MAZEPPA. (1) Opera in 3 acts, libretto from Poushkin's *Pollava*, by Bourenin and others, music by Tchaikovsky. Produced at Moscow and St. Petersburg, almost simultaneously, in 1883; at the Alexandra Theatre, Liverpool, in 1888, by a Russian Company.

(2) Symphonic poem by Liszt. Originally designed as a pianoforte étude, it was revised and scored for orchestra in 1858.

MAZURKA (MAZOURKA, MASUREK, MASURE), a national Polish dance, deriving its name from the ancient Palatinate of Masovia.

The Mazurka was known as early as the 16th century; it originated in national songs¹

¹ This feature it has retained. Chopin, in a letter of Aug. 26, 1829, says, 'The thought fortunately struck Maciejowski to write four stanzas for a Mazurka, and I set them to music' (Karasowski, i. 80).

accompanied with dancing. It was introduced into Germany by Augustus III., Elector of Saxony and King of Poland (1733-63), and after becoming fashionable in Paris, reached England towards 1845. The Mazurka was naturalised in Russia after the subjugation of Poland, but the Russian dance differs from the Polish in being performed by an indefinite number, while the latter is usually danced by four or eight couples. The Mazurka is remarkable for the variety and liberty allowed in its figures, and for the peculiar steps necessary to its performance. Indeed, the whole dance partakes of the character of an improvisation, even the invention of new steps and figures being allowable. The music (in 3-4 or 3-8 time) consists usually of two or four parts of eight bars, each part being repeated. In the earliest Mazurkas the bass was invariably on one note, usually the tonic. There is generally a strong accent on the third beat of the bar. The tune should also end on the second beat of the bar, but in old Mazurkas there is often no definite conclusion, and the repeats are made *ad libitum*. (See BEAT (3)). The *Tempo* is much slower than that of the ordinary waltz. Chopin treated the dance in a new and characteristic manner. He extended its original forms, eliminated all vulgarity, introduced all sorts of Polish airs, and thus retained little more than the intensely national character of the original simple dance tune.¹ No less than fourteen sets of his Mazurkas have been published, containing fifty-two in all (opp. 6, 7, 17, 24, 30, 33, 41, 50, 56, 59, 63, 67, 68, and one without opus number). Weber gives the title 'Masurik' to the fourth of his six pieces for the PF. à quatre mains (op. 10).

The following example is a simple Mazurka popular in the neighbourhood of Warsaw. The first part of the melody has a vocal accompaniment:

W. B. S.

MAZZAFERRATA, GIOVANNI BATTISTA (b. Como, 2nd half of 17th cent.), maestro di cappella at the Accademia della Morte at Ferrara. He composed: Salmi concertati, 3-4 v. (1676); cantatas (1680); madrigals, 2-3 v. (1668), canzonets and cantatas (1680); solo chamber cantatas (1677); 12 sonatas for 2 violins with

¹ See Karasowski's *Life of Chopin*, chap. vii.; and also the somewhat rhapsodical but still interesting remarks of Liszt in his *Chopin*.

a 'bassetto viola' *ad lib.* (1674; republ. 1678). One of these was republished by Wasielewski. An Oratorio by him was performed at Siena, 1684 (Q.-L.; Riemann).

MAZZINGHI, a family of musicians of Corsican extraction settled in England.

(1) THOMAS (d. May 20, 1775) was violinist at Marylebone Gardens. 'Six solos for the violin,' published in London about 1763 (see Q.-L.), may be ascribed with reasonable probability to him. He was buried in St. Pancras.² His son,

(2) JOSEPH (b. London, Dec. 25, 1765; d. 1839³), was a pupil of John Christian Bach, under whom he made such progress that, on the death of his father, in 1775, he was, although but 10 years of age, appointed organist of the Portuguese Chapel. He then studied under Bertolini, Sacchini and Anfossi. In 1784 he became musical director and composer at the King's Theatre, and produced the operas of 'Il tesoro' and 'La Belle Arsène,' besides many songs, duets, etc., for introduction into other operas, and the music for several ballets. The score of Paisiello's opera 'La Locanda' having been consumed in the fire of the Opera House in June 1789, Mazzinghi rescored the work so faithfully as to admit of its continued performance. For the English theatre he set the following pieces:

- 'A Day in Turkey,' 1791.
- 'The Magician no Conjuror,' 1792.
- 'Ramah Droog,' 1798.
- 'The Turnpike Gate,' 1799.
- 'Paul and Virginia,' 1800.
- 'The Blind Girl,' 1801.
- 'Chains of the Heart,' 1802 (the last five in collaboration with Reeve).
- 'The Wife of two Husbands,' 1803.
- 'The Exile,' 1808.
- 'The Free Knights,' 1810.

The last piece contained the duet, 'When a little farm we keep,' which for nearly half a century was highly popular and constantly introduced into other pieces.

Mazzinghi was music-master to the Princess of Wales, afterwards Queen Caroline, and had an extensive practice as a teacher of the pianoforte, for which instrument he composed nearly seventy sonatas and arranged a multitude of pieces, besides writing an 'Introduction' to it. His glees, trios, harmonised airs, songs and other vocal pieces were legion. His pastoral glee, 'The Wroath' ('Tell me, shepherds'), was long in favour. He likewise composed a Mass for three voices, and six hymns. W. H. H.

(3) THOMAS (TOMMASO) (d. Downside, near Bath, Jan. 15, 1844), violinist, was ennobled in Italy in 1834.⁴ His title of Count has been supposed to belong to Joseph, and the 'Six solos for the violin' named above have been attributed⁵ to him despite the obvious incompatibility of dates. He may have been another son of THOMAS (1).

C.

MAZZOCCHI (1), DOMENICO (b. Vejra, near

² Canalic's *St. Pancras Inscriptions*.

³ C. F. Fohl, *Mozart und Haydn in London*, vol. II. p. 370.

⁴ *Ibid.*

⁵ Riemann.

Civita Castellana, c. end of 16th cent.), was a pupil of Nanini, and published an opera, 'La catena d' Adone,' in 1626, a book of 5-part madrigals, a set of 'Dialoghi e sonetti' in 1638, and a volume of 'Musiche sacre' in 1640.

In the dedication of this last he states that he has been for twenty years in the service of the family of Aldobrandini Borghese. He seems to have been the first to use the sign $\ll \gg$ for a crescendo and diminuendo, or a 'swell.'

His brother (2) VIRGILIO (d. Oct. 1646) was from 1628–29 maestro di cappella at St. John Lateran in Rome, and in the latter year was appointed to a similar place in St. Peter's. He held this post until his death. In 1640 he published, as op. 1, 'Sacrae flores' for two, three and four voices, and in 1648 a set of psalms for double chorus was issued (Q.-L.).

MAZZONE, MARCO ANTONIO, of Miglionico, Naples, composed 1 book of madrigals *a 5 v.*, 1 book of madrigals *a 4 v.* (both Venice, 1569); 1 book of Magnificats to serve for choirs of limited compass (*ib.* 1593) (Q.-L.).

MAZZONI, ANTONIO (b. Bologna, c. 1718), pupil of Predieri. After filling appointments as maestro di cappella in various towns, he entered the Accademia Filarmonica of Bologna in 1743; visited Spain and Portugal where he produced several of his operas, and returned in 1752, writing operas for Parma, Naples, Venice and Bologna, where he became Prince of the Accademia Filarmonica in 1757. He then visited St. Petersburg, Sweden and Denmark, returning to Bologna in 1761 as maestro di cappella of S. Giovanne in Monte. In 1767 he was deputy maestro di cappella at the Cathedral of St. Peter, and 1773 again Prince of the Accademia Filarmonica. Apart from a number of operas, he composed an oratorio and a considerable amount of church as well as secular music. Burney and Dittersdorf speak very highly of his ability. His Solfeggi for middle voice have been re-edited by Jul. Stern (Q.-L.; *Fétis*).

MAZZUCATO, GIAN ANDREA (b. Milan; d. London, Aug. 1900), writer and critic. On the death of his father (Alberto Mazzucato) he was appointed professor of musical aesthetics at the Milan Conservatoire (1878). He contributed also various critical articles to the *Corriere della sera*, then in its infancy. About 1880 he left Milan for London, where he earned a living by giving lessons in Italian, translating, and occasional articles on musical subjects, including biographical and critical notes for the first edition of this Dictionary. F. B.

MEAN (Old Eng. *meane, mene*; Lat. *medius*).

(1) An old name for a middle voice-part, whether alto or tenor.

(2) A name given to the second instrument in a Consort of Viols, such as Orlando Gibbons's 'Fantasies in three parts, for Viols.'

(3) The name of the second and third strings of the viol—the former being called the Small and the latter the Great Meane.

(4) The title of an ingenious Fugue for the Organ composed by William Blitheman, and printed by Hawkins in the Appendix to vol. v. of his *History*. W. S. R.

MEANTONE, see TEMPERAMENT.

MEARES, RICHARD, father and son with the same Christian name. The father was a skilled maker of viols, lutes, and other instruments, and as his labels inform us, lived 'Without Bishop-gate, near to Sr. Paul Pinder's, London.' The earliest of these labels of which the present writer has knowledge is dated 1669; others 1677, etc. Hawkins, who gives an account of father and son (misspelling the name 'Mears'), says that his shop was opposite the Catherine Wheel Inn, without Bishopgate, and that he was advertising in 1688, 'lutes, and viols fretted according to Mr. Salmon's proposal.'

Richard Meares the son is mentioned by Hawkins as a 'whimsical man,' bred up to his father's business, who, 'seeing the slovenly manner in which music was published by Walsh & Hare, and being desirous to participate in so gainful a trade, became their rival.'

A card in the Bagford collection (*B.M.*) indicates that the younger Meares was first established in Leadenhall Street at the sign of the Golden Viol, but that he is then removed from thence to the north side of St. Paul's Churchyard at the Golden Viol and Hautboy, where he sells all sorts of musical instruments, books and songs 'as also ye best sort of cutlery ware.'

Meares's first publication is stated to be Mattheson's 'Pièces de clavecin,' which is dated from St. Paul's Churchyard, 1714. After this he became the publisher selected by Handel, during his periodical squabbles with Walsh, to issue his works, partly in conjunction with J. C. Smith. 'Radamisto' is 'printed and sold by R. Meares and C. Smith not to be sold anywhere else in England.' 'Suites de pièces' and the additional airs in 'Floridant' are others by Handel having Meares's imprint. He published also Corelli's 'Sonatas' and 'Concertos,' Ariosto's 'Coriolanus,' and Dr. Croft's 'Musicus apparatus academicus.' One of his late issues is *Introduction to Psalmody*, J. Church, 1723, 8vo. According to Hawkins he was not very successful, and in due course removed to Birch Lane, and finally to London-house Yard, where he died about 1743. He must not be confused with a typographical music-printer named H. Meere, who printed one or two works for Walsh in 1716 and 1718. F. K.

MEARS & STAINBANK. This bell-foundry was established in 1570 and removed from Essex Street, Whitechapel, to its present site in Whitechapel Road in 1738.

The history of the firm begins with Robert Mot, 1570, who was succeeded by the following

founders: Carter (2), Bartlet (3), Phelps (2), Lester, Pack and Chapman.

In 1784 the ownership passed to William Mears, and remained in that family until 1865, since which time the business has been carried on under the name of Mears & Stainbank. At different times the foundries of Abraham Rudhall (Gloucester), John Briant (Hertford), Osborn and Dobson (Downham), and Robert Wells (Aldbourn), have been absorbed by the Mears foundry. Amongst the best-known peals cast at this foundry may be mentioned:

12 bells:

Bow Church, Cheapside	tenor 53 cwt.
Norwich: St. Peter Mancroft	" 43 "
York Minster	" 54 "

10 bells:

Coventry: St. Michael's	tenor 31 cwt.
Stepney: St. Dunstan's	" 31 "
Stockport: St. George's	" 30 "
	W. W. S.

MEASURE (1) originally denoted any dance remarkable for its well-defined rhythm, but in time the name was applied to a solemn and stately dance, of the nature of a Pavan or a Minuet. The dignified character of the dance is proved by the use of the expression 'to tread a measure'; a phrase of frequent occurrence in the works of the Elizabethan dramatists. In the reigns of Elizabeth and James I., Measures were danced at court, and at the public entertainments periodically given by the Societies of Law and Equity. On these occasions the great legal and state dignitaries took part in them, but the custom seems rapidly to have died out under Charles I. It is somewhat remarkable that no trace can be found of any special music to which Measures were danced; this circumstance seems to prove that there was no definite form of dance tune for them, but that any stately and rhythmical air was used for the purpose.

(2) Equivalent to BAR (*q.v.*). W. B. S.

MECHANICAL APPLIANCES CONNECTED WITH MUSIC. The earliest instance of mechanical music-making seems to be the CARILLON, described under its own heading, which could be played either by the hand or by mechanism. Several other appliances are discussed below in chronological order.

(1) BARREL ORGAN, a musical instrument, of all others the most easy of manipulation, as it requires nothing beyond the regular rotary motion of a handle to keep it playing. In some examples even this power is applied mechanically, either by means of clock-work, or by weights. These instruments are of the most various capacities, from the simple street organ—the 'barrel organ' of ordinary parlance—to large and complicated machines representing the full orchestra. But the principle of action is the same in all. A wooden cylinder, or barrel, placed horizontally, and armed on its outside circumference with brass staples or

pins, slowly revolves, in the direction from back to front; and in doing so the pins raise certain trigger-shaped keys, which correspond with simple mechanism communicating with valves that on being opened allow wind to enter the required pipes. In this way either melody or harmony is produced. The wind is provided by bellows which are worked by the same motion that turns the barrel. The most simple kind of instrument of this nature is the small 'bird organ,' used, as its name implies, for teaching bullfinches to pipe—which plays the simplest music in melody only.

It is not positively known when barrel organs were first made, but they are supposed to date from about the beginning of the 18th century. An organ-builder of the name of Wright, the great-grandfather of ROBSON, made a barrel organ for Fulham Church, which alone would carry the date a long way back. FLIGHT of Exeter Change was also a celebrated maker of barrel organs in his day. The finest and most elaborate specimen of a 'Finger and Barrel' organ that was ever made was the APOLLONICON (*q.v.*). The firms of Flight and Robson, and of BRYCESON, made perhaps the greatest number of barrel organs, a kind of instrument in much demand many years ago, for churches and chapels. These were set with psalm and hymn tunes, chants, and occasionally with voluntaries.

A church barrel organ had rarely a chromatic compass of notes, but usually only a greater or less approximation thereto. Thus it would generally have either 8, 14, 17, 21, 27, 28 or 31 keys. In the case of one having 14 keys, two diatonic scales, of short range, would be presented, namely G and D, into which all the tunes 'marked' upon the barrel would be transposed, and a few pipes at somewhat large intervals apart would be supplied by way of bass, such as D and G. In organs with more keys, the G \sharp would be inserted, allowing the scale of A to be used. In organs having a further increased number of keys the D \sharp would be introduced, permitting the scale of E to be employed; and so on. Strange to say, scales with flats were never planned unless specially ordered; nor was there much provision for tunes in the minor mode in organs with comparatively but few 'keys.'

Organs having the complete compass and with all the chromatic semitones have been made to play overtures, movements of symphonies, selections from operas, sets of waltzes, and other music. The place occupied in the making of these instruments by John Robson was taken by Imhof and Muckle of London, who during the 19th century supplied a large number of these mechanical organs called 'Orchestrion' to private houses in the country at prices ranging from £100 to £1500. One of the completest of these instruments contains

8 ordinary stops, ranging through a complete chromatic scale of $5\frac{1}{2}$ octaves, and 6 solo stops; with a swell of 3 stops in addition to drums, triangle, cymbals and castanets. Three machines work the whole of this elaborate apparatus. The barrels can be changed very rapidly, and as each barrel takes $11\frac{1}{2}$ minutes to complete its revolution whole movements of symphonies and overtures can be performed. Instruments of this character have been occasionally furnished with a manual, and are then known as 'Barrel and Finger Organs.'

The ordinary street organ was first made by a builder named Hicks at the beginning of the 19th century. It flourished in the streets of London and other English towns during that century, but has now almost disappeared. The smallest kind having 24 keys, sounded the following notes:

Larger sizes had a fuller compass. There were 2 stops, an open (rarely of metal) and a closed (wood). The barrel was set to play 9 or 10 tunes. The instruments weighed from 40 to 56 lbs., and cost from £18 upwards.

The annexed illustration shows a cross section of an ordinary barrel organ.

Barrel organs have been made with three and four barrels in a circular revolving iron frame. The first of the kind, containing four barrels, was made by BISHOP, sen., for Northallerton Church, Yorkshire, about the year 1820. Many years later Messrs. Gray and Davison made grinder organs with three barrels in one frame.

E. J. H.

(2) *PIANO MÉCANIQUE*, an invention of Debain of Paris (*d.* 1877), for the mechanical performance of musical compositions upon a pianoforte without disturbing its keyboard, or its capability for manual performance. To manage this the pinned barrel employed in the street pianos and barrel-organs had to give place to a novel and ingenious apparatus invented and adapted to his '*Piano mécanique*' by Debain, about the year 1850. To an ordinary upright piano he supplied a second set of hammers working the reverse way to the ordinary ones, that is, from above. These hammers were set in motion by iron levers, the further ends of which were tempered hard, and projected as 'beaks' through a comb of four or five inches long, into which space five octaves of the keyboard were compressed. The comb crossed transversely a smooth iron plate fixed along the top of the instrument. 'Planchettes,' or small boards upon which the piece to be played was pinned (as on a barrel), were connected with a handle, made to travel along this plate, the pins doing the work of the fingers upon the levers. The dynamic shades of piano

and forte, accent, etc., were produced by varying the height of the pins. Perhaps the greatest merit of Debain's invention was that his upper system of hammers had the same 'striking-place' (i.e. measured division of the string for the impact of the hammers) that the keyboard hammers have. This was achieved by moving the latter forward when the mechanical apparatus came into play. The great defect of the contrivance was the want of damping during performance. When applied by Debain and Co. to the organ or harmonium it was styled 'Antiphonal.'

(3) The '*Handle-pianos*,' popularly known as *PIANO-ORGANS*, merely because being stringed instruments they succeeded the street organs as the chief means of musical mendicancy in

a is the barrel, 'set' round its circumference with 'pins,' at the various intervals, and of the various lengths, necessary for the music, and turned by the worm *b* on the shaft *c*; *d d'* are the bellows worked by the cranks *e e* on the shaft and the connecting rods *f f*, and delivering the wind into an air chamber *g*, which runs to the farther end of the case, and is kept at a uniform pressure by the spiral springs *h h*. The air vessel again delivers the wind into the wind-chest *m*, which communicates with the pipes *n n*. Each pipe has its valve *o*, which is kept closed by a spring until the corresponding pin on the barrel raises the trigger *p*, and, forcing down the connecting wire *r*, opens the valve and admits wind to the pipe. *s s* is the case. Space being very valuable in these instruments, the pipes are packed together very closely, and are often bent in shape to fit the demands of the case. In the diagram one is shown lying beneath the floor of the bellows.

England, come principally from Italy. These instruments are strongly made, to stand hard work and weather; the felt hammers have leather coating, and there are three, and in the treble often four, strings to each note. The action is of the simplest kind, the pin of the barrel pressing down a crank, which gives the

blow ; a spring causing the immediate return of the hammer. There are no dampers excepting in a few instances in the lowest bass notes, and no attempt to regulate the pinning of the barrel to produce louder or softer notes.

(4) **MUSICAL SNUFF-BOX, etc.**—Musical boxes were invented about the beginning of the 19th century, probably in Switzerland, the chief seat of their production. The motive power is a pinned cylinder resembling the barrel of a mechanical organ, and made to shift on the same principle ; the working power is a spring ; the mechanism and rotation are closely allied to those of a watch or clock ; and the teeth of the comb which produce the notes are measured to scale.

The original musical boxes are small and not unlike a snuff-box in appearance. They are now made of all sizes.

About 1830 a very favourite composition with amateurs of the pianoforte was the 'Snuff-box Waltz,' the composer of which preserved his anonymity under the initials M. S. Such a passage as the following illustrates the kind of imitation that was possible :

Bells, drums, castanettes, free reeds worked by bellows, and more recently a 'zither,' produced by a sheet of thin paper resting on the teeth of the comb, have been introduced, and have not raised the musical value of the instrument, any more than similar introductions early in the 19th century raised the value of the pianoforte. As pointed out by Moonen in his Report on the Melbourne Exhibition, the real improvements have been in the mechanical portion, by the accurate 'pointing' or adjustment on the cylinder of as many as 36 airs ; the obtaining a constant movement for an hour and a half without requiring to wind up the spring during that time ; the possibility of shifting the barrel in such a manner that an air 'noted' may be played without the necessity of going through all the others in rotation, and the important one of the interchange of barrels made to fit any box.

A. J. H.

(5) **PLAYER-PIANO (PIANOLA, etc.)**—Of late years a refined form of mechanical piano has come into extraordinary vogue for domestic use. A patent was taken out in the United States as early as 1860 for a keyboard piano-player, and the first pneumatic keyboard instrument was made in France in 1863. The main principles of the action are much the same in all these attachments. A roll of cardboard

pierced with openings corresponding to the duration and pitch of the notes in the composition to be repeated passes over a cylinder furnished with small apertures, through which a puff of air is drawn or pushed as often as the passage is left free by the occurrence of one of the openings in the cardboard roll. This puff of air sets in motion a series of hammers which act as substitutes for the human fingers ; the movement of the roll, and the force with which the notes are struck, are regulated by pedals like those of the harmonium, with the assistance of certain handles by which the speed and force of the apparatus can be rapidly changed. It is not necessary to discuss the relative merits of the innumerable and variously named inventions which are now before the public ; the greater number of them are of American origin, though practically all piano manufacturers build player-pianos, that is, instruments capable of being played either through the mechanism or by the hands of the pianist. All of them claim that by means of the mechanism the performer can put an individual interpretation into music for which his manual technique would be quite insufficient, and that one person's manner of manipulating the instruments will be altogether different from another's.

An immense collection of music of all grades is now published in the form of rolls, and the technique of performance through the player-piano has been fully explored. A few composers have been induced to write specially for the instrument. The following books afford useful information :

CONSTRUCTION.—WILLIAM BRAID WHITE, *The Player-piano up to date* (1914) ; HARRISON LOUIS VAN ATTA, *The Piano and Piano-player* (1914) ; SYDNEY GREW, *The Art of the Pianist and Pianist* (1922) ; B. NEWMAN, *The Piano-player and its Music*.

An important modification of the player-piano mechanism is the reproducing action which requires no individual control at all. By means of it the previous performance of a pianist is recorded and reproduced with more or less faithfulness as to tone values, time, phrasing, etc. The principal patents which mark successive stages of accuracy in this mechanism are the 'Welte-Mignon,' the 'Duo-Art' and the 'Ampico.'

The principle of the player-piano has been successfully applied to the organ in the form of the Æolian and Orchestrelle. See ÆOLIAN COMPANY for details of the manufacture in England of these several instruments, and more especially the 'Duo-Art' player-piano.

M. ; addns. c.

(6) **GRAMOPHONE (PHONOGRAPH)** is the instrument by far the most widely used at the present day for the mechanical reproduction of music. Its principle rests on the formation of an actual record of the vibrations set up by voice or instrument and their subsequent re-creation. A stylus attached to the

sensitive diaphragm, which receives the vibrations, makes indentations on a revolving disc or cylinder of wax or other impressionable material. From this a copy is produced in metal by a process of electrolysis and is used as a matrix from which further copies in a hard composite material can be multiplied.

The name gramophone (in America phonograph) is commonly given to the machine through which these records reproduce the sound. It reverses the recording process. The needle, following the groove of the record placed on a rotating plate, is the agent by which the indentations once more set up vibrations. These conducted through the tone arm into contact with a mica diaphragm and sound box are converted into sound waves. A horn or other apparatus supplies the necessary amplification.¹

The invention is attributable to Thomas A. Edison who patented his Phonograph, Nov. 1877. The record was made on a cylinder, and one instrument served both to record and to reproduce. Edison's first object was the transmission of speech, but music soon entered into his experiments. The adoption of the disc form of record and its almost unlimited multiplication from a matrix, which made possible the popular vogue of the gramophone, was due to Émile Berliner of Washington, D.C. (1887). By about the year 1900, the immense commercial possibilities of the gramophone becoming apparent, the ingenuity of American inventors was concentrated on the improvement of its processes. The majority of inventions of the first quarter of the 20th century have been directed to secure greater accuracy in the transmission of musical qualities. There is still much to be done in this direction, particularly with regard to the recording of orchestral values, but what has been effected in this comparatively short period has been sufficient to make gramophone reproduction acceptable to musicians, who not only commend its educational value to others but profess pleasure in it themselves. Recording has become a very lucrative occupation for executive artists of all kinds, and by means of the gramophone every type of music from the highest to the lowest has been disseminated² all over the world. C.

MÉDECIN MALGRÉ LUI, LE, opera by Gounod, the text adapted from Molière by Barbier and Carré; produced Théâtre Lyrique, Jan. 15, 1858; in English, as 'The Mock Doctor,' Covent Garden, Feb. 27, 1865. G.

Henry Fielding made a ballad opera, 'The Mock Doctor, or the Dumb Lady cured,' acted at Drury Lane in 1732, and often revived afterwards. It was published with the airs of the songs by J. Watts in 1732. F. K.

MÉDÉE, opera in 3 acts; words by Hoff-

¹ For fuller description of the principle and action of the gramophone see E. W. Scripture, *Elements of Experimental Phonetics*.

² See 'His Master's Voice' Record Catalogue, 1922. Additions are made almost daily to the large catalogues of this and other companies.

mann, music by Cherubini. Produced Théâtre Feydeau, Mar. 13, 1797; in London, Her Majesty's Theatre, in Italian, with recitatives by Arditi, June 6, 1865. G.

MEDER, JOHANN VALENTIN (*bapt.* Wasungen on the Werra, May 3, 1649; *d.* Riga, July 1719), studied theology at Leipzig and Jena, then turned to music. After various engagements as singer, and wanderings which brought him as far as Copenhagen, he became in 1674 cantor at Reval College, and in 1687 at St. Mary's, Danzig, where his attempt to introduce opera (with two of his own works, 'Nero' and 'Coelia') met with the opposition of the town council. He left there and became Kapellmeister at Königsberg Cathedral, but exchanged that post for a similar position at Riga Cathedral. He was greatly esteemed as a composer by Buxtehude, Mattheson, etc., his works including operas, an oratorio, motets and other church music, as well as trios for 2 violins, and bass for the organ, and a MS. trio for 2 treble viols with bass and harpsichord (J. Bolte, *Vierteljahrsschrift für Musikwissenschaft*, 1891 and 1892; *Q.-L.*).

MEDESIMO TEMPO, 'in the same time,' is occasionally used in the same way as *L'ISTESSO TEMPO* (*q.v.*). M.

MEDIAL CADENCE, see CADENCE (I.), section (2).

MEDIANT (from the Lat. *medius*, 'middle').

(1) For the use of this term in the Modal system see MODES, ECCLESIASTICAL.

(2) In modern music the term is always applied to the third of the scale, by reason of its intermediate position, between the tonic and the dominant. The office of this note is extremely important, inasmuch as it determines whether the tonality of the scale is major or minor. W. S. R.

MEDIATION (Lat. *mediatio*), the inflexion which occurs half-way through a psalm-tone before the point of division marked in the words by a colon. (See INFLEXION; GREGORIAN TONES.)

MEDTNER, NICOLAI RASLOVITCH (*b.* Moscow, Dec. 24, 1879), Russian composer of German descent, entered the Moscow Conservatoire in 1891, studying the piano under Safonov. In 1900 he won the Gold Medal awarded by that institution and the Rubinstein Prize. In 1901-02 he toured Europe as a pianist, and on his return became professor of his instrument at the Conservatoire. In 1903 he retired in order to devote himself exclusively to composition, a branch of his art for which, although he had cultivated it comparatively little during his student days, he had an astonishing aptitude. He had no difficulty in bringing his work before the public. His first piano sonata was published by Belaiev, and P. Jurgenson issued all his other works for some time, until he attracted the attention

of the Russian Music Publishing Society. After the Revolution he taught music at a school in the outskirts of Moscow, and in 1922 he set out on another European tour.

Medtner's music is firmly rooted in tradition. He does not break new ground, but devotes himself to extending the fields cultivated by the classics. Although not averse to the use of new idiomatic resources, he regards them as acquisitions destined to enrich the old system, not to destroy it. Even his curious experiments in rhythm must be considered as old devices used in a new and interesting way rather than as actual innovations.

Both on account of his neo-classicism and his predilection for cross-rhythms, Medtner has often been described as the 'Russian Brahms'; but, apart from the fact that this designation is in itself contradictory, the resemblances that have occasioned it are only superficial ones. The two composers have a certain earnestness of purpose and self-sufficing gravity in common, but such a similarity of outlook may be found in artists whose creative faculties manifest themselves in totally dissimilar ways. Medtner is undoubtedly a modern descendant of the Beethoven-Brahms line of classical development, but he is not therefore more like Brahms than the latter is like Beethoven.

Medtner is a firm believer in absolute music. His output is almost exclusively restricted to chamber music, the piano works being the most significant and characteristic as well as the most numerous. The stage and the orchestra have apparently no attraction for a composer who aims at creating works of an intimate and purely musical nature. Even in his songs, where a literary element necessarily obtrudes itself, the music remains abstract as far as possible.

The form in which Medtner expresses himself most completely is that of the sonata. He does not adhere very closely to the classical model, which he bends to his creative fancy with considerable freedom, but its fundamental principles serve him as the ideal mould for all his larger works. Perhaps the sonata form is occasionally apt to be his master rather than his servant. The op. 11, for instance, may be suspected to have originally been planned as a sonata in three movements, and it would seem that, as the work progressed, each movement shaped itself inevitably into the first-movement form, and that the work thus became a 'Sonata-Triad' of three separate and fully developed movements. Much the same appears to have happened in the case of op. 25, No. 1, and of op. 27, which may have been intended as a 'Fairy Tale' and a 'Ballade' respectively, but grew imperceptibly into sonatas.

In spite of the organic structure of Medtner's music, it is by no means coldly formal. It is

clear that each work sprang from a poetical conception, even when this is left to the hearer's imagination. In some cases it is indicated by a verbal motto, in others implied by a title such as 'Dithyramb' or 'Fairy Tale.' The latter has become especially typical of the romantic aspects of Medtner's work.

The difference between the early and the later works is not vast, for, in spite of some classical influences, the composer's personality is apparent from the beginning. His style of pianistic writing is invariably ideally suited to the instrument. Comparatively conventional in its first stages, it has constantly enriched itself by new devices, and its intricate and endlessly varied texture is the more interesting for being at times almost invincibly difficult. Here and there the problems are made unnecessarily hard to solve by Medtner's curious manner of making his rhythmic complexities apparent to the reader's eye; phrasing and accent are frequently not only indicated by the conventional signs, but reinforced by a method of linking together the groups of notes which is logical in theory but confusing in practice.

The most extensive work for the piano is the concerto, op. 33. In technical ingenuity it is inferior to none of the earlier piano music, but the composer's excessive preoccupation with contrapuntal problems, which are overcome with consummate mastery, involves the sacrifice of much of the fanciful imagination and soaring poetry that characterises his best work.

For violin and piano Medtner has written a sonata and three 'Nocturnes,' which not only represent him at his best as regards invention, but are admirably laid out for the two instruments, both individually and in combination.

In the songs the vocal line is somewhat lacking in lyrical breadth and adaptability to the varying character of the poetry. The great variety Medtner achieves in his vocal work is too much due to his interesting but unduly prominent accompaniments. An advantage, on the other hand, is the treatment of each poem from a purely musical point of view. Each song is confined to a definite range of colours that expresses the feeling of the poem without resorting to the description of details, which are made sufficiently salient by the words alone and need no strengthening by duplication.

A curious and interesting vocal work on a larger scale is the 'Sonata-Vocalise,' op. 41, for voice and piano, which, save for a 'motto' culled from Goethe, is sung without words.

The following is a list of Medtner's works (PF. solo unless otherwise stated):

Op. 1, 8 Mood Pictures. Op. 2, 3 Improvisations. Op. 3, 3 Songs. Op. 4, 4 Pieces (Etude, Caprice, Moment musical, Prelude). Op. 5, Sonata, F minor. Op. 6, 9 Songs (Goethe). Op. 7, 3 Arabesques. Op. 8, 2 Fairy Tales. Op. 9, 3 Fairy Tales. Op. 10, 3 Dithyrambs.

Op. 11, Sonata-Triad (A \sharp at major, D minor, C major). Op. 12, 3 Songs (Heine). Op. 13, 2 Songs. Op. 14, 2 Fairy Tales. Op. 15, 13 Songs (Goethe). Op. 16, 3 Nocturnes, Vn. & PF. Op. 17, 3 Novels. Op. 18, 6 Songs (Goethe). Op. 19, 3 Songs (Nietzsche). Op. 19a, 2 Songs (Nietzsche). Op. 20, 2 Fairy Tales. Op. 21, Sonata, B minor, Vn. & PF. Op. 22, Sonata, G minor. Op. 23, 4 Lyric Fragments. Op. 24, 8 Songs. Op. 25, No. 1, Fairy-Tale Sonata, C minor; No. 2, Sonata, E minor. Op. 26, 4 Fairy Tales. Op. 27, Sonata-Ballade, F \sharp at minor. Op. 28, 7 Songs. Op. 29, 7 Songs (Pushkin). Op. 30, Sonata, A minor. Op. 31, 3 Pieces (Improvisation, Marche funebre, Fairy Tale). Op. 32, 6 Songs (Pushkin). Op. 33, Concerto, C minor, PF. & Orch. Op. 34, 4 Fairy Tales. Op. 35, 4 Fairy Tales. Op. 36, Songs (Pushkin). Op. 37, 8 Songs. Op. 38, Forgotten Melodies, vol. I. Op. 39, Forgotten Melodies, vol. II. Op. 40, Forgotten Melodies, vol. III. Op. 41, Sonata-Vocalise, Voice & PF. Op. 42, No. 1, Russian Fairy Tale. Op. 44, Sonata No. 2, G major, vln. and PF. 2 Cadenzas to Beethoven's PF. Concerto No. 4. E. B.

MEERESSTILLE UND GLÜCKLICHE FAHRT, i.e. *Calm Sea and Prosperous Voyage*, a poem by Goethe, which has been set to music by—

(1) Beethoven, for chorus and orchestra. Composed in 1815, first performed at the Great Redoutensaal in Vienna on Christmas Day of that year, and published Feb. 28, 1823, by Steiner. It is dedicated 'to the immortal Goethe.' The reverse of the title-page contains three lines from Voss's translation of the *Odyssey* (viii. 479), thus rendered by Lang and Butcher:

'For from all men on earth minstrels get their meed of honour and worship; inasmuch as the muse teacheth them the paths of song, and loveth the tribe of minstrels.'

A letter from Beethoven to the publisher, dated June 12, and apparently belonging to the year 1824, calls it a cantata, and asks for the loan of the score, that he 'might write a kind of overture to it.' This intention does not appear to have been carried out.

(2) Mendelssohn, for orchestra only. Written in the summer of 1828, first performed at Berlin, Dec. 1, 1832, remodelled and 'made thirty times as good as before,' and published as op. 27 and No. 3 of his Concert Overtures in 1834. We learn from a passage in his sister's diary¹ that Mendelssohn wished to avoid the form of an introduction and overture, and to throw his work into two companion pictures. G.

MEERTS, LAMBERT JOSEPH (b. Brussels, Jan. 6, 1800; d. there, May 12, 1863), distinguished violinist and composer for his instrument, a pupil of Lafont, Habeneck and Baillot. At the age of 16 he became a member of the theatre orchestra in Antwerp. After completing his studies in Paris he returned to Brussels and established himself as a teacher and performer. In 1835 he was appointed professor of the violin at the Brussels Conservatoire. He wrote several instructive works for the violin, including a series of duets for two violins, each study being founded on a particular rhythm extracted from one of Beethoven's symphonies.

MEFISTOFELE, opera in a prologue and 5 acts; words (after Goethe) and music by Pofto. Produced Milan, Mar. 5, 1868; remodelled, prologue and 4 acts, Bologna, Oct. 4,

¹ Hensel? *Die Familie Mendelssohn*, I. 194.

1875; Her Majesty's, July 6, 1880; New York, Academy of Music, Nov. 24, 1880; in English (Carl Rosa Co.), 1912. See also FAUST.

MEGLI (MELIO, MELLI), DOMENICO (16th-17th cent.), of Reggio, Doct.Jur., lived at Padua. He composed several books of madrigals, canzonis, arias, etc., between 1602–09, some in 2 editions; 1 song in Robt. Dowland's 'A Musically Banquet,' 1610 (Q.-L.).

MEHLIG, ANNA (b. Stuttgart, July 11, 1846), a distinguished pianist, received her musical education at the Conservatorium of her native town, and afterwards spent a year at Weimar studying under Liszt. In 1866 she made her first appearance in England, playing Hummel's Concerto in B Minor at the Philharmonic on Apr. 30. She revisited England each year till 1869 inclusive, playing regularly at the Philharmonic and Crystal Palace and other concerts. She then took a long tour in America, where she met with great success. In 1875 she reappeared in England, playing Chopin's E minor Concerto at the Crystal Palace on Oct. 9. She married Herr Falk of Antwerp. G.

MÉHUL, ÉTIENNE HENRI (ÉTIENNE-NICOLAS) (b. Givet in the Ardennes, June 22, 1763; d. Paris, Oct. 18, 1817), son of a cook, who was too poor to give him much education. Even in childhood he showed a passion for music, and a remarkable perseverance in overcoming obstacles, and at 10 was appointed organist to the convent of the Récollets at Givet. Having learned all that his master, a poor blind organist, could teach him, he was thrown on his own resources, until the arrival, at the neighbouring convent of La Val Dieu, of a new organist, Wilhelm Hauser, whose playing had attracted the attention of the Abbot Lissor, when visiting the Abbey of Scheussenried in Swabia. The monks of La Val Dieu, wishing to make music a special feature in their services, had a good organ, and the playing of Hauser, who was a sound and good musician, caused quite an excitement in that secluded corner of the Ardennes. La Val Dieu was several leagues from Givet, but Méhul often walked over to hear Hauser; and at length, with the consent of his father, was admitted into the convent, and became the most diligent, as he was the most gifted, of the eight pupils under Hauser's training. At 14 he became deputy-organist; and a distinguished amateur who heard him play was so struck by his evident power of imagination, that he determined to take him to Paris, and in 1778 Méhul bade farewell to the flowers he loved to cultivate, and the instructor who had put him in the way to become a great musician. On his arrival in Paris he at once went to Edelmann for instruction in pianoforte-playing and composition. To earn his bread he gave lessons, and composed two sonatas (1781) which bear no traces of a master mind; but this was not the

line in which he was destined to distinction. In 1779 he was present at the first performance of 'Iphigénie en Tauride,' and the effect produced on one with his cultivated intellect, his love of the beautiful, and passionate though reserved nature, was immense. He expressed his admiration to Gluck himself, who received the young enthusiast graciously, gave him valuable advice, and undertook his instruction in the philosophical and poetical parts of music. Encouraged by the success of a cantata with orchestra composed to one of Rousseau's sacred odes, and produced at the Concert Spirituel in Mar. 1782, he might have gone on writing church music, had not Gluck shown him his true vocation, and directed his attention to the stage. Solely for practice, he composed, one after another, three operas, 'Psyché et l'Amour,' a pastoral by Voisenon previously set by Saint Amans; 'Anacréon,' the third act of a ballet by Bernard and Rameau, produced in 1757 as 'Les Surprises de l'Amour'; and 'Lausus et Lydie,' three acts, to a libretto adapted by Valadier from Marmontel. These unpublished scores are lost, no trace of them being discoverable in any of the public libraries of Paris.

Méhul now felt himself in a position to appear before the public, and Valadier having furnished him with the libretto of 'Cora et Alonzo,' four acts, also taken from Marmontel, the score was soon ready, and accepted by the Opéra, but there the matter ended. Tired of waiting, he resolved to try his fortune at another theatre, and having made the acquaintance of Hoffmann he obtained from him the libretto of 'Euphrosine et Coradin, ou le Tyran corrigé,' three acts (Sept. 4, 1790). In this opéra-comique the public recognised at once a force, a sincerity of accent, a dramatic truth, and a gift of accurately expressing the meaning of the words, which were throughout the main characteristics of Méhul's mature genius. Its success was instantaneous; and the duet 'Gardez-vous de la jalousie,' the close of which contains a modulation as unexpected as it is effective, speedily became a favourite throughout France. Henceforth Méhul had ample opportunities of satisfying his productive instinct, and he brought out successively:

'Cora' (1791); 'Stratonice' (May 3, 1792); 'Le Jeune Sage et le vieux Fou' (1793); and the third act of 'Le Jugement de Paris' (the other acts by Haydn and Pleyel); 'Horatius Cocles' and 'Mélidore et Phrosine' (1794); 'La Caverne' (1795), not so successful as Lesueur's on the same subject; 'Doria' (1795); 'Le Jeune Henri' (1797); 'Adrien' (June 4) and 'Ariodant' (Oct. 11, 1799); 'Épiqueur,' with Cherubini (Mar. 14), and 'Bion' (Dec. 27, 1800); 'Le Traité, ou l'Emporté' (Feb. 17, 1801); 'Une Folie' (Apr. 4), 'Le Trésor supposé,' 'Joanna' and 'L'Heureux malgré lui' (1802); 'Hélène' and 'Le Balser et la quittance,' with Kreutzer, Boieldieu, and Nicolo (1803); 'Les Deux Aveugles de Tolède' (Jan. 28), 'Uthal' (May 17), and 'Gabrielle d'Estrées' (June 28, 1806); 'Joseph' (Feb. 17, 1807).

Astonishing as it may seem, these twenty-four operas were not the only works Méhul produced within seventeen years. He composed and published in addition many patriotic songs and cantatas, among others the 'Chant national du 14 juillet,' the 'Chant du départ,' the 'Chant

du retour,' the 'Chanson de Roland,' and choruses to 'Timoléon' (1794), a tragedy by Joseph Chénier; two ballets, 'La Dansomanie' (1800) and 'Daphnis et Pandrose'; several operettas, and other 'morceaux de circonstance,' such as 'Le Pont de Lodi,' etc., all unpublished except the 'Chant lyrique' for the inauguration of the statue voted to Napoleon by the Institut. A Mass, written for the coronation of Napoleon, but not performed then, was published in Paris in 1879.

The epoch at which he composed 'Uthal' and 'Joseph' was the culminating point of Méhul's career. He was already a member of the Institut (1795) and a chevalier of the Legion of Honour (1802), and had been inspector of instruction at the Conservatoire from its foundation. His pupils looked up to him and he was a favourite in the best society, but such homage did not blind him to the fact that in science his colleagues Cherubini and Catel were his superiors, owing to his want of early systematic training. This accounts for his laborious efforts to change his style and excel in more than one department of music. His symphonies, though performed at the Conservatoire, cannot rank with those of Haydn and Mozart; indeed none of his other orchestral works rise to the level of his overtures. Of his ballets 'Le Retour d'Ulysse' (1807), and 'Persée et Andromède' (1810) in which he introduced many pieces from 'Ariodant,' were well received, but 'Les Amazones, ou la fondation de Thèbes' (1811) disappeared after nine performances. An opéra-comique in one act, 'Le Prince Troubadour' (1813), was not more successful, and in 1814 he collaborated with Paër, Berton and Kreutzer in 'L'Oriflamme'; his last work, 'La Journée aux aventures,' three acts (Nov. 16, 1816), kept the boards for some time. Its success was partly due to its being known at the time that Méhul was dying of consumption. Two months after its production he was sent to Provence, but the change came too late; he returned to Paris, and died there. Besides six unpublished operas composed between 1787 and 1797, he left the unfinished score of 'Valentine de Milan,' a three-act opéra-comique, completed by his nephew and pupil DAUSSOIGNE-MÉHUL (q.v.) (b. Givet, June 10, 1790; d. Liège, Mar. 10, 1875), and produced Nov. 28, 1822.

The most conspicuous quality of Méhul's work as a whole is its absolute passion. This is exemplified most strikingly in 'Stratonice' and 'Ariodant.' Not less obvious are the traces of the various influences under which he passed. Between 'Ariodant' and 'Joseph' must be placed all those repeated attempts to vary his style and convince his detractors that he could compose light and graceful airs as well as grand, pathetic and sustained melodies, which cannot be considered as anything but failures, although the ignorant amateurs of the day pronounced

'L' Irato' to be true Italian music. 'Joseph,' which dates from the midst of the Revolution, before the Empire, belongs to a different epoch, and to a different class of ideas. Méhul's noble character, his refined sentiment, and religious tendencies, the traces of his early education, his acquaintance with the church modes and plain-song, and his power of writing excellent church music, are all apparent in this powerful work, the simplicity, grandeur and dramatic truth of which will always command the admiration of impartial musicians.

Méhul was not so fortunate as Grétry in finding a poet whose creative faculties harmonised thoroughly with his own; and he was fascinated by any subject—antique, chivalrous, Ossianic, Spanish, patriarchal or biblical—so long as it afforded him opportunities for local colouring, the importance of which he often exaggerated. His overtures to 'Le Jeune Henri,' 'Horatius Coclès,' 'Timoléon,' and 'Les Deux Aveugles de Tolède' are, however, incomparably superior to anything of the kind which preceded them; and most striking are such passages as the introduction to 'Ariodant,' where three violoncellos and a trombone hold a kind of dialogue, and that in 'Mélidore et Phrosine,' where four horns, which have a complete part throughout the score, accompany the voice of a dying man with a kind of smothered rattle. In 'Uthal' the violins are entirely absent, their places being taken by the violas, in order to produce a soft and misty effect. Grétry was shocked at this innovation, and so wearied by its monotony that he cried, on leaving the theatre after the first performance, 'Six francs for a chanterelle (E-string) !'

Though Méhul's new and ingenious combinations were not always successful, and though his melodies were often wanting in that life and dash which rouse an audience, it must be acknowledged that his work bears the stamp of a very individual mind and character, and the impress of that mighty race of 1789, with whom to will was to do, but amongst whose many gifts that of grace was too often wanting. Had he but possessed this fascinating quality, Méhul might have been the Mozart of France. As it is, we cannot withhold our admiration from the man who carried on Gluck's work with even more than Gluck's musical skill, regenerated opéra-comique, and placed himself at the head of the composers of his own time and nation.

A portrait¹ of Méhul exists in a remarkable print by Quenedey, 1808. Quatremère de Quincy pronounced his eulogium at the Institut in Oct. 1818, and Vieillard, one of his intimate friends, published an interesting *Notice* of him (Paris, 1859). The library of the Conservatoire contains many of his auto-

graphs, several being fragments of unpublished operas. The writer of this article discovered among them 'La Naissance d'Oscar Leclerc,' not elsewhere mentioned, an opéra-comique 'La Taupe,' and an 'Ouverture burlesque' for piano, violin and reeds, interesting merely as musical curiosities. A statue of Méhul was unveiled at Givet, Oct. 2, 1892.

MEIBOM (Latin, MEIBOMIUS), MARCUS (b. Toenningen, Schleswig-Holstein, early 17th century; d. Utrecht, 1711), learned historian of music.

His great work, *Antiquae musicae auctores septem graece et latine* (Amsterdam, Elzevir), was published in 1652, which suggests that the date of his birth can hardly have been as late as 1626 as commonly stated. The work was dedicated to Queen Christina of Sweden, at whose court he resided for some time. On one occasion, however, while singing at the Queen's request his version of an ancient Greek melody, the whole court burst out laughing, and Meibom, imagining that the Queen's physician Bourdelot was the instigator of this unseemly mirth, gave him a box on the ear, and was in consequence dismissed. He took refuge with Frederick III. of Denmark, who gave him a professorship at Upsala, but he soon returned to Holland. Having endeavoured in vain to find a capitalist who would carry into execution his plan of restoring the ancient tirrenes, he came to England in 1674 with the view of making arrangements for a new edition of the Old Testament. This project also failed, and he returned to Holland. The book already mentioned is one of the most valuable sources of information on ancient music, and may be considered a precursor of Gerber and Coussemaker. Its usefulness is much enhanced in the modern reprints, notably that by Karl von Jan (1895). For his numerous works on music and geometry the reader is referred to *Fétis*.

F. G.

MEILAND, JACOB (b. Senftenberg in Saxony, c. 1542; d. 1577), was brought up as a chorister in the Saxon Court Chapel at Dresden. After attending the University of Leipzig, and spending some time in travelling, he was appointed Kapellmeister to the Margrave of Anspach, till the dissolution of this chapel in 1574. The rest of his life, to his early death, Meiland spent chiefly as an invalid at Frankfort-on-the-Main, though busy to the last in bringing out his fairly numerous publications. He was highly thought of in his time as a composer of Latin and German motets, and considered even the equal

¹ A woodcut therefrom was given in former editions of this Dictionary.

of Orlando Lassus. His harmonies are often rugged, after the manner of Orlando. In the composition of German secular songs he was one of the first to introduce into Germany the Italian Villanella style, paying more attention to the rhythmical declamation of the words than to the artifices of counterpoint. His works are:

1. *Cantiones sacrae*, 1564, 17 Nos. a 5 and 6
2. *Neue auserlesene teutsche Liedlein*, 1569, 15 Nos. a 4 and 5.
3. *Selectae cantiones*, 1572, 17 Nos. a 5 and 6.
4. *Sacrae aliquot cantiones latinae et germanicae*, 1575, 33 Nos. a 4 and 5.
5. *Neue auserlesene teutsche Gesäng*, 1575, 18 Nos. 4 and 5.
6. *Cantiones novae*, etc., 1576, 19 Nos. a 5.
7. *Cygnaeae cantiones latinae et germanicae*, 1590, 22 Nos. a 4 and 5.

Other works, including three settings of the Passion, are preserved in MS. Three Latin motets were republished in Commor's *Musica sacra*, and two German sacred songs a 4 are contained in Schöberlein. J. R. M.

MEINARDUS, LUDWIG SIEGFRIED (*b.* Hooksiel, Oldenburg, Sept. 17, 1827; *d.* Bielefeld, July 12, 1896), composer, teacher and writer on music, was at first educated at the Gymnasium at Jever, where his father held an official post. He was intended to study theology, but was at length allowed to devote himself to the art, his parents imposing the curious condition that he was to become a public performer on some instrument. To this end he took up the violoncello, learning what he could from the Stadtmusikus of the place, who was a violinist. After making himself ill with excessive practice, he returned to school, and it was not till he had finished his studies there that he finally determined, on the advice of Schumann, who had seen some of his compositions, to embrace the profession of a composer. At Christmas, in 1846, he entered the Leipzig Conservatorium, but after half a year, finding that private instruction from Ricius would be more to his advantage, he accordingly remained with him for two years. In 1850 he went to Berlin in order to study with A. B. Marx, but for some reason or other he fell under the suspicions of the police, and was not allowed to remain. He betook himself to Liszt at Weimar, where he stayed some months, after which he went to Erfurt as conductor of a small theatrical company, and subsequently in a similar capacity to Nordhausen. At last he was provided with better credentials, and succeeded in remaining in Berlin. In 1853, having finished his education with Marx, he was appointed conductor of the Singakademie at Glogau, where he remained 'till, in obedience to a call from Julius Rietz, he went to the Dresden Conservatorium as a teacher in 1865. In 1874 he settled in Hamourg, where he was for many years continuously active as a composer and as critic of the *Ham-burger Korrespondent*. In 1887 he moved to Bielefeld, to take up a post as organist, and died there. His most prominent compositions are the oratorios 'Simon Petrus,' 'Gideon,' 'König Salomo,' 'Luther in Worms,' 'Odrun'; two operas, 'Bahnesa' (three acts, finished

1881) and 'Doktor Sassafras' (neither of them performed); four ballads for chorus, 'Rolands Schwanenlied,' 'Frau Hitt,' 'Die Nonne,' 'Jung Baldurs Sieg'; two symphonies, and many chamber compositions. A memoir of Mattheson, an autobiographical sketch, and collected criticisms are his most important contributions to literature. M.

MEISTERSCHULE, see BERLIN.

MEISTERSINGER (Ger. = Master-singers), the name given to the guilds of poet-musicians which flourished in the 14th-16th centuries in various towns of Germany. The founder of the first guild is supposed to have been Heinrich von Meissen, called Frauenlob, who instituted a company at Mainz in 1311. As to the original signification of the name authorities are divided, but it seems fairly certain that as in other crafts the grades of apprentice, journeyman and master were differentiated, so the members of these guilds passed successively through the stages of Schüler, Schulfreund, Sänger, Dichter and Meister. For a list of famous mastersingers, the chief of whom was Hans Sachs, see SONG, subsection GERMANY. The guild was a kind of counterpart, in what would now be called the middle classes of German society, to the MINNESINGER, who were exclusively of noble birth. M.

MEISTERSINGER VON NÜRNBERG, DIE, opera in 3 acts; words and music by Wagner, completed in Oct. 1867, and produced at Munich, June 21, 1868 (the overture was first performed at Leipzig, Nov. 1, 1862); in England, under Richter, Drury Lane, May 30, 1882; New York, Metropolitan Opera House, Jan. 4, 1886; Covent Garden, in Italian (G. Mazzucato), July 13, 1889; in English, Carl Rosa Co., Manchester, Apr. 16, 1896; Paris, Opéra, Nov. 10, 1897. G.

MEL, RINALDO DEL, 'Gentiluomo fiammengo,' and distinguished composer of the 16th century. The date of his birth is not known, but his nationality is assured, not only by the above title, which appears on more than one of his works, but by his own words, 'la natione nostra fiammengo.' In the 'Sacrae cantiones' of 1589, he implies that Schlettstadt in Lorraine was his birthplace. He is not to be confused with Gaudio Moll, a name which Adami,¹ Liberati² and Martini³ give to GOUDIMEL (*q.v.*).

³ Giudizio di Apollo bound up with third volume of Martini's *Storia della musica*. (B.M. 557 ca.)

Having served Sebastian, King of Portugal, and his successor, Cardinal don Henriquez, as maestro de capilla, he arrived in Rome in 1580. This change in his career may be accounted for by the annexation of Portugal to Spain in that year. If Philip II. was unwilling to keep up a useless retinue in Lisbon, he would certainly make no exception in favour of 'Flemish gentlemen,' who indeed were never to his liking. At Rome, Mel entered the service of Cardinal Paleotto, and Bainsi¹ declared that he also studied under Palestrina. His publications began in 1581, with a first book of motets, *a 4-8*, and between that year and 1595 he published five books of motets and fifteen books of madrigals, besides contributing to various collections which carried his name from Rome to Venice, Nuremberg, Antwerp and Munich. (See *Q.-L.*)

Up to 1590 he probably lived chiefly in Rome, though we find him at Liège in 1587,² where some of his family were in the service of Ernest, Duke of Bavaria, in whose employ we find the composer in the following year. In 1591 he was again in the service of Cardinal Gabriel Paleotto, archbishop of Bologna, who had himself some knowledge of music.³ When the diocese of Sabina was placed under Paleotto's charge in 1591 he founded a college, improved the cathedral at Magliano and made many changes in the internal government. The appointment of a new maestro di cappella agrees well enough with these facts, and it is in the year 1591 that we hear of Mel's appointment to the cathedral and the new college. He dates from Calvi, a little town near Magliano, Mar. 20, 1593, and from Magliano⁴ itself, 1595. From this time his publications cease, and we have no further record of him. He is said to have been already well advanced in life when he left Portugal, and by this time was probably an old man. So we may assume that the end of life was near, and that he did not long survive Palestrina.

Proske prints a Litany in the 'Musica divina,' Ann. II. vol. iii. (Ratisbon, 1869), and Commer's 'Musica sacra' contains seven motets and a litany; the Motet Society published an anthem, 'O praise the Lord,' adapted by Aldrich from a work of Mel, in vol. iii. p. 128.

MELANI, a 17th-century sexton of Pistoja, eight of whose sons became eminent musicians. (1) JACOPO (*b.* Pistoja, July 6, 1623) was, with Mazzocchi and others, one of the pioneers of comic opera in Rome, and was famous for his arias on a *basso ostinato*. Of his operas which appeared between 1657-73 only three, and a

few libretti, are still in existence. (2) ALESSANDRO (*d.* Rome, 1703), maestro di cappella successively of St. Petronio, Bologna (1660), S. Maria Maggiore, Rome (from 1667), S. Luigi de Francesi, Rome (from 1672), composer of operas, oratorios, cantatas, motets and other church music, arias, etc. (3) ANTONIO, in the service of Archduke Ferdinand Karl of Austria (1659), composed *Scherzi Musicali*, etc., for 2 violins and viola (Innsbruck, 1659). (4) BARTOLOMEO (*b.* Pistoja, Mar. 6, 1634), 1657-58 singer in the Munich court chapel, when he was arrested for political intrigues. (5) DOMENICO (*d.* before Nov. 12, 1693), castrato at the Dresden court from 1654, returned to Italy in 1680 as agent of the Elector. (6) NICOLA, also castrato at the Dresden court from 1654. (7) ATTO (*b.* Pistoja, Mar. 31, 1626; *d.* 1714), castrato, sang in the title rôle of Rossi's *Orfeo* at Paris in 1647. (8) FRANCESCO MARIA, Servite monk under the name of *Filippo* (*b.* Pistoja, Nov. 3, 1628), also a castrato, who sang *Amastris* in Cavalli's 'Serso' at Paris in 1660. (For further particulars see *Riemann*; also *Q.-L.*)

MELBA, DAME NELLIE (*b.* Burnley on the 'Yarra Braes,' near Melbourne, May 19, 1861), is the professional name and title of Helen Porter Armstrong (*née* Mitchell), celebrated operatic soprano.

Her father, David Mitchell, a Scottish contractor, had settled in Australia. He was proud of his child's precocious musical talent, and allowed her to sing at a concert in the Richmond (Melbourne) Town Hall when only 6 years old. He objected, however, to her adopting music as a profession. It was only after her marriage in 1882 to Captain Charles Armstrong that the young soprano finally determined to follow a musical career; nor did she come to Europe until the spring of 1886, when, after a solitary appearance at Prince's Hall, London (June 1), she went to Paris to study under Madame Marchesi.

Her period of tutelage was rapid and brilliant, for after twelve months' work her teacher pronounced her ready for the stage, and on Oct. 12, 1887, she made her début as Gilda at the Théâtre de la Monnaie, Brussels, under the name of 'Melba,' obviously derived from that of her native city, Melbourne. She achieved instantaneous success, and was soon afterwards engaged by Harris for his first season of Italian Opera at Covent Garden in 1888, where she appeared as Lucia on May 24.

From the outset the London public was rapturous in its warmth. Calmer critics readily perceived what was still lacking to the equipment of a really great and finished artist; but none could gainsay the uncommon character of her endowments—the extraordinary beauty of her silvery tone, its bright, 'girlish' quality and remarkable evenness throughout a compass of

⁴ See dedication of 'Liber 5us motectorum' (Venice, 1595).

two and a half octaves (*b* flat to *f'''*), and above all the excellence of a method that plainly owed as much to nature as it did to art. In her brilliant execution of the most difficult *floriture* nothing impressed more than the wonderful flexibility of the organ, unless it was the un-failing ease and perfect sense of restraint with which the singer accomplished her *tours de force*. This rare faculty for using her tone within rather than beyond its true limit of resonant power has remained one of the most striking and beneficial features of Melba's method. Once, in America, she was so ill-advised as to essay the part of Brünnhilde in 'Siegfried.' But it was for a single night only. Fortunately she perceived that disaster must ensue, and took care never to repeat her error.

In the spring of 1889 Mme. Melba made her début at the Paris Opéra, and sang Ophélie with great success to the Hamlet of Lassalle. She also prepared the rôles of Marguerite and Juliette under the personal instruction of Gounod, and later in the year undertook both at Covent Garden, where 'Roméo et Juliette' was then performed in French for the first time. In conjunction with Jean and Edouard de Reszke she shared a memorable triumph in these operas, while her vocal and dramatic resources alike manifested a marked advance. Thenceforward she took part regularly in every Covent Garden season without missing a single summer. In 1890 Mme. Melba added to her repertory the parts of Elsa ('Lohengrin') and Esmeralda (in the French revival of Goring Thomas's charming opera); subsequently Violetta in 'La Traviata,' Micaela in 'Carmen,' Rosina in 'Il Barbiere,' and the Queen in 'Les Huguenots.' In 1894 she created here the rôle of Nedda in 'Pagliacci,' and ten years later that of Hélène in the opera so named, written for her by Camille Saint-Saëns.

In 1891 she accompanied the De Reszkes to St. Petersburg, by special invitation of the Czar, and was welcomed there with extraordinary warmth. In 1892 she sang at La Scala, Milan, and followed up her triumphs there with a brilliant tour through Italy. Next year she fulfilled the first of many successful engagements in the United States, making her début with the De Reszkes at Chicago during the 'World's Fair.' In 1894 she sang for the first time at the Handel Festival (Selection Day). In 1902, after an absence of sixteen years, she revisited Australia, making her reappearance in Melbourne on Sept. 27, and subsequently gave concerts at Sydney, Brisbane, Adelaide and many other towns. During the next twenty years she continued to travel much, to work constantly, and to add to her honours in different parts of the world; dividing her home-life pretty equally between England and Australia. She has also received numerous decorations, among the more prominent being that

of a Dame Commander of the Order of the British Empire.

Among her more notable tours were those in Canada and the United States in 1903. It was while travelling there that she studied the rôle of Hélène in Saint-Saëns's opera, already mentioned, which she first created at Monte Carlo in Jan. 1904, and also at Covent Garden on June 20 of the same year. During that season she organised a very successful concert at the Queen's Hall in aid of Queen Charlotte's Hospital; and, *inter alia*, sang for King Edward and Queen Alexandra at Buckingham Palace for the entertainment of the Archduke Franz Ferdinand of Austria, whose assassination at Serajevo in July 1914 was the signal for the outbreak of the Great War. On this occasion the Queen pinned on her breast the Order of Science, Art and Music. Whilst in New York the following winter she was compelled by a long and dangerous illness to cancel most of her tour, but sang once in 'La Bohème' at the Metropolitan Opera House. She appeared regularly at Covent Garden, and in 1905 her English engagements included the Bristol Musical Festival.

In January 1907 the appearances of Dame Melba at the Manhattan Opera House, New York, rescued from financial disaster Oscar Hammerstein's initial enterprise in the domain of grand opera. She then sang the parts of Lucia, Gilda, Mimi and Violetta with, if possible, greater success than ever before in America, and the houses were extraordinary. Later in the year she revisited Australia, chiefly for a holiday, but in May 1908 was back in London taking part at a gala performance at Covent Garden in honour of President Fallières. And so the record went on for year after year, until 1926, when her final farewells to the public were announced—in opera at Covent Garden in the summer, and in the concert room at the Royal Albert Hall in the autumn.

BIBL.—AGNES MURPHY, *Nellie Melba*. (1909.)

MELCHISSÉDEC, PIERRE LÉON (*b.* Clermont-Ferrand, Puy-de-Dôme, May 7, 1843; *d.* Paris, Mar. 23, 1925), baritone singer. Educated at the Paris Conservatoire, he won the 2nd prize for opera and opéra-comique in 1865, and made his début the same year at the Opéra-Comique in 'Le Toréador' and 'Le Châlet' of Adolphe Adam. He created the principal parts in 'Le Premier Jour de bonheur' (Auber, 1868), Ourrias in 'Mireille' (Gounod, 1874), and 'L'Amour africain' (Paladilhe, 1875). He went on to the Théâtre-Lyrique, first appearing there in 1876 in V. Joncière's 'Dimitri'; and there created the chief parts in 'Paul et Virginie' (V. Massé) and 'Le Timbre d'argent' (Saint-Saëns, 1877), etc.

Melchissédéc joined the Opéra, Nov. 17, 1879, in 'Les Huguenots,' and remained there

until 1892. Among his most important rôles may be mentioned those in 'Le Tribut de Zamora' (Gounod, 1881), 'Françoise de Rimini' (Ambroise Thomas, 1882), 'Le Cid' (Massenet, 1885), 'Roméo et Juliette' (Gounod, 1888), etc.

Melchissédec was professor of vocal declamation at the Conservatoire, 1894-1923; among his pupils may be mentioned Gresse, Gilly, Friant, Mmes. Chenal, Courso, A. Daumas, etc. He was an excellent singer, but was generally regarded as an inferior actor. He possessed a fine baritone, well-modulated, and was a capable vocalist. He published two works of instruction: *Pour chanter; ce qu'il faut savoir; sa méthode* (1913); and *Le Chant, la déclamation lyrique* (1924).

Bibl.—*Comœdia* (Apr. 26, 1913, Mar. 25, 1925).

J. G. P.

MELGOUNOV, JULIUS NICHOLAEVICH (b. Vetlougá, Govt. of Kostroma, Aug. 30 (Sept. 12), 1846; d. Moscow, Mar. 19/31, 1893), pianist and musical writer. In his school days he took pianoforte lessons with Dreyschöck, and at 18 made his début in St. Petersburg as a pianist. He studied theory with Laroche, and was for a short time a student of the Moscow Conservatoire. About 1875 Melgounov became acquainted with Rudolph WESTPHAL (q.v.), then professor in the Katkov Lycée at Moscow. Melgounov was attracted to Westphal's theories, and co-operated with him in bringing out ten of Bach's fugues in a special edition, with a preface entitled: 'The rhythmic execution of Bach's Fugues.' When, shortly afterwards, Westphal gave a series of sixty concerts in Germany in order to propagate his views upon musical rhythm, Melgounov accompanied him as pianist. He also toured in Russia with the violinist Laub and the violoncellist Carl Davidov. Melgounov's most important work was the elaboration of a more accurate method of noting down the folk-songs. The results of his researches in popular music are published under the following title:

'Russian Songs, written down directly from the singing of the people, transcribed for pianoforte with text; Part I. with the co-operation of Klenovsky, Moscow, 1879; Part II. with the co-operation of Blaraberg, St. Petersburg, 1885.'

His leading ideas were: that the folk-songs are based upon two diatonic scales, the major and natural minor, and that the intervals of the latter are exactly the same as those of the major reversed { $\begin{smallmatrix} e & d & c & b & a & g & f \\ 1T. & 1T. & \frac{1}{2}T. & 1T. & 1T. & 1T. & \frac{1}{2}T. \end{smallmatrix}$; that they are sung 'polyphonically,' not, as was once erroneously supposed, in unison; that their harmony is formed by working out the principal melody in independent contrapuntal parts (*podgoloski*), and unison is only found at the close of the songs, or in their rhythmic sections; that the rhythm is inseparably connected with the text and conforms to the rhythmic principles of the Greeks. Melgounov

finds no chromatic or enharmonic changes in the folk-songs, and the perfect fifth is of rare occurrence. By writing down all the secondary parts, Melgounov revealed the entire structure of the songs. As these *podgoloski* are generally free improvisations, and to write them all down from ear at once is practically impossible, it often happens in Melgounov's songs that all his secondary parts do not harmonise with the principal melody. Subsequently Mme. Eugénie Liniev carried Melgounov's work much farther, and by the help of the phonograph obtained some very accurate records of the peasant partsongs, just as they are sung by the people. Besides the above publication, Melgounov left the following treatises on this subject: *On Russian National Music* (Russ. Ethnographical Review, v. vi.), *A Correct Method of Writing Down the Folk-songs, The Rhythm of the Slavonic Folk-songs*, etc.

R. N.

MELISMA (Gr. μέλισμα, a 'song'). (1) In plain-song the term is used for a group of notes set to a single syllable; hence the more elaborate plain-song style is often called melismatic.

W. H. F.

(2) Any kind of air or melody, as opposed to recitative or other music of a purely declamatory character. It is frequently used in the sense of *floritura* or even *cadenza*.

MELL, DAVIS, familiarly called Davie Moll (b. Wilton, near Salisbury, Nov. 15, 1604), an eminent violinist and clockmaker, resident in London about the middle of the 17th century, was one of the signatories of the Cromwellian petition for the establishment of a national college of music,¹ and is honourably mentioned by Aubrey and Anthony Wood. In the year 1657 he visited Oxford, where, as we learn from Wood's *Diary*:

'Peter Pett, Will. Bull, Ken. Digby, and others of Allsoules, as also A. W. did give him a very handsome entertainment in the Taverne cal'd "The Salvation" in S. Marie's Parish. . . . The Company did look upon Mr. Mell to have a prodigious hand on the Violin, & they thought that no person, as all in London did, could goe beyond him. But, when Tho. Baltzar, an Outlander, came to Oxon. in the next year, they had other thoughts of Mr. Mell, who tho he play'd farr sweeter than Baltzar, yet Baltzar's hand was more quick, & could run it insensibly to the end of the Finger-board.'

He succeeded Lanieri as Master of the King's Band at the Restoration, and was followed, at the close of 1661, by Thomas BALTZAR (q.v.). Pieces by him are in Christopher Simpson's 'Division Violin,' 1684.

Aubrey² tells a curious story of a child of Mell's, who was cured of a crooked back by the touch of a dead hand.

W. S. R.

MELLON, ALFRED (b. London, Apr. 17, 1821; d. Mar. 27, 1867), lived first at Birmingham, became a violinist in the opera and other orchestras, and afterwards leader of the ballet at the Royal Italian Opera, Covent Garden. He

MELNGAILIS, E., see LATVIAN MUSIC.

MELODISTS' CLUB, THE (1825-1856), a society founded in 1825 by admirers of Charles Dibdin, 'for the promotion of ballad composition and melody.' In 1827 and 1828 a library was formed, and prizes offered for songs; and the prize songs were afterwards published in a volume. In 1833 two prizes of ten guineas were offered for songs in the style of Arne, Shield or Dibdin, and gained by Blowitt and Hobbs. In 1837 prizes of five guineas for words and ten guineas for music of a song were gained by Wilson and Hobbs for the song 'Send round the wine.' The object of the Club was well described by Sir H. Bishop in presenting some music to the Library in 1840:

'It is from my perfect conviction that good and appropriate melody is the chief attribute of excellence in music of every style, from the simple ballad to the most elaborate composition, that I hail the establishment of the Melodists' Club, from its patronage of native genius, and its encouragement of melody, as essentially calculated to aid the cause of the musical art in this country.'

The entrance-fee was five guineas, and the subscription eight guineas. Its professional members included Sir George Smart, Braham, Balfo, T. Cooke, Hawes, Sterndale Bennett and other eminent English musicians. Among the artists who took part in the music in its earlier day were J. B. Cramer, Moscheles, Hummel, Field, Benedict, Lipinski. T. Cooke was musical director, and John Parry hon. secretary.

C. M.

MELODRAMA (Fr. *mélodrame*; Ger. *Melodram*), a kind of dramatic composition in which the actor recites his part while the orchestra plays a more or less elaborate commentary on the situation of the moment, as in the classic instance of the grave-digging scene in 'Fidelio,' the dream in 'Egmont,' the incantation scene in 'Der Freischütz' and scenes in Mendelssohn's 'Midsummer Night's Dream.' For earlier examples see DRAMAMA.

The same principle has been adopted for concert-room performance in the shape of recitations to music, for which the term declamation has often been used, and of which examples are Schubert's 'Abschied von der Erde,' Schumann's 'Schön Hedwig' (Hebbel), op. 106; 'Vom Haideknabe' (Hebbel), and Shelley's

'Fugitives,' op. 122. Hiller's 'Vom Pagen und der Königstochter' (Geibel) is a slighter specimen. In these 'ballads for declamation' the accompaniment is always for pianoforte, and as a kind of impromptu adjunct to recitations the same instrument came into use some years ago in connexion with the recitals of Clifford Harrison. A long series of 'Recitation Music,' i.e. compositions for piano intended to accompany the declamation of various well-known poems, was written by Stanley Hawley, and a shorter series by Sir A. C. Mackenzie came out about the same time. A more important work was the musical accompaniment to Tennyson's *Enoch Arden* by Richard Strauss (1902).

The melodrama has been much cultivated in Czecho-Slovakia, e.g. see FIBICH; JANÁČEK, etc.

M.; rovd. N. C. G.

MELODY is the general term vaguely used to denote successions of single notes which are musically effective. It is sometimes used as if synonymous with TUNE or AIR (*q.v.*), but in point of fact many several portions of either tunes or airs may be accurately characterised as 'melody' which could not reasonably be made to carry the name of the whole of which they form only a part.

Tunes and airs are for the most part constructively and definitely complete, and by following certain laws in the distribution of the phrases and the balance of the groups of rhythms, convey a total impression to the hearer (see FORM); but melody has a more indefinite signification, and need not be a distinct artistic whole according to the accepted laws of art, though it is obvious that to be artistic it must conform to such laws as lie within its range. For example, the term 'melody' is often with justice applied to the inner parts of fine contrapuntal writing, and examples will occur to every one in numerous choruses, symphonic movements and other instrumental works, where it is so perfectly woven into the substance of the work that it cannot be singled out as a complete tune or air, though it nevertheless stands out from the rest by reason of its greater beauty.

The elements of effect in melody are extremely various and complicated. In the present case it will only be possible to indicate in the slightest manner some of the outlines. In the matter of rhythm there are two things which play a part—the rhythmic qualities of language, and dance rhythms. For example, a language which presents marked contrasts of emphasis in syllables which lie close together will infallibly produce corresponding rhythms in the national music; and though these may often be considerably smoothed out by civilisation and contact with other peoples, no small quantity pass into and are absorbed in the mass of general music, as characteristic Hungarian rhythms have done through the intervention of Haydn,

until 1892. Among his most important rôles may be mentioned those in 'Le Tribut de Zamora' (Gounod, 1881), 'Françoise de Rimini' (Ambroise Thomas, 1882), 'Le Cid' (Massenet, 1885), 'Roméo et Juliette' (Gounod, 1888), etc.

Melchissédéc was professor of vocal declamation at the Conservatoire, 1894-1923; among his pupils may be mentioned Gresse, Gilly, Friant, Mmes. Chenal, Courso, A. Dumas, etc. He was an excellent singer, but was generally regarded as an inferior actor. He possessed a fine baritone, well-modulated, and was a capable vocalist. He published two works of instruction: *Pour chanter; ce qu'il faut savoir; sa méthode* (1913); and *Le Chant, la déclamation lyrique* (1924).

In 1837 prizes of five guineas for words and ten guineas for music of a song were gained by Wilson and Hobbs for the song 'Send round the wine.' The object of the Club was well described by Sir H. Bishop in presenting some music to the Library in 1840:

'It is from my perfect conviction that good and appropriate melody is the chief attribute of excellence in music of every style, from the simple ballad to the most elaborate composition, that I hail the establishment of the Melodists' Club, from its patronage of native genius, and its encouragement of melody, as essentially calculated to aid the cause of the musical art in this country.'

The entrance-fee was five guineas, and the subscription eight guineas. Its professional members included Sir George Smart, Braham, Balfe, T. Cooke, Hawes, Sterndale Bennett and other eminent English musicians. Among the artists who took part in the music in its earlier day were J. B. Cramer, Moscheles, Hummel, Field, Benedict, Lipinski. T. Cooke was musical director, and John Parry hon. secretary.

C. M.

MELODRAMA (Fr. *mélodrame*; Ger. *Melodram*), a kind of dramatic composition in which the actor recites his part while the orchestra plays a more or less elaborate commentary on the situation of the moment, as in the classic instance of the grave-digging scene in 'Fidelio,' the dream in 'Egmont,' the incantation scene in 'Der Freischütz' and scenes in Mendelssohn's 'Midsummer Night's Dream.' For earlier examples see DUODRAMA.

The same principle has been adopted for concert-room performance in the shape of recitations to music, for which the term declamation has often been used, and of which examples are Schubert's 'Abschied von der Erde,' Schumann's 'Schön Hedwig' (Hebbel), op. 106; 'Vom Haideknabe' (Hebbel), and Shelley's

'Fugitives,' op. 122. Hiller's 'Vom Pagen und der Königstochter' (Geibel) is a slighter specimen. In those 'ballads for declamation' the accompaniment is always for pianoforte, and as a kind of impromptu adjunct to recitations the same instrument came into use some years ago in connexion with the recitals of Clifford Harrison. A long series of 'Recitation Music,' i.e. compositions for piano intended to accompany the declamation of various well-known poems, was written by Stanley Hawley, and a shorter series by Sir A. C. Mackenzie came out about the same time. A more important work was the musical accompaniment to Tennyson's *Enoch Arden* by Richard Strauss (1902).

The melodrama has been much cultivated in Czecho-Slovakia, e.g. see FIBICH; JANAČEK, etc.

M.; rovd. N. C. G.

MELODY is the general term vaguely used to denote successions of single notes which are musically effective. It is sometimes used as if synonymous with TUNE or AIR (*q.v.*), but in point of fact many several portions of either tunes or airs may be accurately characterised as 'melody' which could not reasonably be made to carry the name of the whole of which they form only a part.

Tunes and airs are for the most part constructively and definitely complete, and by following certain laws in the distribution of the phrases and the balance of the groups of rhythms, convey a total impression to the hearer (see FORM); but melody has a more indefinite signification, and need not be a distinct artistic whole according to the accepted laws of art, though it is obvious that to be artistic it must conform to such laws as lie within its range. For example, the term 'melody' is often with justice applied to the inner parts of fine contrapuntal writing, and examples will occur to every one in numerous choruses, symphonic movements and other instrumental works, where it is so perfectly woven into the substance of the work that it cannot be singled out as a complete tune or air, though it nevertheless stands out from the rest by reason of its greater beauty.

The elements of effect in melody are extremely various and complicated. In the present case it will only be possible to indicate in the slightest manner some of the outlines. In the matter of rhythm there are two things which play a part—the rhythmic qualities of language, and dance rhythms. For example, a language which presents marked contrasts of emphasis in syllables which lie close together will infallibly produce corresponding rhythms in the national music; and though these may often be considerably smoothed out by civilisation and contact with other peoples, no small quantity pass into and are absorbed in the mass of general music, as characteristic Hungarian rhythms have done through the intervention of Haydn,

Schubert, Brahms and other distinguished composers. (See *MAGYAR MUSIC*.)

DANCE-RHYTHMS (*q.v.*) play an equally important part, and those rhythms and motions of sound which represent or are the musical counterpart of the more dignified gestures and motions of the body which accompany certain states of feeling, which, with the ancients and some mediæval peoples, formed a beautiful element in dancing (*cf.* *BALLET-DANCING*).

In the distribution of the intervals which separate the successive sounds, harmony and harmonic devices appear to have very powerful influence. Even in the times before harmony was a recognised power in music we are often surprised to meet with devices which appear to show a perception of the elements of tonal relationship, which may indicate that a sense of harmony was developing for a great length of time in the human mind before it was definitely recognised by musicians. However, in tunes of barbaric people who have no notion of harmony whatever, passages of melody also occur which to a modern eye look exceedingly like arpeggios or analyses of familiar harmonies; and as it is next to impossible for those who are saturated with the simpler harmonic successions to realise the feelings of people who knew of nothing beyond homophonic or single-toned music, we must conclude that the authors of these tunes had a feeling for the relations of notes to one another, pure and simple, which produced intervals similar to those which we derive from familiar harmonic combinations. Thus we are driven to express their melody in terms of harmony, and to analyse it on that basis; and we are, moreover, often unavoidably deceived in this, for transcribers of national and ancient tunes, being so habituated to harmonic music and to the scales which have been adopted for the purposes of harmony, give garbled versions of the originals without being fully aware of it, or possibly thinking that the tunes were wrong and that they were setting them right. And in some cases the tunes are unmercifully twisted into forms of melody to which an harmonic accompaniment may be adjusted, and thereby their value and interest both to the philosopher and to every musician who hears with understanding ears is considerably impaired. (See *IRISH MUSIC*.)

Modern melody is almost invariably either actually derived from, or representative of, harmony, and is dependent for a great deal of its effect thereupon. In the first place it is immediately representative in one of two ways: either as the upper outline of a series of different chords, and therefore representing changing harmonies; or else by being constructed of different notes taken from the same chord, and therefore representing different phases of permanent harmony. Examples of either of these forms being kept up for any length of

time are not very common; of the first the largest number will be found among hymn tunes and other forms of simple note-against-note harmony;—the first phrase of 'Batti batti' approaches it very nearly, and the second subject of the first movement in Beethoven's Waldstein sonata, or the first four bars of 'Selig sind die Todten' in Spohr's 'Die letzten Dinge' are an exact illustration. Of the second form the first subject of Weber's sonata in A \flat is a remarkable example:

since in this no notes foreign to the chord of A \flat are interposed till the penultimate of all. The first subject of the Eroica symphony in like manner represents the chord of E \flat , and its perfectly unadorned simplicity adds force to the unexpected C \sharp , when it appears, and to its yet more unexpected resolution; the first subject of Brahms's violin concerto is a yet further example to the point:

The simplest variation of these forms is arrived at by the interposition of passing notes between notes which are part of the essential chord or chords, as in the following from 'Cet asile aimable,' in Gluck's 'Orphée':

The notes with asterisks may be all regarded as passing notes between the notes which represent the harmonies.

This often produces successions of notes which are next to each other in the scale; in other words, progression by single degrees, of which we have magnificent examples in some of the versions of the great subject of the latter part of Beethoven's ninth symphony, in the second subject of the first movement of his violin concerto, and in the last chorus of Bach's 'Matthew Passion.' When these passing notes fall on the strong beats of the bar they lead to a new element of melodic effect, both by deferring the essential note of the chord and by lessening the obviousness of its appearance, and by affording one of the many means, with suspensions, appoggiaturas and the like, of obtaining the slurred group of two notes which

is alike characteristic of Bach, Gluck, Mozart and other great inventors of melody, as in the following example from Mozart's quartet in D major :

The use of chromatic preparatory passing notes pushes the harmonic substratum still further out of sight, and gives more zest and interest to the melodic outline ; as an example may be taken the following from the second Act of 'Tristan und Isolde' :

Along with these elements of variety there are devices of turns and such embellishments, such as in the beginning of the celebrated tune in 'Der Freischütz,' which Agatha sings in the second scene of the second act :

Sequences also, and imitations and anticipations, and all the most elaborate devices of resolution, come into play, such as interpolation of notes between the discordant note and its resolution. Further, there are endless refinements of grouping of phrases, and repetition of rhythms and groups of intervals in condensed forms and in different parts of the scale, which introduce an intellectual element even into the department of pure melody.

Lastly, it may be pointed out that the order and character of the successions of harmony which any special form of melody represents has a great deal to do with its importance. Commonplace tunes represent commonplace

and trite successions of harmony in a commonplace way, while melody of a higher order usually represents successions which are in themselves more significant and more freely distributed. The giants of art have produced tunes the melody of which may represent the simplest harmonic successions, but they do it in their own way, and the result is proportionate to their powers and judgment. Unfortunately, the material of the simpler order of melody tends to be exhausted, and a large proportion of new melody has to be constructed on a more complicated basis. To take simple forms is often only to make use of what the great masters rejected ; and indeed the old forms by which tunes are constructively defined are growing so hackneyed that their introduction in many cases is a matter for great tact and consideration. More subtle means of defining the outlines of these forms are possible, as well as more subtle construction in the periods themselves. The result in both cases will be to give melody an appearance of greater expansion and continuity, which it may perfectly have without being either diffuse or chaotic, except to those who have not sufficient musical gift or cultivation to realise it. In instrumental music there is more need for distinctness in the outline of the subjects than in the music of the drama ; but even in that case it may be suggested that a thing may stand out by reason of its own proper individuality quite as well and more artistically than if it is only to be distinguished from its surroundings by having a heavy blank line round it. Melody will always be one of the most important factors in the musical art, but it has gone through different phases, and will go through more. Some insight into its direction may be gained by examination of existing examples, and comparison of average characters at different periods of the history of music, but every fresh great composer who comes is sure to be ahead of our calculations, and if he rings true will tell us things that are not dreamed of in our philosophy.

C. H. H. P.

MELOPHONE, a free-reed instrument in the shape of the guitar or sometimes the violoncello, with a rudimentary keyboard for the left hand on the neck. The bellows, concealed within the body of the instrument, are worked by the right hand. It was invented by Leclerc, a Parisian clockmaker, and introduced by Halévy into one of his operas. (See HARMONIUM.)

F. W. G.

MELOPHONIC SOCIETY, THE, established 1837, 'for the practice of the most classical specimens of choral and other music,' by band and choir, under the management of J. H. Griesbach, H. Westrop, J. Surman and H. J. Banister. The first performance, on Nov. 23, 1837, at Wornum's Music Hall, Store Street, was the 'Creation,' followed during the

season by Beethoven's Mass in C, Romberg's Ode 'The Transient and the Eternal,' 'Judas Macabæus,' and 'St. Paul.' C. M.

MELOPIANO, see SOSTINENTE PIANOFORTE.

MELSA, DANIEL (b. Warsaw, Aug. 1892), violinist, entered the Conservatoire of Lodz, Poland, at the age of 7, when he already showed some proficiency as a violinist. His studies continued till 1905, when they were interrupted by the revolution and its attendant tragedies (among the victims were his father and sister), but they were resumed in Berlin in 1906 under Carl Flesch. In 1912 he gave his first recital in the Beethoven Saal, playing 3 concertos with orchestra. The following year he appeared in Paris under Nikisch and came to London for the season 1913-14 to give 6 recitals. He was chosen by Clara Butt as soloist during her Empire tour, and has since then played in every town of importance in the United Kingdom, his appearances including 3 recitals given in London with his wife, Joan Carr. His elegance of style ingratiate him with the public, whilst his remarkably sure technique commends his playing to musicians. W. W. C.

MEMMO (MEMO), FRATE DIONISIO, a 15th-16th-century Italian musician, pupil of Giovanni di Maria, appointed Sept. 22, 1507, first organist of St. Mark's, Venice. He came to London 1516, where he was made a vicar choral, and stood in high esteem at the court of Henry VIII. (W. Nagel, *Gesch. d. Mus. am engl. Hofe*).

MENDEL, HERMANN (b. Halle, Aug. 6, 1834; d. Berlin, Oct. 26, 1876), editor of the famous dictionary of music (see DICTIONARIES OF MUSIC), studied music in Leipzig and Berlin.

From 1862-68 he carried on a music business in the latter city, and at the same time wrote in various musical periodicals and took an active part in music generally. His lives of Meyerbeer (1868) and Otto Nicolai have been published separately. In 1870 Mendel started the work already mentioned—*Musikalisches Conversations-Lexikon*—with the help of a large and distinguished staff of writers. The Lexicon was completed after his death, in 11 vols. under the editorship of Dr. August Reissmann, who brought out the twelfth, supplementary, volume in 1883. G.

MENDELSSOHN, JAKOB LUDWIG FELIX MENDELSSOHN-BARTHOLDY (b. Hamburg, Feb. 3, 1809; d. Leipzig, Nov. 4, 1847), was the composer whose versatile abilities dominated the musical taste of Germany during his life and of England for a generation or more after his death.

The article by Sir George Grove printed below was written for the first edition of this Dictionary published in 1880. It is retained as a masterly presentation of the view of Mendelssohn accepted when his reputation stood highest.

The text follows as far as possible that of the first edition. The additions contributed by F. G. Edwards to the second edition, as well as many details formerly scattered through the Dictionary under other headings, are incorporated in footnotes¹; a few cuts have been made, and subheadings have been added to facilitate reference. C.

JAKOB LUDWIG FELIX MENDELSSOHN-BARTHOLDY was born in a house in the thoroughfare now called the Grosse Michaelisstrasse.²

The family was already well known from Moses Mendelssohn, the grandfather of Felix, 'The Modern Plato,' whose *Phädon*, a dialogue upon the immortality of the soul, based on the *Phædo* of Plato, was translated, long before the birth of his illustrious grandson, into almost every European (and at least one Asiatic) language.³ Moses (b. Dessau, Sept. 6, 1729; d. Berlin, Jan. 4, 1786), was the son of Mendel, a poor Jewish schoolmaster of Dessau, on the Elbe. The name Mendelssohn, i.e. 'son of Mendel,' is the ordinary Jewish, oriental way of forming a name. Moses migrated at 14 years old to Berlin, settled there in 1762, married Fromet, daughter of Abraham Gugenheim, of Hamburg, had many children, of whom six attained maturity, three sons and three daughters, published his *Phädon* at Berlin in 1767,

² Ferdinand Dorn was destined to become so great a friend of Mendelssohn's, was born in the same house the year after. The house is at the corner of the Brunnenstrasse, and is now, through the affectionate care of Mr. and Madame Otto Goldschmidt, decorated with a memorial tablet over the front door. The house was numbered 14 when Grove wrote and later numbered 54.

³ Dutch (Hague, 1760); French, 2 versions (Paris, 1772; Berlin, 1772); Italian, 2 do. (Chur, 1773; Parma, 1800); Danish (Copenhagen, 1779); Russian (Berlin, 1760); English (London, 1769); also Russian, Polish and Hungarian. It is a curious evidence of the slowness with which music penetrated into literary circles in England that the excellent article on Moses Mendelssohn in the *Penny Cyclopædia*, though published in 1839, makes no mention of Felix, who had then been five times in this country. The '*Phädon*' attracted the notice of no less a person than Mirabeau.—*See M. Mendelssohn*, etc. London, 1877.

and died there. He was a small, humpbacked man, with a keen, eager face, bright eyes, and a humorous mouth. The first peculiarity was traceable in his grandchild Fanny, and the bright eyes were one of Felix's most noticeable characteristics. After the death of Moses his widow left Berlin with Joseph, the eldest son, and returned to her native city.

Abraham, the second son (b. Dec. 11, 1776), went to Paris, and in 1803 was cashier in Fould's bank there. In 1804 he resigned this post and went into partnership with his elder brother Joseph; married, Dec. 26, 1804, Lea Salomon (b. Mar. 26, 1777), of a Jewish family in Berlin, and settled in Hamburg, carrying on his business at the house above mentioned, and having also a house out of town called 'Marten's Mühle.' He remained in Hamburg till 1811, and there were born to him Fanny Cécilie (Nov. 14, 1805), Jakob Ludwig Felix (Feb. 3, 1809), and Rebecka (Apr. 11, 1811). During the French occupation of Hamburg, life became intolerable, and shortly after Rebecka's birth the whole family escaped in disguise to Berlin, where they started the eminent banking-house, and lived in a large house on the Neue Promenade, in the N.E. quarter of the town, a broad open street or place between the Spree and the Haacksche Markt, with houses on one side only, the other side lying open to a canal with trees, a sufficiently retired spot as late as 1820 for Felix and his friends to play in front of it.¹ There, eleven days after the battle of Leipzig, Abraham's second son and youngest child, Paul, was born (Oct. 30, 1813). The daughters of Moses Mendelssohn, Dorothea and Henriette, became Roman Catholics. Dorothea married Friedrich von Schlegel, and Henriette was governess to Fanny, the only daughter of General Sebastiani, afterwards (1847) so unfortunate as the Duchesse de Praslin. The sons remained Jews; but at length Abraham saw that the change was inevitable, and decided² to have his children baptized and brought up as Protestant Christians. This decision was taken on the advice and example of his wife's brother Salomon Bartholdy, to whom also is due the adoption of the name

Bartholdy, 'after the former proprietor of the garden belonging to the family.' He himself had taken it, and he urged it on his brother-in-law as a means of distinction from the rest of the family. Salomon was a man of mark. He resided in Rome for some time as Prussian Consul-General; had his villa on Monte Pincio (Casa Bartholdy) decorated with frescoes,³ by Veit, Schadow, Cornelius, Overbeck and Schnorr, collected objects of art, and died there in 1827, leaving his fortune to his sister Lea. He was cast off by his mother for his conversion, and was only reconciled long after, at the entreaty of Fanny.⁴ At a later date Abraham and Lea were received into the Christian Church at Frankfort, and Lea took the additional names of Felicia Paulina, from her sons.

Abraham Mendelssohn was accustomed to describe his position in life by saying 'formerly⁵ I was the son of my father, now I am the father of my son.'⁶ But though not so prominent as either, he was a man of strong character, wise judgment and very remarkable ability. These qualities are strikingly obvious in the success of his method for the education of his children, and in the few of his letters⁷ which are published; and they are testified to in a very remarkable manner by his son in many passages of his letters, and in the thorough deference which he always pays to the judgment of his father, not only on matters relating to the conduct of life, but on points of art. Though not, like Leopold Mozart, a technical musician, and apparently having no acquaintance with the art, he had yet an insight into it which many musicians might envy. 'I am often,' says his son, 'quite unable to understand how it is possible to have so accurate a judgment about music without being a technical musician, and if I could only say what I feel in the same clear and intelligent manner that you always do, I would certainly

never make another confused speech as long as I live.' ¹ Or again, this time after his death, 'not only my father, but . . . my teacher both in art and in life.' ²

Though apparently cold in his manners, and somewhat stern in his tone, and towards the end perhaps unduly irritable, Abraham Mendelssohn was greatly beloved by his wife and children. Felix, in particular, is described as 'enthusiastically, almost fanatically, fond of him,' ³ and the letters show how close was the confidence which existed between them. Hardly less remarkable was the mother. She was one of those rare persons whose influence seems to be almost in proportion to the absence of any attempt to exert it. Hiller when a boy saw her once, and the impression made upon him by the power of her quiet kindness and gentleness remained fresh in his mind after more than half a century. ⁴ When her house was thronged with the intellect and wit of Berlin, she was the centre of the circle and the leader of the conversation. ⁵ Her letters, of which large numbers exist in manuscript, are full of cleverness and character. Her practical sense of the value of money comes out in her letters to Ferdinand David. ⁶ The education of her children was her great object in life. She was strict—we may now think over strict ⁷; but no one who looks at the result in the character of her children can say that her method was not a wise one. They loved her dearly to the end, and the last letters which Felix wrote to her are full of an overflowing tenderness and a natural confidential intimacy which nothing can surpass. Calm and reserved like her husband, she was full of feeling, and had on occasion bursts of passion. Felix's intention to leave Berlin affected her to a 'terrible' degree—a degree which surprised him. He confesses that his yielding to the wishes of the King, after having made up his mind to retire, was due solely to her. 'You think that in my official position I could do nothing else. It was not that. It was my mother.' ⁸

How far she was herself a pianoforte player we are not told, but the remark which she made after Fanny's birth, 'that the child had got Bach-fugue fingers,' shows that she knew a good deal about the matter. We learn also that she herself for some time taught the two eldest children music, beginning with lessons five minutes long, and gradually increasing the time until they went through a regular course of instruction. ⁹ For many years Felix and Fanny never practised or played without the mother sitting by them, knitting in hand.

EARLY LIFE.—Felix was scarcely 3 when

his family escaped to Berlin. The first definite event of which we hear after this is a visit to Paris by Joseph and Abraham in 1816, for the liquidation of the indemnity to be paid by France to Prussia on account of the war. Abraham took his family with him, and Felix and Fanny, then 7 and 11 respectively, were taught the piano by Madame Bigot, a remarkable musician, and apparently an excellent teacher. She was the daughter of a Madame Kiéné, and in 1816 was 30 years old. Miniatures of the four children were taken during this visit, which are still in existence. ¹⁰ Soon after their return from Paris to the grandmother's house at the Neue Promenade, where the family still lived, the children's education seems to have begun systematically. Heyso ¹¹ was their tutor for general subjects, Ludwig Berger for the piano, Zelter for thorough-bass and composition, Henning for the violin and Rüssel for landscape. Felix learned Greek with Rebecka, two years his junior, and advanced as far as Aeschylus. ¹²

On Oct. 28, 1818, he made his first appearance in public at a concert given by a certain Herr Gugel, in which he played the pianoforte part of a trio for pianoforte and two horns by Woelffl, and was much applauded. ¹³ The children were kept very closely to their lessons, and Felix is remembered in after-life to have said how much they enjoyed their Sundays, because then they were not forced to get up at 5 o'clock to work. Early in his eleventh year, on Apr. 11, 1819, he entered the singing-class of the Singakademie as an alto, for the Friday practisings. There and elsewhere 'he took his place,' says Devrient, ¹⁴ 'amongst the grown-up people in his child's dress, a tight-fitting jacket, cut very low at the neck, over which the wide trousers were buttoned, into the slanting pockets of these the little fellow liked to thrust his hands, rocking his curly head [he had long brown curls] from side to side, and shifting restlessly from one foot to the other.'

With 1820, that is to say with his twelfth year, Felix seems to have begun systematically to compose; at least with that year begins the invaluable series of forty-four volumes, in which Mendelssohn's methodical habits have preserved a collection of autographs or copies of a great part of his works, published and unpublished, down to the time of his death, the majority carefully inscribed with both date and place—which are now deposited in the State Library at Berlin.

To the year 1820 are attributable between fifty and sixty movements, including amongst them a trio for pf. and strings (three movements); a sonata in F for pf. and violin (three do.); two movements in D minor for the same; two full sonatas for pf. solo; the beginning of a

¹⁴ *Dev.* p. 2.

third in G minor, finished the next year, and published in 1808 (as op. 105); six pieces for pf. solo; three pieces for the same instrument, four hands; four pieces for organ; three songs; two partsongs for men's voices; a cantata, 'In rührend feierlichen Tönen'; and a Lustspiel, or little comedy, for voices and pf. in three scenes, beginning 'Ich. J. Mendelssohn.' The earliest date is that to the cantata—Jan. 13, 1820. The extraordinary neatness and finish, which characterise Mendelssohn's MSS. to the end, are observable in the earliest of these childish productions, and the mysterious letters L.v.g.G., or H. d. m., so familiar to those who know his latest scores, are usually at the head of each.

Among the pieces for 1821 are five sinfonics for string quartet, each in three movements; nine fugues for ditto; the completion of the G minor pf. sonata (op. 105); motets for four voices; a couple of songs; a couple of études for pf. solo; two one-act operas, 'Soldatenliebschaft' and 'Die beiden Pädagogen';¹ and half a third opera, 'Die wandernden Comödianten.' 1821 was the year of his acquaintance with Weber, then in Berlin for the production of 'Der Freischütz,' and of an enthusiasm on the part of the boy for that romantic composer which he never lost.² This, too, was the year of his first visit to Goethe. Zelter took his pupil to Weimar in November, and they passed sixteen days under the old poet's roof.³

In 1822 Felix made a second appearance in public of a more serious nature than before, viz. on March 31, at a concert of Aloys Schmitt's, in which he played with Schmitt a duet of Dussek's for two pianos. In the summer the whole family made a tour in Switzerland. Starting on July 6, they went by Cassel (for Spohr), Frankfurt, Darmstadt, Schaffhausen, Amsteg, Interlaken, Vevey and Chamounix; a large and merry party of ten, besides servants. The tour was taken at great leisure, and on the return two important halts were made—first at Frankfurt, to make the acquaintance of Schelble, the conductor of the famous Cäcilien-Verein, whom Felix astonished by extemporising on Bach's motets; and at Weimar, for a second visit to Goethe.⁴

At Secheron, near Geneva, two songs were written (Sept. 18, 1822); and the pianoforte quartet in C minor, afterwards published as op. 1, was begun to be put on paper (the autograph being marked 'Begun at Secheron, Sept. 20, 1822'), and was finished after the return home. Besides this, the records of these two years (1822 and 1823) contain six more symphonies, Nos. 7, 8, 9, 10, 11, 12; six detached pieces for strings; five concertos for solo instruments with quartet accompaniment, viz. one for violin solo, one for pf. solo, one for pf. and violin, and

two for two pfs.; two quartets for pf. and strings, viz. in C minor (op. 1) and in F minor (op. 2); sonata for pf. and violin (op. 4) and for pf. and viola (MS.); a fantasia and three other pieces for the organ; a fugue and fantasia for pf.; a Kyrie for two choirs; a psalm, three songs, a piece for contralto solo and strings, in three movements, to Italian text; two songs for men's voices, and the completion of the fourth opera, 'Die beiden Neffen,' or 'Der Onkel aus Boston,' which was a full-grown piece in three acts. The symphonies show a similar advance. They are in four movements instead of three as before, and the length of the movements increases. No. 8, in D, written between Nov. 6 and Nov. 27 (1822), after the return from Switzerland, has an *Adagio e grave* before the opening *Allegro*. The slow movement is for three violas and bass, and the finale has a prominent part for the violoncello. This symphony must have pleased the composer or some of his audience in whose judgment he believed, since within a month he began to re-score it for full orchestra. He wrote a new trio for the minuet, and in this form it became symphony No. 9. The three last of the six are for quintet, and the scherzos of Nos. 10 and 12 are founded on Swiss tunes, in No. 12 with the addition of triangles, cymbals and drums. The independent violoncello part is conspicuous throughout. This advance in his music is in keeping with the change going on in Felix himself. He was now nearly 14, was growing fast,⁵ his features and his expression were altering and maturing, his hair was cut short,⁶ and he was put into jackets and trousers. His extemporising—which he had begun to practise early in 1821⁷—was already remarkable,⁸ and there was a dash of audacity in it hardly characteristic of the mature man. Thus Goethe wished to hear a certain fugue of Bach's, and as Felix could not remember it all he developed it himself at great length, which he would hardly have done later.⁹ After his return home, on Dec. 5, 1822, he appeared at a concert given by Madame Anna Milder, when he played a pianoforte concerto of his own, probably that in A minor with quintet accompaniment.¹⁰

The same incessant and varied production of previous years marks those of 1822 and 1823. It must not be supposed that the symphonies, operas, quartets, concertos and other work, mentioned were written as exercises only. It had been the custom in the Mendelssohn house for some time past to have musical parties on alternate Sunday mornings, with a small orchestra, in the large dining-room of the house, and the programmes included one or more of Felix's compositions. As a rule the pianoforte part was taken by himself or Fanny, or both, while Rebecka sang, and Paul played the violon-

cello. But Felix always conducted, even when so small as to have to stand on a stool to be seen; thus he enjoyed the benefit not only of hearing his compositions played (a benefit for which less fortunate composers—Schubert, for example—have sighed in vain) but of the practice in conducting and in playing before an audience.¹ The size of the room was not sufficient for a large audience, but on these occasions it was always full, and few musicians of note passed through Berlin without being present.² In performing the operettas and operas, no attempt was made to act them. The characters were distributed as far as the music went, but the dialogue was read out from the piano, and the chorus sat round the dining-table. Zelter, in strong contrast to his usual habit of impartial neglect of his pupils, was not only regularly there, but would criticise the piece at the close of the performance, and if he often praised would sometimes blame. The comments of his hearers, however, were received by Felix with perfect simplicity. Devrient has well described how entirely the music itself was his aim,³ and how completely subordinated were self-consciousness and vanity to the desire of learning, testing and progressing in his art. These Sunday performances, however, were only one feature of the artistic and intellectual life of the house. Music went on every evening more or less, theatricals, impromptu or studied, were often got up, and there was a constant flux and reflux of young, clever, distinguished people, who made the suppers delightfully gay and noisy, and among whom Felix was the favourite.

The full rehearsal of his fourth opera, 'Die beiden Neffen,' on his fifteenth birthday, Feb. 3, 1824, was an event in the boy's life. At supper, after the conclusion of the work, Zelter, adopting freemason phraseology, raised him from the grade of 'apprentice,' and pronounced him an 'assistant,' 'in the name of Mozart, and of Haydn, and of old Bach.'⁴ A great incentive to his progress had been given shortly before this in the score of Bach's Passion, copied by Zelter's express permission from the MS. transcript in the Singakademie, and given him by his grandmother at Christmas, 1823. The copy was made by Eduard Rietz,⁵ who had succeeded Henning as his violin teacher, and to whom he was deeply attached. His confirmation took place about this date, under Wilmsen, a well-known clergyman of Berlin.

In the compositions of 1824 there is a great advance. The symphony in C minor (op. 11)—which we now know as 'No. 1,' but which on the autograph in the library of the Philharmonic

Society is marked 'No. XIII.'—was composed between March 3 and 31. The settest for pt. and strings (op. 110), the pianoforte quartet in B minor⁶ (op. 3), a fantasia for four hands (pf.), and a motet in five numbers are all amongst the works of this year. An important event in the summer of 1824 was a visit of the father, Felix, and Rebecka, to Dobberan, a bathing-place on the shores of the Baltic near Rostock. For the wind-band at the bath-establishment at Dobberan Felix wrote an overture which he afterwards scored for a full military band and published as op. 24. But the chief result of the visit was that he there for the first time saw the sea, and received those impressions and images which afterwards found their tangible shape in the *Meeresstille* overture.

Among the great artists who came into contact with Felix at this time was Moscheles, then on his way from Vienna to Paris and London. He was already famous as a player, and Frau Mendelssohn calls him 'the prince of pianists.' He remained in Berlin for six weeks in Nov. and Dec. 1824, and was almost daily at the Mendelssohns'; and after a time, at the urgent request of the parents, and with great hesitation on his own part, gave Felix regular lessons on the pianoforte every other day. Moscheles was then 30. It is pleasant to read of his unfeigned love and admiration for Felix and his home—

'a family such as I have never known before; Felix a mature artist, and yet but fifteen; Fanny extraordinarily gifted, playing Bach's fugues by heart and with astonishing correctness—in fact, a thorough musician. The parents gave me the impression of people of the highest cultivation. They are very far from being over-proud of their children; indeed, they are in anxiety about Felix's future, whether his gifts are lasting, and will lead to a solid, permanent future, or whether he may not suddenly collapse, like so many other gifted children.'

'He has no need of lessons; if he wishes to take a hint from me as to anything new to him, he can easily do so.'

Such remarks as these do honour to all concerned, and it is delightful to find Mendelssohn, years afterwards, in the full glory of his great fame, referring to these very lessons as having fanned the sacred fire within him and urged him on to enthusiasm.⁷

Moscheles has preserved two of the Sunday morning programmes:

'Nov. 28. Morning music at the Mendelssohns':—Felix's C minor quartet; his D major symphony; Concerto by Bach (Fanny); Duet for two pianos in D minor, Arnold.'

'Dec. 12. Sunday music at Mendelssohns':—Felix's F minor quartet. I played my Duet in G for two pianos. Little Schilling played Hummel's Trio in G.'

Moscheles was followed by Spohr, who came to superintend the first performance at Berlin of his opera 'Jessonda' (Feb. 14, 1825). He was often at the house, and on very intimate terms, though he does not mention the fact in his Autobiography.⁸

¹ It seems that he accompanied the quartet symphonies on the piano. Dorn, in his *Recollections*, expressly says so, and the slow movement of the Symphony No. 10 contains a note in Mendelssohn's own writing, 'Das Klavier mit dem Baese,' which seems to prove it. The practice, therefore, did not end with the 18th century, as has been supposed (Prof. E. F. Röntgen, *On the Growth of the Modern Orchestra, Proceedings of the Musical Association, 1878-79*, p. 371).

² *F.M.* i. 137. ³ *Den.* p. 4. ⁴ *F.M.* p. 140; *Den.* p. 399. ⁵ Or Rietz, as Mendelssohn always spells it. He seems to have been on the whole Felix's most intimate early friend.

⁶ Last movement dated Jan. 18, 1825. ⁷ *Mos.* i. 99; ii. 161. ⁸ *F.M.* i. 144.

One or two accounts by competent judges of Felix's style of playing at this time have been preserved. Hiller was with him in Frankfurt in the spring of 1825, and speaks both of his extemporising and of his playing the music of others.¹ With the latter he delighted both Hiller and André (who relished neither his face, his ideas, nor his manners) by playing the *Allegretto* of Beethoven's Seventh Symphony in such a 'powerful orchestral style' as fairly to stop André's mouth. With the former he carried Hiller away by extemporising on Handel's choruses in 'Judas,' as he had done Schelble, in the same room three years before, on subjects from Bach's motets. This time his playing was quite in the vein of his subject; 'the figures' which he used were thoroughly Handelian, and the power and clearness of his passages in thirds, sixths and octaves were really grand, and yet it all belonged to the subject-matter, thoroughly true, genuine, living music, with no trace of display.' Dorn is more explicit as to his accompanying—the duet in 'Fidelio.' 'He astonished me in the passage, "Du wieder nun in meinen Armen!" by the way in which he represented the violoncello and the bass parts on the piano, playing them two octaves apart. I asked him why he chose that striking way of rendering the passage, and he explained it all to me in the kindest manner. How many times since,' says Dorn, 'has that duet been sung in Berlin to the pianoforte, but how rarely has it been accompanied in such a manner!'² He rarely played from book, either at this or any other time of his life. Even works like Beethoven's Ninth Symphony, and the sonata in B flat (op. 106), he knew by heart.³ One of the grounds of Spontini's enmity to him is said to have been a performance of the Ninth Symphony by Felix, without book, before Spontini himself had even heard it, and it is known on the best authority that he played the symphony through by heart only a few months before his death. Here we may say that he had a passion for Beethoven's latest works, his acquaintance with which dated from their publication, Beethoven's last years (1820-27) exactly corresponding with his own growth to maturity. It was almost the only subject on which he disagreed with his father.⁴ On the other hand, the devotion of such very conservative artists as David, Rietz and Sterndale Bennett to those works is most probably due to Mendelssohn's influence. Marx⁵ challenges his reading of Beethoven; but this is to fly in the face of the judgment of all other critics.

In 1825 the older Mendelssohn made a journey to Paris, for the purpose of fetching his sister Henriette back to Germany, and took Felix with him. They arrived on Mar. 22.

One of the first things he mentions is the astonishment of his relatives at finding him no longer a child.⁶ He plunged at once into musical society. Hummel, Onslow, Boucher, Herz, Halévy, Kalkbrenner, Moscheles (on his way back from Hamburg to London, with his bride), Pixis, Rode, Baillet, Kreutzer, Rossini, Paer, Meyerbeer, Plantade and many more, were there, and all glad to make acquaintance with the wonderful boy. At Madame Kiéné's—Madame Bigot's mother—he played his new pianoforte quartet (in B minor) with Baillet and others, and with the greatest success.

The French musicians, however, made but a bad impression on him. Partly, no doubt, this is exaggerated in his letters, as in his criticism on Auber's 'Léocadie';⁷ but the ignorance of German music—even Onslow,⁸ for example, had never heard a note of 'Fidelio'—and the insults to some of its masterpieces (such as the transformation of 'Der Freischütz' into 'Robin des bois,'⁹ and the comparison of a passage in Bach's A minor organ prelude to a favourite duet of Monsigny), and the general devotion to effect and outside glitter—these were just the things to enrage the lad at that enthusiastic age. With Cherubini their intercourse was very satisfactory. The old Florentine was more than civil to Felix, and his expressions of satisfaction (so very rare in his mouth) must have given the father the encouragement which he was so slow to take in the great future of his boy.¹⁰ Felix describes him in a few words as 'an extinct volcano, now and then blazing up, but all covered with ashes and stones.' He wrote a Kyrie 'a 5 voci and grandissimo orchestra' at the instance of Cherubini,¹¹ which he describes as 'bigger than anything he had yet done.'¹² The Kyrie seems to have been lost. Through all this the letters home are as many as ever, full of music, descriptions and jokes—often very bad ones. Here, for instance, is a good professional query: 'Ask Ritz if he knows what *Fes moll* is.'

On May 19, 1825, the father and son left Paris with Henriette ('Tanto Jette'), who had retired from her post at General Sebastiani's with an ample pension, and thenceforward resided at Berlin. On the road home they paid a short visit (the third) to Goethe, at Weimar. Felix played the B minor pianoforte quartet (op. 3), and delighted the poet by dedicating it to him.¹³ It is a marvellous work for a boy of 16, and an enormous advance on either of its two predecessors; but probably no one—not even the composer—suspected that

¹⁰ Marx (*Erinn.* II, 113, 114) says that the father's hesitation as to his son's future was so great, that, even to a late date, he constantly urged him to go into business. He believed that his son had no genius for music, and that it was all the happier for him that he had not.

the scherzo (in F sharp minor, 3-8) was to be the first of a 'family of scherzi which, if he had produced nothing else, would stamp him as an inventor in the most emphatic signification of the word.' It must be admitted that Goethe made him a very poor return for his charming music. Anything more stiff and ungraceful than the verses which he wrote for him, and which are given in *Goethe and Mendelssohn*, it would be difficult to find, unless it be another stanza, also addressed to Felix, and printed in vol. i. p. 477 of the poet's works (Stuttgart, 1860):

Wenn das Talent verständig wal-
tet,
Wirksame Tugend nie versätet.
Wer Menschen gründlich konnt'
erfreuen
Der darf sich vor der Zeit nicht
scheuen;
Und mächtet ihr ihm Beifall
geben,
So gebt ihn uns, die wir ihn
frisch beleben.

If Talent reigns with Wisdom
grate,
Virtue is never out of date.
He who can give us pleasure true
Need never fear what time can
do;
And will you Talent your approval
give?
Then give it us who make her
newly live.

They were at home before the end of May. The fiery Capriccio in F sharp minor for pf. (afterwards published as op. 5), so full of the spirit of Bach, is dated July 23 of this year, and the score of 'Camacho's Wedding'—an opera in two acts by Klingemann, founded on an episode in 'Don Quixote'—is dated Aug. 10. The Capriccio was a great favourite with him, and he called it *une absurdité*.

The Mendelssohn-Bartholdy family was beginning to outgrow the accommodation afforded by the grandmother's roof, and at the end of the summer of 1825 they removed from No. 7 Neue Promenade to a large house and grounds which had formerly belonged to the noble family of Reck, namely to No. 3 of the Leipziger Strasse, the address so familiar to all readers of Felix's subsequent letters. If we were writing the life of an ancient prophet or poet, we should take the name of the 'Leipzig Road' as a prediction of his ultimate establishment in that town; but no token of such an event was visible at the time. The new residence lay in a part of Berlin which was then very remote, close to the Potsdam Gate, on the edge of the old Thiergarten, or deer park, of Frederick the Great, so far from all the accustomed haunts of their friends that at first the laments were loud. The house was of a dignified, old-fashioned kind, with spacious and lofty rooms; behind it a large court with offices, and behind that again a beautiful stretch of ground, half park, half garden, with noble trees, lilacs and other flowering shrubs, turf, alleys, walks, banks, summer-houses and seats—the whole running far back, covering about ten acres, and being virtually in the country. Its advantages for music were great. The house itself contained a room precisely fitted for large music parties or private theatricals; and at the back of the court, and dividing it from the garden, there was a separate building called the 'Gartenhaus,' the middle of which formed a hall capable of

containing several hundred persons, with glass doors opening right on to the lawns and alleys—in short, a perfect place for the Sunday music.¹ Though not without its drawbacks in winter—reminding one of Hensel's almost pathetic description of the normal condition of too many an English house—it was an ideal summer home, and '3, Leipziger Strasse' is in Mendelssohn's mouth a personality, to which he always turned with longing, and which he loved as much as he hated the rest of Berlin. It was identified with the Mendelssohn-Bartholdys till his death, after which it was sold to the State; and the Herrenhaus, or House of Lords of the German government, now stands on the site of the former court and Gartenhaus.

FIRST WORKS OF MATURITY.—Devrient takes the completion of 'Camacho' and the leaving the grandmother's house as the last acts of Felix's musical minority; and he is hardly wrong, for the next composition was a wonderful leap into maturity.² It was no other than the octet for strings (afterwards published as op. 20), which he finished towards the end of Oct. 1825, and dedicated to Eduard Ritz as a birthday gift. It is the first of his works which can be said to have fully maintained its ground on its own merits, and is a truly astonishing composition for a boy half-way through his seventeenth year. There is a radiance, a freedom and an individuality in the style which are far ahead of the 13th symphony, or any other of the previous instrumental works, and it is steeped throughout in that inexpressible captivating charm which is so remarkable in all Mendelssohn's best compositions. The scherzo especially (G minor, 2-4) is a movement of extraordinary lightness and grace, and the Finale, besides being a masterly piece of counterpoint (it is a fugue), contains in the introduction of the subject of the scherzo a very early instance of 'transformation of themes.' Felix had confided to Fanny³ that his motto for the scherzo was the following stanza in the Intermezzo of 'Faust':

Orchester.—(*pianissimo*)

Wolkenzug und Nebelflor	Floating cloud and trailing mist
Erhehlen sich von oben:	Bright'ning o'er us hover:
Luft im Laub, und Wind im Rohr,	Air with the brake, the rushes
Und Alles ist zerstoben.	shake—
	And all their pomp is over.

and never was a motto more perfectly carried out in execution. The whole of the last part, so light and airy—and the end, in particular, where the fiddles run softly up to the high G, accompanied only with staccato chords—is a perfect illustration of 'Alles ist zerstoben.' He afterwards instrumented it for full orchestra, but it is hard to say if it is improved by the process.⁴ The so-called Trumpet Overture, in C (op. 101), was almost certainly composed this autumn, and was first heard at a concert given by Maurer, in Berlin, on Nov. 2, at which Felix played the pianoforte part of Beethoven's

¹ F.M. i. 142.

³ F.M. i. 164.

⁴ MS. in the possession of the Philharmonic Society (London).

Choral Fantasia.¹ This overture was a special favourite of Abraham Mendelssohn's, who said that he should like to hear it while he died. It long remained in MS. in the hands of the Philharmonic Society, and was not published until many years after the death of the composer. 1826 opens with the string quintet in A (op. 18),² which, if not perhaps so great as the octet, is certainly on the same side of the line, and the scherzo of which, in fugue form, is a worthy companion to its predecessors. The pianoforte sonata in E (op. 6) is of this year (Mar. 22, 1826). So is an interesting-looking Andante and Allegro (June 27), written for the wind band of a Beer-garden which he used to pass on his way to bathe; the MS. is safe in the hands of Dr. Paul Mendelssohn-Bartholdy's widow at Berlin.

But all these were surpassed by the overture to 'A Midsummer Night's Dream,' which was composed during the peculiarly fine summer of 1826, under the charming conditions of life in the new garden,³ and the score of which is signed 'Berlin, August 6, 1826.'⁴ It appears to have been the immediate result of a closer acquaintance with Shakespeare, through the medium of Schlegel and Tieck's version, which he and his sisters read this year for the first time. Marx claims to have been much consulted during its progress, and even to have suggested essential modifications.⁵ Fanny also no doubt was in this, as in other instances, her brother's confidante, but the result must have exceeded even the fondest wishes of those who knew him best. It is asserted by one who has the best right to judge, and is not prone to exaggeration,⁶ 'that no one piece of music contains so many points of harmony and orchestration that had never been written before as does this, and they have none of them the air of experiment, but seem all to have been written with certainty of their success.' In this wonderful overture, as in the octet and quintet, the airy fairy lightness, and the peculiar youthful grace, are not less remarkable than the strength of construction and solidity of workmanship which underlie and support them. Not the least singular thing about it is the exact manner in which it is found to fit into the music for the whole play when that music was composed seventeen years later. The *motives* of the overture all turn out to have their native places in the drama.⁷ After many a performance as a duet on the piano, the overture was played by

an orchestra in the Mendelssohns' garden-house, to a crowded audience, and its first production in public seems to have been at Stettin, in Feb. 1827, whither Felix went in very severe weather to conduct it.⁸ With the composition of this work he may be said to have taken his final musical degree, and his lessons with Zelter were discontinued.

'Camacho' had been submitted to Spontini as General Music-Director in the preceding year by Felix himself. Spontini was then, by an odd freak of fortune, living in a house which had for some time been occupied by the Mendelssohns in the early part of their residence in Berlin, viz. 28 Markgrafen Strasse, opposite the Catholic church. Taking the young composer by the arm, Spontini led him to the window, and pointing to the dome across the street, said, 'Mon ami, il vous faut des idées grandes comme cette coupole.'⁹ This from a man of 52, in the highest position, to a boy of 17, could hardly have been meant for anything but kindly, though pompous, advice. But it was not so taken. The Mendelssohns and Spontini were not only of radically different natures, but they belonged to opposite parties in music, and there was considerable friction in their intercourse. At length, early in 1827, after various obstructions on Spontini's part, 'Camacho' was given out for rehearsal and study, and on Apr. 29 was produced. The house—not the Opera-house, but the smaller theatre—was crowded with friends, and the applause vehement; at the end the composer was loudly called for, but he had left the theatre, and Devrient had to appear in his stead. Owing to the illness of Blum, the tenor, the second performance was postponed, and the piece was never again brought forward. Partly from the many curious obstructions which arose in the course of the rehearsals, and the personal criticisms which followed it, partly perhaps from a just feeling that the libretto was poor and his music somewhat exaggerated, but mainly no doubt from the fact that during two such progressive years as had passed since he wrote the piece he had outgrown his work,¹⁰ Felix seems to have so far lost interest in it as not to press for another performance. The music was published complete in pianoforte score by Laue, of Berlin, in 1828.¹¹

A nature so keenly sensitive as his could hardly be expected to pass with impunity through such worries as attended the production of the opera. He was so sincere and honest

¹ *A.M.Z.*, 1825, p. 825. The autograph was once in possession of Mr. Schlemitz. From him it went into the omnivorous paw of Julius Rietz; it is now in the State Library at Berlin. The MS. in our Philharmonic Library is a copy with corrections made by Mendelssohn.

² Zelter's letter to Goethe of June 6, 1826. This MS., too, seems to have disappeared.

³ The first letter that I have found dated from the Leipzig Strasse, 'am 7. Juli 1826, im Garten,' says, 'to-day or to-morrow I shall begin to dream the Midsummer night's dream.'

⁴ The score was published with those of the 'Hebrides' and 'Meeresstille' as '3 Concert Overtures' by B. & H., Mar. or Apr. 1826.

⁸ *F.M.* I. 156. Felix's MS. letter from Stettin, Feb. 17, 1827, is the first in which his father is addressed as 'Herr Stadtrath.'

⁹ 'My friend, your ideas must be grand—grand as that dome.' Marx, *Erinn.* I. 247.

¹⁰ 'For God's sake, do not let my old sin of Camacho's Wedding be stirred up again!' (Letter to Wm. Bartholomew, July 17, 1843 *Polka*, 217.) In the same manner in 1835 he protests to Mrs. Voigt against the performance of his C minor Symphony—at least without the explanation that it was written by a boy of barely fifteen.

¹¹ *Acht Briefe von Felix Mendelssohn-Bartholdy*, Leipzig, 1871, p. 20.)

¹² In the original Grove here drew attention to the use of 'Leitmotive' the part of Don Quixote and claimed the term as Mendelssohn's own invention.

that the sneers of the press irritated him unduly. A year before (in 1820) he had vented his feelings in some lines which will be new to most readers :

Schreibt der Komponist ernst,
Schäfer! er uns ein;
Schreibt der Komponist froh,
Ist er zu gemein;

Schreibt der Komponist lang,
Ist es zum Erbarmen;
Schreibt ein Komponist kurz,
Kann man nicht erwarren.

Schreibt ein Komponist klar,
Ist's ein armer Tropf;
Schreibt ein Komponist tief,
Rappelt's ihm ins Kopf.

Schreib' er also wie er will,
Keinem steht es an,
Darum schreib' ein Komponist
Wie er will und kann.¹

If the artist gravely writes,
To sleep it will bequele,
If the artist gaily writes,
It is a vulgar style.

If the artist writes at length,
How and his hearers' lot!
If the artist briefly writes,
No man will care one jot.

If an artist simply writes,
A fool he's said to be,
If an artist deeply writes,
He's mad; 'tis plain to see.

In whatsoever way he writes
He can't please every man;
Therefore let an artist write
How he likes and can.

But on the present occasion the annoyance was too deep to be thrown off by a joke. It did in fact for a time seriously affect his health and spirits, and probably laid the foundation for that dislike of the officialism and pretension, the artists and institutions, the very soil and situation of Berlin, which so curiously pervades his letters whenever he touches on that city.² His depression was increased by the death of an old friend, named Hanstein, who was carried off this spring, and beside whose deathbed Felix composed the well-known fugue in E minor for pianoforte (op. 35, No. 1). The chorale in the major, which forms the climax of the fugue, is intended, as we are told on good authority, to express his friend's release.³ But Felix was too young and healthy, and his nature too eager, to allow him to remain in despondency. A sonata in B flat for pf. (afterwards published as op. 106) is dated May 31, 1827; and on Whitsunday, June 3, we find him at Sakrow, near Potsdam, the property of his friend Magnus, composing the charming Lied, 'Ist es wahr?' which within a few months he employed to advantage in his string quartet in A minor (op. 13). Meantime—on May 2, 1826—he had entered the University of Berlin, where his tutor Heyse was now a professor. For his matriculation essay he sent in a translation in verse of the *Andria* of Terence, which primarily served as a birthday present to his mother (Mar. 15).⁴ This translation was published in a volume, with a preface and essay, and a version of the ninth Satire of Horace, by Heyse.⁵ Mendelssohn's translation has been examined by an eminent English scholar, who reports that as a version it is precise and faithful, exceedingly literal, and corresponding closely with the original both in rhythm and metre, while its language, as far as an Englishman may judge of German, is quite worthy of repre-

senting the limpid Latin of Terence. Professor Munro also points out that as this was the first attempt in Germany to render Terence in his own metres, it may be presumed to have set the example to the scholars who have since that date, as a rule, translated Plautus and Terence and other kindred Greek and Latin classics in the original metres. It was by no means his first attempt at verse; for a long mock-heroic of the year 1820 has been preserved, called the *Paphleis*, in three cantos, occupied with the adventures of his brother Paul (Paphlos), full of slang and humour, and in hexameters.

Whether Felix went through the regular university course or not, does not appear, but no doubt the proceeding was a systematic one, and he certainly attended several classes, amongst them those of Hegel,⁶ and took especial pleasure in the lectures of the great Carl Ritter on geography. Of his notes of these, two folio volumes, closely written in a hand like copperplate and dated 1827 and 1828, still exist. Italian he was probably familiar with before he went to Italy; and in later years he knew it so thoroughly as to be able to translate into German verse the very crabbed sonnets of Dante, Boccaccio, Cecco Angiolieri and Cino, for his uncle Joseph in 1840.⁷ Landscape drawing, in which he was ultimately to excel so greatly, he had already worked at for several years. For mathematics he had neither taste nor capacity, and Schubring pathetically describes the impossibility of making him comprehend how the pole-star could be a guide in travelling.

The change into the new house was a great event in the family life. Felix began gymnastics, and became a very great proficient in them. He also learned to ride, and to swim, and with him learning a thing meant practising it to the utmost, and getting all the enjoyment and advantage that could be extracted from it. He was a great dancer, now and for many years after. Billiards he played brilliantly. Skating was the one outdoor exercise which he did not succeed in—he could not stand the cold. The garden was a vast attraction to their friends, and *Boccia* (a kind of bowls) was the favourite game under the old chestnut trees which overshadowed the central alley. The large rooms also gave a great impetus to the music and to the mixed society which now flocked to the house more than ever. We hear of Rahel and Varnhagen, Bettina, Heine, Holtei, Lindblad, Steffens, Gans, Marx, Kugler, Droysen; of Humboldt, W. Müller,⁸ Hegel (for whom alone a card-table was provided) and other intellectual and artistic persons, famous, or to be famous afterwards. Young people, too, there were in troops; the life was free, and it must have been a delightful, wholesome and thoroughly enjoy-

⁸ Father of Max Müller, and author of Schubert's 'Schöne Müllein.'

able time. Among the features of the garden life was a newspaper, which in summer was called *Garten-zeitung* ('The Garden Times'), in winter *Thee- und Schneezeitung* ('Tea and Snow Times'). It appears to have been edited by Felix and Marx, but all comers were free to contribute, for which purpose pens, ink and paper lay in one of the summer-houses. Nor was it confined to the younger part of the society, but grave personages, like Humboldt and Zelter even, did not disdain to add their morsel of fun or satire. In all this brilliant interchange of art, science and literature, Felix, even at this early date, was the prominent figure. It was now as it was all through his life. When he entered the room every one was anxious to speak to him. Women of double his age made love to him, and men, years afterwards, recollected the evenings they had spent with him, and treasured every word that fell from his lips.¹ One who knew him well at this time, but afterwards broke with him, speaks of the separation as 'a draught of wormwood, the bitter taste of which remained for years.'²

The latter half of August and the whole of September (1827) were passed in a tour with Magnus and Heydemann³ through the Harz mountains to Baden-Baden (where his amusing adventures must be read in his letters in *F.M.*), and thence by Heidelberg, where he made the acquaintance of THIBAUT⁴ (*q.v.*) and his old Italian music, to Frankfort. At Frankfort he saw Schellbe and Hiller, and delighted them with his new A minor string quartet (op. 13)—not then fully written down; and also with the 'Midsummer Night's Dream' overture, which although a year old was still new to the world.

The annoyance about 'Camacho' had vanished with the tour, and Felix could now treat the story as a joke, and take off the principal persons concerned. The A minor quartet (op. 13) was completed directly after his return home, and is dated 'Berlin, Oct. 26, 1827.' Of further compositions this year we know only of the beautiful fugue in E flat for strings (on his favourite old ecclesiastical subject), which after his death was published as the last movement of op. 81. It is dated 'Berlin, Nov. 1, 1827.' Also a 'Tu es Petrus' for choir and orchestra, written for Fanny's birthday (Nov. 14), and published as op. 111. A very comic 'Kindersymphonie' for the Christmas home party, scored for the same orchestra as Haydn's, and a motet for four voices and small orchestra on the chorale 'Christe du Lamm Gottes,' are named by Fanny in a letter.⁵ Soon after this their circle sustained a loss in the departure of Klingemann, one of the cleverest and most

genial of the set, to London as Secretary to the Hanoverian Legation.

THE REVIVAL OF BACH.—During the winter of 1827, Felix—incited thereto by a complaint of Schubring's, that Bach always seemed to him like an arithmetical exercise—formed a select choir of sixteen voices, who met at his house on Saturday evenings, and at once began to practise the Matthew Passion.⁶ This was the seed which blossomed in the public performance of that great work a year later, and that again in the formation of the BACH GESELLSCHAFT (*q.v.*). Long and complicated as the Passion is, he must have known it by heart even at that early date; for among other anecdotes proving as much, Schubring, who may be implicitly believed, relates that one evening after accompanying one of the choruses at the piano without book, he said, 'at the twenty-third bar the sopranos have C and not C sharp'!

Mar. 1828 was occupied by the composition of a long lyric poem (*lyrische Dichtung*), to words by Levezow, for the Tercentenary Festival of Albert Durer, at the Singakademie at Berlin, on Apr. 18.⁷ It was undertaken at the request of the Akademie der bildenden Künste und dem Künstlervereine, and is written for solo voices, chorus and orchestra, and contains fifteen numbers. The 'Trumpet Overture' preceded it in performance. Felix was not in love with his task, but as the work grew into shape and the rehearsals progressed, he became reconciled to it; the performance was good, and Fanny's sisterly verdict is that 'she never remembers to have spent a pleasanter hour.'⁸ The work remains in MS. at the Singakademie and the Royal Library at Berlin, and has probably the faults of almost all such compositions. Even Beethoven failed when he had to write to order. Fate, however, had a second task of the same kind in store for Felix, with some curious variations. This time the cantata was for a meeting (or, as we should now call it, a 'congress') of physicians and investigators of natural science, to whom a festival was given by A. von Humboldt as president. Rellstab wrote the words, and Felix was invited to compose the music. It contains seven numbers for solo and chorus. Owing to a whim of Humboldt's the chorus was confined to men's voices, and the orchestra to clarinets, horns, trumpets, violoncellos and basses. The thing came off in September; but no ladies—not even Fanny—were admitted, no report is given in the musical paper, and as there is no mention of it in the MS. Catalogue the autograph has probably vanished. Chopin was present at the sitting of the congress, and saw Mendelssohn with Spon-tini and Zelter; but his modesty kept him from introducing himself, and their acquaintance was put off to a later date.⁹

¹ For instances of this see Dorn.

² Marx, *Erinn.* II. 188.

³ Louis Heydemann was a very eccentric person. He possessed many MSS. of Mendelssohn's—amongst others the pianoforte sonata in E (op. 7) and the violoncello variations (op. 17). These—ten in number, dating from 1824–29—are now (1906) all in the possession of Dr. Paul Mendelssohn-Bartholdy's widow at Berlin.

⁹ Karasowski's *Life of Chopin*, chap. IV.

Felix had, however, during the summer been occupied in a more congenial task than such *pièces d'occasion* as these, viz. in the composition of the overture to Goethe's 'Calm sea and prosperous voyage,' on which we find him employed in June (1828). Fanny gives us the interesting information that he especially avoided the form of an overture with introduction, and wished his work to stand as two companion pictures.¹ She mentions also his having written pianoforte pieces at this time, including some 'Lieder ohne Worte' (a title not destined to come before the world for some years) and a great Antiphona and Responsorium for four choirs, 'Hora est,' etc., which still remains in MS.

For Christmas he wrote a second Kindersymphonie, which delighted every one so much that it had to be repeated on the spot.² He also re-scored Handel's 'Acis and Galatea,' and the 'Dettingen Te Deum,' at Zelter's desire, for the use of the Singakademie.³ They have since been published, but are not satisfactory specimens of such work (see ADDITIONAL ACCOMPANIMENTS). He also wrote the Variations in D for pf. and violoncello (op. 17), dated 'Jan. 30, 1829,' and dedicated to his brother Paul, who was more than a fair violoncello-player. The 'Calm sea and prosperous voyage' was finished, or finished as nearly as any score of Mendelssohn's can be said to have been finished, before it was publicly performed and had received those innumerable corrections and alterations and afterthoughts which he always gave his works, and which in some instances caused the delay of their appearance for years—which in fact prevented the appearance of the Italian Symphony till his removal made any further revision impossible. We have already seen that the basis of the work was furnished by the visit to Dobberan. A MS. letter from that place to Fanny (July 27, 1824) gives her an account of the sea in the two conditions in which it is depicted in the overture.⁴

Felix's little choir had steadily continued their practice of the Passion, and the better they knew the mighty work the more urgent became their desire for a public performance by the Singakademie (300 to 400 voices) under Felix's own care. Apart from the difficulties of the music, with its double choruses and double orchestra, two main obstacles appeared to lie in the way—the opposition of ZELTER (*q.v.*) as head of the Akademie, and the apathy of the public. Felix, for one, 'utterly disbelieved' in the possibility of overcoming either,⁵ and with him were his parents and Marx, whose influence in the house was great. Against him, in this opinion, were Devrient, Schubring, Bauer and one or two other enthusiasts. At length Devrient and

Felix determined to go and beard Zelter in his den. They encountered a few rough words, but their enthusiasm gained the day. Zelter yielded, and allowed Felix to conduct the rehearsals of the Singakademie.⁶ The principal solo singers of the opera at once gave in their adhesion; the rehearsals began; Felix's tact, skill and intimate knowledge of the music carried everything before them, and the public flocked to the rehearsals.

On Wednesday, Mar. 11, 1829, the first performance of the Passion since the death of Bach took place; every ticket was taken, and a thousand people were turned away from the doors. Thus in Felix's own words (for once and once only alluding to his descent) 'it was an actor and a Jew who restored this great Christian work to the people.'⁷ There was a second performance under Felix on Bach's birthday, Mar. 21. It is probable that these successes did not add to Felix's popularity with the musicians of Berlin. Whether it was his age, his manner, his birth, the position held by his family, or whatever else, certain it is that he was at this time in some way under a cloud. He had so far quarrelled with the Royal Orchestra that they refused to be conducted by him, and concerts at which his works were given were badly attended.⁸

Paganini made his first appearance in Berlin this month (March), gave four concerts, and bewitched the Berliners as he did every one else.⁹ He very soon found his way to the Leipziger Strasse.¹⁰ It would be interesting to know if he heard the Passion, and if, like Rossini, some years later, he professed himself a convert to Bach.

Whistling's *Handbuch* shows that by the end of this year (1829) Felix had published his three pf. quartets; the sonata for pf. and vln.; the Capriccio for pf. (op. 5); the sonata for pf. solo; the 'Wedding of Camacho'; and the first two books of songs. The dedications of these throw an interesting light on some things. The pf. quartets are inscribed respectively to Prince A. Radzivil (a friend of the family, who was present at the first performance of 'Die beiden Pädagogen' at the Neue Promenade), Zelter and Goethe; the violin sonata (op. 4) to Eduard Ritz, Felix's favourite violin-player; and the seven 'Characteristic Pieces,' pf. (op. 7), to Ludwig Berger, his pianoforte-teacher. The rest have no dedications.

FIRST VISIT TO ENGLAND.—The engagement of Fanny Mendelssohn to William Hensel the painter, of Berlin, took place on Jan. 22, 1829, in the middle of the excitement about the Passion; and on Apr. 10 Felix started for England. He was now 20. His age, the termination of his liability to military service,¹¹ the friction

just alluded to between himself and the musical world of Berlin—all things invited him to travel, and Zelter¹ was not wrong in saying that it was good for him to leave home for a time. Hitherto also he had worked without fee or reward. He was now to prove that he could make his living by music.² But more than this was involved. His visit to England was the first section of a long journey,³ planned by the care and sagacity of his father, and destined to occupy the next three years of his life. In this journey he was 'closely to examine the various countries, and to fix on one in which to live and work; to make his name and abilities known, so that where he settled he should not be received as a stranger; and lastly to employ his good fortune in life, and the liberality of his father, in preparing the ground for future efforts.'⁴ The journey was thus to be to him what the artistic tour of other musicians had been to them; but with the important difference, resulting from his fortunate position in life, that the establishment of his musical reputation was not the exclusive object, but that his journey was to give him a knowledge of the world, and form his character and manners. Music had not been adopted as a profession for Felix without much hesitation, and resistance on the part of some of his relations, and his father was wisely resolved that in so doing nothing should be sacrificed in the general culture and elevation of his son. The reason alleged to have been given by a young Scotch student for going to Oxford, 'To improve myself, and to make friends,' was Mendelssohn's motto, not only during his grand tour but throughout his career.

It was their first serious parting. His father and Rebecca accompanied him to Hamburg. The boat (the *Attwood*) left on the Saturday evening before Easter Sunday, Apr. 18, and it was not till noon on Tuesday, the 21st, that he reached the Custom House, London. The passage was a very bad one, the engines broke down, and Mendelssohn lay insensible for the whole of Sunday and Monday. He was welcomed on landing by Klingemann and Moscheles, and lodged at the house then numbered 103 Great Portland Street, where his landlord was Heinke, a German ironmonger.⁵

It was the middle of the musical season, and on the night of his arrival Malibran made her first reappearance at the opera, as Desdemona.⁶ Other singers in London at that time were Sontag, Pisaroni, Mme. Stockhausen and Don-

zelli; also Velluti, the castrato, a strange survival of the ancient world, whom it is difficult to think of in connexion with Felix Mendelssohn-Bartholdy. De Bériot and Madame Duleken were among the players. Fétis, too, was in London with the object of delivering his lectures (of which only one was given) on 'La musique à la portée de tout le monde,' in French, to English audiences. Felix was much with Mr. and Mrs. Moscheles, and there met Neukomm, with whom, in everything but his music, he sympathised warmly.

His first appearance before an English audience was at the Philharmonic Concert, then held in the ARGYLL ROOMS (*q.v.*), on Monday evening, May 25, when he conducted his symphony in C minor. Old John Cramer 'led him to the piano, as if he were a young lady.'⁷ The applause was immense, and the scherzo (scored by him from his octet for this occasion, in place of the original minuet and trio) was obstinately encored against his wish.⁸ How deeply he felt the warmth of his reception may be seen from his letter to the Society.⁹ He published the symphony with a dedication to the Philharmonic,¹⁰ and they on their part elected him an honorary member of the Society on Nov. 29, 1829. It was thus an English body which gave him his first recognition as a composer.¹¹ The simple applause of London had wiped out the sneers and misunderstandings of Berlin. This he never forgot: it recurs throughout his correspondence, and animates his account of his latest visits to us. Near the close of his life he spoke of it as 'having lifted a stone from his heart.'¹² The English had much to learn, and he could laugh heartily at them; but at least they loved him and his music, and were quite in earnest in their appreciation.¹³ Five days afterwards, on the 30th, at 2 P.M., he appeared again in the Argyll Rooms at what is vaguely called in *The Times* of June 1 'The fourth grand concert.' He played the 'Concertstück of Weber—as the same journal informs us—'with no music before him.' A charming letter,¹⁴ equal to any in the whole collection for its gaiety and bright humour, describes his coming to the rooms early to try the piano—a new Clementi—and his losing himself in extemporising till he was recalled by finding that the audience were taking their seats. Two other concerts must be mentioned: one by Drouet, the flute-player, on Midsummer Night, at which, most appropriately, the overture to the 'Midsummer Night's Dream' was given, for the first time in England, and he himself played the E flat concerto of Beethoven. After the concert the score

of the overture was left in the hackney coach by Attwood, and lost.¹ The other concert on July 13 was for the benefit of the sufferers from the floods in Silesia.² At this the overture was repeated, and Felix and Moscheles played (for the first and only time in England) a concerto by the former for two pianofortes and orchestra, in E.³ All this was a brilliant beginning, as far as compositions went; it placed him in the best possible position before the musical society of London, but it did not do much to solve the question of livelihood, since the only commission which we hear of his receiving, and which delighted him hugely, he was compelled for obvious reasons to decline, viz. a festival hymn for Ceylon for the anniversary of the emancipation of the natives!—an idea so comical that he says it had kept him laughing inwardly for two days.⁴ A MS. letter of this time (dated June 7) is signed 'Composer to the Island of Ceylon.'

But he found time for other things besides music; for the House of Commons, and picture galleries, and balls at Devonshire House and Lansdowne House, and so many other parties, that the good people at home took fright and thought he was giving up music for society, and would become a drawing-room ornament.⁵ The charm of his manner and his entire simplicity took people captive, and he laid a good foundation this year for the time to come.

An amusing little picture of himself and his friends Rosen and Mühlenfeld, coming home late from a state dinner given by the Prussian Ambassador, buying three German sausages, and then finding a quiet street in which to devour them, with a three-part song and peals of laughter between the mouthfuls, shows how gaily life went on outside the concert-room.⁶

At length the musical season was over. Felix and Klingemann left London about July 21, and stopping at York (23rd) and Durham (24th),⁷ were in Edinburgh by the 28th.⁸ On the 29th they were present at the annual competition of Highland Pipers in the Theatre Royal.⁹ On the 30th, before leaving 'the grey metropolis of the north,' they went over Holyrood Palace, saw the traditional scene of the murder of Rizzio, and the chapel with the altar at which Mary was crowned standing 'open to the sky, and surrounded with grass and ivy, and everything ruined and decayed': 'and I think,' he continues, 'that I found there the beginning of

my Scotch Symphony.' The passage which he then wrote down was the first sixteen bars of the Introduction, which recurs at the end of the first movement, and thus forms, as it were, the motto of the work.¹⁰

From Edinburgh they went to Abbotsford, and thence by Stirling, Perth and Dunkeld, to Blair-Atholl; then on foot by Fort-William to Tobermory, sketching and writing enormous letters at every step. On the way they visited Fingal's Cave, and Felix, writing 'auf einer Hebride'—'on one of the Hebrides'—Aug. 7, gives twenty bars of music, 'to show how extraordinarily the place affected me.' These twenty bars,¹¹ an actual inspiration, are virtually identical with the opening of the wonderful overture which bears the name of 'Hebrides' or 'Fingal's Cave.' Then came Glasgow, and then Liverpool. At Liverpool they went over a new American liner called the *Napoleon*, and Felix, finding a Broadwood piano in the saloon, sat down to it and played for himself and his friend the first movement of Fanny's 'Easter-Sonata'—whatever that may have been. Home was always in his thoughts. Then to Holyhead for Ireland, but the weather was dreadful. He says: 'Yesterday was a good day, for I was only wet through three times.' So he turned back to Liverpool, there said good-bye to Klingemann, and went on by Chester to the house of John Taylor,¹² a mining engineer, at Coed-du near Holywell. Here he remained for some days, seeing a very pleasant side of English country life, and making an indelible impression on his hosts; and here he composed the three pianoforte pieces which form op. 16, the first of which in key, tempo and melody closely resembles the introduction to the Scotch Symphony.¹³

His head was at this time full of music—the E flat violin quartet (op. 12)¹⁴; an organ piece for Fanny's wedding¹⁵; the Reformation Symphony, the Scotch Symphony, the 'Hebrides' overture, as well as vocal music, 'of which he will say nothing.' Other subjects, however, occupied even more of his letters than music. Such were a private plan for a journey to Italy in company with his parents and Rebecka, for which he enters into a little conspiracy with his sister; and a scheme for the celebration of his parents' silver wedding (Dec. 26, 1829), by the perform-

¹⁰ *F.M.* i. 244.

¹¹ Ten of the present score, as he afterwards diminished the notation by one-half. A facsimile is given in *F.M.* i. 267.

¹² Letter from Miss Anne Taylor, afterwards Mrs. Worsley, was quoted at length here in former editions. It gives a charming picture of Mendelssohn's personality and of his relations with his hosts. It mentions the piano piece, 'The Rivulet,' which he wrote at that time for my sister Susan. Cf. *Dev.* p. 176.

¹³ Both Allegros are in G-B, and the Andante is repeated at the end of each. The piece is dated 'Coed-du, Sept. 4, [1829].'

¹⁴ *F.M.* pp. 276, 278, 280. The autograph of the Quartet, in the possession of Mr. Rudolf, is dated 'London, Sept. 14, 1829.' Though published as No. 1, it is thus really his second string quartet. See above, p. 118. The quartet was dedicated to '[Betty] P[latzer]'; but after her engagement to Rudolf, Mendelssohn requested David to alter the initials ('durch einen kleinen Federwechsel') to 'T. R.' (see Eckardt's *Ferdinand David*, p. 35). In the same letter he calls it 'Quartet aus 8.'

¹⁵ Fanny herself wrote the piece which was actually played at the wedding, Oct. 8, 1829 (*F.M.* i. 206). Felix's plan, however, was finished and written out (*L.* to Fanny, July 25, 1844).

¹ The discovery in 1806 at the R.A.M. of a German copyist's score from which Mendelssohn had undoubtedly conducted the London performance of 1830, and possibly also this one of 1829, seems to disprove the story originally told here of Mendelssohn rewriting the score from memory.

² This was suggested by Mendelssohn's uncle Nathan, who lived in Silesia, to his brother Abraham, and by him communicated to Felix (*F.M.* i. 236).

³ See Felix's letters describing this, July 10, 16, and 17 (*F.M.* i. 238-40); also *Mos.* i. 227. The autograph of the Concerto is dated Oct. 17, 1823.

⁴ *F.M.* i. 230.

⁵ *F.M.* i. 235.

⁶ *Dev.* p. 78.

⁷ Their journey can be traced by Felix's sketches.

⁸ *F.M.* i. 240.

⁹ *Ibid.*; *Esopis*, p. 77. I owe the date to the kindness of John Glen of Edinburgh.

ance of three operettas (Liederspiel), his own 'Soldatenliebschaft,' a second to be written by Hensel and composed by Fanny, and the third an 'Idyll' by Klingemann and himself, which when once it entered his head rapidly took shape, and by the end of October appears to have been virtually complete.¹

By Sept. 10 he was again in London, this time at 35 Bury Street, St. James's, Klingemann's lodgings²; on the 14th he finished and signed the E flat quartet, and on the 17th was thrown from a gig and hurt his knee, which forced him to keep his bed for nearly two months, and thus to miss not only a tour through Holland and Belgium with his father, but Fanny's wedding. Confinement to bed, however, does not prevent his writing home with the greatest regularity. On Sept. 22 he ends his letter with the first phrase of the 'Hebrides' overture—'aber zum Wiedersehn,

F.'

On Oct. 23 he informs them that he is beginning again to compose—and so on. He was nursed by Klingemann, and well cared for by Sir Lewis and Lady Moller, by Attwood and Hawes (the musicians), the Goschens and others. His first drive was on Nov. 6, when he found London 'indescribably beautiful.' A week later he went to Norwood to the Attwoods,³ then back to town for 'the fourteen happiest days he had ever known,' and on Nov. 29 was at Hôtel Quillaçq, Calais, on his road home.

He reached Berlin to find the Hensels and the Devrients inhabiting rooms in the garden-house. His lameness still obliged him to walk with a stick; but this did not impede the mounting of his piece for the silver wedding,⁴ which came off with the greatest success on Dec. 26, and displayed an amount of dramatic ability which excited the desire of his friends that he should again write for the stage.⁵ The Liederspiel, however, was not enough to occupy him, and during this winter he composed a symphony for the tercentenary festival of the Augsburg Confession, which was in preparation for June 25, 1830.⁶ This work, in the key of D, is that which we shall often again refer to as the 'Reformation Symphony.'⁷ He also wrote the fine fantasia in F sharp minor (op. 28) for pf., which he called his 'Scotch Sonata'⁸—a piece too little

played. A chair of music was founded in the Berlin University this winter expressly with a view to its being filled by Mendelssohn. But on the offer being made he declined it, and at his instance Marx was appointed in his stead.⁹ There can be no doubt that he was right. Nothing probably could have entirely kept down Mendelssohn's ardour for composition; but it is certain that to have exchanged the career of a composer for that of a university teacher would have added a serious burden to the many occupations which already beset him, besides forcing him to exchange a pursuit which he loved and succeeded in, for one for which he had no turn—for teaching was not his forte.¹⁰

The winter was over, his leg was well, and he was on the point of resuming his 'great journey' in its southern portion, when, at the end of Mar. 1830, both Rebecka and he were taken ill with measles. This involved a delay of a month, and it was not till May 13 that he was able to start.¹¹ His father accompanied him as far as Dessau, the original seat of the family, where he remained for a few days with his friend Schubring.

CONTINENTAL TRAVELS.—He travelled through Leipzig, Weissenfels and Naumburg, and reached Weimar on the 20th. There he remained a fortnight in the enjoyment of the closest intercourse with Goethe and his family, playing and leading what he calls a mad life—'*Heidenleben*.'¹² There his portrait was taken, which, though like, 'made him look very sulky,' and a copy of the score of the Reformation Symphony was made and sent to Fanny. On June 3 he took leave of Goethe for the last time,¹³ and went by Nuremberg to Munich, which he reached on June 6.¹⁴ At Munich he made a long halt, remaining till the end of the month; made the acquaintance of Josephine Lang, Delphine Schauroth and other interesting persons, and was fêted to an extraordinary extent¹⁵—'several parties every evening and more pianoforte playing than I ever recollect'—all which must be read in the letter of Marx, and in his own delightful pages.¹⁶ On June 14, he sends Fanny a little Song without Words (Lied) in A, and on the 26th, 'on the birth of her son,' a much longer one in B flat minor, which he afterwards altered, and published as op. 30, No. 2.¹⁷ Both here and at Vienna he is disgusted at the ignorance on the part of the best players—Mozart, Haydn and Beethoven utterly ignored, Hummel, Field and Kalkbrenner accepted as classics. He himself played the best music, and with the best effect, and his visit must

² F. M. l. 301.

³ Op. 16, No. 2, is dated 'Norwood, Surrey, Nov. 18.' There is a MS. letter from the same address Nov. 18. The house was on Beulah Hill. (A photograph of it is given in *Musical Reminiscences in London*, p. 5.)

⁴ 'Heimkehr aus der Fremde' (The Return from Abroad). It was translated by Chorley as 'Son and Stranger,' and produced at the Haymarket Theatre, July 7, 1851.

⁵ Dec. p. 94.

⁶ The first mention of the symphony appears to be in a letter of his own from North Wales, Sept. 2, 1829. The tercentenary was intended to be celebrated throughout Germany, but the political troubles of 1830 prevented any festive demonstrations.

⁷ For some curious details regarding this, see Dec. p. 96. Schubring (302b) tells the same story of the Trumpet Overture.

⁸ The MS., formerly in Mr. Schlettitz's possession, is entitled 'Sonate écossaise,' and dated 'Berlin, Jan. 28, 1833'; but he played it at Goethe's, May 24, 1830 (L. May 25, 1830).

⁹ Dec. p. 98.

¹⁰ See a remark in Hauptmann's *Letters to Hauser* (l. 187) in reference to a similar attempt in 1835.

¹⁷ F. M. l. 313-27.

have marked an epoch in the taste of both places.¹

From Munich he went through the Salzkammergut, by Salzburg, Ischl and the Traunsee, to Linz, and thence to Vienna, Aug. 13. Here he passed more than a month of the gayest life² with Hauser the singer,³ Merk the violoncellist, the Pereiras, the Eskeles and others, but not so gay as to interfere with serious composition—witness a cantata or anthem on 'O Haupt voll Blut und Wunden' (MS.),⁴ and an 'Ave Maria' for tenor solo and 8-part chorus (op. 23, No. 2), both of this date. On Sept. 28 we find him at Pressburg, witnessing the coronation of the Crown Prince Ferdinand as King of Hungary⁵; then at Lilienfeld; and by Gratz, Udine, etc., he reached Venice on Oct. 9.

His stay in Italy, and his journey through Switzerland back to Munich, are so fully depicted in the volume of his *Letters from Italy and Switzerland*, that it is only necessary to allude to the chief points. He went from Venice by Bologna to Florence, reaching it on Oct. 22, and remaining there for a week. He arrived in Rome on Nov. 1—the same day as Goethe had done, as he is careful to remark—and he lived there till Apr. 10, 1831, at No. 5 Piazza di Spagna. The latter half of April and the whole of May were devoted to Naples (Sti. Combi, Sta. Lucia, No. 13, on the 3rd floor) and the Bay—Sorrento, Ischia, Amalfi, etc. Here he met Benedict, and renewed the acquaintance which they had begun as boys in Berlin in 1821, when Benedict was Weber's pupil.⁶ By June 5 he was back in Rome, and after a fortnight's interval set out on his homeward journey by Florence (June 24), Genoa, Milan (July 7-15), Lago Maggiore and the Islands, the Simplon, Martigny and the Col de Balme, to Chamounix and Geneva. Thence on foot across the mountains to Interlaken; and thence by Grindelwald and the Furka to Lucerne, Aug. 27 and 28. At Interlaken, besides sketching, and writing both letters and songs, he composed the only waltzes of which—strange as it seems in one so madly fond of dancing—any trace survives.⁷ At Lucerne he wrote his last letter to Goethe,⁸ and no doubt mentioned his being engaged in the composition of the 'Walpurgisnacht,' which must have brought out from the poet the explanation of the aim of his poem which is printed at the beginning of Mendelssohn's music, with the date Sept. 9, 1831. Then, still on foot, he went by Wallenstadt and St. Gall to Augsburg, and returned to Munich early in September.

Into both the nature and the art of this extended and varied tract he entered with enthusiasm. The engravings with which his father's house was richly furnished, and Hensel's

copies of the Italian masters, had prepared him for many of the great pictures; but to see them on the spot was to give them new life, and it is delightful to read his rapturous comments on the Titians of Venice and Rome, the gems in the Tribune of Florence, Guido's 'Aurora,' and other masterpieces. His remarks are instructive and to the point; no vague generalities or raptures, but real criticism into the effect or meaning or treatment of the work; and yet rather from the point of view of an intelligent amateur than with any assumption of technical knowledge, and always with sympathy and kindness.⁹ Nor is his eye for nature less keen, or his enthusiasm less abundant. His descriptions of the scenery of Switzerland during the extraordinarily stormy season of his journey there are worthy of the greatest painters or letter-writers. Some of his expressions rise to grandeur.

'It was a day,' he says, describing his walk over the Wengern Alp,

'as if made on purpose. The sky was flecked with white clouds floating far above the highest snow-peaks, no mists below on any of the mountains, and all their summits glittering brightly in the morning air, every undulation and the face of every hill clear and distinct. . . . I remembered the mountains before only as huge peaks. It was their height that formerly took such possession of me. Now it was their boundless extent that I particularly felt, their huge broad masses, the close connection of all these enormous fortresses, which seemed to be crowding together and stretching out their hands to each other. Then, too, recollect that every glacier, every snowy plateau, every rocky summit was dazzling with light and glory, and that the more distant summits of the further ranges seemed to stretch over and peer in upon us. I do believe that such are the thoughts of God Himself. Those who do not know Him may here find Him and the nature which He has created, brought strongly before their eyes.'¹⁰

Other expressions are very happy:

"The mountains are acknowledged to be the finest after rain, and to-day looked as fresh as if they had just burst the shell."¹¹

Again, in approaching Naples:

'To me the finest object in nature is and always will be the sea. I love it almost more than the sky. I always feel happy when I see before me the wide expanse of waters.'

In Rome he devoted all the time that he could spare from work to the methodical examination of the place and the people. But his music stood first, and surely no one before or since was ever so self-denying on a first visit to the Eternal City. Not even for the sirocco would he give up work in the prescribed hours.¹² His plan was to compose or practise till noon, and then spend the whole of the rest of the daylight in the open air. He enters into everything with enthusiasm—it is 'a delightful existence.' Rome in all its vast dimensions lies before him like an interesting problem, and he goes deliberately to work, daily selecting some different object—the ruins of the ancient city,

the Borghese Gallery, the Capitol, St. Peter's, or the Vatican.

'Each day is thus made memorable, and, as I take my time, each object becomes indelibly impressed upon me. . . . When I have fairly imprinted an object on my mind, and each day a fresh one, twilight has usually arrived, and the day is over.'

Into society he enters with keen zest, giving and receiving pleasure wherever he goes, and 'amusing himself thoroughly and divinely.' 'My looking-glass is stuck full of visiting-cards, and I spend every evening with a fresh acquaintance.'¹ His visits to Horace Vernet and Thorwaldsen, Santini's visits to him; the ball at Torlonia's, where he first saw the young English beauty, and that at the Palazzo Albani, where he danced with her; the mad frolics of the Carnival, the monks in the street (on whom he 'will one day write a special treatise'), the peasants in the rain, the very air and sunshine—all delight him in the most simple, healthy and natural manner.

'Oh! if I could but send you in this letter one quarter of an hour of all this pleasure, or tell you how life actually flies in Rome, every minute bringing its own memorable delights.'²

On the other hand, he has no mercy on anything like affectation or conceit. He lashes the German painters for their hats, their beards, their dogs, their discontent, and their incompetence, just as he does one or two German musicians for their empty pretension. The few words which he devotes to Berlioz (who although always his good friend is antagonistic to him on every point) and his companion Montfort, are strongly tinged with the same feeling.³ On the other hand, nothing can be more genuinely and good-naturedly comic than his account of the attempt to sing Marcello's psalms by a company of dilettanti assisted by a Papal singer.⁴

This sound and healthy habit of mind it is, perhaps, which excludes the sentimental—we might almost say the devotional—feeling which is so markedly absent from his letters. Strange that an artist who so enjoyed the remains of ancient Italy should have had no love of antiquity as such. At sight of Nisida he recalls the fact that it was the refuge of Brutus, and that Cicero visited him there.

'The sea lay between the islands, and the rocks, covered with vegetation, bent over it then just as they do now. These are the antiquities that interest me, and are much more suggestive than crumbling mason-work.' . . .

'The outlines of the Alban hills remain unchanged. There they can scribble no names and compose no inscriptions . . . and to these I cling.'

In reference to music the same spirit shows itself still more strongly in his indignation at the ancient Gregorian music to the Passion in the Holy Week services.

'It does irritate me to hear such sacred and touching words sung to such insignificant dull music. They say it is *canto fermo*, Gregorian, etc. No matter. If at that period there was neither the feeling nor the capacity to write in a different style, at all events we have now the power to do so';

and he goes on to suggest two alternative plans for altering and reforming the service.

He was very fortunate in the time of his visit to Rome. Pope Pius VIII. died while he was there, and he came in for all the ceremonies of Gregory XVI.'s installation, in addition to the services of Holy Week, etc. These latter he has described in the fullest manner, not only as to their picturesque and general effect, but down to the smallest details of the music, in regard to which he rivalled Mozart's famous feat. They form the subject of two long letters to Zelter, dated Dec. 1, 1830,⁵ and June 16, 1831; and as all the particulars had to be caught while he listened, they testify in the strongest manner to the sharpness of his ear and the retentiveness of his memory. Indeed it is impossible not to feel that in such letters as these he is on his own ground, and that, intense as was his enjoyment of nature, painting, society and life, he belonged really to none of these things—was 'neither a politician nor a dancer, nor an actor, nor a *bel esprit*, but a musician.'⁶ And so it proved in fact. For with all these distractions his Italian journey was fruitful in work. The 'Walpurgisnacht,'⁷ the result of his last visit to Weimar, was finished, in its first form, at Milan (the MS. is dated 'Mailand, July 15, 1831'); the 'Hebrides,' also in its first form, is signed 'Rome, Dec. 16, 1830.'⁸ The Italian and Scotch Symphonies were begun and far advanced before he left Italy. Several smaller works belong to this period—the Psalm 'Non Nobis' (Nov. 15, 1830); the three church pieces which form op. 23; a Christmas Cantata, still in MS. (Jan. 28, 1831); the hymn 'Verleih' uns Frieden' (Feb. 10); the three motets for the nuns of the Trinità de' Monti at Rome; and although few of these minor pieces can be really said to live, yet they embody much labour and devotion, and were admirable stepping-stones to the great vocal works of his later life. In fact, then, as always, he was what Berlioz calls him, 'un producteur infatigable,'⁹ and thus obtained that facility which few composers have possessed in greater degree than Mozart and himself. He sought the society of musicians. Besides Berlioz, Montfort and Benedict, we find frequent mention of Baini, Donizetti, Coccia and Madame Fodor. At Milan his encounter with Madame Ertmann, the intimate friend of Beethoven, was a happy

⁷ The vocal portion was begun in April. Feb. 13, 1832, is the date of the completion of the overture—'Saxon Overture' as he calls it—in the 'Walpurgisnacht.'

⁸ The date of the revised version is 'London. June 20, 1832.'

⁹ *Voyage musical*, i. 76.

accident, and turned to the happiest account. There, too, he met the son of Mozart, and delighted him with his father's overtures to 'Don Juan' and the 'Magic Flute,' played in his own 'splendid orchestral style' on the piano. Not the least pleasant portions of his letters from Switzerland are those describing his organ-playing at the little remote Swiss churches at Engelberg, Wallenstadt, Sargans and Lindau—from which we would gladly quote if space allowed.

The great event of his second visit to Munich was the production (and no doubt the composition) of his G minor concerto, 'a thing rapidly thrown off,'¹ which he played on Oct. 17, 1831, at a concert which also comprised his symphony in C minor, his overture to the 'Midsummer Night's Dream,' and an extempore performance. Before leaving he received a commission to compose an opera for the Munich Theatre.² From Munich he travelled by Stuttgart (Nov. 7) and Heidelberg to Frankfurt, and thence to Düsseldorf (Nov. 27), to consult Immermann as to the libretto for the Munich opera, and arrange with him for one founded on 'The Tempest.'³ The artistic life of Düsseldorf pleased him extremely, and no doubt this visit laid the foundation for his future connexion with that town.

He arrived in Paris about the middle of December, and found, of his German friends, Hiller and Franck settled there. He renewed his acquaintance with the Parisian musicians who had known him as a boy in 1825, especially with Baillet; and made many new friends, Habeneck, Franchomme, Cuvillon and others. Chopin, Meyerbeer, Herz, Liszt, Kalkbrenner, Ole Bull, were all there, and Mendelssohn seems to have been very much with them. He went a great deal into society and played frequently, was constantly at the theatre, and as constantly at the Louvre, enjoyed life thoroughly, saw everything, according to his wont, including the political scenes which were then more than ever interesting in Paris; knew everybody; and in fact, as he expresses it, 'cast himself thoroughly into the vortex.'⁴ His overture 'Midsummer Night's Dream' was performed at the Société des Concerts (Conservatoire) on Feb. 19, 1832, and he himself played the concerto in G of Beethoven at the concert of Mar. 18. His Reformation Symphony was rehearsed, but the orchestra thought it too learned, and it never reached performance.⁵ His octet was played in church at a mass commemorative of Beethoven, and several times in private; so was his quintet (with a new Adagio⁶) and his quartets, both for strings and for piano. The pupils of the Conservatoire, he writes, are

working their fingers off to play 'Ist es wahr?'' His playing was applauded as much as heart could wish, and his reception in all circles was of the very best.

On the other hand, there were drawbacks. Eduard Ritz, his great friend, died (Jan. 23) while he was there; the news reached him on his birthday. Goethe, too, died (Mar. 22). The rejection of his Reformation Symphony, the centre of so many hopes,⁸ was a disappointment which must have thrown a deep shadow over everything; and no doubt after so much gaiety there was a reaction, and his old dislike to the French character—traces of which are not wanting in a letter to Immermann dated Jan. 11, 1832—returned. In addition to this his health had not latterly been good, and in March he had an attack of cholera.⁹ Though he alludes to it in joke, he probably felt the truth of a remark in the *Figaro* that 'Paris is the tomb of all reputations.'¹⁰ Brilliantly and cordially as he was received, he left no lasting mark there; his name does not reappear in the programmes of the Conservatoire for eleven years, and it was not till the establishment of the Concerts Populaires in 1861 that his music became at all familiar to the Parisians.¹¹ He himself never again set foot in Paris.

LONDON AND BERLIN.—On Apr. 23, 1832, he was once more in his beloved London, and at his old quarters, in Great Portland Street. 'That smoky nest,' he exclaims, amid the sunshine of the Naples summer, 'is fated to be now and ever my favourite residence; my heart swells when I think of it.'¹² And here he was back in it again! It was warm, the lilacs were in bloom, his old friends were as cordial as if they had never parted, he was warmly welcomed everywhere, and felt his health return in full measure. His letters of this date are full of a genuine heartfelt satisfaction. He plunged at once into musical life. The 'Hebrides' overture was played from MS. parts by the Philharmonic on May 14, and he performed his G minor concerto, on an Erard piano, at the concerts of May 28 and June 18. He gave a MS. score of his overture to the Society, and they presented him with a piece of plate. During his stay in London he wrote his Capriccio Brillant in B minor (op. 22), and played it at a concert of Mori's on May 25.¹³ On Sunday, June 10, he played the organ at St. Paul's Cathedral.¹⁴ He also published a four-hand arrangement¹⁵ of the 'Midsummer Night's

⁵ This want of sympathy, combined with an astonishing amount of ignorance, is amusingly displayed in the following description from the catalogue of a well-known French autograph collector: 'Mendelssohn-Bartholdy (Fell) remarquable intelligence, mais cœur égoïste et froid; qui n'avait pu gravir d'un pas sur les sommets de l'art, s'est réfugié dans la musique de chambre.' ('an ignorance and confidence go further')

⁶ Written in memory of Eduard Ritz, and replacing a Minuet in F sharp minor, with Trio in double Canon.

Dream 'overture with Cramer, and the first book of the 'Songs without Words' with Novello,¹ and played at many concerts. A more important thing still was the revision of the 'Hebrides' overture,² to which he appears to have put the final touches on June 20 (five weeks after its performance at the Philharmonic), that being the date on the autograph score in possession of the family of Sterndale Bennett, which agrees in all essentials with the printed copy.

On May 15 Zelter died, and he received the news of the loss of his old friend and teacher at Attwood's house at Norwood. The vision of a possible offer of Zelter's post at the Singakademie crossed his mind, and is discussed with his father; but it was not destined to be fulfilled. Among the friends whom he made during this visit, never to lose till death, were the Horsleys, a family living in the country at Kensington. William Horsley was one of our most eminent glee-writers; his daughters were unusually musical; one of the sons, John Calcott Horsley, became R.A., and another, Charles Edward Horsley, was for many years a bright ornament to English music. The circle was not altogether unlike his Berlin home, and in his own words³ he seldom spent a day without meeting one or other of the family.

In July 1832 he returned to Berlin, to find the charm of the summer life in the garden as great as before. His darling sister Rebecca⁴ had been married to Professor Dirichlet in May. Another change was that the Devrients had migrated to another place, and Hensel's studios now occupied all the spare space in the garden-house. Immermann's promised libretto was waiting for him on his return, but from the terms in which he asks for Devrient's opinion on it, it is evident that it disappointed him, and we hear no more of the subject.⁵ 'St. Paul' was beginning to occupy his mind (of which more anon), and he had not long been back when the election of the conductor for the Singakademie in Zelter's place came on the tapis. The details may be read elsewhere⁶; it is enough to say here that chiefly through the extra zeal and want of tact of his friend Devrient, though with the best intentions, Mendelssohn, for no fault of his own, was

dragged before the public as an opponent of Rungenhagen; and at length, on Jan. 22, 1833, was defeated by 60 votes out of 236. The defeat was aggravated by a sad want of judgment on the part of the family, who not only were annoyed, but showed their annoyance by withdrawing from the Singakademie, and thus making an open hostility. Felix himself said little, but he felt it deeply. He⁷ describes it as a time of uncertainty, anxiety and suspense, which was as bad as a serious illness; and no doubt it widened the breach in his liking for Berlin, which had been begun by the rejection of 'Camacho.' He doubtless found some consolation in a grand piano which was forwarded to him in August by Pierre Erard of London.

His musical activity was at all events not impaired. Besides occupying himself with the Sunday music at home, Felix, during this winter, gave three public concerts at the room of the Singakademie in Nov. and Dec. 1832 and Jan. 1833,⁸ at which he brought forward his 'Walpurgisnacht,' his Reformation Symphony, his overtures to the 'Midsummer Night's Dream,' 'Meeresstille' and 'Hebrides,' his G minor concerto and his Capriccio in B minor for pf.; besides playing Beethoven's pf. sonatas (opp. 27 and 53) and his G major concerto, also a concerto of Bach in D minor—all, be it remembered, novelties at that time even to many experienced musicians. In addition to this he was working seriously at the Italian Symphony. The Philharmonic Society of London had passed a resolution on Nov. 5, 1832, asking him to compose 'a symphony, an overture and a vocal piece,' and offering him a hundred guineas for the exclusive right of performance during two years.⁹ Of these the Italian Symphony was to be one, and the MS. score of the work accordingly bears the date 'Berlin, Mar. 13, 1833.' On Apr. 27 he wrote to the Society offering them the symphony with 'two new overtures, finished since last year' (doubtless the 'Fingal's Cave' and the Trumpet overtures), the extra one being intended 'as a sign of my gratitude for the pleasure and honour they have again conferred upon me.' Graceful and apparently spontaneous as it is, the symphony had not been an easy task. Mendelssohn was not exempt from the lot of most artists who attempt a great poem or a great composition; on the contrary, the bitterest moments he 'ever endured or could have imagined' were those which he experienced during the autumn when the work was in progress, and up to the last he had his doubts and misgivings as to the result. Now, however, when it was finished, he found that it pleased him and showed progress¹⁰—a very

¹ Under the title of 'Original Melodies for the Pianoforte' (Novello). It was during this visit also that he played to Vincent Novello Bach's *Illde E* minor prelude and fugue for the organ, a circumstance which led to its being published in England (by Novello) before it appeared in any other country, including Germany. (See *Mus. T.*, Nov. 1830, p. 724.)

² The first score, dated 'Rome, Dec. 16, 1830,' and entitled 'Die eleanore Insel,' was formerly in possession of Felix Moschles. The differences between this and the above-mentioned autograph are very great, chiefly in the working out. In an English letter, written from Attwood's house at Norwood, to Sir George Smart, and dated 'June 6, 1832,' he offers to the Philharmonic Society 'the score of my Overture to the "Isles of Fingal," as a token of my deep and heartfelt gratitude for the indulgence and kindness they have shown to me during my second visit in this country' (B.M. Add. 3858, 33, 965, fol. 251). The MS. does not, however, appear to be in the Society's library.

³ *G. & M.*, p. 97.

⁴ A little book containing water-colour sketches and songs which Mendelssohn began for his sister, Rebecca Dirichlet, and dated 'Christmas 1832,' was formerly in the possession of Sir Charles Hantley, who left it to Miss Marie Pezze (Mrs. Duncan Montgomerie).

modest expression for a work so full of original thought, masterly expression, consummate execution and sunny beauty as the Italian Symphony, and, moreover, such a prodigious advance on his last work of the same kind!¹

On Feb. 8, 1833, a son was born to the Moscheleses, and one of the first letters written was to Mendelssohn, asking him to be godfather to the child. He sent a capital letter in reply, with an elaborate sketch,² and later on he transmitted a cradle song—published as op. 47, No. 6—for his godchild, Felix Moscheles. Early in April he left Berlin for Düsseldorf, to arrange for conducting the Lower Rhine Festival which took place May 26-28. As soon as the details had been completed, he went on to London for the christening of his godchild, and also to conduct the Philharmonic Concert of May 13, when his Italian Symphony was performed for the first time, and he himself played Mozart's D minor piano concerto. This was his third visit. He was there by Apr. 26—again at his old lodgings in Great Portland Street—and on May 1 he played at Moscheles's annual concert a brilliant set of four-hand variations on the Gipsy March in 'Preciosa,' which the two had composed together.³

On or after May 16 he left London and returned to Düsseldorf, in ample time for the rehearsal of the Festival, which began on Whitsunday, May 26, and was an immense success. 'Israel in Egypt'⁴ was the *pièce de résistance*, and among the other works were Beethoven's Pastoral Symphony and overture to 'Leonora,' and Felix's own Trumpet overture. Abraham Mendelssohn had come from Berlin for the Festival, and an excellent account of it will be found in his letters,⁵ admirable letters, full of point and wisdom, and showing better than anything else could the deep affection and perfect understanding which existed between father and son. The brilliant success of the Festival and the personal fascination of Mendelssohn led to an offer from the authorities of Düsseldorf that he should undertake the charge of the entire musical arrangements of the town, embracing the direction of the church music and of two associations, for three years, from Oct. 1, 1833, at a yearly salary of 600 thalers (£90).⁶ He had been much attracted by the active artistic life of the place when he visited Immermann at the close of his Italian journey, and there appears to have been no hesitation in his acceptance of the offer. This important agreement concluded, Felix returned to London for the fourth time, taking his father with him. They arrived about June 5, and went into the

old lodgings in Great Portland Street. It is the father's first visit, and his letters are full of little hits at the fog, the absence of the sun, the Sundays and other English peculiarities, and at his son's enthusiasm for it all. As far as the elder Mendelssohn was concerned, the first month was perfectly successful, but in the course of July he was laid up with an accident to his shin, which confined him to his room for three weeks, and although it gave him an excellent idea of English hospitality, it naturally threw a damp over the latter part of the visit. His blindness, too, seems to have begun to show itself.⁷

His son, however, experienced no such drawbacks. To his father he was everything. 'I cannot express,' says the grateful old man,

'what he has been to me, what a treasure of love, patience, endurance, thoughtfulness and tender care he has lavished on me; and much as I owe him indirectly for a thousand kindnesses and attentions from others, I owe him far more for what he has done for me himself.'⁸

Only a few letters by Felix of this date have been printed,⁹ but enough information can be picked up to show that he fully enjoyed himself. His Trumpet overture was played at the Philharmonic on June 10, 1833. He played the organ at St. Paul's (June 23), Klingemann and other friends at the bellows, and the church empty—introduction and fugue, extempore; Attwood's Coronation Anthem, four hands, with Attwood; and three pieces of Bach.¹⁰ He also evidently played a great deal in society, and his father's account of a mad evening with Malibran will stand as a type of many such.¹¹ The Moscheleses, Attwoods,¹² Horsleys and Alexanders are among the most prominent English names in the diaries and letters.¹³ Besides Malibran, Schröder-Devrient, Herz and Hummel were among the foreign artists in London. On Aug. 4 the two left for Berlin,¹⁴ Abraham having announced that he was bringing home 'a young painter named Alphonse Lovie,' who, of course, was no other than Felix himself.¹⁵ They reached Berlin in due course, and by Sept. 27, 1833, Felix was at his new post.

WORK AT DÜSSELDORF.—Düsseldorf was the beginning of a new period in his career—of settled life away from the influences of home, which had hitherto formed so important an element in his existence. At Berlin both success and non-success were largely biassed by personal considerations; here he was to start afresh, and to be entirely dependent on himself. He began his new career with vigour. He first attacked the church music, and as 'not one tolerable mass' was to be found, scoured the country as far as Elberfeld, Cologne and Bonn,

¹ I.e. the early Symphony in C minor.

² A facsimile will be found in *Mos.* i. 284.

³ *Mos.* i. 290. The duet was published by Cramer.

⁴ It had been performed by the Singakademie of Berlin, Dec. 8, 1831, but probably with re-instrumentation. It was now done as Handel wrote it.

⁵ *F. M.* i. 347-54.

⁶ I cannot discover his exact status or title at Düsseldorf. In his own sketch of his life (see below) he styles himself Music-director of the Association for the Promotion of Music in Düsseldorf.

and returned with a carriage-load of Palestrina, Lasso and Lotti, 'Israel in Egypt,' the 'Messiah,' 'Alexander's Feast' and 'Egmont' are among the music which we hear of at the concerts. At the theatre, after a temporary disturbance, owing to a rise in prices, and a little over-eagerness, he was well received and successful; and at first all was *couleur de rose*—'a more agreeable position I cannot wish for.'¹ But he soon found that the theatre did not suit him; he had too little sympathy with theatrical life, and the responsibility was too irksome. He therefore, after a few months' trial, in Mar. 1834,² relinquished his salary as far as the theatre was concerned, and held himself free, as a sort of Honorary Intendant.³ His influence, however, made itself felt. 'Don Juan,' 'Figaro,' Cherubini's 'Deux Journées,' were amongst the operas given in the first four months; and in the church we hear of masses by Beethoven and Cherubini, motets of Palestrina and cantatas of Bach, the Dettingen Te Deum, 'and on the whole as much good music as could be expected during my first winter.'⁴ He lived on the ground floor of Schadow's house,⁵ and was very much in the artistic circle, and always ready to make an excursion, to have a swim, to eat, to ride (for he kept a horse⁶), to dance or to sleep; was working hard at water-colour drawing, under Schirmer's tuition, and was the life and soul of every company he entered.⁷ May 18-20 was the Lower Rhine Festival at Aix-la-Chapelle, conducted by Ferdinand Ries; there he met Hiller,⁸ and also Chopin, whose acquaintance he had already made in Paris,⁹ and who returned with him to Düsseldorf. During the spring of 1834 he was made a member of the Berlin Academy of the Fine Arts.¹⁰

Meantime, through all these labours and distractions, of pleasure or business alike, he was composing busily and well. The overture to 'Melusina'¹¹ was finished Nov. 14, 1833, and tried; the Rondo Brillant for piano and orchestra in E flat (op. 29) on Jan. 29, 1834; 'Infelice,' for soprano and orchestra, for the Philharmonic Society (in its first shape),¹² is dated Apr. 3, and the fine Capriccio for piano-

forte in A minor (op. 33, No. 1), Apr. 9, 1834. He had also rewritten and greatly improved the 'Meeresstille' overture¹³ for its publication by Breitkopf with the 'Midsummer Night's Dream' and 'Hebrides' overtures. A symphony which he mentions as on the road appears to have been superseded by a still more important work. In one of his letters from Paris (Dec. 19, 1831), complaining of the low morale of the opera librettos, he says that if that style is indispensable he 'will forsake opera and write oratorios.' The words had hardly left his pen when he was invited by the Cécilien-Verein of Frankfort to compose an oratorio on St. Paul.¹⁴ The general plan of the work, and such details as the exclusive use of the Bible and Choral-book, and the introduction of chorales, are stated by him at the very outset. On his return to Berlin he and Marx made a compact by which each was to write an oratorio-book for the other; Mendelssohn was to write 'Moses' for Marx, and Marx 'St. Paul' for Mendelssohn.¹⁵ Mendelssohn executed his task at once, and the full libretto, entitled 'Moses, an Oratorio, composed by A. B. M.,' and signed 'F. M. B., 21 Aug. 1832,' is now in the possession of the family.¹⁶ Marx, on the other hand, not only rejected Mendelssohn's book for 'Moses,' but threw up that of 'St. Paul' on the ground that chorales were an anachronism. In fact, this singular man's function in life seems to have been to differ with everybody. For the text of 'St. Paul,' Mendelssohn was indebted to his own selection, and to the aid of his friends Fürst and Schubring.¹⁷ Like Handel, he knew his Bible well; in his oratorios he followed it implicitly, and the three books of 'St. Paul,' 'Elijah' and the 'Lobgesang' are a proof (if any proof were needed after the 'Messiah' and 'Israel in Egypt') that, in his own words, 'the Bible is always the best of all.'¹⁸ He began upon the music in Mar. 1834, not anticipating that it would occupy him long;¹⁹ but it dragged on, and was not completed till the beginning of 1836.

Though only Honorary Intendant at the Düsseldorf theatre, he busied himself with the approaching winter season, and before leaving for his holiday corresponded much with Devrient as to the engagement of singers.²⁰ Sept. 1834 he spent in Berlin,²¹ and was back at Düsseldorf for the first concert on Oct. 23,²² calling on his way at Cassel, and making the acquaintance of Hauptmann,²³ with whom he was destined in later life to be closely connected. The new theatre opened on Nov. 1.

He and Immermann quarrelled as to precedence, or as to the distribution of the duties. The selection of singers and musicians, the bargaining with them, and all the countless worries which beset a manager, and which, by a new agreement, he had to undertake, proved a most uncongenial and, moreover, a most wasteful task; so uncongenial that at last, the day after the opening of the theatre, he suddenly 'made a *salto mortale*' and threw up all connexion¹ with it, not without considerable irritability and inconsistency.² After this he continued to do his other duties, and to conduct occasional operas, Julius Rietz being his assistant.

REMOVAL TO LEIPZIG.—With the opening of 1835 he received an invitation from Leipzig through Schleinitz, which resulted in his taking the post of Conductor of the Gewandhaus Concerts there. His answers³ to the invitation show not only how very careful he was not to infringe on the rights of others, but also how clearly and practically he looked at all the bearings of a question before he made up his mind upon it.

Before the change, however, several things happened. He conducted the Lower Rhine Festival of 1835 at Cologne (June 7-9) (see *NIEDERRHEINISCHE MUSIKFESTE*). The principal works were Handel's 'Solomon'—for which he had written an organ part in Italy; Beethoven's symphony No. 8, and overture op. 124, a 'religious march' and hymn of Cherubini's, and the Morning Hymn of his favourite J. F. Reichardt. The Festival was made more than ordinarily delightful to him by a present of Arnold's edition of Handel in thirty-two vols. from the committee. His father, mother and sisters were all there. The parents then went back with him to Düsseldorf; there his mother had a severe attack of illness, which prevented his taking them home to Berlin till the latter part of July.⁴ At Cassel the father too fell ill, and Felix's energies were fully taxed on the road.⁵ He remained with them at Berlin till the end of August, and then left for Leipzig to make the necessary preparations for beginning the subscription concerts in the Gewandhaus on Oct. 4.

His house at Leipzig was in Reichel's garden, off the Promenade. Chopin visited him during the interval, and Felix had the pleasure of introducing him to Clara Wieck, then a girl of 16. His first introduction to Schumann is said to have taken place at Wieck's house on Oct. 3, the day before the Gewandhaus Concert, at which Clara played Beethoven's B flat trio.⁶ Later came his old Berlin friend Ferdinand

David from Russia to lead the orchestra,⁷ and Moscheles from London for a lengthened visit. Mendelssohn's new engagement began with the best auspices. The relief from the worries and responsibilities of Düsseldorf was immense,⁸ and years afterwards he refers to it as 'when I first came to Leipzig and thought I was in Paradise.'⁹ He was warmly welcomed on taking his seat, and the first concert led off with his 'Meeresstille' overture.

Rebecka passed through Leipzig on Oct. 14 (1835) on her way from Belgium, and Felix and Moscheles accompanied her to Berlin for a visit of two days, returning to Leipzig for the next concert. Short as the visit was, it was more than usually gay. The house was full every evening, and by playing alternately, by playing four hands, and by the comical extempore tricks of which the two friends were so fond, and which they carried on to such perfection, the parents, especially the father, now quite blind, were greatly mystified and amused.¹⁰ And well that it was so, for it was Felix's last opportunity of gratifying the father he so tenderly loved and so deeply revered. At half-past 10 A.M. on Nov. 19, 1835, Abraham Mendelssohn was dead. He died the death of the just, passing away, as his father had done, without warning, but also without pain. He turned over in his bed, saying that he would sleep a little; and in half an hour he was gone. Hensel started at once for Leipzig, and by Sunday morning, the 22nd, Felix was in the arms of his mother. How deeply he felt under this peculiarly heavy blow the reader must gather from his own letters. It fell on him with special force, because he was not only away from the family circle, but had no home of his own, as Fanny and Rebecka had, to mitigate the loss. He went back to Leipzig stunned, but determined to do his duty with all his might, finish 'St. Paul,' and thus most perfectly fulfil his father's wishes. He had completed the revision of his 'Melusina' overture on Nov. 17, only three days before the fatal news reached him, and there was nothing to hinder him from finishing the oratorio. He had played in Bach's concerto in D minor for three pianofortes with Clara Wieck and Rakemann at the Gewandhaus Concert on Nov. 9, 1835.

The business of the day, however, had to go on. One of the chief events in this series of concerts was a performance of the Ninth Symphony of Beethoven, Feb. 11, 1836.¹¹ Another was Mendelssohn's performance of Mozart's D minor concerto 'as written' (for it seems to have been always hitherto played after some adaptation),¹² on Jan. 29, with cadenzas which electrified his audience. Leipzig was particu-

larly congenial to Mendelssohn. He was the idol of the town, had an orchestra full of enthusiasm and devotion, a first-rate coadjutor in David, who took much of the mechanical work of the orchestra off his shoulders; and, moreover, he was relieved of all business arrangements, which were transacted by the committee, especially by Herr Schleinitz. Another point in which he could not but contrast his present position favourably with that at Düsseldorf was the absence of all rivalry or jealousy. The labour of the season, however, was severe, and he confesses that the first two months had taken more out of him than two years' composing would do.¹ The University of Leipzig showed its appreciation of his presence by conferring on him the degree of Doctor of Philosophy in March.²

Meantime Schelble's illness had cancelled the arrangement for producing 'St. Paul' at Frankfurt, and it had been secured for the Lower Rhine Festival at Düsseldorf (May 22-24, 1836). The programmes included, besides the new oratorio, the two overtures to 'Leonore,' both in C, 'No. 1' (then unknown) and 'No. 3': one of Handel's Chandos anthems, the 'Davide penitente' of Mozart, and the Ninth Symphony. 'St. Paul' was executed with the greatest enthusiasm, and produced a deep sensation. It was performed on the 22nd, not in the present large music-hall (Kaisersaal), but in the long low room which lies outside of that and below it, known as the Rittersaal, a too confined space for the purpose. For the details of the performance, including an escapade of one of the false witnesses, in which the coolness and skill of Fanny alone prevented a break-down, we must refer the reader to the contemporary accounts of Klingemann, Hiller and Polko.³ To English readers the interest of the occasion is increased by the fact that Sterndale Bennett, then 20 years old, and fresh from the R.A.M., was present.

Schelble's illness induced Mendelssohn to take the direction of the famous Cäcilien-Verein at Frankfurt. Leipzig had no claims on him after the concerts were over, and he was thus able to spend six weeks at Frankfurt practising the choir in Bach's 'Gottes Zeit,' Handel's 'Samson,' and other works, and improved and inspired them greatly. He resided in Schelble's house at the corner of the 'Schöne Aussicht,' with a view up and down the Main. Hiller was then living in Frankfurt; Lindblad was there for a time; and Rossini remained for a few days on his passage through, in constant intercourse with Felix.⁴

Mendelssohn's visit to Frankfurt was, however, fraught with deeper results than these. It was indeed quite providential, since here he

met his future wife, Cécile Charlotte Sophie Jeanrenaud, a young lady of great beauty, nearly ten years younger than himself, the second daughter of a clergyman of the French Reformed Church, who had died many years before, leaving his wife (a Souchay by family) and children amongst the aristocracy of the town. The house was close to the Fahrthor, on the quay of the Main.⁵ Madame Jeanrenaud was still young and good-looking, and it was a joke in the family that she herself was at first supposed to be the object of Mendelssohn's frequent visits. But though so reserved, he was not the less furiously in love, and those who were in the secret have told us how entirely absorbed he was by his passion, though without any sentimentality. He had already had many a passing attachment. Indeed, being at once so warm-hearted and so peculiarly attractive to women—and also, it should be said, so much sought by them—it is a strong tribute to his self-control that he was never before seriously or permanently involved. On no former occasion, however, is there a trace of any feeling that was not due entirely, or mainly, to some quality or accomplishment of the lady, and not to her actual personality. In the present case there could be no doubt either of the seriousness of his love or of the fact that it centred in Mlle. Jeanrenaud herself, and not in any of her tastes or pursuits. And yet, in order to test the reality of his feelings, he left Frankfurt, at the very height of his passion, for a month's bathing at Scheveningen near the Hague.⁶ His friend F. W. Schadow, the painter, accompanied him, and the restless state of his mind may be gathered from his letters to Hiller.⁷ His love stood the test of absence triumphantly. Very shortly after his return, on Sept. 9, the betrothal took place, at Kronberg, near Frankfurt⁸; three weeks of bliss followed, and on Oct. 2 he was in his seat in the Gewandhaus, at the first concert of the season. Five days later (Oct. 7), in the distant city of Liverpool, 'St. Paul' was performed for the first time in England,⁹ under the direction of Sir George Smart. The season at Leipzig was a good one; Sterndale Bennett, who had come over at Mendelssohn's invitation, made his first public appearance in his own pianoforte concerto in C minor, and the series closed with the Choral Symphony.

His engagement soon became known far and wide, and it is characteristic of Germany, and of Mendelssohn's intimate relation to all concerned in the Gewandhaus, that at one of the

⁵ A pencil-drawing of the Main and the Fahrthor, with the 'Schöne Aussicht' in the distance, taken from the Jeanrenauds' windows, has the following inscription: 'Vendu à Mendelssohn au prix de l'exécution d'un nombre indéterminé de Fugues de J. S. Bach et de la Conté d'un Rondo du même Maître. L'ATRENA à Montpellier.'

concerts, the Finale to 'Fidelio,' 'Wer ein holdes Weib errungen,' should have been put into the programme by the directors with special reference to him, and that he should have been forced into extemporising on that suggestive theme, amid the shouts and enthusiasm of his audience. The rehearsals for the concerts, the concerts themselves, his pupils, friends passing through, visits to his fiancée, an increasing correspondence, kept him more than busy. Sterndale Bennett was living in Leipzig, and the two friends were much together. In addition to the subscription series and to the regular chamber concerts, there were performances of 'Israel in Egypt,' with a new organ part by him, on Nov. 7, and 'St. Paul,' on Mar. 16, 1837. The compositions of this winter are few, and all of one kind, namely, preludes and fugues for pianoforte.¹ The wedding took place on Mar. 28, 1837, at the Walloon French Reformed Church, Frankfurt. For the wedding tour they went to Freiburg and into the Palatinate, and by the 15th of May had returned to Frankfurt.² A journal which they kept together during the honeymoon is full of sketches and droll things of all kinds. In July they were at Bingen, Horchheim, Coblenz and Düsseldorf for some weeks. At Bingen, while swimming across to Assmannshausen, he had an attack of cramp which nearly cost him his life, and from which he was only saved by the boatman. The musical results of these few months were very important, and include the 42nd Psalm, the string quartet in E minor (op. 44, No. 2), an Andante and Allegro for pianoforte in E, published posthumously as a Capriccio (op. 118), the second pianoforte concerto, in D minor, and the three preludes³ for the organ (op. 37). He was also in earnest correspondence with Schubring⁴ as to a second oratorio, on the subject of St. Peter.

'ST. PAUL,' ORGAN MUSIC, etc.—It must have been hard to tear himself away so soon from his lovely young wife—and indeed he grumbles about it lustily⁵—but he had been engaged to conduct 'St. Paul,' and to play the organ and his new pianoforte concerto, at the Birmingham Festival. Accordingly on Aug. 24 he left Düsseldorf for Rotterdam, crossed to Margate in the *Attwood*, the same boat which had taken him over in 1829, and on the 27th is in London, on his fifth visit, at Klingemann's house, as cross as a man can well be.⁶ But this did not prevent his setting to work with Klingemann at the plan of an oratorio on Elijah⁷ over which they had two mornings'

consultation.⁸ Before leaving London for Birmingham, he played the organ at St. Paul's—on Sunday afternoon, Sept. 10—and at Christ Church, Newgate Street, on Tuesday morning, the 12th. It was on the former of these two occasions that the vorgers, finding that the congregation would not leave the Cathedral, withdrew the organ-blower, and let the wind out of the organ during Bach's prelude and fugue in A minor⁹—'near the end of the fugue,'¹⁰ before the subject comes in on the pedals.¹¹ At Christ Church he was evidently in a good vein. He played 'six extempore fantasias,' one on a fugue subject given by old Wesley at the moment, and the Bach fugue just mentioned and Bach's toccata. Samuel Wesley—our own ancient hero, though 71 years old—was present and played. It was literally his Nunc Dimittis: he died on Oct. 11, 1837, a month from that date. Mendelssohn's organ-playing¹² on these occasions was eagerly watched. He was the greatest of the few great German organ-players who had visited this country, and the English organists, some of them no mean proficient, learned more than one lesson from him. 'It was not,' wrote Dr. Gauntlett,

'that he played Bach for the first time here,—several of us had done that. But he taught us how to play the *slow* fugue, for Adams and others had played them too fast. His words were, "Your organists think that Bach did not write a slow fugue for the organ." Also he brought out a number of pedal-fugues which were not known here. We had played a few, but he was the first to play the D major, the G minor, the E major, the C minor, the short E minor,' etc.¹³

Even in those that were known he threw out points unsuspected before, as in the A minor fugue, where he took the episode on the Swell,

¹ His private Journal. He mentioned it to John C. Horsley, R.A., during this visit.

² For a very interesting account of these two performances by Dr. Gauntlett, see *Musical World*, Sept. 15, 1897, p. 8.

³ His private Journal.

⁴ See a letter from Dr. Gauntlett to Sir George Grove in *Mus. T.*, Feb. 1902, p. 94.

⁵ Mendelssohn's biographers have usually ignored his organ compositions, yet his 'Six Sonatas' and 'Three Preludes and Fugues' for the instrument have proved to be among the most vital of his works. Even the organ music of Bach himself is hardly more sure of its place in the repertory alike of student, church organist, and the Sonata. The Sonata shows the way to the enterprise of Messrs. Coventry & Hollier, a London firm of music publishers, who, noting the interest roused by Mendelssohn's organ-playing during his visits to England, commissioned him to write some organ music, suggesting the English title 'voluntary' as being 'peculiarly appropriate.' Mendelssohn, however, preferred to call them 'sonatas,' although they contain scarcely a movement in sonata form as the term is generally understood (see SONATA, where their form is analysed.) Moreover, it is clear that he wrote them as independent movements, and with no view to their subsequent grouping. Writing to Coventry from Frankfurt in 1844, he says: 'I hope soon to send you the promised organ pieces. Nine are ready, but I want to have twelve before I make a parcel of them.' The Sonatas were published in the following year, one hundred and ninety subscribers coming forward, and the composer receiving £40 for the English copyrights. They made their way slowly, owing to the scarcity of good organs and players in England at the time. However, the Sonatas roused the enthusiasm of the few players able to do them justice. Dr. Chipp (apparently the first to perform them in public) played the half-dozen at a single recital, and from memory! Mendelssohn himself only once did this, and found the physical effort too great. Writing to his sister Fanny, he says: 'I will play the organ sonatas to you at Ober-Liederbach; that is to say, by three at a time, for all six are too fatiguing, as I found the other day when trying them.' For a full analysis of the Sonatas and many interesting details concerning their origin, the reader is referred to Dr. C. W. Pearce's *On Mendelssohn's Organ Sonatas* (Schlörner). The 'Three Preludes and Fugues' were written about seven years before the Sonatas, and, though less immediately attractive, are sterling organ music.

¹² He had learned these since his Swiss journey. See *L.* Sept. 3, 1881.

¹ Published as op. 35. See the Catalogue at the end of this article.

² *Ibid.* p. 200.

³ The fugues appear to have been composed later.

⁵ *F. M.* II, 61.

⁶ *Ibid.* p. 99.

⁷ The earliest known reference to the oratorio of 'Elijah' is in a letter to Klingemann, dated 'The Hague, Aug. 12, 1836.' He says: 'If you would only give all the care and thought you bestow now upon St. Paul to an Elijah, or a St. Peter, or even an Og of Baahan!' See *The History of Mendelssohn's 'Elijah'*, by F. G. Edwards, p. 3 & seq.

returning to the Great Organ when the pedal re-enters, but transferring the E in the treble to the Great Organ a bar before the entry of the other parts, with very fine effect.¹ One thing which particularly struck our organists was the contrast between his massive effects and the lightness of his touch in rapid passages. The touch of the Christ Church organ was both deep and heavy, yet he threw off arpeggios as if he were at a piano. His command of the pedal clavier was also a subject of much remark.²

On the evening of the Tuesday, Sept. 12, he attended a performance of his oratorio 'St. Paul' by the Sacred Harmonic Society at Exeter Hall. He had conducted three rehearsals, but could not conduct the performance itself, owing to the prohibition of the Birmingham committee. It was the first time he had heard 'St. Paul' as a mere listener, and his private journal says that he found it 'very interesting.' His opinion of English amateurs may be gathered from his letter to the Society, with which his journal fully agrees.

'I can hardly express the gratification I felt in hearing my work performed in so beautiful a manner, indeed, I shall never wish to hear some parts of it better executed than they were on that night. The power of the choruses—this large body of good and musical voices—and the style in which they sang the whole of my music, gave me the highest and most heartfelt treat; while I thought on the immense improvement which such a number of *real amateurs* must necessarily produce in the country which may boast of it.'

On the Wednesday he went to Birmingham, and remained there, rehearsing and arranging, till the Festival began, Tuesday, Sept. 19. At the evening concert of that day he extemporised on the organ, taking the subjects of his fugue from 'Your harps and cymbals sound' ('Solomon'), and the first movement of Mozart's symphony in D, both of which had been performed earlier in the day; he also conducted his 'Midsummer Night's Dream' overture. On Wednesday he conducted 'St. Paul,' on Thursday evening played his new pianoforte concerto in D minor, and on Friday morning, the 22nd, Bach's prelude and fugue ('St. Anne's') on the organ.³ The applause throughout was prodigious; but it did not turn his head, or prevent indignant reflections on the treatment to which Neukomm had been subjected, reflections which do him honour. Moreover, the applause was not empty. Mori and Novello were keen competitors for the D minor pianoforte concerto, and it became the prize of the latter, at what we should now consider a very moderate figure, before its composer left Birmingham. He travelled up by coach, reaching London at midnight, and was intercepted at the coach-office by the committee of the Sacred Harmonic

Society, who presented him with a large silver snuff-box, adorned with an inscription.⁴

He then went straight through, arrived in Frankfurt on the 27th, and was at Leipzig at 2 p.m. of the day of the first concert, Sunday, Oct. 1.⁵ His house was in Lurgenstein's Garden, off the Promenade, the first house on the left, on the second floor.⁶

LEIPZIG CONCERTS, ETC.—The next few years were given chiefly to Leipzig. He devoted all his heart and soul to the Gewandhaus Concerts, and was well repaid by the increasing excellence of the performance and the enthusiasm of the audiences. The principal feature of the series 1837–38 was the appearance of Clara Novello for the first time in Germany—a fruit of his English experiences. She sang first at the concert of Nov. 2, 1837, and remained till the middle of January, creating an extraordinary excitement. But the programmes had other features to recommend them. In Feb. and Mar. 1838 there were four historical concerts (1. Bach, Handel, Gluck, Viotti; 2. Haydn, Cimarosa, Naumann, Righini; 3. Mozart, Salieri, Méhul, Romberg; 4. Vogler, Beethoven, Weber), which excited great interest. Mendelssohn and David played the solo pieces, and it is easy to imagine what a treat they must have been. In the programmes of other concerts we find Beethoven's 'Glorreiche Augenblick,' and Mendelssohn's own 42nd Psalm. His Serenade and Allegro gioioso (op. 43)—like his 'Ruy Blas' overture, a veritable impromptu—was produced on Apr. 2,⁷ and his string quartet in E flat (op. 44, No. 3) on the following day.

His domestic life during the spring of 1838 was not without anxiety. On Feb. 7 his first son was born, afterwards named Carl Wolfgang Paul, and his wife had a very dangerous illness.⁸ This year he conducted the Lower Festival at Cologne (June 3–6). He had induced the committee to include a cantata of Bach,⁹ then an entire novelty, in the programme, which also contained a selection from Handel's 'Joshua.' A silver cup (Pokal) was presented to him at the close of the Festival.¹⁰

The summer was spent at Berlin, in the lovely garden of the Leipziger Strasse, and was his wife's first introduction to her husband's family.¹¹ To Felix it was a time of great enjoyment and much productiveness. Even in the early part of the year he had not allowed the work of the concerts to keep him from composition. The string quartet in E flat just mentioned, the violoncello sonata in B flat (op. 45),

⁴ L. to his mother, Oct. 4, 1837.

⁵ On Oct. 12, 1837, he writes to thank the Gesellschaft der Musikfreunde of Vienna for its diploma of membership. The letter is in the Society's archives.

⁶ H. p. 149.

⁷ Conceived and composed in two days for Mme. Botgorschack's concert. See L. Apr. 2, 1838.

⁸ H. p. 116.

⁹ The Bach novelty appears to have been a garbled version of the Himmelfahrts cantata, 'Gott führet auf mit Jauchzen,' though Mendelssohn probably found it in that state. The double chorus—to which he refers in a letter to J. A. Novello, printed in O. & M., p. 192, as being alone worth the journey from London to Cologne to hear—was 'Nun ist das Heil, und die Kraft.' This information is obtained from a word-book of the festival. See *Mus. Z.*, June 1906, p. 387.

³ For these details see *Musical World*, Sept. 22 and 29, 1837, pp. 26–40. He had revolved on the Prelude and Fugue two months before. See L. to his mother, July 13, 1837.

the 95th Psalm, and the Serenade and Allegro gioioso are all dated during the hard work of the first four months of 1838. The actual result of the summer was another string quartet (in D; op. 44, No. 1), dated July 24, 1838,¹ and the Andante Cantabile and Presto Agitato in B (Berlin, June 22, 1838). The intended result is a symphony in B flat which occupied him much, which he mentions more than once as complete in his head, but of which no trace on paper has yet been found.² He alludes to it in a letter to the Philharmonic Society (Jan. 19, 1839)—answering their request for a symphony—as ‘begun last year,’ though it is doubtful if his occupations will allow him to finish it in time for the 1839 season. So near were we to the possession of an additional companion to the Italian and Scotch symphonies! The violin concerto was also begun in this holiday,³ and he speaks of a Psalm⁴ (probably the noble one for eight voices, ‘When Israel out of Egypt came’), a sonata for pianoforte and violin (in F, dated ‘Berlin, June 13, 1838,’ still in MS.), and other things. He was now, too, in the midst of the tiresome correspondence with J. R. Planché,⁵ on the subject of the opera which that gentleman had agreed to write, but which, like Mendelssohn’s other negotiations on the subject of operas, came to nothing; and there is the usual large number of long and carefully written letters. He returned to Leipzig in September, but was again attacked with measles,⁶ on the eve of a performance of ‘St. Paul,’ on Sept. 15. The attack was sufficient to prevent his conducting the first of the Gewandhaus Concerts (Sept. 30), at which David was his substitute. On Oct. 7 he was again at his post.⁷ The star of this series was Mrs. Alfred Shaw, whose singing had pleased him very much when last in England. Its one remarkable novelty was Schubert’s great symphony in C,⁸ which had been brought from Vienna by Schumann, and was first played in MS. on March 21, 1839, at the last concert of the series. During the autumn of 1839 he received from Erard the grand piano which became so well known to his friends and pupils, and the prospect of which he celebrates in a remarkable letter now in the possession of that firm.

‘Elijah’ is now fairly under way. After discussing with his friends Bauer and Schubring the subject of St. Peter,⁹ in terms which show how completely the requirements of an oratorio book were within his grasp, and another subject not very clearly indicated, but apparently approaching that which he afterwards began to

treat as ‘Christus’¹⁰—he was led to the contemplation of that most picturesque and startling of the prophets of the Old Testament, who, strange to say, does not appear to have been previously treated by any known composer. Hiller¹¹ tells us that the subject was suggested by the passage¹² (1 Kings xix. 11), ‘Behold, the Lord passed by.’ We may accept the fact more certainly than the date (1840) at which Hiller places it. Such a thing could not but fix itself in the memory, though the date might easily be confused. We have already seen that he was at work on the subject in the summer of 1837, and his correspondence¹³ shows that much consultation had already taken place upon it, and that considerable progress had been made in the construction of the book of the oratorio. Mendelssohn had drawn up a number of passages and scenes in order, and had given them to Schubring for consideration. His ideas are dramatic enough for the stage!¹⁴ The music does not seem to be yet touched.

During the spring of 1839 he finished the 114th Psalm, and wrote the overture to ‘Ruy Blas.’ This, though one of the most brilliantly effective of his works, was, with a chorus for female voices, literally conceived and executed *à l’improviste* between a Tuesday evening and a Friday morning—a great part of both Wednesday and Thursday being otherwise occupied—and in the teeth of an absolute aversion to the play.¹⁵ The performance took place at the theatre on Mar. 11. A letter to Hiller, written a month¹⁶ after this (Leipzig, Apr. 15), gives a pleasant picture of his care for his friends. A great part of it is occupied with the arrangements for doing Hiller’s oratorio in the next series of Gewandhaus Concerts, and with his pleasure at the appearance of a favourable article on him in Schumann’s paper, *Neue Zeitschrift für Musik*, from which he passes to lament over the news of the suicide of Nourrit, who had been one of his circle in Paris in 1831.

In May (1839) he is at Düsseldorf, conducting the Lower Rhine Musical Festival (May 19-21)—the ‘Messiah,’ Beethoven’s Mass in C, his own 42nd Psalm, the Eroica Symphony, etc. From there he went to Frankfurt, to the wedding of his wife’s sister Julie to Mr. Schunck of Leipzig, and there he wrote the D minor trio¹⁷; then to Horchheim, and then back to Frankfurt. On Aug. 21¹⁸ they were at home again in Leipzig, and were visited by the Hensels, who remained with them till Sept. 4, and then departed for Italy. Felix followed them with a

long letter¹ of hints and instructions for their guidance on the journey, not the least characteristic part of which is the closing injunction to be sure to eat a salad of broccoli and ham at Naples, and to write to tell him if it was not good.

The summer of 1839 had been an unusually fine one; the visit to Frankfort and the Rhine had been perfectly successful; he had enjoyed it with that peculiar capacity for enjoyment which he possessed, and he felt 'thoroughly refreshed.'² He went a great deal into society, but found none so charming as that of his wife. A delightful picture of part of his life at Frankfort is given in a letter to Klingemann of Aug. 1, and still more so in one to his mother on July 3, 1839. Nor was it only delightful. It urged him to the composition of partsongs for the open air, a kind of piece which he made his own, and wrote to absolute perfection. The impulse lasted till the end of the winter, and many of his best partsongs—including 'Love and Wine,' 'The Hunter's Farewell,' 'The Lark'—date from this time.³ In addition to these the summer produced the D minor piano-forte trio already mentioned, the completion of the 114th Psalm, and three fugues for the organ, one of which was worked into the organ sonata No. 2.⁴

On Oct. 2 his second child, Marie, was born. Then came the christening, with a visit from his mother and Paul, and then Hiller arrived. He had very recently lost his mother, and nothing would satisfy Mendelssohn but that his friend should come and pay him a long visit,⁵ partly to dissipate his thoughts, and partly to superintend the rehearsals of his oratorio of 'Jeremiah the Prophet,' which had been bespoken for the next series of Gewandhaus Concerts.⁶ Hiller arrived early in December, and we recommend his description of Mendelssohn's home life to any one who wishes to know how simply and happily a great and busy man can live. Leipzig was proud of him, his wife was very popular, and this was perhaps the happiest period of his life. His love of amusement was as great as ever, and his friends long recollected his childish delight in the Cirque Lajjarre and Paul Cousin the clown.

The concert season of 1839-40 was a brilliant one. For novelties there were symphonies by Lindblad, Kalliwoda, Kittl, Schneider and Vogler. Schubert's symphony in C was played no less than three times,⁷ and one concert⁸ (Jan. 9, 1840) was rendered memorable by a performance of Beethoven's four

overtures to Leonora ('Fidelio'). Mendelssohn's own 114th Psalm was first performed 'sehr glorios'⁹ on New Year's Day, and the new trio in D minor on Feb. 10. The quartet Concerts were also unusually brilliant. At one of them Mendelssohn's octet was given, he and Kalliwoda playing the two violas; at another he accompanied¹⁰ David in Bach's 'Chaconne,' then quite unknown. Hiller's oratorio was produced on Apr. 2 with great success. Ernst and, above all, Liszt were among the virtuosi of this season; and for the latter of these two great players Mendelssohn arranged a soirée at the Gewandhaus, which he thus epitomises: '350 people, orchestra, chorus, punch, pastry, Meeresstille, Psalm, Bach's triple concerto, choruses from St. Paul, Fantasia on Lucia, the Erl King, the devil and his grandmother'¹¹; and which had the effect of somewhat allaying the annoyance which had been caused by the extra prices charged at Liszt's concerts.

How, in the middle of all this exciting and fatiguing work (of which we have given but a poor idea), he found time for composition, and for his large correspondence, it is impossible to tell, but he neglected nothing. On the contrary, it is precisely during this winter that he translates for his uncle Joseph, his father's elder brother—a man not only of remarkable business power but with considerable literary ability—a number of difficult early Italian poems into German verse. They consist of three sonnets by Boccaccio, one by Dante, one by Cino, one by Cecco Angiolieri, an epigram of Dante's and another of Gianni Alfani's. They are printed in the later editions of the letters (German version only), and are accompanied by a letter to his uncle Joseph, dated Feb. 20, 1840, describing half-humorously, half-pathetically, the difficulty which the obscurities of the originals had given him amid all his professional labours. With irrepressible energy he embraced the first moment of an approach to leisure, after what he describes as a 'really overpowering turmoil,'¹² to write a long and carefully studied official communication to the Kreis-Director or Home Minister of Saxony, urging that a legacy recently left by a certain Herr Blümner should be applied to the formation of a solid music academy at Leipzig.¹³ This was business; but, in addition, during all these months there are long letters to Hiller, Chorley, his mother, Fanny, Paul and Fürst (and remember that only a small part of those which he wrote has been brought within our reach); and yet he managed to compose both the 'Lobgesang' and the 'Festgesang' for the Festival in commemoration of the invention of Printing, which was held in Leipzig on June 25, the former of which is as characteristic and important a work

as any in the whole series of his compositions. The music for both these was written at the express request of the Town Council, acting through a committee whose chairman was Dr. Raymond Härtel, and the first communication with Mendelssohn on the subject was made about the end of the previous July. We know from Mendelssohn himself¹ that the title 'Symphonie Cantata' is due to Klingemann, but the words are probably Mendelssohn's own selection, no trace of any communication with Schubring, Bauer or Fürst being preserved in the published letters or recollections, and the draft of the words having vanished.

The Festival extended over two days, Wednesday and Thursday, June 24 and 25, 1840. On Tuesday evening there was a 'Vorfeier' in the shape of an opera by Lortzing, 'Hans Sachs,' composed for the occasion. At 8 A.M. on Wednesday was a service in the church with a cantata by Richter (of Zittau), followed by the unveiling of the printing-press and statue of Gutenberg, and by a performance in the open market-place of Mendelssohn's 'Festgesang'² for two choirs and brass instruments, he conducting the one chorus and David the other. On Thursday afternoon a concert was held in St. Thomas's Church, consisting of Weber's Jubilee Overture, Handel's Dettingen Te Deum, and Mendelssohn's 'Lobgesang.'

Hardly was this over when he went to Schwerin with his wife, to conduct 'St. Paul' and other large works, at a Festival there (July 8-10). On the way back they stopped in Berlin for 'three very pleasant days.'³ Another matter into which at this time he threw all his devotion was the erection of a monument to Sebastian Bach in front of his old habitat at the 'Thomas School.' The scheme was his own, and he urged it with characteristic heartiness.⁴ But dear as the name and fame of Bach were to him, he would not consent to move till he had obtained (from the Town Council) an increase to the pay of the orchestra of the Gewandhaus concerts. For this latter object he obtained 500 thalers,⁵ and on Aug. 6 gave an organ performance *solissimo* in St. Thomas's Church, by which he realised 300 thalers.⁶ Even this he would not do without doing his very best, and he describes to his mother how he had practised so hard for a week before 'that he could hardly stand on his feet, and the mere walking down the street was like playing a pedal passage.'⁷ After such a six months, no wonder that his health was not good, and that his 'physician wanted to send him to some Brunnen instead

of a Musical Festival.'⁸ To a Festival, however, he went.

'LOBGESANG' AT THE BIRMINGHAM FESTIVAL.—The 'Lobgesang' had not escaped the attention of the energetic Mr. Moore, who managed the music in Birmingham, and some time before its first performance he had written to Mendelssohn with the view of securing it for the autumn meeting. On July 21, Mendelssohn writes in answer, agreeing to come, and making his stipulations as to the other works to be performed.⁹ It was his sixth visit to England.

There was a preliminary rehearsal of the work in London under Moscheles's care. Mendelssohn arrived on Sept. 18,¹⁰ visited all his London friends, including the Alexanders, Horsleys, Moscheles, and Klingemann (with whom he stayed, at 4 Hobart Place, Pimlico), went down to Birmingham with Moscheles on Sunday the 20th and stayed with Mr. Moore. On Tuesday he played a fugue on the organ; on Wednesday, the 23rd, conducted the 'Lobgesang,'¹¹ and after it was over, and the public had left the hall, played for three-quarters of an hour on the organ.¹² The same day he played his G minor concerto at the evening concert in the theatre. On Thursday, after a selection from Handel's 'Jephthah,' he again extemporised on the organ, this time in public. The selection had closed with a chorus, the subjects of which he took for his improvisation,¹³ combining 'Theme sublimo' with 'Ever faithful' in a masterly manner.

On his return to town he played on the organ at St. Peter's, Cornhill, on Sept. 30, Bach's noble prelude and fugue in E minor, his own in C minor (op. 37, No. 1) and F minor,¹⁴ and other pieces, concluding with Bach's Passacaglia. Of this last he wrote a few bars as a memento, which still ornament the vestry of the church.¹⁵ He had intended to give a charity concert during his stay in London,¹⁶ after the Festival, but it was too late in the season for this, and he travelled from London with Chorley¹⁷ and Moscheles in the mail-coach to Dover; then an eight hours' passage to Ostend, and by Liège and Aix-la-Chapelle to Leipzig. It was Moscheles's first introduction to Cécile.

The concerts had already begun, on Oct. 4, but he took his place at the second. The 'Lobgesang' played a great part in the musical life of Leipzig this winter. It was performed at the special command of the King of Saxony at an extra concert in October.¹⁸ Then Mendelssohn set to work to make the alterations and additions which the previous performances had

¹ L. to Klingemann, Nov. 18, 1840.

² The words of this were by Prof. Prüß of Freiberg (*N.M.Z.*, 1840, II. 7). The 'statue' which is mentioned in the accounts was probably something merely temporary. The second number of the 'Festgesang,' adapted by Dr. W. H. Cummings to the words 'Hark, the herald angels sing,' is a very favourite hymn-tune in England. In a letter to his English publisher, Mr. E. Buxton (Ewer & Co.), Mendelssohn says that the tune 'will never do to sacred words.'

suggested to him, including the scene of the watchman, preparatory to a benefit performance on Dec. 3; and lastly it was performed at the ninth Gewandhaus Concert, on Dec. 16, when both it and the Kreutzer Sonata were commanded by the King and the Crown Prince of Saxony. The alterations were so serious and so universal as to compel the sacrifice of the whole of the plates engraved for the performance at Birmingham. Now, however, they were final, and the work was published by Breitkopf & Härtel early in the following year. Before leaving this we may say that the scene of the watchman was suggested to him during a sleepless night, in which the words 'Will the night soon pass?' incessantly recurred to his mind. Next morning he told Schloinitz that he had got a new idea for the 'Lobgesang.'

THE INTERVENTION OF BERLIN.—From 1841 began the worries and troubles which, when added to the prodigious amount of his legitimate work, gradually robbed him of the serene happiness and satisfaction which he had for long enjoyed, and in the end, there can be little doubt, contributed to his premature death. Frederick William IV., to whom, as Crown Prince, Mendelssohn dedicated his three concert overtures in 1834, had succeeded to the throne of Prussia on June 7, 1840; and being a man of much taste and cultivation, one of his first desires was to found an Academy of Arts in his capital, to be divided into the four classes of Painting, Sculpture, Architecture and Music, each class to have its director, who should in turn be superintendent of the whole Academy. In music it was proposed to connect the class with the existing establishments for musical education, and with others to be formed in the future, all under the control of the director, who was also to carry out a certain number of concerts every year, at which large vocal and instrumental works were to be performed by the royal orchestra and the Opera company.

Such was the scheme which was communicated to Mendelssohn by Herr von Massow, on Dec. 11, 1840, with an offer of the post of director of the musical class, at a salary of 3000 thalers (£450). Though much gratified by the offer, Mendelssohn declined to accept it without detailed information as to the duties involved. That information, however, could only be afforded by the Government Departments of Science, Instruction and Medicine, within whose regulation the Academy lay, and on account of the necessary changes and adjustments would obviously require much consideration. Many letters on the subject passed between Mendelssohn, his brother Paul, Herr von Massow, Herr Eichhorn the Minister, Klingemann, the President Verkenius, from which it is not difficult to see that his hesitation arose from his distrust of Berlin and of the official world which predominated there, and

with whom he would in his directorship be thrown into contact at every turn. He contrasts, somewhat captiously perhaps, his freedom at Leipzig with the trammels at Berlin; the devoted, excellent, vigorous orchestra of the one with the careless, perfunctory execution of the other. His radical, *roturier* spirit revolted against the officialism and etiquette of a great and formal court, and he denounces in distinct terms

'the mongrel dolms of the capital—vast projects and poor performances; the keen criticism and the slovenly playing; the liberal ideas and the shoals of subservient courtiers; the Museum and Academy, and the sand.'

However, the commands of a king are not easily set aside, and the result was that by the end of May 1841 he was living in Berlin, in the old home of his family—to his great delight.

His life at Leipzig during the winter of 1840–1841 had been unusually laborious. The interest of the concerts was fully maintained; four very interesting programmes, occupied entirely by Bach, Handel, Haydn, Mozart and Beethoven, and involving a world of consideration and minute trouble, were given. He himself played frequently; several very important new works by contemporaries—including symphonies by Spohr, Maurer and Kalliwoda, and the Choral Symphony, then nearly as good as new—were produced, after extra careful rehearsals¹; and the season wound up with Bach's Passion. In a letter to Chorley² of March 15, 1841, he says his spring campaign

'was more troublesome and vexatious than ever . . . nineteen concerts since then [Jan. 1], and seven more to come in the next three weeks, not to speak of rehearsals, of which we always had at least three in a week.'

The amount of general business and correspondence, due to the constant rise in his fame and position, was also alarmingly on the increase. In a letter to his mother, Jan. 25, 1841, he tells of thirty-five letters written in two days, and of other severe demands on his time, temper and judgment. And when we remember what his letters often are—the large quarto sheet of 'Bath paper,' covered at least on three sides, often over the flaps of the fourth, the close straight lines, the regular, extraordinarily neat writing, the air of accuracy and precision that pervades the whole down to the careful signature and the tiny seal—we shall not wonder that with all this, added to the Berlin worries, he composed little or nothing. 'I have neither read nor written in the course of this music-mad winter,' says he,³ and accordingly, with one exception, we find no composition with a date earlier than the latter part of Apr. 1841. The exception was a pianoforte duet in A, which he wrote expressly to play with his friend Madame Schumann, at her concert

¹ It was at this performance of the Choral Symphony that Schumann for the first time heard the D in the bass trombone which gives so much life to the beginning of the trio. See his words in *N. M. Z.*, 1841, i. 89. ² *C. L.* 384. ³ *Ibid.*

on Mar. 31. It is dated Leipzig, Mar. 23, 1841, and was published after his death as op. 92. As the pressure lessens, however, and the summer advances, he breaks out with some songs, with and without words, and then with the '17 Variations sérieuses' (June 4), going on, as his way was, in the same rut, with the variations in E flat (June 25) and in B flat.¹ It was known before he left Leipzig that it was his intention to accept the Berlin post for a year only, and therefore it seemed natural that the 'Auf Wiedersehen' in his Volkslied, 'Es ist bestimmt,' should be rapturously cheered when sung² by Schröder-Devrient to his own accompaniment, and that when serenaded at his departure with the same song he should himself join heartily in its closing words.³ He took his farewell, as we have said, with a performance of Bach's Passion, in St. Thomas's Church, on Palm Sunday, Apr. 4, and the appointment of Kapellmeister to the King of Saxony followed him to Berlin.⁴

For some time after his arrival there matters did not look promising. But he had bound himself for a year. Many conferences were held, at which little was done but to irritate him. He handed in his plan for the Musical Academy,⁵ received the title of Kapellmeister⁶ to the King of Prussia, the life in the lovely garden at the Leipziger Strasse reassorted its old power over him, and his hope and spirits gradually returned. He was back in Leipzig for a few weeks in July, as we find from his letters, and from an organ prelude in C minor, a perfectly strict composition of thirty-eight bars, written 'this morning' (July 9), on purpose for the album of Henry E. Dibdin of Edinburgh.⁷ He then began work in Berlin. The King's desire was to revive some of the ancient Greek tragedies. He communicated his idea to Tieck, the poet, one of the new directors; the choice fell on the *Antigone* of Sophocles, in Donner's new translation; and by Sept. 9⁸ Mendelssohn was in consultation with Tieck on the subject. He was greatly interested with the plan, and with the novel task of setting a Greek drama, and worked at it with the greatest enthusiasm. By the 28th of the same month he had made up his mind on the questions of unison, melodrama, etc. The first full stage rehearsal took place on Oct. 22, and the performance itself at the Neue Palais at Potsdam on Oct. 28, with a repetition on Nov. 6. Meantime he had taken a house of his own opposite the family residence. A temporary arrangement had been made for the Gewandhaus Concerts of this winter to be con-

ducted by David, and they began for the season on that footing. Mendelssohn, however, ran over for a short time, after the second performance of 'Antigone,' and conducted two of the series, and the concert for the benefit of the orchestra, returning to Berlin for Christmas.

On Jan. 10, 1842, he began a series of concerts by command of the King, with a performance of 'St. Paul' in the concert-room of the theatre; but, if we may believe Devrient, there was no cordial understanding between him and the band; the Berlin audiences were cold, and he was uncomfortable. 'A prophet hath no honour in his own country.' It must, however, have been satisfactory to see the hold which his 'Antigone' was taking both in Leipzig and Berlin,⁹ in each of which it was played over and over again to crowded houses. During the winter he completed the Scotch Symphony, which is dated Jan. 20, 1842. His sister's Sunday concerts were extraordinarily brilliant this season, on account not only of the music performed, but of the very distinguished persons who frequented them; Cornelius, Thorwaldsen, Ernst (a constant visitor), Pasta, Madame Ungher-Sabatier, Liszt, Büchh, Lepsius, Mrs. Austin, are specimens of the various kinds of people who were attracted, partly no doubt by the music and the pleasant *réunion*, partly by the fact that Mendelssohn was there.

He made his escape to his beloved Leipzig for the production of the Scotch Symphony on Mar. 3,¹⁰ but though it was repeated a week later, he appears to have returned to Berlin. For the sixth time he directed the Lower Rhine Festival at Düsseldorf (May 15-17); and passing on to London, for his seventh visit, with his wife, conducted his Scotch Symphony at the Philharmonic, amid extraordinary applause and enthusiasm, on June 13, and played his D minor concerto there on the 27th,¹¹ and conducted the 'Hebrides' overture, which was encored. The Philharmonic season wound up with a fish dinner at Greenwich, given him by the directors.

On June 12 he revisited St. Peter's, Cornhill. It was Sunday, and as he arrived the congregation were singing a hymn to Haydn's well-known tune. This he took for the subject of his voluntary, and varied and treated it for some time extempore in the happiest and most scientific manner. On the 16th he paid a third visit to Christ Church, Newgate Street, and it was possibly on that occasion that he played an extempore fantasia on 'Israel in Egypt' which positively electrified those who heard it. He also again treated Haydn's hymn, but this time as a fantasia and fugue, entirely distinct from his performance of four days previous.¹² On

¹² On the authority of Miss Elizabeth Mounsey, Dr. E. J. Hopkins and the *Athenæum*, June 18, 1842.

the 17th, at a concert of the Sacred Harmonic Society at Exeter Hall, mostly consisting of English anthems, he played the organ twice; first, Bach's so-called 'St. Anne's' fugue, with the great prelude in E flat, and, secondly, an extempore introduction and variations on the 'Harmonious Blacksmith,' ending with a fugue on the same theme.¹ After this he and his wife paid a visit to their cousins in Manchester, with the intention of going on to Dublin, but were deterred by the prospect of the crossing. During the London portion of this visit they resided with his wife's relations, the Boneckes, on Denmark Hill, Camberwell.² He was very much in society, where he always enjoyed himself extremely, and where his wife was much admired; and amongst other incidents described in his letters to his mother³ are two visits to Buckingham Palace, the first in the evening of June 20, and the second on the afternoon of July 9, which show how thoroughly Queen Victoria and the Prince Consort appreciated him. On the latter occasion he obtained Her Majesty's permission to dedicate the Scotch Symphony to her.⁴

They left London on July 12, and by the middle of the month were safe at Frankfort, in the midst of their relatives, 'well and happy,' and looking back on the past month as a 'delightful journey.'⁵ August was devoted to a tour in Switzerland, he and Paul, with their wives. Montreux, Interlaken, the Oberland, the Furka, Meiringen, the Grimsel are all mentioned. He walked, composed, and 'sketched furiously'; visited the old scenes, found the old landladies and old guides, always glad to see him; his health was perfect, his mood gay, and all was bright and happy, save when the spectre of a possible prolonged residence in Berlin intruded its unwelcome form.⁶ On Sept. 3 they were at Zürich,⁷ on the 5th, 6th and 7th at the Rigi and Lucerne.⁸ While at Zürich he visited the Blind Institution, spent two hours in examining the compositions of the pupils, praised and encouraged them, and finished by extemporising on the piano at great length.⁹ On his return he stayed for a gay fortnight at Frankfort. Hiller, Charles Hallé and their wives were there, and there was much music made, and a great open-air fête at the Sandhof, with partsongs, *tableaux vivants*, etc., etc.¹⁰ A very characteristic and beautiful letter to Simrock, the music publisher, urging him to accept some of Hiller's compositions (an appeal promptly responded to by that excellent

personage), dates from this time.¹¹ So well was the secret kept that Hiller never knew of it till the publication of the letter in 1863.

During the summer the King of Prussia had conferred on Mendelssohn, in company with Liszt, Meyerbeer and Rossini, the great honour of the 'Ordre pour le Mérite,'¹² and the Order itself reached him at Frankfort. He set no store by such distinctions, nor perhaps was its Berlin origin likely to increase the value of this particular one. Shortly after it arrived he was taking a walk with a party of friends across the bridge at Offenbach. One of them (Mr. Speyer) stayed behind to pay the toll for the rest. 'Is not that,' said the toll-keeper, 'the Mr. Mendelssohn whose music we sing at our society?' 'It is.' 'Then, if you please, I should like to pay the toll for him myself.' On rejoining the party, Mr. Speyer told Mendelssohn what had happened. He was enormously pleased. 'Hm,' said he, 'I like that better than the Order.'¹³

He took Leipzig on his way to Berlin, and conducted the opening concert of the Gowandhaus series on Oct. 2 (1842), amid the greatest enthusiasm of his old friends. A week later and he was in Berlin, and if anything could show how uncongenial the place and the prospect were, it is to be found in his letter to Hiller, and even in the Italian *jeu d'esprit* to Hiller's wife.¹⁴ It is as if his very teeth were set on edge by everything he sees and hears there. Nor were matters more promising when he came to close quarters. A proposition was made to him by the minister immediately after his arrival that he should act as superintendent of the music of the Protestant Church of Prussia, a post at once vague and vast, and unsuited to him. At the same time it was now evident that the plans for the organisation of the Academy had failed, and that there was no present hope of any building being erected for the music school. Under these circumstances, anxious more on his mother's account than on his own not to leave Berlin in disgrace, in fact ready to do anything which should keep him in connexion with the place where she was,¹⁵ he asked and obtained a long private interview with the King, in which His Majesty expressed his intention of forming a choir of about thirty first-rate singers, with a small picked orchestra, to be available for church music on Sundays and festivals, and to form the nucleus of a large body for the execution of grand musical works. Of this, when formed, he desired Mendelssohn to take the command, and to write the music for it; meantime he was to be at liberty to live where he chose, and—his own stipulation—to receive half the salary previously granted. The King evidently had the

matter very closely at heart. He was, says Mendelssohn, quite flushed with pleasure, could hardly contain himself, and kept repeating 'You can scarcely think *now* of going away.' When kings ask in this style it is not for subjects to refuse them. Moreover, Mendelssohn was as much attracted by the King as he was repelled by the official etiquette of his ministers, and it is not surprising that he acceded to the request. The interview was followed up by a letter from His Majesty dated Nov. 22,¹ containing an order constituting the Domchor or Cathedral Choir, conferring on Mendelssohn the title of General Music-Director, with a salary of 1500 thalers, and giving him the superintendence and direction of the church and sacred music as his special province. This involved his giving up acting as Kapellmeister to the King of Saxony, and for that purpose he had an interview with that monarch at Dresden, in which he obtained the King's consent to the application of the Blümner legacy to his darling scheme of a Conservatorium at Leipzig.²

RETURN TO LEIPZIG.—Thus then 'this long, tedious, Berlin business' was at length apparently brought to an end, and Mendelssohn was back in his beloved Leipzig, and with a definite sphere of duty before him in Berlin, for he had learnt in the meantime that he was at once to supply the King with music to Racine's *Athalie*, the *Midsummer Night's Dream*, *The Tempest* and *Œdipus Coloneus*.³ This, with the proofs of the Scotch Symphony and 'Antigone' to correct, with the 'Walpurgisnacht' to complete for performance, the new Conservatorium to organise, the concerts, regular and irregular, to rehearse and conduct, and a vast and increasing correspondence to be kept up, was enough for even his deft and untiring pair of hands. He is cheerful enough under it, and although he complains in one letter that composition is impossible, yet in the next letter 'Athalie,' 'Œdipus,' the 'Midsummer Night's Dream,' the 'Walpurgisnacht' and the new violoncello sonata (in D) are beginning again to fill his brain, and he finds time to be pleasant over old Madame Schröder, and to urge the claims of his old Meiringen guide to a place in Murray's *Handbook*.⁴ In the midst of all this whirl he lost his mother, who died in the same rapid and peaceful manner that his father had done. She was taken ill on the Sunday evening—her husband's birthday—and died before noon on Monday, Dec. 12—so quickly that her son's letter of the 11th could not have reached her.⁵ The loss affected him less violently than that of his father had done, perhaps because he was now older and too hard worked, and also because of the home-life and ties by which he was surrounded. But it caused him keen suffer-

ing, from which he did not soon recover. It brings into strong relief his love of the family bond, and his fear lest the disappearance of the point of union should at all separate the brothers and sisters; and he proposes, a touching offer for one whose pen was already so incessantly occupied, that he should write to one of the three every week, and the communication be thus maintained with certainty.⁶

The house now became his, but the hesitation with which he accepts his brother's proposal to that effect, lest it should not be acceptable to his sisters or their husbands, is eminently characteristic of his delicate and unselfish generosity.⁷ He admits that his mother's death has been a severe trial, and then he drops an expression which shows how heavily the turmoil of so busy a life was beginning to press upon him.—'In fact, everything that I do and carry on is a burden to me, unless it be mere passive existence.' This may have been the mere complaint of the moment, but it is unlike the former buoyant Mendelssohn. He was suffering, too, from what appears to have been a serious cough. But work came to his relief; he had some scoring and copying to do which, though of the nature of

The sad mechanic exercise,
Like dull narcotics, numbing pain,

yet had its own charm—'the pleasant intercourse with the old familiar oboes and violas and the rest, who live so much longer than we do, and are such faithful friends,'⁸ and thus kept him from dwelling on his sorrow. And there was always so much in the concerts to interest and absorb him. He still clung, though as fastidiously as ever, to the hope of getting an opera-book. A long letter in French to M. Charles Duveyrier, dated Jan. 4, 1843,⁹ discusses the merits of the story of Jeanne d'Arc for the purpose, and decides that Schiller's play has preoccupied the ground. At this time he rewrote 'Infelice,' the second published version of which is dated 'Leipzig, Jan. 15, 1843.'

At the concert of Feb. 2, 1843, the 'Walpurgisnacht' was produced in a very different condition from that in which it had been performed at Berlin just ten years before, in Jan. 1833. He had rewritten the score 'from A to Z,' amongst other alterations had added two fresh airs, and had at length brought it into the condition in which it is now so well known. On Jan. 12 a symphony in C minor, by Niels Gade, of Copenhagen, was rehearsed. It interested Mendelssohn extremely, and gave him an opportunity to write a letter¹⁰ full of sympathy and encouragement to the distant and unknown composer, one of those letters which were native to him, but which are too seldom written, and for more of which the world would be all

the better. The work was produced on Mar. 2, amid extraordinary applause.

Berlioz visited Leipzig at this time, and gave a concert of his compositions. Mendelssohn and he had not met since they were both at Rome, and Berlioz was foolish enough to suppose that some rallery of his might be lurking in Mendelssohn's memory, and prevent his being cordially welcomed. But he was soon undeceived. Mendelssohn wrote at once offering him the room and the orchestra of the Gewandhaus, on the most favourable terms, and asking him to allow one of his works to be played at the approaching concert (Feb. 22) for the benefit of the orchestra.¹ An account of the whole, with copious souvenirs of their Roman acquaintance (not wholly uncoloured), will be found in Berlioz's *Voyage musical*, in the letter to Heller.² It is enough here to say that the two composer-conductors exchanged batons, and that if Berlioz did not convert Leipzig, it was not for want of an amiable reception by Mendelssohn and David. (See BATON.)

On Mar. 9 an interesting extra concert was given under Mendelssohn's direction, to commemorate the first subscription concert given in 1743.³ The first part of the programme contained compositions by former cantors, or directors of the concerts—Döles, Bach, J. A. Hiller and Schicht, and by David, Hauptmann and Mendelssohn (114th Psalm). The second part consisted of the Choral Symphony.

FOUNDATION OF THE CONSERVATORIUM.—Under the modest title of the Music School, the prospectus of the Conservatorium was issued on Jan. 16, 1843, with the names of Mendelssohn, Hauptmann, David, Schumann, Pohlzen and C. F. Becker as the teachers; the first trial was held on Mar. 27, and on Apr. 3 it was opened in the buildings of the Gewandhaus.⁴ Thus one of Mendelssohn's most cherished wishes was at last accomplished. A letter on the subject to Moscheles, dated Apr. 30, is worth notice as showing how practical his ideas were on business matters, and how sound his judgment. On Sunday, Apr. 23, he had the satisfaction of conducting the concert at the unveiling of the monument to Sebastian Bach, which he had originated, and for which he had worked so earnestly.⁵ The programme consisted entirely of Bach's music, in which Mendelssohn himself played a concerto. Then the monument was unveiled, and the proceedings ended with Bach's eight-part motet 'Singet dem Herrn.' Such good services were appropriately acknowledged by the Town Council with the honorary freedom of the city (Ehrenbürgerrecht).⁶

In the spring of 1843 he made the acquaintance of Joseph Joachim, who came to Leipzig from Vienna as a boy of 12, attracted by the fame of the new music school, and there began a friendship which grew day by day, and only ended with Mendelssohn's death.

On May 1 his fourth child, Felix, was born. On account no doubt partly of his wife's health, partly also of his own—for it is mentioned that he was seriously unwell at the dedication of the Bach monument—but chiefly perhaps for the sake of the Conservatorium, he took no journey this year, and, excepting a visit to Dresden to conduct 'St. Paul,' remained in Leipzig for the whole summer. How much his holiday was interfered with by the tedious, everlasting affair of Berlin—orders and counter-orders, and counter-counter-orders—may be seen from his letters,⁷ though it is not necessary to do more than allude to them.

For the unveiling of the statue of Friedrich August I. of Saxony at Dresden on June 7, 1843, he and Wagner each contributed a composition. Wagner, then Kapellmeister at Dresden, confirms the opinion, which he says was formed, that 'his simple, heartfelt composition had entirely eclipsed the complex artificialities of Mendelssohn'! Wagner's piece, for male voices only, was published at Berlin in 1906: Mendelssohn's (still in MS.) is for two choirs of men's voices (tenor and bass) with accompaniment of brass instruments. 'Its complex artificialities' (as Wagner was pleased to call them) consist in the singing of the Saxon national anthem (our 'God save the King') by the second choir as a counter theme to, and concurrently with, the singing of Mendelssohn's original music by the first choir.⁸

WORKS FOR BERLIN.—By the middle of July he had completed the 'Midsummer Night's Dream' music,⁹ had written the choruses to 'Athalie,' and made more than a start with the music to 'Oedipus,' and some progress with a new symphony¹⁰; had at the last moment, under a pressing order from court, arranged the chorale 'Herr Gott, dich loben wir' (Te Deum) for the celebration of the 1000th anniversary of the empire, 'the longest chorale and the most tedious job he had ever had,' and had also, a still harder task, answered a long official letter on the matter of his post, which appeared to contradict all that had gone before, and cost him (in his own words) 'four thoroughly nasty, wasted, disagreeable days.'

He therefore went to Berlin early in August (1843), and on the 6th conducted the music of the anniversary; returned to Leipzig in time to join his friend Madame Schumann in her husband's Andante and Variations for two

¹ Jan. 25. Letter now in Brit. Museum Add. MSS. 33,965. In printing it Berlioz has shortened it by one-half, and sadly garbled it by correcting Mendelssohn's French.

pianofortes at Madame Viardot's concert on Aug. 19,¹ and on Aug. 25 was pursued thither by orders for a performance of 'Antigone,' and the production of the 'Midsummer Night's Dream' and 'Athalie' in the latter half of September. At that time none of the scores of these works had received his final touches; 'Athalie' indeed was not yet scored at all, nor was a note of the overture written. Then the performances are postponed, and then immediately resumed, at the former dates; and in the end 'Antigone' was given on Sept. 19, in the Neue Palais at Potsdam,² and the 'Midsummer Night's Dream' at the same place—after eleven rehearsals³—on Oct. 18, and on the 19th, 20th and 21st,⁴ at the King's Theatre in Berlin. The music met with enthusiastic applause each time; but the play was for long a subject of wonder to the Berliners. Some disputed whether Tieck or Shakespeare were the author; others believed that Shakespeare had translated it from German into English. Some, in that refined atmosphere, were shocked by the scenes with the clowns, and annoyed that the King should have patronised so low a piece; and a very distinguished personage⁵ expressed to Mendelssohn himself his regret that such lovely music should have been wasted on so poor a play—a little scene which he was very fond of mimicking.⁶ 'Antigone' procured him the honour of membership of the Philologen-Versammlung of Cassel.⁷

Mendelssohn's position at Berlin had now apparently become so permanent that it was necessary to make proper provision for filling his place at the Leipzig concerts, and accordingly Ferdinand Hiller was engaged to conduct them during his absence.⁸ The first of the series was on Oct. 1. Hiller conducted, and Felix supported his friend by playing his own G minor concerto. Two days afterwards, on Oct. 3, he writes a long communication to the Town Council of Leipzig, praying for an increase in the salaries of the town orchestra for their services at the theatre. On Oct. 30 he joined Mme. Schumann and Hiller in the triple concerto of Bach; on Nov. 18 there was a special farewell concert at which he played his new violoncello sonata (op. 58), and which closed with his octet, he and Gade taking the two viola parts; and by Nov. 25 he had left Leipzig 'with wife and children, and chairs and tables, and piano and everything,'⁹ and was in Berlin, settled in the old family house, now his own. On Nov. 30 he conducted the first of the weekly subscription concerts, which he

and Taubert directed alternately and at which he often played. With all his aversion to the Berlin musicians he was obliged to acknowledge that, in some respects at least, the orchestra was good. 'What pleases me most,' he says to his old friend and confidant David,

'are the basses, because they are what I am not so much accustomed to. The eight violoncellos and four good double-basses give me sometimes great satisfaction with their big tone.'¹⁰

Then came performances of the 'Midsummer Night's Dream' music, of 'Israel in Egypt,' entertainments and dinners—which amused him notwithstanding all his dislike to aristocrats—and Fanny's Sunday performances. Once immersed in life and music, and freed from official correspondence and worries, he was quite himself. 'He is,' says his sister,

'Indescribably dear, in the best of tempers, and quite splendid, as you know he can be in his best times. Every day he astonishes me, because such quiet intercourse as we are having is a novelty to me now, and he is so versatile, and so original and interesting on every subject, that one can never cease to wonder at it.'¹¹

His favourite resort during his later Berlin life was the house of Professor Wichmann the sculptor, in the Hasenjäger (now Feilner) Strasse. Wichmann's wife was a peculiarly pleasant artistic person, and their circle included Magnus the painter, Taubert, Werder, Count Redern and other distinguished people, many of them old friends of Mendelssohn's. There, in 1844, he first met Jenny Lind. The freedom of the life in this truly artistic set, the many excursions and other pleasures, delighted and soothed him greatly.

Christmas was kept royally at his house; he was lavish with presents, of which he gives Rebecka (then in Italy) a list.¹² A very characteristic Christmas gift to a distant friend was the testimonial, dated Berlin, Dec. 17, 1843,¹³ which he sent to Sterndale Bennett for use in his contest for the professorship of music at Edinburgh University. His exertions for his friend did not stop at this testimonial, but led him to write several long letters pressing his claims in the strongest terms, the drafts of which will be found in the 'green books' at Leipzig. The Edinburgh professorship, however, was not bestowed on Bennett.

The compositions of the winter were chiefly for the Cathedral, and include the fine setting of the 98th Psalm (op. 91) for eight-part choir and orchestra, for New Year's Day, 1844; the 2nd Psalm, for Christmas, with chorales and 'Sprüche,' and pieces 'before the Alleluja'; also the 100th Psalm, the 43rd ditto, and the 22nd, for Good Friday, for eight voices, each with its 'Spruch' or anthem—and seven psalm-tunes or chorales with trombones. At these great functions the church was so full¹⁴ that not

even Fanny Hensel could get a place. The lovely solo and chorus, 'Hear my prayer,' for soprano solo, chorus and organ,¹ belongs to this time. It is dated Jan. 25, 1844, and was written for William Bartholomew, the careful and laborious translator of his works into English, and sent to him in a letter dated Jan. 31.² Also the duets 'Maiglöckchen,' 'Volklied' and 'Herbstlied' (op. 63, Nos. 6, 5 and 4), and many songs, with and without words. The concerts finished with a magnificent performance of Beethoven's Ninth Symphony on Mar. 27, and on Palm Sunday (Mar. 31) 'Israel in Egypt' was sung in St. Peter's Church. The rehearsals for these two difficult works, new to Berlin, had been extremely troublesome and fatiguing.

THE PHILHARMONIC SOCIETY OF LONDON.—At the end of February he received a letter from the Philharmonic Society of London, offering him an engagement as conductor of the last six concerts of the season. He looked forward with delight to an artistic position 'of such tremendous distinction,'³ and one which promised him the opportunity of doing a service to a Society to which he felt personally indebted⁴; and on Mar. 4 he writes 'with a feeling of true gratitude' accepting for five concerts.⁵ Meantime the old annoyances and heartburnings at Berlin had returned. Felix had been requested by the King to compose music to the *Eumenides* of Æschylus, and had replied that the difficulties were immense, and perhaps insuperable, but that he would try; and in conversation with Tieck he had arranged that as the work could only be given in the large new opera-house, which would not be opened till Dec. 15, it would be time enough for him to write his music and decide after his return from England whether it was worthy of performance. Notwithstanding this, he received, as a parting gift, on Apr. 28, a long, solemn, almost scolding, letter from Bunsen,⁶ based on the assumption that he had refused to undertake the task, and expressing the great disappointment and annoyance of the King. No wonder that Mendelssohn's reply, though dignified, was more than warm. It appeared to him that some person or persons about the court disbelieved in the possibility of his writing the music, and had pressed their own views on the King as his, and he was naturally and justifiably angry. A dispute with the subscribers to the Symphony Concerts, where he had made an innovation on ancient custom by introducing solos, did not tend to increase his affection for Berlin.⁷

His presence was necessary on Easter Day (Apr. 7) in the Cathedral, but by the end of the

month he had left Berlin with his family. On May 4 they were all at Frankfort, and by the 10th or 11th he himself was settled in London at Klingemann's house, 4 Hobart Place.⁸ This was his eighth visit. He conducted the Philharmonic Concert of May 13, and each of the others to the end of the series, introducing, besides works already known, his 'Midsummer Night's Dream' music and the 'Walpurgisnacht,' as well as Beethoven's overture to *Leonora*, No. 1, the *Ruins of Athens*, Bach's suite in D, Schubert's overture to *Fierrabras*, and playing Beethoven's concerto in G (June 24), then almost a novelty to an English audience. He had brought with him Schubert's symphony in C, Gade's in C minor, and his own overture to 'Ruy Blas.' But the reception of the first two at the trial by the band was so cold, not to say insulting, as to incense him beyond measure.⁹ With a magnanimity in which he stands alone among composers, he declined to produce his own overture, and it was not publicly played in England till after his death.¹⁰

With the directors of the Philharmonic his intercourse was most harmonious. 'He attended their meetings, gave them his advice and assistance in their arrangements, and showed the warmest interest in the success of the concerts and the welfare of the Society.'¹¹ By the band he was received with 'rapture and enthusiasm.'¹² And if during the earlier concerts one or two of the players acted in exception to this, the occurrence only gave Mendelssohn the opportunity of showing how completely free he was from rancour or personal feeling.¹³ No wonder that the band liked him. The band always likes a conductor who knows what he is about. His beat, though very quiet, was certain, and his face was always full of feeling, and as expressive as his baton. No one perhaps ever possessed so completely as he the nameless magic art of inspiring the band with his own feeling; and this power was only equalled by his tact and good nature. He always touched his hat on entering the orchestra for rehearsal. He was sometimes hasty, but he always made up for it afterwards. He would run up and down to a distant desk over and over again till he had made the meaning of a difficult passage clear to a player. If this good nature failed, or he had to deal with obstinacy, as a last resource he would try irony—sometimes very severe. Such pains and tact as this are never thrown away.

The band played as if under a new influence. The season was most successful in a pecuniary sense; Hanover Square Rooms had never been

¹ Polka, p. 220. It was originally written with an organ accompaniment, but Mendelssohn afterwards scored it at the instance of Joseph Robinson, of Dublin. For an account of the dedication of 'Hear my prayer' to Taubert, see *Felix Mendelssohn und Wilhelm Taubert in Deutsche Revue*, Jan. 1893, p. 57.

² This letter and the autograph score of the music are now at the Victoria and Albert Museum, South Kensington.

so crammed; as much as 120 guineas were taken on single nights in excess of the usual receipts; and whereas in 1842 the loss had been £300, in 1844, with the interest on capital, etc., nearly £400 were added to the reserve fund.¹ Among the events which combined to render this series of concerts historical were the first appearances at the Society's concerts of Ernst (Apr. 15), Joachim (May 27)² and Piatti (June 24). His playing of the Beethoven G major concerto on June 24 was memorable, not only for the magnificence of the performance, but for some circumstances attending the rehearsal on the previous Saturday. He had not seen the music of the concerto for two or three years, and 'did not think it respectful to the Philharmonic Society to play it without first looking through it'—those were his words. He accordingly called at Sterndale Bennett's on the Friday night to obtain a copy, but not succeeding, got one from Miss Horsley after the rehearsal on the Saturday. At the rehearsal itself, owing to some difficulty in the band coming in at the end of his cadenza in the first movement, he played it three times over, each time quite extempore, and each time new, and at the performance on the Monday it was again different.³

In addition to the Philharmonic, Mendelssohn took part in many other public concerts—conducted 'St. Paul' for the Sacred Harmonic Society on June 28 and July 5, extemporised at the British Musicians, played his own D minor trio, and his duet variations (op. 83a), and took part twice in Bach's triple concerto—once (June 1) with Moscheles and Thalberg, when he electrified the room with his sudden improvisation in the cadenza,⁴ and again (July 5) with Moscheles and Döhler. He also finished a scena for bass voice and orchestra, to words from Ossian—'On Lena's gloomy heath,' which he undertook at the request of Henry Phillips in 1842, and which was sung by that gentleman at the Philharmonic, Mar. 15, 1847. On June 12 he and Dickens met for the first time. On June 18 he is at Manchester, writing to Mr. Hawes, M.P., to secure a ticket for the House of Commons.⁵ Piatti he met for the first time during this visit, at Moscheles's house, and played with him his new duo in D. No one had a quicker eye for a great artist, and he at once became attached to that noble player. One of his latest words on leaving England for the last time was, 'I must write a concerto for Piatti.' In fact, he had already composed the first movement.

The enthusiasm for him in London was greater than ever, and all the more welcome

after the irritations of Berlin. He was more widely known at each visit, and every acquaintance became a friend. He never enjoyed himself more than when in the midst of society, music, fun and excitement. 'We have the best news from Felix,' says Fanny during this visit,⁶

'and when I tell you that he has ordered a large *Baum-Kuchen* [a peculiar Berlin cake, looking like a piece of the trunk of a tree] to be sent to London for him, you will know that that is the best possible sign.'

'A mad most extraordinarily mad time,' says he; 'I never had so severe a time before—never in bed till half-past one; for three weeks together not a single hour to myself in any one day.'⁷

'My visit was glorious. I was never received anywhere with such universal kindness, and have made more music in these two months than I do elsewhere in two years.'⁸

But even by all this he was not to be kept from work. He laboured at his edition of 'Israel in Egypt' for the Handel Society; and on official pressure from Berlin—which turned out to be mere vexation, as the work was not performed for more than a year—actually, in the midst of all the turmoil, wrote (in London) the overture to 'Athalie,' the autograph of which is dated June 13, 1844. Very trying! and very imprudent, as we now see! but also very difficult to avoid. And his power of recovery after fatigue was as great as his power of enjoyment, so great as often no doubt to tempt him to try himself. Three things were in his favour—his splendid constitution; an extraordinary power of sleep, which he possessed in common with many other great men, and of being lazy when there was nothing to do; and most of all that, though excitable to any amount, he was never dissipated. The only stimulants he indulged in were those of music, society and boundless good spirits.

HOLIDAYS.—On July 10 he left London, and on the 13th was in the arms of his wife and children at Soden, near Frankfort. During his absence they had been seriously ill, but his wife had kept the news from him, and when he returned he found them all well, brown and hearty. For the life of happy idleness which he passed there in the next two months—

'eating and sleeping, *without* dress coat, *without* piano, *without* visiting-cards, *without* carriage and horses; but *with* donkeys, *with* wild flowers, *with* music-paper and sketch-book, *with* Cécile and the children'⁹

interrupted only by the Festival which he conducted at Zweibrücken on July 31 and Aug. 1, the reader must be referred to his own charming letters.¹⁰ 'Idleness' does not mean ceasing to compose, so much as composing only when he had a mind to it. And that was often: he had no piano, but he completed the violin concerto on Sept. 16, after a long and minute correspondence with David, and many of the movements of the six organ sonatas appear in the

MS. Catalogue, with dates ranging from July 22 to Sept. 10.¹ Doubtless, too, he was working at the book of 'Christus,' a new oratorio, the first draft of which he had received from Bunsen on Easter Monday of this year. At this time also he edited a collection of organ pieces by Bach commissioned by the firm of Coventry & Hollier,² by whom they were published in London in the spring of 1845.

The pleasure in his simple home life which crops out now and then in these Frankfort letters is very genuine and delightful. Now, Marie is learning the scale of C, and he has actually forgotten how to play it, and has taught her to pass her thumb under the wrong finger! Now, Paul tumbles about so as to crack their skulls as well as his own. Another time he is dragged off from his letter to see a great tower which the children have built, and on which they have ranged all their slices of bread and jam—'a good idea for an architect.' At ten Carl comes to him for reading and sums, and at five for spelling and geography—and so on. 'And,' to sum up, 'the best part of every pleasure is gone if Cécile is not there.'³ His wife is always somewhere in the picture.⁴

RETURN TO WORK.—But the time arrived for resuming his duties at Berlin, and, leaving his family behind him at Frankfort, he arrived there on Sept. 30, alone, and took up his quarters with the Hensels. We are told that before leaving in the spring he had firmly resolved not to return for a permanence; and the extraordinary warmth and brilliance of his subsequent reception in England, both in public and in social circles, and the delights of freedom in Frankfort, when compared with the constraint and petty annoyances of Berlin—the difficulty of steering through those troubled official waters, the constant collisions with the Singakademie, with the managers of the theatre, the clergy, the King and the Ministers; the want of independence, the coldness of the press, the way in which his best efforts appeared to be misunderstood and misrepresented, and above all the consciousness that he was at the head of a public musical institution of which he did not approve⁵—all these things combined to bring about the crisis. His dislike to the place, and the way in which it haunts him beforehand, is really quite plaintive in its persistence—'If I could only go on living for half a year as I have lived the last fortnight (Soden, Aug. 15), what might I not get through? But the constant arrangement and direction of the concerts, and the exertion of it all, is no pleasure to me, and comes to nothing after all.'⁶ So he once more communicated with the King, praying to be

freed from all definite duties, and from all such commissions as would oblige him to reside in Berlin.⁷ To this the King good-naturedly assented; his salary was fixed at 1000 thalers, and he was free to live where he liked. It is easy to understand what a blow this was to his sister,⁸ but it was evidently the only possible arrangement for the comfort of the chief person concerned. 'The first step out of Berlin' was to him 'the first step towards happiness.'⁹ He remained till the end of November, at the special wish of the King, to conduct a few concerts and a performance of 'St. Paul' (Nov. 25), and the time was taken advantage of by Lvov to commission Hensel to paint a portrait of him, which has been engraved by Caspar, but can hardly be called a favourable likeness. On the 30th he left Berlin amid regret and good wishes, but the coldness of the ordinary musical circles towards him was but too evident.¹⁰

Very early in December he was in Frankfort, where he found his youngest boy Felix dangerously ill; the child recovered, but only after being in great danger for many weeks. It was probably a relief in the very midst of his trouble to write a long letter to G. A. Macfarren (Dec. 8, 1844),¹¹ giving him minute directions as to the performance of 'Antigone' at Covent Garden. His own health began to give him anxiety, and his resolution was to remain in Frankfort for the whole year and to have a thorough rest.¹² He had always good spirits at command, looked well, and would rarely confess to any uneasiness. But when hard pressed by those with whom he was really intimate, he confessed that his head had for some months past been in constant pain and confusion.

'I myself am what you know me to be; but what you do not know is that I have for some time felt the necessity for complete rest—not travelling, not conducting, not performing—so keenly that I am compelled to yield to it, and hope to be able to order my life accordingly for the whole year. It is therefore my wish to stay here quietly through winter, spring, and summer, *sans* journeys, *sans* festivals, *sans* everything.'¹³

This resolve he was able to carry out for some months of 1845,¹⁴ even to resisting a visit to Leipzig when his violin concerto was first played by David on Mar. 13; and his letters to his sisters show how thoroughly he enjoyed the rest.

'Antigone' was brought out at Covent Garden on Jan. 2, 1845, under the management of M. Laurent, the orchestra conducted by G. A. Macfarren. Musically its success was not at first great, owing to the inadequate way in which the chorus was put on the stage. Writing

¹¹ At the end of 1844, or the beginning of 1845, he was much gratified at receiving an invitation to conduct a musical festival at New York in 1845; his letter declining the invitation and other information leading to the proposal is given by H. E. Krehbiel in the *New York Daily Tribune* of Oct. 29, 1905.

¹² *F.M.* III. 204.

¹³ *Ibid.* p. 219 et seq.

to his sister at Rome on March 25,¹ Mendelssohn says :

'See if you cannot find *Punch* for Jan. 18. It contains an account of "Antigone" at Covent Garden, with illustrations, especially a view of the chorus which has made me laugh for three days. The chorus-master, with his plaid trousers shewing underneath, is a masterpiece, and so is the whole thing, and most amusing. I hear wonderful things of the performance, particularly of the chorus. Only fancy, that during the Bacchus chorus there is a regular ballet with all the ballet-girls !'

A woodcut which made Mendelssohn laugh for three days has *ipso facto* become classical, and needs no apology for its reproduction.

The play improved after a short time, and the fact that it ran for forty-five nights (Jan. 2-Feb. 1, Feb. 8-21), and that the management applied to him for his 'Ædipus,'² proves that it was appreciated. His letters show how much work he was doing at this time. By April 20 the six organ sonatas (op. 65) were in the hands of the copyist, the C minor trio was finished—'a trifle nasty (*eklig*) to play, but not really difficult—seek and ye shall find'³; and the splendid string quintet in B flat (dated July 8). The sixth book of Songs without Words was shortly to be published, and dedicated to Klingemann's fiancée; a symphony was well in hand (oh that we had got it!); nor had the desire to write an opera by any means left him, 'if only the right material could be found.'⁴

He had not forgotten his promise to consider the possibility of setting the choruses of the *Eumenides* of Æschylus with effect, and a correspondence had taken place between him and the Geheim-cabinetsrath Müller, in which, in reply to something very like an offensive innuendo, Mendelssohn stated that in spite of strenuous efforts he had utterly failed to see any way of carrying out the commission to his own satisfaction.⁵ The 'Ædipus Coloneus,' the 'Ædipus Rex' and the 'Athalie' were, however, finished, and at His Majesty's disposal. The editing of 'Israel in Egypt' had

given him considerable trouble, owing apparently to the wish of the council of the Handel Society to print Mendelssohn's marks of expression as if they were Handel's, and also to the incorrect way in which the engraving was executed. Those letters are worth looking at,⁶ as evidence how strictly accurate and conscientious he was in these matters, and also how gratuitously his precious time was often taken up.

Gade had conducted the Gewandhaus Concerts for 1844-45; but having got rid of the necessity of residing in Berlin, and having

enjoyed the long rest which he had proposed, it was natural that Mendelssohn should return to his beloved Leipzig. But in addition to this he had received an intimation from Von Falkenstein as early as June 5, 1845, that the King of Saxony wished him to return to his former position. He accordingly once more took up his residence at Leipzig early in September (this time at No. 3 Königsstrasse, on the first floor⁷), and his reappearance in the conductor's place at the opening concert in the Gewandhaus on Oct. 5 was the signal for the old applause, and for hearty recognition from the audience and the press. The season was rendered peculiarly brilliant by the presence of Madame Schumann, and of Jenny Lind, who made her first appearance in Leipzig at the subscription concert of Dec. 4. Miss Dolby also made her first appearance Oct. 23, sang frequently, and became a great favourite. Among the more important orchestral works of the season 1845-46 were Schumann's symphony in B flat, and Mendelssohn's violin concerto (David), brought forward together on Oct. 23, 1845.

After the first concert he left for Berlin to produce his 'Ædipus Coloneus,' which was first performed at Potsdam on Nov. 1, and his 'Athalie' at Charlottenburg, both being repeated at Berlin. He returned to Leipzig on

⁶ There are seven of them, and they are given in the Appendix to G. & M. p. 169.

⁷ The house has since been renumbered, and is now 21. A bronze tablet on the front states that he died there.

Dec 3, bringing Jenny Lind¹ with him, and remained there till the close of the season, taking an active part in all that went on, including her farewell concert on Apr. 12, 1846—the last occasion of his playing in public in Leipzig.

At the end of 1845 a formal offer was made to Moscheles, at that time the fashionable pianoforte-teacher in London, to settle in Leipzig as professor of the pianoforte in the Conservatorium. He took time to consider so important an offer, and on Jan. 25, 1846, with a sacrifice of income and position which does his artistic feeling the highest honour, decided in its favour. Mendelssohn's connexion with the school was no sinecure. He had at this time two classes—pianoforte and composition.² The former numbered about half-a-dozen pupils, and had two lessons a week of two hours each. The lessons were given collectively, and among the works studied during the term were Hummel's 'Septuor'; three of Beethoven's sonatas; preludes and fugues of Bach; Weber's Concertstück and sonata in C; Chopin's studies. The composition class had one lesson a week of the same length. The pupils wrote compositions of all kinds, which he looked over and heard and criticised in their presence. He would sometimes play a whole movement on the same subjects, to show how they might have been better developed. Occasionally he would make them modulate from one key to another at the piano, or extemporise on given themes, and then would himself treat the same themes. He was often extremely irritable: 'Toller Kerl, so spielen die Katzen!' or (in English, to an English pupil) 'Very ungentlemanlike modulations!' etc. But he was always perfectly natural. A favourite exercise of his was to write a theme on the blackboard, and then make each pupil add a counterpoint; the task of course increasing in difficulty with each addition. On one occasion the last of the pupils found it impossible to add a single note, and after long consideration shook his head and gave in. 'You can't tell where to place the next note?' said Mendelssohn. 'No.' 'I am glad of that,' was the reply, 'for neither can I.' But in addition to the work of his classes, a great deal of miscellaneous work fell upon him as virtual head of the School. Minute lists of the attendance and conduct of the pupils, drawn up by him, still remain to attest the thorough way in which he did his duty, and we have Moscheles's express testimony³ that during the overwhelming work of this summer he never neglected his pupils.⁴ But it was another ounce added to his load. The fixed labour, the stated hours, when combined with his composition, his correspondence, his hospitality, and all his other pursuits, were too much, and to his intimate

friends he complained bitterly of the strain, and expressed his earnest wish to give up all work and worry, and devote himself entirely to his Art—in his own words, to shut himself into his room and write music till he was tired, and then walk out in the fresh air.⁵

PRODUCTION OF 'ELIJAH.'—Meantime 'Elijah'⁶ was fast becoming a realised fact: by May 23, 1846,⁷ the first part was quite finished, and six or eight numbers of the second part written, and a large portion despatched to London to be translated by Bartholomew.⁸ 'I am jumping about my room for joy,' he writes to a very dear friend⁹ on the completion of part I. 'If it only turns out half as good as I fancy it is, how pleased I shall be!' And yet, much as the oratorio engrossed him, he was corresponding with Mme. Birch-Pfeiffer about an opera, and writes to the same friend as if the long-desired libretto were virtually within his grasp. At this date he interrupted his work for three weeks to conduct a succession of performances on the Rhine—at Aix-la-Chapelle (the Lower Rhine Festival, May 31–June 2) for the seventh and last time¹⁰; at Düsseldorf, a soirée; at Liège, on Corpus Christi Day, June 11, his hymn 'Lauda Sion,' composed expressly for that occasion, and dated Feb. 10, 1846; and at Cologne the first festival of the German-Flemish association, for which he had composed a Festgesang on Schiller's poem 'An die Künstler' (op. 68). His reception throughout this tour was rapturous, and delighted him. The three weeks were one continued scene of excitement. Every moment not taken up in rehearsing or performing made some demand on his strength. He was in the highest spirits all the time, but the strain must have been great, and was sure to be felt sooner or later. It will all be found in a delightful letter to Fanny of June 27, 1846.¹¹

On June 26 he is again at Leipzig, writing to Moscheles to protest against the exclusion from the band at Birmingham of some players who had been impertinent to him at the Philharmonic in 1844.¹² The summer was unusually hot, and his friends well remember how exhausted he often became over his close work. But he kept his time. The remainder of the oratorio was in Bartholomew's hands by the latter part of July¹³; the instrumental parts were copied in Leipzig, and rehearsed by Mendelssohn there on Aug. 5.

¹ L. to Jenny Lind.

² On June 11, 1845, the Committee of the Birmingham Musical Festival invited him to conduct all the performances, and to 'provide a new oratorio, or other music for the occasion.' He declined to conduct the Festival, and added in an English letter: 'Since some time I have begun an oratorio, and hope I shall be able to bring it out for the first time at your Festival.' This proved to be 'Elijah.' (*Hist. of 'Elijah'*, p. 31 et seq.)

⁸ L. to Moscheles, June 26, 1846.

⁹ The long and minute correspondence (entirely in English) with Bartholomew, together with an important letter in facsimile, will be found in the *Hist. of 'Elijah'*, chapters iii. and v.

¹ Rocketro's information.

² This information I owe to Mr. Otto Gröndelmidt and Mr. W. S. Rocketro, who belonged to both of his classes. c. ³ *Mos.* ii. 162.

⁴ The English pupils for 1844 and 1845 embraced the names of Ellis, Wells, Haaker, Ascher and Rocketro.

One of the last things he did before leaving was to give his consent to the publication of some of Fanny's compositions, which, owing to his 'tremendous reverence for print,' he had always opposed,¹ and now only agreed to reluctantly.²

He arrived in London, for the ninth time, on the evening of Aug. 17 or 18, had a trial rehearsal with piano at Moscheles's house, two band rehearsals at Hanover Square Rooms, went to Birmingham on Sunday the 23rd, had full rehearsals on Monday morning and Tuesday evening, and the oratorio was performed on the morning of Wednesday, Aug. 26. The Town Hall was densely crowded, and it was observed that the sun burst forth and lit up the scene as Mendelssohn took his place,³ amid a deafening roar of applause from band, chorus and audience. Staudigl was the Elijah, and Charles Lockey sang the air 'Thou shalt the righteous' in a manner which called forth Mendelssohn's warmest praise.⁴ 'No work of mine,' says he in the long letter which he wrote his brother the same evening—

'no work of mine ever went so admirably at the first performance, or was received with such enthusiasm both by musicians and the public, as this.' 'I never in my life heard a better performance—no, nor so good, and almost doubt if I can ever hear one like it again.'⁵

No less than four choruses and four airs were encored.⁶ The applause at the conclusion of both first and second parts was enormous—almost grotesquely so; and an old member⁷ of the band well remembered the eagerness with which Mendelssohn shook hands with all who could get near him in the artists' room, thanking them warmly for the performance. He returned to London with Mr. and Mrs. Moscheles, 'on purpose for a fish dinner at Lovgrove's,' spent four days at Ramsgate with the Beneckes 'to eat crabs,'⁸ and on Sept. 6 recrossed the Channel with Staudigl. His visit this time had been one of intense hard work, as any one who knows what it is to achieve the first performance of a great work for solos, chorus and orchestra will readily understand. And the strain was unremitting, for, owing partly to Moscheles's illness, he had no relaxation, or next to none. In consequence he was so tired as to be compelled to rest three times between Ostend and Leipzig.⁹ It is a sad contrast to the buoyancy of the similar journey ten years before.¹⁰

But notwithstanding the success of the oratorio the reader will hardly believe that he himself was satisfied with his work. Quite the contrary. His letter to Klingemann of Dec. 6 shows the eagerness with which he went about his corrections.¹¹ The oratorio was then en-

graved, and published by Simrock of Berlin, and Ewer & Co., London, in June 1847.

Meantime Mendelssohn had been again reminded of his duties at Berlin by an urgent command from the King to set the German Liturgy to music. This (still in MS.), and an anthem or motet (published as op. 79, No. 5), both for double choir, are respectively dated Oct. 28 and Oct. 5, 1846. A song for the Germans in Lyons¹²—dear to him as the birthplace of his wife—and a Psalm-tune for the French Reformed Church in Frankfurt, are dated the 8th and 9th of the same month. On Oct. 21 the Moscheleses arrive at Leipzig, and Moscheles begins his duties as professor of pianoforte-playing and composition. Gade again conducted the Gewandhaus Concerts for this season. A trace of Mendelssohn's interest in them remains in a pianoforte accompaniment to the E major violin prelude of Bach,¹³ which he evidently wrote for David's performance at the concert of Nov. 12, 1846. The MS. is dated the day before, and is amongst David's papers.¹⁴ During October and November he was very much occupied with the illness of his faithful servant Johann Krebs, to whom he was deeply attached—'mein braver guter Diener,' as he calls him—and whose death, on Nov. 23, distressed him much. It was another link in the chain of losses which was ultimately to drag him down. Fortunately he had again, as at the time of his mother's death, some mechanical work to which he could turn. This time it was the comparison of the original autograph parts of Bach's 13 minor mass with his (Mendelssohn's) score of the same work.¹⁵ As time went on, however, he was able to apply himself to more independent tasks, and by Dec. 6 was again hard at work on the alterations of 'Elijah.'¹⁶ Since the middle of October he had been in communication with Lumley,¹⁷ then lessee of Her Majesty's Theatre, London, as to an opera to be founded by Scribo on *The Tempest*, already tried by Immermann; and a long correspondence between himself, Scribo and Lumley appears to have taken place, no doubt exhaustive on his part. It came to nothing, from his dissatisfaction with the libretto,¹⁸ but it was accompanied by extreme and long-continued annoyance, owing to his belief that the opera was announced in London as if he were under a contract to complete it, and that for the season of 1847.¹⁹ He was at this moment more or less committed to the subject of 'Loreley,'

on which he had communicated with Geibel the poet as early as the preceding April.¹ Geibel, a friend of Mendelssohn's and a warm admirer of his wife's, was at work on the book and completed it at the beginning of 1847.

Mendelssohn occasionally conducted the later Gewandhaus concerts of this season, and some of the programmes were of special interest, such as two historical concerts on Feb. 18 and 25, 1847. One of these gave him the opportunity to write a charming letter to the daughter of Reichardt,² a composer for whom he always had a special fondness, and whose Morning Hymn (from Milton) had been performed at the Festival at Cologne in 1835 at his instance.

This was not on the whole a satisfactory autumn. After the extra hard work of the spring and summer, especially the tremendous struggle against time in finishing 'Elijah,' he ought to have had a long and complete rest, like that which so revived him in 1844; whereas the autumn was spent at Leipzig, a less congenial spot than Frankfort, and, as we have shown, in the midst of grave anxiety and perpetual business, involving a correspondence which those only can appreciate who have seen its extent, and the length of the letters, and the care and neatness with which the whole is registered and arranged by his own hands. Knowing what ultimately happened, it is obvious that this want of rest, coming after so much stress, must have told seriously upon him. He himself appears to have felt the necessity of lessening his labours, for we are told that he had plans for giving up all stated and uncongenial duty, and doing only what he felt disposed to do; for building a house in Frankfort,³ so as to pass the summer there, and the winter in Berlin with his sisters, and thus in some measure revive the old family life to which he so strongly urges his brother-in-law in a remarkable letter of this time.⁴ Nothing, however, could stop the current of his musical power. He was at work on 'Christus,' the new oratorio.⁵ As Kapellmeister to the King of Saxony he had to arrange and conduct the court concerts at Dresden; and he took a large part in the management of the Gewandhaus concerts this season, though suffering much from his head, and being all the time under the care of his doctor.⁶ How minutely, too, he did his duty at this time as chief of the Conservatorium is shown by a MS. memorandum, dated Jan. 10, 1847, containing a long list of students, with full notes of their faults, and of the recommendations to be made to their professors.

His enjoyment of life is still very keen, and his birthday was celebrated with an immense amount of fun. His wife, and her sister, Mrs. Schunck—a special favourite of Mendelssohn's—gave a comic scene in the Frankfort dialect;

and Joachim (as Paganini), Moscheles (as a cook) and Mrs. Moscheles acted an impromptu charade on the word 'Gewandhaus.' Happily no presentiment disturbed them; and the master of the house was as uproarious as if he had fifty birthdays before him. On Good Friday (Apr. 2) he conducted 'St. Paul' at Leipzig, and shortly afterwards—for the tenth, and alas! the last time—was once more in England, where he had an engagement with the Sacred Harmonic Society to conduct three (subsequently increased to four) performances of 'Elijah' in its revised form.⁷

One of those kindnesses which endeared him so peculiarly to his friends belongs to this time. Madame Frege had a son dangerously ill, and was unable to hear the performance of 'St. Paul.' 'Na nun,' said he, 'don't distress yourself; when he gets out of danger I'll come with Cécile and play to you all night.' And he went, began with Beethoven's 'Moonlight' sonata, and played on for three hours, ending with his own 'Variations sérieuses.' A day or two afterwards, he left, travelled to London with Joachim,⁸ and reached the Klingemanns' house on Monday evening, Apr. 12. The performances of 'Elijah'⁹ took place at Exeter Hall on the 16th, 23rd, 28th, with a fourth on the 30th. The Queen and Prince Albert were present on the 23rd, and it was on that occasion that the Prince wrote the note in his programme book, addressing Mendelssohn as a second Elijah, faithful to the worship of true Art though encompassed by the idolaters of Baal, which has often been printed.¹⁰ In the interval Mendelssohn paid a visit to Manchester for a performance of 'Elijah'¹¹ on the 20th, and another to Birmingham, where he rehearsed and conducted the oratorio at the Town Hall on the 27th.¹² He conducted his 'Midsummer Night's Dream' music and Scotch Symphony at the Philharmonic on Apr. 26, and played Beethoven's G major concerto with even more than his usual brilliancy and delicacy. He probably never played that beautiful concerto—'my old *cheval de bataille*,' as he called it years before—more splendidly than he did on this occasion. To a friend¹³ who told him so after the performance he replied: 'I was desirous to play well, for there were two ladies present whom I particularly wished to please, and they were the Queen and Jenny Lind.' A little trait remembered by more than one who heard the performance, is that during the cadenza to the first movement—a long and elaborate one, and, as before (see

⁷ The engagement for one performance had been tendered as early as Sept. 14; see Mendelssohn's reply of Oct. 7, 1846, to the letter of the secretary to the Society (Thomas Brewer) of that date, in *Polko*, p. 227. The other two were proposed Jan. 25, and arranged for between that date and Mar. 10, 1847; see the letter of that date to Bartholomew, *Polko*, p. 229. The fourth was an afterthought.

p. 408), entirely extempore, Costa, who conducted, raised his baton, thinking that it was coming to an end, on which Mendelssohn looked up, and held up one of his hands, as much as to say, 'Not yet.'

On May 1 he lunched at the Prussian embassy and played, and also played for more than two hours at Buckingham Palace in the presence of the Queen and Prince Albert only. On the 4th, at the Beethoven Quartet Society, he played Beethoven's thirty-two variations, without book, his own C minor trio, and a Song without Words; and the same evening was at the opera at Jenny Lind's début. On the evening of the 5th at the Antient Concert he played on the organ a prelude and fugue on the name of Bach. The morning of the 6th he spent at Lord Ellesmere's picture-gallery, and in the afternoon played to his friends the Bunsens and a distinguished company, including Mr. and Mrs. Gladstone, at the Prussian embassy. He left the room in great emotion, and without the power of saying farewell.¹ The same day he wrote a Song without Words in the album of Lady Caroline Cavendish, and another in that of the Hon. Miss Cavendish, since published as op. 102, No. 2, and op. 85, No. 5, respectively. On the 8th he took leave of the Queen and Prince Albert at Buckingham Palace, and left London the same evening, much exhausted, with the Klingemanns. He had indeed, to use his own words, 'stayed too long here already.'²

It was observed at this time by one³ who evidently knew him well, that though in the evening and when excited by playing, he looked as he had done on former visits, yet that by daylight his face showed sad traces of wear and a look of premature old age. He crossed on Sunday, the 9th, to Calais, drove to Ostend, and on the 11th was at Cologne.⁴ At Herbesthal, through the extra zeal of a police official, who mistook him for a Dr. Mendelssohn of whom the police were in search, he was stopped on his road, seriously annoyed, and compelled to write a long statement which must have cost him as much time and labour as to compose an overture.

BREAKDOWN IN HEALTH.—He had been only a day or two in Frankfurt when he received the news of the sudden death of his sister Fanny at Berlin on May 14. It was broken to him too abruptly, and acting on his enfeebled frame completely overcame him. With a shriek he fell to the ground, and remained insensible for some time. It was the third blow of the kind that he had received, a blow perhaps harder to bear than either of the others, inasmuch as Fanny was his sister, more of his own age, and he himself was older, more worn, and less able in the then weak state of his nerves to sustain the shock. In his own words, 'a great chapter

was ended, and neither title nor beginning of the next were written.'⁵

Early in June, as soon as he had sufficiently recovered to move, the whole family (with Frl. Jung as governess, and Dr. Klengel as tutor) went to Baden-Baden, where they were joined by Paul and Hensel; thence by Schaffhausen to Lucerne, Thun and Interlaken, in and about which they made some stay. To Felix the relief was long in coming. On July 7, though well, and often even cheerful, he was still unable to do any musical work, write a proper letter, or recover a consistent frame of mind. He worked at his drawing with more than usual assiduity at this time. Thirteen large water-colour pictures illustrate the journey, beginning with two views of the Falls of Schaffhausen (June 27 and 29), and ending with one of Interlaken (Sept. 4). Many of them are very highly finished, and all are works which no artist need hesitate to sign. They are on a larger scale than any of his previous sketches, and there is a certainty about the drawing, and a solidity in the perspective, which show how well he understood what he was about. The same love of form that shines so conspicuously in his great symphonies is there, and the details are put in, like the oboe and clarinet phrases in his scores, as if he loved every stroke. They are really beautiful works. In addition to these finished drawings, he sketched a good deal in Indian ink.⁶

In the middle of the month Paul and Hensel returned home, but Felix and his family remained till September.⁷ Meantime the world was going on, regardless of private troubles; friends visited him, and plans for music began to crowd round him. Among the former were Professor Graves⁸ and his wife, Mr. Grote the historian—old friends, the last of whom had taken a long journey on purpose to see him⁹—and Chorley the musical critic. He had received a request from the Philharmonic Society for a symphony for 1848; an application to write a piece for the opening of the Philharmonic Hall, Liverpool¹⁰; had a new cantata in view for Frankfurt, and something for the inauguration of Cologne Cathedral. 'Elijah' was to be given under his baton both at Berlin (Nov. 3) and Vienna—at the latter with Jenny Lind—and the long-cherished opera exercised its old charm over him. But his nerves were still too weak to bear any noise, and he suffered much from headache and weariness; his piano was 'not for playing, but for trying a chord,' 'it was the very worst he had ever touched in his life,'¹¹ and he shrank from the organ at Fribourg when proposed to him.¹² The organ in the village church of Ringgenberg, on the lake of Brienz, was his only resource, and it was

there that for the last time in his life he touched the organ keys. He put aside the music for Liverpool, 'for the present,' and declined the request of the Philharmonic,¹ on the ground that a work for the Society ought not to bear the least trace of the hurry and bustle in which he would have to live for the rest of the year. At the same time he was much agitated at the state of home politics, which were very threatening, and looked with apprehension on the future of Germany. For himself he returned strongly to the plans already alluded to at the end of 1846, of giving up playing and concert-giving, and other exciting and exacting business, and taking life more easily, and more entirely as he liked.²

LAST WORKS.—At length the power of application came, and he began to write music. We shall not be far wrong in taking the intensely mournful and agitated string quartet in F minor (op. 80) as the first distinct utterance of his distress. This over, he arrived by degrees at a happier and more even mental condition, though with paroxysms of intense grief and distress. The contrast between the gaiety and spirit of his former letters and the sombre, apathetic tone of those which are preserved from this time, is most remarkable, and impossible to be overlooked. It is as if the man were 'broken,'³ and accepted his lot without an idea of resistance. He continually recurred to the idea of retirement from all active life but composition.

Of the music which is due to this time we find, besides the quartet just mentioned, an andante and scherzo in E major and A minor, which form the first movements of op. 81; the fragments of 'Loreley' and of 'Christus';⁴ a 'Te Deum,'⁵ Jubilate, Magnificat and Nunc dimittis for four voices (op. 69), which he began before going to London, and finished in Baden-Baden on June 12, and a few songs, such as 'Ich wandre fort' (op. 71, No. 5).

With the close of the summer the party returned homewards, and on Sept. 17 were again in Leipzig.⁷ He found there a new Broadwood grand piano which had been forwarded by the firm during his absence in Switzerland, and is said to have played upon it for several hours. Those who knew him best found him 'unaltered in mind, and when at the piano or talking about

music still all life and fire.'⁸ During these days he played to Dr. Schleinitz a new string quartet, complete except the slow movement, which was to be a set of variations—but not yet put on paper. He took leave of Mr. Buxton (Ewer & Co.) one of his English publishers, with the words 'You shall have plenty of music from me; I will give you no cause to complain.'⁹ But such moments of vivacity would be followed by great depression, in which he could not bear to speak or to be spoken to even by old friends. He was much changed in look, and he who before was never at rest, and whose hands were always in motion, now often sat dull and listless, without moving a finger. 'He had aged, looked pale and weary, walked less quickly than before, and was more intensely affected by every passing thing than he used to be.' Also he complained of the oppressive air of the town.¹⁰ And yet, not even those most near him appear to have realised the radical and alarming change for the worse which had taken place in his strength.

ILLNESS AND DEATH.—The Gewandhaus concerts began on Oct. 3, but he took no part in them, and left the conducting to his old colleague Rietz. A friend recollects his saying how happy he was—'as cheerful as a set of organ-passages'—that he had not to make out the programmes. He dreaded all public music, and complained much, though blaming himself as not deserving the happiness he had in his 'dear Cécile' and in the recovery of his boy Felix. He had been to Berlin for a week, very shortly after his return, and the sight of his sister's rooms, exactly as she left them, had agitated him extremely,¹¹ and almost neutralised the benefits of his Swiss retirement.¹² He had definitely given up the performance of 'Elijah' at Berlin, but was bent on undertaking that at Vienna on Nov. 14,¹³ where he was to hear his friend Jenny Lind in the music which he had written for her voice. On the morning of Oct. 9, he called on the Moscheles and walked with them to the Rosenthal. He was at first much depressed, but it went off, and he became for the moment almost gay. After this he went to Madame Frégo's house, and here his depression returned, and worse than before. His object was to consult her as to the selection and order of the songs in op. 71,¹⁴ which he was about to publish—one of the minute matters in which he was so fastidious

¹ Letter to Philharmonic Society, Interlaken, Aug. 27, 1847 (printed in the programme-book of the concert given Feb. 5, 1880).

² *Mod. German Mus.* ii. 392; *Dieu*, p. 272.

³ This expression was used to the writer by Dr. Klengel, the tutor of his boys, who was constantly with him during the last two or three years of his life, and knew him intimately. Dr. Klengel died in Nov. 1879.

⁴ The completed and published portions of 'Loreley' are the finale to Act I, an Ave Maria, sop. and chorus (sc. 3), and a vintagers' chorus (sc. 4). Portions of scenes 2 and 7 were left more or less advanced towards completion. The finale has been frequently staged in Germany.

⁵ 'Christus' had been projected to form the third of a trilogy with 'St. Paul' and 'Elijah.' During this last visit to Switzerland, 8 numbers of recitative and chorus were sufficiently completed to be published as op. 97 (No. 26 posth. works). The fragments were first heard at the Birmingham Festival, Sept. 8, 1852.

⁶ Mendelssohn appears to have composed the Te Deum fifteen years earlier, though he may have rewritten it in 1847. See his letter (in English) of Aug. 22, 1832, in *Brit. Mus. Add. MSS.* 11,720, fol. 120; printed in *Mus. T.*, Oct. 1903, p. 682.

¹³ The last letter stuck into the last (the 29th) of his green volumes is from Fienchhoff of Vienna on this subject, and is dated Oct. 29. It must have been received too late to have been read by him.

¹⁴ Of the seven songs which he brought, the 'Alte deutsches Frühlingslied,' though put on paper on Oct. 7, was composed in the summer. The 'Nachtlied' was composed and written for Schleinitz's birthday, Oct. 1, and is therefore virtually Mendelssohn's last composition. 'An odd birthday present,' said he to Mme. Frégo, 'but I like it much, for I feel so dreary.'

and difficult to satisfy. She sang them to him several times, they settled the order, and then he said he must hear them once more, and after that they would study 'Elijah'; she left the room for lights, and on her return found him on the sofa shivering, his hands cold and stiff, his head in violent pain. He then went home, and the attack continued; leeches were applied, and by the 15th he had recovered so far as to listen with interest to the details of the reception of Hiller's new opera at Dresden, and actually to make plans for his Vienna journey.

On the 25th he writes to his brother in the old affectionate vein. He is taking tonics, but Paul's face would do him more good than the bitterest medicine. He was not, however, destined to speak to him again. On the 28th he was so much better as to take a walk with his wife, but it was too much, and shortly afterwards he had a second attack, and on Nov. 3 another, which last deprived him of consciousness. He lingered through the next day, fortunately without pain, and expired at 9.24 p.m. on Thursday, Nov. 4, 1847, in the presence of his wife, his brother, Schloinitz, David and Moscheles.

During the illness, the public feeling was intense. Bulletins were issued, and the house was besieged by inquirers. After his death it was as if every one in the town had received a blow and sustained a personal loss. 'It is lovely weather here,' writes a young English student¹ to the *York Courant*, 'but an awful stillness prevails; we feel as if the king were dead. Clusters of people are seen speaking together in the streets.' The streets were placarded at the corners with official announcements of his death, as if he had been a great officer of state.

On the Friday and Saturday the public were allowed to see the dead body. On Sunday the 7th it was taken to the Pauliner Church at Leipzig. A band preceded the hearse, playing the Song without Words in E minor (Book 5, No. 3), instrumented by Moscheles; and after this came a student² of the Conservatorium with a cushion, on which lay a silver crown formerly presented to Mendelssohn by his pupils, and his Order 'pour le mérite.' The pall was borne by Moscheles, David, Hauptmann and Gade; the professors and pupils of the Conservatorium, the members of the Gewandhaus orchestra, the chief functionaries of the Corporation and the University, and several guilds and societies accompanied the coffin, and Paul Mendelssohn was chief mourner. In the church the chorale 'To thee, O Lord,' and the chorus 'Happy and blest,' from 'St. Paul,' were sung, a sermon or oration was delivered by Herr Howard, the pastor of

the Reformed Congregation, and the service closed with the concluding chorus of Bach's St. Matthew Passion. At 10 p.m. the coffin was conveyed to the Leipzig station and transported by rail to Berlin. On the road, during the night, it was met at Cöthen by the choir of the place, under Thile their director, and at Dessau by Friedrich Schneider, who wiped away the recollection of early antagonisms by a farewell part-song, composed for the occasion, and sung by his choir at the station. The coffin arrived at Berlin at 7 a.m., and, after more funeral ceremonies, was deposited in the enclosed burial-place of the family in the Alte Dreifaltigkeits Kirchhof, close outside the Hallethor. His tombstone is a cross. He rests between his boy Felix and his sister Fanny. His father and mother are a short distance behind.

The fifth Gewandhaus concert, which, it was piously observed, would naturally have ended at the very moment of his death, was postponed till Nov. 11, when, excepting the Eroica Symphony, which formed the second part of the programme, it was entirely made up of the compositions of the departed master. Among them were the *Nachtlied* of Eichendorf (op. 71, No. 6), sung by Madame Frege.

In London the feeling, though naturally not so deep or so universal as in his native place, was yet both deep and wide. His visits had of late been so frequent, and the last one was so recent, and there was such a vivid personality about him, such force and fire, and such a general tone of health and spirits, that no wonder we were startled by the news of his death. The tone of the press was more that of regret for a dear relation than of eulogy for a public character. Each writer spoke as if he intimately knew and loved the departed. This is especially conspicuous in the long notices of *The Times* and *Athenæum*, which are full not only of keen appreciation, but of deep personal sorrow. From his private friends I shall only permit myself two quotations. Mrs. Grote, writing nearly thirty years afterwards, names four friends whose deaths had occasioned her the most poignant sorrow of her life; and among these are Felix Mendelssohn, Alexis de Tocqueville and John Stuart Mill. Mrs. Austin, the aunt of his early friends the Taylors, and herself one of his most intimate allies, in a tribute to his memory as beautiful as it is short, says:

'His is one of the rare characters which cannot be known too intimately. Of him there is nothing to tell that is not honourable to his memory, consoling to his friends, profitable to all men. . . . If I admired him as an artist, I was no less struck by his childlike simplicity and sportiveness, his deference to age, his readiness to bend his genius to give pleasure to the humble and ignorant; the vivacity and fervour of his admiration for everything good and great, his cultivated intellect, refined tastes, and noble sentiments.'³

¹ Mr Thomas Simpson Camidge (see CAMIDGE (4)).

² Mr. de Santis.

³ *Fraser's Magazine*, Apr. 1848, p. 426.

Nor was the public regret out of proportion to that of his intimate friends. We are not perhaps prone to be very demonstrative over artists, especially over musicians; but this was a man who had wound himself into our feelings as no other musician had done since Handel. What Handel's songs, the 'Harmonious Blacksmith,' and other harpsichord pieces, had done for the English public in 1740, that Mendelssohn's Songs without Words, and partsongs, had done in 1840, and they had already made his name a beloved household word in many a family circle both in town and country. He had been for long looked upon as half an Englishman. He spoke English well, he wrote letters and familiar notes in our tongue freely; he showed himself in the provinces; his first important work was founded on Shakespeare, his last was brought out in England, at so peculiarly English a town as Birmingham; and his Scotch Symphony and 'Hebrides' overture showed how deeply the scenery of Britain had influenced him. And, perhaps more than this, there were in the singular purity of his life, in his known devotion to his wife and family, and his general high and unselfish character, the things most essential to procure him both the esteem and affection of the English people.

The Sacred Harmonic Society, the only Society in London having concerts at that period of the year, performed 'Elijah' on Nov. 17, preceded by the Dead March in 'Saul,' and with the band and chorus all dressed in black. At Manchester and Birmingham similar honours were paid to the departed composer. In Germany commemorative concerts (*Todenfeier*) were given at Berlin, Vienna, Frankfort, Hamburg and many other places. His bust was set up in the Theatre at Berlin, and his profile in the Gewandhaus at Leipzig. The first concert of the Conservatoire at Paris, on Jan. 9, 1848, was entitled 'À la mémoire de F. Mendelssohn-Bartholdy,' and comprised the Scotch Symphony and 'Hebrides' overture, the violin concerto, and airs from 'St. Paul.' Among the very numerous letters of condolence addressed to his widow we will only mention those from Queen Victoria, the King of Prussia and the King of Saxony.

POSTHUMOUS PUBLICATIONS. — Two works were in the printers' hands at the time of Mendelssohn's death—the Six Songs (op. 71) and the Six Kinderstücke (op. 72), known in England as 'Christmas pieces.' These were quickly published. Then there was a pause, and at length, as he had left no will, Madame Mendelssohn confided to a kind of committee, composed of her husband's most intimate musical friends, the task of deciding which pieces out of the immense mass of MS. music should be published, and of supervising

the publication. Those gentlemen were Dr. Schleinitz, the acting member of the council of the Conservatorium, David, Moscheles and Hauptmann, all resident in Leipzig, with Paul Mendelssohn in Berlin, and Julius Rietz in Dresden. The instrumental works then (1847) in MS. embraced the Trumpet overture (1825) and Reformation Symphony (1830), the Italian Symphony (1833), the overture to 'Ruy Blas' (1839), two sets of pianoforte variations (1841), the quintet in B flat (1845), the quartet in F minor (1847), and fragments of another quartet in E, Songs without Words, and other pianoforte pieces. The vocal works comprised the Liederspiel 'Heimkehr aus der Fremde' (1829), the concert-aria 'Infelice' (1843), the music to 'Athalie' and to 'Edipus Coloneus' (both 1845), 'Lauda Sion' (1846), fragments of the opera 'Loreley,' and of the oratorio 'Christus,' on which he had been at work not long before his death, Psalms and Sprüche for voices with and without accompaniment, songs and partsongs.

The work of publication began with 'Lauda Sion,' which appeared as op. 73, in Feb. 1848. This was followed by 'Athalie,' and by other works, down to the four partsongs which form op. 100, and No. 29 of the posthumous works, which came out in Jan. 1852. Here a pause took place.

In the meantime, borne down by her great loss, and also by the death of her third boy, Felix, in 1851, Madame Mendelssohn herself died on Sept. 25, 1853. The manuscripts then came into the hands of Dr. Carl Mendelssohn, the eldest son, and after some years publication recommenced with the Trumpet overture, which appeared in 1867, and continued at intervals down to the 'Responsorium et Hymnus' (op. 121), and other works without opus numbers.

Many of the pieces referred to in the above enumeration are included in the series of MS. volumes already mentioned. Forty-four of these volumes were deposited in the Imperial Library at Berlin, in pursuance of an arrangement dated Dec. 23, 1877, by which, in exchange for the possession of them, the German government agreed with the Mendelssohn-Bartholdy family to found two perpetual scholarships of 1500 marks (£75) per annum each, tenable for four years, for the education of students of music elected by competition from the music schools of Germany. The Trustees of the Fund are three—the Director of the High School of Music at Berlin, a second nominated by the government, and a third by the family. The first election took place on Oct. 1, 1879, and the successful candidates were Engelbert Humperdinck of Siegburg, and Josef Kotek of Podolia. In addition, Ernst Seyffardt of Crefeld, and Johann Secundus Kruse of Melbourne, Australia, received allowances of 750 marks each out of the arrears of the Fund.

Long before the foundation of the Berlin Scholarships, however, practical steps in the same direction had been taken in England. In Nov. 1847 a resolution was passed by the Sacred Harmonic Society of London for the erection of a public memorial in honour of Mendelssohn. £50 was subscribed thereto by Queen Victoria and Prince Albert and like sums by the Sacred Harmonic and Philharmonic Societies. Other subscriptions were raised amounting in the whole to over £600. In Apr. 1859, after many negotiations, a model of a statue by Mr. C. Bacon was approved by the subscribers; it was cast in bronze in the following November and on May 4, 1860, was set up on the Terrace of the Crystal Palace at Sydenham.

A more appropriate memorial was the Mendelssohn Scholarship originated by Madame Jenny Lind-Goldschmidt in the year 1850, which will be found described under its own heading. (See MENDELSSOHN SCHOLARSHIP.)

PERSONALIA AND PORTRAITS.—In person Mendelssohn was short,¹ not so much as 5 ft. 7 ins. high, and slight of build; in figure lithe, and very light and mercurial. His look was dark and very Jewish; the face unusually mobile, and ever varying in expression, full of brightness and animation, and with a most unmistakable look of genius. After a breakfast with him at B. Hawes's, Thackeray told Richard Doyle (who told the writer), 'His face is the most beautiful face I ever saw, like what I imagine our Saviour's to have been.' Sir Frederick Pollock² 'was much struck by his fine face and figure, and the excellence of his conversation.' His complexion was fresh, and showed a good deal of colour. His hair was black, thick and abundant, but very fine, with a natural wave in it, and was kept back from his forehead, which was high and much developed. By the end of his life, however, it showed a good deal of grey, and he began to be bald. His mouth was unusually delicate and expressive, and had generally a pleasant smile at the corners. His whiskers were very dark, and his closely shaven chin and upper lip were blue from the strength of his beard. His teeth were beautifully white and regular; but the most striking part of his face were the large dark-brown eyes. When at rest he often lowered the eyelids as if he were slightly short-sighted—which indeed he was; but when animated they gave an extraordinary brightness and fire to his face and 'were as expressive a pair of eyes as were ever set in a human being's head.' They could also sparkle with rage like a tiger's.³ When he was playing extempore, or was otherwise much excited, they would dilate and become nearly twice their ordinary size, the brown pupil changing to a vivid black. His laugh was hearty and frequent;

and when especially amused he would quite double up with laughter and shake his hand from the wrist to emphasise his merriment. He would nod his head violently when thoroughly agreeing, so that the hair came down over his face. In fact his body was almost as expressive as his face. His hands were small, with taper fingers.⁴ On the keys they behaved almost like 'living and intelligent creatures, full of life and sympathy.'⁵ His action at the piano was as free from affectation as everything else that he did, and very interesting. At times, especially at the organ, he leant very much over the keys, as if watching for the strains which came out of his finger tips. He sometimes swayed from side to side, but usually his whole performance was quiet and absorbed.⁶

He refused more than once, from motives of modesty, to have his likeness taken.⁷ But a great number of portraits were painted and drawn at different times of his life. The best of these, in the opinion of those most capable of judging, is that painted by his friend Professor Edward Magnus at Berlin in the year 1844, and although deficient in that lively speaking expression which all admit to have been so characteristic of him, it may be accepted as a good representation.⁸ It is very superior to the various replicas and copies in existence, which are distinguished by a hopeless meek solemnity of look, absolutely impossible in the original, and which, therefore, convey an entirely wrong idea of the face.

Other portraits worth notice are (1) a pencil sketch taken in 1820, in possession of Mr. C. V. Benecke, lithographed in *Goethe and Mendelssohn*. (2) A half-length taken by Begas in 1821, in the possession of the Paul Mendelssohn-Bartholdy family at Berlin. This is very poorly engraved, both as to resemblance and execution, in *Goethe and Mendelssohn*. The original is probably much idealised, but it is a striking picture. (3) A three-quarter-length, in a cloak, painted by Hildebrand, and engraved as the frontispiece to 'Elijah'; in possession of Herr Killmann of Bonn. (4) A whole length, sitting, and looking to the side, taken by Hensel in 1844, in the possession of the Paul Mendelssohn-Bartholdy family. This, though clever as a picture, can hardly convey the man. The hand is perhaps the most remarkable thing in it, and must be a portrait. (5) A profile taken after death by Hensel, in possession of Mr. C. V. Benecke. This, which is said by many to be the best representation of him, is fairly engraved as the frontispiece to Lady Wallace's translation of the letters.

¹ A plaster cast of his hand can be bought.

² The late Dr. Charles Graves, Bishop of Limerick.

³ I owe the above description of Mendelssohn's looks chiefly to Mr. John C. Horsley, R.A. Few knew him better, or are more qualified to describe him.

⁴ *L.* Dec. 20, 1831; *Apr.* 3, May 18, 1835.

⁵ This portrait was presented by Magnus himself to Madame Jenny Lind-Goldschmidt, who bequeathed it to Mendelssohn's elder daughter, the late Mrs. C. V. Benecke.

¹ He was shorter than Sterndale Bennett, who was 5 ft. 7.

Photographische Gesellschaft, Berlin

MENDELSSOHN

From a painting by Horace Vernet

A portrait of him in crayons was taken at Weimar for Goethe,¹ which he describes as 'very like, but rather sulky'; another was painted at Rome by Horace Vernet,² (see *PLATE XLVIII.*) and another by a painter named Schramm.³ The sketch by his brother-in-law, taken in 1840, and given as frontispiece to vol. ii. of the *Famille Mendelssohn* must surely be too young-looking for that date. Miniatures of the four children were taken in Paris in 1816, and passed into the possession of Herr Ernst von Mendelssohn-Bartholdy, Berlin, nephew of the composer.

The bust by Rietschel (engraved as frontispiece to Devrient) and the profiles by Knauer and Kiotz are all said to be good. There is a bust by Peter Hollins (1800-86), a Birmingham artist, now in the City of Birmingham Museum and Art Gallery.⁴

CHARACTER AND FRIENDSHIPS.—Not less remarkable than his face was his way and manner. It is described by those who knew him as peculiarly winning and engaging; to those whom he loved, coaxing. The slight lisp or drawl which remained with him to the end made the endearing words and pet expressions, which he was fond of applying to his own immediate circle, all the more affectionate. But outside this immediate circle also he was very fascinating, and it is probable that, devotedly as he was loved at home, few men had fewer enemies abroad. The strong admiration expressed towards him by men of such very different natures as Schumann⁵ and Berlioz,⁶ both of whom knew him well, shows what a depth of solid goodness there was in his attractiveness. 'His gentleness and softness,' says one of his English friends, 'had none of the bad side so often found with those qualities; nothing effeminate or morbid. There was a great deal of manliness packed into his little body,' as all readers of the early part of this sketch must be aware. Indeed he had a great capacity for being angry. Anything like meanness or deceit, or unworthy conduct of any kind, roused his wrath at once. 'He had a way,' says a very old friend, 'of suddenly firing up on such occasions, and turning on his heel, in a style which was quite unmistakable,' and astonishing to those who only knew his smoother side. Towards thoughtlessness, negligence or obstinate stupidity he was very intolerant, and under such provocation

said things the sting of which must have remained for long after, and which he himself deeply regretted.⁷ But these were rare in stances, and as a rule his personal fascination secured him friends and kept them firm to him. And to those to whom he was really attached—outside his own family, of which we are not speaking—there could hardly be a better friend. The published letters to General von Webern, to Verkenius, Klingemann, Schubring, Hiller, Moscholes, are charged with an amount of real affection rarely met with, which yet never leads him to sink his own individual opinion on any point which he thought material, as may be seen in many cases. Talent and perseverance he was always ready to encourage, and the cases of Taubert, Eckert, Gade, Joachim, Rietz, Naumann, Sternsd Bennett, Hiller, and the anonymous student whose cause he pleads so earnestly to the King,⁸ show how eager he always was to promote the best interests of those whom he believed to be worthy. His warm reception of Berlioz, Liszt and Thalberg has been already mentioned, but must be again referred to as an instance of the absence of jealousy or rivalry in his nature, and of his simple wish to give everybody fair play.

The relations of Mendelssohn and Schumann were thoroughly good on both sides. There is a remarkable absence of Schumann's name in Mendelssohn's published letters⁹; but this may have arisen from considerations which influenced the editors, and would possibly be reversed if the letters had been fully given, and if others which remain in MS. were printed. The two men were always good friends. They differed much on some matters of music. Mendelssohn had his strong settled principles, which nothing could induce him to give up. He thought that everything should be made as clear as a composer could make it, and that rough or awkward passages were blemishes, which should be modified and made to sound well. On the other hand, Schumann was equally fixed in the necessity of retaining what he had written down as representing his intention. But such differences of opinion never affected their intercourse; they were always friendly, and even affectionate, and loved to be together. More than one person living¹⁰ remembers the strong interest which Mendelssohn took in 'Paradise and the Peri'¹¹ on its first appearance, and how anxious he was that his friends should hear it. Of Schumann's string quartets he records that they 'pleased him extremely'; and it is surely allowable to infer

¹ *L. Weimar*, May 25, 1830.

² *L. Jan. 17 and Mar. 15, 1831.* See Rebecka's letter in Eckardt's *Ferdinand David*, p. 39. Vernet's portrait, painted in return for an extempore fantasia on 'Don Juan,' was reproduced as a supplement to the *Mus. T.*, Mar. 1905. Another portrait, drawn by Edward Novello (a son of Vincent Novello), was reproduced as a supplement to the *Mus. T.*, Nov. 1897.

³ Possibly taken in 1840; since in Ernst Mendelssohn-Bartholdy's possession is the autograph of three songs inscribed 'Dem Maler Schramm zu freundlichem Andenken und mit bestem Dank. F. M. B. Leipzig, d. 4 Nov. 1840.' It was reproduced as frontispiece to F. G. Edwards's *History of Eliza* (1899).

⁹ See the fuller discussion of this question under SCHUMANN, subsection RELATIONS WITH MENDELSSOHN.

¹⁰ *I.e.* in 1879, the date of writing.

¹¹ See Mendelssohn's letter to Buxton (Ewer & Co.), suggesting the publication in England of 'Paradise and the Peri,' quoted in the letter from Sir George Grove in the *Times* of Sept. 11, 1894; also printed in the *Mus. T.*, Nov. 1905, p. 716.

that it was the expression of his pleasure that made Schumann dedicate them to him. He had a particular love for some of Schumann's songs, and as this feeling was not shared by all the members of his family he would sometimes ask for the 'forbidden fruit,' as a kind of synonym for something peculiarly pleasant. The fact that he placed Schumann among his colleagues at the starting of the Leipzig Conservatorium of itself shows how much he valued him.

On the other hand, Schumann is never warmer or more in earnest than when he is praising Mendelssohn's compositions, as may be seen by many an article in his *Gesammelte Schriften*. He dedicated his string quartets to him, as we have said. He defended him with ardour when attacked; during his last sad years Mendelssohn's name was constantly in his mouth as that of his best friend, and his last clearly expressed wish was that his youngest boy should be called after him. A proof of his affectionate feeling is to be found in the No. 28 of his 'Album für die Jugend' (op. 68), which is inscribed 'Erinnerung (Nov. 4, 1847),' and therefore expresses his feelings at the death of his friend. It is not necessary to discover that definite direct meaning in this touching little piece which Mendelssohn found in all music, in order to recognise sadness tempered by a deep sense of grace and sweetness; the result showing how beautiful was the image which Mendelssohn left in the mind of one so completely able to appreciate him as Schumann.

Nowhere is Mendelssohn's naturalness and naïveté more evident than in his constant reference to his own foibles. The hearty way in which he enjoys idleness, and boasts of it,¹ the constant references to eating and drinking, are delightful in a man who got through so much work, who was singularly temperate, and whose only weakness for the products of the kitchen was for rice milk and cherry pie. In this, as in everything else, he was perfectly simple and natural. 'I do not in the least concern myself as to what people wish or praise or pay for: but solely as to what I myself consider good.'² No doubt he was very fortunate in being able to disregard 'what people paid for,' but that he did so is a part of his character.

His fun and drollery were more the result of his high spirits than of any real turn for wit. Unlike Beethoven, he rarely indulges in plays on words, and his best efforts in that direction are the elaborately illustrated programmes and *jeux d'esprit* which are preserved in the albums of some of his friends, and in which caricatures, verses, puns and jokes are mixed up in a very droll fashion. There is much humour in some of his scherzos, but especially in the funeral march for Pyramus and Thisbe in the 'Mid-

summer Night's Dream' pieces, one of the most comical things in all music. It is much to be regretted that he has left no other specimen of his remarkable power in this direction. Probably he indulged in a good deal of such fun which has not been preserved, since both he and his sister refer to that march as a specimen of a style in which he often extemporised.³ In mimicry he was great, not only in music but in taking off speech and manner. The most humorous passage that I have met with in his letters is still in MS.:

'Dass jenseits auch Musik gemacht werden könne, das glauben Sie ja, und haben mirs oft gesagt. Dann wird's wohl kein schlechtes Instrument geben, wie bei Geyer, und keine dumme Flöte pücket da, und keine Posaune schleppt nach, und nirgends fehlt es, und wankt es, und cilt es, das glaube ich wohl.'⁴

PURSUITS—SKETCHES AND CORRESPONDENCE.—No musician—unless perhaps it were Leonardo da Vinci, and he was only a musician in a limited sense—certainly no great composer, ever had so many pursuits as Mendelssohn. Mozart drew, and wrote capital letters, Berlioz and Weber also both wrote good letters, Beethoven was a great walker and intense lover of nature, Cherubini was a botanist and a passionate card-player, but none of them approach Mendelssohn in the number and variety of his occupations. Both billiards and chess he played with ardour to the end of his life, and in both he excelled. When a lad he was devoted to gymnastics; later on he rode much, swam more, and danced whenever he had the opportunity. Cards and skating were almost the only diversions he did not care for. But then these were diversions. There were two pursuits which almost deserve to rank as work—drawing and letter-writing. Drawing with him was more like a professional avocation than an amusement. The quantity of his sketches and drawings preserved is very large. They begin with the Swiss journey in 1822, on which he took twenty-seven large ones, all very carefully finished, and all dated, sometimes two in one day. The Scotch and Italian tours are both fully illustrated; and so they go on year by year till his last journey into Switzerland in 1847, of which, as already said, fourteen large highly finished water-colour drawings remain, besides slighter sketches.⁵ At first they are rude and childish, though with each successive set the improvement is perceptible. But even with the earliest ones there is no mistaking that the drawing was a serious business. The subjects are not what are called 'bits,' but are usually large comprehensive views, and it is impossible to doubt that the child threw his whole

¹ *F.M.* III. 51, 54. A 'Barentanz' is described in *Mus. T.*, Aug. 1892.

² 'That there may be music in the next world I know you believe for you have often told me so; but there will certainly be no bag pianos there like Geyer's, no stupid puffing flutes, no dragging trombones, no stopping, or wavering, or hurrying—of that I am quite sure.' *MS.* letter.

³ Coloured facsimiles of two of his water-colour sketches formed supplements to the *Mus. T.*, Dec. 1897, which also contains one of his humorous pen-and-ink sketches, as does the issue of Nov. 1900, p. 725.

¹ *L.* July 14, 1836, and in many others.

² *L.* to his mother, Oct. 4, 1837.

mind into it, did his very best, and shirked nothing. He already felt the force of the motto which fronted his conductor's chair in the Gewandhaus—'Res severa est verum gaudium.' Every little cottage or gate is put in with as much care as the main features. Every tree has its character. Everything stands well on its legs, and the whole has that architectural style which is so characteristic of his music.

Next to his drawing should be placed his correspondence, and this is even more remarkable. During the last years of his life there can have been but few eminent men in Europe who wrote more letters than he did. Many even who take no interest in music are familiar with the nature of his letters—the happy mixture of seriousness, fun and affection, the life-like descriptions, the happy hits, the naïveté which no baldness of translation can extinguish, the wise counsels, the practical views, the delight in the successes of his friends, the self-abnegation, the bursts of wrath at anything mean or nasty. We all remember, too, the length to which they run. Taking the printed volumes, and comparing the letters with those of Scott or Arnold, they are on the average very considerably longer than either. But the published letters bear only a small proportion to those still in MS.¹ In fact the abundance of material for the biographer of Mendelssohn is quite bewildering. That, however, is not the point. The remarkable fact is that so many letters of such length and such intrinsic excellence should have been written by a man who was all the time engaged in an engrossing occupation, producing great quantities of music, conducting, arranging and otherwise occupied in a profession which more than any demands the surrender of the entire man. For these letters are no hurried productions, but are distinguished, like the drawings, for the neatness and finish which pervade them. An autograph letter of Mendelssohn's is a work of art; the lines are all straight and close, the letters perfectly and elegantly formed, with a peculiar luxuriance of tails, and an illegible word can hardly be found. Down to the folding and the sealing everything is perfect. It seems impossible that this can have been done quickly. It must have absorbed an enormous deal of time.

While speaking of his correspondence, we may mention the neatness and order with which he registered and kept everything. The forty-four volumes of MS. music, in which he did for himself what Mozart's father so carefully did for his son, have been mentioned. But it is not generally known that he preserved all letters that he received, and stuck them with his own hands into books. Twenty-seven large

thick green volumes exist,² containing apparently all the letters and memorandums, business and private, which he received from Oct. 29, 1821, to Oct. 29, 1847, together with the drafts of his oratorio books, and of the long official communications which, during his latter life, cost him so many unprofitable hours. He seems to have found time for everything. Hiller tells us how, during a very busy season, he revised and copied out the libretto of his oratorio for him.³ One of his dearest Leipzig friends has a complete copy of the full score of 'Antigone,' including the whole of the words of the melodrama, written for her with his own hand; a perfect piece of caligraphy, without spot or erasure! and the family archives contain a long minute list of the contents of all the cupboards in the house, filling several pages of foolscap, in his usual neat writing, and made about the year 1842. We read of Charles Dickens that 'no matter was considered too trivial to claim his care and attention. He would take as much pains about the hanging of a picture, the choosing of furniture, the superintending of any little improvement in the house, as he would about the more serious business of his life; thus carrying out to the very letter his favourite motto that, What is worth doing at all is worth doing well.'⁴ No words could better describe the side of Mendelssohn's character to which we are alluding, nor could any motto more emphatically express the principle on which he acted throughout life in all his work.

His taste and efficiency in such minor matters are well shown in the albums which he made for his wife, beautiful specimens of arrangement, the most charming things in which are the drawings and pieces of music from his own hands. His private account-books and diaries are kept with the same quaint neatness. If he had a word to alter in a letter, it was done with a grace which turned the blemish into a beauty. The same care came out in everything—in making out the programmes for the Gewandhaus concerts, where he would arrange and rearrange the pieces to suit some inner idea of symmetry or order; or in settling his sets of songs for publication as to the succession of keys, connexion, or contrast of words, etc. In fact he had a passion for neatness, and a repugnance to anything clumsy. Possibly this may have been one reason why he appears so rarely to have sketched his music. He made it in his head, and had settled the minutest points there before he put it on paper, thus avoiding the litter and disorder of a sketch. Connected with this neatness is a certain quaintness in his proceedings which perhaps strikes an Englishman more forcibly than it would a German. He used

¹ In the hands of his family, of Mr. Robt von Mendelssohn (Berlin), Felix Moscheles, Professor Paul Schubring (Berlin), Paul David, Otto Goldschmidt, Miss Freusser, Euler of Düsseldorf, the Sternsdales Bennetts, and others.

² In the hands of Mrs. Wach (Lilli Mendelssohn-Bartholdy). Two others seem to be missing. ³ *H. p.* 167.

⁴ Preface to the *Letters of Charles Dickens*, 1879.

the old-fashioned C clef for the treble voices in his scores to the last; the long flourish with which he ornaments the double bar at the end of a piece never varied. A score of Haydn's Military Symphony which he wrote for his wife bears the words 'Possessor Cécile.' In writing to Mrs. Moscheles of her little girls, whose singing had pleased him, he begs to be remembered to the 'drei kleine Diskantisten.' A note to David, sent by a child, is inscribed 'Kinderpost,' and so on. Certain French words occur over and over again, and are evidently favourites. Such are *plaisir* and *trouble*, *à propos*, *en gros*, and others. The word *hübsch*, answering to our 'nice,' was a special favourite,¹ and *nett* was one of his highest commendations.

But to return for a moment to his engrossing pursuits. Add to those just mentioned the many concerts, to be arranged, rehearsed, conducted; the frequent negotiations attending on Berlin; the long official protocols; the hospitality and genial intercourse, where he was equally excellent as host or as guest; the claims of his family; the long holidays, real holidays, spent in travelling, and not, like Beethoven's, devoted to composition—and we may almost be pardoned for wondering how he can have found time to write any music at all. But on the contrary, with him all this business does not appear to have militated against composition in the slightest degree. It often drove him almost to distraction; it probably shortened his life; but it never seems to have prevented his doing whatever music came before him, either spontaneously or at the call of his two posts at Berlin and Dresden. He composed 'Antigone' in a fortnight, he resisted writing the music to 'Ruy Blas,' he grumbled over the long chorale for the thousandth anniversary of the German Empire, and over the overture to 'Athalie' in the midst of his London pleasures; but still he did them, and in the cases of 'Antigone' and the two overtures it is difficult to see how he could have done them better. He was never driven into a corner.

The power by which he got through all this labour, so much of it self-imposed, was the power of order and concentration, the practical business habit of doing one thing at a time, and doing it well. This, no doubt, was the talent which his father recognised in him so strongly as to make him doubt whether business was not his real vocation. It was this which made him sympathise with Schiller in his power of 'supplying' great tragedies as they were wanted.² In one way his will was weak, for he always found it hard to say 'No'; but having accepted the task it became a duty, and towards duty his will was the iron will of a man of business. Such a gift is vouchsafed to very few artists. Handel possessed it in some degree; but with that one exception Mendelssohn seems to stand alone.

¹ *Mos. II. p. 165.*

² *L. Engelhorn Aug. 23, 1881.*

Of this method of composing, little or nothing is known. He appears to have made few sketches, and to have arranged his music in his head at first, much as Mozart did. Probably this arose from his early training under Zelter, for the volumes for 1821, 1822, 1823 of the MS. series now in the Royal Library at Berlin appear to contain his first drafts and rarely show any corrections, and what there are are not so much sketches as erasures and substitutions. Devrient and Schubring tell of their having seen him composing a score bar by bar from top to bottom; but this was probably only an experiment or *tour de force*.

Alterations in a work after it was completed are quite another thing, and in these he was lavish. He complains of his not discovering the necessity for them till *post festum*.³ We have seen instances of this in the 'Walpurgisnacht,' 'St. Paul,' 'Lobgesang,' 'Elijah' and some of the concert-overtures. Another instance is the Italian Symphony, which he retained in MS. for fourteen years, till his death, with the intention of altering and improving the finale. Another, equally to the point, is the D minor trio, of which there are two editions in actual circulation, containing several important and extensive differences.⁴ This is carrying fastidiousness even further than Beethoven, whose alterations were endless, but ceased with publication. The autographs of many of Mendelssohn's pieces are dated years before they were printed, and in most, if not all, cases they received material alterations before being issued.

MENDELSSOHN AS PIANIST.—Of his pianoforte-playing in his earlier days we have already spoken. Of the various recollections with which I have been favoured, I cannot do better than give entire those of Madame Schumann and Ferdinand Hiller. In reading them it should be remembered that Mendelssohn was fond of speaking of himself as a player *en gros*, who did not claim (however great his right) to be a virtuoso, and that there are instances of his having refused to play before great virtuosi.

1. 'My recollections of Mendelssohn's playing,' says Madame Schumann,

'are among the most delightful things in my artistic life. It was to me a shining ideal, full of genius and life, united with technical perfection. He would sometimes take the *tempo* very quick, but never to the prejudice of the music. It never occurred to me to compare him with virtuosi. Of mere effects of performance he knew nothing—he was always the great musician, and in hearing him one forgot the player and only revelled in the full enjoyment of the music. He could carry one with him in the most incredible manner, and his playing was always stamped with beauty and nobility. In his early days he had acquired perfection of technique; but latterly, as he often told me, he hardly ever practised and yet he surpassed every one. I have heard him in

³ *L. to Klingemann, Dec. 6, 1846.*

⁴ The parts of the 'Hebrides' overture are not in exact accordance with the score of 'Fingals Hölle.' The pianoforte arrangement of the 'Midsummer Night's Dream' overture published in London is given in notes of half the value of those in the score, published after it in Leipzig; but the difference here is only apparent.

Bach, and Beethoven, and in his own compositions, and shall never forget the impression he made upon me.'

2. 'Mendelssohn's playing,' says Ferdinand Hiller,

'was to him what flying is to a bird. No one wonders why a lark flies. It is inconceivable without that power. In the same way Mendelssohn played the piano, because it was his nature. He possessed great skill, certainty, power and rapidity of execution, a lovely full tone—all in fact that a virtuoso could desire; but these qualities were forgotten while he was playing, and one almost overlooked even those more spiritual gifts which we call fire, invention, soul, apprehension, etc. When he sat down to the instrument music streamed from him with all the fullness of his inborn genius,—he was a centaur, and his horse was the piano. What he played, how he played it, and that he was the player—all were equally riveting, and it was impossible to separate the execution, the music and the executant. This was absolutely the case in his improvisations, so poetical, artistic and finished; and almost as much so in his execution of the music of Bach, Mozart, Beethoven or himself. Into those three masters he had grown, and they had become his spiritual property. The music of other composers he knew, but could not produce it as he did theirs. I do not think, for instance, that his execution of Chopin was at all to be compared to his execution of the masters just mentioned; he did not care particularly for it, though when alone he played everything good with interest. In playing at sight his skill and rapidity of comprehension were astonishing, and that not with pianoforte music only, but with the most complicated compositions. He never practised, though he once told me that in his Leipzig time he had played a shake (I think with the second and third fingers) several minutes every day for some months, till he was perfect in it.'

'His staccato,' says Dr. Joachim,

'was the most extraordinary thing possible for life and crispness. In the *Frühlingslied* (Songs without Words, No. 30), for instance, it was quite electric, and though I have heard that song played by many of the greatest players, I never experienced the same effect. His playing was extraordinarily full of fire, which could hardly be controlled, and yet was controlled, and combined with the greatest delicacy.'

'Though lightness of touch and a delicious liquid pearlyness of tone,' says another of his pupils,¹

'were prominent characteristics, yet his power in *forte* was immense. In the passage in his G minor Concerto where the whole orchestra makes a *crescendo*, the climax of which is a 6-4 chord on D (pianoforte alone), it seemed as if the band had quite enough to do to work up to the chord he played.'

As an instance of the fullness of his tone, the same gentleman mentioned the five bars of *piano* which begin Beethoven's G major concerto, and which, though he played them perfectly softly, filled the whole room.

'His mechanism,' says another of his Leipzig pupils,²

'was extremely subtle, and developed with the lightest of wrist (never from the arm); he therefore never strained the instrument or hammered. His chord-playing was beautiful, and based on a special theory of his own. His use of the pedal was very sparing, clearly defined and therefore effective; his phrasing beautifully clear. The performances in which I derived the most lasting impressions from him were the Thirty-two Variations and last sonata (op. 111) of Beethoven, in which latter the variations of the final movement came out more clearly in their structure and beauty than I have ever heard them before or since.'

¹ W. S. Rockstro.

² Otto Goldschmidt.

Of his playing of the Thirty-two Variations, Macfarren remarks that

'to each one, or each pair, where they go in pairs, he gave a character different from all the others. In playing at sight from a MS. score he characterised every incident by the peculiar tone by which he represented the instrument for which it was written.'

In describing his playing of the Ninth Symphony, Schleinitz testified to the same singular power of representing the different instruments. A still stronger testimony is that of Berlioz, who, speaking of the colour of the 'Hebrides' overture, says that Mendelssohn 'succeeded in giving him an accurate idea of it, such is his extraordinary power of rendering the most complicated scores on the piano.'

His adherence to his author's meaning, and to the indications given in the music, was absolute. Strict time was one of his hobbies. He alludes to it, with an eye to the sins of Hiller and Chopin, in a letter of May 23, 1834, and somewhere else speaks of 'nice strict tempo' as something peculiarly pleasant. After introducing some *ritardandos* in conducting the introduction to Beethoven's second symphony, he excused himself by saying that 'one could not always be good,'³ and that he had felt the inclination too strongly to resist it. In playing, however, he never himself interpolated a *ritardando*, or suffered it in any one else.⁴ It especially enraged him when done at the end of a song or other piece. 'Es steht nicht da!' he would say; 'if it were intended it would be written in—they think it expression, but it is sheer affectation.'⁵ But though in playing he never varied the tempo when once taken, he did not always take a movement at the same pace, but changed it as his mood was at the time. We have seen in the case of Bach's A minor Fugue (p. 396) that he could on occasion introduce an individual reading; and his treatment of the arpeggios in the Chromatic Fantasia shows that, there at least, he allowed himself great latitude.⁶ Still, in intimating this it should be remembered how thoroughly he knew these great masters, and how perfect his sympathy with them was. In conducting, as we have just seen, he was more elastic, though even there his variations would now be condemned as moderate by some conductors. Before he conducted at the Philharmonic it had been the tradition in the coda of the overture to 'Egmont' to return to a *piano* after the *crescendo*; but this he would not suffer, and maintained the *fortissimo* to the end—a practice now always followed.

He very rarely played from book, and his prodigious memory was also often shown in his sudden recollection of out-of-the-way pieces. Hiller has given two instances of this.⁷ His power of retaining things casually heard was

⁵ Kellow Pyn.

also shown in his extempore playing, when he would recollect the themes of compositions which he heard then and there for the first time, and would combine them in the happiest manner. An instance of this is mentioned by his father,¹ in which, after Malibran had sung five songs of different nations, he was dragged to the piano, and improvised upon them all. He himself describes another occasion, a 'field day' at Baillot's, when he took three themes from the Bach sonatas and worked them up to the delight and astonishment of an audience worth delighting.² At the matinée of the Society of British Musicians in 1844, he took his themes from two compositions by C. E. Horsley and G. A. Macfarren which he had just heard, probably for the first time—and other instances could be given.

His extemporising was, however, marked by other traits than that of memory. 'It was,' says Macfarren, 'as fluent and as well planned as a written work,' and the themes, whether borrowed or invented, were not merely brought together but contrapuntally worked. Instances of this at Birmingham and elsewhere have been mentioned. His tact in these things was prodigious. At the concert given by Jenny Lind and himself on Dec. 5, 1845, he played two Songs without Words—No. 31 in E flat, and No. 30 in A major, and he modulated from the key of one to that of the other by means of a regularly constructed intermezzo, in which the semi-quavers of the first song merged into the arpeggios of the second with the most consummate art and with magical effect.³ But great as were his public displays, it would seem that, as with Mozart, it was in the small circle of intimate friends that his improvisation was most splendid and happy. Those only who had the good fortune to find themselves (as rarely happened) alone with him at one of his Sunday afternoons are perhaps aware of what he could really do in this direction,⁴ and he 'never improvised better' or pleased himself more than when *tête à tête* with Queen Victoria and Prince Albert. A singular fact is mentioned by Hiller,⁵ which is confirmed by another friend of his: that in playing his own music he did it with a certain reticence, as if not desiring that the work would derive any advantage from his execution. The explanation is very much in consonance with his modesty, but whether correct or not, there is no reason to doubt the fact.

His immense early practice in counterpoint under Zelter—like Mozart's under his father—had given him so complete a command over all the resources of counterpoint, and such a habit of looking at themes contrapuntally, that the combinations just spoken of came more or less

naturally to him. In some of his youthful compositions he brings his science into prominence, as in the fugue in A (op. 7, No. 5); the finale of the E flat string quartet (1823); the original minuet and trio of the string quintet in A (op. 18), a double canon of great ingenuity; the chorus in 'St. Paul,' 'But our God,' constructed on the chorale 'Wir glauben all'; but with his maturity he mostly drops such displays and 'Elijah,' as is well known, 'contains no fugues.' In extemporising, however, it was at his fingers' ends to the last.

He was also fond of throwing off ingenious canons,⁶ of which the following, written on

Etude for one violin, or (anon for two violins).

the moment for Joachim, on March 11, 1844, is a good example. A somewhat similar canon, written in the album of John Parry in 1846, is printed in the *Musical World* for August 19, 1848. Another for two violas—'Viola 1, Sir G. Smart; Viola 2, F. M. B.'—is given in Sir Frederick Bridge's *Primer of Double Counterpoint and Canon*.⁶

Of his organ-playing we have already spoken. It should be added that he settled upon his combinations of stops before starting, and steadily adhered to the plan on which he set out; if he started in three parts he continued in three, and the same with four or five. He took extraordinary delight in the organ; some describe him as even more at home there than on the pianoforte, though this must be taken with caution. But it is certain that he loved the organ, and was always greatly excited when playing it.

He was fond of playing the viola, and on more than one occasion took the first viola part of his own octet in public. The violin he learned when young, but neglected it in later life. He however played occasionally, and it was amusing to see him bending over the desk and struggling with his part just as if he were a boy. His practical knowledge of the instrument is evident from his violin music, in which there are few difficulties which an ordinarily good player cannot surmount. But this is characteristic of the care and thoughtfulness of the man. As a rule in his scores he gives each instrument the passages which suit it. He appears to have felt somewhat of the same natural dislike to brass instruments that Mozart did. At any rate in his early scores he uses them with great

moderation,¹ and somewhere makes the just remark that the trombone is 'too sacred an instrument' to be used freely.

COMPOSITIONS

The few of Mendelssohn's very early works which he published himself, or which have been issued since his death, show in certain points the traces of his predecessors—of Bach, Mozart, Beethoven and Weber. But this is only saying what can be said of the early works of all composers, including Beethoven himself. Mendelssohn is not more but less amenable to this law of nature than most of his compeers. The traces of Bach are the most permanent, and they linger on in the vocal works even as late as 'St. Paul.' Indeed Bach may be tracked still later in the solid construction and architectonic arrangement of the choruses, even of the 'Lobgesang,' the grand Psalms, the 'Walpurgisnacht' and 'Elijah,' works in all respects emphatically Mendelssohn's own, not less than in the religious feeling, the union of noble sentiment with tender expression, and the utter absence of commonness or vulgarity which pervade all his music alike.

SYMPHONIC WORKS.—In the instrumental works, however, the year 1826 broke the spell of all external influence, and the octet, the quintet in A, and, above all, the 'Midsummer Night's Dream' overture, launched him upon the world at 17 as a thoroughly original composer. The concert-overtures, the two great symphonies, the two PF. concertos and the violin concerto fully maintain this originality, and in thought, style, phrase and clearness of expression, no less than in their symmetrical structure and exquisite orchestration, are eminently independent and individual works. The advance between the symphony in C minor (1824)—which we call 'No. I.,' though it is really 'No. XIII.'—and the Italian Symphony (Rome, 1831) is immense. The former is laid out quite on the Mozart plan, and the working throughout recalls the old world. But the latter has no model. The melodies and the treatment are Mendelssohn's alone, and while in gaiety and freshness it is quite unrivalled, it is not too much to say that the slow movement is as great a novelty as that of Beethoven's piano concerto in G. The Scotch Symphony is as original as the Italian, and on a much larger and grander scale. The opening andante, the scherzo, and the finale are especially splendid and individual. The concert-overtures are in all essential respects as original as if Beethoven had not preceded them by writing 'Coriolan'—as true a representative of his genius as the 'Hebrides' is of Mendelssohn's. That to the 'Midsummer

Night's Dream,' which brought the fairies into the orchestra and fixed them there, and which will always remain a monument of the fresh feeling of youth; the 'Hebrides' with its intensely sombre and melancholy sentiment, and the 'Melusina' with its passionate pathos, have no predecessors in sentiment, treatment or orchestration. 'Ruy Blas' is as brilliant and as full of fire as the others are of sentiment, and does not fall a step behind them for individuality.

In these works there is little attempt at any modification of the established forms. Innovation was not Mendelssohn's habit of mind, and he rarely attempts it. The Scotch Symphony is directed to be played through without pause, and it has an extra movement in the form of a long coda, which appears to be a novelty in pieces of this class. There are unimportant variations in the form of the concertos, chiefly in the direction of compression. But with Mendelssohn, no more than with Schubert, do these things force themselves on the attention. He has so much to say, and says it well, the music is so good and so agreeable, that it never occurs to the hearer to inquire if he has altered the external proportions of his discourse.

His scherzos are still more peculiarly his own offspring, and really have no prototypes. That in a movement bearing the same name as one of Beethoven's most individual creations, and occupying the same place in the piece, he should have been able to strike out so entirely different a path as he did, is a wonderful tribute to his originality. Not less remarkable is the variety of the many scherzos he has left. They are written for orchestra and chamber, concerted and solo alike, in double and triple time indifferently; they have no fixed rhythm, and notwithstanding a strong family likeness—the impress of the gay and delicate mind of their composer—are all independent of each other. In his orchestral works Mendelssohn's scoring is remarkable not more for its grace and beautiful effect than for its clearness and practical efficiency. It gives the conductor no difficulty. What the composer wishes to express comes out naturally, and, as already remarked, each instrument has with rare exceptions the passages best suited to it.

Mendelssohn's love of 'Programme' is obvious throughout the foregoing works. The exquisite imitation of Goethe's picture in the scherzo of the octet is the earliest instance of it; the overture founded on his 'Calm sea and prosperous voyage' is another; and as we advance each overture and each symphony has its title. He once said, in conversation with Friedrich Schneider on the subject, that since Beethoven had taken the step he did in the Pastoral Symphony, every one was at liberty to follow.²

¹ Neither of his three concert-overtures, nor the Italian and Scotch Symphonies, have trombones. As to 'St. Paul,' see his letter to J. C. Horsley, R.A., Aug. 23, 1834, in *G. & M. p.* 115.

² Schulerberg, p. 2472, note

But the way in which he resented Schumann's attempt¹ to discover 'red coral, sea monsters, magic castles and ocean caves' in his 'Melusina' overture shows that his view of Programme was a broad one, that he did not intend to depict scenes or events, but held fast by Beethoven's canon, that such music should be 'more expression of emotion than painting'—*mehr Ausdruck der Empfindung als Malerei*. Thus he quotes the first few bars of the 'Hebrides' overture (see p. 387) not as his recollection of the sound of the winds and the waves, but 'to show how extraordinarily Fingal's cave had affected him' *wi—e seltzam mir auf den Hebriden zu Muth geworden ist*. True, in the 'Midsummer's Night's Dream' overture we are said to hear the bray of Bottom in the low G of the ophicleide; and in the three North Wales pieces for pianoforte (op. 16) we are told of even more minute touches of imitation; but these, if not imaginary, are at best but *jeux d'esprit*.

Connected with this tendency to Programme is a curious point, namely, his belief in the absolute and obvious 'meaning' of music. 'Notes,' says he, 'have as definite a meaning as words, perhaps even a more definite one,'² and he devotes a whole letter to reiterating that music is not too indefinite to be put into words, but too definite; that words are susceptible of a variety of meanings, while music has only one.³ This is not the place to discuss so strange a doctrine, which, though true to him, is certainly not true to the majority of men, and which obviously rests on the precise force of the word 'to mean' (*heissen*); but it is necessary to call attention to it *en passant*.⁴

CHAMBER MUSIC.—His great works in chamber music are on a par with those for the orchestra. The octet, the quintets and the six quartets are thoroughly individual and interesting, nothing far-fetched, no striving after effect, no emptiness, no padding, but plenty of matter given in a manner at once fresh and varied. Every bar is his own, and every bar is well said. The accusation which is sometimes brought against them, that they are more fitted for the orchestra than the chamber, is probably to some extent well founded. Indeed Mendelssohn virtually anticipates this charge in his preface to the parts of the octet, which he desires may be played in a symphonic style; and in that noble piece, as well as in parts of the quintet in B flat and of the quartets in D and F minor, many players have felt that the composer has placed his work in too small

a frame, that the proper balance cannot always be maintained between the leading violin and the other instruments, and that to produce all the effect of the composer's ideas they should be heard in an orchestra of strings rather than in a quartet of solo instruments. On the other hand, the pianoforte quartet in B minor and the two pianoforte trios in D minor and C minor have been criticised, probably with some justice, as not sufficiently concertante, that is as giving too prominent a part to the piano. Such criticism may detract from the pieces in a technical respect, but it leaves the ideas and sentiments of the music, the nobility of the style and the clearness of the structure, untouched.

His additions to the technique of the pianoforte are not important. Hiller tells a story which shows that Mendelssohn cared little for the rich passages of the modern school; his own were quite sufficient for him.⁵ But this is consistent with what we have just said. It was the music of which he thought, and as long as that expressed his feelings it satisfied him, and he was indifferent to the special form into which it was thrown. Of his pianoforte works the most remarkable is the set of seventeen 'Variations sérieuses'; but the Fantasia in F sharp minor (op. 28), the three great Capriccios (op. 33), the Preludes and Fugues and several of the smaller pieces, are splendid works too well known to need further mention. The Songs without Words stand by themselves, and are especially interesting to Englishmen on account of their very great popularity in this country. Mendelssohn's orchestral and chamber works have been greatly played and much enjoyed here, but it is to his oratorios, songs, Songs without Words and part songs that he owes his firm hold on the mass of the English people. It was some time before the Songs without Words reached the public; but when once they became known, the taste for them quickly spread, and probably no pieces ever were so much and so permanently beloved in the country. The piece, like the name (*Lieder ohne Worte*), is virtually his own invention. Not a few of Beethoven's movements—such as the adagio of the 'Sonate pathétique' or the minuet of op. 10, No. 3—might be classed as songs without words, and so might Field's nocturnes; but the former of these are portions of larger works, not easily separable, and the latter were little known; and neither of them possess that grace and finish, that intimate charm, and above all that domestic character, which have ensured the success of Mendelssohn's Songs without Words in many an English family. They soon became identified with his name as it grew more and more familiar in England; some of them were composed here, others had names or stories

¹ *J.* to Pannoy, Jan. 30, 1836. The reference is to an article in the *N.M.Z.* When asked what he meant by this overture he once replied, 'Hm, une méalliance.'

⁴ Mrs. Austin (*Fraser's Mag.*, Apr. 1848, p. 426) relates that he said to her on one occasion, 'I am going to play something of Beethoven's, but you must tell them what it is about. What is the use of music, if people do not know what it means?' She might surely have replied, 'What, then, is the use of the imagination?'

⁵ *H.* pp. 154, 155.

attached to their origin¹: there was a piquancy about the very title—and all helped their popularity. His own feeling towards them was by no means so indulgent. It is perhaps impossible for a composer to be quite impartial towards pieces which make him so very popular, but he distinctly says, after the issue of Book 3, 'that he does not mean to write any more at that time, and that if such *animalculæ* are multiplied too much, no one will care for them,' etc.² It is difficult to believe that so stern a critic of his own productions should not have felt the weakness of some of them, and the strong mannerism which, with a few remarkable exceptions, pervades the whole collection. We should not forget, too, that he is not answerable for the last two books, which were published after his death, without the great alterations which he habitually made before publication. One drawback to the excessive popularity of the Songs without Words is, not that they exist—for we might as well quarrel with Goethe for the 'Wandrer's Nachtlied' or the 'Haidenröslein'—nor yet the number of imitations they produced, but that in the minds of thousands these graceful trifles, many of which were thrown off at a single sitting, are indiscriminately accepted as the most characteristic representatives of the genius of the composer of the violin concerto and the 'Hebrides' overture.

VOCAL MUSIC.—His songs may be said to have introduced the German *Lied* to England, and to have led the way for the deeper strains of Schumann, Schubert and Brahms in English houses and concert-rooms. No doubt the songs of those composers do touch lower depths of the heart than Mendelssohn's do; but the clearness and directness of his music, the spontaneity of his melody, and a certain pure charm pervading the whole, have given a place with the great public to some of his songs, such as 'Auf Flügeln des Gesanges,' which they will probably retain for a long time to come. Others, such as the Nachtlied, the Volkslied ('Es ist bestimmt') and the Schillied, are deeply pathetic; others, as the 'Lieblingsplätzchen,' are at the same time extremely original; others, as 'O Jugend,' the 'Jagdlied' and 'An die Entfernte,' the soul of gaiety. He was very fastidious in his choice of words, and often marks his sense of the climax by varying the last stanza in accompaniment or otherwise, a practice which he was perhaps the first to adopt. One of his last commissions to his friend Professor Graves, before leaving Interlaken in 1847, was to select words from the English poets for him to set to music.

His partsongs gave the majority of English

¹ Such as the well-known one in A (No. 30), which, though in Germany known as *Frühlingssied*, was in England for a long time called 'Camberwell Green,' from the fact of its having been composed during his visit to the Benckeys, who resided at Denmark Hill, near Camberwell Green. The Duet (No. 18) represents a conversation between the composer and his fiancée.

² *L.* to Simrock, Mar. 4, 1839.

amateurs a sudden and delightful introduction to a class of music which had long existed for Germans, but which till about 1840 was little known here. Many can still³ recollect the utterly new and strange feeling which was then awakened in their minds by the new spirit, the delicacy, the pure style, the delicious harmonies, of these enchanting little compositions!

Ever since Handel's time, oratorios have been the favourite public music here. Mendelssohn's works of this class, 'St. Paul,' 'Elijah,' the 'Lobgesang,' soon became well known. They did not come as strangers, but as the younger brothers of the 'Messiah' and 'Judas Macchabæus,' and we liked them at once. Nor only liked them; we were proud of them, as having been produced or very early performed in England; they appealed to our national love for the Bible, and there is no doubt that to them is largely owing the position next to Handel which Mendelssohn occupies in England. 'Elijah' at once took its place, and it is now on a level with the 'Messiah' in public favour. Apart from the intrinsic qualities of the music of his large vocal works, the melody, clearness, spirit and symmetry which they exhibit, in common with his instrumental compositions, there is one thing which remarkably distinguishes them, and in which they are far in advance of their predecessors—a simple and direct attempt to set the subject forth as it was, to think first of the story and next of the music which depicted it. It is the same thing that we formerly attempted to bring out in Beethoven's case, 'the thoughts and emotions are the first things, and the forms of expression second and subordinate' (Vol. I. p. 306). We may call this 'dramatic,' inasmuch as the books of oratorios are more or less dramas; and Mendelssohn's letters to Schubring in reference to 'Elijah,' his demand for more 'questions and answers, replies and rejoinders, sudden interruptions,' etc., show how thin was the line which in his opinion divided the platform from the stage, and how keenly he wished the personages of his oratorios to be alive and acting, 'not mere musical images, but inhabitants of a definite active world.'⁴ But yet it was not so much dramatic in any conscious sense as a desire to set things forth as they were. Hauptmann⁵ has stated this well with regard to the three noble Psalms, 'Judge me, O God,' 'Why rage fiercely the heathen?' and 'My God, why hast Thou forsaken me?' He says that it is not so much any musical or technical ability that places them so far above other similar compositions of our time, as the fact that Mendelssohn has

'just put the Psalm itself before him; not Bach, or Handel, or Palestrina, or any other style or composer, but the words of the Psalmist; and the result is not

³ *i.e.* in 1879, the date of writing.

⁴ *L.* to Schubring, Nov. 2, Dec. 6, 1838.

⁵ Hauptmann's letter to Hauser, Jan. 16, 1860.

anything that can be classed as new or old, but the Psalm itself in thoroughly fine musical effect; the music not pretending to be scientific, or anything on its own account, but just throwing life and feeling into the dry words.'

Any one who knows these psalms will recognise the truth of this description. It is almost more true in reference to the 114th Psalm, 'When Israel out of Egypt came.' The Jewish blood of Mendelssohn must surely for once have beat fiercely over this picture of the great triumph of his forefathers, and it is only the plain truth to say that in directness and force his music is a perfect match for the splendid words of the unknown Psalmist. It is true of his oratorios also, but they have other great qualities as well. 'St. Paul' with all its great beauties is an early work, the book of which, or rather perhaps the nature of the subject, does not wholly lend itself to forcible treatment, and it is an open question whether it can fully vie with either the 'Lobgesang' or 'Athalie,' or still more 'Elijah.' These splendid compositions have that air of distinction which stamps a great work in every art, and which a great master alone can confer. As instances of this, take the scene of the Watchman and the concluding chorus in the 'Lobgesang'—'Ye nations'; or in 'Elijah' the two double quartets; the arioso, 'Woe unto them,' which might be the wail of a pitying archangel; the choruses, 'Thanks be to God,' 'Be not afraid,' 'He watching over Israel,' 'Behold! God the Lord passed by'; the great piece of declamation for soprano which opens the second part; the unaccompanied trio 'Lift thine eyes,' the tenor air 'Then shall the righteous.' These are not only fine as music, but are animated by that lofty and truly dramatic character which makes one forget the vehicle, and live only in the noble sentiment of the scene as it passes.

'Lauda Sion,' though owing to circumstances less known, has the same great qualities, and is a worthy setting of the truly inspired hymn in which St. Thomas Aquinas was enabled to rise so high above the metaphysical subtleties of his day. This piece of Roman Catholic music—Mendelssohn's only important one—shows what he might have done had he written a Mass, as he once threatened to do.¹ It would have been written 'with a constant recollection of its sacred purpose'; and remembering how solemn a thing religion was to him, and how much he was affected by fine words, we may well regret that he did not accomplish the suggestion.

'Antigone' and 'Œdipus,' owing to the remoteness of the dramas, both in subject and treatment, necessarily address themselves to a limited audience, though to that audience they will always be profoundly interesting, not only for the lofty character of the music, but for the able and thoroughly natural manner in which Mendelssohn carried out a task full of diffi-

culties and of temptations to absurdity, by simply 'creating music for the choruses in the good and scientific style of the present day, to express and animate their meaning.'²

The 'Midsummer Night's Dream' music is a perfect illustration of Shakespeare's romantic play, and will be loved as long as beauty, sentiment, humour and exquisite workmanship are honoured in the world.

How far Mendelssohn would have succeeded with an opera, had he met with a libretto entirely to his mind—which that of 'Loreley' was not—it is difficult to say. Fastidious he certainly was, though hardly more so than Beethoven (see Vol. I. p. 297), and probably for much the same reasons. Times had changed since the lively intrigues and thinly veiled immoralities of Da Ponte were sufficient to animate the pen of the divine Mozart; and the secret of the fastidiousness of Beethoven and Mendelssohn was that they wanted libertists of their own lofty level in genius and morality, a want in which they were many generations too early. Opera will not take its proper place in the world till subjects shall be found of modern times with which every one can sympathise, treated by the poet, before they come into the hands of the composer, in a thoroughly pure, lofty and inspiring manner.

'Camacho' is too juvenile a composition, on too poor a libretto, to enable any inference to be drawn from it as to Mendelssohn's competence for the stage. But, judging from the dramatic power present in his other works, from the stage-instinct displayed in the 'Midsummer Night's Dream' music, and still more from the very successful treatment of the finale to the first act of 'Loreley'—the only part of the book which he is said really to have cared for—we may anticipate that his opera, when he had found the book he liked, would have been a very fine work. At any rate we may be certain that of all its critics he would have been the most severe, and that he would not have suffered it to be put on the stage till he was quite satisfied with his treatment.

We must now close this long and yet imperfect attempt to set Mendelssohn forth as he was. Few instances can be found in history of a man so amply gifted with every good quality of mind and heart; so carefully brought up amongst good influences; endowed with every circumstance that would make him happy; and so thoroughly fulfilling his mission. Never perhaps could any man be found in whose life there were so few things to conceal and to regret.

Is there any drawback to this? or, in other words, does his music suffer at all from what he calls his 'habitual cheerfulness'? It seems as if there was a drawback, and that arising more

¹ L. to Pastor Bauer, Jan. 12, 1835.

² L. to Müller, Mar. 12, 1845.

or less directly from those very points which we have named as his best characteristics—his happy healthy heart, his single mind, his infailing good spirits, his simple trust in God, his unaffected directness of purpose. It is not that he had not genius. The great works enumerated prove that he had it in large measure. No man could have called up the new emotions of the 'Midsummer Night's Dream' overture, the wonderful pictures of the Hebrides, or the pathetic distress of the lovely Melusina, without genius of the highest order. But his genius had not been subjected to those fiery trials which seem necessary to ensure its abiding possession of the depths of the human heart. 'My music,' says Schubert, 'is the product of my genius and my misery; and that which I have written in my greatest distress is that which the world seems to like best.' Now Mendelssohn was never more than temporarily unhappy. He did not know distress as he knew happiness. Perhaps there was even something in the constitution of his mind which forbade his harbouring it, or being permanently affected by it. He was so practical that as a matter of duty he

would have thrown it off. In this as in most other things he was always under control. At any rate he was never tried by poverty, or disappointment, or ill-health, or a morbid temper, or neglect, or the perfidy of friends, or any of the other great ills which crowded so thickly around Beethoven, Schubert or Schumann. Who can wish that he had been? that that bright, pure, aspiring spirit should have been dulled by distress or torn with agony? It might have lent a deeper undertone to his songs, or have enabled his adagios to draw tears where now they only give a saddened pleasure. But let us take the man as we have him. Surely there is enough of conflict and violence in life and in art. When we want to be made unhappy we can turn to others. It is well in these agitated modern days to be able to point to one perfectly balanced nature, in whose life, whose letters and whose music alike all is at once manly and refined, clever and pure, brilliant and solid. For the enjoyment of such shining heights of goodness we may well forgo for once the depths of misery and sorrow. G.

LIST OF MENDELSSOHN'S PUBLISHED WORKS taken from the Thematic Catalogue published by Messrs. Breitkopf & Härtel in 1882, with additions and corrections from other sources. The dates of composition are also given, when discoverable, together with the names of the persons to whom the works were dedicated, and the *original* English and German publishers, so far as they can be traced.

Op.	Title.	Date of Composition.	Dedicated to	English Publisher.	German Publisher.

WORKS WITHOUT OPUS NUMBERS

Étude in F minor, pf. For the 'Méthode des méthodes.'	Leipzig, Mar. 13, 1836.	Schlesinger.
Scherzo in E minor, pf.	Do.
Scherzo and Capriccio in F sharp minor, pf. For the Pianist's Album.	Cramer.	Simrock.
2 Romances of Lord Byron's, voice and pf. 'There be none of beauty's daughters,' and 'Sun of the sleepless.'	No. 2, Düsseldorf, Dec. 31, 1834.	Breitkopf & Härtel.
'Verleih' uns Frieden'; 'Grant us Thy peace,' Prayer, chorus and orch.	Rome, Feb. 10, 1831.	President Verkenius.	Novello.	Do.
Andante cantabile and Presto agitato in B, pf. For the Album of 1839.	Berlin, June 22, 1838.	..	Mori & Lavenu.	Do.
The Garland, voice and pf., poem by Thomas Moore.	London, May 24, 1829.	..	Ewer.	Spehr, Brunswick.
Ersatz für Unbestand, part song, male voices, poem by Ruckert.	Nov. 22, 1839.	Kistner.
For Tauchnitz's <i>Musen-almanach</i> . Festgesang, male chorus and orch. Composed for the Gutenberg Festival at Leipzig, held in 1840, in celebration of the invention of printing. (No. 2 is associated in England with the words of Charles Wesley's Christmas hymn, 'Hark! the herald angels sing, to which it was adapted by Dr. W. H. Cummings.)	Ewer.	Breitkopf & Härtel.
Gondellied in A, pf. 'Auf einer Gondel'	Leipzig, Feb. 5, 1837.	..	Ewer.	F. W. Arnold (Eibelfeld).
3 Volklieder, 2 voices and pf.	Do.	Schlesinger.
'Lord, have mercy upon us' (Kyrle). 'For evening service.' Voices only.	Berlin, Mar. 24, 1833.	..	Do.	Schubert.
'For Mr. Attwood.' In the Album für Gesang.' First published in England in Ewer's <i>Orpheus</i> , Book XI.
Prelude and fugue in E minor, pf. For the Album Notre temps.	Prelude, Leipzig, July 13, 1841; Fugue, June 16, 1827.	Schott.
3 Sacred choruses, forming part of op. 96.	Leipzig, Jan. 5, 1843.	Simrock.
'Hear my prayer,' hymn, soprano solo, chorus and organ; afterwards orchestrated, the full score is only published in England, not in Germany.	Jan. 25, 1844.	Wilhelm Taubert.	Ewer. Orchestral Score, Novello.	E. Bote & G. Bock.
Warnung vor dem Rhein, poem by C. Simrock, voice and pf.	Simrock.
2 Songs, voice and pf.	No. 1, Berlin, Aug. 17, 1835.	F. W. Arnold.
2 Songs, voice and pf.	No. 1, Apr. 20, 1841.	C. A. Klemm (Leipzig).
2 Clavierstücke, in B flat and G minor, pf.	Mori & Lavenu.	B. Senf (Leipzig).
Bernmann's Schiedelied, poem by Hoffmann v. Fallersleben, voice and pf.	Printed in 'Apollo's Gift, or The Musical Souvenir,' for 1831, p. 36 (Chappell).	Schlesinger.
Nachtgesang, 4 male voices.	Berlin, Jan. 16, 1842.	C. F. Kahnt (Leipzig).
Die Stiftungsfeier, 4 male voices.	Do.
'Für die Stiftungsfeier der Gesellschaft der Freunde in Berlin, Jan. 1842.'
Des Mädchens Klage, Romance, voice and pf.	Schubert & Co. (Leipzig).
Kyrle Eleison, mixed voices, double chorus (Deutsche Liturgie).	Oct. 28, 1846.	E. Bote & G. Bock.
Elire sei Gott in der Höhe; Hellig: Psalm 100. Three sacred pieces, Nos. 1 and 2, double choir; No. 3, 4 voices, from 'Música sacra,' Band 7, Nos. 17 and 18, Band 8, No. 10.	Do.
Te Deum in A (English Church Service).	Novello.	(Not published in Germany.)
The Evening Bell, for harp and pf. The 'bell' was that of Attwood's gate. See <i>Musical Haunts in London</i> , p. 5.	Norwood, Nov. 1829.	..	Chappell.	(Not published in Germany.)
Fugue in F minor, organ.	Frankfort, July 18, 1839.	..	Stanley Lucas & Co. (1885).	(Not published in Germany.)
Two pieces, organ.	Novello (1898).	(Not published in Germany.)
(1) Andante with variations in D. (2) Allegro in B flat.	July 23, 1844.
Duo concertant, variations upon the March in Weber's <i>Freischütz</i> , pf., 4 hands, jointly composed by Mendelssohn and Ignaz Moscheles.	Dec. 31, 1844.	Mme. la Baronne O. de Goethe.	Cramer.	Kistner.

NOT INCLUDED IN THE THEMATIC CATALOGUE

<i>Title.</i>	<i>Date of Composition.</i>	<i>Dedicated to</i>	<i>English Publisher.</i>	<i>German Publisher.</i>
Hymn-tune, Psalm xxi., 'Defend me, Lord, from shame.' Composed for the 'National Psalmist' (1839), edited by Charles Danvers Hackett.	Feb. 27, 1839.	--	--	--
Præludium in C minor for the organ. Composed for Mr. Henry E. Dibdin Additional (final) chorus to Psalm 95 (op. 46).	Leipzig, July 9, 1841. Leipzig, Apr. 11, 1839.	--	Paterson & Co. (Edinburgh), Novello.	(Not published in Germany.) (Not published in Germany.)
String quartet in E flat. Autograph in British Museum (Add. MS. 30,900).	Mar. 5-30, 1823.	--	--	Erlar (Berlin).

COMPOSITIONS EDITED, ETC., BY MENDELSSOHN

Handel's 'Dettingen Te Deum,' with additional accompaniments. Score and parts. (Kistner.)

Handel's 'Acis and Galatea,' with additional accompaniments. (Novello.)

Handel's 'Israel in Egypt,' edited for the London Handel Society; Mendelssohn wrote a special organ part, and the edition was published by Cramer & Co. in June 1846. For the interesting

correspondence with G. A. Macfarren on the subject of this edition, see *Goethe and Mendelssohn*, 2nd edition, 1874, p. 169 et seq.

J. S. Bach's 'Chaconne for Violin,' with pf. accompt. (Ewer.)

J. S. Bach's 'Organ compositions on Coralia (Psalm tunes),' Organ Preludes, etc., 2 books. (Coventry & Hollier, 1845.)

J. S. Bach's 'Eleven variations on the Corale Hey geyruss! Jeu gott!' (All hail, good Jesus), edited from the original manuscript. (Coventry & Hollier.)

The collection of autograph MSS. of Mendelssohn contained in the green volumes, already mentioned, now preserved in the State Library, Berlin, comprise the following unpublished compositions:

- 11 Symphonies for strings.
- 1 Symphony for full orchestra.
- Many Fugues for strings.
- Concertos for pf.; vln.; pf. and vln. with quartet accompaniment.
- 2 Concertos for 2 pianos and orch.
- Trio for pf., vln. and viola.
- 2 Sonatas for pf. and vln. (one dated 1838).
- 1 Sonata for pf. and viola.
- 1 do. for pf. and clarinet.
- 2 Sonatas for pf. solo.
- Many Studies, Fantasias (one for four hands), Fugues, etc., for pf. solo.
- Many Fugues for organ.
- 5 Operas and music to Calderon's 'Steadfast Prince.'
- 1 secular and 3 sacred Cantatas.
- Many Songs and vocal pieces.
- Organ part to Handel's 'Solomon.'

A fragment of a symphony in C found among the loose papers of Mendelssohn was printed in former editions of this Dictionary by permission of the composer's daughter, the late Mrs. C. Victor Benecke.

BIBLIOGRAPHY

I. LETTERS

(1) Two volumes have been published by authority. The first, edited by his brother Paul, is entitled *Reisebriefe . . . aus den Jahren 1839 bis 1842* (Leipzig, 1861); the second, edited by his brother and his eldest son, *Briefe aus den Jahren 1833 bis 1847* (Leipzig, 1893), with an Appendix purporting to be a list of all Mendelssohn's compositions, compiled by Julius Rietz, which is, however, both vague and incomplete.

These were translated (not adequately) by Lady Wallace and published with the titles, *Letters from Italy and Switzerland*, etc., and *Letters from 1833 to 1847* (Longmans, 1892 and 1893). At a later date some important letters were added to the German edition of vol. II, amongst others one containing Mendelssohn's translations of Dante, Boccaccio, etc., and indexes were appended; but no change has been made in the contents of the English translation. There is reason to believe that the letters of vol. I. were in many ways altered by the editor.

(2) Eight letters published for the benefit of the Deutschen Invaliden-Stiftung—*Acht Briefe und ein Facsimile* (Leipzig, 1871). English translation in *Macmillan's Magazine*, June 1871.

The name of the lady to whom they were written is suppressed, but it is understood that she was Mrs. Voigt, a musical amateur of Leipzig. The last of the eight contains a facsimile of a sketch by Mendelssohn.

(3) *Musiker-Briefe*, by C. F. Ludwig Nohl (Leipzig, 1897), contains thirty letters dating from 1826 to Aug. 26, 1847. They are included by Lady Wallace in her translation of the entire work entitled *Letters of Distinguished Musicians* (London: Longmans, 1897).

(4) Other letters are contained in Devrient's *Recollections: Hiller's Mendelssohn: Goethe and Mendelssohn: Polko's Reminiscences: Hensel's Die Familie Mendelssohn: Moscheles's Life: Chorley's Life: Eckardt's Ferdinand David: F. Moscheles's Briefe; and F. G. Edwards's History of 'Eljak', etc.*

II. BIOGRAPHICAL WORKS

(1) Lampadius (Wilhelm Adolf). *Felix Mendelssohn-Bartholdy. Ein Denkmal für seine Freunde* (Leipzig, 1848), translated into English by William Leonard Gage, with supplementary sketches

by Benedict Chorley, Ludwig Reilstab, Bayard Taylor, R. S. Willis and J. S. Dwight (New York, 1868; London, 1876).

(2) Benedict (Julius). *A Sketch of the Life and Works of the late Felix Mendelssohn-Bartholdy* (London: John Murray, 1850; 2nd ed., with additions, 1853).

(3) Devrient (Edmund). *Meine Erinnerungen an F. M.-B.* . . . (Leipzig, 1869). English translation by Lady Macfarren (London: Bentley, 1869).

Contains thirty-two letters and portions of letters.

(4) Mendelssohn-Bartholdy (Carl). *Goethe and Felix Mendelssohn-Bartholdy* (Leipzig, 1871). By the composer's eldest son; an account of the three visits paid to Goethe, from journals, letters, etc., with a poor engraving from Rega's portrait. English translation by Miss M. E. von Glehn—*Goethe and Mendelssohn*, 'with additions and with letters of later date' (London: Macmillan, 1872); 2nd ed., 'with additional letters,' thirty-seven in all (1874).

(5) Hiller (Ferdinand). *Mendelssohn. Letters and Recollections*, ed. and pub. in *Macmillan's Magazine* (from Jan. to May 1874), the English translation by Miss M. E. von Glehn. Also in a volume (London: Macmillan, 1874); and in German (Cologne, 1874). Contains twenty-six letters not before printed.

(6) Polko (Ries). *Erinnerungen an F. M.-B.* (Leipzig, 1868).

Contains twelve letters. English translation by Lady Wallace—*Reminiscences of Felix Mendelssohn-Bartholdy*, ed. (London: Longmans, 1891), with Appendix of thirty-three additional letters and fragments of letters addressed to English correspondents.

(7) Hensel (Sebastian). *Die Familie Mendelssohn (1792-1847)* . . . with eight portraits (3 vols., Berlin, 1879). Engl. translation, *The Mendelssohn Family* (from the second revised German edition, 2 vols., London: Sampson Low & Co., 1880), by Carl Klingemann and an American collaborator, with a notice by Sir George Grove, London, 1881.

By the son of Fanny Hensel—the Sebastian of the Letters. Compiled from journals and family papers, and containing seventy-three letters or portions of letters hitherto unpublished.

(8) Hogarth (George). *The Philharmonic Society of London* (London, 1882). Contains notices of Mendelssohn's connexion with the Philharmonic, with three letters in the body of the work and seven others in the appendix.

(9) Moscheles (Charlotte). *Aus Moscheles Leben . . . von seiner Frau* (2 vols., Leipzig, 1872 and 1873). English translation by A. D. Coleridge (2 vols., London: Hurst & Blackett, 1873).

Contains many valuable notices, and some letters.

(10) Schubring (Julius). *Erinnerungen an F. M.-B.* In the magazine *Deutsche* (Leipzig) for 1866, No. 26. English translation in *Musical World*, May 12 and 19, 1866.

One of the most detailed, valuable and interesting of all the notices.

(11) Horsley (Charles Edward). *Reminiscences of Mendelssohn*. First published in *Dwight's Journal of Music* (Boston, U.S.A.) and reprinted in *The Choir* (London) for Jan. 11, 25; Feb. 6, 15, 1873.

Full of information, now and then a little exaggerated.

(12) Dorn (Heinrich L. G.). *Recollections of F. M. and his Friends*. An article in *Temple Bar*, Feb. 1873; probably translated from a German original.

(13) Chorley (Henry Fothergill). *1. Modern German Music* (2 vols., London: Smith, Elder & Co., 1854).

(14) Chorley (Henry Fothergill). Brief notice prefixed to the third edition (1864) of *Mendelssohn's Letters from Italy and Switzerland*, translated by Lady Wallace.

(15) Hewlett (Henry G.). *Henry Fothergill Chorley, Autobiography, Memoir and Letters* (3 vols., London: Bentley, 1873). Contains some information, and six letters.

(16) Marx (Adolph Bernhard). *Erinnerungen aus meinem Leben* (2 vols., Berlin, 1865).

Contains many recollections of the Mendelssohn house from 1824-1892, and personal anecdotes of Felix, with whom Marx was at one time intimate.

(17) Reilstab (Heinrich F. L.). *Aus meinem Leben* (2 vols., Berlin, 1861).

Contains (vol. II. chap. 11) an account of Mendelssohn's playing at Goethe's house in 1821.

(18) Lobe (Johann Christian) has reported some conversations with Mendelssohn in his *Fliegende Blätter für Musik* (Leipzig, 1863). He has also described the evening at Goethe's mentioned just above in the *Gesellschaft* for 1867, No. 1.

(19) Eckardt (Julius). *Ferdinand David und die Familie Mendelssohn-Bartholdy* (Leipzig 1884).

Contains thirty letters of Mendelssohn's.

(20) Moscheles (Felix). *Briefe von Felix Mendelssohn an Ignaz und Charlotte Moscheles* (Leipzig, 1888). English translation, *Letters of Felix Mendelssohn* (London: Trübner & Co., 1888).

(21) Edwards (F. G.). *The History of Mendelssohn's 'Elijah'*: with an introduction by Sir George Grove (London: Novello, 1898).

Contains the Mücke portrait of Mendelssohn, and portraits of William Bartholomew, Standig and others; also several unpublished letters, including one in facsimile.

(22) Stratton (Stephen S.). *Mendelssohn*; in Dent's 'The Master Musicians' series (London: J. M. Dent & Co., 1901), with illustrations and portraits.

(23) Edwards (F. G.). *Musical Haunts in London* (London: Curwen, 1896). Contains a facsimile of a sketch of St. Paul's Cathedral and its surroundings, by Mendelssohn, and photographs of two houses at which he stayed in London, pp. 5 and 42.

(24) Wolff (Ernst). *Felix Mendelssohn-Bartholdy* (Berlin, 'Harmonie, Verlagsgesellschaft für Literatur und Kunst,' 1906).

(25) Dahms (Walter). *Mendelssohn* (Berlin and Leipzig, 1919).

(26) Kahl (Willi). *Zu Mendelssohns Liedern ohne Worte* (Z.M.W. May 1921).

(27) Schünemann (Georg). *Mendelssohn's Jugendopern* (Z.M.W. June-July 1923).

MENDELSSOHN CHOIR, TORONTO, see VOGT, Augustus Stephen.

MENDELSSOHN GLEE CLUB, see NEW YORK.

MENDELSSOHN SCHOLARSHIP. This is the most valuable musical prize in the United Kingdom. It originated in a movement among the friends of Mendelssohn at Leipzig, who, shortly after his death, resolved to found scholarships in his memory, to be competed for and held in that Conservatorium in the foundation of which, not long before, he had greatly assisted. They appealed for help in this undertaking to English admirers of the departed composer, and were met with ready sympathy and co-operation. A committee was formed in London, with Sir G. Smart as chairman, Carl Klingemann, Mendelssohn's intimate friend, as secretary, and E. Buxton (Ewer & Co.), treasurer.

The first effort towards raising money was made in the shape of a performance of 'Elijah' on a large scale, to which Mlle. Jonny Lind gave her willing and inestimable services. This took place Dec. 15, 1848, under the direction of Julius Benedict, at Exeter Hall, the Sacred Harmonic Society and John Hullah's Upper Schools contributing to the efficiency of the choral force. A large profit was derived from the performance; and this, with a few donations, was invested in the purchase of £1050 Bank 3 per cent annuities—the nucleus of the present Scholarship Fund.

The original plan of amalgamating the London and Leipzig projects fell through, and the money was allowed to accumulate till 1856, when the first scholar was elected—Arthur S. Sullivan.

J. M.

The funds of the trust were increased in later years by subscriptions and donations, now enabling a grant of £100 a year to be made to the successful candidate. At first the candidates, natives of Great Britain and Ireland, of either sex, were required to be between the ages of 14 and 20. In 1871 the limit was between 14 and 24; in 1885, 16 and 21; in 1890, 16 and 22; and in 1923 below the age of 30.

The original qualification was a decided talent for music in composition, or instrumental

or vocal performance. In 1890 it was changed to composition only. The scholars are elected for one year, subject to renewal, but no scholarship is held for more than four years. The education is in this country or abroad.

The original Committee consisted of the following: Sir George Smart, C. Klingemann (secretary), E. Buxton (treasurer), Sir Julius Benedict, Sir W. Sterndale Bennett, J. W. Davison, John Hullah, C. E. Horsley and H. F. Chorley.

At the present time (1926) the committee includes among its members, Sir Hugh Allen, Sir A. C. Mackenzie, Sir Landon Ronald, Sir H. Walford Davies, J. B. M'Ewen, P. V. M. Benecke (treasurer) and J. F. R. Stainer (secretary).

The scholars have been:

A. S. Sullivan . . .	1856-60
C. S. Heap . . .	1865-67
W. Shakespeare . . .	1871-75
F. Corder . . .	1875-78
Maude V. White . . .	1879-81
E. D'Albert . . .	1881-82
Marie Wurm . . .	1884-87
S. P. Waddington . . .	1891-93
H. C. Wilson . . .	1895-98
P. H. Miles . . .	1899-1902
G. Dyson . . .	1904-07
E. W. Gritton . . .	1909-12
J. A. Taffs . . .	1912-15
P. Lévi . . .	1916-19
A. L. Sandford . . .	1921-23
P. P. Turnbull . . .	1923-26.

In addition short scholarships at the R.A.M. were granted to Mary Crawford, 1872, E. Fanning, 1873, and G. J. Bennett, 1884.

MENDES, MANUEL (b. Evora, early 16th cent.; d. there, Dec. 16, 1605), Portuguese church musician, master of Duarte Lobo, Filipe de Magalhães and other distinguished composers. He was for a time choirmaster at Portalegre, and then occupied that post in his native town of Evora. His pupil, Duarte Lobo, endeavoured to get some of his master's work printed; in 1610 he wrote to the manager of Plantin's printing-house at Antwerp on the subject, but without success. A Mass (4 v.) by him is to be found in a 17th-century MS. choir-book at Evora (Bibl. Publ.); the catalogue of the library of John IV. mentions four motets and a theoretical treatise.

J. B. T.

MENESSON, ÉMILE (b. Mirecourt), a violin-maker, trained at Mirecourt, but working at Rheims from about 1870, whose instruments were considered worthy of a special 'rapport' in the *Travaux de l'Académie Nationale de Reims* (1875-76, No. 1, p. 44), by L. S. Fanart, which was afterwards printed separately as a pamphlet. The peculiarity which he introduced as an improvement was the covering of the outer periphery of his violins with a single coat of tender varnish, the central portions only, of the back and table, being covered with hard varnish. By this means Menesson claimed that the elasticity of the sound-box was increased.

E. H.-A.

MENGELBERG, RUDOLF (b. Crefeld - on Rhine, Feb. 1, 1892), composer and musical writer. He studied (first in Jura) in Geneva, Munich, Leipzig and Bonn; he graduated under Hugo Riemann in Leipzig with an essay on G. A. Ristori.

Since 1915 he has lived in Amsterdam, being engaged in the artistic direction of the Concertgebouw. He organised the Mahler Festival in Amsterdam, 1920. His chief compositions are songs, orchestral and chamber works.

Op. 1, 2. Songs Op. 6. 'Lieder des Abschieds.' (Universal Edition.)
Op. 8. 'Idyllen.' (Leuckart, Leipzig.)
Op. 7. Violin Sonata, (Fischer u. Jagenberg, Cologne.)
Op. 9. Symphonische Elegie for orchestra. (Kähter, Hamburg and Leipzig.)

Composed 1922, performed in Amsterdam, New York, Hamburg, etc.
Numerous Songs, including 'Verlaine-Lieder' and songs with orchestra (in MS.).
'Requiem' for baritone and orchestra.
'Trauermusik' for violin and orchestra.

LITERARY WORKS

Gustav Mahler, a little biography (Breitkopf und Härtel, 1923.)
Mahler-Festbuch. (Amsterdam, 1920.)
Editor of: Das Mahlerfest in Amsterdam. (May 1920.) *Vorträge und Berichte.* (Universal Edition.)

MENGELBERG, WILLEM (b. Utrecht, Mar. 28, 1871), conductor. He comes of a Rhenish family and is the son of Friedrich Wilhelm Mengelberg, church architect. He studied at the Cologne Conservatoire and became an excellent pianist under Isidor Seiss, studying composition and conducting, at the same time, with Franz Wüllner. At the age of 21 he was appointed music director in Lucerne, and in 1895 he was invited to Amsterdam, as conductor of the 'Concertgebouw.' Since 1898 Mengelberg has also conducted the choir of the Maatschappij tot Bevordering der Toonkunst. From 1907-20 he was also director of the Museumgesellschaft, and (from 1908) of the Caeciliënverein in Frankfurt-on-Main. From 1911-14 he conducted regularly concerts of the London Symphony Orchestra and of the Royal Philharmonic Society, and also visited Italy, Russia and other countries as a guest conductor. Since 1921 Mengelberg has conducted each season in New York: first the National Symphony Orchestra, which, on his initiative, in 1922 was united with the Philharmonic Orchestra, and which is now one of the finest orchestras in the United States.

Mengelberg also makes many tours in other countries with his famous and magnificent Amsterdam orchestra; in 1898, at Grieg's invitation, to the first Northern Music Festival in Bergen (Norway); in 1903 to the Strauss Festival in London; in 1912 to the Church Music Festival at Frankfurt-on-Main; in 1914 and 1924, in conjunction with the Toonkunst Choir, to Paris (Bach's Matthew Passion and Beethoven's Ninth Symphony); in 1922 to Berlin and Hamburg for a three-days' 'Netherlands-Hamburg' music festival.

Mengelberg's importance as a conductor lies especially in the refinement and individuality of his orchestral and choral technique, and his

power of revealing the utmost expression in the music. His interest in contemporary music is worthy of note, especially for that of Gustav Mahler. He celebrated his 25 years' anniversary as conductor of the Concertgebouw, 1920, with a Mahler Festival; the first big international festival to take place after the war. This was followed in 1922 by a French Music Festival, and in 1924 by a Strauss Festival under his direction.

Mengelberg has composed, in his younger years, a Mass for mixed choir, solo voices and orchestra; also songs, 'Rembrandt Variations' (in connexion with the Rembrandt celebrations in 1906), and a 'Praeludium' upon the Dutch national hymn, for full orchestra. B. M^o.

MENGOZZI, BERNARDO (b. Florence, 1758; d. Mar. 1800), distinguished both as a singer and a composer. Studied music at Florence and at Venice from Pasquale Potenza, cantor of St. Mark's.

In Lent of 1785, Lord Mount Edgecumbe found him singing in oratorio at Naples, with Signora Benini, whom he soon afterwards married. After singing together at several Italian theatres, the two came to London in 1786, but our climate was very ill-suited to Mengozzi, whose voice, a good tenor, but wanting in power, suffered much and permanently from its rigour. He played, however, the principal part in 'Il Tutor Burlato' of Paisiello, and showed himself 'a good musician, with a good style of singing.'¹ In March, Handel's 'Giulio Cesare' was revived, with additions from others of his works; and in this pasticcio (1787) Mengozzi took part.

From London Mengozzi went to Paris (about 1787), where he was heard to advantage in the concerts given by Marie Antoinette, and among the Italian company of the Théâtre de Monsieur, with Mandini and Viganoni. He remained at Paris after the Revolution, and supported himself by giving lessons and writing operettas for the Feydeau and Montansier Theatres. When the Conservatoire was established, he was named 'Professeur de Chant.' Mengozzi had, during many years, compiled the materials for a *Méthode de chant* for the Conservatoire; but he died before he had completed it. The work was edited by Langlé. Fétis gives a list of his 14 operas. J. M.

MENO MOSSO, lit. 'with less motion'; hence, rather slower. A direction, which, like *Più lento*, generally occurs in the middle of a movement, the latter term properly being used where the whole movement is already a slow one, and the former in a quick movement. M.

MENOU, TUTTOVALE (TUTUALLE), 16th-century musician. Fétis says he was a Frenchman who lived in Italy, mostly at Correggio; he was the teacher of Claudio Merulo and composed 1 book of madrigali d'amore a 4 v.

¹ Burney.

(Ferrara, 1548) which appeared in several editions, 4 canzone in P. Bozzi's 'Giardinetto,' 1588 (Q.-L.).

MENSURAL MUSIC, see MUSICA MENSURATA; NOTATION.

MENTER, (1) JOSEPH (*b.* Deutenkofen, Bavaria, Jan. 19, 1808; *d.* Munich, Apr. 18, 1856), celebrated violinist. His first instrument was the violin, but before long he transferred his attention to the violoncello, which he studied under P. Moralt at Munich. In 1829 he took an engagement in the orchestra of the Prince of Hohenzollern-Hockingen, but in 1833 became a member of the Royal Opera band at Munich. With the exception of various artistic tours in Germany, Austria, Holland, Belgium and England, he remained at Munich till his death.

T. P. P.

His daughter, (2) SOPHIE (*b.* Munich, July 29, 1848; *d.* Feb. 23, 1918) was a distinguished pianoforte-player, and after a childhood of great precocity entered the Munich Conservatorium under Professor Leonhard. At 13 she left that establishment for private tuition under Niest; in her 15th year took her first artistic tour; in 1867 appeared at the Gewandhaus, Leipzig, and studied with Tausig; in 1869 became a pupil of Liszt, and in 1872 married the violoncellist, David POPPER (*q.v.*), from whom she was divorced in 1886. In 1883-87 she was professor at St. Petersburg. She first appeared in England in 1881.

G.

MENUEETTO, MENUETT, see MINUET.

MEO, ASCANTO, in 1608 maestro di cappella of S. Giacomo delli Spagnoli, Naples, composed 5 books of madrigals, only the 3rd and 5th books of which are still known to exist (Q.-L.).

MERBECKE (MERBECK, MARBECK, MARBECKE), JOHN (*d.* Windsor, c. 1585), a church musician and composer of more than ordinary importance, since he produced *The Booke of Common Praier noted* (1550), being the first setting to music of the English Liturgy as authorised by the Act of Uniformity of 1549.

Merbecke is first heard of as a lay-clerk and organist (1541) of St. George's Chapel, Windsor. In the dedication to King Edward VI. of his *Concordance* (published 1550), he describes himself as

'altogether brought up in your highnes Colledge at Wyndesore, in the study of Musike and playng on Organs, wherin I consumed vainly the greatest part of my life.'

In 1543 Merbecke was arrested, his papers, including notes on the Bible and his half-completed *Concordance*, were seized, and he was tried for heresy and condemned ¹ July 26, 1544. He was, however, saved from the death penalty by the personal interposition of Gardiner, Bishop of Winchester, and Sir Humphrey

Foster, one of the Commissioners. He was not only pardoned but left in the possession of his office at Windsor. In 1549 he supplicated for the degree of Mus.B.² at Oxford. It was in that year that

'The Booke of the Common Prayer and Administration of the Sacramentes, and other Rites and Ceremonies of the Church, after the use of the Church of England,'

known as the First Prayer Book of Edward VI., was brought into general use as from Whitsunday (June 9); it may safely be assumed, therefore, that Merbecke's few surviving Latin compositions belong to an earlier date. The 'Injunctions' (4 Ed. VI., Oct. 26, 1550) refer to Merbecke and one George Thexton as receiving fees for playing on the organ, and these emoluments are secured to them

'during their lyves, if they continue in that Colledge, in as large and ample a manner as if organ playing had still continued in the Church.'

The implied intention to abolish organ-playing never took effect.

Merbecke's unique contribution to English liturgical music, *The Booke of Common Praier Noted*, was published in this year, but the First Prayer Book survived in use only till the second Act of Uniformity substituted its successor, the Second Prayer Book, on All Saints Day, Nov. 1, 1552. Had Merbecke followed this up with a noted version of the second book the course of English Church musical history might have been materially altered. (See CHANT and CHANTING.) The second Prayer Book introduced considerable modifications in the liturgical text which necessarily threw much of Merbecke's setting out of use. Moreover, it compromised on the musical question as on much else. Its rubrics provided for the use of singing,⁴ but did not command or expect it as the first had done. Opposition to the sung Office was strengthening; Merbecke may have sympathised with the opposition; the dedication of his *Concordance*, quoted from above, suggests that he had come to regard church music as a 'vanity.' The immense industry of that work shows him absorbed in Biblical studies. Nevertheless he apparently remained in his office of organist at Windsor, was undisturbed by the Marian reaction, and in the reign of Queen Elizabeth published the following books and pamphlets, which leave no doubt of his personal attitude in the theological controversy as one of uncompromising Protestantism:

- The Lyves of Holy Sainctes, Prophets, Patriarches, etc.* 1574.
The Holie History of King David . . . drawne into English metre for the Youth to reade. 1579.
*A Ripping up of the Pope's Pardels.*⁵ 1581.
A Booke of Notes and Commonplaces. 1581.
Examples drawn out of Holy Scriptures. 1582.
A Dialogue between Iohn and Age. 1584.

¹ Wood, *Faust Ozon*

² See West, *Cath. Org.*

³ Notably in the Gloria in Excelsis of the Communion Service, now for the first time transferred to its position near the end of the Office.

⁴ Entered in the register of Stationer's Company anonymously. Terry says he has been unable to discover a copy.

⁵ Fox, *Acts and Monuments* (1562), relates the whole story and more than the story, since he declares Merbecke to have suffered 'martyrdom.' This Fox had to correct in the edition of 1576.

With Merbecke as Biblical student and anti-papist controversialist we are not here concerned, beyond noting that his active participation in the questions of the day so far increased as to banish artistic creativeness. We are therefore left to consider two aspects of Merbecke as artist, (1) the composer of Latin church music, (2) the pioneer in English church music. Of these the latter is of by far the greater historical importance.

LATIN COMPOSITIONS.—The known compositions of this type include the following:

Mass. 'Per arma justicie' (5 v.). (Bod. Mus. Sch.)
Motet. 'Domine Jhesu Christe' (5 v.). (Bod. Mus. Sch.)
Motet. 'Ave Dei Patris Filia.' (PH. Tenor missing.)

Sir R. Terry, who scored the Mass for use at Westminster Cathedral, has given a full analysis of it.¹ The melody, much used as a *canto fermo* by English composers of the period, is that of an Antiphon, and, comparing Merbecke's work with that of Taverner, Terry has drawn attention to its high qualities and also proved its remarkable beauties in performance. With the Latin works must also be mentioned the exquisite English carol 'A Virgine and Mother,'² of which, however, no original has been found. Nevertheless the small bulk of Merbecke's surviving polyphonic compositions leaves him in the position of a minor composer of the school in which Taverner and Tye are the acknowledged masters.

THE BOOKE OF COMMON PRAIER NOTED.—The pioneer character of Merbecke's service to the first liturgy in the English language increases his historical importance immeasurably. His object was to provide a 'playne tune'³ for priest and clerks (in unison) for the daily Offices of the church⁴ which should be in keeping with the traditions of plain-song and also be conformable to the accentual qualities of the English language. His method shows extraordinary insight into the necessities of the case and subtle artistry in dealing with it. The *Booke* contains full directions for the singing in this manner (if necessary without organ accompaniment) of Mattins, Evensong, 'Quicunque vult,' Communion, the Burial of the Dead and 'Communion when there is a Burial.'

He used traditional melodies freely, more particularly the psalm tones, simplifying where necessary in conformity with Cranmer's view that there should be 'for every syllable a note,'⁵ and writing original music on similar lines. Thus in the Communion, Gloria and Creed are

original save for the traditional intonation of the former, while Kyrie, Sanctus, Benedictus and Agnus Dei are traceable to several Sarum sources.⁶

But the essential value of Merbecke's treatment, whether of traditional music or of his own, lies in his study of the rhythmic qualities of the English language as opposed to Latin. The short preface to the *Booke* sufficiently defines this and is as follows:

IN THIS BOOKE

is conteyned so much of the Order of Common prayer as is to be song in Churches; wherein are used only these iiii sortes of Notes,

The first note is a strene note, and is a breve. The second a square note, and a semy breve. The iiii a pycke, and is a mynymme. And when there is a pycke by the square note, that pycke is half as much as the note that goeth before it. The iiii is a close, and is only vsed at ye end of a verse.

It must be remembered that in 16th-century Notation (*q.r.*) the relative values of breves, semibreves and minims were not fixed in the proportion of 1:2 as they are to-day. Time signatures required for the purposes of polyphony and not employed here determined the proportion as 1:2 or 1:3. Study of the music shows that Merbecke regards the square note (or semibreve) as the normal note and that he uses it continuously for recitations and wherever he considers it unnecessary to give any strict rhythmic value to the phrase beyond that which the words themselves secure. His setting of Venite to Tone VIII. first ending without intonation shows the method.

O come, let us sing un - to the Lorde, let

our sal - va - cion.

The 'strene' note or breve is merely a prolonged note for the purpose of stressing an important word. Again, where he feels the necessity to express groups of syllables by rhythmic groups of notes he avails himself of the 'pycke,'⁸ or minim either with or without the 'pycke' (or dot) to lengthen the square note. These devices are amply illustrated in the opening to the Creed.⁹

¹ *Proceedings of the Musical Association*, 45th session, 1918-19.

² Quoted by Hawkins, *Hist.* p. 451 (Novello ed.). Its general acceptance as Merbecke's work rests solely on Hawkins's statement.

³ A rubric of Mattins in both Prayer Books of Edward VI., but omitted from Elizabeth's book, reads: 'And to thende the people may the better heare in such places where they do syng, there shall the leasons be songe in a playne tune and lykwise the Epistle and Gospell.'

⁴ Terry points out that in doing so he followed 'a practice common enough on the Continent, as exhibited in the well-known "Missa Regia" and the Masses of Dumont and others' (*Proc. Mus. Ass.*, 1918-19).

⁵ Cranmer's letter to Henry VIII., quoted by Burney, *Hist.* vol. II. p. 377.

⁶ The sources have been analysed by Terry, *cit. ob.*

⁷ Burney defines this as 'strained or stretched.'

⁸ Palmer and Barrett, *Dict. of Musical Terms*, and Terry, *Proc. Mus. Ass.*, misquote this as 'pycke,' thus confusing the pycke (pike-head, referring to the shape) with the pycke or dot.

⁹ The quotations are from the copy of the original edition in the British Museum. The type of the first note of the Creed has slipped a little. In copies from other impressions it seems to have slipped more. Hence some modern reprints give C as the first note of the intonation. The B.M. copy clearly gives two notes on the lowest line, but printed a little unevenly.

Here the words 'One God' receive the accents of prolonged notes, the 'close' naturally marking the end of the priest's intonation; the values of 'Father' are rendered precisely by the dotted note and minim, and the minims to 'visible and invisible' deal successfully with the troublesome problem of the short English finals. To singers accustomed to sing 'visibilium omnium et invisibilium' this would demand careful safeguarding. This examination then shows that Merbecke's 'playne' tune is neither 'plain-song' in the technical sense (notes of undefined value) nor mensural music (notes of strict value) but a typically English compromise between the two, designed to guide the singer in his new problem of singing an accentual language in place of a quantitative one.

These principles have been either misunderstood or frequently ignored by modern editors with fatal results both to the character of the melody and to the reading of the liturgical text.¹ The errors have been in two directions. One is represented by Stainer's² harmonised version where the whole is forced into a time of four beats in a bar; the other³ by attempts to smooth out the rhythmic figures into the even notes of plain-song. Merbecke in the preface to his *Concordance* disclaimed learning, but his treatment of the English language here shows him to have been an instinctive master of its problems. He created an art of free rhythm to deal with them, an art in which, unfortunately, he had no followers, since it was crushed out alike by the enemies and the friends of church music. The enemies refused altogether the ideal of a common song in the Church's Offices; the friends concentrated on the preservation and extension of harmonised music and the creation of the choral SERVICE (*q.v.*). It was not until the revival of the 19th century that Merbecke's importance received recognition by others than historians.⁴ In 1844 *The Booke of Common Praier Noted* was reprinted in

facsimile by Whittingham for Pickering. Rimbauld issued an edition in the following year and Jebb included it in 'Choral Responses and Litanies' (vol. ii.) in 1857. Since then prints of various parts, and more particularly of the Communion Office, have issued from the press with increasing frequency and his melody has been widely accepted as the groundwork of the sung Eucharist in the English church. c.

MERCADANTE, GIUSEPPE SAVERIO RAFFAELE (*b.* Altamura near Bari, 1795⁶; *d.* Naples, Dec. 17, 1870), entered at 12 the Collegio di San Sebastiano at Naples, of which Zingarelli was chief, and where he learnt the flute and violin, and became leader in the orchestra. He was suddenly dismissed, and to gain a living attempted composing for the stage. His first work, a cantata for the Teatro del Fondo (1818) was followed by another, 'L'Apoteosi d'Ercole,' produced at San Carlo (1819) with extraordinary success. In the next year he produced his first opera buffa, 'Violenza e costanza,' and after this came several 'opere serie,' of which 'Elisa e Claudio' (Milan, 1821) was the most successful.

From this period Mercadante steadily maintained his reputation, and the verdict of Italy in his favour was endorsed by Vienna in 1824. He passed the years 1827 and 1828 in Madrid, 1829 in Cadiz, and in 1831 returned to Naples. In 1833 he became Generali's successor as maestro di cappella at the cathedral of Novara. In 1836 he composed and superintended the production of 'I briganti' in Paris. His next fine opera was 'Il giuramento' (Milan, 1837). In the opera buffa 'I due illustri rivali,' 1838, he changed his style, marking the accents strongly with the brass instruments. In 1839 he became musical director of the cathedral at Lanciano, and in 1840 director of the Conservatorio di Naples. He was a member of the Institut de France. Though he lost an eye at Novara, he continued to compose by dictation; but became totally blind in 1862. Besides his operas, which number nearly 60, he wrote 20 masses, many psalms and motets, secular cantatas, instrumental pieces and songs.

Bibl.—G. BUSTICO, *Saverio Mercadante a Novara*. R.M.I., 1921, pp. 361-96. F. G.

MERCATOR, MICHAEL (*b.* 1491; *d.* 1544), was a Venetian maker of virginals, who made instruments for Henry VIII. and Cardinal Wolsey, 1529-32. He was included in the list of the musical establishment of Henry VIII. in 1526. There is a medallion portrait of him in the British Museum. E. J. H.

MERCKER (MERKHER), MATHIAS (MATHIAEUS), of Amsterdam, a 16th-17th-century composer and skilful performer on the organ, trombone, cornetto, flute and viols. From before 1599 till after 1622 he was organist at St. Nikolas, Strassburg. He composed 1 book of

¹ It must be remembered, however, that all modern editions are adaptations to the text of the present Book of Common Prayer, based on the second Book of Edward VI., which differs materially from the working set by Merbecke.

² *The Cathedral Prayer Book*, where above the harmonised version is given a black-note notation, which must not be mistaken for that of Merbecke, as a comparison with the example above will show.

³ See the *English Gradual*, edited by Francis Burgess.

⁴ Both Hawkins and Burney devoted considerable attention to him; the one following Fox discussing the circumstances of his life, the other laying stress on the achievements of *The Booke of Common Praier Noted*.

pavanes, galliards, etc., in 5 parts (1609), and 'Odae spirituales' (1619); also a MS. (copied in 1599) of 'Christ Gottes und Mariae Sohn,' 5 v. (Q.-L.).

MERCY (MERCY), LOUIS (b. early 18th cent.), an Englishman of French extraction, was an eminent performer on the flûte-à-bec, or English flute, for which he composed several sets of solos. But he lived at a time when his favourite instrument was gradually becoming superseded by the traverse, or German flute, and in the hope of averting the change, about 1735 he allied himself with Stanesby the instrument-maker, in an endeavour to promote the use of the modified form of the flûte-à-bec manufactured by the latter, and published 12 solos, six of which were said to be adapted to the traverse flute, violin or Stanesby's new English flute, with a preface strongly insisting on the merits of Stanesby's invention. Mercy's solos, two sets for the flute and bassoon (or violoncello) respectively, are in the British Museum.

W. H. H.

MEREAUX, (1) NICOLAS JEAN LE FROID DE, (b. Paris, 1745; d. there, 1797), was organist of the Church of St. Sauveur¹ (1767) and at the Petits Augustins and royal chapel. His oratorios 'Samson' and 'Esther' were given at the Concert Spirituel in 1774 and 1775 respectively. These, and an Ode on the birth of the Dauphin, performed at the same concerts in Dec. 1781, are his only works of importance besides his operas, of which the following list is given in the supplement to *Fétis*:

'La Ressource comique,' 1772; 'Le Retour de tendresse,' 1774; 'Le Duel comique' (partly arranged from Paisiello), 1776; 'Laurette,' 1777; 'Alexandre aux Indes,' 1783; 'Édipe et Jocaste,' 1791; 'Fabius,' 1793; 'Les Thermopyles' and 'Scipion à Carthage.'

(2) JEAN NICOLAS (b. Paris, June 22, 1767; d. there, Feb. 1838), pupil of his father, organist and pianist, composed sonatas, fantasias, etc. His son

(3) JEAN AMÉDÉE (b. Paris 1803; d. Rouen, Apr. 25, 1874), became a remarkable pianist and a most successful teacher. He studied under Reicha from the age of 10, and appeared with great success in Paris and London before 1835, when he settled in Rouen as a teacher. Of his original compositions his studies are the most important, but his fame rests chiefly upon his excellent collection published in 1867 under the title of 'Les Clavecinistes de 1637 à 1790.' He was also in great repute as a musical journalist.

M.; addns. M. L. P.

MERIC, MADAME DE, an accomplished singer, who appeared in London in 1832, and was very successful in an unsuccessful season. She was a clever actress, with a good voice and considerable versatility of talent, rendering her very useful, as she sang in serious or comic operas, first parts or second, and in any language. While in this country, she per-

formed in Italian, German, French and English, and could have done so equally well in Spanish, had it been required.

She appeared in 'Der Freischütz' on its first production here with the original German words, when German opera, for a time at least, drove Italian from the London boards. Madame de Meric played also Donna Elvira to the Donna Anna of Schröder-Devrient, who rather eclipsed her; but in Chelard's 'Macbeth' she distinguished herself.

J. M.

MÉRIC-LALANDE, see LALANDE, Henriette-Clementine-Méric.

MERIGHI, ANTONIA, a fine operatic contralto profondo, was first engaged for the London stage by Handel, as announced in the *Daily Courant* of July 2, 1729. The first part she undertook was that of Matilda in 'Lotario' (Handel), Dec. 2, 1729, in which she created a favourable impression; but her songs, when printed in the published opera, were transposed into much higher keys. This opera was followed by a revival of 'Tolomeo,' in which she sang soprano music transposed for her, and next by 'Partenope,' in which Merighi appeared as Rosmira with equal success in 1730 and 1731. In the latter year she sang the part of Armida in the revival of 'Rinaldo.'

After the close of that season, however, her name was not found again in the bills until 1736. The *Daily Post* of Nov. 18 in that year informs us that

'Signora Merighi, Signora Chimenti, and the *Francesina*, had the honour to sing before her Majesty, the duke, and princesses, at Kensington, on Monday night last, and met with a most gracious reception.'

In Jan. 1738, Merighi appeared in the new opera, 'Faramondo,' just finished by Handel after his return from Aix-la-Chapelle, and again in 'La conquista del Vello d'Oro' (Pescetti). In April of the same season she took the part of Amastre in 'Serse'—the last she sang in England.

J. M.

MERK, JOSEPH (b. Vienna, Jan. 18, 1795; d. there, June 16, 1852), a distinguished Austrian violoncellist. His first musical studies were directed to singing, the guitar, and especially to the violin, which last instrument he was obliged to abandon (according to Fétis) in consequence of an accident to his arm. He then took to the violoncello, and under the tuition of an excellent master, named Schindlöcker, speedily acquired great facility on the instrument. After a few years of desultory engagements he settled at Vienna as principal violoncellist at the Opera (1818), professor at the newly founded Conservatorium (1823), and Kammervirtuos to the Emperor (1834). He was much associated with Mayseder, and was often called the Mayseder of the violoncello. His compositions for his instrument are numerous.

T. P. P.

MERKEL, GUSTAV (b. Oberoderwitz, Saxony,

¹ Not St. Jacques du Haut-Pas as stated by *Fétis*.

Nov. 12, 1827; *d.* Dresden, Oct. 30, 1885), organist and composer of organ music, studied music under Julius Otto, and Johann Schneider of Dresden, and also received some instruction from Reissiger and Schumann; was appointed organist of the Waisenkirche, Dresden, in 1858, of the Kreuzkirche in 1860, and court organist in 1864.

From 1867-73 he was director of the Dresden Singakademie, and from 1861 was a professor at the Conservatorium there. Merkel's printed compositions reach the number of 180. Of these a large proportion is for his instrument, for which he composed preludes, fugues, fantasias, variations, sonatas, etc., and pieces for violin (or violoncello) and organ. He also published many solos and duets for pianoforte, motets (op. 106), and songs with pianoforte accompaniment. Many of his fugues are 'alla cappella,' and in five parts, and all are well constructed. H. S. O.

His organ works include 9 organ sonatas, an 'Organ School,' 30 studies for pedal technique, 3 fantasias and many Choral preludes. (*Riemann.*)

MERKLIN, SCHÜTZE & CIE, see DAUBLAINE & CALINET.

MERLIN, opera in 3 acts; libretto by Siegfried Lippiner, music by Goldmark. Produced Hof Oper, Vienna, Nov. 19, 1886.

MERLIN, JOSEPH, an ingenious instrument maker in London in the latter part of the 18th century. He had a place in Oxford St. described as 'Merlin's Cave.'

A piano of his, No. 91, 1782, gives him precedence of Broadwood in making grands, and perhaps even of Kirkman, but not Stodart.

His only patent is for a combined harpsichord and piano with a pedal for the 2 unisons and octave, replacing the stops (1774): No. 1081.

A single keyboard Kirkman harpsichord, 1758, came to light in 1924 with an adapted pianoforte movement by Merlin (1779).

'He may have been one of Burney's harpsichord-makers who followed Backer's lead in making grand pianos, before Kirkman and Shudi took them up.

'Broadwood has a square piano by him with an organ beneath.

'The square piano in the portrait by Gainsborough of his son-in-law Fischer, the oboe-player, is by Merlin.' E. J. H^a.

MERLO, ALESSANDRO (*b.* Rome, c. 1530), singer and violist (also called Alessandro Romano and Alessandro della Viola), pupil of Willaert and Rore. In c. 1575 he came into prominence through his phenomenal bass-tenor voice with a compass of three octaves. In 1594 he was singer in the Papal Chapel. His compositions are: two books of Canzoni alla napolitana, 5 v. (1572, 1575); two books of madrigals, 5 v. (1565, 1577); a book of

villanelle (1579); one book of madrigals, 4 v. ('Le vergini,' 1554, 1562, 1585, 1587); one book of motets (1579); one piece in 'Delle Muse libri III.' (1555-61). (*Riemann.*)

MERMET, AUGUSTE (*b.* 1810; *d.* Paris, July 4, 1889), composer, was a pupil of Lesueur and Halévy. His operas include 'La Bannière du roi' (Versailles, 1835), 'Le Roi David' (Paris, Opéra, 1846), 'Roland à Roncevaux' (Opéra, 1864), and 'Jeanne d'Arc' (1876). The last named is memorable as the first new production in the present Opera House of Paris (see ACADÉMIE DE MUSIQUE, Vol. I. p. 11).

MERRICOCKE, T. (MERRICOCK, MARCOCK), an English church music composer of the 16th or early 17th century, who is among the composers of the 40 In Nomines included in part-books (Bodl. Mus. Sch.). The name is an unusual one, and he is probably the 'Merri-cock,' the altus part of whose Te Deum and Evening Service is in an early 17th-century MS. (B.M. Add. MSS. 29,289/80b), and whose 3-part motet, 'Gloria laus et honor' is in the Commonplace Book of John BALDWIN (*q.v.*) (written between 1581 and 1606). J. M^s.

MERRIE ENGLAND, comic opera in 2 acts; libretto by Basil Hood, music by Edward German. Produced Savoy Theatre, London, Apr. 2, 1902.

MERRY WIVES OF WINDSOR, THE (*Die lustigen Weiber von Windsor*), opera in 3 acts; words from Shakespeare, by Mosenthal; music by Nicolai. Produced Berlin, Mar. 9, 1849; Her Majesty's (in Italian), as 'Falstaff,' May 3, 1864; in Paris Théâtre Lyrique as 'Les Joyeuses Commères de Windsor,' May 25, 1866; in English, Carl Rosa Co., Adelphi, Feb. 11, 1878. For the operas by Balfe and Verdi, founded on the same play, see FALSTAFF.

MERSENNUS, MARIN (LE PÈRE MERSENNE) (*b.* Oizé, Maine, Sept. 8, 1588; *d.* Paris, Sept. 1, 1648), was the writer of valuable treatises on music.

Educated at Le Mans and La Flèche, Mersenne became a Minorite, entering upon his noviciate July 17, 1611, and receiving full orders (after a course of theology and Hebrew in Paris) from Monsignor de Gondi in 1613. For a time he taught philosophy at Nevers, but soon returned to Paris, where, with other kindred spirits such as Descartes, Pascal (père), Roberval and Peiresc, he studied deeply both mathematics and music. He corresponded with Doni, Huygens and other learned men in Italy, England and Holland; and visited Italy three times (1640, 1641 and 1645). His most important work is his *Harmonie universelle* (1636), which had been preceded by a smaller work, *Traité de l'harmonie universelle* (1627), of which he published an epitome in Latin. *Harmonie universelle*, two folio volumes, with numerous illustrations, includes full descriptions of contemporary instruments. These are more important even than

¹ Notes by A. J. Elphinstone.

Cerone's great work as sources of information on music in the 17th century, especially French music and musicians. His other musical treatises are *Questions harmoniques* (1634), *Les Préludes de l'harmonie universelle* (1634), *Harmonicorum libri XII*. (1635) (enlarged edition 1648, with the names of three publishers, Baudry, Cramoisy and Robert Ballard), *De la nature des sons* (1635). The full titles of these and of Mersennus's miscellaneous writings, are given in *Q.-L.* F. G.

MERULA, TARQUINIO, a composer of the early 17th century, the facts of whose life are gathered from the title-pages of his compositions. His birthplace is never definitely given in these, but it is supposed to have been Cremona. He was maestro di cappella at Santa Maria of Bergamo in 1623, court and church organist at Warsaw in 1624, and in 1628 was organist at Sant' Agata and maestro of the cathedral at Cremona. In 1639 he resumed the office at Bergamo, and in 1640 was maestro and organist of the cathedral there. He belonged to the Bolognese academy of the 'Filomusi,' and in 1652 was once more maestro and organist of the cathedral at Cremona. At one time, before 1680, he held a court appointment at Florence. His works are interesting as early specimens of the use of voices and instruments in combination. They are:

Canzoni a 4 per stromenti, lib. 1. Venice, 1615.
 Madrigali et altre musiche concertate a 1-5. Venice, 1623.
 Madrigaletti a 3, lib. 1, op. 4. Venice, 1624.
 Madrigali a 4-8 voci, lib. 1, op. 6. Venice, 1624.
 Motetti e sonate concertati, a 2-5 voci, lib. 1, op. 6. Venice, 1624.
 Ballo, e Cordia, dialogo. Venice, 1626.
 Concerti spirituali, etc., a 2-5 voci, lib. 2. Venice, 1628.
 Canzoni, ovver Sonate concertate per chiesa, lib. 2, op. 12. Venice, 1637.
 Curto precipitato et altri capricci, etc., lib. 2, op. 13. Venice, 1638.
 Canzoni da suonare a tre, op. 9. Venice, 1639.
 Concerto declino quinto . . . Messì, salmi, . . . concertati, a 2-12. Venice, 1639.
 Puggas, salmi, motetti, etc., a 2-5, lib. 3, op. 11. Venice, 1640.
 Arpa Davidica . . . salmi et messa . . . op. 16. Venice, 1640.
 Canzoni da suonare a 2-3, lib. 4, op. 17. Venice, 1651.
 Salmi et messa concertati a 3-4, lib. 3, op. 18. Venice, 1652.

For other works in MS., see *Q.-L.* The Fitzwilliam Museum at Cambridge and the R.C.M. contain a comic madrigal for three voices, 'Nominativo, hic, haec, hoc.' M.

MERULO, (1) CLAUDIO, or CLAUDIO DA CORREGGIO (*b.* Correggio, 1533¹; *d.* Parma, May 4, 1604), organist and distinguished teacher. At the age of 24, after competition with nine other candidates, he took his place at the second organ of St. Mark's, Venice. He had been appointed organist at Brescia in the previous year (Sept. 17, 1556). It is delightful to be carried back² to a May evening more than 300 years ago, to find Zarlino waiting on the Piazza of St. Mark till Vespers are over, that he may present 'M. Claudio Merulo soavissimo organista del detto tempio' to Francesco Viola,³ who was visiting Venice,

¹ Entered in baptismal register of S. Quirino on Apr. 8 as son of Antonio and Giovanni Merolotti, which was the true form of his name.

² *Dimostrazioni harmoniche* (Zarlino, Venice, 1571). See Introduction.

³ Maestro di cappella to the Duke of Ferrara, and an old pupil of Willert.

and then to follow them all to the house of old Adrian Willaert, kept at home by the gout, yet holding a grand reception, and ready to discuss with them the subjects of Zarlino's famous book. Merulo's salary was increased from time to time,⁴ and he became first organist of St. Mark's in 1566. He set up as a publisher in 1566,⁵ and twelve years later (between 1578-81) as a composer of motets and madrigals. Gardane printed in 1578 two books of Sacrae cantiones (*a* 5) and in 1579 and 1580 respectively two books of madrigals (*a* 4 and *a* 3). The first and second books of motets (*a* 6) were not printed till 1583 and 1593 respectively. The third book of motets was not published till 1605, after the composer's death. A first book of four masses appeared in 1573 and 'Sacrorum concentuum 8-16, lib. 1' in 1594. Two masses (*a* 8 and *a* 12) and litanies (*a* 8), were published some years after his death.

After twenty-seven years' service Claudio left Venice, went first to Mantua, and thence to Parma, in 1584, as organist of the Steccata, or ducal chapel. Here he lived sixteen years, was knighted by the Duke, and died at the age of 71. The following letter was written at the time by one of his pupils to Sig. Ferrante Carli.⁶

'According to your wish I send you some particulars of Sig. Claudio's death. On Sunday the 25th of April, S. Mark's Day, after playing the organ at Vespers in the Steccata, he enjoyed an evening walk before going home. In the night he was aroused by a pain in his right side, succeeded by great fever and violent sickness. The fever continued from day to day, giving him no rest even for a few minutes. The doctors, Sig. Cornodoro and Cerati, his son-in-law, after using many remedies with little or no success, determined at last to give him a medicine with strong ingredients—rhubarb, etc. This was on Sunday, May 2nd. When the poor old man had taken the draught he cried out, "Alas! how cruelly these doctors have treated me!" for they had given him to understand it was merely a syrup. The effect was so severe that he died just as the clock struck 12 on the 4th of May. The Duke arranged the funeral, and had him crowned with laurel and ivy, these marks of respect giving great consolation to all. He was dressed as a Capuchin monk, music books were placed on his coffin, at each corner of which one of his scholars, clothed in black, held a lighted candle. They were D. Chris. Bora, M. Ant. Bertanelli, M. And. Salati, the fourth scarcely venturing to add his name, for he had only been under the good old man's care for a month, thanks first to his own gentleness and kindness, and next to that of our Sig. Christophero, who introduced me and entered me at S. Claudio's great school. . . . The Monday following, May 10th, the service took place in the Cathedral, when he was buried next to Cipriano (Rore), near the altar of S. Agatha. . . . We sang the Mass with double choir, one placed near the organ, the other on the opposite side. . . .
 'Your affectionate servant,
 'ALESSANDRO VOLPIUS.

'PARMA, May 14, 1604.'

Claudio's organ toccatas and ricercari,⁷ given to the world late in life, many published

⁴ Catelani, *Memorie della vita . . . di C. Merulo* (Milan, Ricordi).
⁵ Editing madrigals by Verdelot, and, as a partner with Betancio, a set of the same by Porta. Betancio only joined him for a short time, perhaps owing to an unexpected pressure of work at St. Mark's by the resignation of the other organist and delay in appointing another. Claudio published one set of madrigals (*a* 6) of his own.

⁶ G. C. Tiraboschi, *Pubblicista Modenese*, tom. vi, pt. 1. (Modena, 1786).
⁷ 'Canzoni di intavolatura,' etc. lib. 1, 1592; lib. 2, 1606; lib. 3, 1611. 'Ricerari di intavolatura,' etc. lib. 1, 1597; lib. 2, 1607; lib. 3, 1608. 'Messe d' intavolatura d' organo,' lib. iv 1608. 'Toccatte d' intavolatura,' etc. lib. 1, 1598; lib. 2, 1604.

posthumously, cannot bring back to us the wonderful power of his playing, which could fascinate the most orthodox musicians, and attract students from all parts of Italy, Germany and the North of Europe. They compare favourably with other works of the period. As historical examples they are also valuable. Six vocal pieces are in Torchi's *L'arte musicale in Italia*, vol. i., and four toccatas in vol. iii. See full list of extant works in *Q.-L.*

J. R. S.-B.

(2) GIACINTO, nephew of Claudio, succeeded the latter as court organist at Parma. One book of madrigals *a 4* with one instrumental Canzona (Venice, 1623) by him is known to exist.

E. v. d. s.

MERULO, GIOVANNI ANTONIO, appointed singer in the Papal Chapel Sept. 12, 1551; was elected maestro di cappella in 1587 for one year by the college of singers by the order of Pope Sixtus V., being the first musician to hold this position, which before that time had been held by a prelate of the Papal court, chosen by the Pope (Haberl, *Jahrbuch*, 1891, p. 84).

MÉSANGEAU (MÉZENGEAU), RENÉ (*b.* Paris, ? end of 16th cent.; *d.* there, c. 1639), lutenist, 'ordinaire' to the king's music. Some pieces by him are in the Bibliothèque Nationale de Paris, the library of Copenhagen (under the name of Meschanson), in a MS. of Rostock's, etc. 'Gautier le vieux' composed the 'Tombeau' de Mézangeau in 1653 or later.

BIBL.—L. DE LA LAURENCIE, *Revue de musicologie* (Nov. 1923).

J. G. P.

MESSA DI VOCE, the art of swelling out and diminishing the tone on a long-held note in singing. See SINGING.

MESSENGER, ANDRÉ CHARLES PROSPER (*b.* Montluçon, France, Dec. 30, 1853), composer of French opéra-comique and English light opera, studied music for some time at the École Niedermeyer in Paris, and subsequently worked at harmony and composition under Camille Saint-Saëns. In 1876 he won the gold medal of the Société des Compositeurs for a symphony in four movements, which was performed the same year at the Châtelet concerts under the direction of Édouard Colonne. He also carried off the second Premier Prix at the Concours de la Ville de Paris with a cantata for chorus and orchestra entitled 'Prométhée enchaîné.'

Messenger's first effort as a writer for the stage was in connexion with an unfinished comic opera by Firmin Bernicat, 'François les Bas-bleus,' which he completed, on the composer's death, for production at the Folies-Dramatiques on Nov. 8, 1883. Two years later, at the same theatre, was brought out his 3-act operetta, 'La Fauvette du Temple,' which was favourably received. His first real success, nowever, was 'La Béarnaise,' a 3-act operetta given at the Bouffes-Parisiens in Dec. 1885, and in the following Oct. mounted at the Prince of

Wales's Theatre, London, where, with Miss Florence St. John and Miss Marie Tempest in the principal parts, it achieved a lengthy run. To tunefulness was added a refinement and musicianship quite unusual in works of this class. It was followed in successive years by 'Les Deux Pigeons,' a 3-act ballet (Opéra, and Covent Garden, June 21, 1906), 'Le Bourgeois de Calais,' a 3-act operetta (Folies-Dramatiques), 'Isoline,' a fairy spectacle (Renaissance), 'Le Mari de la reine,' a 3-act operetta (Bouffes-Parisiens), and 'La Basoche,' a comic opera in 3 acts, produced at the Opéra-Comique on May 30, 1890.

The opera last named marked a turning-point in Messenger's career. It was recognised as aiming at a higher standard; and, despite a certain lack of originality (which the Parisian critics have invariably pointed out in their countryman's music), was warmly welcomed as a pleasant contrast to the serious and often heavy works that had too long monopolised the active repertory of the Opéra-Comique. An English version of 'La Basoche,' written by Sir Augustus Harris and Eugène Oudin, was mounted in London by D'Oyly Carte at the Royal English Opera (now the Palace Theatre of Varieties), Shaftesbury Avenue, on Nov. 3, 1891, with Miss Esther Palliser, Ben Davies, and David Bispham (then a débutant) in the principal parts. (See CARTE; SULLIVAN.) It met with considerable success, and established its composer's reputation in the British metropolis as a musician of ability, imagination and resource.

His next important work was a comédie-lyrique on a Japanese subject, 'Madame Chrysanthème,' founded upon Pierre Loti's novel of the same name, and performed at the Théâtre-Lyrique (Renaissance) for its inauguration on Jan. 30, 1893. This ambitious score was greatly admired for its 'tasteful and elegant orchestration, the limpid clearness of its ensemble, and the rare delicacy of its harmonies.' At the same time, it left to be desired, 'even at the cost of less perfection of form, a higher degree of solidity, a little more individuality; in a word, greater freshness, novelty, and individuality of melodic inspiration.' In the same year the same industrious pen gave forth a 4-act ballet entitled 'Scaramouche,' and a 3-act operetta, 'Miss Dollar,' both produced at the Nouveau Théâtre. On July 3, 1894, his 3-act comic opera 'Mirette,' specially written for the Savoy Theatre, London, was brought out there with fair success. Next came 'Le Chevalier d'Harmental' (Opéra-Comique, 1895), 'Le Chevalier aux fleurs,' ballet (Théâtre Marigny, 1896), 'Les Petites Michus' (Bouffes-Parisiens, 1897), 'Véronique' (Bouffes-Parisiens, 1898), 'Une Aventure de la Guimart,' ballet (Opéra-Comique, 1900), and 'Les Dragons de l'impératrice' (Variétés, 1905). Of these 'Véronique'

and 'Les Petites Michus' were both transferred to the London stage with remarkable success, while the former was also given in America during the winter of 1905.

Messenger was for several years one of the conductors of the Paris Opéra-Comique. He was appointed joint 'directeur de la Musique' with Albert Carré, and 'Directeur Général' in 1898. He filled the post of 'Artistic Director' at the Royal Opera, Covent Garden (1901-06). He then became associated with M. Bronssau as director of the Paris Opéra, and occupied that position until his resignation in 1913. During his connexion with Covent Garden many novelties were produced, some of which he himself conducted. These included Bunning's 'La Princesse Osra' (1902), Saint-Saëns's poëme-lyrique, 'Hélène' (1904), Leonï's 'L'Oracolo' (1905), and Gluck's 'Armido' (1906). He was succeeded here as musical director in 1907 by Percy Pitt. Further operas were 'Fortunio' at the Opéra-Comique (1907) and 'Béatrice' (Monte Carlo, 1914). 'Monsieur Beaucaire,' an English light opera, was produced for a run at Prince's Theatre, London, Apr. 19, 1919. He has also written minor compositions for various instruments, piano duets for four hands, and several songs.

H. K.

MESSCHAERT, JOHANNES (b. Hoorn, Holland, Aug. 22, 1857; d. Zürich, Sept. 10, 1922), baritone singer. He began his career as a violinist, but changed to singing and became a pupil of Stockhausen. He lived and worked also as a teacher, chiefly in Holland and Germany, but he appeared also in London and other music centres. The Messchaert-Röntgen Lieder evenings (with Julius Röntgen as pianist) were well known. Messchaert was one of the most notable concert singers of his time; as a baritone of wide range he was equally remarkable as an oratorio and 'Lieder' singer. His interpretation of the part of Christus in Bach's Matthew Passion was unequalled. He sang the bass solos in Elgar's 'Gerontius' at Dusseldorf (1902).

Franziska Martienssen wrote in German upon his methods, *Johannes Messchaert, contribution to the understanding of the true art of singing*.

R. M^o.

MESSIAH, oratorio by Handel; libretto from Holy Scripture by Charles Jennens. Composition begun Aug. 22, 1741; first part completed Aug. 28; second part, Sept. 6; third part, Sept. 12; instrumentation, etc., filled in, Sept. 14; in all twenty-four days only. First performed (during Handel's sojourn in Ireland) in the Music Hall, Fishamble Street, Dublin, for the benefit of the Society for relieving Prisoners, the Charitable Infirmary, and Mercer's Hospital, Apr. 13, 1742. First performed in England at Covent Garden Theatre, Mar. 23, 1743. After the original performance Handel revised and rewrote much of

the work, which was published in 1767. The ADDITIONAL ACCOMPANIMENTS of Mozart and others are discussed under that heading.

MESSIDOR, lyric drama in 4 acts; text by Emile Zola, music by Bruneau. Produced Opéra, Paris, Feb. 19, 1897.

MESTO, 'sadly'; a term used twice by Beethoven, in the pianoforte sonata, op. 10, No. 3, and in the slow movement of the string quartet, op. 59, No. 1. The slow movement of the first of these is called *Largo e mesto*, and of the second *Adagio molto e mesto*.

M.

MESTRINO, NICCOLO (b. Milan, 1748; d. Paris, Sept. 1790), violinist and composer. Having begun life as a street player, he entered the service of Prince Esterhazy, and later that of Count Erdödy in Hungary. Undergoing imprisonment for some foolish prank, he occupied the period of his confinement by perfecting his technique. He went to Paris in 1786, and performed with marked success at the Concert Spirituel. Becoming an established teacher in Paris, he was appointed leader of the Italian Opera orchestra in 1789. Compositions: twelve concertos for violin and orchestra; duos for two violins; sonatas for violin and bass; and studies for the violin alone. (A. M. Clarke's *Biog. Dict. of Fiddlers*, London, 1896.)

E. H.-A.

METALLO, D. GRAMMATIO (b. Bisaccia, Naples, 1541; still living in Venice in 1615¹). Metallo appears to have been living at his birthplace in 1577. In 1602 he was at Cairo, after a journey to the Holy Land where he finished his book of *Ricercari a 2 v.* (note on title-page), published 1603 at Venice, where he was maestro di cappella at S. Marcuola, still holding that position in 1610. He composed masses, motets, madrigals and other church music, 'Vilanelle alla Napolitana,' and one *Moresca* (1592), *Canzoni alla francese* for instruments, book 4 (1594), and the above-mentioned *Ricercari a 2 v.* 'to play and sing,' which appeared in many editions until 1685 (list of works in *Q.-L.*). The dedication mentioned by Eitner as signed in Alexandria, 15/9/1601, the writer has been unable to trace.

E. v. d. s.

METAMORPHOSIS is the modification of a musical figure or idea, made with the view of putting it in a new light, or adapting it to changed conditions.

In the later stages of the development of abstract music, composers have concentrated a great deal of energy on devising new ways of enhancing the intellectual interest of their works—as by making the continuity of the component sections more close, and giving a new aspect to the relationship of various movements, or distinct portions of single movements; and most of these are based upon some varia-

¹ According to Romano Michell (*Musica vega*, etc.), who gives the age at that time as 74.

tion or modification of a well-defined melodic or rhythmic figure. Such devices can be found occasionally in the early stages of modern instrumental music, as in J. S. Bach; and an example from Mozart, in which he welds together a minuet and trio, is quoted in the article FORM. Beethoven was the first to make any very conspicuous use of them, and they are frequently met with in the 'development' portion of the movements of his sonatas and symphonies. A most notable instance is the dovetailing of the 'working-out' to the 'recapitulation' in the first movement of his sonata, op. 90, in E minor. An ornamental passage put over a part of a subject with a phrase quoted in the working-out ends as at (a) Ex. 1, which has at first sight no ostensible connexion with the principal subject. But in order to make the continuity of the movement as close as possible, and also of course to introduce a feature of interest, Beethoven makes this figure pass through five modifications, and then come out as the first phrase of the subject in recapitulation. The changes are as follows, (a) being the end of the ornamental passage, (b) (c) (d) and (e) its successive modifications, and (f) the beginning of the recapitulation of this principal subject. The device is enhanced in this case by the echoes of imitation, and by the dying away of the old figure in a constant diminuendo, and its bursting out with renewed vigour as the impulsive first subject.

EX. 1.

The device is to be met with also in other situations, as in the first movement of the C minor symphony, where the figure (a) at

EX. 2.

the outset becomes (b) in the contrasting key.

Berlioz makes ingenious and characteristic use of the device in his 'Symphonic fantaisie,' in his treatment of what he calls the 'idée fixe.' Liszt also makes it a conspicuous feature in his experiments in programme music. Wagner makes more elaborate use of it than any one else in his great music dramas, and constantly transforms the character of his *LEITMOTIVE* (*g.v.*) in conformity with the varying nature of the situations. C. H. H. P.

METASTASIO, PIETRO ANTONIO DOMENICO BONAVENTURA (*b.* Rome, Jan. 3, 1698; *d.* Vienna, Apr. 12, 1782), a celebrated Italian poet and most famous of all operatic librettists, was the son of Trapassi, of Assisi, a papal soldier. As a child he showed an astonishing power of improvisation, which so struck Gravina, that, with his parents' consent, he took him into his family, had him educated, and changed his name.¹ He was studying the classics, and engaged in translating the *Iliad* into Italian verse, when his benefactor died suddenly—a loss he felt deeply, although he was eventually consoled by the attachment of Maria Bulgarini the singer. In the meantime his fame had reached Vienna, and, at the instigation of Apostolo Zeno, the late court poet, the Emperor Charles VI. offered him that post. He arrived in Vienna in 1730, and remained there till his death, living with his friend Martines in the 'Michaeler Haus.' Henceforth he furnished the principal attraction at the private festivals of the court, composing verses to be recited or sung by the young Archduchess, set to music in the latter case by the court composers, Reutter, Predieri, Caldara or Bonno. Metastasio was also musical; he played the harpsichord, sang ('come un serafino,' as he used to say) and composed.² He may be considered as the originator of a real improvement in the musical drama, though long since superseded. His popularity as a dramatic poet was great; the charm, grace, melody and sweetness of his verse induced the composers to overlook the absence of contrast and strong passion; and in consequence some of his libretti have been set as many as thirty or forty times.³ His poems include twenty-nine dramas, eight oratorios, thirty-nine pièces de circonstance, nearly fifty cantatas and sonatas; elegies, idylls, sonnets, canzonas, sestines, terzines, etc., published in nearly fifty different editions.⁴ His portrait has often been engraved; that by Mansfield and Heath after Steiner is the best. Burney describes his appearance in 1772 in enthusiastic

¹ 'Metastasio,' *trappassamento*, or transition, is a play on Trapassi.

² 'Appel of Vienna published his 'XXXVI Canzoni a sole tre voci.'

³ See *R. M. J.* vol. xi. p. 228.

⁴ Vol. I. of *Opere del Signor Abbate Pietro Metastasio*, seventeen small vols. 12mo (Milan, 1785), contains a life by Cristofari. A selection of his poems was published in Paris (1804) with the title *Pensieri di Metastasio*.

terms.¹ There are also busts and medallions of him. He was buried in a vault in the Michaelerkirche, and in 1855 an amateur named Galvagni placed a marble monument to his memory (by Luccardi) in the church of the Minorites, bearing the following lines by the Abbé Guido Ferrari:

'Dat patriam Assisium, nomen Roma, Austria famam,
Plausum orbis, tumulum haec urna Metastasio.'

ARSIS AND THESIS.—The Greeks called the weak beat *arsis* and the strong *thesis*. This is clear from Baccheios's catechism (Meibom, p. 24):

Q. What shall we say *arsis* is?

A. The time during which the foot is raised when we are going to take a step.

Q. And what is *thesis*?

A. The time when it is on the ground. We need not go into such a detail as the moment between *arsis* and *thesis*, for by its brevity it escapes both eye (in the dance) and ear (in song).

Unfortunately the Romans, perhaps because they thought much of recited poetry and little of dancing, inverted the meanings, and used *arsis* for the (strong) rise and *thesis* for the (weak) fall of the voice. The Greek meaning is chosen here because the words are Greek (and are used then in their original sense), and because that sense agrees with the motion of the conductor's stick.

Here are a few of these Greek feet arranged on either side of a bar-line according to the times into which they fall:

Common Time.

(a) spondee ('solemn') . . . ♩
dactyl ('finger joints') . . . ♩
proceleusmatic ('inciting') . . . ♩

(b) amphibrach ('long between shorts') ♩
anapaest ('reversed' dactyl) . . . ♩
orthios ('stirring') . . . ♩

♩ Time.
(a) } pyrrhic (a dance measure) . { ♩
(b) }

♩ Time.
(a) trochee ('tripping') . . . ♩
(b) tribrach ('three shorts') . . . ♩

lamb (associated with lampons)

It is to be noticed that *thesis* means rather the accented part of the foot than the accented note merely, and that if we apply what they said of the foot to our bar we get such articulation as

They were saying, in fact, a practical thing, that the accent (thesis) controls every section, small or great, of the phrase.

THE COMPOUND FOOT, THE PERIOD.—Out of these simple feet they went on to make compound. (See also PERIOD.) One of these, to take an instance, was

We do not know how they put this into their music, but we can almost hear an Elizabethan writing it; this, from Wilbye's 'Draw on, sweet night,' is, in fact, not very far off:

This, by the way, is a good example of metrical articulation, one of the main conditions of sound melody. Other examples are 'Il mio tesoro' ('Don Giovanni'), Schubert's 'Über allen Gipfeln,' the theme of the slow movement of Brahms's A minor Quartet, Purcell's 'I attempt from love's sickness,' the opening theme of Beethoven's violoncello Sonata in A, and most of the themes in Bach's maturer work.

FOOT AND BAR.—The example just given shows clearly the difference between foot and bar. For instance | ♪ ♪ |, | ♪ ♪ | and | ♪ ♪ | are all equally trochees but they make different kinds of bar, as, conversely, a bar of any one time makes different kinds of foot. In the example, the first iamb is of the (b) form, the second of the (a), and the pyrrhic has half the value it should have to correspond with the others. A foot, therefore, is a uniform combination of time-units independent of 'time,' and a bar a uniform division of time regardless of the particular time-units it contains. We think musical phrases in feet and afterwards arrange them in bars. It does not disturb us in a *stretto* that these phrases begin on different bar-accent, since the foot is uniform.

METRICAL FIGURE.—A small, easily recognisable nucleus (see FIGURE) of similar time-units (Mozart's violas at the beginning of the G minor Symphony), or dissimilar (the 'cyclical dactyl' for the flute which begins the *Vivace*

in Beethoven's seventh), is called a metrical figure. It ranges from the ALBERTI BASS (*q.v.*) to the protean forms of Wagner's motives, and is especially useful in establishing by its recurrence, by way of *basso ostinato* or inverted pedal or otherwise, the unity of a piece.

CHOICE OF TIME-UNIT.—Rousseau in his Dictionary (1781) remarks, under '*Mesure*,' that if the many different time-units in use (eight, after the lapse of the *Maxime* and *Longue*) were adopted to mark differences of time they are too many, and if of tempo, too few. Commenting on this, Westphal, *Theorie der musikalischen Rhythmik*, p. 83, points out as a curious case that ♪ ♪ ♪ are usual in

Adagios and ♪ ♪ ♪ in Allegros, and quotes an explanation offered in 1794 by Sulzer. This was that musicians, having come to regard ♪ ♪ as heavy notes and ♪ ♪ as light, now, when they see a piece of which ♪ is the shortest note, play it in a heavy manner, and if ♪ is the longest in a light manner. As he observes, this does not account for the waltz, which, with ♪ for time-unit, is of a decidedly light character. He does not account for this himself, but he

reminds us that Bach's minuets in ♪ ♪ ♪ became in Haydn's hands | ♪ ♪ | at a quicker pace; and adds, what has not proved true, that no one would be likely to depart from writing scherzos in Beethoven's | ♪ ♪ |.

It is possible also that as slow movements are apt to be variational and to indulge in groups composed of every sort of fraction of the original time-unit, the fact that the tails could be joined (whereas with ♪ and ♪ they cannot) proved a substantial argument for the smaller time values in such movements. If it is not altogether true that quaver and semi-quaver suggest lightness, yet minim and semi-breve do, to us now, look heavy, and so the true character of the madrigal, for instance, is expressed better in the former. A. H. F. S.

METRANOME (Fr. *métronomie*. Ger. *Metronom*, and *Taktmesser*). From the Gr. μέτρον, 'a measure,' and νόμος, 'a law,' an instrument, constructed for the purpose of enabling composers to indicate the exact pace at which they wish their works to be performed.

EARLY EXPERIMENTS.—Étienne Loulié in a work entitled *Éléments ou principes de musique, mis dans un nouvel ordre* (Paris, 1696; Amsterdam, 1698) describes an instrument, called a *chronomètre*, formed of a bullet suspended to a cord, and provided with means for lengthening or shortening the latter at pleasure, in such a manner as to indicate seventy-two different degrees of velocity. This was a good beginning. Nevertheless, the machine does not seem to have become generally known: for in many curious

treatises of later date we find vague glimmerings of similar ideas put forth in apparent ignorance of Loulié's discovery. Joseph Sauveur—the inventor of the word 'Acoustics,' and the author of a series of valuable papers on music contributed to the *Mémoires de l'Académie* between the years 1700 and 1711—is said to have proposed a *Chronomètre* of his own. In 1732 an article on a species of Musical Time-keeper was contributed to the *Mémoires des Sciences* by Enbrayg. Gabory recommended the use of the pendulum in his *Manuel utile et curieux sur la mesure du tems* (Paris, 1771). John Harrison's *Description concerning such a machine as will afford a nice and true mensuration of time; as also an account of the Scale of Music* (London, 1775) serves to show that the connexion between music and chronometry was not unnoticed in England. Davaux wrote an article on the subject for the *Journal Encyclopédique* in 1784. Not long afterwards, Pelletier made use of the pendulum in a way sufficiently ingenious to call forth a treatise on his invention from Abel Burja of Berlin in 1790. In the same year Breitkopf & Härtel printed, at Leipzig, *Zwölf geistliche prosaische Gesänge, mit Beschreibung eines Taktmessers*, by J. G. Weiske. And enough was done, both in France and in Germany, to show that even before the close of the 18th century the matter had attracted no small amount of serious attention.

In 1813 Gottfried Weber advocated the use of a pendulum, formed of a small bullet attached to the end of a string, upon which the necessary divisions were marked by knots; the whole being so contrived that it could be carried in the pocket—a far more simple and convenient arrangement than that of Loulié.¹ New plans were proposed by G. E. Stöckel, Zmeskall and other musicians of reputation, and Beethoven is known to have discussed them with interest. The subject excited an equal amount of attention in England, where many attempts were made to produce a perfect instrument. (See WRIGHT, Thomas.) Dr. Crotch, discarding Loulié's cord, used in place of it a stiff pendulum, formed of a long thin strip of box-wood, graduated in inches and hung upon a suitable frame. Another musical time-keeper invented by Henry Smart is described in the *Quarterly Musical Review* (vol. iii., London, 1821).

All these inventions failed, however, more or less completely, through the inconvenience caused by the length of the pendulum necessary to produce beats of even moderate slowness. In order to perform sixty oscillations in a minute a pendulum must, in our latitude, be 39.2 inches long. One long enough to execute forty would

be difficult to manage. This difficulty was eventually removed through the ingenuity of a celebrated mechanist named WINKEL, an inhabitant of Amsterdam, who first entertained the idea of constructing a metronome upon a system before untried, involving the use of a certain kind of double pendulum, the motions of which are governed by mathematical laws of extreme complexity though, practically considered, the principle is simple.

If a rod be suspended from its centre, and equally weighted at both ends, its centres of motion and gravity will coincide, and its position, when at rest, will be perfectly horizontal. But if the weight at one end be diminished, or moved a little nearer to the central pivot than the other, the centre of gravity will be displaced, and the unaltered end will gradually descend, until the rod hangs perpendicularly; the rapidity with which the change of position takes place depending upon the amount of diminution to which the upper weight is subjected, or its nearness to the pivot. In either case, the upper weight will exercise so strong a retarding influence on the lower one, that by carefully adjusting the proportion between weights and distances, it will be found possible to make a double pendulum, of the kind we have described, oscillate as slowly as an ordinary one five or six times its length.

WINKEL AND MÄLZEL.—The possibility of constructing a metronome upon this principle is said to have first suggested itself to Winkel about the year 1812; but it is difficult, in the face of conflicting statements, to arrive at a just conclusion as to the circumstances in which his invention was first given to the world. It is indeed known to have been warmly commended by the Dutch Academy of Sciences in a report dated Aug. 14, 1815; and, judging from this, we may surmise that it had by that time assumed a complete, if not a perfect form. We have, however, no definite proof of its then condition. It may have been finished, or it may not: but, finished or unfinished, it is certain that Winkel derived very little benefit from his discovery. Johann Nepomuk MÄLZEL (*q.v.*) had long meditated an improvement upon Stöckel's machine for beating time, and succeeded about this time in producing a species of so-called 'Chronometer,' which fairly satisfied Salieri, Weigl and even Beethoven himself. Fortified by the approval of these high authorities, he determined to bring out his invention in London. Meanwhile, he exhibited it, in company with other mechanical curiosities, in a travelling museum, which he carried about with him from city to city, through some of the principal countries of Europe. Among other places, he visited Amsterdam, where he saw Winkel's instrument. Struck with the superiority of the double pendulum to the principle adopted in his own time-keeper, he at once

¹ A pocket Metronome was registered by Greaves in 1850, and another, 'scala. Mälz., system Decher,' was patented by Albl, of Munich. A still further development of this simple kind of metronome, the principle of which is identical with an ordinary tape-measure, but with a spring to fasten the measure at any length, is that now sold by J. Curwen & Sons.

offered to purchase the invention. Winkel declined to cede his rights; but Maelzel, having now learned all he wanted to know, proceeded to Paris, patented the double pendulum in his own name, and in 1816 set up the first metronome manufactory on record. Winkel afterwards obtained possession of one of the Paris instruments; established its identity with his own; and (as Wurzbach states) took advantage of Maelzel's return to Holland to submit his case to the 'Niederländische Akademie' for decision. A Commission was appointed to investigate its merits; and as it was proved that the graduated scale was the only part of the instrument really originated by Maelzel, a formal judgment was recorded in Winkel's favour—too late, however, to do him full justice, for to this day his share in the work is, by common consent, suppressed, and Maelzel is universally regarded as the inventor of the instrument which bears his name.¹

THE METRONOME DESCRIBED.—The first metronomes made at the new manufactory differed so little in any point of vital consequence from those now in daily use, that a description of the one will include all that need be said concerning the other. The most important part of the business is a flat steel rod, about seven and a half inches long, and an eighth of an inch in breadth, pierced, at a distance of about five and a half inches from its upper end, by a hole, through which is passed the pivot upon which it is made to oscillate. This rod—answering to the double pendulum already described—is suspended, by means of the pivot, in front of a wooden case, and kept in a perpendicular position by a stout leaden bullet, fixed to its shorter end, which, thus weighted, sinks, of course, when at rest, to the lowest place. On its upper and longer end is placed a smaller weight, of brass, made to slide up and down at will, and so proportioned to the lower weight, that, by changing its position, the pendulum may be made to execute any number of oscillations, between 40 and 208 in a minute. As a guide to the position of the upper weight, the rod is backed by a graduated scale—really the invention of Maelzel—affixed to the wooden case; and by means of this the instrument may be so adjusted as to beat, silently, for a few minutes, at any required pace. To render it still more effective—capable of beating for a longer time, and with a distinctly audible sound—it is provided with a strong spiral spring, adapted to an escapement exactly similar to that of an ordinary loud-ticking clock.² In

this form it is complete enough to answer its intended purpose perfectly; nevertheless, an attempt is sometimes made to increase its efficiency still farther, by the addition of a little bell, which can be made to strike at every second, third, fourth or sixth oscillation of the pendulum, and thus to indicate the various accents, as well as the simple beats of the bar. The scale does not include all the units between 40 and 208—which, indeed, would be a more useless encumbrance—but proceeds from 40 to 60 by twos, from 60 to 72 by threes, from 72 to 120 by fours, from 120 to 144 by sixes, and from 144 to 208 by eights. In order to indicate the exact *Tempo* in which he wishes his piece to be performed, the composer uses a formula, beginning with the letters M. M. followed by a musical note, connected by the sign = with a number. The letters signify Maelzel's Metronome. The note implies that the beats of the pendulum are to be understood as representing minims, crotchets or quavers, as the case may be. The number indicates the place on the graduated scale to the level of which the top of the upper weight must be raised or lowered. Thus 'M. M. ♪=60' would show that the metronome was to be so arranged as to beat minims at the rate of 60 in a minute; 'M. M. ♪=100' that it was to beat crotchets at the rate of a hundred in a minute. Some metronomes are marked with the words *Andante*, *Allegretto*, *Allegro*, etc., in addition to the numbers. This is a useless contrivance; for it is evident that if ♪=100 be held to indicate *Moderato*, ♪=100 will stand for *Allegro* and ♪=100 for *Largo*. The word *Moderato*, therefore, without the minim, crotchet or quaver to qualify it, means nothing at all. W. S. R.

For the purpose of silently indicating the time, the tape-measure already mentioned in the footnote, p. 448, and the ingenious and compact apparatus called 'Pinfold's Patent Metronome,' are of great use. The latter has the weight moving on a graduated scale, and a swinging weight below a small tripod. M.

METZLER. The founder of this well-known business was (1) VALENTINE METZLER, a native of Bingen on the Rhine, who opened a shop in Wardour Street for the sale of flutes and other instruments about the year 1790. He married an Englishwoman, and his only child was (2) GEORGE RICHARD METZLER (1797–1867). The name Metzler first appears in the London directories in 1812, and the style Metzler & Son was adopted in 1819; V. Metzler probably died in 1840, as the name after 1841 is G. Metzler & Co. The firm is said to have entered upon music-publishing in 1816, and removed in 1842 to

¹ We are indebted, for most of these particulars, to A. W. Thayer, whose careful researches have placed him in possession of much valuable information on this subject. Bernsdorf tells a different story, to the effect that Maelzel, unable to overcome some difficulty connected with his improvement of Stöckel's time-keeper, took Winkel into consultation; that Winkel solved the problem for him; and that he then proceeded to Paris and there patented Winkel's invention in his own name.

² In the first time-keeper made by Maelzel, in his attempt to improve upon Stöckel's Chronometer, the sound was produced by a lever (*Hebel*), striking upon a little anvil (*Ämboß*). This explains

a curious expression contained in a letter written by Beethoven to Zmeskall—"Erste Schwingungsmann der Welt, und dies ohne Hebel" ('first swingman of the world, and that without a lever'). For a description of the instrument—known as the 'Stöckel-Maelzel Chronometer'—see the *A.N.Z.* for 'Dec. 1, 1817'.

37 Great Marlborough Street. The only surviving child of George Richard was (3) GEORGE THOMAS METZLER (1835-79). He gained a practical knowledge of the pianoforte in Germany, and had a distinct literary bias, which he followed as far as opportunity permitted. He became known as a writer of words for songs, Mrs. George March (Virginia Gabriel), Mme. Sainton-Dolby, Henry Smart and J. L. Hatton having set his graceful lyrics to music. In 1867, Frank Chappell, who had acquired his knowledge of business in the Bond Street firm of that name, joined G. T. Metzler in partnership, and from his suggestion the important agency of Messrs. Mason & Hamlin, which practically introduced the American organ into this country, became a speciality of the Metzler business. This firm was early in the field with the precursors of the harmonium; their 'improved Seraphines' are advertised in the *Musical World* in 1838. Frank Chappell died in 1886, and from that date the business was carried on by the trustees of his estate until 1893, when it became a limited company.

About 1810-12 a certain 'Mr. Metzler,' of 9 Newman Street, issued a small oblong book of airs for the flageolet, called 'The Magic Flageolet.' This came out in numbers, many being issued by James Power, and others by Metzler himself, whose name was affixed to many of the pieces. A. J. H.; addns. F. R.

MEYER, GREGOR, was organist of the Cathedral Church at Solothurn in Switzerland in the earlier part of the 16th century. Our whole knowledge of him is derived from Glarean, who in his *Dodecachordon*, 1547, frequently mentions him in terms of the highest respect for his musical abilities, and obtained from him for the purposes of his work various compositions as examples of the proper use of the ecclesiastical modes in polyphonic music, inattention to which Glarean is disposed to censure in the works of Josquin and others. So, for instance, he communicates of Meyer eleven somewhat elaborate settings *a* 4 and 3 of the Kyrie and Christe Eleison as illustrations of the proper use in conjunction of the Æolian and Hypo-æolian modes, also a motet, 'Confitebor Domino,' as an example of the Lydian and Hypo-Lydian united, and two settings of the antiphon 'Qui mihi ministrat,' etc., one as an example of what Glarean describes as the genuine form of the Lydian mode without B flat, and the other in the more commonly used form of the Lydian with the flat. J. R. M.

MEYER, SIGTENHORST, see SIGTENHORST MEYER.

MEYERBEER, GIACOMO (properly JAKOB LIEBMANN BEER) (b. Berlin, Sept. 5, 1791; d. Paris, May 2, 1864), famous dramatic composer, of Jewish parentage. His father, Herz Beer, a native of Frankfort, was a wealthy banker in Berlin; his mother (*née* Amalie

Wulf) was a woman of rare mental and intellectual gifts, and high cultivation. He was their eldest son, and a legacy from a rich relation named Meyer caused his name to take the form in which it was known. He seems to have been the sole member of his family remarkable for musical gifts; but two of his brothers achieved distinction in other lines—Wilhelm as an astronomer, and Michael (who died young) as a poet.

His genius showed itself early. His first instructor was Lauska, an eminent pianoforte-player, and pupil of Clementi; and old Clementi himself, although he had long given up teaching, was so much struck, during a visit to Berlin, with the promise displayed in the boy's performance as to consent to give him lessons. As early as 7 years old he played in public the D minor concerto of Mozart, and two years later was reckoned one of the best pianists in Berlin. It was as a pianist that he was expected to win his laurels, but as he had also, from an early age, shown much talent for composition, he was placed under Zelter for instruction in theory, and subsequently (for Zelter's rigid severity was insupportable to the young prodigy) under Bernard Anselm Weber, director of the Berlin Opera, and a pupil of the then celebrated Abbé VOGLER (*q.v.*). In 1810 Meyerbeer became an inmate of Vogler's house. He had for companions Gänsbacher and Carl Maria von Weber, who had studied with Vogler some years before, and was now attracted to Darmstadt by his presence there, and between whom and Meyerbeer, eight years his junior, there sprang up a warm and lasting friendship. Each morning after early Mass, when the young men took it in turns to preside at the organ, they assembled for a lesson in counterpoint from the Abbé. Organ fugues were improvised in the Cathedral, on subjects contributed by all in turn. In this way Meyerbeer's education was carried on for two years. His great powers of execution on the pianoforte enabled him to play at sight the most intricate orchestral scores, with a full command of every part. His 4-part 'Geistliche Oden von Klopstock' were published at this time, and an oratorio of his, entitled 'Gott und die Natur,' was performed in presence of the Grand Duke, who appointed him composer to the court. His first opera, 'Jephthas Gelübde,' was also written during this Vogler period and produced at Munich in 1813. Biblical in subject, dry and scholastic in treatment, it resembled an oratorio rather than an opera, and although connoisseurs thought it promising, it failed to please the public. A comic opera, 'Alimelek,' or 'Die beiden Kalifen,' met with a better fate at Stuttgart in 1813. It was bespoken and put in rehearsal by the manager of the Kärnthnerthor theatre in Vienna.

To Vienna, in consequence, Meyerbeer now

MEYERBEER

ROSSINI

From a drawing by Louis Dupré in the possession of A. F. Hill

repaired, with the intention of making his appearance there as a pianist. But on the very evening of his arrival he chanced to hear Hummel, and was so much impressed by the grace, finish and exquisite *legato*-playing of this artist that he became dissatisfied with all he had hitherto aimed at or accomplished, and went into a kind of voluntary retirement for several months, during which time he subjected his technique to a complete reform, besides writing a quantity of pianoforte music, which, however, was never published. He made a great sensation on his first appearance, and Moscheles, who heard him at this time, was wont to say that, had he chosen a pianist's career, few virtuosi could have rivalled him. But to be a composer was the only goal worthy of his ambition, although at this moment it seemed to recede as he pursued it. 'Die beiden Kalifen,' performed in Vienna in 1814, had been an utter failure. Salieri, however, assured him that he wanted nothing in order to succeed but freedom from scholastic trammels, and, above all, knowledge of the human voice and how to write for it, a knowledge, Salieri added, only to be acquired in Italy.

Accordingly, in 1815, Meyerbeer went to Venice. It was Carnival time. Rossini's 'Tancredi' was then at the height of its popularity, and all Venice resounded with 'Di tanti palpiti.' To Meyerbeer this was a revelation, and he surrendered spell-bound to the genial charm. Hope awoke, emulation was rekindled. He had no style of his own to abandon, but he abandoned Vogler's without regret, and set to work to write Italian operas. His success was easy and complete. 'Romilda e Costanza' (produced at Padua in 1818, Pisoni in the leading part), 'Semiramide riconosciuta' (Turin, 1819), 'Eduardo e Cristina' and 'Emma di Resburgo' (Venice, 1820) were all received with enthusiasm by the Italian people, and this at a time when it was difficult for any one but Rossini to obtain a hearing. The last-named opera was played in Germany under the title of 'Emma von Leicester,' and not unsuccessfully. 'Margherita d'Anjou,' the best of these operas, was written for La Scala at Milan and given there in 1820. 'L'esule di Granata' (1822) made but little impression. 'Almansor' was begun at Rome, but not completed. In 1823, while engaged in writing the 'Crocato,' the composer went to Berlin, where he tried, but failed, to get a performance of a 3-act German opera—'Das Brandenburger Thor.' This was a time of transition in his life. He was wearying of the Italian manner, and he could not be insensible to the murmurs of dissatisfaction which everywhere in Germany made themselves heard at the degradation of his talent by his change of style. Foremost among the malcontents was C. M. von Weber, who had looked

on his friend as the hope of that German opera in which were centred his own ardent aspirations, and who in 1815 at Prague, and subsequently at Dresden, had mounted 'Die beiden Kalifen' with extraordinary care and labour, hoping perhaps to induce him to return to his old path. 'My heart bleeds,' he wrote, 'to see a German composer of creative power stoop to become an imitator in order to win favour with the crowd.' In spite of all this the friendship of the two men remained unshaken. On his way back to Italy Meyerbeer spent a day with Weber, who wrote of it:

'Last Friday I had the happiness of having Meyerbeer with me. It was a red-letter day—a reminiscence of dear old Mannheim. . . . We did not separate till late at night. He is going to bring out his "Crocato" at Trieste, and in less than a year is to come back to Berlin, where perhaps he will write a German opera. Please God he may! I made many appeals to his conscience.'

Weber did not live to see his wish fulfilled, but the desire which he expressed before his death, that an opera he left unfinished should be completed by Meyerbeer, showed that his faith in him was retained to the last.

The 'Crocato' was produced at Venice in 1824, and created a furore, the composer being called for and crowned on the stage. In this opera, written in Germany, old associations seem to have asserted themselves. More ambitious in scope than its predecessors, it shows an attempt, timid indeed, at dramatic combination which constitutes it a kind of link between his 'wild oats' (as in after years he designated these Italian works) and his later operas.¹

In 1826 he was invited to witness its first performance in Paris, and this proved to be the turning-point of his career. He eventually took up his residence in Paris, and lived most of his subsequent life there. From 1824–31 no opera appeared from his pen. A sojourn in Berlin, during which his father died, his marriage and the loss of two children, were among the causes which kept him from public life. But in these years he undertook that profound study of French character, French history and French art which resulted in the final brilliant metamorphosis of his dramatic and musical style, and in the great works by which his name is remembered.

Paris was the headquarters of the unsettled, restless, tentative spirit which at that epoch pervaded Europe. The prevailing spirit of eclecticism found its perfect musical counterpart in the works of Meyerbeer. The assimilative power that, guided by tenacity of purpose, enabled him to identify himself with any style he chose, found in this intellectual ferment, as yet unrepresented in music, a wellnigh inexhaustible field, while these influences in return proved the key to unlock all that was original

¹ It is significant that, with the exception of the 'Crocato,' not one of these early works, so enthusiastically received, held the stage after their composer had left Italy.

and forcible in his nature. And he found a fresh stimulus in the works of French operatic composers.

'He did not shrink, as a man, from the unremitting, insatiable industry he had shown as a boy, and he buried himself in the literature of French opera, from the days of Lullu onwards. . . . It was interesting to see in his library hundreds of operas—scores great and small, many of which were hardly known by name even to the most initiated. . . . In his later works we see that to the flowing melody of the Italians and the solid harmony of the Germans he united the pathetic declamation and the varied, *piquant* rhythm of the French.'¹

Last, but not least, in his librettist, Eugène Scribe, he found a worthy and invaluable collaborator.

Many vicissitudes preceded the first performance, in 1831, of 'Robert le Diable,' the opera in which the new Meyerbeer first revealed himself, and of which the unparalleled success extended in a very few years over the whole civilised world. It made the fortune of the Paris Opéra. Scenic effect, striking contrast, novel and brilliant instrumentation, vigorous declamatory recitative, melody which pleased none the less for the strong admixture of Italian-opera conventionalities, yet here and there (as in the beautiful scena 'Robert! toi que j'aime') attaining a dramatic force unlooked for and till then unknown, a story part heroic, part legendary, part allegorical—with this strange picturesque medley all were pleased, for in it each found something to suit his taste.

The popularity of the opera was so great that the 'Huguenots,' produced in 1836, suffered at first by contrast. The public, looking for a repetition, with a difference, of 'Robert,' was disappointed at finding the new opera quite unlike its predecessor, but was soon forced to acknowledge the incontrovertible truth, that it was immeasurably the superior of the two. It is, as treated by Meyerbeer, the most vivid chapter of French history that ever was written. The splendours and the terrors of the 16th century—its chivalry and fanaticism, its ferocity and romance, the brilliance of courts and the 'chameleon colours of artificial society,' the sombre fervour of Protestantism—are all here depicted and endued with life and reality, while the whole is conceived and carried out on a scale of magnificence hitherto unknown in opera.

In 1838 the book of the 'Africaine' was given to Meyerbeer by Scribe. He became deeply interested in it, and the composition and re-composition, casting and recasting of his work, occupied him at intervals to the end of his life. His excessive anxiety about his operas extended to the libretti, with which he was never satisfied, but would have modified to suit his successive fancies over and over again, until the final form retained little likeness to the original. This was especially the case with the 'Africaine,' subsequently called 'Vasco de Gama' (who,

although the hero, was an afterthought!), and many were his altercations with Scribe, who got tired of the endless changes demanded by the composer, and withdrew his book altogether; but was finally pacified by Meyerbeer's taking another libretto of his, 'Le Prophète,' which so forcibly excited the composer's imagination that he at once set to work on it and finished it within a year (1843).

A good deal of his time was now passed in BERLIN (*q.v.*),² where the King had appointed him Generalmusikdirector in 1842. Here he wrote several occasional pieces, cantatas, marches and dance music, besides the 3-act German opera, 'Ein Feldlager in Schlesien.' The success of this work was magically increased, a few weeks after its first performance, Dec. 7, 1844, by the appearance in the part of the heroine of Jenny Lind.

He at this time discharged some of the debt he owed his dead friend, C. M. von Weber, by producing 'Euryanthe' at Berlin. His duties at the opera were heavy, and he had neither the personal presence nor the requisite nerve and decision to make a good conductor. From 1845 he only conducted—possibly not to their advantage—his own operas, and those in which Jenny Lind sang.

The year 1846 was marked by the production of the overture and incidental music to his brother Michael's drama of 'Struensee.' This very striking work is its composer's only one in that style, and shows him in some of his best aspects. The overture is his most successful achievement in sustained instrumental composition. A visit to Vienna (where Jenny Lind achieved a brilliant success in the part of Vielka in the 'Feldlager in Schlesien') and a subsequent sojourn in London occurred in 1847. In the autumn he was back in Berlin, where, on the occasion of the King's birthday, he produced, after long and careful preparation, 'Rienzi,' the earliest opera of his future rival and bitter enemy, Richard Wagner. The two composers had seen something of one another in Paris. Wagner was then in necessitous circumstances, and Meyerbeer exerted himself to get employment for him, and to make him known to influential people in the musical world. Subsequently Wagner, while still in France, composed the 'Fliegende Holländer,' to his own libretto. The score, rejected by the theatres of Leipzig and Munich, was sent by its composer to Meyerbeer, who brought about its acceptance at Berlin. Without claiming any extraordinary merit for these good offices of one brother artist to another, we may, however, say that Meyerbeer's conduct was ill-requited by Wagner.

'Le Prophète,' produced at Paris in 1849, after long and careful preparation, materially

¹ Mendel.

² On the conditions of his life at Berlin, see the *Sammelbände* of the Int. Mus. Ges. iv. 519.

added to its composer's fame. Thirteen years had elapsed since the production of its predecessor. Once again the public, looking for something like the 'Huguenots,' was disappointed. Once again it was forced, after a time, to do justice to Meyerbeer's power of transferring himself, as it were, according to the dramatic requirements of his theme. But there are fewer elements of popularity in the 'Prophète' than in the 'Huguenots.'

Meyerbeer's health was beginning to fail, and after this time he spent a part of every autumn at Spa, where he found a temporary refuge from his toils and cares. Probably no great composer ever suffered such a degree of nervous anxiety about his own works as he did. During their composition, and for long after their first completion, he altered and retouched continually, never satisfied and never sure of himself. During the correcting of the parts, the casting of the characters, the 'coaching' of the actors, he never knew, nor allowed any one concerned to know, a moment's peace of mind. Then came endless rehearsals, when he would give the orchestra passages scored in two ways, written in different coloured inks, and try their alternate effect; then the final performance, the ordeal of public opinion and of possible adverse criticism, to which he was so painfully susceptible that, as Heine says of him, he fulfilled the true Christian ideal, for he could not rest while there remained one unconverted soul, 'and when that lost sheep was brought back to the fold he rejoiced more over him than over all the rest of the flock that had never gone astray.'

Faithful to change, he now challenged his adopted countrymen on their own especial ground by the production at the Opéra-Comique in 1854 of 'L'Étoile du nord.' To this book he had intended to adapt the music of the 'Feldlager in Schlesien,' but his own ideas transforming themselves gradually while he worked on them, there remained at last only six numbers of the earlier work. 'L'Étoile' achieved considerable popularity, although it aroused much animosity among French musicians, jealous of this invasion of their own domain, which they also thought unsuited to the melodramatic style of Meyerbeer. The same may be said of 'Le Pardon de Ploermel' (Dinorah), founded on a Breton idyll, and produced at the Opéra-Comique in 1859. Meyerbeer's special powers found no scope in this comparatively circumscribed field. The development of his genius since 1824 was too great not to be apparent in any style of composition, but these French operas, although containing much that is charming, were, like his Italian 'wild oats,' the result of an effort of will—the will to be whomever he chose.

After 1859 he wrote, at Berlin, two cantatas, and a grand march for the Schiller Centenary Festival, and began a musical drama—never

finished—called 'Göthe's Jugendzeit,' introducing several of Goethe's lyrical poems, set to music. His life was overshadowed by the death of many friends and contemporaries, among them his old coadjutor, Scribe, to whom he owed so much.

In 1862 he represented German music at the opening of the London International Exhibition by his 'Overture in the form of a March.' (He had before visited England in 1832.) The next winter he was again in Berlin, still working at the 'Africaine,' to which the public looked forward with impatience and curiosity. For years the difficulty of getting a satisfactory cast had stood in the way of the production of this opera. His excessive anxiety and fastidiousness resulted in its being never performed at all during his lifetime. In Oct. 1863 he returned, for the last time, to Paris. The opera was now finished, and in rehearsal. Still he corrected, polished, touched and retouched: it occupied his thoughts night and day. But he had delayed too long. On Apr. 23 he was attacked by illness, and on May 2, 1864, he died.

The 'Africaine' was performed after his death at the Opéra in Paris, Apr. 28, 1865. When it appeared in London (in Italian) on the 22nd July following, the creation by Pauline Lucca of the part of Selika was long remembered by those who saw it. The work itself had suffered somewhat from the incessant change of intention of its composer, having occupied him from 1838-43. Laid aside at that time for many years, and the book then undergoing a complete alteration, a second story being engrafted on to the first, the composition, when resumed, was carried on intermittently to the end of his life. The chorus of bishops, and Nelusko's two airs, for instance, were written in 1858; the first duet between Vasco and Selika in 1857; while the second great duet took its final form as late as the end of 1862. The excessive length of the opera on its first production (when the performance occupied more than six hours) necessitated considerable curtailments detrimental to coherence of plot. But in spite of all this, the music has a special charm, a kind of exotic fragrance of its own, which will always make it to some minds the most sympathetic of Meyerbeer's works. It is, in fact, the most purely musical of them all.

Subjoined is a list of his principal works:

OPERAS AND DRAMATIC PIECES

1. Jephthas Gelübde (performed in English, 1824; 11. formed 1811); 2. Les Amours de Robert le Diable, 1831; 12. Les Tévelinde (in German, monodrama for soprano, chorus and larger orchestra, 1836); 13. Ein Feldlager in Schlesien, 1840; 14. clarinet obbligato, in which the Struensee overture and entr'acte instrumental figured as a scene, 1846; 15. Le Prophète, dramatic personage; 16. L'Étoile du nord, 1854; 17. Le Pardon de Ploermel (Italian, 1859); 18. L'Africaine, 1864; 19. An Oratorio—Gott und die Natur (performed 1811).
3. Emma di Resburgo, 1819; 4. Dinorah, 1859; 5. Romilda e Costanza, 1818; 6. Semiramide riconosciuta, 1819; 7. Margherita d'Anjou, 1820; 8. L'esule di Granata, 1823; 9. Das Brandenburg Thor, 1823; 10. Aeschylus.

Choruses to the Eumenides of Aeschylus.

CANTATAS AND VOCAL MUSIC

- Seven sacred cantatas of Klopstock, for four voices, unaccompanied.
- An Gott. Hymn, by Gubitz. For four voices.
- Le Génie de la musique à la tombe de Beethoven. For solo and chorus.
- Cantata, for four voices. Written for the inauguration of Gutenberg's statue at Mainz.
- Cantata, Maria und ihr Genius. Composed for the silver wedding of Prince and Princess Charles of Prussia. For solo and chorus.
- Serenade. 'Braut geleitet aus der Heimath.' Composed for the wedding of Princess Louise of Prussia. For eight voices, unaccompanied.
- La festa nella corte di Ferrara. Grand Cantata, with tableaux.
- March of the Bavarian Archers. Cantata for four voices and male chorus, with accompaniment of brass instruments.
- (Ode to Rauch, the sculptor. Solo, chorus and orchestra.
- Festal Hymn. Composed for the silver wedding of the King of Prussia. Four voices and chorus.
- Freundschaft. Quartet for men's voices.
- The 91st Psalm, for eight voices. Composed for the choir of Berlin Cathedral. Published, in score, by Brandus at Paris.
- Peter Noster, for four voices, with organ accompaniment.
- Twelve Psalms, for double chorus, unaccompanied. (MS.)
- Stabat Mater. (MS.)
- Miserere. (MS.)
- Te Deum. (MS.)

SONGS

- A large number of songs with PF. accompaniment, among which the best known are perhaps 'Le Moine' (for bass) and 'Das Fischerndädchen.' The whole of them were published, together with 'Le Génie de la musique à la tombe de Beethoven,' in one volume, entitled 'Quarante Mélodies à une et plusieurs voix,' by Brandus at Paris.
- 'Neben Dir.' song for tenor voice, with violoncello obligato.
- 'Des Jägers Lied.' for bass voice, with horn obligato.
- 'Dichters Wahlspruch,' canon for three voices.
- 'Venezia,' barcarole.
- 'Der Schäfers Lied' for tenor voice with clarinet obligato.
- And many others of less importance.

INSTRUMENTAL MUSIC

- First Dance, with torches (Fackeltanz), for brass orchestra. Composed for the King of Bavaria's wedding, 1840.
- Second ditto, for the wedding of Princess Charlotte of Prussia, 1850.
- Third ditto, for the wedding of Princess Anne of Prussia, 1853.
- Grand March, for the Schiller Centenary Festival, 1859.
- Overture, in the form of a march, for the opening of the International Exhibition in London, 1862.
- Coronation March, 1863.
- A quantity of PF. music, written in youth, all unpublished.
- F. A. M.

BIBLIOGRAPHY

- There are Lives and general studies of Meyerbeer's work by—
- A. DE LABRALDE (1864, with catalogue of works.)
- A. POUJIN. (1864.)
- H. BLAZE DE BURY. (1865.)
- H. MENDEL. (1865.)
- J. WEHRER. (1906.)
- L. DUBOIS (Les Maîtres de la musique). (1913.)
- HERMANN ABERT. (1918.)
- JULIUS KAPP. (1920.)
- Special studies include—
- G. R. KUHN: Meyerbeer Jugendopern. (Z. M. W., Apr. 1919.)
- W. ALTMANN: Meyerbeer im Dienste des preussischen Königs. (Z. M. W., Nov. 1919.)
- J. KAPP: Wagner-Meyerbeer, ein Stück Operngeschichte, etc. (Die Musik, Oct. 1923.)
- MS. diaries of Meyerbeer (1812-64) are now in the Preussische Bibliothek.

MEYER-HELMUND, ERIK (b. St. Petersburg, Apr. 25, 1861), after learning the rudiments of music from his father, went to Berlin to study composition with Kiel and singing with Stockhausen. He had a successful career as a concert singer, but his fame, at all events in England, chiefly rests upon his many graceful songs, all of which are of a kind to appeal at once to a large number of hearers, and many of which are written to his own words. The operas 'Margitta' (Magdeburg, 1889), 'Der Liebeskampf' (Dresden, 1892) were very successful; his ballet, 'Rübezahl,' or 'Der Berggeist,' was given at Leipzig with great success; and a 1-act burlesque opera, 'Trischka,' was given at Riga in 1894. It was followed by 'Lucullus' (Riga, 1905), 'Münchener Bilderbogen' (Munich, 1910), another opera, 'Heines Traumbilder,' and a light opera, 'Taglioni' (both Berlin, 1912). (Riemann; Baker.) M.

MEZARI, MADALENA (called CASULANA) (b. Vincenza, 2nd half of 16th cent.), a composer

who apparently lived afterwards at Venice. She was a madrigal composer of distinction to whom A. Gardano dedicated a book of madrigals by Filippo di Monte. She composed 1 book of madrigals a 4 v. (1568; 2nd edition, 1583), 1 book of madrigals (1570), and a third book of madrigals a 5 v. (1583). Various numbers are in collective volumes (Q.-L.).

MEZENGEAU, see MÉSANGEAU.

MEZZO, MEZZA (Ital.), 'half' or 'medium'; is used of voices as a qualification both as regards tone and range. Hence 'mezza voce' means singing at half-power, a quiet, unforced utterance. (Cf. MEZZO-SOPRANO.)

MEZZOGORRI, GIOVANNI NICOLÒ, an early 17th-century Italian church composer, vicar and maestro di cappella of Comacchio Cathedral, 1612. He composed a large amount of sacri concerti, masses, madrigals, motets, etc., published between 1611 and 1623 (list in Q.-L.).

MEZZO-SOPRANO, the name given to the woman's voice which combines some of the rich quality of the true CONTRALTO (q.v.) with the bright ring of the true SOPRANO (q.v.), and with a compass generally of about two octaves up to b' flat. The tessitura lies in a most effective register, between those of the contralto and the soprano, and the voice in consequence is greatly used for music of a dramatic character.

MI, the third note of the major scale in the nomenclature of France and Italy. See E; HEXACHORD; SOLMISATION.

MIASKOVSKY, NICOLAI YAKOVLEVITCH (b. Novogorogievsk, Russia, now Poland, Apr. 8/20, 1881), composer, son of a general of engineers in the Russian army, was educated for a military career, but studied music with Glière in Moscow and afterwards entered the St. Petersburg Conservatoire as a pupil of Rimsky-Korsakov and Liadov. At the outbreak of war in 1914 he joined the army, which he did not leave until 1920. The following year he became professor of composition at the Moscow Conservatoire.

In his own country Miaskovsky is regarded as the musician destined to carry forward the evolution of Russian symphonic music. His works are for the most part planned on a large scale and show a predilection for vast formal conceptions and elaborate thematic development. The first orchestral work of importance was a symphoniette, begun in 1907, finished in 1910, and revised in 1922. The first symphony followed in 1908, and was also rewritten in 1922. The symphonic poems 'Nevermore' (after Poe) and 'Alastor' (after Shelley) belong to the years 1909-11 and 1912-14 respectively. The second symphony was finished in 1911, the third in 1914, the fourth in 1917, the fifth in 1918. Nos. 6 and 7 appeared in 1922 and No. 8 was completed in 1925.

Only one or two of the symphonies being published, Miaskovsky's work has not yet been adequately performed outside Russia. A few isolated works have been heard in London, New York, Berlin and elsewhere. Sir Henry J. Wood performed 'Alastor' at a Queen's Hall Promenade Concert in Oct. 1923. It made no profound impression, but was probably not a representative work. The sixth symphony was given in London by the same conductor on Mar. 5, 1927.

Victor Belaiev sees in Miaskovsky's music some superficial influences, such as that of Glazounov as regards symphonic structure and that of Scriabin in respect of harmonic idiom, while he attributes the composer's care to relate his music as much to human experience as to artistic principles to a certain affinity with Moussorgsky; but he maintains that such derivations confine themselves to generalities and that Miaskovsky's work reveals above all a strongly original creative personality.

Miaskovsky has also written three sonatas for piano, several smaller pieces for that instrument, a number of songs, and a sonata for violoncello and piano. E. B.

MICHAEL, (1) ROGIER (b. Bergen, Dutch Brabant; *d. circa* 1619), was the son of a certain Simon Michael, who is described as Mechanicus and Musicus to the Emperor Ferdinand I.

He is first mentioned as being before 1574 in the service of the Markgraf of Ansbach as tenor singer. In 1575 he became tenor singer at the Electoral Chapel at Dresden, and in 1587 became Kapellmeister to the Elector. For some years before his death, owing to Michael's age and growing infirmities, the Elector was obliged to send for Michael Praetorius, and afterwards Heinrich Schütz, to take his place on all important occasions. Heinrich Schütz definitely succeeded Michael in 1619. The second part of the Dresden Gesangbuch of 1593 contains fifty-two Choralbearbeitungen by Michael, which Otto Kade describes as simple four-part settings, *nota contra notam*, with the Choral melody in the descant; but, judging from the specimen Kade himself gives in his *Beilagen zu Ambros*, a setting of 'Ein feste Burg,' we cannot call them simple harmonic settings in the modern sense, as they have also something of the freedom of the motet style. Another work, not preserved complete, is a book of Introits for Sundays and Festivals, set as motets for five voices, 1603. A few other occasional works, printed and MS., are enumerated in *Q.-L.*

(2) TOBIAS (b. Dresden, 1592; *d.* 1657), son of Rogier, was first a soprano singer at the court chapel in Dresden, and receiving his further education at Schulpforta and Wittenberg, became in 1619 Kapellmeister at Sondershausen. In 1631 he succeeded Johann Hermann Schein as cantor and Musikdirector of the Thomaskirche at Leipzig. His chief work

is 'Musikalischer Seelenlust,' of which the 'Erster Theil,' 1634-35, contains thirty sacred pieces, *a 5*, in the madrigal style, and the 'Ander Theil,' 1637, fifty pieces, *a 1-6*, in the concerto style for voices and instruments. Other occasional and MS. works are enumerated in *Q.-L.*

J. R. M.

MICHEL ANGELO CANCEINO, a 16th-17th-century composer of Viterbo, a Carmelite monk and maestro di cappella at Viterbo Cathedral. He appears in some works¹ under Canceino, but generally signed himself only Michel Angelo. He composed 2 books of motets *a 5 v.* (only 2nd book, of 1608, still known), and a book of madrigals *a 4*, *5*, *6* and *8 v.* (Venice, 1590); also some songs in collective volumes (*Q.-L.*).

MICHELI, DOMENICO, lived at Bologna 1564 and Ravenna 1581. He composed 1 book of masses *a 5 v.*, and 5 books of madrigals *a 5* and *6 v.*, with some 'Dialoghi' of 8 and 10 parts (*Q.-L.*).

MICHELI, ROMANO (b. Rome, c. 1575), studied music in Rome under Francesco Soriano, and acquired fame among his contemporaries as a learned contrapuntist. Doni² describes him as a 'peritissimo contrapuntista, ed allievo in questa professione del Soriani.' Printz³ also praises Micheli's work 'in dem stylo canonico.' Micheli made a tour of all the more important towns in Italy—Milan, Ferrara, Bologna, Venice, Florence and Naples; he met many celebrated musicians, with whom there was much friendly rivalry in the pastime of composing music on given themes. In the preface to *Musica vaga*, 1615, he gives an account of his travels; he was warmly received in Venice, and adds:

'non solo darml occasione di comporre diverse opere ecclesiastiche a mio beneplacito, ma anche alcuni motetti con obblighi, e canoni diversi, datomi da ciascheduno il soggetto, come in essi motetti e canoni è annotato.'

In 1616 he was maestro di cappella at the church of Concordia, Modena. He became a priest; in 1610 he was already a 'clerico,' and in 1621 was placed for a time at Aquileia. He returned to Rome in 1625 as maestro di cappella at S. Luigi de' Francesi. One of Banchieri's *Lettere armoniche*,⁴ Bologna, 1628, p. 50, is addressed to 'Sig. D. Romano Micheli, Roma.' In 1659 he was still alive at the age of 84.

Micheli took part in an amusing squabble as to the relative merits of German and Italian composers, between the Italian organist Marco Scacchi and Paul Syfert, organist at Danzig. The latter asserted that Italian compositions were of a trivial character, and that their authors should go to Danzig and study genuine music. Micheli promptly sent copies of his musical works to both Syfert and Forster of

¹ Révis: Vogel.

² *Annotazioni*, Rome, 1640, p. 395.

³ *Sing- und Klängekunst*, 1690, ch. xli.

⁴ *Parisiini*, l. 4.

Danzig, with a request that they would test Italian work before they condemned it. The effect was immediate, a polite reply was received in Feb. 1647, and the matter then dropped. Scacchi himself was not so ready to acknowledge Micheli's pre-eminence. The work, 'Canoni musicali composti sopra le vocali di più parole da Romano Micheli romano, del qual modo di comporre egli è inventore,' Rome, 1645, roused him to publish a protest (Warsaw, Mar. 16, 1647) against the assumption that Micheli was the originator of this type of canon, which could be traced to a much earlier date. Micheli replied by the publication of a collection of canons, full of the most ingenious devices, entitled 'La potestà pontificia diretta dalla santissima Trinità.' The manuscript inscribed 'Canoni musicali di Romano Micheli romano' was preserved in the library of S. Agostino.¹

LIST OF WORKS

Psalmi ad officium vespereorum musicis notis expressi, et ternis vocibus decantandi. Una cum parte organica. Romano Michaelis clerico romano auctore. Liber primus. Romae. J. B. Roblextum, 1610. 4to.

Musica vaga et artificiosa continente motetti con obblighi, e canoni diversi, etc. Di D.R.M. rom. Venetia. Giacomo Vincenti, 1615. Folio. In the British Museum: the music, writes Burney (*Hist. of Music*, iii. 319), shows nothing but 'toll and pedantry.' Salmi per i vesperi a tre voci in concerto da cantarsi in diversi modi . . . con il basso continuo per l'organo. Libro secondo. Opera terza. Venetia. Magni, 1616. 4to.

Completa a sei voci con tre tenori concertata all' uso moderno con il basso continuo per l'organo di D.R.M. rom. maestro di cappella nella cattedrale di Concordia. Venetia. 1616. Fétis gives an edition of 1818.

Lettera di R.M. rom. all' . . . sig. eccellentissimi musici della cappella di N.S. ed altri musici romani neli Patroni osservandissimi. Venetia. G. Vincenti, 1618. Contains a canon in twelve parts.

Madrigali a sei voci in canone, con la resolutione delle parti, nel quale per mezzo de gli accidenti l' armonia discende un' tuono e di poi ascende il tuono già disceso, potendosi anco cantare per i suoi riversi, come il musici perti sanno: studio curioso non più veduto. Con un avviso a tutti il Sig. musici di Roma. Dato in luce da R.M. rom. Benedicatio nella metropoli d' Aquileia. Roma. Soldi, 1621. Contains the madrigal 'O voi che sospirate,' which was afterwards printed by Angelo Berardi both in his *Miscellanea musicale*, Bologna, 1689, p. 60, and in his *Arcani musicali*, 1690, p. 14; he describes it as written 'con nobilissimo artificio.'

Certezza d' artificio musicali, non più fatti, contenuti neli dieci obblighi della messa a dieci voci: con la risposta all' opposizione, fatta dal Sig. A. Antonelli, musico in Roma, sopra la quantità di essi obblighi. Dato in luce da R.M. rom. Benedicatio nella metropoli d' Aquileia. Venetia. Bonfadino, 1621. 4to.

Copia di lettera con manoscrittà mandata dal Sig. A. Antonelli musico in Roma a me R.M., ecc., con la risposta fattagli nelle presente stampe, etc. Venetia. Bonfadino, 1621. 4to.

Vivit Deus. Canones super pluribus verborum vocalibus: quod artificium componendi, neque in Italia, nec alibi hactenus vixum est nonnullaque curioso artificio ad musices pertinetissimum pertinentia. Auctore R.M. rom. Opus sextum. Romae. L. Grignani, 1649. Folio.

Avviso inviato da me R.M. insieme col foglio reale del canone musicale Pons Signatus, alli famosi e peritissimi sig. musici d' Italia e di tutti gli altri Regni, etc. Roma. Grignani, 1650. 4to. This work gives approximately the date of Micheli's birth as it was written 'nella sua vigintiduesima etiani 75' (Parfetti, 1893).

Canone musicale a quattro voci, ad honore della concezione della B.V.M., composto sopra le vocali di nuovo, e curioso artificio, etc. Opera et inventione pellegrina di R.M. rom. Roma, L. Grignani, 1650.

Baini also mentions the following three works:

Li salmi a quattro voci. Venetia, 1638.

Le messe a quattro voci. Roma, 1660.

Li responsori a cinque voci. Roma, 1668.

Kircher, *Musurgia universalis*, Rome, 1650, i. pp. 583-4, prints a canon in thirty-six parts, distributed among nine choirs, composed by Micheli, 'one of those who had revived the forgotten art of writing canons.'

MSS. In the Dresden Library, MS. 3758, an aria scored for voice and instruments. (Eitner.)

In the British Museum add. MSS. 11,588, ff. 148, 149, 'Canon di Romano Micheli, 1615; and 'Canone del Metallo, dal Romano Micheli', both from Micheli's *Musica vaga et artificiosa*, 1616.

C. S.

MI CONTRA FA, see TRITONE.

MICROLOGUS (from the Gr. adj. μικρο-λόγος, 'having regard to small things'—from μικρός, 'little,' and λόγος, 'a word'; Lat. *sermo brevis*, an 'epitome,' or 'compendium'), a name

given by two celebrated authors to works containing an epitome of all that was known of music at the time they were written.

(1) The Micrologus of GUIDO D' AREZZO (*q.v.*) is believed to have been compiled about the year 1025. Valuable MS. copies of this curious work are preserved in the Vatican Library, as well as in the Bibliothèque Nationale at Paris, the British Museum and in other European collections. The treatise was printed in 1784 by Gerbert, Prince Abbot of S. Blasien, in his great work entitled *Scriptores ecclesiastici de musica*; and in 1876 Hermesdorff published a copy of the original text at Treves, side by side with a German translation. Considerable variations occur in the ancient MSS. An admirable edition of Guido's *Micrologus* was prepared by Dom Ambrogio Amelli, O.S.B., Prior of Monte Cassino, and published in 1904.

(2) A less celebrated but scarcely less valuable treatise entitled *Musice active micrologus* was printed at Leipzig in 1517, by Andreas ORNITHOPARCUS (*q.v.*) (or Ornithoparchus).

The following are the various editions through which it passed:

1. Leipzig, Jan. 1517. The colophon runs as follows:

Excussum est hoc opus Lipsiae in aedibus Valentini — Schuman. Mense Januario, Anni virginii partus De- | cimseptimi supra seculmillesimū Leone de | cimo pont. max. ac Maximiliano | gloriosissimo Impatore orbi terrar | praesidentibus. |

This is the first edition, and only one copy is known to exist, viz. in the Bibliothèque Nationale at Paris, the whole of sheet A of which is wanting. It was described by Fétis, who, however, confuses it with the second edition.

2. Leipzig, Nov. 1517. Described in Panzer (*ix. 496*). The colophon is:

Excussum est hoc opus, ab ipso auctore denuo castigatum, recognitumq: Lipsie in edibus Valentini Schumann, calco- | graphi solertissimi: Mense Noubr: Anni virginii partus de- | cimi septimi supra seculmillesimū. Leone decimo Pont. max. | ac Maximiliano inultissimo impatore orbi terrar | praesidentibus. |

This edition, though the colophon clearly proves the contrary, is generally described as the first. Copies of it are in the British Museum; Kgl. Bibliothek, Berlin; Hofbibliothek, Darmstadt; Library of St. Mark's, Venice; University of Bonn; and one was in the 'Rosenthal Antiquariat,' Munich, May 1888.

3. Leipzig, 1519. The colophon runs:

Excussum est hoc opus: denuo castigatum recognitumq: | Lipsie in edibus Valentini Schumann: calco- | graphi solertissi | mi: Mense April: Anni virginii partus vndeulesimi supra | seculmillesimū. |

There are copies of this at Berlin (State Library), Munich (State Library), Königsberg (see *M.f.M.*, 1870, p. 47), Göttingen (University Library) and Brussels (see *Catalogue de la Bibliothèque de F. J. Fétis*, p. 621). A copy is said (*M.f.M.* viii. p. 22) to be in the Rathsschulbibliothek of Zwickau. Fétis says there is an edition of 1521 at the Bibliothèque Nationale in Paris, though

¹ Baini, *Mem. stor. crit.* ii. 34, note 473.

on inquiry the only copy found there was that of Jan. 1517. The colophon he quotes is that of the 1519 edition, but he seems to have imagined that 'undevigesimi' meant twenty-one, instead of nineteen. His statement has been copied by Mendel.

4. Cologne, 1533. The title-page runs :

Andre Ornitoparchi Meyningensis, De arte cantandi micrologus, libris quatuor digestus, omnibus musicæ studiosis non tam utilis quam necessarius, diligenter recognitus. Colonia, apud Joannem Gymnecum, anno 1533.

A copy of this edition is in the Bibliothèque du Conservatoire Nationale de Musique, Paris (see Weckerlin's *Catalogue*, p. 209).

5. Cologne, 1535. An edition without colophon, similar to the preceding. A copy is in the State Library at Munich.

6. Gerber (*Lexicon*, ed. 1813, iii. p. 618) quotes Schacht's *Bibl. Music.* (1687) to the effect that there exists an edition in oblong 8vo, printed by Johannes Gymnecus at Cologne in 1540, but no copy of this is known to exist.

This work, written in the quaint Latin peculiar to the 16th century, contains the substance of a series of lectures delivered by the author at the Universities of Heidelberg, Mainz and Tübingen; and is divided into four separate books.

In 1609 John Dowland printed a correct though deliciously quaint English translation in London (quoted from in the article COUNTERPOINT); and it is through the medium of this that the work is best known in this country. Hawkins, indeed, though he mentions the Latin original, gives all his quotations from Dowland's version.

W. S. R.; W. B. S.

MIDAS, a famous work of the second period of English BALLAD OPERA (*q.v.*). It is a classical extravaganza, and a parody of Italian opera. Its first appearance on the English boards was at Covent Garden in 1764.¹

The music was selected from popular melodies, and the piece held the stage for many years. It was revised and acted at Drury Lane, Oct. 25, 1802, when Michael Kelly took the part of 'Apollo,' previously filled by Vernon, and by Mattocks. Another revival took place at Covent Garden in 1814, Sinclair taking 'Apollo.' The pretty song, 'Pray Goody please to moderate the rancour of your Tongue,' appears in the opera, the air of which has been variously ascribed to Rousseau, Oswald and Burney. The music of the opera was first published by Walsh; the revised edition of 1802 by Birchall.

F. K.

MIDDLE C. The note, *c'*, indicated by the C clef, or by the first ledger line below the treble staff, and the first above the bass staff. (See STAVELESS NOTATION.)

MIDLAND INSTITUTE SCHOOL OF MUSIC, see BIRMINGHAM.

¹ It was played privately at Lurgan in 1760, and was brought out at the Crow Street Theatre, Dublin, Jan. 22, 1762. W. H. G. F.

MIDSUMMER NIGHT'S DREAM MUSIC, by Mendelssohn, consists of two parts. (1) The overture was written between July 7 and Aug. 6, 1826, and was first performed in public at Stettin in Feb. 1827, and in London, Argyll Rooms, June 24, 1829, Mendelssohn conducting.

(2) The music for the play was composed in 1843 in obedience to the desire of the King of Prussia, and was produced on the stage at the New Palace at Potsdam, on Oct. 14 of that year; first performance at the Philharmonic was under the composer's direction, May 27, 1844.

G.

MIGNON, opéra-comique in 3 acts, words by Carré and Barbier, founded on 'Wilhelm Meister'; music by Ambroise Thomas. Produced Opéra-Comique, Paris, Nov. 17, 1866; Drury Lane, July 5, 1870; New York, Academy of Music, Nov. 22, 1871; in English, Carl Rosa Co., Her Majesty's Theatre, 1880.

M.

MIKADO, THE, comic opera in 2 acts; words by W. S. Gilbert, music by Sullivan. Produced Savoy Theatre, Mar. 14, 1885.

M.

MILAN. A school of music was founded at Milan in 1483 by Lodovico Sforza, Duke of Milan. Some writers affirm that this was the first public school of music in Italy, but that of Bologna, founded in 1482 by Pope Nicholas V., preceded it by one year. Franchino Gafurio of Lodi was the first public professor of music in Milan. Costanza Porta, the pupil of Willaert, Zarlino, Caimo, Gastoldi, Biffi and others were also eminent composers in the old Lombard school of music, but Claudio Monteverdi (*b.* Cremona, 1570) was the first to found a new epoch in this school and to make it one of the richest and most powerful in Italy. The result of his studies appears in some valuable innovations in the old rules of counterpoint, which, although they excited much cavil and discussion at the time, were soon adopted not only by dilettanti but by professors.

Besides making these important discoveries, he is considered to be one of the inventors of recitative in the musical drama. Orazio Vecchi (*b.* about 1550) was another writer of operatic music of the Lombard school. His opera of 'L'Amfiparnaso' was one of the earliest operatic representations. These and many other writers of dramatic music were formed in the Lombard school, which was also illustrated by composers for the Church, such as Viadana, Noscimbene, Simpliciano Olivo, Giuseppe Vignati, Antonio Rosetti, Gio. Andrea Fioroni, etc. etc.

In the first part of the 18th century the famous school of singing of Giuseppe Ferdinando Brivio flourished at Milan, but there does not seem to have been any special 'Accademia' or Conservatorio for public musical instruction till the year 1807, when, by a decree of Napoleon Buonaparte, the present Royal Conservatorio of Milan was established.

By order of the viceroy, Eugène Beauharnais,

the building annexed to the church of Santa Maria della Passione, formerly a convent, was set apart for the new musical institute. It was opened on Sept. 8, 1808, and formally inaugurated by the Marquis de Brème, Minister of the Interior; and it was to be modelled on the pattern of the old Conservatorios of Naples.

The first president of the Conservatorio was Bonifazio Asioli, chosen by the celebrated Gian Simone Mayr, who traced out the rules for the new institution; and the first professors of the various branches of musical instruction were Federigi, Secchi, Ray, Piantanida, Negri, Rolla, Sturioni, Andrei, Adami, Belloli, Buccinelli. In 1814, on account of the large increase of pupils, two extra professors were nominated. During the years 1848 and 1849, when the Austrians were in Milan, the Conservatorio was also occupied by their troops, but the musical instruction of the pupils was carried on in the private houses of the professors. In 1850 the Conservatorio was reopened under the presidency of Lauro Rossi on a larger scale, with a considerable change in its form of government, and fresh provision was made for instruction in the organ, the harp, the history and philosophy of music. In 1858 a school of instruction in singing for the performers at the royal theatres was likewise added.

An Academical Council was instituted in 1864 to determine what prizes should be distributed to the pupils, and every year those who distinguish themselves most at the yearly examinations receive a monthly pension arising out of the endowment of the institution. In this same year the 'Società del Quartetto' was formed, of which many of the most notable musicians of the present day are honorary members. Every year this society causes six or eight concerts of classical music to be performed, and offers a prize for the best musical composition on a given subject. The 'Scuole popolari' for the lower classes of the people, at the cost of the State, are also offshoots of the great Milanese Conservatorio.

The programme of musical instruction in the Royal Conservatorio, as translated from the report of Jan. 1873 of the president, Lodovico Melzi, comprehends two kinds of instruction in music, artistic and literary, and these may again be subdivided into a preliminary and a superior course of instruction in either of these two branches.

The Conservatorio professes to give a complete musical and a fair literary education. The musical instruction is directed by twenty-nine professors, assisted by about thirty teachers selected from the best pupils of both sexes. For the literary branch there are seven professors. There are other professors for deportment, pantomime, ballet and drill.

Each pupil previous to admission must pass through a preliminary examination. This ex-

amination when passed only gives the pupil a right to enter the Conservatorio probationally for a year, and not till he has passed the second examination at the end of the probationary year is he admitted as a pupil. C. M. P.

LA SCALA.—The proprietors of the Ducal Theatre of Milan, which was burnt in 1776, obtained, by a decree of July 15, 1776, from the Empress Maria Theresa of Austria, leave to build a new opera-house on the site of the church of S. Maria della Scala. The celebrated architect Piermarini of Foligno made the designs, and it was inaugurated Aug. 3, 1778. The building was not only the grandest theatre then existing in Europe, but the most artistically beautiful and complete. Levati and Reina painted the ceiling, the boxes and the great hall or *ridotto*; and the curtain, representing Parnassus, was the work of Riccardi. The cost of the whole amounted to one million lire (£40,000), an enormous sum for that time. Until 1857 the principal entrance of La Scala was from a by-street, but since that date it opens on to a large and beautiful piazza.

The interior of the house is in the horseshoe form, with five tiers of boxes and a gallery above them, all in white, relieved by gilded ornaments. The lowest three tiers have each thirty-six boxes, and a royal box above the entrance to the stalls. The fourth and fifth tiers have each thirty-nine boxes, and there are four on each side of the proscenium, making a total of 194 boxes, besides the large royal box and the gallery, each box having a private room at its back for the convenience of its occupants.

The length of the whole building is 330 ft., and its width 122 ft. The height from the floor to the ceiling is 65 ft. The stage, with the proscenium, is 145 ft. long and 54 wide between the columns of the proscenium, but is 98 ft. wide farther behind. The *ridotto*, a large hall for promenading between the acts, is 82 ft. long and 30 ft. wide. The total capacity of the house is 3600. This immense institution permanently employs 922 persons on its staff, distributed in the following way: Artist-singers, 20; orchestra, 100; band, 28; choristers, 110; 'supers,' 120; ballet, 140; dressmakers and tailors, 150; doctors, 6; servants, 36, etc.

The gentlemen who provided the funds for the building of La Scala enjoy the use of its boxes at a nominal rental whenever the theatre is open, each box having its owner. In all other respects the theatre has been the property of the town of Milan since 1872. The theatre is controlled by a Commission elected by the Common Council of Milan and the owners of its boxes.

Annexed to the theatre is a celebrated dancing school, with sixty pupils, where the most famous ballet-dancers have been trained, and a singing school for about fifty choristers. Two charitable institutions—*I Filarmonici*, founded

by Marchesi in 1783, and the *Teatrale*, by Modrone in 1829—are also dependent for their income upon the greatest theatre of Italy. The theatre was restored in 1878, and again later, reopening in 1922 after important alterations had been carried out.

Its archives have been most carefully preserved and an interesting museum is now housed in the theatre. As the most important opera-house in Italy, La Scala has seen the first production of most of Verdi's operas, including 'Otello' and 'Falstaff'; of Boito's 'Mefistofele' and 'Nerone'; of Puccini's 'Madame Butterfly' and 'Turandot.' (See TOSCANINI.) L. R.; rev., with addns., F. B.

MILAN, LUIS (*b.* ? Valencia, about 1500; *d.* there, after 1561), Spanish lutenist. He was the third son of Don Luis del Milan (*d.* before 1516) and Violante Eixarch. His first book, 'Libro de Motes' (a book of parlour games), was published in 1535; 'El Maestro' (lute tablature) in 1536; 'El Cortesano' (a manual of polite conversation and descriptions of life and music at the court of Germaine de Foix at Valencia) in 1561. 'El Maestro' is dedicated to Prince John, afterwards John III. of Portugal (1521-57), from whom the author received a pension of 7000 *crúzados*. His visit to Portugal (if he ever visited it) must have taken place after 1538, or he would certainly have mentioned the fact in the dedication. He describes Portugal as being 'a sea of music,' so much was the art appreciated and understood there. He may have been in Italy; though the fact that he set six Italian sonnets to music proves no more than the Portuguese villancicos also included in 'El Maestro.' He was certainly familiar with contemporary Italian music and systems of lute tablature, and it has been conjectured that 'El Maestro' was printed from type brought from Venice. The printer describes himself as a Roman (Francisco Diaz Romano), but the book was printed in Valencia. No lute music is known to have been printed in Rome as early as this; the only Italian lute-books in existence at the time were three printed by Petrucci at Venice.

The instrument for which Luis Milan wrote was not, strictly speaking, a lute at all, but the VIHUELA (*q.v.*). His tablature is in principle Italian, the frets being designated by numbers (not by letters, as in England and France); but the top line of his 'stave' is the top string and not, as usually the case, the bottom one (see TABLATURE). In vocal music, the voice part is distinguished by the figures being printed in red. The book consists of Spanish and Portuguese villancicos, Spanish ballads and Italian

sonnets. The purely instrumental pieces include *fantasias* and pavaues. Luis Milan has a real instrumental style, and shows considerable variety in his methods of accompaniment: simple chords, passages in imitation of the voice part, and, above all, rapid brilliant passages, especially at the end of a verse. His settings are real solo songs, not mere transcriptions of polyphonic music. Copies of his 'Libro de musica de vihuela de mano, intitulado El Maestro' (1536) are in the Brit. Mus.; Bibl. Nat., Paris; Bibl. Nac. and Bibl. Real, Madrid; Bibl. de la Diputació, Barcelona. (See Morphy, *Les Luthistes espagnoles* (Leipzig, 1902); *Luis Milan* (Oxford, 1925).) J. B. T.

MILANOLLO, (1) DOMENICA MARIA TERESA (*b.* Savigliano, near Turin, Aug. 28, 1827; *d.* Paris, Oct. 25, 1904), the elder and better known of the two sisters. (2) Her sister MARIA (*b.* Savigliano, July 19, 1832; *d.* Paris, Oct. 21, 1848), whose career was suddenly cut short at the age of 16. They were two exceptionally gifted youthful violinists.

Their father, according to Fétis, was a poor carpenter, and his little daughters were two out of thirteen children. Teresa's talent was so precocious that her father migrated to Turin, when the little girl—scarcely 6—received instruction from Gebbaro and Mora, two violinists attached to the Cappella Carlo Alberto. After a year of struggle and trial in Turin, Milanollo père resolved to tempt fortune by taking Teresa to Paris. Armed with an introduction to Lafont, they finally arrived in Paris in 1837. Lafont at once recognised Teresa's gifts, made her one of his pupils, allowed her to play five times at the Opéra-Comique concerts, and took her on tour with him through Holland and Belgium. After a severe illness in Amsterdam, which prevented her from finishing the tour, she reappeared at The Hague, and played to the Prince of Orange, who presented her with a handsome diamond ornament. From Holland she went to England; played in Covent Garden Theatre at five concerts; received some tuition from the Anglo-Italian violinist, Mori, and then toured in the provinces and Wales, playing at forty concerts in less than a month. Previously to this, Teresa had started giving her sister Maria violin lessons. Maria's gifts were also of a high order, though her style was quite different. Teresa's playing was full of warmth and feeling, while Maria's was brilliant and sparkling, characteristics which caused them to be nicknamed Mademoiselle Adagio and Mademoiselle Staccato. After Maria's début in Boulogne at the age of 6, the two sisters were inseparable, and travelled together everywhere, playing in France, Holland and Belgium. In 1839 they returned to Paris. A year later, the sisters appeared again in public at Rennes, Nantes and Bordeaux, where they gave twelve

concerts with great success. In Paris they played before King Louis Philippe at Neuilly, and at Habeneck's special request made a most successful appearance at the Paris Conservatoire. Making the acquaintance of De Bériot at Boulogne, Teresa received some lessons from him, and then travelled with her sister in Belgium and Germany, played before the King of Prussia, gave twelve concerts at Frankfort, and in 1843 arrived in Vienna, where they created a furore at twenty-five concerts. In the same year they returned to their native country, and on June 9, 1845, appeared in London at the Philharmonic Concert. In 1848, Maria, who had been ailing for some months, suddenly died of rapid consumption, and was buried in the Cemetery of Père Lachaise. Teresa was so overcome with grief at the loss of her companion that she retired from public life for some time, remaining mostly on an estate which her father had bought near Malezeville, in Lorraine. Gradually she resumed her concert appearances, which she continued with remarkable success in Germany and Italy, until 1857, when she married, on Apr. 16, an eminent French military engineer, Monsieur Charles Joseph Théodore Parmentier (b. Barr, Lower Rhine, Mar. 14, 1821). After her marriage she abandoned the concert platform. During the lifetime of Maria the sisters were greatly interested in the poor of Lyons, and as soon as Teresa had roused herself from the grief which her sister's death caused her, she exerted herself in establishing her Concerts des Pauvres, which she carried out in a systematic manner in almost every town in France. Teresa's compositions include:

Ave Maria, chorus for male voices; Fantaisie-décliquée for violin; two romances; transcriptions and variations for violin and pianoforte.

MILANUZ (MILANUZZI), FRA CARLO, Augustinian monk and B.D. of Santa Natoglia, near Camerino, Venice; organist (1619) of the Augustinians at Perugia, maestro di cappella (1622) at S. Eufemia, Verona; organist (1623-1630) of S. Stefano, Venice; maestro di cappella of Camerino Cathedral, 1636, and maestro di cappella and organist at S. Mauro at Noventa di Piave, Lombardy, 1643. He was a prolific composer of masses, psalms, litanies and other church music, and wrote 8 books of secular songs (arioses) between 1619 and 1635 (Q.-L.).

MILDENBURG, ANNA VON (b. Vienna, Nov. 29, 1872), operatic soprano, married Hermann Bahr, 1909. She studied for some time with Mme. Rosa Papier, and did her final preparatory work for the stage under Pollini of the Hamburg Stadttheater, where she made her first appearance in 1895. Voice and physique alike indicated her fitness for the

heroic characters of Wagnerian opera, and in these she earned invariable success. She became a favourite in Hamburg, and in 1906 was engaged for the German performances at Covent Garden, making her début as Isolde on June 6. In 1908 she became a member of the Imperial Opera in Vienna and took up her residence permanently in her native city, where her talent was deservedly appreciated. Her next appearance at Covent Garden was in 1910 as Klytemnestra, in Beecham's production of Strauss's 'Elektra,' wherein she several times created a highly satisfactory impression during both the spring and winter seasons. She sang the same rôle here in the revival of 1913. She was joint-author with her husband of *Bayreuth und das Wagner-Theater* (1912; Eng. trans. by T. W. Shakespeare).

H. K.

MILDER-HAUPTMANN, PAULINE ANNA (b. Constantinople, Dec. 13, 1785; d. Berlin, May 29, 1838), a celebrated German singer and tragic actress, the daughter of Milder, a courier in the Austrian service. Her fine voice and handsome person attracted the notice of Schikaneder, who urged her to enter the profession, offering to be responsible for her musical education and to superintend her début on the stage. The offer was accepted, and she became the pupil of an Italian singing-master named Tomascelli, and subsequently of Salieri. She made her first public appearance on Apr. 9, 1803, as Juno, in Süssmayer's opera 'Der Spiegel von Arkadien.' That the part of 'Fidelio' should have been written for her is sufficient testimony to the capabilities of the organ which caused Haydn to say to her, 'Dear child, you have a voice like a house!'

Her fame spread rapidly, and in 1808 she made a brilliantly successful professional tour, obtaining, on her return to Vienna, a fresh engagement at court as *prima donna assoluta*. In 1810 Anna Milder married a rich jeweller named Hauptmann. Her greatest series of triumphs was achieved at Berlin, where she appeared in Gluck's 'Iphigenia in Tauris' in 1812. After singing with equal éclat in other great German towns, she contracted, in 1816, a permanent engagement with the royal theatre of Berlin. Her great parts were those of the classical heroines of Gluck—Iphigenia, Alceste, Armida—for which she was pre-eminently fitted, both by her imposing presence and by her magnificent soprano voice, full, rich and flawless, which both in amount and quality seems to have left nothing to desire. At times, especially in her later years, she attempted some lighter parts, such as Mozart's Donna Elvira, and Susanna, but her lack of execution prevented her from succeeding in these as she did in Weigl's opera 'Die Schweizerfamilie' (made celebrated by her impersonation of Emmeline),

or in the broad declamatory style of Gluck. Although 'Fidelio' became one of her principal rôles, her performance in this opera was never, either vocally or dramatically, irreproachable. Thayer¹ relates a conversation with her, in 1836, when she told him what 'hard fights' she used to have with the master about some passages in the adagio of the great scena in E major, described by her as 'ugly,' 'unvocal' and 'inimical (*widerstrebend*) to her organ.'

In 1829 she left Berlin owing to misunderstandings and differences with Spontini. She then visited Russia, Sweden and Denmark, but her voice was failing fast. Her last public appearance was at Vienna in 1836, two years before her death.

F. A. M.

MILES, PHILIP NAPIER (b. Shirehampton, Gloucestershire, Jan. 21, 1865), is a composer who has combined to a quite remarkable extent the single-minded enthusiasm of the amateur with the practical workmanship of the professional musician.

The heir to a large landed property in the west of England (King's Weston). Napier Miles studied music seriously both at Dresden and at home under Parry and Dannreuther. He has since constantly devoted himself to the encouragement of music in Bristol and its neighbourhood. He formed and has conducted the Shirehampton Choral Society on his own estate, and brought its performances to a high degree of proficiency, performing a wide repertory of music which has ranged from the Elizabethan madrigals to the works of such modern composers as Vaughan Williams and Holst. He has been president of the BRISTOL MADRIGAL SOCIETY (*q.v.*), and he furthered in many ways the Glastonbury Festival scheme (see BOUGHTON). He organised the performances of opera at Clifton in 1924 at which de Falla's puppet opera, 'El Retablo de Maese Pedro,' received its first English performance. Other works of great interest, including some of his own, were there heard. A similar season was undertaken in Bristol in 1926. The University of Bristol gave to Napier Miles the honorary degree of LL.D. in 1925.

The greater part of Napier Miles's own composition has been for the stage. 'Westward Ho!'—an opera in three acts, the book by E. F. Benson after Charles Kingsley's novel—was heard in London (Lyceum Theatre) in 1913, and portions of another grand opera, 'Queen Rosamond,' have been given at Shirehampton. But later works of less ambitious scope show surer handling, and among them the one-act opera, 'Markheim' (after R. L. Stevenson's story), is a subtle piece of musical characterisation. It has been given both at Clifton at Bristol and in London, and it received an award from the Carnegie Trust. The vocal score was published in 1926. 'Music Comes,' a

choral dance (poem by John Freeman—Boosey & Co.), was written for Glastonbury, produced there, and subsequently given by the Glastonbury Players in London (Old Vic.). Its skilful treatment of combined rhythms and the delicate scoring for tenor voice, women's choir and small orchestra, are typical of the composer's refined talent. Similar in imaginative quality, though without the stage, is his setting of Keats's 'Ode to Autumn' (baritone voice, oboe, clarinet and string quartet), heard in London in 1926. He has written many other songs (some published by Acott of Oxford, others still unpublished) which deserve attention.

C.

MILHAUD, DARIUS (b. Aix-en-Provence, Sept. 4, 1892), composer, studied at the Paris Conservatoire, where he successively gained prizes for violin, counterpoint and fugue. The outbreak of the European war interrupted his studies before he was able to compete for the Prix de Rome. From 1917–19 he was attached to the French Legation in Brazil. Milhaud was a member of the group of young French composers who became known as the 'Six.'

The productivity of Darius Milhaud so far has been extraordinary, and his contributions to almost every species of music are numerous. In 1911 appeared a sonata for violin and piano, which still reveals the influence of the post-Franck school; like the first string quartet, it is a distinctly romantic work. But it soon became clear that the composer began to lean more and more towards sombre and violent expressions. He has proved by his incidental music to Greek tragedies that he is capable of lifting dark and sinister themes to a high level. His most daring experiment in this direction is his curious 'orchestration of stage noises' in the music to the 'Choëphori' of Aeschylus, where he employs a number of percussion instruments in combination with such things as whistling winds, human groans and cries of despair. On the other hand, Milhaud is equally well versed in the comic side of his art; in the pantomime 'Le Boeuf sur le toit' (produced in London as 'The Nothing-doing Bar'), for instance, he has exploited with brilliant effect the humorous possibilities of the Brazilian tango, and in the ballet 'Le Train bleu' (produced in Paris in June 1924) he makes an amusingly parodistic use of the conventions of musical comedy. But his humour, too, is of a somewhat crude type, and in works such as his setting of a florist's catalogue for voice and chamber orchestra it verges disastrously on mere eccentric trifling. We must turn to his chamber music and to some of the song-cycles in order to discover that delicate tints and lyrical emotions are by no means outside his wide range of expression.

The following are Milhaud's principal works up to 1924 :

Five String Quartets; 2 Sonatas for violin and piano; several Suites and a Sonata for piano; a considerable number of sets of

In the same year in which Jannequin's 'Bataille' was published, we find in England one of the earliest of those 'Rules and Articles of War' of which the succession has been continued down to the present day. These 'Rules and Ordinances for the Warre' were published for the French campaign of 1544. Amongst them are the following references to trumpet signals:

'After the watche shal be set, unto the tyme it be discharged in the mornynge, no maner of man make any shouting or blowing of hornes or whisteling or great noyse, but if it be trumpettes by a special commaundement.' 'Every horseman at the fyrst blaste of the trumpette shall saddle or cause to be saddled his horse, at the seconde to brydell, at the thirde to leape on his horse backe, to wait on the kyng, or his lord or capitayne.'

There is here no mention of drums, but it must be remembered that by this time the distinction of trumpet sounds being cavalry signals and drum-beats confined to the infantry was probably as generally adopted in England as it was abroad. In a virginal piece of William Byrd preserved at Christ Church, Oxford, and called 'Mr. Birds Battel,' which was probably written about the end of the 16th century, we find different sections, entitled 'The Souldiers Summons,' 'The March of the footemen,' 'The March of the horsemen,' 'The Trumpetts,' 'The Irish March' and 'The Bagpipe and the Drum.' The

first and fifth of these contain evident imitations of trumpet sounds which are probably English military signals of the period, the combination of bagpipes and drums being a military march. Jehan Tabourot, in his valuable *Orchésographie* (1588) (see ARBEAU), says that the musical instruments used in war were 'les buccines et trompettes, litues et clérons, cors et cornets, tibies, fifres, arigots, tambours, et aultres semblables' (fol. 6b), and adds that 'Ce brulet de tous les dicts instruments, sert de signes et aduertissements aux soldats, pour desloger, marcher, se retirer: et à la rencontre de l'ennemy leur donne cour, hardiesse, et courage d'assailir, et se defendre virlement et vigoureusement.'

Tabourot's work also mentions that it was the custom among certain German troops for the cavalry to use kettledrums. The illustrations to the 1566 edition of L. Fronsperger's *Kriegsbuch* give more than one example of this. Similarly in Rabelais we find a description of the Andouille folk attacking Pantagruel and his company to the sound of 'joyous fifes and tabours, trumpets and clarions.' But though from these passages it would seem as if signals were given by other instruments than the drum and trumpet, there can be no doubt that if this was the case they were soon discontinued. 'It is to the voice of the Drum the Souldier should wholly attend, and not to the aire of the whistle,' says Francis Markham in 1622; and Sir James Turner, in his *Pallas Armata* (1683), has the following:

'In some places a Piper is allowed to each Company; the *Germans* have him, and I look upon their Pipe as a Warlike Instrument. The Bag-pipe is good enough Musick for them who love it; but sure it is not so good as the *Almain Whistle*. With us any Captain may keep a Piper in his Company, and maintain him too, for no pay is allowed him, perhaps just as much as he deserveth.'

In the numerous military manuals and works published during the 17th century we find many allusions to and descriptions of the different signals in use. It would be unnecessary to quote these *in extenso*, but Francis Markham's *Five Decades of Epistles of Warre* (London, 1622) demands some notice as being the first work which gives the names and descriptions of the different signals. In Decade I., Epistle 5, 'Of Drummes and Phiphes,' he describes the drum signals as follows:

'First, In the morning the discharge or breaking up of the *Watch*, then a preparation or Summons to make them repaire to their colours; then a beating away before they begin to march; after that a *March* according to the nature and custom of the country (for diuers countries have diuers Marches), then a *Charge*, then a *Retrait*, then a *Troupe*, and lastly a *Battalion* or a *Battery*, besides other sounds which depending on the phantastikenes of forain nations are not so useful.'

He also states that a work upon the art of drumming had been written by one Hindar: unfortunately of this no copy apparently exists. Markham is no less explicit with regard to Trumpet Sounds than he is with Drum Signals:

'In Horse-Troupes . . . the *Trumpet* is the same which the *Drum* and *Phiph* is, onely differing in the

tearmer and sounds of the Instrument : for the first point of warre is *Butte sella*, clap on your saddles; *Mounte Cavallo*, mount on horseback; *Tuequet*, march; *Carga, carga*, au Alarme to charge; *A la Standardo*, a retreat, or retire to your colours; *Auget*,² to the Watch, or a discharge for the watch, besides divers other points, as Proclamations, Cals, Summons, all which are most necessary for every Souldier both to know and obey (Dec. III. Ep. 1).

It is noticeable in this list that the names of the trumpet sounds evidently point to an Italian origin, while those of the drum signals are as clearly English. To the list of signals given by Markham we may add here the following, mentioned only in different English works, but in which, unfortunately, no musical notes are given: Relief, Parado, Tapt (Count Mansfields *Directions of Warre*, translated by W. G., 1624); March, Alarm, Troop, Chamadoes and answers thereunto, Reveils, Proclamations (Du Praissac's *Art of Warre*, Englished by J. Cruso, 1639); Call, Preparative, Battle, Retreat (W. Barriffe's *Military Discipline: or the Young Artillery Man*, second edition, 1639, and Elton's *Complete Body of the Art Military*, 1650); Take Arms, Come to Colours, Draw out into the Field, Challenge, General, Parley (*English Military Discipline*, 1680); Gathering (Turner's *Pallas Armata*, 1683).

To return to those signals the notes of which have come down to us, the earliest collection extant is to be found in the second book of Mersenne's *De instrumentis harmonicis*, Prop. xix. (1635), where the following cavalry signals are given—L'entrée; Two Boute-selles; A cheval; A l'estendart; Le simple cavalquet; Le double cavalquet; La charge; La chamade; La retraite; Le Guet. Of these signals (copies of which will be found in a MS. of the 17th century in the British Museum, Harl. 6461) we give here the first Boute-selle:

The next collection known is that of Girolamo Fantini, Trumpeter to Ferdinand II., Duke of Tuscany, whose work is entitled

Modo per imparare a sonare di tromba tanto di guerra quanto musicalmente in organo, con tromba sordina, col clarino e con altro istrumento; aggiuntovi molte sonate, come balletti, brandi, capricci, serabando, correnti, passaggi e sonate con la tromba e organo insieme (Frankfort, 1636).

This rare work, to which M. Georges Kastner first drew attention in his *Manuel de musique militaire*, contains specimens of the following trumpet calls—Prima Chiamata di Guerra; Sparata di Butta Sella; L' Accavallo; La marciata; Seconda Chiamata che si va sonata avant la Battaglia; Battaglia; Allo Standardo; Ughetto; Ritirata di Capriccio; Butte la Tenda; Tutti a Tavola. Some of these are very elaborate. The Boute-selle, for instance, consists of an introduction of four

bars in common time, followed by a movement in 6-4 time, twenty-nine bars long, which is partly repeated. We give here one of the shorter signals, 'Allo Standardo':

With regard to the German signals of this period, and indeed with regard to the whole history of military music in Germany, we are reluctantly compelled to treat the subject very cursorily, owing to the almost total want of material. It has been seen that the use of the kettledrum for the cavalry came from Germany, and frequent allusions are made in French works of the 18th century to the superiority of German military music. But owing perhaps to the more general musical intelligence of the soldiers, the different signals seem to have been handed down orally to a greater extent than they were with other nations. It is said that their signals were better in point of form than those of other nations, and that they were often derived from popular Volkslieder, etc. Their musical superiority they retain to the present day. An interesting point with regard to the German signals is the habit the soldiers had of inventing doggerel verses to them. Some of these rhymes are said to be very ancient, going back so far as the 16th century. The verses were not confined to the signals of their own armies, but were sometimes adapted to those of their traditional enemies, the French. Freiherr von Soltan gives several of these in his work on German Volkslieder (Leipzig, 1845). The following are some of the most striking:

Wahre di bure
Di garde di kumbt. (1500.)

Hüt dich Bawr ich kom
Mach dich bald davon. (16th cent.)

Zu Bett zu Bett
Die Trommel geht
Und das ihn morgen früh aufsteht,
Und nicht so lang im Bette lcht.
(Prussian Zapfenstreich, or Tattoo.)

Die Franzosen haben das Geld gestohlen,
Die Preussen wollen es wieder holen!
Geduld, geduld, geduld!

(Prussian Zapfenstreich.)

Kartoffelsupp, Kartoffelsupp.
Und dann wann ein Schöpfenkop',
Mehl, mehl, mehl. (Horn Signal.)

² In England similar nonsense rhymes are invented for some of the calls. Their chief authors and perpetuators are the boy buglers. The following Officers' Mess Call is an example:

Oh, off - cer's wives have puddings and pies, but

sol - diers' wives have skil - ly.

¹ *Auget*, i.e. *Au guet*—to the watch.

Another probable reason of the scarcity of old collections of signals in Germany is that the trumpeters and drummers formed a very close and strict guild. The origin of their privileges was of great antiquity, but their real strength dates from the Imperial decrees confirming their ancient privileges, issued in 1528, 1623 and 1630, and confirmed by Ferdinand III., Charles VI., Francis I. and Joseph II. Sir James Turner (*Pallas Armata*, Lond. 1623) ¹ has some account of this guild, from which were recruited the court, town and army trumpeters. Their privileges were most strictly observed, and no one could become a master-trumpeter except by being apprenticed to a member of the guild.²

Returning to France, we find from the time of Louis XIV. downwards a considerable number of orders of the Government regulating the different trumpet and drum signals. Many of these have been printed by M. Kastner in the Appendix to his *Manuel*, to which work we must refer the reader for a more detailed account of the various changes which they underwent. In 1705 the elder Philidor (André) inserted in his immense autograph collection (see PHILIDOR), part of which is now preserved in the library of the Paris Conservatoire, many of the 'batteries et sonneries' composed by himself and Lully for the French army. The part which Lully and Philidor took in these compositions seems to have been in adapting short airs for fifes and hautbois to the fundamental drum-beats. (See the numerous examples printed in Kastner's *Manuel*.)

From this time the number and diversity of the French signals increased enormously. Besides Philidor's collection, a great number will be found in Lecocq Madeleine's *Service ordinaire et journalier de la cavalerie en abrégé* (1720) and Marguery's *Instructions pour les Tambours*, for the most part full of corruptions, and too often incorrectly noted. Under the Consulate and Empire the military signals received a number of additions from David Buhl, who prepared different sets of ordinances for trumpets, drums and fifes, which were adopted by the successive French Governments during the first half of the 19th century, and still form the principal body of signals of the French army.

The French signals are much too numerous for quotation in these pages. They are superior to the English in the three essentials of rhythm, melody and simplicity, but in all three respects are inferior to the German. Perhaps the best

French signal is 'La Retraite,' played as arranged for three trumpets:

Returning to the English signals, after the Rebellion and during the great continental wars of the 18th century the English army underwent many changes, and was much influenced by the association of foreign allies. The fife had fallen into disuse, but was re-introduced by the Duke of Cumberland in 1747. Fifes were first used by the Royal Artillery, who were instructed in playing them by a Hanoverian named Ulrich. They were afterwards adopted by the Guards and the 19th, and soon came into general use. Grosse

¹ Of recent years several collections of Trumpet and Bugle Sounds with adapted words have been published; that by A. C. Atherley (1892) is especially complete.

² See also *Ceremoniel u. Privilegien d. Trompeter u. Pauker* (Dresden, no date. Quoted in Weckert's *Musikiana*, p. 110).

³ Further information on this subject will be found in Mendel, *sub voce* 'Trompeter,' and in the work quoted in that article, *Verzeichn. einer Anleitung zur heroldisch-musikalischen Trompeter- und Pauker-Kunst* (Halle, 1790).

(*Military Antiquities*) alleges that the trumpet was first adopted in 1759 by the Dragoons instead of the hautbois; but this is evidently an error, as by an order of George II., dated July 25, 1743, 'all Horse and Dragoon Grand Guards are to sound trumpets, and beat drums, at marching from the Parade and Relieving.' On the formation of light infantry regiments, drums were at first used by them, in common with the rest of the army, but about 1792 they adopted the bugle for signalling purposes. 'Bugle Horns' are first mentioned in the *Rules and Regulations for the Formations, Field-Exercise and Movements of His Majesty's Forces*, issued June 1, 1792.¹ In Dec. 1798 the first authorised collection² of trumpet-bugle Sounds was issued, and by regulations dated Nov. 1804 these Sounds were adopted by every regiment and corps of cavalry in the service. The bugle was afterwards (and still is) used by the Royal Artillery, and about the time of the Crimean campaign was used by the cavalry in the field, although the trumpet is still used in camp and quarters. The use of the drum for signalling is almost extinct in our army, except for parade purposes to convey orders, but combined with the fife (now called the flute) it is used for marching purposes.³ Like many other musical matters connected with the British army, the state of the different bugle and trumpet sounds calls for considerable reform. The instruments used are trumpets in E \flat and bugles in B \flat , and though the former are said to be specially used by the Horse Artillery and Cavalry, and the latter by the Royal Artillery and Infantry, there seems to be no settled custom in the service, but—as in the similar case of the different regimental marches—one branch of the service adopts the instrument of another branch whenever it is found convenient. The two collections of Sounds formerly published for the respective use of the Mounted Services and Garrison Artillery and the Infantry have been superseded, since Dec. 1902, by *The Trumpet and Bugle Sounds for the Army*, which was compiled under the direction of the Commandant, Royal Military School of Music, and is issued by authority. In this all calls have been assimilated, so that they can be sounded either by trumpet or by bugle. The work contains Regimental Calls, War and Peace Calls, for all arms, and Instructions for Trumpeters and Buglers. The sounds are formed by different combinations of the open notes of the bugle and trumpet. Their scales are as follows:

The B \flat of the trumpet is, however, never used. Many of the English signals are intrinsically good, while many are quite the reverse; and they are noted down without much regard to the manner in which they should be played. A comparison with the sounds used by the German army (especially the infantry signals) shows how superior in this respect the latter are, the rests, pauses, marks of expression and tempi being all carefully printed, and the drum-and-fife marches being often full of excellent effect and spirit, while in the English manuals attention to these details is more the exception than the rule.

In conclusion we must refer the reader who would further investigate this subject to Kastner's *Manuel général de Musique Militaire* (Paris, 1848), where are to be found a large number of the signals and sounds in use in the different European armies in the author's time, as well as much information on the subject of military music in general—a subject which has been hitherto strangely neglected in both Germany and England. Some little information will also be found in Mendel's *Lexikon* (arts. 'Militair - Musik' and 'Trompeter'). The present writer is much indebted to the kindness of Col. Thompson and Col. Barrington Foote, former Commandants of the Military School of Music, Kneller Hall; Sir Lionel Cust; Lieut. A. J. Stretton; Mr. J. A. Browne, bandmaster of the South Metropolitan Schools; and H. Potter & Co., who have furnished information for this article. The last-named firm publish a *Drum, Flute and Bugle Duty Tutor*.

W. B. S.

MILLER, EDWARD, Mus.D. (b. Norwich, 1731; d. Doncaster, Sept. 12, 1807), studied music under Dr. Burney, and was elected organist of Doncaster, July 25, 1756, upon the recommendation of Nares. He graduated as Mus.D. at Cambridge in 1786. His compositions comprise elegies, songs, harpsichord sonatas, flute solos, psalm tunes, etc., and he was the author of 'The Elements of Thorough-bass and Composition,' 1787, and a *History of Doncaster*, 1804. In his 'Psalms of David for the use of Parish Churches' occurs the famous hymn-tune 'Rockingham.' See *Mus. T.*, 1901, p. 736.

W. H. H.

MILLERAN, an undated MS. of lute music, entitled: *Livre de lute de M. Milleran, interprète du Roy . . . Recueil des plus belles pièces de lute des meilleurs maîtres sur les 14 modes de la musique, savoir sept en bémol et sept en bécarré,*

¹ Grose, *Military Antiquities* (first ed.), says that in the year 1761 there were some troops of Light Dragoons who used horns like post-horns.

² In James Gilbert's *Bugle Horn Calls of Riflemen*, etc. (London, 1804), the author states that he was 'in the year 1795 the first that Arranged and Published the complete Duty of the Trumpet and Bugle Horn for the Light Horse Regiments and Associations throughout Great Britain.'

³ Compare the table of early marching rhythms given under MARCH.

belonging to the Conservatoire Library, Paris. It must have been compiled at the end of the 17th century; though Weckerlin assigns it the date of 1725. Its author, René Milleran, was a grammarian, teacher of the English and German languages in Paris, an amateur lutenist and a pupil of Mouton. This valuable MS. contains: pieces by Mouton (24), Dupré d'Angleterre, Gautier, Gautier le vieux (in all 17), Gallot de Paris, le vieux Gallot d'Angers, Emond (Hémon) de Launay, le père Bocquet and some anonymous; also a list of the principal lute-masters of the time.

M. L. P.

MILLET, LUIS (b. Apr. 18, 1867), Spanish (Catalan) conductor and composer, founder of the Barcelona Choral Society, *Orfeo Català*, in 1891. His works consist mainly of choral arrangements of Catalan folk-songs, though he has also written for orchestra.

J. B. T.

MILLEVILLE, (1) G. ALESSANDRO (b. 1521, either Paris¹ or Ferrara; d. Ferrara, Sept. 7, 1589). His father was Jean de Milleville.² From 1544–73 he was at the court of Modena as teacher of the Princess of Este. He was appointed singer in the Papal Chapel, Rome, Oct. 30, 1552; was organist at the court of Ferrara in 1575, and was still there in 1584. He composed 2 books of sacred songs and 3 books of madrigals.³ (2) BARNABA (b. Ferrara), maestro di cappella of Chioggia Cathedral, 1619–20. In 1628 he was at Siena, according to Adr. Banchieri,⁴ who calls him P. D. Barnaba Milleville. He composed masses, madrigals, motets and other church music. (3) FRANCESCO (b. Ferrara), a son of Alessandro, late 16th century, according to Fétis at first engaged at the Polish court, then at the court of Rudolph II. He went to Rome in 1614, became maestro di cappella at Volterra Cathedral; afterwards at Chioggia (?). In 1622 he was maestro di cappella and organist at S. Giorgio, Ferrara; in 1627 organist at S. Benedetto, Siena. He composed between 1617–1639 masses, 3–8 v., psalms, litanies, concerti spirituali, sacre gemine, concerti a 1–4 v. with basso continuo, the last a Fantasia alla Francese for instruments (1617); also 7 books of motets, 2–6 v. (*Riemann*; *Q.-L.*).

MILICO, GIUSEPPE (b. Terlizzi, Modena, 1739), a good composer and better singer. Gluck, who heard him in Italy, thought him one of the greatest sopranos of his day, and, when Millico visited Vienna in 1772, and was attached to the court theatre, Gluck showed his estimation of him by choosing him as singing-master for his own niece. In the spring of that year Millico had already come to London, where, however, he found the public but little disposed in his favour. By the end of the season, however, he had reversed the first unfavourable

impression. He had then appeared in 'Artaserse' and 'Sofonisba,' and he took part in 'Il Cid' and 'Tamerlano' in the following year. In 1774 he appeared here in 'Persco,' after which he went to Berlin. In 1780 he was in Italy again, attached to the Neapolitan court. Fétis gives a list of his compositions, including three operas, three cantatas, a collection of canzonets, published in London (1777), and other pieces. The canzonets are apparently a small oblong quarto publication of Italian songs, 'Six Songs with an accompaniment (sic) for the Great or Small harp, fortepiano, or harpsichord . . . dedicated to the Hon. Mrs. Hobard by Giuseppe Millico,' issued originally by Welcker and republished by Birchall at a much later date.

J. M.; addns. F. K.

MILLÖCKER, KARL (b. Vienna, May 29, 1842; d. Baden, near Vienna, Dec. 31, 1899), a most prolific composer of operettas, was educated in the Conservatorium der Musikfreunde there. After being Kapellmeister at Graz in 1864, and at the short-lived Harmonietheater in Vienna two years later, Millöcker was, in 1869, appointed conductor of and composer to the Theater an der Wien, for which he accomplished all of his most brilliant work. The list of his compositions is very long. It includes, besides a number of musical farces and the collection of pianoforte pieces, which were issued as the *Musikalische Presse* in monthly parts, the operettas 'Der todte Gast' and 'Die beiden Binder,' written for Graz; 'Diana,' produced at the Harmonietheater; 'Fraueninsel,' brought out at Budapest; 'Ein Abenteurer in Wien,' 'Das verwunschene Schloss,' with dialect songs, 'Gräfin Dubarry,' 'Der Bettelstudent' (1882), which enjoyed an enormous vogue in Germany and Austria especially, and was produced at the Alhambra Theatre, Apr. 12, 1884; 'Der Feldprediger,' 'Der Vice-admiral,' 'Die sieben Schwaben,' 'Der arme Jonathan,' 'Das Sonntagskind,' 'Gasparone,' and a host of other operettas. Millöcker's music was piquant and cheerful, and aimed at popularity, which it very easily attained.

R. H. L.

MILLS, ROBT. WATKIN-, see WATKIN-MILLS.

MILLS, SEBASTIAN BACH (b. Mar. 1, 1838; d. Dec. 21, 1898), a pianist, English by birth, but a resident of the United States for the last thirty years of his life. His first teachers were his father and Cipriani Potter; later he studied at the Conservatorium in Leipzig, under Moscheles, Plaidy, Rietz and Hauptmann, and then came within the circle of young men who were so strongly influenced by Liszt. Mills's first professional engagement was as organist of the Roman Catholic cathedral at Sheffield, which he took in 1855. He did not drop out of sight, however, as a public pianist, and in 1858 he appeared as solo performer at the Gewandhaus in Leipzig. In 1859 he went

¹ Fétis.

² Riemann.

³ Q.-L.

⁴ *Lettres arméniques*, p. 116.

to New York, making his first appearance there at a concert of the Philharmonic Society on Mar. 26, in Schumann's A minor concerto. In 1859, 1867 and 1878 he made brilliant and successful concert tours in Germany. His appearances in the United States were frequent, and he was an especial favourite in New York, where he played every season in the Philharmonic Society's concerts from 1859 down to 1877, his last performance being on Nov. 24 of the latter year.

R. A.

MILOYEVICH, MILOYE (b. Belgrade, Oct. 15, 1884), Serbian composer, studied in Belgrade and Munich. He is now settled as assistant lecturer in musical aesthetics at the University of Belgrade. His works include:

Antique Legend, for solo v., chor. and orch.; *Symphonic Poem, Smrt Majke Jugovica* (Death of the Mother of Jugovich); *National Melodies of Serbia*; *Serbian Dances* for violin and piano; *Legende for Violoncello and piano*; *part-songs and piano pieces*.

R. N.

MILTON, JOHN (b. circa 1563; d. in the Barbican, London, Mar. 1646/47), composer, father of the poet, was the son of Richard Milton, a well-to-do yeoman of Stanton St. John, near Oxford.

Aubrey says that he was brought up at Christ Church, Oxford; the fact that his name is not found in the University registers does not make this impossible, for they were carelessly kept at that time. Perhaps it was at Oxford that he received a gold medal and chain from a Polish prince, in reward for an *In Nomine* of forty parts, as related by his grandson Phillips on the authority of the poet; this prince, it has been conjectured, may have been Albertus Alasco, vaide or palatine of Siradia in Poland, who visited Oxford in 1583, and was entertained by the University with 'learned recreations.' Milton was 'cast out by his father, a bigoted Roman Catholic, for abjuring the Popish tenets,' and accordingly went to London to seek his fortune. In 1595 he was apprenticed to James Colbron, a member of the Scriveners' Company, and on Feb. 27, 1599 (1600), was himself admitted to the freedom of the Company. He married Sarah Jeffrey about the same date, and settled in Broad Street. Of his children (five of whom were baptized at Allhallows, Bread Street) three survived: John, the poet; Christopher, the judge; and a daughter, Ann, who married Edward Phillips and was the mother of Edward and John Phillips, the authors.

About the year 1632, Milton, who had acquired a considerable fortune, retired to Horton in Buckinghamshire. In 1634 he was elected to the Mastership of the Scriveners' Company, but avoided serving the office.¹ On Apr. 3, 1637, Milton's wife died at Horton, and soon afterwards his son Christopher came with his family to live with him, until at some date between Jan. 1639/40 and Aug. 1641 he moved

with them to Reading. Here he remained till the taking of Reading by Lord Essex's forces in 1643, when he went to live in London with his son the poet, at first in Aldersgate Street, and later in a house in the Barbican, where he died. He was buried in the chancel of St. Giles', Cripplegate, on Mar. 15, 1646/47.

Milton's musical abilities are alluded to in his son's poem 'Ad Patrem.' His compositions display sound musicianship, but are of no remarkable interest. The following were printed in his lifetime. In 'The Triumphes of Oriana,' 1601, 'Fair Oriana in the morn,' a 6. In Leighton's 'Teares or Lamentations,' 1614, 'Thou God of might,' a 4 (printed by Burney); 'O Lord behold,' a 5; 'O had I wings,' a 5 (printed by Hawkins); and 'If that a sinner's sighs,' a 5. For Ravenscroft's Psalter, 1621, he set two Psalm-tunes, one of them twice over. Of his other compositions, 'When David heard' and 'I am the Resurrection' (both a 5) have been printed in No. xxii. *Old English Edition*, from B.M. Add. MSS. 29,372-7, which also contain 'O woe is me,' a 5, 'Precamur sancte Domine,' 'How doth the Holy City,' and 'She weepeth continually' (all a 6). At Christ Church, Oxford, are 'If ye love me,' a 4, and five Fancies in five and six parts.

G. E. P. A.

MINACCIANDO, 'threateningly'; a term used once by Beethoven, in a letter to Schott, dated Jan. 28, 1826 (Nohl, *Neue Briefe Beethovens*, p. 282), in which, after some playful abuse, the following postscript occurs:

M.

MINGOTTI, REGINA (b. Naples, 1728; d. Neuberg on Danube, 1807), a very celebrated singer, born of German parents, whose family name was VALENTINI. Her father, an officer in the Austrian service, being ordered to Graz in Silesia in the same year, took his daughter with him. Here he died, leaving her to the care of an uncle, who placed her in the Ursuline Convent, where she received her first instruction in music. At the age of 14, however, she lost her uncle by death, and the pension which ensured her an asylum with the nuns ceased with his life. Compelled to return to her family, she spent some time very unhappily.

In order to escape from this miserable life, though still a mere child, she married Mingotti, an old Venetian musician, impresario of the Dresden opera. Perceiving all the advantage that might be derived from the great gifts of his young wife, Mingotti placed her at once

¹ For particulars as to his business career, and a lawsuit brought against him and his partner which was decided in their favour, see *Mason's Life of Milton*, vol. 1.

under the tuition of Porpora, where she made rapid progress in her art. From a slender salary, she soon rose to receiving more considerable pay, while her growing popularity aroused the jealousy of a powerful and established rival, the celebrated Faustina, who actually vacated the field and left Dresden for Italy. Soon afterwards the younger singer went also to Italy, and obtained a lucrative engagement at Naples. There she appeared with great éclat (1748) in Galuppi's 'L' Olimpiade,' astonishing the Italians no less by the purity of her pronunciation than by the beauty of her voice and style. Engagements were immediately offered her for many of the great Italian operas, but she refused all in order to return to Dresden, where she was already engaged. Here she played again in 'L' Olimpiade' with enormous success. Faustina and her husband, Hasse the composer, were also now again in Dresden; and Burney tells an anecdote which, if true, shows that their jealous feelings towards Mingotti had not ceased.¹ From Dresden she went to Spain (1751), where she sang with Gizziello in the operas directed by Farinelli, who was so strict a disciplinarian that he would not allow her to sing anywhere but at the Opera, nor even to practise in a room that looked on the street!

After spending two years in Spain, Mingotti went to Paris, and thence to London for the first time. Her arrival here retrieved the fortunes of the opera in England, which were in a languishing condition. In Nov. 1755 Jommelli's 'Andromaca' was performed, but 'a damp was thrown on its success by the indisposition of Mingotti.' She told Burney,² indeed, in 1772, 'that she was frequently hissed by the English for having a toothache, a cold, or a fever, to which the good people of England will readily allow every human being is liable except an actor or a singer.' She seems to have been a very accomplished singer and actress; her only fault, if she had one, being a little want of feminine grace and softness.

Her contentions with Vaneschi, the manager, occasioned many private quarrels and feuds.

At the close of the season of 1763, Signora Mattei left England, and Giardini and Mingotti again resumed the reins of opera government, and Mingotti sang in 'Cleoneice,' 'Siroe,' 'Enea e Lavinia' and 'Leucippe e Zencorita.' She afterwards sang with considerable success in the principal cities of Italy, but she always regarded Dresden as her home, during the life of the Elector Augustus. In 1772 she was settled at Munich, living comfortably, well received at court, and esteemed by all such as were able to appreciate her understanding and conversation.

In 1787 Mingotti retired to Neuburg on the Danube, where she died. Her portrait in

crayons, by Mengs, is in the Dresden Gallery. It represents her, when young, with a piece of music in her hand; and, if faithful, it makes her more nearly beautiful than it was easy for those who knew her later in life to believe her ever to have been. 'She is painted in youth, plumpness, and with a very expressive countenance.' The dog in Hogarth's 'Lady's Last Stake' is said to be a portrait of Mingotti's dog.

J. M.

MINIM (Fr. *blanche*; Ger. *halbe Note*, whence the American term *Half-note*; Ital. *minima*). The half of a semibreve and equal to two crotchets. It is written  and its rest is , a block-stroke placed above a line of the staff: i.e. the inversion of the semibreve rest.

MINNESINGER, or MINNESÄNGER, were the German counterpart of the troubadours, but of somewhat later date. They flourished in the 12th and 13th centuries, and were succeeded by the MEISTERSINGER (*q.v.*). The Minnesinger were almost exclusively of noble or gentle birth, and to modern musicians, the names of Walther von der Vogelweide, Wolfram von Eschenbach and Tannhäuser are the most familiar, from the dramas of Wagner. The work of F. H. von der Hagen, *Minnesänger* (1838-56), is the best authority on the subject. The name implies that love was the principal subject dealt with in the songs of these knightly minstrels. (See MEISTERSINGER; SONG, subsection GERMAN.)

MINOJA, AMBROGIO (b. Ospitaletto, near Lodi, Oct. 2, 1752; d. Milan, Aug. 3, 1825), pupil of S. Anselmi, Lodi and Sala at Naples. From 1781-1801 he was maestro al cembalo (conductor) at La Scala Theatre, Milan, where he produced his first opera in 1787. In 1795 he was maestro al cembalo at Parma Theatre, afterwards maestro di cappella at La Scala Theatre and director of Milan Conservatoire. He composed masses and other church music, coronation music for Napoleon and music for members of his court, etc.; orchestral and chamber music and a book of Solfeggi which are still largely used. He also wrote *Letters on Singing* (addressed to B. Asioli), which were translated into German. The MS. of his *Autobiography* is in the Wm. Heyer Museum, Leipzig (Q.-L.; Riemann).

MINOR. When intervals have two forms which are alike consonant or alike dissonant, these are distinguished as major and minor. The minor form is always a semitone less than the major.

¹ See HASE; and Burney, *Present State (Germany)*, i. 157.

² From whose account most of these details are derived.

The consonances which have minor forms are thirds and sixths; the dissonances are seconds, sevenths and ninths; of these the minor thirds and sixths are the roughest of consonances, and the minor second is the roughest and the minor seventh the smoothest of dissonances.

Minor scales are so called because their chief characteristic is their third being minor. Minor tones are less than major by a comma. (See MAJOR; HELMHOLTZ; SCALE.) C. H. H. P.

MINOR CANONS, priests in cathedrals and collegiate churches whose duty it is to superintend the performance of daily service. They are not of the Chapter, but rank after the canons and prebendaries. They were formerly called vicars choral, and were originally appointed as deputies of the canons for church purposes, their number being regulated by the number of the capitular members. Laymen were frequently appointed as vicars choral, but it is necessary that minor canons should be in Holy Orders. According to the statutes, they should also be skilled in church music. (Hook's *Church Dictionary*.) W. B. S.

MINORE (Ital. *minor*) is used as a warning sign in music which changes suddenly into the tonic (or sometimes the relative) minor of the original key, and in which the change of signature might escape the observation of the performer. It is most commonly found, like its counterpart, MAGGIORE (*q.v.*), in variations. M.

MINSTREL (Fr. *ménétrier*). The name so vaguely used in modern romantic language as the equivalent of musician, had originally a far more definite signification. Its most probable derivation is from *minister*, and at first the minstrels seem to have been employed by the troubadours as their attendants, possibly in order to accompany them on some stringed instrument. Through all the development of music, the idea of an instrumental performer has clung to the name minstrel, who appears to have corresponded in the north of France to the jongleur of the south, and to have performed the same functions. The name minstrel has undergone no such debasing change of meaning as has been the fate of jongleur in its modern form of juggler. (See SONG; TROUBADOUR.) M.

MINUET (Fr. *menuet*; Ger. *Menuett*; Ital. *menuetto*), a dance of French origin. The name is derived from the French *menu* (small), and refers to the short steps of the dance. According to some authorities it came originally from the province of Poitou, while others say that the first was composed by Lully.

In its earliest form the minuet consisted of two eight-bar phrases, in 3-4 time, each of which was repeated; sometimes beginning on the third, but more frequently upon the first, beat of the bar, and of a very moderate degree of movement. As a complement to the short movement, a second minuet was soon added,

similar in form to the first, but contrasted in feeling. This was mostly written in 3-part harmony, whence it received its name trio, a name retained down to the present time, long after the restriction as to the number of parts has been abandoned. A further enlargement in the form of the minuet consisted in the extension of the number of bars, especially in the second half of the dance, which frequently contained sixteen, or even more, bars, instead of the original eight. It is in this form that it is mostly found in the Suite.

SUITES.—In the works of the composers of the 18th century, especially Handel and Bach, the minuet is by no means an indispensable part of the suite. As compared with some other movements, such as the allemande, courante or sarabande, it may be said to be of somewhat infrequent occurrence. Its usual position in the suite is among the miscellaneous dances, which are to be found between the sarabande and the gigue, though we exceptionally meet with it in the third suite of Handel's second set as a final movement, and with three variations. In Handel, moreover, it is very rare to find the second minuet (or trio) following the first. On the other hand, this composer frequently gives considerable development to each section of the movement, as in the eighth suite of the second set, where the minuet (written, by the way, as is frequently the case with Handel, in 3-8 instead of 3-4 time) contains thirty-four bars in the first part, and seventy-one in the second. This piece has little of the character of the ordinary minuet excepting the rhythm. Handel also frequently finishes the overtures of his operas and oratorios with a minuet; one of the best-known instances will be found in the overture to 'Samson.'

The minuets of Bach are remarkable for their variety of form and character. In the partita in B₅ (No. 1) the first minuet contains sixteen bars in the first section and twenty-two in the second; while the second minuet is quite in the old form, consisting of two parts of eight bars each. The minuet of the fourth partita (in D) has no trio, and its sections contain, the first eight, and the second twenty bars. In a suite for clavier in E_b (B.-G. xxxvi. p. 12) we find an early example of a frequent modern practice. The first minuet is in E_b major, and the second in the tonic minor. It may be remarked in passing that Bach never uses the term 'trio' for the second minuet, unless it is actually written in three parts. In the fourth of the six sonatas for flute and clavier we meet with another departure from the custom of the day which ordained that all movements of a suite must be in the same key. We here see the first minuet in C major, and the second in A minor—a precedent often followed in more modern works. Another example of the same relation of keys will be found in the fourth of

the so-called 'English Suites'—the only one which contains a minuet. Here the first minuet is in F and the second in D minor. Of the six French suites four have minuets, two of which are worth noticing. In the second minuet of the first suite the latter half is not repeated—a very rare thing; and in the third suite we meet with a genuine trio in three parts throughout, and at the end the indication 'Menuet da capo.' Though it was always understood that the first minuet was to be repeated after the second, it is very rare at this date to find the direction expressly given. One more interesting innovation of Bach's remains to be mentioned. In his great concerto in F for solo violin, two horns, three oboes, bassoon and strings, will be found a minuet with three trios, after each of which the minuet is repeated. (B.-G. xix. p. 27.) We shall presently see that Mozart, half a century later, did the same thing.

THE SYMPHONIC MINUET.—The historic importance of the minuet arises from the fact that, unlike the other ancient dances, it did not become obsolete, but continued to hold a place in the symphony (the descendant of the old suite), and in other large instrumental works written in the same form. The first composer to introduce the minuet into the symphony appears to have been Haydn; for in the works of this class which preceded his (those of C. P. E. Bach, Sammartini and others) we find only three movements. And even with Haydn (as also in many of the earlier works of Mozart) we find the minuet at first by no means of invariable occurrence. On the other hand, we sometimes see in the same work two minuets, each with a trio, one before and one after the slow movement. Examples will be met with in Haydn's first twelve quartets (opp. 1 and 2) and also in some of Mozart's serenatas, divertimenti, etc. (Köchel's Catalogue, Nos. 63, 99, 204, 247 and others).

While in general retaining the old form of the minuet, Haydn greatly changed its spirit. The original dance was stately in character, and somewhat slow. With Haydn its prevailing tone was light-hearted humour, sometimes even developing into downright fun. The time became quicker. While in the earlier works the most frequent indications are *Allegretto*, or *Allegro ma non troppo*, we find in the later quartets more than once a *Presto* (opp. 76 and 77). These minuets thus become an anticipation of the Beethoven scherzo. Curiously enough, in one set of quartets, and in only one (op. 33), Haydn designates this movement 'Scherzando,' in Nos. 1 and 2, and 'Scherzo' in Nos. 3 to 6. As the tempo here is not more rapid than in the other minuets, it is evident that the term only refers to the character of the music, and is not used in the modern sense. As we learn from Rohlf's *Haydn* (p. 332) that the composer care-

fully preserved the chronological order of the quartets in numbering them, we are in a position to trace the gradual development of the minuet through the entire series. We find one of Haydn's innovations in some of the later works, in putting the trio into a key more remote from that of the minuet, instead of into one of those more nearly related (quartet in F, op. 72, No. 2—minuet in F, trio in D \flat ; quartet in C, op. 74, No. 1—minuet in C, trio in A major). This relation of the tonics was a favourite one with Beethoven. In only one of Haydn's quartets (op. 9, No. 4) do we find a trio in three parts, though the name is always given to the second minuet. A curious departure from the ordinary form is to be seen in the quartet in E \flat , op. 2, No. 3. Here the trio of the second minuet has three variations, one of which is played, instead of the original trio, after each repetition of the minuet.

It is no uncommon thing in the works of Haydn to meet with another variety of the minuet. The finales of his smaller works are often written in a 'Tempo di minuetto.' Here the regular subdivisions of minuet and trio, sometimes also the double bars and repeats, are abandoned. In the piano sonatas and trios many examples will be met with. An instance of a similar movement by Mozart is furnished in the finale of his sonata in F for piano and violin. Haydn's predilection for the minuet is further shown by the fact that in several of his sonatas in three movements the minuet and trio replace the slow movement, which is altogether wanting.

With Mozart the form of the minuet is identical with that of Haydn; it is the spirit that is different. Suavity, tenderness and grace, rather than overflowing animal spirits, are now the prevailing characteristics. It is in Mozart's concerted instrumental works (serenatas, etc.) that his minuets must be chiefly studied; they are singularly rare in his pianoforte compositions. Of seventeen solo sonatas, only two (those in E \flat and A major) contain minuets; while out of forty-two sonatas for piano and violin, minuets are only found in four as intermediate movements, though in the earlier works a 'Tempo di minuetto' often forms the finale. In many of the earlier symphonies also we find only three movements, and even in several of the later and finer symphonies (e.g. Köchel, Nos. 297, 338, 444, 504) the minuet is wanting. On the other hand, in the serenades and divertimenti, especial prominence is given to this movement. Frequently two minuets are to be found, and in some cases (Köchel, Nos. 100, 203, 250) three are to be met with. The variety of character and colouring in these minuets is the more striking as the form is approximately the same in all. In the divertimento in D (Köchel, 131), for strings, flute, oboe, bassoon and four horns, there are two

minuets, the first of which has three trios and the second two. The first minuet in D major is given to strings alone; the first trio (also in D major) is a quartet for the four horns; the second (in G) is a trio for flute, oboe and bassoon; while the third (in D minor) is for the seven wind instruments in combination. After the last repetition of the minuet, a coda for all the instruments concludes the movement. The three trios are as strongly contrasted in musical character as in orchestral colour. Many similar instances might easily be given from the works of Mozart.

To Beethoven we owe the transformation of the minuet into the SCHERZO (*q.v.*). Still Beethoven does not entirely abandon the older minuet. Out of sixty-three examples of the minuet or scherzo (not counting those in common time) to be found in his works, seventeen are entitled 'Minuet,' or 'Tempo di minuetto.' Besides this, in two works (the piano and violin sonata in G, op. 30, No. 3, and the piano solo sonata in E \flat , op. 31, No. 3) the tempo di minuetto takes the place of the slow movement; in the sonata, op. 49, No. 2, it serves as finale (as with Haydn and Mozart); and in the sonata, op. 54, the first movement is a tempo di minuetto. In these minuets we sometimes find a grace akin to that of Mozart (sonata, op. 10, No. 3; septet), sometimes, as it were, a reflection of the humour of Haydn (sonata, op. 22); but more often the purest individuality of Beethoven himself. In some cases a movement is entitled 'Minuet' though its character is decidedly that of the scherzo (*e.g.* in the first symphony). The only one of the nine symphonies in which a minuet of the old style is to be seen is No. 8.

The transformation of the minuet into the scherzo, just adverted to, has had an important influence on modern composers. In the large majority of works produced since the time of Beethoven, the scherzo has replaced its predecessor. E. P.

THE DANCE IN ENGLAND.—Minuets began to appear in English musical publications in the latter part of the 17th century; one is in Salter's *Genteel Companion for the Recorder*, 1683, and in the first half of the 18th century they were a feature in English dancing. The period of their greatest popularity here was from about 1730–70, owing, no doubt, to their court patronage. Annually, on the King's birthday, a special minuet was composed for the occasion, and this with the other French dances was published in a small oblong volume issued yearly by such publishers as Walsh and Wright. Later, other music-sellers brought out similar yearly collections. The earliest of these issues of minuets with which the present writer is acquainted is for 1716, and the latest, Thompson's, for 1791. After that date the decline of the minuet as a dance caused such

yearly sets to be abandoned. Though so greatly in favour, much of this minuet music was decidedly uninteresting, and as an example of the type common at the middle of the 18th century the following is appended; it is notable as having been used at the Coronation ball of George the Third in 1761—

The Coronation Minuet.

From Thompson's *Minuets* for 1762.

Other minuets of greater musical quality were Martini's; that from 'Ariadne,' Foot's, etc.; these were in great favour for flute and fiddle pieces. F. K.

MIOLAN, MARIE CAROLINE FÉLIX, see CARVALHO.

MIREILLE, opera in 5 acts; words by Carré (from *Mirëio*, a Provençal poem by Mistral); music by Gounod. Produced Théâtre Lyrique, Mar. 19, 1864; reduced to 3 acts, Dec. 15, 1864, same theatre. In London, in Italian, 5 acts, as 'Mirolla,' Her Majesty's Theatre, July 5, 1864. G.

MISERERE, Psalm li. in the Hebrew and English reckoning, or 50th in the Latin, *Miserere mei Deus*, has special musical importance from its position at the end of the Office of TENEBRAE (*q.v.*).

There is reason to believe that the idea of adapting the Miserere to music of a more solemn character than that generally used for the Psalms, and thus making it the culminating point of interest in the service of Tenebrae, originated with Pope Leo X., whose Master of Ceremonies, Paride Grassi, tells us that it was first sung to a Fauxbourdon in 1514. No trace of the music used on that occasion can now be discovered. The oldest example we possess was composed in 1517 by Costanzo Festa, who distributed the words of the Psalm between two falsi-bordoni, one for four voices and the other for five, relieved by alternate verses of plain-song—a mode of treatment which has survived to the present day. Festa's Miserere is the first of a collection of twelve, contained in two celebrated MS. volumes preserved among the archives of the Pontifical Chapel. The other contributors to the series were Luigi Dentice, Francesco Guerrero, Palestrina, Teofilo Gargano, Francesco Anerio, Felice Anerio, an anonymous composer of very inferior ability, Giovanni Maria Nanini,¹ Sante Naldini, Ruggerio Giovanelli, and lastly Gregorio ALLEGRI

¹ Nanini's work is little more than an adaptation of Palestrina's with an additional verse for nine voices.

(*q.v.*)—whose work is the only one of the twelve now remaining in use in the Papal Chapel. Later works by Tommaso Bai (produced 1714) and Giuseppe Baini (1821) have shared in the fame of Allegri's *Miserere* as performed by the SISTINE CHOIR (*q.v.*). W. S. R., rev.

MISSA; MISSA DE ANGELIS, see MASS.

MISSON, LUIS (*b.* ? Barcelona; *d.* Madrid, Feb. 13, 1766), Spanish composer, inventor of the 'Tonadilla.' In 1748 he was admitted to the royal orchestra as a player on the flute and hautboy, and he soon gained a reputation for virtuosity, especially on the flute. He became conductor in 1756. The first tonadilla dates from 1757. It is a duet between the landlady of an inn and an itinerant Bohemian, and was so successful that it was followed by many others, for various numbers of voices and written by various composers. Misson takes as his subject some simple scene of popular life (usually in Madrid) and draws out of it all the music of which the scene is capable. His writing is strongly national, and inspired by popular songs (*e.g.* *Seguidillas*); his works are genre-pictures, the musical counterpart of the paintings and tapestries of Goya.

The Bibl. del Ayuntamiento, Madrid, contains four MS. scores of Misson, including 'Lo que puede verso . . .' (for 5 v.), which may be translated 'Things seen in the street on a public holiday.' Misson also composed 3 comic operas (*ZARZUELAS* (lost)), and 6 sonatas for flute and bass (Library of the Duke of Alba, Madrid).

J. B. T.

MITJANA Y GORDON, RAFAEL (*b.* Malaga, Dec. 6, 1869; *d.* Stockholm, Aug. 15, 1921), Spanish diplomat and musical historian. He studied music with Pedrell and Saint-Saëns; but his importance lies less with his operatic works (*e.g.* 'La Buena Guarda') than with his historical research. A far better writer than Pedrell, hardly less learned, and more accurate, he was able to give a clearer account of the course of Spanish musical history, while his diplomatic appointments enabled him to discover in foreign libraries new information of great importance. He was particularly fortunate in his discoveries in Sweden, where he found and described an unknown *Cancionero* (song-book) dating from the mid-16th century: 'Villancicos de diversos autores' (2-5 v.), printed at Venice by H. Scotus, 1556 (Univ. Lib., Upsala). He also discovered two early and unknown secular cantatas by MORALES (*q.v.*), and published a catalogue of printed music at Upsala. He was responsible for the Spanish vol. of the *Encl. du Conservatoire* (Paris, Delagrave); but owing to unforeseen causes his MS., dated 1914, was only printed in 1919. Many printers' errors remained uncorrected, especially in the musical illustrations, while the indispensable index and table of contents were omitted. The final results of his researches

will be found in the following, published subsequently:

Estudios sobre algunos músicos españoles del siglo XVI. Madrid, 1918. (Including Morales and Victoria.)
Don Fernando de las Infantas. Madrid, 1918.
Francisco Uuerrero. Madrid, 1922.

He also wrote valuable articles on secular music in Spain in the 16th and 17th centuries for the *Revista de Filología Española*, and a short life of Morales. This, however, has not yet been published. J. B. T.

MIXED CADENCE, see CADENCE (II.), section (3).

MIXED MODES. Writers on plain-song apply this term to tonalities which embrace the entire compass of an Authentic Mode in combination with that of its plagal derivative (see MODES, ECCLESIASTICAL). W. S. R.

MIXED VOICES, the English term for a combination of female and male voices, as opposed to EQUAL VOICES (*q.v.*), which denotes male or female voices alone. G.

MIXOLYDIAN MODE (Lat. *modus mixolydius*; *modus angelicus*), the seventh of the Ecclesiastical Modes, see MODES, ECCLESIASTICAL.

MIXTURE, an organ stop ordinarily furnished with from two to five comparatively small pipes to each key. It is compounded of the higher-sounding and therefore shorter members of the 'foundation' and 'mutation' classes of stops, combined or 'mixed,' and arranged to draw together, as in practice they are seldom required to be used separately. The Mixture represents or corroborates the higher consonant harmonic sounds suggested by nature, and in the bass produces tones to the third or fourth octave above the unison or chief foundation tone. As the musical scale ascends the higher harmonics become weak and inaudible to the ear; hence in a Mixture stop it is customary to discontinue the higher ranks as they ascend, one or more at a time, and insert in lieu a rank of lower tone than was previously in the stop, but appearing as a separate stop. This alteration is called a 'break.' A Full Mixture is generally of three ranks, consisting of the following intervals in relation to the unison: 15, 19, 22, or *c'*, *g'*, *c'''*, when *c* is struck. (See MUTATION and J. J. Wedgwood's *Dictionary of Organ Stops*.) E. J. H.

MIZLER (MITSLER) VON KOLOF, LORENZ CHRISTOPH (*b.* Heidenheim, Württemberg, July 25, 1711; *d.* Warsaw, Mar. 1778), was educated at the Gymnasium of Anspach and the University of Leipzig. He was one of Bach's scholars. In 1734 he became a magistrate, and was generally a cultivated and prominent person. His claim to perpetuity is his connexion with the 'Association for Musical Science,' which he founded at Leipzig in 1738 and kept together. Amongst its members were Handel, Bach and Graun. Bach composed a 6-part canon and the canonic variations on 'Vom Himmel

hoch' as his diploma pieces. Mizler edited a periodical, the *Neu-eröffnete Musik-Bibliothek* (1739-54), wrote a treatise on Thorough-bass, *Die Anfangsgründe des General basses*, in which he seems to have pushed the connexion of music and mathematics to absurdity. (See Spitta, *Bach*, Engl. trans. iii. 22-25.) He translated Fux's *Gradus* into German (1742). (See *Q.-L.* for other works.) a.

MLYNARSKI, EMIL (b. Kibarty, Poland, July 18, 1870), orchestral conductor, studied as a violinist under Auer in St. Petersburg and became second conductor and director of symphony concerts at Warsaw (1893), and succeeded to the senior conductorship both of the Opera and of the Warsaw Philharmonic Society (1901-05). In 1907 he conducted orchestral concerts with the LONDON SYMPHONY ORCHESTRA (*q.v.*), and in 1910 he took charge of the SCOTTISH ORCHESTRA (*q.v.*), with which he did much important work. Later (1919-22) he returned to Poland and resumed the directorship of the Opera and of the Conservatoire at Warsaw.

Among his more important compositions are a concerto in D minor for violin and orchestra and a symphony in F, 'Polonia.' c.

MOCK DOCTOR, THE, see MÉDECIN MALGRÉ LUI, Le.

MOCQUEREAU, DOM ANDRÉ (b. Tessoualle, near Chollet, Maine-et-Loire, June 6, 1849), a French Benedictine, entered the Solesmes monastery in 1875, after solid musical study. He founded the *Paléographie musicale*, a monumental publication intended to spread the knowledge of the liturgical chants of the Catholic Church in all their forms and in all epochs. In order to complete the melodic restoration, Dom Mocquereau published before the prefaces to the volumes of the *Paléographie* a number of theoretical and practical works on the traditional rules for the performance of the Gregorian chant: *L'Art grégorien*; *Petit traité de psalmodie*; *Méthode de chant grégorien* (1899); *Le Nombre musical grégorien ou Rythmique grégorienne* (1908). F. R⁴.

MODERATO, 'in moderate time,' or 'moderately.' This direction is used either singly as a mark of time, or as qualifying some other mark of time, as Allegro moderato, or Andante moderato, when it has the result of lessening the force of the simple direction. Thus Allegro moderato will be slightly slower than Allegro alone, and Andante moderato slightly faster than Andante. M.

MODERNE, JACQUES, also GRAND JACQUES (on account of his stoutness) or 'PRNGVENTO,' probably from his birthplace (?) in Istria; early 16th-century musician; maître de chapelle at Notre Dame du Confort at Lyons, where he established a music-printing business and published between 1532-67 several books of masses, motets, chansons, including motets and chan-

sons of his own composition which appear to be lost (*Q.-L.*; *Riemann*).

MODES, ECCLESIASTICAL. All mediæval art-music is based upon a system of eight modes. This system is the result of a long, intricate and controverted history; and it will be best explained by an historical method of treatment.

HISTORY—THE GREEK SYSTEM.—The first question that arises is with regard to the antiquity of the modes. It has been taken for granted that when ancient Greek writers such as Plato and Aristotle speak of certain *Harmoniai* (ἁρμονίαι) distinguished by Greek tribal names as Dorian, Lydian, Phrygian, etc., they are referring to modes such as were in use in the later Middle Ages under those names. In the article GREEK MUSIC reasons have been given to prove that this is a false assumption, and to show that the groups of notes described as Dorian, Phrygian, etc., by the Greek writers of classical times were distinguished from one another by pitch and grouping, and not, properly speaking, by tonality.

Now the mediæval modal system is one which depends on differences of tonality, and is comparatively indifferent to pitch. The history of the mediæval modes is therefore, to a considerable extent, the history of the evolution of tonality. Tonality may be defined as the musical character belonging to a mode or a melody by reason of the mutual relation of the notes employed. It is determined chiefly by three things, (1) the range and sequence of the notes, and their relation to the two fixed points of (2) the Dominant, and (3) the Final.

The early Greek *Harmoniai* or groupings of notes and tetrachords were experimental in character. One of them proved to be more valuable than all the rest, viz. the Octave-system (see MONOCHORD). It came, in theory at any rate, to supersede all the others, though, they being no doubt associated with particular instruments, continued to be in practical use long after theory had advanced beyond them. This Octave-system represented only one form of tonality. Variety was provided not by differences of tonality but by differences of *genus* (γένος), the enharmonic, the chromatic and the diatonic *genera*. (See GREEK MUSIC.) In the diatonic genus (which alone need be taken into account for the present purpose) the tonality may be roughly described as that of the modern minor scale or mode, for the series of notes presented tones and semitones in the following order ascending

TSTTTSTT | TSTT, etc.

equivalent to the white notes of the pianoforte from A upwards.

A reader unaccustomed to the modes and the idea of tonality will realise what this implies by contrasting the TSTTTSTT series of intervals of the modern minor scale or mode, with the familiar TTSTTTS series of the modern

major scale or mode. This Greek diatonic system, standing as it did alone, afforded no sufficient opportunity for any idea of differences in tonality. Yet even so the Greeks began to see that the character of a melody depended upon its reference to a given note of the series. The fixed note in their series of notes was the Mese ($\mu\epsilon\sigma\eta$), the central note, which served as the hinge or meeting-point for the two conjunct tetrachords of the Octave-system (E-e), or in later days for the two octaves of the Perfect System (A-a). (See MONOCHORD.) Thus Aristotile called attention (*Probl.* xix. 20) to the way in which the character of a melody depended upon the relation of its notes to the constantly recurring Mese. Here are the first signs of the sense of tonality, and of a Mese or Dominant; but they are only rudimentary as yet.

The *Harmoniai* and their designations fell into the background as the advance was made first towards the Octave-system and then the Perfect System; thereupon that sense of pitch to which the early Greeks attached so much significance, was satisfied in a new way, viz. by transposing the Octave-system to different pitches. When thus set at a special pitch it was called *róvos*; and it was natural to give to these various *róvoi* the same designation which had previously been employed to denote pitch, viz. Dorian, Lydian, etc.

Thus when the old (Dorian, Phrygian, Lydian, etc.) *Harmoniai* or groups went out of vogue, there came up in their place the (Dorian, Phrygian, Lydian, etc.) *Tonoí*, each formed by transposing the Octave-system to the Dorian, the Phrygian, the Lydian, etc., pitch. At this point there appeared upon the scene Aristoxenus of Tarentum, a pupil of Aristotle (*Jl.* c. 310), the author of many developments in musical theory. He noted the indefiniteness of the old use of the designations Dorian, Phrygian, etc., and gave them a definite pitch. He made out a scheme of thirteen *Tonoí*, placing one on each semitone of the octave, and he attached to each some one of the old designations. The enumeration is found in two forms in the writings of Cleonides, a disciple of Aristoxenus; his own account is not extant. In the one form thirteen designations are used, in the other only eight, five of them being utilised for a pair of *Tonoí*.

13 (lowest). Hypodorian	E	Hypodorian.

At a later date the Aristoxeneans raised the number to fifteen by adding a Hyperlydian and a Hyperæolian: the *Tonoí* thus fell into three groups of five each, the upper group distinguished by the prefix *Hyper* and the lower by the prefix *Hypo*.

This system of *Tonoí* or keys remained the chief feature of Greek musical theory for the next 500 years. It provided only for one tonality or mode, viz. that represented by the Octave-system, or later by the Perfect System of two octaves; but it provided for it at every possible pitch. (See Vol. II. pp. 444-7.) Meanwhile advances were being made towards a fuller sense of tonality and towards the modal system.

Aristoxenus himself was active in this direction. He showed that as there are in the diatonic genus three different species of tetrachord possible, viz. those represented by the formulas T T S, T S T and S T T, so there are seven possible species of octave. In the writings of his followers (his own treatise unfortunately breaks off at this point) these are thus described:

1. STSTT ^m TS	{ Hypate Hypaton to Paramease	{ (B-b) Mixolydian.
2. TTSTT ^m TS	{ Parhypate Hypaton to Trita Diezeugmenon	{ (C-c) Lydian.
3. TSTT ^m TST	{ Lichanos Hypaton to Paranete Diezeugmenon	{ (D-d) Phrygian.
4. STT ^m TSTT	{ Hypate Meson to Nete Diezeugmenon	{ (E-e) Dorian.
5. TT ^m TSTTS	{ Parhypate Meson to Trita Hyperbolaon	{ (F-f) Hypolydian.
6. T ^m TSTTST	{ Lichanos Meson to Paranete Hyperbolaon	{ (G-g) Hypophrygian.
7. mTSTTSTT	{ Mese to Nete Hyperbolaon	{ (a-a') Hypodorian.

These seven octaves were distinguished from one another in range and sequence of intervals; so far they exhibited the first element of tonality. But they were not distinguished from one another by difference of Mese or Dominant, and there is as yet no idea of a Final. The note Mese (=a) acted as Dominant throughout, and this accounts for the designations. Mixolydian, signifying high pitch, is given to No. 1 because it has its Mese at the highest point, Lydian at the next highest, and so on. The position is marked above by ^m. Thus the designations Mixolydian, Lydian, etc., here appear in inverse order as compared with their use for the *Tonoí* or keys. The contradiction is more apparent than real. In each case it is the Mese that determines the sense of pitch. In the *Tonoí*, being transpositions of the scale, the Mese varies actually in pitch just as all the other notes of the *Tonos* vary in pitch; and the highest *Tonos* in range is the highest also in pitch. In the Seven Species of Octave, however, being mere sections of a fixed scale, the Mese is at a fixed pitch, and only varies relatively to the other notes of the octave. Consequently the octave which is the lowest in range gives the effect of the highest pitch, since its melodies group round the Mese, which is at the top of the Octave; conversely, the octave which has the highest range gives the effect of

low pitch, because of the prevalence of its lowest note. In other words, the designations are given to the *Tonoï* in regard to the actual pitch of the Mese, but to the Seven Species of Octave in regard to the relative pitch of the Mese (see Vol. II. p. 443).

This doctrine of the Seven Species of Octave remained without further development among the disciples of Aristoxenus until the advent of Ptolemy in the middle of the 2nd century A.D. Differences of pitch were now felt to be of less importance, and distinctions of species were more highly appreciated; the consequence was that interest was transferred from the *Tonoï* or keys, which merely gave the same scale at different pitches, to the Seven Octaves, which represented different species. Ptolemy reduced the *Tonoï* to seven in number, equating them to the Seven Species of Octave, and using transposition as a way of setting all the species at a uniform pitch, but with varying signatures. When this was done it was natural to ascribe to each species a Mese of its own, which should be a real Mese or middle note of the octave, exercising the same function with regard to it that the original Mese exercised with regard to the original (Dorian) octave of the Perfect System. This necessitated the double nomenclature described in Vol. II. p. 447. According to the new method (*κατὰ θέσιν*) each species of octave could have a Mese as its central note, a Nete as its highest note, and so on. As each octave thus acquired its own Mese, which was not as formerly in a varying position but always the central note, the inverted series of denominations formerly given to the octaves became inappropriate, and the series of names was attached to the Seven Species of Octave in the same order in which it was attached to the *Tonoï* and not in the inverse order.

Thus Ptolemy's Seven Octaves, which we may now begin to call modes because they are distinguished by their tonality and valued accordingly, may be set down in tabular form thus: First as seven modes varying in pitch, but each formed of a section of the Perfect System or white notes of the pianoforte.

	Mese.	
1 (highest). Mixolydian	(a—a') d	= Paraneite Diezeugmenon. = Tritæ Diezeugmenon. = Paramese. = Mese. = Lichanos Meson. = Parhypatæ Meson. = Hypatæ Meson.
2. Lydian	(G—g) c	
3. Phrygian	(F—f) b	
4. Dorian	(E—e) a	
5. Hypolydian	(D—d) ti	
6. Hypophrygian	(C—c) F	
7. Hypodorian	(B—b) E	

Secondly, reduced by the system of *Tonoï* to uniform pitch but varying in signature:

The successors of Ptolemy, as it appears from the late Byzantine writer Bryennius, came to regard each of these modes as a pair of conjunct tetrachords meeting in Mese; they then added

below a Proslambanomenos or disjunct note to make up the octave, thus repeating again the process which had taken place years before in the extension downwards of the two lower conjunct tetrachords of the Perfect System (see MONOCHORD); and the old names of the notes in the octave were reapplied to each mode in slightly altered form, thus: Proslambanomenos, Hypatæ, Parhypatæ, Lichanos, Mese, Parhypatæ, Lichanos, Nete.

The main results of these changes were as follows: (1) The Seven Species of Octave of the theorists became seven practical working modes,¹ distinguished from one another essentially by their different sequence of intervals, and only incidentally by difference of pitch. (2) The Mese became the regular Dominant of the mode: and (3) the modes ranged a note lower than they had previously done owing to the addition of the Proslambanomenos. Thus the Dorian mode is found to have its seat as ever in the octave from E upwards, with *a* as its Mese or Dominant: but it now descends to D. Similarly the Phrygian has *b* for its dominant and E for its lowest note: while the Lydian has *c* and F, the Mixolydian *d* and G.

So far it has been possible to trace the evolution of the modal system in the writings of the theorists. Two out of three chief features of tonality have emerged, viz. (1) the range and succession of the intervals in each mode, and (2) the idea of the Dominant. Hitherto, however, there is no sign of any idea of the importance of the Final, which is the third chief ingredient of tonality. The conception of the Dominant is traceable back as far as Aristotle, but the significance of the closing note of a melody had not as yet been scientifically recognised, at any rate by the theorists. At this point in the evolution the series of writers on the theory of music, who have hitherto been our guides, to all intents and purposes comes to an end. No Greek writers are forthcoming after the 4th century A.D. until Bryennius in the 14th; the Latin writers do little to fill the gap, at any rate until the 9th. Boethius, Cassiodorus and Martianus Capella in the 5th and 6th centuries are of little value, as they merely repeat, after the manner of an encyclopædist, such information as they derived from the Greek writers. Happily at this date, when the theorists fail, there becomes available for the Western history a large collection of actual musical compositions in which the further evolution of the modal system may be traced.

THE ROMAN SCHOOL.—The developments in the West between the 6th and the 9th centuries

¹ Later followers of Ptolemy added a Hypermixolydian Mode thus making eight.

are bound up with the great music school (*Schola Cantorum*) of Rome. They go forward in silence; for it is only when the Roman chant reaches the Frankish Empire that the silence is broken by fresh writings of theorists, called forth here, as in the case of the Liturgy, by the new ways recently imported from Rome. The early Roman Church was pre-eminently Greek in character and personnel, therefore its church music was not different in this respect from the Roman secular music which clung closely to the Greek traditions. From the 6th century onward the music school of the Roman Church grew in importance and organisation; and, even when Greek ceased to be the liturgical language of the Roman Church, there is no reason to think that any break came in the continuity of the Greek tradition so far as the music was concerned. The bulk of the so-called GREGORIAN MUSIC (*q.v.*) was composed in these surroundings, and whatever importations there were at this period from outside were from Greek sources. It is therefore to be expected that the theory that lies behind the Gregorian music should prove to be in line with the Greek traditions. For a full discussion of the character of this music the reader is referred to the article PLAIN-SONG; but one or two points must be taken into account here.

The bulk of the music falls into two classes, and is either responsorial or antiphonal in its style. Now the responsorial music, which is the older class of the two, is characterised by a Dominant note, which serves as the note on which the greater part of the text is recited; but it sets no great store on the Final. It therefore corresponds with the state of development already reached and expounded. The antiphonal style was of later introduction, coming from the East in the 4th century. Here the Final is of greater moment, for the antiphon consists of a melody which has no reciting note, and in which, therefore, tonality is largely determined by the close. It is safe, therefore, to suppose that with the progress of the antiphonal style there went along a growth in the conception and importance of the Final. Meanwhile a transformation from simple to elaborate music was taking place, as musical proficiency grew within the Roman School. The responsorial class of music was more affected by it than the antiphonal. The elaborate embroideries which decorated the chant of the Graduals and other Responds tended to obscure the primitive reciting note; the Final, however, was only brought into greater prominence by the process of elaboration. Consequently, as the music grew more ornate, tonality came to depend more upon the newly conceived Final and less upon the older conception of the Dominant. This change is one which may safely be said to have come about during this intervening period from the 5th to the 8th centuries in which the theorists are silent.

A more difficult change to account for is that by which the so-called 'plagal' modes came into existence in their mediæval form. The germ of them is clearly discernible in the prefix 'Hypo,' which characterised the lowest three of the Seven Modes. But in Ptolemy's time these were not accounted of a different class from the rest; they had the same general character (*mutatis mutandis*); and the prefix merely denoted that they were each in pitch a fourth below the mode with the corresponding designation. The mediæval plagal modes took from these their names and ranges, but they had not their independent position and other characteristics. Each plagal mode depended upon the corresponding authentic mode; it had the same Final, and was so closely related to it that, when the modes came to be denoted by numbers, it was at first thought more natural to put the two under one number, only distinguishing them from one another by the term 'Authentic' and 'Plagal.' Thus the Greeks reckoned them as four pairs; but the Latins, as they emancipated themselves from Greek influence, came to denote them by the numbers from one to eight.

		Range.	Domi- nant.	Final.
1st. First Mode	{ Authentic (Dorian)	D—d	D	D
2nd.	{ Plagal (Hypodorian)	A—a	F	D
3rd. Second Mode	{ Authentic (Phrygian)	E—e	b	E
4th.	{ Plagal (Hypophrygian)	B—b	a	E
5th. Third Mode	{ Authentic (Lydian)	F—f	c	F
6th.	{ Plagal (Hypolydian)	C—c	a	F
7th. Fourth Mode	{ Authentic (Mixolydian)	G—g	d	G
8th.	{ Plagal (Hypomixolydian)	D—d	c	G

This arrangement of eight modes in four pairs must be subsequent to the evolution of the idea of the Final; for it is the Final that is made the main link between each pair of modes. It also seems to be subsequent to the decay of the Dominant in importance; for while the Dominants of the authentic modes keep to the old line as being the Mese of the mode, those of the plagal modes are determined only with reference to the corresponding authentic Dominant, being normally a third lower.

It is further to be observed that a new mode has been added to the seven, viz. the Hypomixolydian (quite unlike the previous one of that name), which occupies the same octave as the Dorian, but in the new condition of things is entirely unlike it in any other respect.

There is also conceived to be a structural difference between authentic and plagal. The extra note that was added to the two conjunct tetrachords in the form of a Proslambanomenos (see above) came to be regarded, when the old Greek tetrachordal system faded, as forming with the lower tetrachord of the two a pentachord or fifth; consequently, each authentic mode was looked upon as a pentachord with a tetrachord above it. This pentachord it shared with its plagal brother; and thus a plagal mode was conversely viewed as a tetrachord with a pentachord above it. In the former case the Dominant (or 'Media' as the Latins called it,

= μέση) was the hinge or meeting-point of the two, and in the latter case the Final.

TABLE OF EIGHT MODES.

1st Mode. *Primus* or *Authentus Protus*.2nd Mode. *Secundus* or *Plagius Protus*.3rd Mode. *Tertius* or *Authentus Deuterus*.4th Mode. *Quartus* or *Plagius Deuterus*.5th Mode. *Quintus* or *Authentus Tritus*.6th Mode. *Sextus* or *Plagius Tritus*.7th Mode. *Septimus* or *Authentus Tetrardus*.8th Mode. *Octavus* or *Plagius Tetrardus*.

This brief analysis tends to show that, though the exact genesis of the dual system of authentic and plagal modes cannot be traced, it proceeded along very natural lines, and arrived at a very convenient and symmetrical result. The development still went on under the Greek ægis, as the terminology would alone be sufficient to prove. Its date is a matter of more difficulty. The earliest literary mention of the system of eight modes, or *Octoechos* as the latest Greeks called it, is found in a table given in some editions of Boethius; but as there is

no mention of it in the text it must be taken to be a later addition. The next mention is to be found in a passage of Alcuin of the end of the 8th century, where the system is spoken of as a matter of common knowledge. Among Greek writers (so far as they have been explored) an even greater conspiracy of silence prevails.¹ So literary evidence is entirely wanting. The history of the *Schola Cantorum* suggests the 6th or 7th century as a suitable date for such a settlement; and this view of the case is amply borne out by an examination of the Gregorian music itself.

The older class, the responsorial music, demands in its highly elaborated form an eight-mode system. The *Responso* of the Hours, though they use various reciting notes for the *Respond*, employ normally for the 'Verse' one of eight set formulas corresponding to the modes. Similarly in the antiphonal music there are the eight Gregorian tones corresponding also to the modes. (See *PSALMODY*.) These two facts alone are enough to prove that the music, as we now have it, presupposes the eight-mode system. Now there are many lines of evidence that converge to show that the main bulk and nucleus of this music is to be dated as belonging to the 6th century. A persistent tradition ascribes the final regulation of it to St. Gregory (590-604). The festivals and other occasions for which the music was written are as a rule earlier than his date; and the festivals of later origin differ markedly from the pre-Gregorian festivals in having borrowed music instead of original music provided for them; this is especially the case in regard to the Mass. Further, the text of the Latin Bible employed is an ancient one that was for most purposes superseded in the 5th and 6th centuries. These and other considerations all point in the same direction. From them it may be concluded, though with some considerable hesitation owing to the difference of views among students of the question, that the eight-mode system lay behind the great plain-song compositions that form the musical *corpus* of the Western Church; and must, therefore, have arisen at least as early as the 6th century.

FRANKISH THEORISTS; NINTH CENTURY.—When literary evidence as to the modes again becomes available in the Carolingian era, the system is regarded as an old-established tradition. Greek theory still holds the field, and Aurelian, the first of a new group of writers that gives any full discussion or statement of the modes, quotes Greek teachers as his authorities. In fact the theory was already so ancient that some of it was no longer intelligible to the Greek teachers, and the actual

¹ If it were possible to discover what was the *Octoechos* of the Greek Church, say in the days of St. John of Damascus, we should probably have the clue to the formulation of the system of the Ecclesiastical Modes; but the Greek Church has lost the system, and only preserves a conventional distinction, not a modal one in its *Octoechos*. Turning the East, we turn back to the West.

practice of liturgical singers had in some respects moved away from it. One of the difficulties, therefore, that confronted the Franks, as new disciples of the *Cantilena Romana*, was that of reconciling the practice and the theory; indeed, we owe the treatises written in the 9th century, by such writers as Aurelian, Regino and Odo, to the fact that such discrepancies existed, and that the Franks desired to reconcile them.

It will be well to sum up what was clear and fixed at this important epoch before going on to discuss what was doubtful or what was changing in practice.

(1) The Greek Perfect System was the basis of all. This gave the following possibilities.

The range was ample for vocal purposes; it was even extended on occasions one further note downwards (ϕ), and several notes upwards; while the use of the \flat gave an opportunity not only for transposition but also for obtaining some variety by the use of an accidental. Moreover, by combining transposition and the use of the \flat some further chromatic effects could be obtained, and were in fact employed.

(2) This range was subdivided into tetrachords, and this arrangement accorded with the position of the eight modes, for the lowest tetrachord comprised the four lowest limits of the plagal modes: the next comprised the four Finals, and was always so described; the third in fact comprised the four Dominants (Mese) of the authentic modes, but it was not so described.

(3) The doctrine of the Final was very clearly held, though the doctrine of the Dominant had almost entirely dropped out of sight.

(4) The distinction between authentic and plagal was clearly drawn in theory, though it was being found a difficult task to draw the line in practice. No tradition survived as to the origin of the distinction. (The fable that St. Ambrose made the authentic modes and St. Gregory the plagal is of much later date.) It is only supposed that the plagal were devised to include the melodies of lower range, and no significance is attached to the difference of dominant between the authentic and plagal.

Yet even with all these four points clear, there remained much for the new musicians to do in the way of exposition and development of the modal system. They had before them (1) a great collection of masterpieces which had been in use two hundred years and more, (2) an eight-mode system of Greek origin and unknown antiquity, which even their Greek teachers could not fully explain, and (3) works of theorists (such as we have already had in

review) extending only down to the 5th or 6th century and exhibiting the theory at an inchoate stage of development.

The works of Boethius and the rest of the theorists were, so far as the modes went, far more a source of mystification than of enlightenment. Valiant and clumsy attempts were made by the writers of the 9th and 10th centuries to reconcile the earlier with the later, the past theory and the actual practice (e.g. in the nomenclature of the modes); but they only resulted in much confusion both at the time and since. When, however, this element is eliminated from their writings, there remains a real development and a true exposition of the modal system to be found even in the earliest of the Frankish writers; and when once Guido d'Arezzo had had the courage to say that 'the book of Boethius is of no use to singers, but only to philosophers,' emancipation had come, and the road of progress lay open to future generations.

The chief features of the modal system which we have already brought to light, e.g. the combination of pentachord and tetrachord in the authentic, and its inversion in the plagal, were duly expounded by these writers. They have also the credit of having resisted an attempt to make twelve modes instead of eight; they rightly pointed out that twelve were quite unnecessary, granted the power to transpose and the use of the \flat . They laboured to expound and maintain the real tonal independence of the modes; and this in itself was no easy task in the days before Guido when the singers had in the neums no absolute guide as to the intervals and notes which they were to sing.

The chief innovation for which this period was responsible was the change of the Dominant of the third mode from the dubious note b to c ; it took place in the 10th or 11th century, and, though the improvement was universally accepted in theory and the innovation was adopted in the most prominent position possible, i.e. in the case of the reciting note of the third tone, which thenceforward was c not b , the change was never carried out thoroughly, and plenty of traces of the old use of b as Dominant have survived.

The main difficulties that the writers of this period had to face lay in two very practical directions, and were caused by a change in practice. Both the antiphons and the responds had ceased to be used in the old way, and much trouble was caused to the singers in consequence. In many of the responds the custom had arisen of repeating, after the verse or verses, only the latter part of the respond itself instead of the whole. It thus became necessary to lay down rules for the establishing of a proper musical relation between the end of the verse and the opening notes of the repeat. A

similar process of shortening had caused the antiphon to be repeated no longer after each verse of the psalm, but only once or twice in the course of the psalmody. Now the endings of the tones had always been carefully adapted so as to fit on to the opening phrases of the antiphons; but when the repetition of the antiphon decayed, this close intimacy was no longer so necessary. This change of custom affected also the view taken of the tonality of the antiphon. As originally used, its opening phrase was all-important; and it was assigned to this or that mode (and associated therefore with this or that tone) according to the character of its opening. When, however, it came to be used rarely, or only once at the end of the psalm, the end of the antiphon and its Final became far more important than its opening; consequently, according to the newer plan, its tonality was determined no longer by its *incipit* but by its last note.

The difficulty with the Responds was soon settled once for all, by making, where necessary, some slight but permanent accommodation in the music; but the other difficulty was a more or less permanent one; the mediæval tonals continued to offer varying solutions of it, and out of it there grew such further developments of modal theory as the settlement of the Absolute Initials (see INITIALS, ABSOLUTE), *i.e.* the notes in each mode on which a melody may begin.

The development that produced the sequences (see SEQUENCE) entailed a further modification in the modal theory that went far to break down again the distinction between authentic and plagal. In many cases the sequence-melodies were written, as it were, in two registers; their compass, therefore, exceeded the normal limits assigned to any one mode by the theorists of the 10th to 12th centuries (who in this respect were much more strict than the original writers of the music had been); it then became usual to regard them as being both in the authentic and in the corresponding plagal mode.

LATER INFLUENCES.—This was the last modification of any great moment that plain-song brought to the theory of the modes. Such other modifications as came to it between the 12th and the 16th centuries were due principally to two other causes, (1) the invasion of popular music or the spirit of folk-song, and (2) the growth of harmonised and measured music.

The tonality that was congenial to folk-song especially in France was one that had always been uncongenial to the classical plain-song, *viz.* the scale which resulted from the uniform use of the *b*♭ with the fifth and sixth modes, and is identical with the modern major scale or mode. This pair of modes had always been the least used of all the four; without the flat, there was too much tritone in it, even for

mediæval ears that were not so sensitive in that respect as modern ones; with the flat, the mode did not much differ from the fourth pair except in having a semitone below the final, *i.e.* in possessing a leading note, which from the point of view of unharmonised music was rather a disadvantage than an advantage. The major scale, however, is the joy of folk-song; and, as such, it tended to invade the art-music and even to claim a place cheek by jowl with the severe ecclesiastical plain-song.

This tendency was still further emphasised by the growing art of harmony. When at last the perfect close was invented it became the centre of the harmonic art, and the leading note became a necessity. The F mode with *b*♭ and the C mode without it, became favourites; other modes had to submit to chromatic alteration in the interests of harmony. For a surprisingly long time the feeling for the old tonality was so strong that this alteration had to be disguised (see *MUSICA FICTA*), yet it was clear that eventually it would have to yield before the steady pressure of the advancing art of harmony. The period of the rise of harmony is thus the period of the decay of the old tonality, and of the modal system. The ancient modes gradually disappeared until only the major and minor modes remain. A good deal of richness in melodic beauty was sacrificed in the process, and modern melody, even with all its chromatic freedom, has not such a wide range of variety as the old modal system afforded. No one will doubt that the gains in harmony more than compensated for the losses in melody; but it must be emphasised that all was not clear gain.

The modal system as handled and transformed by the pioneers of modern harmony is a matter of far less interest, for all was in a continual state of transition; and though at certain points a halt seems to be called and a permanent interest stirred by the genius of Dunstable, or of the great Flemings, or Palestrina and his contemporaries, yet from the point of view of harmony the old modal system cannot be regarded as anything else but a slavery, from which it was desirable that the polyphonic school should work its escape as soon as possible.

In the closing stages of the decay an attempt was made to revive the proposal to reckon twelve (or even fourteen) modes. (See *DOBECA-CHORDON*.) There was much more to be said for this from the point of view of polyphony in the 16th century than there had been in the 9th from the point of view of plain-song; but the modes were then a vanishing quantity, and the enumeration is only misleading if it is applied to the classical plain-song of earlier days. The Renaissance sent the musicians back afresh to the old writers on musical theory, but the attempts of Gafori and his followers to combine the old and new were as little successful in the 16th century as they had been

in the 9th; they added nothing but some fresh elements of confusion to the theory of the modes.

The following tables of the fourteen modes as given by Glareanus may be compared with the table given above to represent the eight modes of the mediæval plain-song:

mediæval music, Gevaert has also put forward a view of the evolution of the mediæval modes out of the ancient in his *Métopes antiques*, Ghent, 1895—a book of great value even to those who cannot accept his theories. Another view, also based on Westphal, is given by Chailier in his *Système musical de l'Église Grecque* (Rome, 1901). The account given above differs entirely from these as regards the mediæval period, and follows Monro and Macran as regards the earlier history. See GREEK MUSIC. W. H. F.

THE MODES IN POLYPHONIC MUSIC.— Besides its Final and Dominant, every

The following are the eight representative melodies (or Neums) devised in the later Middle Ages in order to show off the special characteristics of each mode:

mode is distinguished by two other highly characteristic notes—its Mediant and Partici-pant.

The Mediant—so called from its position

BIB.—The ancient authorities are enumerated in the article headed *REPERTORIUM*. Among modern writers the following may be named. Greek Music—Westphal, *Harmonik und Metopos der Griechen*, 1863, and Gevaert, *Histoire de la musique d'antiquité*, Ghent, 1875 and 1881. These writers and their followers are opposed by Monro, *The Modes of Ancient Greek Music*, Oxford, 1894, and Macran, *Harmonics of Aristoxenus*, Oxford, 1902. As regards

between the Final and Dominant—is always the third of the scale in the authentic modes, unless that note should happen to be B, in which case C is substituted for it. In the plagal modes

its position is less uniform. The Participant is an auxiliary note, generally in the immediate neighbourhood of the Mediant in authentic modes, and, in the plagal forms, coincident with the Dominant of the corresponding authentic scale. Some modes have a second Participant; and one has a second Mediant, which, however, is not very frequently used.

Each mode is also influenced by certain notes, called its modulations or cadences, which are of two kinds. To these are added two or more subsidiary notes, called conceded modulations (*modulationes concessae*), among which we often find the inverted seventh, i.e. the seventh taken an octave lower than its true pitch, and, consequently, one degree below the natural compass of the scale.

Upon one or other of these modulations, either regular or conceded, every phrase of every melody must begin and end, subject only to two further restrictions: (i.) The first phrase must begin on one of a somewhat less ample series of notes, called the Absolute Initials; (ii.) The last phrase can only end on the Final of the mode.

The following table shows the Compass, Final, Dominant, Mediant, Participant, Regular and

that the mode has been transposed; and the true Final will then lie a fourth below the written one. For example, the plain-song melody 'Angelus autem Domini' has no B flat

at the signature. Its last note is G, the Mixolydian Final. Its compass lies between the fifth above that note and the second below it. It is, therefore, in the Eighth, or Hypomixolydian Mode; and, as its range falls two degrees short of the full downward range of the scale, it belongs to the class of imperfect melodies.

To ascertain the mode of a polyphonic composition, examine the last note in the bass. This will be the Final. Then, should the range

Modulations.

Conceded Modulations, and Absolute Initials of every mode in the series, including the Locrian and Hypolocrian, which, in spite of their manifest imperfection, have sometimes been used in secular music.

In order to ascertain the mode in which a plain-song melody is written, observe the last note, which will, of course, show the required Final. Should the compass of the melody lie between that Final and its octave, the mode will be authentic. Should it lie between the fifth above and the fourth below, it will be plagal. Should it extend throughout the entire range, from the fourth below the Final to the octave above it, it will be mixed. Should there be a B flat at the signature, it will indicate

of the *canto fermo*—which will almost always be found in the tenor—lie between the Final and its octave, the mode will be authentic. Should it lie between the fifth above and the fourth below, it will be plagal. Should there be a B flat at the signature, it will show that the mode has been transposed; and the true Final will then lie a fourth below the last bass note. Thus, Palestrina's motet, 'Dies sanctificatus,' has no B flat at the signature. The last note in the bass is G. The compass of the *canto fermo*, as exhibited in the tenor, lies, almost entirely, between that note and its octave. The motet, therefore, is in the seventh, or Mixolydian Mode. The same composer's Missa, 'Aeterna Christi munera,' has a B flat at the signature, and is, therefore, transposed. The last note in the bass is F, the fourth below which is C—the Ionian Final.

¹ The Inverted 7th.

² Plagal Modes.

³ The 5th above the Final.

⁴ Rarely used in an Absolute Initial.

⁵ Used as an Absolute Initial chiefly in polyphonic music.

⁶ The lowest note of the Mode.

The compass of the *canto fermo*, in the tenor, lies between the transposed Final and its octave. Consequently, the Mass is in the Thirteenth or Ionian Mode, transposed.

According to strict law, it is as necessary for the *canto fermo* to end on the Final of the mode as the bass; but, when the last cadence is a very elaborate one, it frequently contents itself with just touching that note, and then glancing off to others, after the manner of what we should now call a *coda*. (See POLYPHONY.)

In order to accommodate the range of 'unequal' voices, it constantly happens that the treble and tenor are made to sing in an authentic mode, while the alto and bass sing in a plagal one, and *vice versa*. In those cases the true character of the mode is always decided by the compass of the *canto fermo*. W. S. R.

MODULATION is the process of passing out of one key into another.

In classical harmonic music, especially in its instrumental branches, it is essential that the harmonies should be grouped according to their keys; that is, that they should be connected together for periods of appreciable length by a common relation to a definite tonic or keynote. If harmonies belonging essentially to one key are irregularly mixed up with harmonies which are equally characteristic of another, an impression of obscurity arises; but when a chord which evidently belongs to a foreign key follows naturally upon a series which was consistently characteristic of another, and is itself followed consistently by harmonies belonging to a key to which it can be referred, modulation has taken place, and a new tonic has supplanted the former one as the centre of a new circle of harmonies.

THREE TYPES.—The various forms of process by which a new key is gained are generally distributed into three classes—Diatonic, Chromatic and Enharmonic. The first two are occasionally applied to the ends of modulation as well as to the means. That is to say, Diatonic would be defined as modulation to relative keys, and Chromatic to others than relative. This appears to strain unnecessarily the meaning of the terms, since Diatonic and Chromatic apply properly to the contents of established keys, and not to the relations of different shifting ones, except by implication.

Moreover, if a classification is to be consistent, the principles upon which it is founded must be uniformly applied. Hence if a class is distinguished as Enharmonic in relation to the means (as it must be), other classes cannot safely be classed as Diatonic and Chromatic in relation to ends, without liability to confusion. And lastly, the term Modulation itself clearly implies the process and not the result. Therefore in this place the classification will be taken to apply to the means and not to the end—to the process by which the modulation is accomplished and not the keys which are thereby arrived at.

(1) The Diatonic forms, then, are such as are effected by means of notes or chords which are exclusively diatonic in the keys concerned. Thus in the following example (Bach, *Wohlt. Clav.* Bk. 2, No. 12):

the chord at * indicates that F has ceased to be the tonic, as it is not referable to the group of harmonies characteristic of that key. However, it is not possible to tell from that chord alone to what key it is to be referred, as it is equally a diatonic harmony in either B \flat , E \flat or A \flat ; but as the chords which follow all belong consistently to A \flat , that note is obviously the tonic of the new key, and as the series is Diatonic throughout it belongs to the Diatonic class of modulations.

(2) The Chromatic is a most ill-defined class of modulations; and it is hardly to be hoped that people will ever be sufficiently careful in small matters to use the term with anything approaching to clear and strict uniformity of meaning. Some use it to denote any modulation in the course of which there appear to be a number of accidentals—which is perhaps natural but obviously superficial. Others again apply the term to modulations from one main point to another through several subordinate transitions which touch remote keys. The objection to this definition is that each step in the subordinate transitions is a modulation in itself, and as the classification is to refer to the means, it is not consistent to apply the term to the end in this case, even though subordinate. There are further objections based upon the strict meaning of the word Chromatic itself, which must be omitted for lack of space. This reduces the limits of chromatic modulation to such as is effected through notes or chords which are chromatic in relation to the keys in question. Genuine examples of this kind are not so common as might be supposed; the following example (Beethoven, op. 31, No. 3), where passage is made from E \flat to C, is consistent enough for illustration:

(3) The Enharmonic, which tends to be more and more conspicuous in modern music, is such as turns mainly upon the translation of intervals which, according to the fixed distribution of notes by equal temperament, are identical, into terms which represent different harmonic relations. Thus the minor seventh, G-F, appears to be the same interval as the augmented sixth G-F \sharp ; but the former belongs to the key of C, and the latter either to B or F \sharp , according to the context. Again, the chord which is known as the diminished seventh is frequently quoted as affording such great opportunities for modulation, and this it does chiefly enharmonically; for the notes of which it is composed being at equal distances from each other can severally be taken as third, fifth, seventh, or ninth of the root of the chord, and the chord can be approached as if belonging to any one of these roots, and quitted as if derived from any other.

Enharmonic treatment really implies a difference between the intervals represented, and this is actually perceived by the mind in many cases. In some especially marked instances it is probable that most people with a tolerable musical gift will feel the difference with no more help than a mere indication of the relations of the intervals. Thus in the succeeding example the true major sixth represented by the A \flat -F in (a) would have the ratio $5 : 3 (= 125 : 75)$, whereas the diminished seventh represented by G \sharp -F \sharp in (b) would have the ratio $128 : 75$; the former is a consonance and the latter, theoretically, a rough dissonance, and though they are both represented by the same notes in our system, the impression produced by them is to a certain extent proportionate to their theoretical rather than to their actual constitution.

Hence it appears to follow that in enharmonic modulation we attempt to get at least some of the effects of intervals smaller than semitones; but the indiscriminate and ill-considered use of the device will certainly tend to deaden the

musical sense, which helps us to distinguish the true relations of harmonies through their external apparent uniformity.

SALIENT DEVICES.—A considerable portion of the actual processes of modulation is effected by means of notes which are used as pivots. A note or notes which are common to a chord in the original key and to a chord in the key to which the modulation is made, are taken advantage of to strengthen the connexion of the harmonies while the modulation proceeds; as in the following modulation from G \sharp major to B major in Schubert's *Fantasie-Sonata*, op. 78.

This device is found particularly in transitory modulation, and affords peculiar opportunities for subtle transitions. Examples also occur where the pivot notes are treated enharmonically, as in the following example from the chorus 'Sein Odem ist schwach' in Graun's 'Tod Jesu':

These pivot-notes are, however, by no means indispensable. Modulations are really governed by the same laws which apply to any succession of harmonies whatsoever, and the possibilities of modulatory device are in the end chiefly dependent upon intelligible order in the progression of the parts. It is obvious that a large proportion of chords which can succeed each other naturally—that is, without any of the parts having melodic intervals which it is next to impossible to follow—will have a note or notes in common; and such notes are as useful to connect two chords in the same key as they are to keep together a series which constitute a modulation. But it has never been held indispensable that successive chords should be so connected, though in earlier stages of harmonic music it may have been found helpful; and in the same way, while there were any doubts as to the means and order of modulation, pivot-notes may have been useful as leading strings,

but when a broader and freer conception of the nature of the modern system has been arrived at, it will be found that though pivot-notes may be valuable for particular purposes, the range of modulatory device is not limited to such successions as can contain them, but only to such as do not contain inconceivable progression of parts. As an instance, we may take the progression from the dominant seventh of any key to the tonic chord of the key which is represented by the flat submediant of the original key: as from the chord of the seventh on G to the common chord of A \flat ; of which we have an excellent example near the beginning of the *Leonora* overture, No. 3. Another remarkable instance to the point occurs in the trio of the third movement of a quartet of Mozart's in B \flat , as follows:

Other examples of modulation without pivot-notes may be noticed at the beginning of Beethoven's *Egmont* overture, and of his sonata in E minor, op. 90 (bars 2 and 3), and of Wagner's '*Götterdämmerung*' (bars 9 and 10).

An impression appears to have been prevalent with some theorists that modulation ought to proceed through a chord which was common to both the keys between which the modulation takes place. The principle is logical and easy of application, and it is true that a great number of modulations are explicable on that basis; but inasmuch as there are a great number of examples which are not, even with much latitude of explanation, it will be best not to enter into a discussion of so complicated a point in this place. It will be enough to point out that the two principles of pivot-notes and of ambiguous pivot-chords between them cover so much ground that it is not easy to find progressions in which either one or the other does not occur—and even though in a very great majority of instances one or the other may really form the bond of connexion in modulatory passages, the frequency of their occurrence is not a proof of their being indispensable. The following passage from the first act of '*Die Meistersinger*' is an example of a modulation in which they are both absent:

The real point of difficulty in modulation is not the manner in which the harmonies belong-

ing to different keys can be made to succeed one another, but the establishment of the new key, especially in cases where it is to be permanent. This is effected in various ways. Frequently some undoubted form of the dominant harmony of the new key is made use of to confirm the impression of the tonality, and modulation is often made through some phase of that chord to make its direction clear, since no progression has such definite tonal force as that from dominant to tonic. Mozart again, when he felt it necessary to define the new key very clearly, as representing a definite essential feature in the form of a movement, often goes at first beyond his point, and appears to take it from the rear. For instance, if his first section is in C, and he wishes to cast the second section and produce what is called his second subject in the dominant key G, instead of going straight to G and staying there, he passes rapidly by it to its dominant key D, and having settled well down on the tonic harmony of that key, uses it at last as a dominant point of vantage from which to take G in form. The first movement of the quartet in C, from bar 22 to 34 of the allegro, will serve as an illustration. Another mode is that of using a series of transitory modulations between one permanent key and another. This serves chiefly to obliterate the sense of the old key, and to make the mind open to the impression of the new one directly its permanency becomes apparent. The plan of resting on the dominant harmony for a long while before passing definitely to the subjects or figures which are meant to characterise the new key is an obvious means of enforcing it; of which the return to the first subject in the first movement of Beethoven's *Waldstein* sonata is a strong example. In fact insistence on any characteristic harmony or on any definite group of harmonies which clearly represent a key is a sure means of indicating the object of a modulation, even between keys which are remote from one another.

In transitory modulations it is less imperative to mark the new key strongly, since subordinate keys are rightly kept in the background, and though they may be used so as to produce a powerful effect, yet if they are too much insisted upon, the balance between the more essential and the unessential keys may be upset. But even in transitory modulations, in instrumental music especially, it is decidedly important that each group which represents a key, however short, should be distinct in itself. In recitative, obscurity of tonality is not so objectionable, as appears both in Bach and Handel; and the modern form of melodious recitative, which often takes the form of sustained melody of an emotional cast, is similarly often associated with subtle and closely woven modulations, especially when allied with words. Of recitative forms which show analogous freedom of

modulation in purely instrumental works, there are examples both by Bach and Beethoven, as in an adagio in a toccata in D minor and the *Fantasia Cromatica* by the former, and in the introduction to the last movement of the *A_♭* pianoforte sonata (op. 110) of the latter.

When transitory modulations succeed one another somewhat rapidly they may well be difficult to follow if they are not systematised into some sort of appreciable order. This is frequently effected by making them progress by regular steps. In Mozart and Haydn especially we meet with the simplest forms of succession, which generally amount to some such order as the roots of the chord falling fifths or rising fourths, or rising fourths and falling thirds successively. The following example from Mozart's C major quartet is clearly to the point:

Bach affords some remarkably forcible examples, as in the chorus 'Mit Blitzen und Donner' in the *Matthew Passion*, and in the last movement of the *fantasia for organ* in G (B.-G. xxxviii. p. 81), in which the bass progresses slowly by semitones downwards from C_♯ to D. A passage quoted by Marx at the end of the second volume of his *Kompositionslehre* from the 'Christe Eleison' in Bach's A major ¹ Mass is very fine and characteristic; the succession of transitions is founded on a bass which progresses as follows:

In music of a later date a common form is that in which the succession of key-notes is by rising or falling semitones, as in the following passage from the first movement of the *Eroica* Symphony:

¹ See B.-G. viii. 51.

Of this form there are numerous examples in Chopin, as in the latter part of the ballade in *A_♭*, and in the prelude in the same key (No. 17). Beethoven makes use of successions of thirds in the same way; of which the most remarkable example is the largo which precedes the fugue in the pianoforte sonata in *B_♭*, op. 106. In this there are fully eighteen successive steps of thirds downwards, most of them minor.² This instance also points to a feature which is important to note. The successions are not perfectly symmetrical, but are purposely distributed with a certain amount of irregularity so as to relieve them from the obviousness which is often ruinous to the effect of earlier examples. The divisions represented by each step are severally variable in length, but the sum total is a complete impression based upon an appreciable system; and this result is far more artistic than the examples where the form is so obvious that it might almost have been measured out with a pair of compasses.³

This point leads to the consideration of another striking device of Beethoven's, namely, the use of a caesura in modulation, which serves a similar purpose to the irregular distribution of successive modulations. A most striking example is that in the prestissimo of the pianoforte sonata in E major, op. 109, in bars 104 and 105, where he leaps from the major chord of the supertonic to the minor of the tonic, evidently cutting short the ordinary process of supertonic, dominant and tonic; and the effect of this sudden irruption of the original key and subject before the ordinary and expected progressions are concluded is most remarkable. In the slow movement of Schumann's sonata in G minor there is a passage which has a similar happy effect, where the leap is made from the dominant seventh of the key of *D_♭* to the tonic chord of C to resume the first subject, as follows:

² For César Franck's favourite modulation by thirds see FRANCK, Ex. 4.

³ Progressions by whole-tones must now be added to the other sequential modulations enumerated here. See HARMONY, Ex. 46. In this phrase Farry, writing in 1880, has suggested a line of criticism peculiarly applicable to the whole-tone progression which became a fashionable cliché with composers after 1900.

AN HISTORICAL SURVEY.—In the study of the art of music it is important to have a clear idea of the manner in which the function and resources of modulation have been gradually realised. It will be best, therefore, at the risk of going occasionally over the same ground twice, to give a short consecutive review of the aspect it presents along the stream of constant production.

To a modern ear of any musical capacity modulation appears a very simple and easy matter, but when harmonic music was only beginning to be felt, the force even of a single key was but doubtfully realised, and the relation of different keys to one another was almost out of the range of human conception. Musicians of those days no doubt had some glimmering sense of a field being open before them, but they did not know what the problems were which they had to solve. It is true that even some time before the beginning of the 17th century they must have had a tolerably good idea of the distribution of notes which we call a key, but they probably did not regard it as an important matter, and looked rather to the laws and devices of counterpoint, after the old polyphonic manner, as the chief means by which music was to go on as it had done before. Hence in those great polyphonic times of Palestrina and Lasso, and even later in some quarters, there was no such thing as modulation in our sense of the word. They were gradually absorbing into their material certain accidentals which the greater masters found out how to use with effect; and these being incorporated with the intervals which the old church modes afforded them, gave rise to successions and passages in which they appear to us to wander with uncertain steps from one nearly related key to another; whereas in reality they were only using the actual notes which appeared to them to be available for artistic purposes, without considering whether their combinations were related to a common tonic in the sense which we recognise, or not. Nevertheless, this process of introducing accidentals irregularly

was the ultimate means through which the art of modulation was developed. For the musical sense of these composers, being very acute, would lead them to consider the relations of the new chords which contained notes thus modified, and to surround them with larger and larger groups of chords which in our sense would be considered to be tonally related; and the very smoothness and softness of the combinations to which they were accustomed would ensure a gradual approach to consistent tonality, though the direction into which their accidentals turned them was rather uncertain and irregular, and not so much governed by any feeling of the effects of modulation as by the constitution of the ecclesiastical scales. Examples of this are given in the article HARMONY; and reference may also be made to a pavane and a fantasia by our great master, Orlando Gibbons, in 'Parthenia,' republished in the 'Trésor des pianistes,' in Pauer's 'Old English Music,' and (fantasia alone) in Dannreuther's *Ornamentation*. In these there are remarkably fine and strong effects produced by means of accidentals; but the transitions are to modern ideas singularly irregular. Gibbons appears to slip from one tonality to another more than six times in as many bars, and to slide back into his original key as if he had never been away. In some of his vocal works he presents broader expanses of distinct tonality, but of the power of the effect of modulation on an extended scale he can have had but the very slightest possible idea. About his time and a little later in Italy, among such musicians as Carissimi and Cesti, the outlines of the modern art were growing stronger. They appreciated the sense of pure harmonic combinations, though they lost much of the force and dignity of the polyphonic school; and they began to use simple modulations, and to define them much as a modern would do, but with the simplest devices possible. Throughout the 17th century the system of keys was being gradually matured, but their range was extraordinarily limited, and the interchange of keys was still occasionally irregular. Corelli, in the latter part of it, clearly felt the relative importance of different notes in a key and the harmonies which they represent, and balanced many instrumental movements on principles analogous to our own, though simpler; and the same may be said of Couperin, who was his junior by a few years; but it is apparent that they moved among accidentals with caution, and regarded what we call extreme keys as dangerous and almost inexplorable territory.¹

In the works of the many sterling and solid composers of the early part of the 18th century, the most noticeable feature is the extraordinary expanse of the main keys. Music had arrived at the opposite extreme from its state of a

¹ The limitations of keyboard instruments tuned on a system of unequal TEMPERAMENT (q.v.) accounted to some extent for this.

hundred years before; and composers, having realised the effect of pure tonality, were content to remain in one key for periods which to us, with our different ways of expressing ourselves, would be almost impossible. This is in fact the average period of least modulation. Handel is a fairer representative of the time than Bach, for reasons which will be touched upon presently, and his style is much more in conformity with most of his contemporaries who are best known in the musical art. We may take him, therefore, as a type; and in his works it will be noticed that the extent and number of modulations is extremely limited. In a large proportion of his finest choruses he passes into his dominant key near the beginning—partly to express the balance of keys and partly driven thereto by fugal habits; and then returns to his original key, from which in many cases he hardly stirs again. Thus the whole modulatory range of the Hallelujah Chorus is not more than frequent transitions from the tonic key to the key of its dominant and back, and one excursion as far as the relative minor in the middle of the chorus,—and that is all. There are choruses with a larger range, and choruses with even less, but the Hallelujah is a fair example to take, and if it is carefully compared with any average example of the 19th century such as Mendelssohn's 'The night is departing,' in the 'Hymn of Praise,' or 'O great is the depth,' in 'St. Paul,' or the first chorus in Brahms's Requiem, a very strong impression of the progressive tendency of modern music in the matter of modulation will be obtained. In choruses and movements in the minor mode, modulations are on an average more frequent and various, but still infinitely less free than in modern examples. Even in such a fine example as 'The people shall hear,' in 'Israel,' the apparent latitude of modulation is deceptive, for many of the changes of key in the early part are mere repetitions; since the tonalities range up and down between E minor, B and F♯ only, each key returning irregularly. In the latter part it is true the modulations are finely conceived, and represent a degree of appreciation in the matter of relations of various keys, such as Handel does not often manifest.

Allusion has been made above to the practice of going out to a foreign key and returning to the original again in a short space of time. This happens to be a very valuable gauge to test the degrees of appreciation of a composer in the matter of modulation. In modern music keys are felt so strongly as an element of form, that when any one has been brought prominently forward, succeeding modulations for some time after must, except in a few special cases, take another direction. The tonic key, for instance, must inevitably come forward clearly in the early part of a movement, and when its importance has been made sufficiently clear by insist-

ence, and modulations have begun in other directions, if it were to be quickly resumed and insisted on afresh, the impression would be that there was unnecessary tautology; and this must appear obvious on the merest external grounds of logic. The old masters, however, must, on this point, be judged to have had but little sense of the actual force of different keys as a matter of form; for in a large proportion of examples they were content to waver up and down between nearly related keys, and constantly to resume one and another without order or design. In the 'Te gloriosus' in Graun's *Te Deum*, for instance, he goes out to a nearly related key, and returns to his tonic key no less than five several times, and in the matter of modulation does practically nothing else. Even Bach occasionally presents similar examples, and Mozart's distribution of the modulations in 'Splendete te Deus' (in which he probably followed the standing classical models of vocal music) are on a similar plan, for he digresses and returns again to his principal key at least twelve times in the course of the work.

Bach was in some respects like his contemporaries, and in some so far in advance of them that he cannot fairly be taken as a representative of the average standard of the day. In fact, his more wonderful modulatory devices must have fallen upon utterly deaf ears, not only in his time but for generations after; and, unlike most great men, he appears to have made less impression upon the productive musicians who immediately succeeded him than upon those of a hundred years and more later. In many cases he cast movements in the forms prevalent in his time, and occasionally used vain repetitions of keys like his contemporaries; but when he chose his own lines he produced movements which are perfectly in consonance with modern views. As examples of this the 'Et resurrexit' in the B minor Mass and the last chorus of the Matthew Passion may be taken. In these there is no tautology in the distribution of the modulation, though the extraordinary expanse over which a single key is made to spread, still marks their relationship with other contemporary works. In some of his instrumental works he gives himself more rein, as in fantasias, and preludes, and toccatas, for organ or clavier. In these he not only makes use of the most complicated and elaborate devices in the actual passage from one key to another, but also of closely interwoven transitions in a thoroughly modern fashion. Some of the most wonderful examples are in the fantasia in G minor for organ (B.-G. xv. p. 177), and others have been already alluded to.

It is probable that his views on the subject of the relation of keys had considerable influence on the evolution of the specially modern type of instrumental music; as it was chiefly his sons and pupils who worked out and traced in clear

and definite outlines the system of key-distribution upon which Haydn and Mozart developed their representative examples of such works.

In the works of these two great composers we find at once the simplest and surest distribution of keys. They are in fact the expositors of the elementary principles which had been arrived at through the speculations and experiments of more than a century and a half of musicians. The vital principle of their art-work is clear and simple tonality; each successive key which is important in the structure of the work is marked by forms both of melody and harmony, which, by the use of the most obvious indicators, state as clearly as possible the tonic to which the particular group of harmonies is to be referred. This is their summary, so to speak, of existing knowledge. But what is most important to this question is that the art did not stop at this point, but composers having arrived at that degree of realisation of the simpler relations of keys, went on at once to build something new upon the foundation.

Both Haydn and Mozart—as if perceiving that directly the means of clearly indicating a key were realised, the ease with which it could be grasped would be proportionately increased—began to distribute their modulations more freely and liberally. For certain purposes they both made use of transitions so rapid that the modulations appear to overlap, so that before one key is definitely indicated an ingenious modification of the chord which should have confirmed it leads on to another. The occasions for the use of this device are principally either to obtain a strong contrast to long periods during which single keys have been or are to be maintained; or, where according to the system of form it so happens that a key which has already been employed has soon to be resumed—as, for instance, in the recapitulation of the subjects—to lead the mind so thoroughly away that the sense of the more permanent key is almost obliterated. Occasionally, when the working-out section is very short, the rapid transitions alluded to are also met with in that position, as in the slow movement of Mozart's E \flat quartet. The example quoted above from the last movement of his quartet in C will serve as an example on this point as well as on that for which it was quoted.

A yet more important point in relation to the present question is the use of short breaths of subordinate modulation in the midst of the broader expanses of the principal keys. This is very characteristic of Mozart, and serves happily to indicate the direction in which art was moving at the time. Thus, in the very beginning of his quartet in G (Köchel, 387), he glides out of his principal key into the key of the supertonic, A, and back again in the first four bars. A similar digression, from F to D

and back again, may be observed near the beginning of the slow movement of the Jupiter Symphony. But it requires to be carefully noted that the sense of the principal keys is not impaired by these digressions. They are not to be confounded either with the irregular wandering of the composers who immediately succeeded the polyphonic school, nor with the frequent going out and back again of the composers of the early part of the 18th century. This device is really an artificial enlargement of the capacity of a key, and the transitions are generally used to enforce certain notes which are representative and important roots in the original key. A striking example occurs in the first movement of Mozart's symphony in G minor (1st section), where after the key of B \flat has been strongly and clearly pointed out in the first statement of the second subject, he makes a modulatory digression as follows:

This is in fact a very bold way of enforcing the subdominant note; for though the modulation appears to be to the key of the minor seventh from the tonic, the impression of that key is ingeniously reduced to a minimum, at the same time that the slight flavour that remains of it forms an important element in the effect of the transition.

The force with which Beethoven employed the device above illustrated from Mozart is shown in the wonderful transition from E \flat to G minor at the beginning of the Eroica (bars 7-10), and the transition from F to D \flat at the beginning of the Sonata Appassionata. These are, as in most of Mozart's examples, only single steps; in many cases Beethoven makes use of several in succession. Thus in the beginning of the E minor pianoforte sonata, op. 90, the first section should be theoretically in E minor, but in this case a quick modulation to G begins in the third bar, in the seventh a modulation to B minor follows, and in the ninth, G is taken up again, and through it passage is made back to E minor, the original key, again. Thus the main centre of the principal key is supplemented by subordinate centres; the

different notes of the key being used as points of vantage from which a glance can be taken into foreign tonalities, to which they happen also to belong, without losing the sense of the principal key which lies in the background.

These transitions often occur in the early part of movements before the principal key has been much insisted on, as if to enhance its effect by postponement. Thus we find remarkable examples in Beethoven's Introductions, as for instance in the *Leonora* overture, No. 3, and in the Introduction to the quartet in C, op. 59, No. 3.

In composers of note since Beethoven, we find a determination to take full advantage of the effect of such transitions. Brahms, for instance, makes constant use of them in his instrumental works from the earliest to the latest. The first two pages of the G minor quartet for pianoforte and strings, show at once how various are the subordinate centres of which he makes use. In the pianoforte quartet in C minor, op. 60—he presents a short version of his principal subject in the principal key, and then passes to B \flat minor, D \flat major, E \flat minor, A \flat , G \flat minor and B \flat major in rapid succession before he resumes his original key, in order to propound his first subject more fully. Schumann was equally free in his use of subordinate modulations. In the fine intermezzo of the 'Faschingschwank,' which has the signature of E \flat minor, the first chord is in that key, but the second leads to D \flat major, and a few chords farther on we are in B \flat minor, from which an abrupt return is made to E \flat minor only to digress afresh. Such are the elaborate transitions which are developed by an extension of the device of single transitions used so frequently by Mozart; and it may be noted that a closely connected series of transitory modulations occupies in music of the 19th century an analogous position to that occupied by a connected series of harmonies, based on quickly shifting root-notes, in the music of a century or a century and a half earlier. Similarly, in the closely connected steps of modulation, like those used by Haydn and Mozart between one strongly marked expanse of key and another, later composers have packed their successions of keys so closely that it is often a matter of some difficulty to disentangle them with certainty. For instance, the passage in the slow movement of Beethoven's B \flat sonata, op. 106, just before the resumption of the principal key and the first subject (in variation), is as follows:

In this, besides the number of the transitions (exceeding the number of bars in the example), the steps by which they proceed are noticeable with reference to what was touched upon above in that respect. Many similar examples occur in Schumann's works. For instance, in the last movement of his sonata in G minor, where he wishes to pass from B \flat to G major, to resume his subject, he goes all the way round by B \flat minor, G \flat major, E \flat major, D \flat minor, F \sharp , B, A, D, C minor, B \flat , A \flat , and thence at last to G; there is a similar example in the middle of the first movement of his pianoforte quartet in E \flat ; examples are also common in Chopin's works, as for instance bars 29 to 32 of the prelude in E \flat , No. 19, in which the transitions overlap in such a way as to recall the devices of Haydn and Mozart, though the material and mode of expression are so markedly distinct.

From this short survey it will appear that the direction of modern music in respect of modulation has been constant and uniform. The modern scales had first to be developed out of the chaos of ecclesiastical modes, and then they had to be systematised into keys, a process equivalent to discovering the principle of modulation. This clearly took a long time to achieve, since composers moved cautiously over new ground, as if afraid to go far from their starting-point, lest they should not be able to find a way back. Still, the invention of the principle of passing from one key to another led to the discovery of the relations which exist between

one key and another; in other words of the different degrees of musical effect produced by their juxtaposition. The bearings of the more simple of these relations were first established, and then those of the more remote and subtle ones, till the way through every note of the scale to its allied keys was found.

In the meanwhile groups of chords belonging to foreign keys were subtly interwoven in the broader expanses of permanent keys, and the principle was recognised that different individual notes of a key can be taken to represent subordinate circles of chords in other keys of which they form important integers, without destroying the sense of the principal tonality.¹ Then as the chords belonging to the various groups called keys are better and better known, it becomes easier to recognise them with less and less indication of their relations, so that groups of chords representing any given tonality can be constantly rendered shorter, until at length successions of transitory modulations make their appearance, in which the group of chords representing a tonality is reduced to two, and these sometimes not representing it by any means obviously.

It may appear from this that we are gravitating back to the chaotic condition which harmony represented in the days before the invention of tonality. But this is not the case. We have gone through all the experiences of the key-system, and by means of it innumerable combinations of notes have been made intelligible which could not otherwise have been so. The key-system is therefore the ultimate test of harmonic combinations, and the ultimate basis of their classification, however closely chords representing different tonalities may be brought together. There will probably always be groups of some extent which are referable to one given centre or tonic, and effects of modulation between permanent keys; but concerning the rapidity with which transitions may succeed one another, and the possibilities of overlapping tonalities, it is not safe to speculate; for theory and analysis are always more safe and helpful to guide us to the understanding of what a great artist shows us when it is done, than to tell him beforehand what he may or may not do.

C. H. H. P.

The processes of modulation thus broadly indicated by Sir Hubert Parry leave little to add, though they have been illustrated in widely different ways by composers since his article was written. Max Roger's *Beiträge zur Modulationslehre* (12th edition, 1919) goes some way towards codifying later German practices. The article HARMONY, together with George Dyson's *The New Music* (1924), may be consulted for further analysis. Modulation is necessarily modified by new views as to the scope of TONALITY (*q.v.*). The adoption of pure CHRO-

¹ Illustrations of this process might be drawn from any composer of the later 19th century, but the chromatic style of César Franck exemplifies it with peculiar clearness.

MATRICISM (*q.v.*) or the acceptance of the doctrine of 'atonicity' would necessarily banish modulation.

C.

MODULATIONS, REGULAR AND CONCEDED (Lat. *modulationes* [vel *clausulae*] *regulares et concessae*). See MODES, ECCLESIASTICAL, subsection THE MODES IN POLYPHONIC MUSIC.

MODULATOR, see TONIC SOL-FA.

MÖLLER, JOHANN (late 16th to mid-17th cent.), town and court organist at Darmstadt; composed German motets, 5-8 v. (1611), a 6-part 'Vater unser'; 2 books of pavans, galliards, etc., for 5 instruments (1610 and 1612), etc. (See Q.-L.)

MOERAN, ERNEST JOHN (*b.* Osterley, near London, Dec. 31, 1894), composer, is of Irish extraction but has lived much in Norfolk, where he has been an assiduous collector of folk-songs. He was educated at Uppingham but was practically self-taught in music until he entered the R.C.M. in 1913. Eighteen months later he joined the army and served through the war, being demobilised in 1919. Since then he has had some guidance from John Ireland, whose influence can be traced in a few works of that period. Robustness is the outstanding quality of his idiom. Several of his early works have remained unpublished and are now discarded. These include a few orchestral scores, three string quartets, three violin sonatas, a violoncello sonata and a trio. His published works comprise:

Orchestral.—Two Rhapsodies (Halle, Norwich Festival, Promenades, etc.), Symphonic Impression, 'In the Mountain Country', Chamber Music.—String Quartet, Sonata (vln. and PF.), Trio (PF., vln. and vcl.).

Piano.—Variations, legends, fancies, toccata, etc. *Songs*.—Cycle, 'Ludlow Town' (from 'A Shropshire Lad'), and numerous others, 'Six Folk-songs from Norfolk', and other folk-song settings, including two for baritone and male voices quartet. A few part-songs.

E. E.

MÖSER, KARL (*b.* Berlin, Jan. 24, 1774; *d.* there, Jan. 27, 1851), violinist, pupil of Böttcher and Karl Haak. After a short activity as member of the Royal Chapel, Berlin, he went to Hamburg, where his personal intercourse with Rode and Viotti encouraged him to renewed studies. After extended journeys he returned to his former position at Berlin in 1811, where he formed a quartet party with Kelz as violoncellist. Soon after he widened the scope of his public concerts by the introduction of symphonies and overtures, which gradually developed into the symphony concerts of the Royal Chapel for the benefit of the orphan fund. On Nov. 27, 1826, he conducted the first performance of Beethoven's 9th Symphony. In 1842 he celebrated his jubilee, received the title of 'royal Kapellmeister,' and was pensioned, but continued to preside over the instrumental class. Among the foremost of his pupils are Karl Müller and his son August (*b.* 1825; died on a concert tour in America, 1859). His compositions are unimportant (Wasielewski, *Die Violine*; Q.-L.).

MOFFAT, ALFRED (*b.* Edinburgh, Dec. 4,

1866), composer and editor of old music. Studied composition for five years at Berlin, under Professor Ludwig Bussler, and remained in Berlin for another five years working for most of the large music-publishing firms.

He settled in London about the end of the 'nineties, turned his attention to the forgotten British violin composers of the 18th century and earlier, and had a hard fight to get any one to believe there had been a school of English violin composers. In fact it was only after Simrock had published so many of the old English sonatas, arranged by Moffat, that he induced Novello to embark on his 'Old English Violin Music' series, mostly of forgotten works. He has arranged much of Purcell's works and others of the old English school of vocal and instrumental music. His *Meisterschule der alten Zeit* (Simrock) embraces 36 classical violin sonatas, 18 violoncello sonatas, and 22 trio sonatas. It contains many old English works by Purcell, Richard Jones, Robert Valentine, John Collett, Charles Avison and Henry Eccles. His *Kammer-sonaten* (Schott) contains 30 violin sonatas, brought to light for the first time. His French 18th-century music (Schott) contains 18 numbers, and his English 18th-century music (Schott) contains 24 numbers.

His arrangements of British music are comprised in 'The Minstrelsy of England,' 'The Minstrelsy of Scotland,' of 'Wales,' of 'The Highlands,' and a valuable book, 'The Minstrelsy of Ireland,' all enriched with historical notes. There are many others of his arrangements of the English and Scottish vocal and instrumental music published in book form. Moffat regards his *Meisterschule* as one of his most important works. It began with 24 numbers, and has been very popular all over Europe.

In 1925 he was engaged upon a series of books of 'Melodious Scotland.' One of his notable books is 'Songs and Dances of all Nations,' in conjunction with the late J. D. Brown. He has a fine and unique library of early violin music, 17th-18th centuries, including many rare works. His daughter, Alice Moffat, is a talented actress. F. K.

MOLINARA, LA (Ger. *Die schöne Müllerin*), opera by Paisiello, produced at Naples in 1788; in London at the King's Theatre, Mar. 22, 1803. Its name is preserved by a duet, 'Nel cor più non mi sento,' which has served as the theme of many variations, amongst others of six by Beethoven. G.

The song, 'Hope told a flattering tale,' adapted to Paisiello's 'Nel cor più non mi sento,' became, near the close of the 18th century, one of the most favourite English sentimental songs; it was introduced by Mara in a revival of Arne's 'Artaxerxes,' and was republished in all imaginable forms. F. K.

MOLINARO, SIMONE (b. Genoa), was nephew and pupil of Giovanni Battista dalla Costena, whom he succeeded in 1599 in his office of maestro di cappella at the Cathedral of Genoa. In 1613 he edited in score, in one folio volume, the six books of chromatic madrigals of GESUALDO (q.v.), Prince of Venosa, which, as Ambros says, shows that these strange works had begun to be a subject of study for musicians. Of Molinaro's own publications, consisting of motets, sacred concertos with organ score, including some Masses and Magnificates, a book of madrigals and canzonets, hardly any are preserved complete, partbooks being missing in nearly every case. A certain number of his motets for five voices have been preserved complete in the collections of Hasler ('*Sacrae symphoniae*,' 1598) and Schadaeus ('*Promptuarium*,' 1611), from which Commer in modern times has reprinted ten. These are mostly quite simple and melodious on a harmonic basis, without anything of imitative counterpoint to speak of. But Molinaro is also known as a lutenist, and from his '*Intavolatura di liuto*,' 1599, containing Saltarelli, Passamezze and (tagliarde, and including twenty-five fantasias by his master Costena, Oscar Chilesotti has reprinted fourteen little pieces in modern notation in his '*Lautenspieler des XVI. Jahrhunderts*' (Breitkopf & Härtel, 1891). In these pieces, as Fritner says, Molinaro despises all counterpoint, and shows himself as a pure melodist and harmonist, but both in so simple and pretty a way that they all have something uncommonly attractive (see *M.f.M.* xxiv. p. 29). J. R. M.

MOLIQUE, WILHELM BERNHARD (b. Nuremberg, Oct. 7, 1802; d. Curnstadt, near Stuttgart, May 10, 1869), celebrated violinist and composer.

His father, a member of the town band, at first taught him several instruments, but Molique soon made the violin his special study. Spohr,¹ relates that while staying at Nuremberg, in 1815, he gave some lessons to the boy, who already possessed remarkable proficiency on the instrument. Molique afterwards went to Munich, and studied for two years under Rovelli. After having lived for some time at Vienna, as member of the orchestra of the Theater-an-der-Wien, he returned in 1820 to Munich, and succeeded his master Rovelli as leader of the band. From Munich he made several tours through Germany, and soon established his reputation as an eminent virtuoso and a solid musician. In 1826 he accepted the post of leader of the Royal Band at Stuttgart, and remained there till 1849. In that year he came to England, where he spent the remaining part of his professional life. The sterling qualities of Molique as a player, and his sound musicianship, soon procured him an honourable position in the musical world of London. His first appearance at the Philharmonic was on

¹ *Selbstbiographie*, i. 228.

May 14, 1840, when he played his own A minor concerto. With the general public he was equally successful as a soloist, quartet-player and teacher, while the serious character and the fine workmanship of his compositions raised him high in the estimation of connoisseurs and musicians.

As an executant he showed a rare perfection of left-hand technique, but his bowing appears to have been somewhat wanting in breadth and freedom. His style of playing was usually very quiet, perhaps deficient in animation. As a composer the influence of Spohr is evident, not only in the character of most of his subjects, but also in his manner of treating and working them out, yet some of his works—especially the first two movements of his third concerto in D minor, and of the fifth in A minor—are fine compositions. His other compositions, though evincing the same technical mastery, are very inferior in interest to these concertos—they bear hardly any traces of inspiration and had no great or lasting success.

Molique gave a farewell concert at St. James's Hall, May 3, 1866, and five days afterwards retired to Cannstadt, near Stuttgart, where he died. His principal published works are :

6 Violin Concertos; 8 Quartets for stringed instruments; 2 Piano-forte Trios; a Symphony; 2 Masses, an Oratorio, 'Abraham' (performed at the Norwich Festival in 1869); Duos for two violins, and for flute and violin.

Bibl.:—FRITZ SCHROEDER, *Bernhard Molique und seine Instrumentalkompositionen. Mit einem Verzeichnis aller nachweisbaren Werke Moliques und einem thematischen Katalog des wichtigsten Instrumentalkompositionen.* (Stuttgart, 1923.) P. D.

MOLL and DUR are the German terms for minor and major respectively.

MOLLE, HENRY (early part of 17th cent.), English composer of church music, went to King's College, Cambridge, and was Public Orator to that University while Cosin was Master of Peterhouse (1635-40). His English Litany was 'made for Cosin.' One of the madrigals in Thomas Tomkins' 'Songs' of 1622 is dedicated to Mollé. In the Tudway Collection (B.M. Harl. MSS. 7337-7342) are 2 Evening Services by Mollé; the first in D, written in 1636, and the second in F, dated 1639, and '... commonly called Mollé's 2nd Service.' In PH. are the following compositions by him :

Latin T.D. and L., English L., M. and N.D., Second M. and N.D., a 4, and an anthem, 'Great and Marvellous.'

The words also of another anthem by him are given in Clifford's 'Collection' (1663). J. M^{rs}.

MOLLENHAUER, EDWARD R., a violin-maker established in New York in the latter half of the 19th century, who introduced an 'improvement' in violin construction which was patented in this country (1881, No. 621).

The invention consists in placing a board between the sounding-board and the back of the instrument, and parallel to these two boards, so as to divide the interior into two compartments. This intermediate board is provided with sound-holes and a bass bar.*

This contrivance was considered of sufficient importance by Count Luigi Francesco Valdrighi to form the subject of No. 9 of his *Musurgiana* under the title *Strumenti ad arco rinforzati* (Modena, 1881). E. H.-A.

MOLLER, JOACHIM, see BURCH, Joachim à.
MOLTER, JOHANN MELCHIOR (d. Durlach, Jan. 12, 1765), from 1722-33 Kapellmeister at the court of the Markgrave of Baden at Durlach, whence he went to Italy, at the latter's expense, for further studies. In 1733 he went to Eisenach as church-music director but returned to Durlach in 1743, where he occupied his former position till his death. He was a prolific composer of instrumental music. Most of his compositions, including 169 symphonies, 95 concertos and concertini, and 66 sonatas, for various instruments, 14 overtures, 14 cantatas, etc., are preserved in MS. in the State Library at Karlsruhe, and the MS. score of a Passion Music in the Sondershausen Library (*Riemann; Q.-L.*).

MONASTERIO, JESUS DE (b. Potes, province of Santander, Spain, Apr. 18, 1836; d. there, Sept. 28, 1903¹), eminent violinist, showed strong inclination for music at a very early age, and enjoyed royal patronage from the age of 7 years. He was taught by the best masters at Madrid, and for a time followed the career of a prodigy; but the death of his father compelled him to return to his home, and through the influence of a wealthy amateur he was sent to Brussels to study with De Bériot. Here he remained at the Conservatoire from 1849-52, when he returned home and played in Madrid with great success; in 1861 he appeared in Belgium, Holland and Germany as a finished performer. His success in these countries and in France was remarkable; at Weimar he was offered the post of court Kapellmeister, but he preferred to return to his native country, and in a short time he was appointed violin professor at the Conservatoire of Madrid. His quartet-playing was of remarkable excellence, and he introduced the works of the classical masters to the musical amateurs of Spain. He wrote many successful works for his instrument, as well as two ecclesiastical compositions without accompaniment. M.

MONDAY POPULAR CONCERTS, see POPULAR CONCERTS.

MONDONVILLE, (1) JEAN JOSEPH CASASANE DE (b. Narbonne, Dec. 24, 1711; d. Belleville, near Paris, Oct. 8, 1772), son of well-born but poor parents.² His taste for music showed itself early, and he acquired considerable powers of execution as a violinist. He was in Paris in 1733, and from there went to Lille, where he was well received, and still more so at the Concert Spirituel in 1737. He returned to Paris in 1734 and achieved success as a violinist

¹ Obituary in the *Zeitschrift* of the Int. Mus. Gen., 1903, p. 224.

² The only information about his youth is in the *Nécrologe des hommes célèbres de France*. (1773.)

and composer of popular chamber music and organ pieces (for Balbâtre).

We lose sight of him from this time until 1738, when he began to compose motets. These religious compositions appeared in the programmes of the Concert Spirituel from then until 1770. Mondonville attempted the stage, but his first opera, 'Isbe' (Académie, Apr. 10, 1742), failed. In 1744 he succeeded Gervais as Surintendant de la Chapelle du Roi, and under court patronage he produced at the Académie 'Le Carnaval du Parnasse' (Sept. 23, 1749), an opéra-ballet in three acts, containing some graceful music. When the contest between the partisans of Italian and French music, known as the Guerre des Bouffons, arose in 1752 in consequence of the success of 'La serva padrona,' Mondonville, a protégé of Mme. de Pompadour, was chosen champion of the national school; and his opera 'Titon et l'Aurore' (Jan. 9, 1753) owed its success largely to this circumstance. 'Daphnis et Alcimadure' (Dec. 29, 1754), a pastoral in the Langue d'Oc, in which he introduced many Provençal airs, completed his popularity; and of this he made use to procure his appointment as director of the Concert Spirituel. That post he occupied for seven years (1755-62) showing great ability both as an administrator and conductor, and producing at the concerts with much success three short oratorios, 'Les Israélites au Mont Oreb,' 'Les Fureurs de Saül' and 'Les Titans.' 'Les Fêtes de Paphos' (May 9, 1758), originally written for Mme. de Pompadour's private theatre, was the only opera performed at the Académie during the same period. His last operas, 'Thésée' (1767) and 'Psyché' (1769, a mere adaptation of the third act of 'Les Fêtes de Paphos'), were unsuccessful. Twelve motets, a book of trios, sonatas for violin and harpsichord, etc., are mentioned in *Q.-L.*, and a very amusing *jeu d'esprit* was published in 1760. It is a musical setting in cantata form of the 'Privilege du Roi' which appears in all publications of the period; it has parts for strings, oboes and horns.

The following are his chief instrumental works, arranged chronologically, of which the 'Pièces de clavecin en sonates,' the first of the kind, and the 'Sons harmoniques,' which, for the violin were equally original, are the most important:

1. Sonatas for vin. with basso continuo. (1733.)
2. Trio Sonatas for two vins. or flutes with basso continuo.
3. Sonatas for PF. with vin. accomp. (c. 1734.)
4. 'Les Sons harmoniques,' sonatas for vin. solo with basso continuo (c. 1738.)
5. PF. pieces with voice or vin. (c. 1748.)

There is a good portrait of Mondonville in pastel by La Tour, formerly in the possession of Ambroise Thomas, now in the Musée de St. Quentin; and another by C. N. Cochin, engraved by Saint-Aubin.

(2) JEAN (b. Narbonne, Apr. 15, 1716) (called le Jeune or le Cadet), his younger brother, was

'Ordinaire de la musique du roi,' and composed a collection of sonatas (1767). He is lost sight of after 1769. G. c.; addns. M. P.

BIBL.—L. DE LA LAURENCE, *L'École française de violon de Lully à Vioti*, I. 1922-23, pp. 376-436.

MONFERRINA, a kind of country dance, originating in Piedmont. The tunes used in Italy and Malta became fashionable in England in the early years of the 19th century, and were employed for country dances. In this country the name stood as 'Monfrina,' 'Monfreda' or 'Manfredina.' The favourite tune with the title 'Italian Monfrina' was—

Copies will be found in Wheatstone's *Country Dances* for 1810, *Companion to the Ball-Room*, circa 1816, and other collections of country dances. F. K.

MONGINI (d. 1874), a tenor singer, who first sang in London at Her Majesty's Theatre in 1859, and again about 1862. The best part of his London career, however, dated from 1866, when the premature death of Giuglini had left Mapleson without a leading tenor possessed of any great attraction for the public. Mongini could not fill Giuglini's place, but he had a voice of extraordinary power and range, and in certain parts—Arnold in 'William Tell,' Manrico in 'Trovatore,' and John of Leyden in 'The Prophet' among the rest—he met with marked success. When Gye and Mapleson joined forces at Covent Garden in 1869, Mongini was one of the leading tenors in the company, and he afterwards sang under Mapleson's management down to 1873. He was a typical *tenore di forza*. S. H. P.

MONTUSZKO, STANISLAUS (b. dept. of Minsk, Lithuania, May 5, 1820; d. Warsaw, June 4, 1872), received his first musical education from the organist Aug. Freyer and went to Berlin in 1837, where he was a pupil of Rungenhagen for two years. He settled down at Wilna as a teacher and organist of the church of St. John, and in 1846 his first opera, 'Halka,' was given at Warsaw. In 1858 he became Kapellmeister at the opera in Warsaw, and afterwards professor at the Conservatorium. Among his operas¹ and dramatic pieces the most noteworthy are 'Die Gräfin' and 'Der Paria,' the latter produced in 1869. He wrote five masses, church music, cantatas and choral music, an overture 'Bajka,' music to 'Hamlet' and 'The

¹ *Riemann* enumerates fourteen, with three ballets.

Merry Wives of Windsor,' and many songs and pianoforte pieces, besides an instruction book in harmony in Polish. One of his best songs, 'Le Cosaque,' enjoyed great popularity for many years. Twenty years after his death a branch of the Warsaw Musical Society was founded with the special object of publishing his MS. works and founding a museum in his honour. M.

BIBL.—BRONISŁAWA WOJCIEKOWA, *Szkice Muzykologiczne*. (Warsaw, 1923). (Discusses Moniuszko's settings of ballads by Mickiewicz.)

MONK, EDWIN GEORGE, Mus.D. (b. Frome, Somerset, Dec. 13, 1819; d. Radley, near Oxford, Jan. 3, 1900), was initiated in music by his father, an amateur. He studied pianoforte-playing at Bath under Henry Field, and organ-playing under George Field. He then went to London and learned choral singing in Hullah's classes, and solo singing from Henry Phillips. Later he studied harmony with G. A. Macfarren. After holding several appointments as organist in his native county he went to Ireland in 1844, and became organist and music-master of the newly formed College of St. Columba; at Stackallan, near Navan, County Meath, afterwards transferred to Rathfarnham, County Dublin; he remained there till 1846, when he was succeeded by J. B. Calkin. In 1847 he settled in Oxford, and was concerned in the formation of 'The University Motett and Madrigal Society.' In 1848 he obtained the appointments of lay-precentor, organist and music-master at the new College of St. Peter, Radley, and graduated Mus.B. at Oxford. In 1856 he proceeded Mus.D., his exercise being a selection from Gray's ode, 'The Bard,' which he published in the same year in vocal score. In 1859 he was appointed successor to Dr. Camidge as organist and choirmaster of York Cathedral. He resigned in 1883, and was succeeded by Dr. J. Naylor. He published a service, several anthems, a Veni Creator Spiritus, and other pieces, and various secular compositions, and edited *The Anglican Chant Book* and *The Anglican Choral Service Book*, also, with the Rev. R. Corbet Singleton, *The Anglican Hymn Book* and, with Sir F. A. G. Ouseley, *The Psalter and Canticles pointed for chanting* (two series), and *Anglican Psalter Chants*. He was the compiler of the libretti of Macfarren's oratorios, 'St. John the Baptist,' 'The Resurrection' and 'Joseph.' He was a student of astronomy, and became F.R.A.S. in 1871. W. H. H.; addns. W. H. G. F.

MONK, WILLIAM HENRY (b. London, Mar. 16, 1823; d. there, Mar. 1, 1889), is remembered for his widespread influence on English hymnody through the part which he took in editing the music of HYMNS ANCIENT AND MODERN (q.v.).

He studied under Thomas Adams, J. A. Hamilton and G. A. Griesbach. After filling the office of organist at Eaton Chapel, Pimlico;

St. George's Chapel, Albemarle Street; and Portman Chapel, St. Marylebone, he was appointed in 1847 director of the choir in King's College, London, and in 1849 organist. In 1874, upon the resignation of Hullah, he became professor of vocal music in the college. He was early associated with Hullah in his work of popular musical education. In 1851 he became professor of music at the School for the Indigent Blind. In 1852 he was appointed organist of St. Matthias, Stoke Newington, where a voluntary choir, under his direction, for many years sustained a daily choral service. He delivered lectures on music at the London Institution (1850-79); the Philosophical Institution, Edinburgh; and the Royal Institution, Manchester. He was appointed a professor in the National Training School for Music, 1876, and in Bedford College, London, 1878. He was musical editor of *The Parish Choir* after the fortieth number, and one of the musical editors of *Hymns Ancient and Modern*. He edited many other works of a similar character, including some for the Church of Scotland, and made various contributions to many of the modern hymnals. W. H. H.

MONN, GEORG MATTHIAS (b. Austria, 1717; d. Vienna, Oct. 3, 1750), organist of the Karlskirche, composer of symphonies, trio sonatas, quartets, etc., which are in a style of transition from the old to the modern school of instrumental composition. K. Horwitz, C. Riedel and G. Adler held that to him and not to Stamitz belonged the credit of having inaugurated the modern style, but this claim must fail on closer examination, as Riemann has justly pointed out. Some compositions attributed to him (also in Q.-L.) are by a younger composer, G(iovanni) M(atteo) Monn or Mann (*Riemann*; Q.-L.).

MONOCHORD (from the Greek *Μονόχορδον* and the Latin 'Monochordon'), a single vibrating string, which, being subdivided in simple mathematical ratios, gives the main notes of the scale which underlie all musical theory. This scientific basis of music has been known from very early times. It is especially connected with the name of Pythagoras, the great Greek of the 6th century B.C. He very possibly obtained his knowledge of it from the Egyptian priests, and he certainly handed on to a Greek school of his own a developed musical or rather acoustical theory, on which all subsequent theory has been based. The earliest full statement of it is in the treatise of Euclid (c. 300 B.C.), called 'Sectio Canonis,' the precursor of a large number of such treatises extending into the Latin Middle Ages.

The first interval to be established is the octave, which is sounded by $\frac{1}{2}$ the vibrating string; the fifth will similarly be given by $\frac{2}{3}$ of the string and the fourth by $\frac{3}{4}$ of it. A

tone is the difference between the fourth and the fifth, that is to say, it is represented by the fraction $\frac{1}{2}$. Thus the whole skeleton of the scales is arrived at. The Greeks subdivided the fourth in three different ways: (1) into a tone, a tone and a semitone: or else (2) into a semi-tone, a semitone and a sesquitone: or else (3) into a quarter-tone, a quarter-tone and a ditone, these three methods give the three *genera* of scale called respectively diatonic, chromatic and enharmonic.¹ (See GREEK MUSIC.)

The first of the three is the one that has been perpetuated in modern Western music, and therefore is the only one that need be taken into account here. The immediate result of it was an Octave-System made up thus:

T	Nete (νήτη or νεάτη, lit. 'lowest'), our highest note.
T	Paranete (παρανήτη, i.e. 'next to Nete').
S	Trite (τρίτη, i.e. 'third string').
S	Paramese (παραμέση, i.e. 'next to Mese').
T	Mese (μῆση, i.e. 'middle string').
T	Lichanos (λιχανός, i.e. 'forefinger string').
S	Parhypate (παρῡπάτη, i.e. 'next to Hypate').
S	Hypate (ὑπάτη, i.e. 'highest'), our lowest note.

The terminology is taken from the Cithara or Lyre. The interval from Nete to Hypate is that of an octave; from Paramese to Hypate is a fifth or pentachord; from Nete to Paramese or from Mese to Hypate is a fourth or tetrachord. These four notes are 'stable,' i.e. of fixed position, whether the scale be diatonic, enharmonic, or chromatic; but the inner notes of the tetrachord vary according to the character of the scale. On the left-hand side the intervals of the diatonic scale are indicated by the initials T and S; and it will be noticed that the two tetrachords are exactly alike in the arrangement of their intervals, each being represented by the formula STT ascending. This octave, therefore, consists of two similar tetrachords separated from one another by a tone, and therefore called in technical language 'disjunct.'

As the range of musical instruments and of musical ideals became more extended this conception of the scale was widened. In the extant writings of Aristoxenus (4th cent. B.C.) there is little trace of any more extended scale than this of one octave; but at least by the time of Euclid (c. 300 B.C.) the standard scale was regarded as consisting of two octaves. A tetrachord was added both above and below the twin tetrachords of the original octave, and then, in order to complete the range of two octaves an additional note was added below. The result was the Double Octave-System, consisting of the following series of notes, and known thence-

¹ There are further subtleties of subdivision which may here be left unnoticed.

forward as the 'Perfect System' (σύστημα τέλειον):

T	Nete Hyperbolaion (νήτη ὑπερβολαίων)	
T	Paranete Hyperbolaion (παρὰ νήτη ὑπερβολαίων)	Tetrachord Hyperbolaion
S	Trite Hyperbolaion (τρίτη ὑπερβολαίων)	
T	Nete Diezeugmenon (νήτη διεzeugμένων)	
T	Paranete Diezeugmenon (παρὰ νήτη διεzeugμένων)	Tetrachord Diezeugmenon.
S	Trite Diezeugmenon (τρίτη διεzeugμένων)	
S	Paramese (παραμέση)	
T	Mese (μῆση)	
T	Lichanos Meson (λιχανός μέσων)	Tetrachord Meson.
S	Parhypate Meson (παρῡπάτη μέσων)	
T	Hypate Meson (ὑπάτη μέσων)	
T	Lichanos Hypaton (λιχανός ὑπατων)	Tetrachord Hypaton.
S	Parhypate Hypaton (παρῡπάτη ὑπατων)	
S	Hypate Hypaton (ὑπάτη ὑπατων)	
	Proslambanomenos (προσλαμβάνόμενος)	

It is evident at once that this nomenclature is only the extension of the preceding. There are only three new terms: the tetrachord added above is called Hyperbolaion (ὑπερβολαίων) additional; the upper tetrachord of the two original ones is called Diezeugmenon (διεzeugμένων) disjunct; the note added to complete the two octaves is called Proslambanomenos (προσλαμβάνόμενος) additional. This enlargement of the scale grew up during the course of the 4th century B.C. Its earliest extant exposition is in the treatise of Euclid already mentioned, but probably its growth was gradual. It will be observed that each of the two new tetrachords is more closely attached to its neighbour than were the two original tetrachords; each pair is in technical language not disjunct but 'conjunct' (συνημμένον), because the two meet and share one note in common.

This conjunction of tetrachords was not a new thing, for there had long been in existence, side by side with the octave, a Heptachord consisting of two conjunct tetrachords which met in the note Mese. The full Greek system therefore was not complete without a tetrachord conjunct having Mese as its base. This formed an alternative to the intervals and notes of the Tetrachord Diezeugmenon; and thus a tetrachord called Synemmenon (συνημμένων) found a place alongside and parallel to it. The middle of the scale therefore offered two alternatives:

T	Paranete Diezeugmenon.	T	Nete Synemmenon.
T	Trite Diezeugmenon.	T	Paranete Synemmenon
S	Paramese.	T	Trite Synemmenon.
T	Mese.	S	Mese.

Thus, by a combination of these two—known as the Greater Perfect System and the Lesser

Perfect System—there was reached the full development in the Perfect Unmodulating System *σύστημα τέλειον ἀμετάβολον*, which consisted of a pair of octaves corresponding, so far as notes went, with the modern minor scale without accidentals, but with the possibility that the note above the middle note of the series could be flattened by a semitone.

This series had no particular pitch of its own; in other words these Greek names correspond with the modern terms tonic, supertonic, mediant, etc., not with the names that denote a definite pitch. They were therefore applicable to any pitch. The early notions of pitch among the Greeks were denoted by tribal names—Dorian, Locrian, Lydian, etc., which in themselves were necessarily somewhat indeterminate. (See *MODES*.) Such methods, though for the moment they might satisfy the theorists, were necessarily insufficient as a working notation for practical musicians. An alphabetical system of notation was therefore devised by them for their use in early days. This policy was begun by the instrumentalists who assigned fifteen letters of a Greek archaic alphabet to the fifteen degrees of the Perfect System. These applied in the first instance to the diatonic form, but by modifications in form and in position the same set of symbols was made to serve also for the chromatic and enharmonic forms. The highest note of the series was called *alpha*; *beta* stood for the fourth below and *gamma* for its octave, *delta* for the sixth below and *epsilon* for its octave, and thus the series went on, each pair of letters signifying two notes an octave apart. (See *GREEK MUSIC*.) The antiquity of the system is shown not merely by the employment of the digamma, but also by the archaic form of other letters and by the use of a second form of *lambda*, the second of which is said to be peculiar to the alphabet of Argos. The strange method of arrangement is probably to be explained as due to the technique of the instruments (see the Table, p. 498).

This system was sufficient not only to provide a short notation for each note of the Perfect System, but also (with the help of some modifications to express the chromatic semitones) to provide for the old Octave Scale to be pitched at each of the thirteen pitches which the teaching of Aristoxenus showed to be required, corresponding with the thirteen semitones of the diatonic octave. (See *MODES*.) When the neo-Aristoxenean teaching demanded fifteen pitches instead of thirteen, the series was insufficient, and had to borrow from elsewhere, as will be seen shortly.

Meanwhile the singers had devised their own method of notation, a simpler one and more modern. They reckoned up all the notes that they would use whether in the diatonic, the

chromatic, or the enharmonic form, gave *alpha* to the highest note, and the succeeding letters to the succeeding notes. No digamma or other archaic form was used; all the notes of the alphabet down to *phi* were required for the higher octave, owing to the number of the true chromatic, enharmonic, and diatonic subdivisions of the octave. The lower octave then followed suit, beginning with the *chi*, *psi* and *omega* that were left over and then starting a fresh alphabet with slightly modified letter-symbols, which in turn had reached to *phi* by the time that the lowest note was reached. This notation, like the other, was sufficient to represent the octave at the thirteen Aristoxenean pitches. To provide for the set of fifteen the vocalists extended their notation upwards, and adopted notes above their original *alpha*, denoting them by the letters of the alphabet from *tau* to *omega*.

It seems to have been at this point in the evolution that the two systems of notation—that of the vocalists and that of the instrumentalists—were for the first time confronted with one another. At once a discrepancy was seen to exist between them in point of pitch; for the *alpha* of the instrumentalist was a minor third above the *alpha* of the vocalist. As, however, the vocalist had adopted the notes just mentioned above his original *alpha*, he had something to equate with the instrumentalist's *alpha*, and thus the two were easily brought into line, so far as the upper end of the scale was concerned. At the lower end the discrepancy was more marked, because the instrumentalist had not yet extended his notation so as to meet the requirements of the neo-Aristoxenean fifteen pitches. He was able, however, to do this very simply by adding to the lower end of his scale the lower notes of the vocalist's scale that overlapped his. Thus the two methods of notation were made to conform to one another. No further devices were required, except that when it was desired to note the Double-octave of the Perfect System, and not merely the old Single-octave, at the different pitches, the additional notes that this change entailed were added above, and the notation of the lower octave was repeated (with a distinguishing dash) alike in both the systems of notation.

Thenceforward the two systems prevailed side by side; each note was represented by two signs, and it is in this form that the Greek notation is known to us. The full description of it is only found in writers of the Christian era such as Gaudentius and Alypius; but it is clear that it is of great antiquity, and some such history as that which has been reconstructed here must lie behind it.

The Perfect System and its notation are of importance because they pass from Greek music through Greco-Latin music into the music of

the Middle Ages, and their effect still remains in modern music. The further history as regards the theory of music is traced in the article *MODES*, but the question of pitch must be dealt with here. Though the Perfect System could be set at any pitch, it was natural to look upon some one particular pitch as the normal one, and upon others as transpositions. The Lydian pitch was adopted for that purpose, and consequently the symbol τ , which represented *Proslambanomenos* at the Lydian pitch, is constantly found as the normal equivalent of *Proslambanomenos*, the Γ (*gamma*) a note higher as the equivalent of *Hypate Hypaton*, and so on, the notation being the instrumental one. The reason for this convention is not clear; certainly it was settled without reference to the origin of either of the systems of notation, for each of these presupposes a different pitch as the normal one, as its use of the letter *alpha* shows. If the ancient and modern notations are to be compared it is evident that the normal pitch at which the Perfect System can most naturally be set is from *a'* to *A*, for its intervals are those of our minor scale, or else from *dd* to *D* when the *b* is used instead of *b*. To bring the old Greek instrumental notation into line with modern notation it is therefore natural to take the modern *aa* as the equivalent of the highest note of the old instrumental system (which was its starting-point, and was in fact called *alpha*). The starting-point of the old vocal system will then have *F* as its modern equivalent; while the Lydian pitch, which was adopted as the normal pitch of the Perfect System, will be represented by the range from *dd* to *D*. And the whole range covered by the Perfect System in all its possible pitches will be from *gg* (the top note of the Hyperlydian pitch) to *FF*, the bottom note of the Hypodorian pitch. Within these extreme limits lies the whole of ancient and mediæval music.

The Perfect System, with its double Greek notation, appears in the early Latin writers such as the celebrated Roman philosopher Boethius (470-524), and through him it reappears in the Latin writers on music in the 9th century. The Lydian pitch still continued to be for Boethius and his followers the normal pitch; and thus the description of the Perfect System in Hucbald's treatise *De harmonica institutione* (c. 900) is accompanied by the ancient signs derived from the primitive Greek alphabet, but in a yet more degraded form, and with letters drawn from the vocalist's system of alphabetical notation substituted where the instrumentalist's symbol was too uncouth to be easily reproduced (see below).

This fusion of the two Greek alphabetical methods of noting the Perfect System, called Dasian Notation, did not last long. Later writers are content to describe the Greek

scale without the Greek notation, and with a new Western alphabetical system in its stead. The two tables following will make all clear.

TABLE OF GREEK NOTATION FOR EVERY SEMITONE

(Compare the Tables, Vol. II. pp. 444-447.)

MODERN.	VOCAL NOTATION.	INSTRUMENTAL NOTATION.
FF	ϕ (altered Phi)	ϕ
GG	υ (turned Upsilon)	υ
FF#	τ (turned Tau)	τ
GG	σ (double Sigma)	σ
A ^b	ρ (inverted Rho)	ρ

bb	ο (Omicron)	ο
etc.	etc.	etc.
	and other higher notes with signs derived from an octave below.	etc.

1 Not really Digamma though called so.

TABLE OF GRECO-LATIN NOTATION

The Dasian Notation of Hucbald derived from the Greek runs thus :

(Iota.)	[V]	Nete hyperbolalon.	
	[Π]	Paranete hyperbolalon.	
	[Y]	Trite hyperbolalon.	
(Form of Alpha.)	[N]	Nete diezeugmenon.	
	[Ω]	Paranete diezeugmenon.	Ω Nete symmenion.
	[E]	Trite diezeugmenon.	[E] Paranete symmenion.
	[=]	Paramese.	[Θ] Trite symmenion.
	[I]	Mese.	[I] Mese.
	[M]	Lichanos meson.	
	[P]	Parhypate meson.	
	[C]	Hypate meson.	
(Digamma.)	[F]	Lichanos hypaton.	
	[B]	Parhypate hypaton.	
(Gamma.)	[I]	Hypate hypaton.	
(Dasian.)	[h]	Proslambanomenos.	

The lower notes are, as was then usual, placed below and the upper ones above ; and this table reads in the inverse order to the preceding one. Proslambanomenos here is the equivalent of D there.

The signs which are bracketed are those taken from the Vocal Notation. Compare the Lydian Table (given in Vol. II. p. 445) from which Hucbald took his signs. For the other Dasia Notation of Pseudo-Hucbald, see NOTATION.

W. H. F.

MONOCORDO (Ital.), MONOCORDE (Fr.),

an indication which instructs a player of a stringed instrument to execute a given passage or whole piece on one string. This excellent effect originated with PAGANINI (*q.v.*). Having played his 'Love Scene,' which he had written for the G and E strings, before the court at Lucca with great success, he was asked if he could not execute something on one string only. The idea immediately caught his fancy, and he set to work and composed his sonata 'Napoleon' for the G string. This he performed before the court on the Emperor Napoleon's birthday, in the presence of the Princess of Piombo, Napoleon's favourite sister, and other royalties, and the success of this composition led to many others of a similar character.

O. R.

MONODY (from the Gr. *μόνος*, 'single,' and *ᾠδή*, 'song'), a term applied to music written in what is sometimes called the homophonic style ; that is to say, music in which the melody is confined to a single part, instead of being equally distributed between all the voices employed, as in the polyphonic schools.

The rise of the homophonic school was extraordinarily rapid. It sprang suddenly into notice ; and, without having previously passed through any of the usual stages of gradual development, at once began to exercise an irresistible influence upon the progress of art.

Giov. Battista Doni tells us that at the cele-

brated *réunions* which took place in Florence about the close of the 16th century, at the house of Sig. Giov. Bardi de' Conti di Vernio, 'Vincenzo Galilei was the first who composed songs for a single voice'; and that Giulio Caccini (detto Romano), 'in imitation of Galilei, but in a more beautiful and pleasing style, set many canzonets and sonnets written by excellent poets,' and sang them 'to a single instrument, which was generally the theorbo, or large lute, played by Bardilla.'¹ (See CACCINI, Giulio.) The success of these early efforts was so encouraging that the inventors of the opera and the oratorio were content to write the whole of their recitatives, and even the rudimentary arias with which they were interspersed, with no richer accompaniment than that of an exceedingly simple-figured bass, in which we soon find indications of the unprepared discords first introduced by Monteverdi. (See THOROUGH-BASS.) No doubt unisonous vocal music with little or no accompaniment had been heard in the canzonetta, villanella, and other forms of national melody, ages and ages before the birth of Galilei ; and that the recognition of what we now call the 'Leading Note' as an essential element of melody was no new thing, may be gathered from the words of Zarlino, who, writing in 1558, says—

'even Nature herself has provided for these things ; for not only those skilled in music, but also the *Contadini*, who sing without any art at all, proceed by the interval of the semitone'

—i.e. in forming their closes. Nevertheless, whatever may have been the popular practice, it is certain that the polyphonic style alone had hitherto been taught in the schools. We must understand therefore that those who met at the house of Bardi, though undoubtedly the first to introduce this simple music to real lovers of art, were not its actual inventors. The latent germs of the monodic style must have been present wherever national melody existed.

The example on the next page from Caccini's 'Nuove musiche' (Venice, 1602) will show the kind of effect contemplated by the Count of Vernio's enthusiastic disciples. We need scarcely say that the figure 14, under the last D, in the last bar but one, indicates a dominant seventh ; but before this canzonetta was published, Monteverdi had already printed his Fifth Book of Madrigals ; he would not, therefore, be robbed of any portion of the credit universally accorded to him, even if it could be proved—which it cannot—that the discord in this instance was not intended to appear as a passing-note. The seventh on the E, in the third bar, is of course a suspension. (See MONTEVERDI ; FORM ; HARMONY ; OPERA ; ORATORIO.)

MONOTONE (from *μόνος*, 'single,' and *τόνος*, a 'note,' or 'tone'), Prayers, Psalms, Lessons and other portions of the Divine Office, when declaimed on a single note, are said to be monotoned, or recited in monotono. (Cf. INFLEXION.)

The use of monotonic recitation is of extreme antiquity, and was probably suggested, in the first instance, as an expedient for throwing the voice to greater distances than it could be made to reach by ordinary means.

W. S. R.

MONPOU, FRANÇOIS LOUIS HIPPOLYTE b. Paris, Jan. 12, 1804; d. Orleans, Aug. 10, 1841), at 5 became a chorister at St. Germain 'Auxerrois, and at 9 was transferred to Notre Dame. In 1817 he entered as a pupil in the school founded by Choron, which he left in 1819 to be the organist at the Cathedral at Tours. For this post he proved unfit, and soon returned to Choron, who was extremely fond of him, and made him, although a bad reader and a poor pianist, his 'accompagnateur' (or assistant) at his Institution de Musique Religieuse. Here he had the opportunity of studying the works of ancient and modern composers of all schools, while taking lessons in harmony at the same time from Porta, Chelard and Fétis; but notwithstanding all these advantages he showed little real aptitude for music, and seemed destined to remain in obscurity. He was

organist successively at St. Nicholas des Champs, St. Thomas d'Aquin, and the Sorbonne, and sacred music appeared to be his special vocation until 1828, when he published a pretty nocturne for three voices to Béranger's song, 'Si j'étais petit oiseau.' He was now taken up by the poets of the romantic school, and became their musical interpreter, publishing in rapid succession romances and ballads to words chiefly by Alfred de Musset and Victor Hugo.

Monpou found himself after the close of Choron's school without regular employment, and being a married man found it necessary to have some certain means of support. The stage seemed to offer the best chance of fortune, and though entirely unpractised in instrumentation, he unhesitatingly came forward as a composer of operas. Within a few years he produced 'Les Deux Reines' (Aug. 6, 1835); 'Le Luthier de Vienne' (June 30, 1836); 'Piquillo,' 3 acts (Oct. 31, 1837); 'Un Conte d'autrefois' (Feb. 20, 1838); 'Perugina' (Dec. 20, 1838); 'Le Planteur,' 2 acts (Mar. 1, 1839); 'La chaste Suzanne,' 4 acts (Dec. 27, 1839); and 'La Reine Jeanne,' 3 acts (Oct. 12, 1840). His progress was undeniable, but he never became a really good musician. He overworked himself, and the effort to produce with greater rapidity than his powers would justify resulted in his premature death. He left unfinished 'Lambert Simnel' (Sept. 16, 1843), completed by Adolphe Adam, and a short opéra-comique, 'L'Orfèvre,' which has never been performed.

G. C.

MONRO (MONROE), GEORGE, an 18th-century organist, who held an appointment at St. Peter's in Cornhill, and who played the harpsichord in the orchestra of Goodman-fields theatre from 1729 to his death a few years later (1731?). His principal fame was gained, however, by a great number of vocal compositions which were in great favour during the early part of the 18th century. After appearing on single music sheets many were transferred to *The Merry Musician*, vols. ii. and iii., c. 1728-29; to Watt's *Musical Miscellany*, 1731; to Walsh's *British Musical Miscellany*, 1733-34, and similar collections. He composed the music for Fielding's *Temple Beau*, acted in 1729.

F. K.

MONRO, HENRY (b. Lincoln, 1774), was a chorister in the cathedral there, and afterwards a pupil of John James Ashley, Dussek, Dittenhofer and Domenico Corri. In 1796 he was appointed organist of St. Andrew's, Newcastle-upon-Tyne. He composed a sonata for piano-forte and violin, and a few pianoforte pieces and songs.

W. H. H.

MONSIGNY, PIERRE ALEXANDRE (b. Fauquembergue, near St. Omer, Oct. 17, 1729; d. Jan. 14, 1817), composer, whom Choron used to call the French Sacchini, showed a taste for music in childhood, and studied the violin with success, though not intended for the profession of music.

His father died just as he had completed his classical education, and wishing to help his family, Monsigny went to Paris in 1749 and obtained a clerkship in the Bureaux des Comptes du Clergé. Having good patrons, for his family was a noble one, and being well educated, refined in manners and a skilful violinist, he was soon attached to the household of the Duke of Orleans as maître d'hôtel, with a salary which placed him above want and enabled him to provide for his younger brothers. He then resumed his musical studies, and Pergolesi's 'Serva padrona' having inspired him with a vehement desire to compose a comic opera, he took lessons from Gianotti, who played the double-bass at the Opéra and taught harmony on Rameau's system. He was a good teacher, and his pupil made so much progress that it is said Gianotti would not have been averse to putting his own name on the score of 'Les Aveux indiscrets,' which Monsigny submitted to him after only five months' tuition, and which at once established his fame when produced at the Théâtre de la Foire (Feb. 7, 1759).

Encouraged by this first success he composed for the same theatre 'Le Maître en droit' (Feb. 13, 1760) and 'Le Cadi dupé' (Feb. 4, 1761), which contains an animated and truly comic duet. His next opera, 'On ne s'avise jamais de tout' (Sept. 14, 1761), was the first in which he had the advantage of a libretto by Sedaine, and the last performed at the Théâtre de la Foire before it was closed at the request of the artists of the Comédie Italienne, in fear of the new composer's increasing reputation. After the fusion of the two companies Monsigny composed successively 'Le Roi et le fermier,' three acts (Nov. 22, 1762); 'Rose et Colas,' one act (Mar. 8, 1764); 'Aline, Reine de Golconde,' three acts (Apr. 15, 1766); 'L'Île sonnante,' three acts (Jan. 4, 1768); 'Le Déserteur,' three acts (Mar. 6, 1769); 'Le Faucon,' one act (Mar. 19, 1772); 'La Belle Arsène,' three acts (Aug. 14, 1773); 'Le Rendezvous bien employé,' one act (Feb. 10, 1774); and 'Félix ou l'enfant trouvé,' three acts (Nov. 24, 1777). After the immense success of this last work he never composed again. Two other operas, 'Pazanius de Monégne' and 'Philémon et Baucis,' written about 1770, remained unperformed. He had acquired a considerable fortune as steward to the Duke of Orleans and inspector-general of canals, but the Revolution deprived him of his employment and of nearly all his resources. However in 1798 the sociétés of the Opéra-Comique came to his assistance, and, in recognition of his services to the theatre, allowed him an annuity of 2400 francs (nearly £100). On the death of Piccinni, two years later, he was appointed inspector of instruction at the Conservatoire de Musique, but he resigned in 1802, being aware that he could not adequately perform the duties of the

office from his own insufficient training. In 1813 he succeeded Grétry at the Institut; but it was not till 1816 that he received the Legion of Honour. His last years were soothed by constant testimonies of sympathy and respect.

As an artist Monsigny's greatest gift was melody. His desultory training accounts for the poverty of his instrumentation, and for the absence of that ease, plasticity and rapidity of treatment which are the most charming attributes of genius. He was not prolific; and, either from fatigue or from a dread of an encounter with Grétry, he ceased to compose immediately after his greatest triumph; his exquisite sensibility and his instinct for dramatic truth have, however, secured him a place among original and creative musicians. MONT, HENRY DU, see DUMONT.

MONTAGNANA, ANTONIO, a celebrated basso, who appeared in England in the autumn of 1731. He made his début on the London boards in 'Poro' (revived); and in Jan. 1732 he created the bass rôle in 'Ezio,' Handel having written specially for him the famous song 'Nasce al bosco,' which was clearly intended to exhibit the peculiar powers of the singer. This opera was followed by 'Sosarme,' in which Montagnana had again an air, 'Fra l'ombra e l'orrori,' in which the depth, power and mellow quality of his voice, and his rare accuracy of intonation in hitting distant and difficult intervals, were displayed to full advantage. In the same year he sang in Handel's 'Acis,' a revival of 'Alessandro,' 'Flavio,' 'Coriolano,' and in 'Esther.' In 1733 Montagnana took part in 'Deborah,' 'Tolomeo,' 'Ottone,' 'Orlando,' and 'Athaliah' (at Oxford). In 'Orlando' he had another very difficult song composed expressly for him, 'Sorge infausta,' which has remained a trial of compass and execution since his day for the most accomplished bassi.

In the following year, however, Montagnana seceded, with Senesino and Cuzzoni, to the Theatre in Lincoln's Inn Fields, under the direction of Porpora; and here he appeared in 'Onorio' by that master, and other pieces. In 1735 and 1736 he was still with Porpora, singing in his 'Polifemo,' and the 'Adriano' of Veracini. In Jan. 1738 he returned to his allegiance to Handel, singing in 'Faramondo,' then first produced, 'La Conquista del Vello d'Oro' and 'Serse.' J. M.

MONTAGNANA, DOMENICO (1700–40), a great violin-maker whose name is not as renowned as others of his class, owing to the misleading labels bearing the names of 'Guarnerius,' 'Bergonzi,' etc., which have been dishonestly inserted in his instruments from

time to time to enhance their market value. He was an apprentice of Antonius Stradivarius, and ranks with Carlo Bergonzi as one of the master's best pupils. He first established a workshop of his own in Cremona, but later he settled in Venice, where his superior knowledge of qualities, materials, thicknesses and varnish—gained in the workshops of Cremona—brought him into prominence. His instruments show the influence of Stradivarius's teaching, but bear little resemblance to the Stradivarius form. The outline is less graceful, the upper and lower curves flatter. The sound-holes somewhat resemble the 'Guarnerius' type, and the scroll is much larger and bolder than that of Stradivari. The extreme richness and velvety softness of his varnish rivals that of his master, and has excited the admiration of connoisseurs throughout Europe. Montagnana made violas and magnificent violoncellos besides violins, but not being a prolific maker, his instruments are scarce and valuable. It is as a violoncello-maker that the best tribute has been paid to him by Charles Roade, who called him 'the mighty Venetian' in his letters to the *Pall Mall Gazette* in 1872.

MONTANARI, FRANCESCO (b. Padua, latter part of 17th cent.; d. 1730), a distinguished violinist. He was a pupil of Corelli, and established himself in Rome, where he became a member of the orchestra of St. Peter's in 1700, and, according to Dr. Burney, died in 1730 of a broken heart when Bini came to Rome and proved himself to be the finest performer of the period. He composed twelve sonatas for violin which are published by a Boulogne firm.

MONTE, PHILIPPE DE (FILIPPO DE; sometimes PHILIPPE DE MONS) (b. Mons,¹ c. 1521 or 1522²; d. July 4, 1603). As to his history, we gain little by consulting old authorities, as Boissart,³ Bullart,⁴ Freher,⁵ Sweetius,⁶ etc., and are told as much by the title-pages of Philippe's own publications. Bullart, however, gives a portrait of the composer, after Sadeler, which is well worth seeing, and much superior to the smaller copies of it in Boissart and Hawkins. Elisabeth Weston's poem,⁷ often

¹ According to Diabacz at Mechlin. *Allgem. histor. Künstler-Lex. für Böhmen*, 4to. (Prague, 1815). Diabacz founds his statement on a list of the Imperial chapel dated 1682. For a full discussion of the subject see Féti's *Biographie*, under 'Philippe de Mons'.

² Sadeler's portrait, the single authority for this date, gives Philippe's age as 72 in 1594.

³ Boissartius, *Icones viror. illustr.* pars 3, p. 32 (1599).

⁵ Freher, *Theatrum vir. clariorum* (Nuremberg, 1688).

⁶ Sweetius, *Athenae Belgicae*, p. 645 (Antwerp, 1626).

⁷ From the *Fæthentron*, by E. J. Weston, 'ex familia' Westonlorum Angli' (Prague, Aug. 16, 1610). The poem! Philippe's honour consists of 'forty-six Latin lines.

referred to in biographies of Philippe, gives no information at all.

De Monte published his first book of masses at Antwerp in 1557,⁸ just at the end of Lassus's residence in that city, and we may safely credit the common tradition of a friendship existing between the two composers. It was probably on Orlando's recommendation that Philippe was called to Vienna, May 1, 1568, to become Maximilian's Kapellmeister. Rudolph II., the next emperor, moved his court to Prague, and thither Philippe followed him. Thus we find him dating from Vienna, April 15, 1569,⁹ and from Prague, Sept. 20, 1580,¹⁰ and Oct. 10, 1587.¹¹

Féti's gives interesting details of de Monte's appointment as treasurer and canon of the cathedral at Cambria, a benefice which he apparently held without residence. He resigned these appointments early in 1603, and died on July 4 of the same year.¹²

De Monte published over thirty books of madrigals—nineteen books a 5, eight a 6 and four a 4.¹³ Eight books of these in the British Museum contain 163 numbers, so we may assume that 630 madrigals were printed, not to speak of many others contributed to collections. His sacred publications include two books of masses and seven of motets. (See Q.-L. for list.) Of reprints, Hawkins contributes a madrigal a 4, Dehn and Commer a motet each, and Van Maldeghem some numbers in his 'Trésor musical.' The Mass 'Benedicta es' (a 6) has been edited (1920) by A. Smijers. The most comprehensive, however, is the study *La Vie et les œuvres de Ph. de Monte* (Brussels, 1921), by G. van Doorslaer, with list of the composer's works, bibliography and reprints. See also *Quatorze lettres inédites du compositeur Ph. de Monte* (Brussels, 1921), by Paul Bergmans.

MONTÉCLAIR, MICHEL PINOLET DE (b. Chaumont in Bassigny, c. 1666; d. St. Denis, Sept. 1737), was a chorister in the cathedral of Langres, and subsequently sang in various other churches. He entered the service of the Prince de Vaudémont, as music-master, and went with him to Italy. In 1700 he went to live in Paris, and became a double-bass player in the Opéra orchestra in 1707, remaining there until 1737, when he retired with a pension. He was a distinguished teacher of the violin, and a composer of some importance, both for the stage and the chamber. His 'Festes de l'Été,' an *opéra-ballet*, was produced on June 12, 1716,

⁸ Missarum a 5, 6, 8, lib. I. (Antwerp, 1557). This on the authority of Féti.

¹⁰ Ninth book of Madrigals (a 6) (Venice, 1580), in B.M.

¹¹ Sacras. cantionum lib. II. (Venice, 1587), in B.M.

¹² For this date, and that of the Vienna appointment, see RINER, *Verzeichnis neuer Ausgaben* (Berlin, Trautwein, 1871), and the Q.-L. Féti speaks of the nineteenth book. The B.M. has the fourteenth. Féti mentions no four-part Madrigals; but the Catalogue of the Bibliothèque Féti's contains 'DI. FI. di M. II. 4°. lib. di Mad. a 4'.

and his *tragédie lyrique* 'Jephthé,' in five acts and a prologue, on Feb. 28, 1732. In the prologue of this latter is a curious scene in which various mythological divinities are driven from the opera-house by Truth and the Virtues, and their places taken by the scriptural personages. Montéclair wrote a *Nouvelle Méthode pour apprendre la musique* (Paris, 1709); a *Méthode facile pour apprendre à jouer du violon* (1711 or 1712); *Principes de musique*, divided into 4 parts (1736) which Fétis has taken for a second edition of the *Méthode*. A number of examples from 'Jephthé' were there given. It contains a valuable explanation of the more usual ornaments, and hints on the proper accentuation of words in music. (See *The Oxf. Hist. Mus.*, vol. iv.: *The Age of Bach and Handel*, p. 301.)

M.; rev. M. P.

MONTELLA, GIOVANNI DOMENICO (d. Naples, c. 1601/02), lutenist in the Royal Chapel, Naples, 1594. According to Florimo¹ he was also harp-player and organist. He composed 8 books of madrigals, 5 v., 2 books of madrigals, 4 v., 1 book of motets, 5 v., 4 books of villanelle, 4 v., psalms and other church music (list in Q.-L.).

MONTEMEZZI, ITALO (b. Vigasio, province of Verona, May 31, 1875), began early the study of the piano without, however, showing any marked predilection for music. It was only after being sent to Milan to complete his technical studies that he decided to abandon engineering for musical composition. Lacking sound elementary training, he did not find it easy to gain admission to the Conservatorio of Milan, and he succeeded only after two fruitless attempts. Once admitted, however, his progress was very rapid under the guidance of M. Saladino (counterpoint) and Ferroni (composition). He obtained his final diploma in 1900. But there were apparently still some lacunæ in his education, and he has confessed that his knowledge of orchestration was gained not from text-books but from the gallery of La Scala Theatre. After leaving the Conservatorio he lived and worked for some years in retirement. His first opera, 'Giovanni Gallurese,' was given in 1905 at Turin, where it made so favourable an impression that Montemezzi came at once to be looked upon as one of the most promising composers of the younger generation. A second opera, 'Hellera,' was less successful, but the third, 'L'Amore dei tre re,' founded on the tragedy of Sem Benelli, then very popular in Italy, was received at La Scala with considerable sympathy and performed in most Italian theatres and also in England, Germany and America. A fourth opera on D'Annunzio's 'La Nave' has met with favour in Italy.

Montemezzi himself has given us a definition of his artistic aims in an article published in

America. Music without melody, he there declares, is inconceivable. Neither scholasticism nor realism appeal to him. His main aim is to create the musical atmosphere in which the characters of the drama must live and express themselves by means of melody. Certainly his chief asset at present appears to be his obvious sincerity and a certain modesty of style, which is never over-elaborate though often finished and neat.

Montemezzi has been engaged for some time in setting to music Edmond Rostand's 'La Princesse lointaine.' He has also composed a 'Song of Songs,' performed in Milan in 1900.

F. B.

MONTESARDO, see TABIATURE.

MONTEVERDI (MONTEVERDE), CLAUDIO (b. Cremona, May, 1567; d. Venice, Nov. 29, 1643), was the pupil of INEGNERI (q.v.) of whom Roland,² says that he was 'the principal theoretician of the theatre in the second half of the 16th century.' From Ingegneri Monteverdi would seem to have obtained a thorough grounding in the contrapuntal method for his later works bear testimony to the efficacy of this teaching. His ability to write in a severely classical style did not leave him even when he appeared most positively to be forsaking the older methods for a yet more advanced incursion among the newer. In 1583 he published his first works, the four-part 'Madrigali spirituali,' and in 1584 the *Canzonette à tre voci*.

MANTUA.—In 1589-90 he was accredited to the Mantuan court as violinist. In 1595 he travelled to Hungary in the suite of the Duke Vincenzo I., who was aiding the Emperor Rudolph in his war against the Turkish Sultan. Again in 1599 Monteverdi was included in the suite which accompanied Vincenzo I. to Flanders³ where, at Spa, the Duke stayed during a month for reasons of health. Pallavicino, maestro di cappella to the House of Gonzaga at Mantua, died in Nov. 1601 and Monteverdi at once applied for the post and eventually obtained it. From the fact that the Duke created him a citizen of Mantua by a decree dated Apr. 10, 1602, it would seem that it was in this year that his appointment as maestro di cappella was finally ratified. Mantua had already become an artistic centre of some renown. The members of the House of Gonzaga, Dukes of Mantua, were inclined towards music, though in differing ways, Guglielmo, father of Vincenzo I., as an amateur composer and as a patron who was indefatigable in attracting the best contemporary talent to his court, Vincenzo I. as one who used all he could procure in the way of musicians and music that would gratify his desire for lavish display. Lacking the

³ See Henry Prunières for possible French influence on Monteverdi at this time. *Art. Sacchini*, Nov. 1922

¹ *La scuola mus. di Napoli*.

intellectual brilliance that had characterised the court of the Estensi at Ferrara as GESUALDO (*q.v.*), Prince of Venosa, found it in 1594, Mantua in 1602 was awakening to a realisation of the potentialities of art as a means to enjoyment and was attentive at least to its seductive properties. Vincenzo I., curious mixture of the Maecenas and the miser, appears to have treated his artists, Monteverdi among them, to alternating manifestations of this two-sided character.

THE FIRST FIVE BOOKS OF MADRIGALS.—In 1587 the first book of five-part madrigals appeared. The second was published in 1590, the third in 1592, the fourth in 1603 and the fifth in 1605. The unwontedness of the harmonic progression in these early madrigals did not go unchallenged. (It must be noted, in this connection, that Gesualdo had, by the time of his death in 1614, reached harmonic spheres as distant as any to be found in Monteverdi's first five books or indeed in all the range of his compositions.) Giovanni Maria Artusi, a canon of S. Salvatore in Bologna, launched a bitter attack on the methods of the new school (*L'Artusi ovvero delle imperfezioni della moderna musica*, part 1, 1600; part 2, 1603) in which he cited the illegal progressions to be found in certain of Monteverdi's madrigals (books 4 and 5). The answer to this was contained in the *Dichiaratione* written by Monteverdi's brother Giulio Cesare as preface to the 1607 'Scherzi musicali.' It is generally considered that Monteverdi's journey to Flanders in 1599 should be held to account for a change of style which took place between the first three books and those that follow, though it is not clear what really was the exact nature of the causes which brought about that change. It seems hardly feasible that a visit to Flanders should have made more impression than did the acquaintance with that Flemish music which was already to be heard in Italy.

ORFEO.—In 1607 'Orfeo' was produced at Mantua, first at the Accademia degli Invaghiti (Feb. 24) and later (Mar. 1) before the court, these being the first of many contemporary performances. The libretto is by Alessandro Striggio, secretary to the Duke and son of the madrigalist of the same name (see STRIGGIO (2)). The work seems to have attracted the attention of Mantua as being an authentic example of the Florentine *stile rappresentativo*. Time has shown how greatly Monteverdi in 'Orfeo' surpassed the achievements of 1600. The work sums up the endeavours of past years. It is more truly the climax of what had gone before, the consummation of traditional technique, than the starting-point of new methods (Adler). 'Orfeo' has been looked on in the past as the first noticeable step in the direction of the orchestral methods of the 17th century. In reality it shows the last

stages of the older methods of Peri and the Florentine operatic composers (Goldschmidt). Monteverdi did not return again to the instrumental style of 'Orfeo.' Already in 'Arianna' (1608) the orchestra, placed behind the scenes as in 'Orfeo,' although possibly still as bewilderingly rich in instruments (Adler), was almost certainly overshadowed in interest by the greater one of the stage action. If we may judge 'Arianna' by all that now remains of the opera, the 'Lamento' (famous throughout Italy from its first appearance as a solo song, later scored by Monteverdi as a five-part madrigal and included in the 6th book of 1614, and, again, fitted with sacred words as the five-part 'Pianta della Madonna,' 1640), the histrionic style is more certain in the portrayal of emotion than that of 'Orfeo,' and has greater importance here than details of orchestral method. Again it is not in 'Orfeo' that experiments in orchestration were carried out, but in later and smaller works such as 'Tancredi e Clorinda.' And from the point of view of orchestral organisation 'Orfeo,' and possibly 'Arianna,' are seen as the final examples of the old methods of Peri, soon to give place to the 'Ballo dello ingrato' (1608), wherein the string orchestra shows signs of a more distinct existence (Goldschmidt). Monteverdi, finding the new movement, initiated in Florence, already in being, showed in 'Orfeo' what, as regards orchestral technique, could be obtained from the contemporary orchestra, and as regards dramatic technique what great advances could be made on the achievements of 1600. In the former connection he could go no farther and was forced to reorganise on narrower lines. In the latter, he was to go onward and reach the more intense dramatic style of 'L'incoronazione di Poppea.' In 1608 Monteverdi also wrote the prologue, now lost, to 'L'idropica,' a comedy by Guarini and the 'Ballo dello ingrato,' later printed in the 'Madrigali guerrieri' (1638).

VENICE.—In 1610 Monteverdi went on a short visit to Rome. Vincenzo I. of Mantua died in 1612 and Monteverdi was relieved of his duties by the new duke. In September of that year he went to Milan, after a short stay in his native Cremona. In Aug. 1613 he was appointed maestro di cappella at St. Mark's in Venice by the Procuratori. His success seems to have been immediate and he definitely settled himself at Venice. His powers were ample and his financial position assured. In such surroundings he was able to apply himself to solving those problems of musical evolution which had been postulated in Florence by the Bardi fraternity and to which he himself had contributed in his Mantuan period. Placed in absolute control of a body of singers and players, he could gauge to a nicety the material at his disposal as well as impose his will on those who

showed themselves to be at variance with his innovating genius.

In 1614 the sixth book of madrigals appeared, and already what Prunières aptly calls 'the disintegration of the madrigal' set in. This book contains declamatory pieces for 2 or for 3 voices in a style far removed from the accepted utterances of Marenzio or di Lasso. The dramatic urgency of the 'Lasciatemi morire' is more sustainedly intense than even Gesualdo, and certainly more definitely descriptive of the actual emotion portrayed than anything the older school had produced. The seventh book (1619) consists in 2, 3 and 4-part madrigals and even solos, all with accompaniment either orchestral or a basso continuo. And in the eighth book ('alcuni opusculi in genere rappresentativo'), the 'Madrigali guerrieri e amorosi' (1638), the pieces are clearly conceived as for a theatre, the 'Ballo delle ingrate' and the 'Combattimento di Tancredi e Clorinda' being included in this set. That Monteverdi should term such pieces 'Madrigali' is evidence of the position to which the madrigal had attained in Italy by the end of the third decade of the 17th century. Since Artusi's attack on the modern school in 1600 swift changes had come over music. It was now no longer details of harmonic behaviour that exercised the minds of the leading composers, but questions of the deeper meaning that was guessed at as lying behind and beyond that kind of disquisition. Monteverdi was armed with an unerring knowledge of contrapuntal methods, and where he destroyed he did so wittingly. In his church music he shows himself the equal of the contemporary ecclesiastical composers, conforming to their conventions as to the contrapuntal treatment of voices and the formal disposition of material. At the same time the charge brought against him in contemporary chronicles that his church music was, by reason of its style, often better fitted to the theatre, is comprehensible. He had the ability for keeping two seemingly antipathetic styles equally in order. And with the 'Messe' of 1610, the 'Selva morale e spirituale' of 1640 and the 'Messa à quattro voci e salmi' of 1650, this twofold activity can be apprehended, so austere and polyphonic a work as the 'In illo tempore' for six voices appearing in the same book (1610) as the brilliant polyphonic 'Sonata sopra Sancta Maria' for eight instruments (five wind and three strings) and solo voice.

OPERAS OF THE VENETIAN PERIOD.—In 1615 Monteverdi wrote the opera-ballet 'Tirsi e Clori,' commissioned by Ferdinand Gonzaga for performance at Mantua (printed in the 7th book of madrigals, 1619). In 1617 he co-operated with Muzio Effrem, Salomo Rossi and Alessandro Guivizzani in the religious drama 'Maddalena.' In the same year an opera, 'Amori di Diana ed' Endimione,' was performed

in Parma. In 1618 the opera 'Andromeda' (unfinished) is placed. Of greatest importance up to this time, however, is the setting of 'Il combattimento di Tancredi e Clorinda' (str. 52–68, omitting str. 63, from canto 12 of Tasso's *Gerusalemme liberata*), performed in 1624 at the Palace of Girolamo Mocenigo. Dramatic in intention, this work is cast in the form of a secular cantata. The advance in power of characterisation on 'Orfeo' is remarkable, the command both of the ways and the means of emotional delineation, most noticeable. In this work the first effective use of string *tremolo* and of *pizzicato* for strings is made. But apart from such interesting considerations the artistic merits of the 'Combattimento' are of a sufficiently high order to warrant its being held in remembrance. What Monteverdi called the 'stile concitato,' that which was fashioned in order to express the agitated and warring elements of human relationships, was here manifested. Each subtlety of spirit and action in the protagonists is reflected from the music.

In 1627 the operas 'Armide' and 'La finta pazza Licori' (both lost) were composed. In 1633 Monteverdi was admitted to the priesthood. Other operas which came after this, and might possibly help to show the expansion of his genius, are most unfortunately no longer to be found. In 1637 the Teatro San Cassiano was opened as a public opera-house, and two years later Monteverdi wrote 'Adone' (also among the lost works) for performance there. Not until the 'Ritorno d' Ulisse in patria' (1642) is it possible to regain touch with Monteverdi's development as a composer of operas. The libretto of this opera is by Badoaro.

'L' INCORONAZIONE DI POPPEA.'—In the 'Ritorno d' Ulisse' Monteverdi faced the great task of setting an extended historical subject in the realistic manner. He was not wholly successful. The value of the work is only relative. The involved libretto weakens the interest of the tale. The story might well have been retold in such a way as to make an exceedingly moving operatic spectacle. Even as it stands the scene of the recognition of Ulysses by Penelope gave Monteverdi an opportunity for one of his finest achievements.

In 1642 'L' incoronazione di Poppea,' an opera on a libretto by Busenello, was produced in Venice at the Teatro San Cassiano, and in this work Monteverdi gave final proof of his genius for truthful characterisation and his talent as a technician in the craft of music and of dramatic presentation. No longer is there any chance that the attention may be deflected to orchestral effects as in the 'Combattimento.' (Only voice parts and continuo are to be found in the sole existing copy of 'L' incoronazione.')¹ However the orchestra may have been organised

¹ See Hugo Goldschmidt's practically complete edition of the opera in vol. II. of his 'Studien.'

and written for, the intensity of the dramatisation is such as to take possession of the audience from the moment when the first act opens to Ottone's restless 'E pur si torno' until at the end Poppea and Nero sing the triumphal 'Pur ti miro, pur ti godo.' The *ritornelli* are few, fewer still the *sinfonie*. Nothing interrupts the unfolding of the bitter and extremely unmoral plot by the singers. Scenes such as that of the death of Seneca and the lullaby sung to Poppea by her nurse in Act 2, or the love scenes between Poppea and Nero in Acts 1 and 3, are more deeply felt and more delicately treated than anything that Monteverdi had previously written. The characters are finely differentiated and keep their individuality to the end. As 'Orfeo,' Monteverdi's first significant work, sums up the achievement of the early attempts at operatic representation, 'L'incoronazione di Poppea,' his last dramatic composition, securely founds that operatic style¹ which was to take possession of Italy, reaching thence out into the whole of Europe and attaining unimagined heights in the stage works of G. F. Handel.

MONTEVERDI'S POSITION IN HISTORY.—As an orchestrator Monteverdi's innovations in the 'Combattimento di Tancredi e Clorinda' are not to be minimised. But as an organiser of the orchestra his importance is still greater. Already in 'Orfeo' he exercised discrimination in the choice of instruments he used (as can be seen when the early orchestras of Marenzio and others are compared with that of 'Orfeo'²), and he abandoned such antiquated instruments as were no longer effective in the orchestral ensemble. By the time of the composition of the 'Combattimento' Monteverdi had effected still further changes in the organisation of the orchestra, which had the result of freeing composers from the cumbersome machinery set in motion by the first exponents of the 'Nuove musiche.' This limitation of orchestral resources had the effect of refining the technique of orchestration at the same time as it simplified the organisation of the orchestra and made it a more malleable medium for the expression of subtleties of thought through music. The instrumentation of 'Orfeo' was rich in the same way as that of the accompanied madrigal of the preceding century. That of 'L'incoronazione' was bare, as though it were left purposely void in order not to impede the unfolding of the principles of operatic form.

Monteverdi stands midway between Palestrina and Handel. He was gifted with an intellect that could understand and practice the art of a Gabrieli as well as that of a Gesualdo. At no one time during all his career does this

dual nature forsake him. And in 'L'incoronazione di Poppea' he used his knowledge of the tried methods of harmonic and contrapuntal procedure and of formal construction in alliance with those revolutionary ideas which informed the art of his time and which he, having done more than any other composer to advance, eventually guided into the paths of a saner evolution.

LIST OF WORKS

Note.—In the case of Operas, Ballets and Intermezzi, date of performance is given. In all other cases, that of publication. Lost works in Italics.

1583. 4-pt. Madrigali spirituali.
1584. Canzonette a tre voci.
1587. 1st book 5-pt. madrigals.
1590. 2nd " "
1592. 3rd " "
1603. 4th " "
1605. 6th " "
1607. Scherzi musicali a tre voci.
Some of the madrigals are printed in the 'Raccolta nazionale' (Ricordi, Milan), books 76, 77, 78, 79, 224, 225. Three 5-pt. madrigals have been edited by M. Vincent d'Indy (Kondaney, Paris, 1914). Three motets for solo voice have been published by Smeur, Paris (1913).
'Orfeo.' Libretto by Alessandro Striggio. Published Venice, 1609. Reprinted Venice, 1618. Sötner. 'Die Oper' 1; Vincent d'Indy prepared a shortened version for performance in 1904. This has since been published. A definitive edition by Signor Malpietro appeared in 1923 (Chener).
1608. 'Arianna.' Libretto by Rinuccini. The 'Lamento,' published Mantua, 1629.
'Ballo delle Ingrate.' Libretto by Rinuccini. Published in 1630, the 'Madrigali guerrieri,' 1631.
'L'idropica.' Prologue. Libretto by Chiabrera.
1610. Messe.
1614. 6th book 5-pt. madrigals.
1615. 'Tirsi e Gid,' ballet with voices. Published 1619, 7th book
1617. 'Maddalena.' Opera, libretto by Rossi, composed in conjunction with others.
'Gli amori di Diana e d'Endimione.' Libretto by the Duchess of Parma.
1618. 'Andromeda.' Libretto by Marigliani.
1619. 7th book 5-pt. madrigals.
'Lamento di Apollo.' Libretto by Striggio.
1624. 'Combattimento di Tancredi e Clorinda.' Poem by Tasso ('Gervasienne liberata'). Published in the 'Madrigali guerrieri,' 1638.
1627. 'Arminia.' Poem by Tasso ('Gervasienne liberata').
'La finta pazzia Licori.' Libretto by Guido Strazzi.
'Melissa e Bradamante.' Poem by Tasso. Intermezzo.
'Aminta.' Poem by Tasso. Intermezzo.
'Didone.' Libretto by Accanto Pitti. Intermezzo.
'Gli Argonauti.' Libretto by Pitti. Intermezzo.
'Mercurio e Mario.' Libretto by Claudio Achillini. Intermezzo.
1628. 'I cinque fratelli.' Five sonnets by Strazzi.
1630. 'Proserpina rapita.' Libretto by Strazzi.
1632. Scherzi musicali a 1 e 2 voci.
1634. Seconda Pratica.
1638. 8th book 5-pt. madrigals. The 'Madrigali guerrieri e amorosi'.
1639. 'Adone.' Libretto by Vendramin.

MONTGOMERY, HUGH (b. Nov. 29, 1739; d. Dec. 14 or 15, 1819), afterwards 12th Earl of Eglintoun, joined the army and became a colonel. On succeeding to the title and estates in Ayrshire he devoted himself to musical studies and became a fair amateur composer. He became a prominent figure in Edinburgh musical society, and patronised the Gow family.

¹ See Goldschmidt, *op. cit.* vol. II., for a discussion of Monteverdi's first use of the *da capo* aria with change of key in the middle section, also first use of *leitmotiv* and special treatment of basso ostinato in 'L'incoronazione.'

² See Goldschmidt, *op. cit.* vol. I.

Some of his compositions appear in the Gow publications, and in 1796 Nathaniel Gow issued a thin folio volume (24 pp.) entirely of his Strathspeys. It was issued anonymously, its title being *New Strathspey Reels . . . composed by a gentleman, and given with permission to be published by Nathaniel Gow.* 'Ayrshire Lasses,' his best-known Strathspey, is included in this work. Niel Gow dedicated his *Fourth Collection of Strathspey Reels*, 1800, to him. A volume of his vocal airs and marches, apparently from his hitherto unpublished MSS., was issued in Glasgow about 1835-40 with pianoforte arrangements by John Turnbull. Mrs. John Hunter had in most instances supplied the words. F. K.

MONTICELLI, ANGELO MARIA (*b.* Milan, c. 1710; *d.* Dresden, 1764), soprano singer. He first appeared in opera at Rome in 1730, and, having a beautiful face and figure, began in that city, where no women were then allowed upon the stage, by representing female characters. His voice was clear and sweet, and singularly free from defects. 'He was,' says Burney, 'a chaste performer, and . . . a good actor.' In 1731 and 1732 he appeared at Venice with Carestini, Bernacchi and Faustina. He came to London in the autumn of 1741, and made his début here in the pasticcio 'Alessandro in Persia.' In the beginning of 1742, after other attempts, another opera was brought out by Pergolesi, called 'Maraspe, o L' Olimpiade,' the first air of which, 'Tremende, oscuri, atroci,' in Monticelli's part, was sung for ten years after the end of the run of this opera; and 'the whole scene, in which "Se cerca se dico" occurs, was rendered so interesting by the manner in which it was acted as well as sung by Monticelli that the union of poetry and music, expression and gesture, have seldom had a more powerful effect on an English audience.'¹

He continued to perform in London through 1743; and in 1744 he sang, in 'Alfonso,' songs of more bravura execution than he had previously attempted. During 1745 and 1746 Monticelli still belonged to our Opera; and in the latter year he sang in Gluck's 'Caduta de' Giganti,' and described one of his songs as an 'aria Tedesca' from the richness of the accompaniment. The 'Antigono' of Galuppi (produced May 13) was the last opera in which Monticelli appeared on our stage. He sang at Naples with Regina Mingotti in the same year, and afterwards at Vienna. In 1756 Hasso engaged him for the Dresden theatre.

A capital mezzotint portrait of Monticelli was scraped by Faber after Casali. J. M.

MONTIGNY-RÉMAURY, FANNY MARCEL-LINE CAROLINE (*b.* Pamiers, Ariège, Jan. 22, 1843; *d.* there, June 20, 1913). Her elder sister and godmother, Elvire Rémaury (Mme.

Ambroise Thomas), an excellent pianist, first taught her music, but anxious to secure her every advantage, entered her in 1854 at the Conservatoire, in the pianoforte class of Professeur Le Couppey. In 1858 she gained the first prize for piano; in 1859 a medal for solfège; and in 1862 the first prize for harmony. Shortly after this Mme. C. Rémaury played Mendelssohn's concerto in G minor at one of the concerts of the Conservatoire, and her animated and vigorous interpretation of this favourite work at once placed her in the first rank of French pianists. In 1866 she married Léon Montigny, a political writer on the staff of the *Temps*, but was left a widow in 1871. She was for long the head of the pianoforte virtuosos of France, and her visits to England and tours on the Continent extended her reputation over Europe. G. C.

MONZANI, THEOBALD, a celebrated Italian flute-maker and player. As early as 1790 he was established as a flute-maker and seller at 1 Duke Street, Grosvenor Square; and before 1800, after sundry changes of address, had settled down at 2 Pall Mall, in partnership with one Cungdor, Cundon or Cinador, for the name is variously spelled in contemporary references. In 1804 they removed to 3 Old Bond Street, and in 1808 Monzani was in partnership with Hill. Monzani & Hill were, in 1814, at 100 Cheapside; in 1814, at 24 Dover Street; and finally, 1820, at 28 Regent Street, close to Regent Circus. They issued a great deal of sheet music, much of it being Italian vocal pieces, while their reputation as flute-makers was at the highest. The elder Monzani acquired some fame as an orchestral flautist, and wrote several instruction-books, etc., but his son excelled the father in taste and execution, and in 1826 is referred to, in W. N. James's *A Word or Two on the Flute*, as 'the most promising performer in England.' F. K.

MOOD (Lat. *modus*; Ital. *modo*; Old Eng. *mode* or *moode*), a term employed in mediæval music to indicate the relative duration of the Large and the Long, the Long and the Breve. (See NOTATION, under subsection TIME SIGNATURES.)

MOODY, FANNY, see MANNERS.

MOONLIGHT SONATA, an absurd title which for years has been attached both in Germany and England to the 'Sonata quasi una fantasia' in C \sharp minor, the second of the two which form together Beethoven's op. 27. It is dedicated to the 'Damigella Contessa Giulietta Guicciardi.' The title is said to have been derived from an expression of Reilstab, the critic, comparing the first movement to a boat wandering by moonlight on the Lake of Lucerne.² In Vienna it is sometimes known as the Laubensonate,³ from a tradition that

¹ Burney. The air is given at length in *The Oxf. Hist. Mus.* vol. IV., *The Age of Bach and Handel*, p. 322.

² Lenz. *Beethoven at ses trois styles*, I. 225.

³ Ib., *Beethoven, eine Kunststudie*, Ft. 2, 79.

the first movement was composed in the leafy alley (Laubengang) of a garden.

MOOR, EMANUEL (b. Hungary, 1862), composer and inventor of the Duplex Coupler Grand Pianoforte, studied in Budapest and Vienna and then toured in Europe and America as conductor and pianist. Several operas by him have been produced in Germany, namely, 'Die Pompadour' and 'Andreas Moser' (both Cologne, 1902), and 'Hochzeitsglocken' (Cassel, 1908). Of seven symphonies three (op. 45 in D minor, op. 65 in E minor, op. 67 in C) have been published. Of his four violin concertos, that in G (op. 62) was introduced by Ysaye who played it at Queen's Hall first in 1907 and again later. At about the same period some of his chamber works were heard in programmes of the CLASSICAL CONCERT SOCIETY. Moór gave a concert of his own pianoforte works in London in 1910.

Moór has been much occupied with instrumental problems and has written a pamphlet on the reconstruction of the orchestra. Of his inventions, that which has come nearest to practical realisation is the Duplex-Coupler piano, the rights in which were bought by the Aeolian Company (see PIANOFORTE). C.

MOOR, KAREL (b. Bělohrad, 1873), Czech composer, operatic conductor and writer. His works include: two operas, 'Viy' (1901), based on Gogol's tale of witchcraft, and 'Hjördis' (1899), from Ibsen's tragedy; the symphonic poems 'Polonia' (reminiscences of Mickiewicz); 'Requiem' (the life of Smetana); 'The Sea'; Polish dances; songs; quartet, etc. Moor has also written a novel of musical life, *Karel Martens* (1904-05). R. N.

MOORE, THOMAS (b. 12 Augier Street, Dublin, May 28, 1779; d. Feb. 28, 1852), poet and musician, was the son of John Moore and Anastasia, his wife.

In his fragmentary 'Memoirs' Moore speaks of himself as a 'Show Child,' and tells of his infantile recitations and his taking part in private theatrical performances. One cannot but recall how in his manhood days he was wont to delight the company by his exquisite rendering of his own songs.

After some private schooling he entered Trinity College, Dublin, in 1793, and remained until 1798. At this time he became associated with Robert Emmet and other members of a revolutionary party. He escaped the fate which befell some of the others, and in 1799 he came to London to enter the Middle Temple. All this while he had written much ephemeral work and translated the *Odes of Anacreon*, which formed a small volume. It is not necessary here to refer in any detail to his literary work, which during his life was very varied and popular. His musical education was mostly what he picked up from the music-master of his sister and his own independent study.

He came to England, but in 1803 was appointed to a Government post in Bermuda. Not liking his position he left the affair in the hands of a deputy who involved him in a deficit of something like £3000. The debt was paid by Lord Lansdowne, who was afterwards repaid by Moore. He went to America and Canada. In the latter-named country he wrote the 'Canadian Boat Song,' one of the most popular of his early pieces.

About 1802-03 he was fully engaged in writing songs which were published, with the music (much of it being his own composition), by James Carpenter of Old Bond Street.

Of single songs he was prolific, some published by Carpenter and at a later period by Power. 'The Woodpecker,' with the music by Michael Kelly, is even now heard; 'O Lady Fair,' a glee for 5 voices, had its fame; 'A Song of the Olden Time' had its vogue, and many another. When the 'Irish Melodies' came forth they eclipsed all Moore's previous efforts. William Power, music-seller of Dublin, projected an edition of Irish airs with English words by different poets. The musical arrangements were to be done by Dr. John Stevenson. In Feb. 1807 Power wrote to Thomas Moore telling him of his project and soliciting his aid. Moore replied enthusiastically, and promised all the help he could give.

It is quite evident that Power's scheme was suggested by Geo. Thomson's Collection of Scottish Songs, then publishing, to which work Robert Burns was the chief contributor. The scheme was launched and the 'Selection of Irish Melodies, with Symphonies and Accompaniments by Sir John Stevenson, Mus. Doc., and characteristic words by Thomas Moore, Esq.,' began publication in numbers, Thomas Moore being the sole poet employed. The 'Melodies' reached ten numbers and a supplement extending to 1834.

The first number was issued at the latter end of 1807 or beginning of 1808, and consisted of 51 pages. It contained about twelve songs, some of which were arranged for two or more voices. The numbers were published at 15 shillings each. The work was issued in green paper boards, decorated with a rude woodcut depicting a lady (supposed to be 'Erin') reclining against a harp. It is said that this woodcut had adorned a Dublin ballad sheet. It was replaced by a far more beautiful design after Stotherd in 1821. In their get-up the numbers were evidently a distinct copy of Geo. Thomson's Scottish collection.

The dates of the publications of the numbers are as follows: 1807-08, 1810-11, 1813, 1815-1818, 1821, 1824-34. The six early numbers contain all the most popular of Moore's songs. The popularity of these from the date of their publication was simply enormous,

and the numbers were republished again and again.

For the airs Moore robbed without scruple the collections of Irish airs made by Edward Bunting and published in 1796 and 1807, much to Bunting's chagrin. It is said that Moore made serious alterations in the airs, but an examination of Bunting's and Holden's works, which he also used, will show that these alterations, when present, were of the slightest. Sir Charles Stanford published in 1895 'The Irish Melodies of Thomas Moore; the original airs restored.' Stanford's restorations are not always justified, as pointed out in Moffat's *Minstrelsy of Ireland*.

One thing has not been before noticed; that Moore was bold enough to take for serious songs tunes which were familiar with comic or semi-comic songs, as 'Paddy Whack' for 'While History's Muse,' and 'The Pretty Girl of Darby, O' for 'Eveleen's Bower.'

After the publication of the seventh number William Power brought an action against his brother James, who then had an extensive trade in London, to prevent him publishing the eighth number, 1821, contending that he had the sole copyright. James, however, won the case.

The ninth and tenth numbers were harmonised by Bishop, who afterwards did most of the musical arrangements for Moore. At James Power's death, in Aug. 1836, his widow retained the copyright of the Irish melodies, which afterwards passed into the hands of Addison and Hollier, who reissued them in the same style of paper boards as the original. When the 'Melodies' became free from copyright, numerous musicians edited them and wrote new arrangements of the airs, as Sir John Stevenson's were old-fashioned and by no means satisfactory for modern singing.

In 1816 Moore published the first number of 'Sacred Songs, the words by Thomas Moore, Esq., the music composed and selected by Sir John Stevenson and Mr. Moore,' folio. After that came a 'Selection of Popular National Airs,' in six numbers, beginning in 1818, and continuing to 1828. The first number was arranged by Sir John Stevenson, and contained the charming song 'Oft in the Stilly Night.' The remaining numbers were harmonised by Henry Bishop. A volume of 'Evenings in Greece' followed.

In 1811 Moore wrote an unsuccessful opera called 'M.P., or the Blue Stocking,' produced at the English Opera House in Sept. 1811, the music composed by Charles Edward Horn (q.v.). In 1811 Moore married an actress, Miss Bessie Dykes. He died from softening of the brain.

Moore's songs were, during the first fifty or sixty years after their publication, in immense favour, and they were sung among all classes of

people. They entered into the literature of the country, and to go no further they are greatly quoted and referred to in Dickens's novels.

His voice was delightful, and charmed everybody with its sweetness. He was fond of singing his songs at the society functions which he attended, and his small stature was hidden by the cluster of admirers who surrounded him. His relations with his publisher, James Power, were extraordinary. Although he drew immense sums for his works he was continually overdrawn his account with Power, and looked upon him for the performance of many extraordinary tasks. Power said, 'I am his banker, his bill acceptor and fish agent, letter carrier, hotel keeper and publisher, and now he wants me to be his shoe-black.'

In the latter part of his life, by the exertions of Lord John Russell, he was granted a Government pension.

F. K.

MOORE, THOMAS, a 17th-century London printer, who was the first to introduce the 'new tied' note in musical typography, where the tails of the quavers and semiquavers are united instead of being printed separately, as was the case before Moore printed. 'The new tied' note is used in the second book of *Comes Amoris*, 1688, the first book, 1687, having the old lozenge-shaped notes.

Moore was afterwards associated with J. Heptinstall, another London printer. In 1700 William Pearson made great improvements in the 'new tied note,' and Fought, at a much later date, effected still greater improvements.

F. K.

MOOREHEAD, (1) JOHN (b. Ireland, middle of 18th cent.; d. near Deal, Mar. 1804) received his first musical instruction in Ireland. He came to England when young, and was for several years engaged in the orchestras of various country theatres. He was one of the violins at the Worcester Festival of 1794, and in 1796 was principal viola at Sadler's Wells Theatre. In 1798 he was engaged in the orchestra at Covent Garden, and soon after was employed to compose for that theatre. During his engagement he composed music for 'The Philosopher's Stone,' 1795; 'Birds of a Feather,' 1796; 'The Volcano' and 'Speed the Plough,' 'Harlequin's Tour' and 'The Dominion of Fancy' (both with Attwood), 1800; 'Il Bondocani' (with Attwood) and 'Perouse' (with Davy), 1801; 'Harlequin's Habeas,' 'The Cabinet' (with Braham, Davy, etc.) and 'Family Quarrels' (with Braham and Reeve), 1802. In that year he became insane, and having transgressed the laws, was confined successively in Tothill Fields Prison and Northampton House, Clerkenwell. On his liberation he entered the navy as a common sailor, and was quickly promoted to be bandmaster. A short time afterwards he hanged himself in a fit of insanity near Deal. The 'F. Moorehead' who is described as the

composer of 'The Naval Pillar,' 1799 (see Q.-L.) is probably a printer's error for John Moorehead. His brother, (2) ALEXANDER, was also a violinist of merit, and led the band at Sadler's Wells; he also became insane and died in an asylum in Liverpool.¹ W. H. H.; addns. F. K.

MOOSER, ALOYS (b. Fribourg, 1770; d. there, Dec. 19, 1829), a famous Swiss organ-builder, whose greatest instruments are those at Fribourg and in the New Temple at Berne. Mooser also made pianos. G.

MORALES, CRISTOBAL (b. Seville, c. 1500; d. ? Marchena, between Sept. 4 and Oct. 7, 1553). Morales always described himself as *Hispalensis*, a native of Seville. His father is believed to have been a certain Cristobal de Morales who was in Seville in 1503, a singer in the service of the Duke of Medina Sidonia. As the son was already maestro de capilla in 1526, he cannot have been born much later than 1500. He was a pupil of Fernandez de Castilleja, maestro de capilla at Seville Cathedral, 1514-74. He was evidently brought up on Flemish traditions, and MS. choir books of Josquin des Prés, apparently dating from this time, are still preserved in the choir library. They also include motets by Gombert, who probably visited Seville in 1526 as maestro de capilla to the Emperor Charles V. at the time of his marriage to Isabella of Portugal, and it was in two collections of motets by Gombert that Morales's earliest works were printed, in 1541. His first appointment was maestro de capilla at Avila (Aug. 8, 1526), with a salary of 100 ducats, a post which he held until Oct. 12, 1530.² The three masses he is said to have left there have disappeared. He is next heard of in Rome, being admitted as cantor in the Cappella Pontificia under Pope Paul III. (Sept. 1, 1535). He was already a priest, and is described as *Clericus Hispalensis*.³ Calasanz, Escribano and other Spaniards were already members of the choir, and Morales was soon joined by Escobedo (Aug. 23, 1536) and Ordoñez (Apr. 29, 1539). His earliest known work is a secular cantata (6 v.) written for the Peace Conference at Nice (1538) between the Emperor Charles V., Francis I. of France and Pope Paul III., while in the following year he composed a similar cantata for the elevation of Ippolito d'Este to the dignity of cardinal. Both of these works are constructed on the principle of one voice (quintus or 'vagens') repeating the same succession of notes at regular intervals, to words which are different from those sung by the other voices—a device much used by Josquin des Prés, Gombert and other 16th-century composers down to the time of Lassus. (Cf. Lassus's 6-part, 'Fremuit spiritus Jesu,' in which the sextus sings nothing but *Lazare, veni foras*). In the same year

(1539) a madrigal by Morales ('Ditimi o si o no') was printed in Arcadelt's 4th book. Two others were published later. To Morales's Roman period also belong some, if not all, his magnificats (1542 and 1545), his 3 vols. of motets (1543 and 1546) and his 2 vols. of masses (1544).

Morales had visited Spain in 1540 (Apr. 4: *obtinuit licentiam eundi ad patriam*). In 1545 he was granted 10 months' leave (May 1: *abiit ad partes de licentia per menses decem*)—leave from which he never returned. In the autumn of that year he was appointed maestro de capilla at Toledo. There, however, he remained for less than two years (Aug. 30, 1545–Spring, 1547). He had been granted, in addition to the usual stipend, an allowance towards the maintenance of the *seises*, the boys of the choir-school. Yet early in the next year (Mar. 26, 1546) the chapter lent 20 ducats to the 'Venerable Cristobal de Morales,' owing to the famine and the high prices resulting from it; while on Oct. 3 they made him a further advance, on account of illness: '28 ducats produced by the sale of the 25 dead elm-trees in the garden of Alaytique.' By July 1547 Morales seems to have left Toledo. A new 'Rector of the College' (the choir-school?) was appointed, and on Aug. 9 the post of maestro de capilla was announced to be vacant.⁴

The whereabouts of Morales between 1547 and 1550 are uncertain; but in that year (Oct. 22) he describes himself (in a letter printed in the 2nd ed. of Bermudo's *Declaracion de instrumentos*) as maestro de capilla to the Duke of Arcos at Marchena, near Seville. In Nov. 1551 we find him elected maestro at Malaga; but he is next heard of at Toledo (Mar. 29, 1552). He returned to Malaga, however, and his name appears frequently in the *Actas Capitulares* of the cathedral. His value was not appreciated; he fell out with the canons and was more than once fined for petty offences.⁵ On July 13, 1552, he asked for leave to go home (to Marchena?); but in 1553 he was once again at Malaga, where, in June, he applied once more for leave of absence. He was trying for a second time for the post of maestro at Toledo, which he had resigned in 1547. It had been decided at a meeting of the Toledo Cathedral chapter (Aug. 11, 1553) that Morales would be welcome back again, but that he must perform his *oposición* (examination) as laid down by the regulations. Morales entered his name (by proxy) on Sept. 4; but he was never heard of again, and on Oct. 7 the chapter at Malaga disposed of 'the house left vacant through the death of Morales.' The election of a maestro de capilla took place at Toledo on Dec. 4, the successful candidate being Bartholomé de Quevedo.

Morales was famous among his contemporaries. As early as 1541 he is described as the 'most excellent' Morales; there were personal qualities in his style which could be recognised—the spacing of the voices, the recourse to purely homophonic writing when the words gave point to the music, and the realisation of the expressive possibilities of the 3rd and 4th modes. These have been favourites in Spain from that day to this. A constant feature of southern Spanish folk-music (and of the works of Granados and Albéniz) is the recurrence of the 4th mode 'Phrygian' cadence, with its drop of a semitone to the final; and this helps to explain Pedrell's enthusiasm for the essentially Spanish qualities which he felt in Morales. Two or three characteristic cadences are probably enough to give the Spanish effect, just as 'Purcellian' cadences and false relations give an English effect to the 'Euge Bone' mass of Morales's contemporary, Tye. The fact that Morales sometimes broke the rules by allowing 'hidden 5ths' and even the tritone, and that like the Tudor composers he had a certain affection for the 'quinta falsa,' did not blind his contemporaries to his complete mastery of the technique of composition. Strict counterpoint with him was not a restraint, but a means of expression; Padre Martini and others have justly admired his skill in fugue and his imaginative use of structural principles. He does not make lucky shots like Taverner; but if he is less surprising than his English contemporaries, he always seems to know what he is doing. Clearness of thought and expression were evidently a passion with him, and his one recorded saying confirms this attitude. Discussing the organ with Juan BERMUDO (*q.v.*), he remarked: 'If what some of these organists do could be brought out clearly, we should find grand mistakes.' (*Si lo que hazen algunos tañedores de órgano se sacasse en limpio, grandes fallas hallaríamos.*) The object of music, he held, was 'to give nobility and austerity to the soul'; yet it is precisely the nobility and austerity of his music which has tended to banish him from the Church service, in favour of Victoria. The formal perfection and austerity of Morales are also found in the later composer, in an intenser form; but the modern reputation of Victoria, unlike that of Morales, depends upon a few of his more expressive responses and motets, which have been sentimentalised by transposing them into flat keys and accompanying them on the organ. Morales, on the other hand, is remarkable for his lyrical sense, and for his feeling for the expressive possibilities of a good tune. His favourite principle of construction, as mentioned above, was that of an independent voice singing words which were different from those the other voices were singing. This can be seen in all stages of development. In the

5-part motet 'Tu es Petrus' the quintus has nothing to sing except the short phrase of six notes with which the motet begins. The same is the case with the beautiful 'Veni, Domine,' 6 v., though the phrase repeated is longer. In 'Andreas Christi famulus,' 5 v., the Superius 2 enters at regular intervals on G and D, singing a well-known tune from the Litania Sanctorum: 'Sancte Andrea, ora pro nobis,' which was used by Gombert in his 5-part motet 'Veni, dilecta mea.' In the celebrated 'Emendemus in melius' (printed by Eslava and Pedrell), the 1st tenor repeats a long melody to the words: *Memento, homo, quia pulvis es et in pulverem reverteris*; while in 'Quanti mercenarii,' 6 v., the independent voice sings the whole of the Lord's Prayer, to the accompaniment of the other voices—having, in fact, become 'the first singing part' as it is found in BYRD's 'Psalms, Sonnets and Songs' (1588). Morales also applied this principle to the Mass. In 'Ave Maria,' 'Tu es vas electionis' and 'De Beata Virgine,' one voice sings the theme and its corresponding words, while the other voices proceed with the Kyrie, Gloria or Credo. (Cf. Palestrina's Mass, 'Ecce Sacerdos magnus,' in which the same device is used.) Morales's 5-part Mass, 'Tristezas me matan' (MS., Sistine Chapel) is even more curious; for the independent voice sings not only the tune of the folk-song but also the Spanish words, while the other voices continue in Latin.

Three portraits of Morales are described by Mitjana. (1) A woodcut in the frontispiece to the 'Missarum liber secundus' (Rome, 1544) in which the composer, dressed as a cantor in the Pontifical choir, offers his work to Paul III. and receives his blessing. (2) An engraving published by Adami da Bolsena, 'Osservazioni per ben regolare il coro della Cappella Pontificia' (Rome, 1711), and reproduced by Hawkins. (3) A drawing in the National Library, Madrid, made for Barbieri from an original said to exist in the Sistine chapel.

Morales published two books of masses, two of magnificats and two of motets. The Lamentations were printed after his death, while the motets appeared mainly in collections of works by various composers (*v. Eitner, Bibliographie d. Musik-Sammelwerke des 16. und 17. Jahrhunderts*, 1877). Pedrell's edition (*Hisp. Schol. musica sacra*, i.) reprints the Officium Defunctorum, 4 v., 2 Magnificats, and the motets previously published by Eslava. A madrigal and two motets are only known in the lute transcriptions of FUENLLANA (*q.v.*), while 24 more have been found in choir-books in Spanish cathedrals, particularly Toledo, Seville and the Escorial. A provisional list is given in *Music and Letters*, 1925, vi. 28-31.

J. B. T.

MORALES, OLALLO JUAN MAGNUS (b. Almeria, Oct. 13, 1874), Spanish composer, educated in Sweden, his mother being Swedish. In Berlin he worked with Teresa Carreño, and later with Pfitzner (conducting). After holding appointments at Lausanne (1904) and Gothenburg (1905-9), he moved to Stockholm, where he became professor at the Conservatoire. His compositions include a symphony in G minor; concert-overture, 'Försommer' (1910), and other orchestral pieces; Berceuse for flute and strings; string quartet. He has also done important critical and historical work. J. B. T.

MORALES, PEDRO GARCÍA (b. Huelva, 1879), Spanish composer. Studied at Seville and then R.C.M., London. Being himself a poet, whose verse is praised by the best judges of Spanish literature, his activities as a composer are chiefly concerned with the modern Spanish song. His instrumental works include 'Esquisse andalouse' (vln. and orch.) and 'Bagatelle' (vln. and PF.). His energy during the war, in organising concerts of Spanish music in aid of war victims, made modern Spanish music (especially the works of Falla, Granados and Turina) well known in England. J. B. T.

MORALT, five brothers, four of whom were celebrated in Munich for their rendering of Haydn's quartets.

(1) **JOSEPH** (b. 1775; d. 1828) entered the court band in 1797, and became Konzertmeister in 1800, which post he held till his death.

(2) **JOHANN BAPTIST** (b. Jan. 10, 1777; d. Oct. 7, 1825) was violinist in the Mannheim court band, and entered the Munich band in 1792. He was the second violin in the quartet, and also composed two symphonies for orchestra, and 'Leçons méthodiques' for the violin, two string quartets, besides a MS. Mass, etc.

(3) **PHILIPP** (b. 1780; d. Mar. 18, 1847), the violoncello of the quartet, was in the band from 1795 to his death. He had a twin brother, (4) **JACQUES**, who played in the orchestra, but not in the celebrated quartet.

(5) **GEORG** (b. 1781; d. 1818), tenor-player.

A Moralt, probably one of the same family, was well known in England in the early part of the 19th century. He was first viola player at the Philharmonic till 1842, when his name disappears, possibly on account of his death, and is succeeded by that of Hill. He took a prominent part in the provincial festivals and music generally.

M.

MORATA, GINÉS DE (16th cent.), Spanish madrigalist, of whom nothing is known beyond 12 pieces for 3 and 4 v. in the Bibl. Medinaceli, Madrid. (MS. 13230.) J. B. T.

MORDENT (Fr. *pincé*; Ger. *Mordent*, also *Beisser*; Ital. *mordente*), one of the most important of the *agréments* or graces of instrumental music. It consists of the rapid alternation of a written note with the note immediately below it.

Mordents are of two kinds, the simple or short mordent, indicated by the sign *mw*, and consisting of three notes, the lower or auxiliary note occurring but once, and the double or long mordent, the sign for which is *mw*, in which the auxiliary note appears twice or oftener. Both kinds begin and end with the principal note, and are played with great rapidity, and, like all graces, occupy a part of the value of the written note, and are never introduced before it.

The appropriateness of the term *Mordent* (from *mordere*, 'to bite') is found in the sudden

1. *Single Mordent.* *Double Mordent.*

ness with which the principal note is, as it were, attacked by the dissonant note and immediately released. Walther says its effect is 'like cracking a nut with the teeth,' and the same idea is expressed by the old German term *Beisser* and the French *pincé*.

The mordent may be applied to any note of a chord, as well as to a single note. When this is the case its rendering is as follows:

2. BACH, Sarabande from 'Suite française No. 4.'

3. BACH, Overture from 'Partita No. 4.'

Sometimes an accidental is added to the sign of the mordent, thus ♯, or ♮; the effect of this is to raise the lower or auxiliary note a semitone. This raising takes place in accordance with the rule that a lower auxiliary note should be only a semitone distant from its principal note, and the alteration must¹ be made by the player even when there is no indication of it in the sign (Ex. 4), except in certain understood cases. The exceptions are as follows—when the note bearing the mordent is either preceded or followed by a note a whole tone lower (Exs. 5 and 6), and, generally, when the mordent is applied to either the third or seventh degree of the scale (Ex. 7). In these cases the auxiliary note is played a whole tone distant from its principal.

4. BACH, Organ Fugue in E minor.

¹ It should be mentioned that the passage referred to in Ex. 4 is, to the opinion of many excellent authorities, to be played without the accidental, i.e. with A♯ not A♮ as the auxiliary note. See Spitta, *J. S. Bach*, Eng. trans., I. 408, note 89.

5. Air from 'Suite française No. 2.'

6. 'Well-tempered Clavier,' No. 1, vol. 2.

7. Sarabande from 'Suite française No. 5.'

The long mordent (*pincé double*) usually consists of five notes, though if applied to a note of great length it may, according to Emanuel Bach, contain more; it must, however, never fill up the entire value of the note, as the trill does, but must leave time for a sustained principal note at the end (Ex. 8). Its sign is , not to be confounded with , or , the signs for a trill with or without a turn.

8. BACH, Sarabande from 'Partita No. 1.'

Besides the above, Emanuel Bach gave the name of mordent to two other graces, now nearly or quite obsolete. One, called the abbreviated mordent (*pincé étouffé*), was rendered by striking the auxiliary note together with its principal, and instantly releasing it (Ex. 9). This grace, which is identical with the ACCIACATURA (*q.v.*), was said by Marpurg to be of great service in playing full chords on the organ, but its employment is condemned by the best modern organists. The other kind, called the slow mordent, had no distinctive sign, but was introduced in vocal music at the discretion of the singer, usually at the close of the phrase or before a pause (Ex. 10).

9. Abbreviated Mordent.

10. Slow Mordent.

(Cf. PRALLTRILLER.)

F. T.

MORE (MOORE), WILLIAM (d. 1565), an English composer who is described (B.M. Add. MSS. 30,480-4) as 'harpour to Edw. VI.' This is a MS. of Elizabeth's time and includes a motet by More, 'Levavi oculos' (*sic*), arranged for 4 viols. His name occurs, however, as early as 1525 among the list of payments to the King's musicians in the Household Book of Henry VIII. (B.M. Egerton MSS. 2604). Apparently also he held similar office in the royal household under Elizabeth, for in the 'Declaration of the accounts by Sir John Masone, knight' for 1560 (Public Record Office) he is described as a harper and is granted '12^d a day to be paid quarterly during life, paid for 2 years & three quarters ended Michaelmas 2 (Eliz.).' A further entry under his name occurs in 1562, and in 1565 there is a record of the last payment made on his account. 'William Moore, Harper, due for half a year ending at the Annunciation, at which time he died.'¹ He is probably identical with the 'Morum' mentioned in John Case's *Apologia musices* (1588) along with Taverner, Blitheman and Tallis, as below:

'Angli non ita pridem Tavernerum, Blithmanum, Tallisum, Morum, aliosque insignes musicos magnis premis affecerunt.'

Besides the motet referred to above (score in B.M. Add. MSS. 31,226/103), there is a single part of another 5-part one, 'Ad Dominum contribulaver' (Harl. 7578/1046). J. M.²

MOREAU, JEAN-BAPTISTE (b. Angers, 1656; d. Paris, Aug. 24, 1733), church musician and composer. He early showed a musical disposition, and was educated as a choir boy in the cathedral of Angers. Whilst still quite a lad he composed motets which were notable. He continued his career as a church musician in the provinces, and became successively 'maître de musique' at Langres Cathedral (a post which he quitted after his marriage, celebrated in that town), then at Dijon, where he remained about a year. He then went to Paris, without introductions and without a post. The exact date of his arrival is not known, but he was there in 1686. At that time, when in all the Parisian churches thanksgiving services were held for the recovery of the king, a *Te Deum*, sung on Jan. 24, 1687, in the church of St. Côme, at the expense of the Company of Master Surgeons, is announced as being the composition of Moreau.

A little later he succeeded in obtaining the protection of the Dauphine, and through her mediation entered the court. He went to Versailles and succeeded in slipping into the apartments of the princess. He had the audacity to address her direct and to propose to sing to her an air of his own composition. The Dauphine, who was very musical, was amused by the unconventionality of the unknown countryman, but granted his request,

and being pleased with his song she spoke of Moreau forthwith to the king. The king bade him come two days later to the apartments of Mme. de Maintenon, where he wished to hear him in his turn. The king liked him and ordered from him the music of several little operas, which were given in the years 1687 and 1688. This gave Moreau the right, without being, properly speaking, in charge of the court music, to take the title 'maître de musique du roi.' The first of these divertissements to be sung, called 'Les Bergers de Marly,' composed on a libretto by Banzy, was given at Marly, in the summer of 1687, two months after Moreau's audition at Mme. de Maintenon's; it was much applauded.

In 1688 Racine received the command for *Esther*, a play intended to serve for a literary exercise and for the amusement of the young ladies of St. Cyr; Moreau was chosen by the king and Mme. de Maintenon to write the musical interludes to the tragedy, which was composed of recitatives and choruses in the classic manner. The famous representations of *Esther* at St. Cyr, Jan. and Feb. 1689, established the reputation of Moreau, whom Racine esteemed highly, and to whom the king gave several distinctions, together with a pension of 600 livres, continued until his death. After this Moreau became, concurrently with the organist Nivers and later with Clérambault, the official musician to St. Cyr. For this institution he composed in the following year the music for a great number of tragedies and divertissements which were not otherwise played in public, Mme. de Maintenon having asserted that representations of *Esther* had introduced a spirit of disorder and worldliness into her religious house. The most celebrated of these compositions are the interludes to *Athalie* (Racine, 1691); to *Jephté* (1692) and *Judith* (1695), by the Abbé Boyer; those to *Jonathas* (1700), *Absalon* (1702) and *Débora* (1706), by Duché; the music to an '*Idylle sur la naissance de Notre Seigneur*'; and lastly the music to the three 'Cantiques spirituels' which Racine wrote for St. Cyr in 1689.

He adapted, in 1697, his interludes to *Esther* into a kind of oratorio called 'Concert spirituel, où le peuple juif est délivré par Esther.' The alterations in the text and the necessary additions are by Banzy. The work was performed in Paris, under the direction of the author, but it has not been preserved in this form.

The works of Moreau, of which the library of the 'Dames de St. Louis' has numerous copies, remained during the whole of the 18th century, together with those of Nivers and Clérambault, with the 'Stances chrétiennes' of Oudot and the prologues of the operas of Lully, the foundation of the musical repertory at St. Cyr.

¹ See *Mus. Ant.*, Oct. 1910.

² *Davey, Hist. Eng. Mus.*

Appreciated as a composer, assured of the favour of the king and of Mme. de Maintonon, Moreau would have made a fine fortune if he had led a regular life, and if he had not had such a great intimacy with the bacchic poet Laïnez, whose libertine ways were disapproved in high quarters. Moreau employed a great deal of his time in setting to music the songs of Laïnez, which were widely distributed in manuscript copies and which had great success. In 1694 he accepted the charge of 'Intendant de la musique des États de Languedoc,' but as he preferred Parisian to provincial life, he spent little time in this employment, and sold the reversion to a musician called Mallet. His chief resource outside his royal salary came from his teaching. He was renowned for his method of singing, and amongst his pupils, both for singing and composition, were to be counted some of the best musicians of the 18th century: Montéclair, Clérambault, Jean-François d'Andrieu; the celebrated singers Marie-Claude Moreau, his daughter (who died before he did, after her marriage to the viol master Deniau), and Louise Couperin, cousin-german to François Couperin.

During the last years of his life Moreau was employed by the curé of St. Sulpice Languet to teach singing to the daughters of the Jesuit community, a convent instituted by this priest. They performed the famous choruses of *Esther* and *Athalie*.

Moreau died Aug. 24, 1733, and was buried in his parish church, St. Josse. He left a widow and a daughter.

Besides the tragedies of St. Cyr and the chansons by Laïnez he composed a certain number of works, both sacred and secular, left in MS. and now lost. Amongst these, his contemporaries praised a motet 'In exitu Israel de Egypto,' with choruses in counterpoint on a plain chant of the psalm; a Requiem Mass; a divertissement written to words by Laïnez to be given at the 'Ermitage de Franchard' during a sojourn of the king at Fontainebleau; and, finally, an essay on teaching, *L'Art mélodique*, a subject which Moreau, whose special characteristics were justness of accent and formal grace of melody, should have treated in an interesting way.

For posterity, he remains as the musician of Racine. His recitatives and his songs which, like those of other Lullist-composers, are smooth and clear in declamation; his choruses simple in style but informed with elegance and nobility; above all the personal character of his music, so expressive and touching, spontaneous, Christian, with something fresh and virginal, accord to perfection with the style and spirit of the poet. These religious and literary divertissements, for the use of an institution for girls, which Racine, in spite of his humility, accounted his *chefs-*

d'œuvre, found at the first moment the music which fitted them. It would be vain to try and remake them.

WORKS

PUBLISHED.—'Chœurs de la tragédie d'Esther, avec la musique composée par J. B. Moreau, maître de musique du roy.' (Paris, 1689) A second edition was published with the title: 'Intermèdes en musique de la tragédie d'Esther propres pour les dames religieuses, et toutes autres personnes.' Par Monsieur Moreau, maître de musique et pensionnaire de Sa Majesté. (Paris, 1696); 'La Musique d'Athalie par J. B. Moreau, maître de musique du roy. Composée par ordre de Sa Majesté, gravée par H. de Brüssen.' (Paris, without date.)

'Cantiques chantés devant le Roy, et composés par Monsieur Moreau, maître de musique et pensionnaire de Sa Majesté. Propres pour les dames religieuses, et toutes autres personnes.' (Paris, 1695.)

MANUSCRIPTS.—'Intermèdes de la tragédie de Jephthé.' (Library of Versailles; from St. Cyr.) 'Intermèdes de la tragédie de Jonathas, with Moreau's autograph, dated 1725 (from St. Cyr). The Versailles Library has many other copies of 'Jonathas,' and of 'Athalie'; one with Moreau's autograph and a copy of the 'Cantiques spirituels': all from St. Cyr. The library of the Paris Conservatoire also possesses, from the same source, many MSS. of these works, as well as of 'Esther.'

'Idille sur la naissance de Notre Seigneur,' Versailles Library (from St. Cyr), and the Bibliothèque Nationale.

'Le Feu de Joye du Sr. Moreau pour Mgr. le Duc de Bretagne,' Versailles Library.

The MS. of the Bibl. Nat. contains some copies of 'Athalie,' 'Esther,' and the 'Cantiques spirituels.'

Rigaudon de M. Moreau, Bibl. Nat.

'Zaire cantatille,' Darmstadt Library (see Q-L).

MODERN REPRINTS.—'Musique des chœurs d'Esther et d'Athalie et des cantiques spirituels,' Works of J. Racine; ed. by Paul Menard. (Supplément musical, Paris, 1873, exact reproduction of original editions.) 'Esther' (ed. by Ch. Bordes), Paris, Schola, without date (not a precise reproduction). 'Athalie' (ed. by Ch. Bordes and Léon Saint-Riquier), Paris, Schola, without date.

MORELLI, GIOVANNI, a basso with a voice of much power, compass, sweetness and flexibility. He first appeared in London in Paisiello's 'Schiavi per Amore,' with Storace and Sestini, and Morigi, who had long been the first *buffo caricato*, but now became second to Morelli. The latter was a very good actor, but, having been 'running-footman' to Lord Cowper at Florence, he was probably not much of a musician. He continued for many years in great favour, and sang at the Opera from time to time till he had scarcely a note left; but he was always received kindly as an old and deserving favourite.

He sang the bass part in the 'Serva padrona,' with Banti, so successfully that the performance was repeated by Royal command; and he was singing with Catalani and Miss Stephens (her first appearance) at the Pantheon, when that house was rebuilt. He sang in the Commemoration of Handel in 1787, with Mara and Rubinelli.

J. M.

MORENO, 'dying,' is used to indicate the gradual 'decrecendo' at the end of a cadence. Its meaning is well given by Shakespeare in the words, 'That strain again! it had a *dying fall*.' It is used by Beethoven in the trio, op. 1, No. 3, at the end of the fourth variation in the slow movement, and in the quartet, op. 74, also at the end of the slow movement. As a rule it is only used for the end of the movement or in a

cadence, but in the quartet, op. 18, No. 7, slow movement, and in the ninth symphony, slow movement, it is not confined to the end, but occurs in imperfect cadences, to give the effect of a full close. It thus differs from *smorzando*, as the latter can be used at any time in the movement.

MORERA, ENRIC (b. Barcelona, May 22, 1865), Spanish composer. His youth was spent in Argentina (Buenos Ayres and Córdoba); his musical studies were prosecuted at Barcelona and Brussels, and the influence of the Belgian school is noticeable in his work. His compositions include operas ('Emporium,' 'Bruniselda,' 'Don Joan de Serralonga,' 'La Nit de St. Joan,' 'La Font de l'Albera,' 'La Fada') and incidental music to a number of Catalan plays, e.g. *L'Alegria que passa*, by Rusiñol. His chief interest, however, is in choral works and arrangements of Catalan folk-songs, and this preference has tended to prevent his music from becoming widely known in Spain and consequently in other countries.

BIBL.—I. IGLESIAS, *Enric Morera: Estudi biogràfic* (Barcelona, 1921).

J. B. T.

MORGAN, JOHN (b. Newburgh, Anglesey, c. 1711; living in 1771), was the last of the Welsh bards who played their national instrument, the crwth (Edw. Jones, *Welsh Bards*). A 3-part catch, 'Quoth Jack on a time,' in Longman's Collection is signed 'Morgan,' but it is doubtful if this is the above.

MORHANGE, CHAS. HENRI VALENTIN, see ALKAN (1).

MORI, (1) NICOLAS (b. London, Jan. 24, 1796 or 1797¹; d. June 14, 1839), violinist, was the son of an Italian wigmaker in the New Road, London. He was brought out as a prodigy, and at 8 years of age played in public a concerto of Barthélemon's, from whom he had lessons. Subsequently he studied for six years with Viotti, and not only became an excellent solo violinist, but from his enthusiasm, industry and judgment, occupied a very prominent position in the music of London and England generally from about 1812 till his death. He played in the second concert of the Philharmonic Society in 1814, and from 1816 was for many years one of the leaders of the Philharmonic band and first violin at the Lenten oratorios, the provincial festivals, and the majority of concerts of any importance. He married in 1819 the widow of the music publisher LAVENU, and entered into partnership with her son. Amongst other music they published the second book of Mendelssohn's Songs without Words, and his PF. concerto in G minor. He left a son,² (2) FRANK (b. Mar. 21, 1820; d. Aug. 2, 1873), who was well known in London for many years as a musician. His cantata 'Fridolin' (brought out at the Worcester

chester Festival of 1851) was performed several times with success; and an operetta, the 'River-sprite,' to words by G. Linley, was produced at Covent Garden, Feb. 9, 1865. A second son, (3) NICHOLAS (b. Jan. 14, 1822), having studied with his father and Charles Lucas, as well as in Paris, composed various works, among them a setting of Psalm cxxxvii., and music to Gilbert's 'Wicked World.'

G., with addns.

MORIANI, NAPOLEONE (b. Florence, Mar. 10, 1808; d. Mar. 4, 1878), came of a good family, received a liberal education, and studied the law for some time, intending to embrace it as his profession. Seduced, however, by the applause which his beautiful tenor voice obtained for him in society, he changed his intentions, and attempted the operatic career at Pavia in 1833, with success. After singing in the principal Italian cities, he returned to Florence in 1839, and in the following year was recognised both there and at Milan and Trieste, as the first tenor of Italy. In 1841 he visited Vienna, where he was appointed 'Virtuoso di camera' by the Emperor. In 1844 and 1845 he sang in London, but he pleased little here. He sang with success at Lisbon, Madrid and Barcelona in 1846, and was decorated by the Queen of Spain with the Order of Isabella. He sang at Milan in the autumn of 1847, but his voice was gone, and he soon afterwards retired from the stage. Mendelssohn more than once speaks of him as 'my favourite tenor, Moriani.' J. M.

MORIGI, ANGELO (b. Rimini, 1752; d. Parma, 1788), violinist and composer. Tartini was his violin teacher and Valotti instructed him in theory and harmony. In 1758 he was appointed first violin of the Prince of Parma's band, and later, director of the court music, a position which he held for many years. He was a composer of some merit, and excellently spoken of as a teacher of composition. Among his pupils was Bonifazio Asioli, the dramatic composer, who out of deference to his master's memory published his (Morigi's) *Trattato di contrappunto fugato* after his death. Compositions:

Six sonatas for violin alone, op. 1. Six trios for two violins and violoncello with a figured bass for the clavecin, op. 2. Six concerti grossi for violin, op. 3. Six others dedicated to the Infanta Donna Philippine.

MORIN, JEAN BAPTISTE (b. Orleans, c. 1677; d. Paris, 1745), musician to the Duke of Orleans; one of the first composers of French cantatas (3 books 1-3 parts, 1706, 1707, 1712), also 2 books of motets (1704, 1709); 'Recueil d'airs à boire à 2 voix'; 'La Chasse du cerf,' 'Divertissement,' 'Le Triomphe de l'amour,' etc.; 'L'Hymen et l'Amour,' 'Épithalame' (Q.-L.).

MORISSEAU, a sabot-maker practising at No. 9 Rue des Fontaines du Temple, in Paris, who applied the principles of his art to the

¹ 1797 is found on a portrait issued in 1805. (D.N.B.)

² See E. W. Duffin, *Particulars of the Illness and Death of the late Mr. Mori*. (London, 1839.)

manufacture of violins, carving the back and sides and neck all in one piece out of a solid block of practically green wood, the only glue used in their manufacture being that employed to fasten on the tables. This innovation was considered sufficiently serious by the Société d'Encouragement pour l'Industrie Nationale for a *Rapport* to be inserted in their Bulletin¹ drawn up by J. Lissajous, with the assistance of Guérin, professor at the Conservatoire, Deffre and Ferrand, leaders of the orchestras of the Théâtre Lyrique and the Opéra-Comique respectively.

E. H.-A.

MORITZ (MAURICE) (*b.* May 25, 1572; *d.* Mar. 14, 1632), Landgraf of Hesse-Cassel from 1592-1627, under the musical tuition of George Otto, Kapellmeister at Cassel from about 1588-1619, developed considerable talent² for composition and was a patron of musicians (see DOWLAND, John). In 1601 he published a Lutheran Gesangbuch with tunes only, twenty-four of which were his own invention. In 1612 he republished the book, providing all the tunes with his own 4-part harmony. Meantime, in 1605, he had abandoned Lutheran doctrine and embraced Calvinism, even adopting the extreme Calvinistic view that nothing but words of Scripture in the vernacular should be sung in churches. Under the influence of his new convictions he published a musical edition of Lobwasser's German version of the French Calvinistic Psalms, providing the original French tunes with a 4-part harmony, and adding some new tunes of his own. His endeavours to force the Calvinistic form of worship on his Lutheran subjects met with some resistance, and he was obliged to concede the use of the Lutheran hymns. It is all the more strange that so enlightened a prince should have adopted this narrow view of the province of church music, considering that he had himself composed a large number of Latin psalms, motets and Magnificats in the *a cappella* style, *a 4* to *12*, which are still preserved in MS. in the library at Cassel (see *Q.-L.*). It redounds to his credit, however, that he showed himself so munificent a patron to the young Heinrich Schütz who, 'brought up as a chorister in his chapel at Cassel, was afterwards sent at his expense to Venice to complete his musical education under the tuition of Giovanni Gabrieli. Schütz testified his gratitude to his patron by dedicating to him in 1611 his op. 1, the first-fruits of his Venetian studies, consisting of a book of Italian madrigals *a 5*, concluding with a flattering poem written by the musician himself in praise of his patron, and set for eight voices. Among the MS. works of the Landgraf in the Cassel library there are some Italian madrigals and villanelle *a 4*, also some instrumental pieces, fugues and dances, which all serve to show the

interest taken by him in the various branches of music of his time. He laid down the reins of government of his principality in 1627, having lost the confidence of his Lutheran subjects by his Calvinist policy. A considerable number of his 4-part settings of psalm and hymn tunes have been republished in modern collections, such as those of Erk, Tucher and Winterfeld. A fugal movement for four strings has also been published in score by Hugo Riemann in his first Book of Old Chamber Music (Augener & Co.).

J. E. M.

MORLACCHI, FRANCESCO (*b.* Perugia, June 14, 1784; *d.* Innsbruck, Oct. 28, 1841), composer. He learnt the violin at 7 years old from his father. At 12 he was placed under Caruso, maestro of the cathedral of Perugia, who taught him singing, the clavier and thorough-bass, while he learned the organ from Mazetti, his maternal great-uncle. At 13 he had already composed much, and during his years of boyhood wrote several pieces for the church, among which a short oratorio, 'Gli angeli al sepolcro,' attracted the attention of many amateurs, and among them, of his godfather, Count Pietro Baglioni, who sent him to study counterpoint with Zingarelli at Loreto. But the severe conventional teaching of Zingarelli clashed with the aspirations of his young, impatient mind, and after a year and a half he returned to Perugia. Conscious, however, that he had still a great deal to learn, he went to Bologna to complete his studies under Padre MATTEI (*q.v.*). Here he devoted much attention to ecclesiastical music, besides making a special study of the orchestra, and acquiring a practical knowledge of all the chief instruments. During this time of studentship he was commissioned to write a cantata for the coronation of Napoleon as King of Italy, at Milan, in 1805. In Feb. 1807 a musical farce called 'Il poeta in Campagna' was performed at the Pergoia theatre in Florence, and, later in this year, a Miserere for sixteen voices having won golden opinions, the composer was invited to visit Verona, where he produced his first *buffo* opera, 'Il ritratto.' He achieved his first popular success with the melodrama, 'Il Corradino,' at Parma in 1808. This was followed by 'Enone e Paride,' 'Oreste,' 'Rinaldo d'Asti,' 'La Principessa per ripiego,' 'Il Simoncino' and 'Le avventure d'una giornata.' But all these were surpassed by 'Le Danaïde,' written for the Argentine theatre at Rome in 1810. This work was immensely successful, and once for all established its composer's fame. Through the influence of Count Marcolini, Minister to the court of Saxony, Morlacchi was now appointed musical director of the Italian opera at Dresden, at first for a year, subsequently for life, with a large salary, besides a considerable honorarium for every new opera he might compose, and leave of absence for some months of each year,

¹ Vol. xi. second series, No. 137, May 1864.

² See Peacham's *Complete Gentleman* (1634), p. 90, for a tribute to the Landgraf's skill.

with liberty to write what he pleased, where he pleased. This appointment he held till his death. The Italian style had long reigned supreme in the Dresden fashionable world, and Morlacchi at once became 'the rage.' His music partook of the styles of Paër and Mayr; it was melodious and pleasing, but very slight in character. He now acquainted himself to some extent with the works of the German masters, a study which had a happy effect on him, as it led him insensibly to add a little more solidity to his somewhat threadbare harmonies. His earliest compositions at Dresden were a Mass for the Royal Chapel, the operas 'Raoul de Créqui' (1811) and 'La capricciosa pentita' (1813), and an oratorio of the 'Passion' (1812) (book by Metastasio), extravagantly admired by contemporary enthusiasts.

In 1813 Dresden became the military centre of operations of the allied armies, and the King, Friedrich August, Napoleon's faithful ally, was a prisoner. During this time Morlacchi kept at a wise distance from public affairs, and bewailed the fate of his patron in retirement. He was, however, roughly aroused by a sudden order from Baron Rozen, Russian Minister of Police, to write a cantata for the birthday of the Emperor of Russia. The task was, of course, uncongenial to the composer, and as only two days were available for it, he declined to comply, alleging in excuse that the time allowed was insufficient. By way of answer it was notified to him that his choice lay between obeying and being sent to Siberia. Thus pressed he set to work, and in forty-eight hours the cantata was ready. Not long after this the Russian government having decreed the abolition of the Dresden chapel, Morlacchi obtained an audience of the Czar at Frankfort, when, in consequence of his representations and entreaties, the decree was reversed.

To celebrate the return of the Saxon king to his capital in 1814, Morlacchi wrote another Mass and a sparkling *opera buffa*, 'Il barbiere di Siviglia.' His political principles must have been conveniently elastic, for the year 1814 also saw the production of a Triumphant Cantata for the taking of Paris by the allied armies, and a Mass for voices alone, according to the Greek ritual, for the private chapel of Prince Repuin, who had been the Russian Governor of Dresden.

In June 1816 he was elected member of the Academy of Fine Arts at Florence, and shortly after paid a visit of some months to his native country, where he was received with every kind of honour, gala performances of 'Le Danaïde' and the oratorio of the 'Passion' being given at Perugia. For the dedication of this last work, Pope Pius VII. rewarded him with the decoration of the Golden Spur and the title of Count Palatine. An oratorio, 'Il sacrificio d' Abramo, o l' Isaac' (1817), although a feeble work, was remarkable for the employment in

it of a novel kind of rhythmical declamation in place of the ordinary recitative.

In 1817 C. M. von Weber was appointed Kapellmeister of the German opera at Dresden. Morlacchi behaved to him with a studied show of obsequious politeness, while doing his utmost in an underhand way to cripple his activity and bar his progress. Yet he did not disdain to beg for Weber's good word as a critic in the matter of his own compositions, and indeed was too much of an artist not to recognise the genius of his young colleague, to whom, although already overworked, he would frequently delegate the whole of his own duties, while on the plea of ill-health he absented himself in Italy for months together. Between 1817 and 1841 he produced a number of operas and dramatic pieces, among which the principal were 'Laodicea' (Naples, 1817), 'Giannini di Parigi' (1818), 'La Morte d' Abel' (Dresden, 1821), 'Donna Aurora' (Milan, 1821), 'Tebaldo ed Isolina' (1822), 'La gioventù di Enrico V' (1823), 'Ilda d' Avenello' (1824), 'I Saraceni in Sicilia' (1827), 'Il Colombo' (1828), 'Il disperato per eccesso di buon cuore' (1829) and 'Il rinnegato' (1832), this last opera being a second setting of the book of 'I Saraceni,' 'in a style calculated to suit German taste.' He wrote ten masses for the Dresden chapel, besides a great number of other pieces for the church. The best of these was the Requiem, composed on the occasion of the King of Saxony's death in 1827. He said of himself that, during the composition of the 'Tuba Mirum' in this Mass he had thought unceasingly of the 'Last Judgment' in the Sistine Chapel, and his biographer, Count Rossi-Scotti, does not hesitate to affirm that by his harmony he emulates Michel Angelo in the realisation of the tremendous moment. A 'scena' or 'episode' for baritone voice with pianoforte accompaniment (the narration of Ugolino, from Canto xxxiii. of the *Inferno*), written in his last years, deserves special mention here, as it became very famous.

In 1841 he once more set off for Italy, but was forced by illness to stop at Innsbruck, where he died. He left an unfinished opera, 'Francesca da Rimini,' for the possession of which Florence, Dresden and Vienna had disputed with each other. Profuse honours were paid to his memory in Dresden and in Perugia.

Weber's good-natured criticism (in one of his letters) on his 'Barbiere di Siviglia' aptly describes much of Morlacchi's dramatic work:

'There is much that is pretty and praiseworthy in this music; the fellow has little musical knowledge, but he has talent, a flow of ideas, and especially a fund of good comic stuff in him.'

The best monument he left to his memory was a benevolent institution at Dresden for the widows and orphans of the musicians of the Royal Chapel, which he was instrumental in founding.

F. A. M.

¹ Della vita e delle opere del Cav. Francesco Morlacchi di Perugia.

MORLAYE, GUILLEAUME (mid-16th cent.), a French lutenist, pupil of Alberto da Ripa, whose compositions he brought out in a number of books in lute tablature, including also his own compositions and those of other masters (published 1550-58). Fétis mentions also a book of Ghitern tablature by him (published 1550). E. v. d. s.

MORLEY, THOMAS (b. 1557; ¹ d. ? 1603), was pupil of William Byrd, by whose endeavours, says Anthony Wood,

'the said Morley became not only excellent in musick, as well in the theoretical as practical part, but also well seen in the Mathematicks, in which Byrde was excellent.'

In July 1588 he took his degree of Mus.B. at Oxford, and at the close of the same year there is reason to think that he was organist of St. Giles's, Cripplegate, for in the registers of that church is entered the burial of 'Thomas yesonne of Thomas Morley, Organist,' Feb. 14, 1588/9.² His wife had probably been a member of the household of Lady Periam, wife of the Lord Chief Baron of the Exchequer (see the Dedication of the 'First Book of Canzonets to Two Voices,' 1595).

It is most likely that, after leaving St. Giles's, Morley became organist at St. Paul's Cathedral, though from a passage in the *Description of Q. Elizabeth's Entertainment at Elvetham in Sept. 1591*, it might perhaps be inferred that his appointment took place earlier; it is said there that the performance of some musicians so pleased the Queen that 'she gave a new name unto one of their Pavans, made long since by master Thomas Morley, then organist of Paules church.'³ However this may be, he was still at St. Paul's in the same year, 1591, for there is an allusion to him as organist there in a letter dated Oct. 3, 1591.⁴ From this letter, written from Flanders by one Paget, a Catholic intriguer, it would appear that Morley had been employed there as some kind of political agent.

'Ther is one Morley that playeth on the organes in poulles that was with me in my house. He seemed here to be a good Catholicke and was reconciled, but not-with-standing suspecting his behaviour I entered letters that Mr. Nowell' [presumably the Dean of St. Paul's] 'wrote to him, whereby I discovered enoughe to have hanged him. Nevertheless he shewing with teares great repentance, and asking on his knees forgiveness, I was content to let him goe. I here since his coming thether he hath played the promotor and apprehendeth Catholickes.'

This is corroborated in the reply.⁵

'It is true that Morley the singing man employeth himselfe in that kind of service . . . and hath brought diverse into danger.'

In 1592 Morley was made gentleman of the Chapel Royal, being 'sworne 24th of July in Mr. Greene's roome'⁶; and in Nov. of the same

year he was appointed to the 'Gospeller's place and waiges,' after having served as Epistler. Between 1596 and 1601 he was living in the parish of St. Helen's, Bishopsgate, his house at the end of this period being in Little St. Helen's. The parish registers (Harleian Soc., 1904) record the baptism of 'Frauncys daughter of Thomas Morley, Musition,' Aug. 19, 1596; and the burial of 'Frauncis d. of Thomas Morley, Gent,' Feb. 9, 1598/9. On June 26, 1599, 'Cristofer, s. of Thomas Morley, gentleman, and Suzan his wyfe,' and on July 28, 1600, 'Anne, d. of Thomas Morley, gentleman, and Suzan his wyfe,' were baptized. There seems no reason to doubt that these entries all refer to the musician. His residence in St. Helen's is further marked by the appearance of his name in two Rolls of Assessments for Subsidies dated 1598⁷ and 1600, in both of which his goods to be taxed were valued at £5, and the assessment was 13s. 4d. An interesting point in connexion with the earlier of these documents is that the name of William Shakespeare occurs in it, his goods being valued at the same amount as were Morley's. It appears that he and Morley both appealed against the assessment, and one may suppose that some amount of personal intercourse existed between the two, especially when it is remembered that of the very little original music for Shakespeare's plays which has survived, Morley composed one if not two songs.

In 1598 Morley was granted a licence for twenty-one years to print song-books of all kinds and music paper, 'with forfeiture of £10 to every person offending against this grant.' The Patent, dated Sept. 28, 1598, is printed in Steele's *Earliest English Music Printing*, 1903. It would seem that it was obtained through the interest of one of the Caesar family (probably Sir Julius), which was connected with the parish of St. Helen's. One book, Carlton's 'Madrigals,' 1601, is said on the title-page to have been 'printed by Thomas Morley dwelling in Little Saint Helen's,' but as a rule East, Barley and others published as Morley's 'assignes' under the Patent. Barley indeed, in 1599 and 1600, seems to have done his printing in Little St. Helen's, and only to have sold his books at his shop in 'Gratious' Street (cf. Farmer's 'Madrigals' and Morley's 'Consort Lessons,' 1599, and Morley's 'First Booke of Ayres,' 1600.⁸) In 1601 the whole question of granting monopolies of this kind was raised in the House of Commons, and Morley's Patent was among those mentioned.¹⁰ The last book which appears to have been printed 'by the

assignment of a Patent granted to T. Morley,' was Dowland's 'Third Book of Songs,' 1603. Barley obtained this Patent on Morley's death, and his name appears as owner of it from 1606 onwards.

Morley alludes more than once to his ill-health in his *Plaine and Easie Introduction*, 1597: 'My health since you saw me, hath beene so bad, as if it had beene the pleasure of him who may all things, to have taken me out of the world, I should have beene very well contented; and have wished it more than once'; and he speaks of the 'solitarie life which I lead (being compelled to keepe at home),' as a reason for his undertaking the work. It was perhaps the bad state of his health which caused the severance of his connexion with the Chapel Royal, where he was succeeded by George Woodson, Oct. 7, 1602. His death probably took place in 1603, for the 'commission to administer the goods, etc., of Thomas Morley, late parishioner of St. Botolph's, near Billingsgate,' was granted to his widow 'Margaret Morley' on Oct. 25, 1603.¹ If we may assume that this refers to the musician, we must suppose that he had married a second time. The title-page of the 1606 edition of the 'Canzonets' of 1593, which states that they are 'Now Newly Imprinted with some Songs added by the Author,' may be interpreted in two ways. Weolkes printed in his 'Ayres or Fantastic Spirites,' 1608, a 'Remembrance of my friend M. Thomas Morley,' beginning 'Death hath deprived me of my dearest friend.'

The following is a list of Morley's publications, of some of which he was only the editor:

1. Canzonets. Or Little Short Songs to Three Voyces. 1593. (2nd ed. with four additional Canzonets, 1608. 3rd ed. 1631. German translations, Cassel, 1612; Rostock, 1624.) *Eng. Madr. Sch. I.*
2. Madrigalls to Foure Voyces. 1594. (2nd ed. with two additional Madrigals, 1600.) *Eng. Madr. Sch. II.*
3. The First Booke of Balletts to five voyces. 1595. (2nd ed. 1600. An Italian edition, London, 1595. German edition, Nuremberg, 1600.) *Eng. Madr. Sch. III.*
4. The First Booke of Canzonets to two voyces. 1595. (2nd ed. 1619.) *Eng. Madr. Sch. I.*
5. Canzonets, Or Little Short Songs to foure voyces. 'Selected out of the best and approved Italian Authors. 1597. (Contains two by Morley himself.)
6. Canzonets or Little Short Aers to fve and sixe voyces. 1597. *Eng. Madr. Sch. IV.*
7. A Plaine and Easie Introduction to Practicall Musicke. 1597. (2nd ed. 1608. 3rd ed. 1771. Contains eight compositions, chiefly motets, by Morley.)
8. Madrigalls to fve voyces. 'Selected out of the best approved Italian Authors. 1598.
9. The First Booke of Consort Lessons, made by diuers exquisite Authors for six Instruments. 1599. (2nd ed. 1611.)
10. The First Booke of Ayres or Little Short Songs; to sing and play to the Lute with the Base Viols. 1600. (Contains 'It was a lover and his lass'.)
11. The Triumphes of Oriana to 5 and 6 voices, composed by diuers seuerall authors. 1601. (Contains two madrigals by Morley. Reprinted in score by Hawes, 1814.) *Eng. Madr. Sch. XXXI.*

With these should be mentioned, 'The whole Booke of Psalmes. With their woonted Tunes . . . Compiled by sundrie Authors,' etc. 'Printed at London in Little S. Hellens by W. Barley, the assigne of T. Morley, and are to be sold at his shop in Gracious street.' This book, which has no date, contains four settings of tunes by Morley, two of which (with

another hitherto unprinted setting) appeared later in Ravenscroft's Psalter, 1621. (See PSALTER.) Of his sacred music, Barnard (1641) printed a Morning and Evening Service of four and five parts; an Evening Service of five parts; and a Verse Anthem 'Out of the Deep.' His Burial Service was printed by Boyce. A motet, 'Nolo mortem,' a 4, was edited by W. Barclay Squire. See list of Morley's church music below.

The *Fitzwilliam Virginal Book* (ed. Fuller Maitland and Squire) contains music by him; as also does Forster's MS. Virginal Book in the Roy. Lib. B.M. A Fancy a 5 is at Christ Church, where are many MS. compositions, chiefly canzonets, by him, some of which may be from the printed collections with altered words.

Morley's contemporaries, such as Meres and Peacham, placed him among the best English musicians of the time, and Ravenscroft speaks of him after his death as 'he who did shine as the Sun in the Firmament of our Art, and did first give light to our understanding with his Præcepts.'² At the present day Morley perhaps holds the first place in popular esteem of all the Elizabethan composers, partly because of the cheerfulness and tunefulness of his ballets, a form of composition which he introduced into this country, and in which he is unrivalled in England, unless by his follower Weelkes. Here he owed much to Gastoldi, after whose 'balletti' he modelled his own, sometimes making use of phrases which are plainly suggested by the Italian writer, just as in his canzonets he sometimes adapts phrases from Felice Anerio. But if his material is sometimes borrowed, his treatment of it is original, and the charge of plagiarism, which Oliphant and others brought against him, need not be pressed. If Morley wrote more in the lighter forms of music, his graver compositions are not less masterly, as may be seen by reference to the 'Nolo mortem' or the Burial Service, which is worthy of the praises bestowed on it by Burney. His *Plaine and Easie Introduction* stands by itself. Written in dialogue form, it gives a pleasant impression of Morley's personality, and is of the greatest value for the side-lights which it throws on contemporary musical life; while for the English student of modal music it is indispensable, being still the only important English work on the subject. Here again Morley has been charged with plagiarism, on the ground that some of his examples are the same as some which Tigrini gives in his *Compendio della musica*, 1588. But in these examples, both Tigrini and Morley are simply showing the best ways of making formal Closes; and as the best are not unlimited in number, it is not surprising if, in a crowd of others, the same examples sometimes occur in

¹ Stated on authority of W. B. S.

² *Briefe Discourse*, 1614.

different text-books. Morley's notation is not identical with Tigrini's, his arrangement is quite different, and there is no reason to suppose that he ever saw Tigrini's book.

MORLEY, WILLIAM, Mus.B. (d. Oct. 29, 1731), graduated at Oxford, July 17, 1713. On Aug. 8, 1715, he was admitted a gentleman of the Chapel Royal. He composed some songs published in a collection together with others by John Isham, and a chant in D minor, printed by Boyce, ii. 306, by some believed to be the oldest double chant in existence. (See FLINTOFF.) W. H. H.

MORNINGTON, GARRETT COLLEY WELLESLEY (WESLEY), Earl of, Mus.D. (b. Dangan, Ireland, July 19, 1735; d. May 22, 1781).¹ With little or no assistance from masters he learned to play on the violin and organ and to compose, and when, with the view of improving himself in composition, he consulted Th. Roseingrave and Geminiani, they informed him that he already knew all they could teach him. He graduated B.A. of Dublin in 1754 and proceeded M.A. in 1757. In that year he founded the Academy of Music, an amateur society in which for the first time ladies sang in the chorus. Two years later he married the Hon. Anne Hill Trevor. In 1764 the University of Dublin conferred on him the degree of Mus.D., and elected him professor of that faculty, a post he held till 1774. In 1758 he succeeded his father, who in 1746 had been created Baron Mornington, and in 1760 he was created Viscount Wellesley and Earl of Mornington. His compositions are chiefly vocal; some are for the church, copies of which exist in the choir-books of St. Patrick's Cathedral, Dublin. His chant in E flat is universally known.² But it was as a glee composer that he excelled. He gained prizes from the Catch Club in 1776 and

1777 for two catches, and in 1779 for his popular glee 'Here in cool grot.' He published a collection of 'Six Gleees,' and John Sale included three others in a collection with three of his own. Nine gleees, three madrigals, an ode and ten catches by him are contained in Warren's collections, and several gleees in Horsley's 'Vocal Harmony.' A complete collection of his gleees and madrigals, edited by Sir H. R. Bishop, was published in 1846. Three of his sons attained remarkable distinction, viz. Richard, Marquis Wellesley; Arthur, Duke of Wellington; and Henry, Lord Cowley.

W. H. H.; addns. W. H. G. F.

MORO, JACOPO, of Viadana, Mantua (16th-17th cent.), Servite monk, composed 2 books concerti ecclesiastici, 1-8 v. (1604), 1-4 v. (1613); 1 book psalms, etc. (1595); 1 book Officium et missa defunctorum, 8 v. (1599); 'Sacrarum cantionum cantus vel tenor' (no title-page) (Q.-L.).

MORPHY, GUILLERMO CONDE DE (b. Madrid, Feb. 29, 1836; d. Baden, Switzerland, Aug. 28, 1899), grandson of an exiled Irishman, was tutor and private secretary to King Alfonso XII. from 1869-78. His acquaintance with Gevaert influenced him to take up the study of old Spanish lute tablatures, a study to which he devoted 25 years. His *magnum opus* was published posthumously, in 1902, namely *Les Luthistes espagnols du XVI^e siècle*, of which there was a German version, edited by Riemann. Morphy was a pioneer in the study of Spanish lute-music. W. H. G. F.

MORRIS, REGINALD OWEN (b. York, Mar. 3, 1886), was educated at Rugby, New College, Oxford, and at the R.C.M., becoming a member of the teaching staff of the last named. In 1926 Morris went to America to take up an appointment at the Curtis Institute in Philadelphia. His *Contrapuntal Technique in the 16th Century* (1922) is of considerable importance, as an attempt to outline the theory of composition as practised by Palestrina and his contemporaries and to contrast their practice with the theories of scholastic contrapuntists (see under POLYPHONY: Principles of the 16th Century). A later book, *Foundations of Practical Harmony and Counterpoint*, is a textbook for teaching purposes. Morris's close study of polyphonic methods also appears in his own composition, a 'Fantasy for String Quartet,' published by the Carnegie Trust, remarkable for its strangeness of sound produced by severely diatonic handling of the parts. Some motets for string quartet, songs and particularly arrangements of Elizabethan songs with string quartet accompaniment, have been played with success. C.

MORRIS (MORRICE) DANCE, a sort of pageant, accompanied with dancing, probably derived from the Morisco, a Moorish dance formerly popular in Spain and France. Although

¹ Several interesting anecdotes of his early career are related by Dalnes Barrington, *Miscellanies*, 1781.

² It is given in its original form in *Mus. T.*, 1900, p. 172.

the name points to this derivation, there is some doubt whether the Morris Dance does not owe its origin to the MATACINS. In accounts of the Morisco, no mention is made of any sword-dance, which was a distinguishing feature of the Matacins, and survived in the English Morris Dance (in a somewhat different form) so late as the 19th century. Jehan Tabourot, in the *Orchésographie* (Langres, 1588), says that when he was young the Morisco used to be frequently danced by boys who had their faces blacked, and wore bells on their legs. The dance contained much stamping and knocking of heels, and on this account Tabourot says that it was discontinued, as it was found to give the dancers gout. The following is the tune to which it was danced :

The English Morris Dance is said to have been introduced from Spain by John of Gaunt in the reign of Edward III., but this is extremely doubtful, as there are scarcely any traces of it before the time of Henry VII., when it first began to be popular. Its performance was not confined to any particular time of the year, although it generally formed part of the May games. When this was the case, the characters who took part in it consisted of a Lady of the May, a Fool, a Piper and two or more dancers. From its association with the May games, the Morris Dance became incorporated with some pageant commemorating Robin Hood, and characters representing that renowned outlaw, Friar Tuck, Little John and Maid Marian (performed by a boy), are often found taking part in it. A hobby-horse, four whiffles, or marshals, a dragon and other characters were also frequently added to the above. The dresses of the dancers were ornamented round the ankles, knees and wrists with different-sized bells, which were distinguished as the fore bells, second bells, treble, mean, tenor, bass and double bells. In a note to Sir Walter Scott's *Fair Maid of Perth* there is an interesting account of one of these dresses, which was preserved by the Glover Incorporation of Perth. This dress was ornamented with 250 bells, fastened on pieces of leather in twenty-one sets of twelve, and tuned in regular musical intervals. The Morris Dance attained its greatest popularity in the reign of Henry VIII.; thenceforward it degenerated into a disorderly revel, until, together with the May games and other 'enticements unto naughtiness,' it was suppressed by the Puritans. It was revived at the Restoration, but the pageant seems never to have attained its former popularity, although the dance continued to be an

ordinary feature of village entertainments until within the memory of persons now living. In Yorkshire the dancers wore peculiar headdresses made of laths covered with ribbons, and were remarkable for their skill in dancing the sword-dance,¹ over two swords placed crosswise on the ground. A country dance which goes by the name of the Morris Dance is still frequently danced in the north of England. It is danced by an indefinite number of couples, standing opposite to one another, as in 'Sir Roger de Coverley.' Each couple holds a ribbon between them, under which the dancers pass in the course of the dance. In Cheshire the following tune is played to the Morris dance :

In Yorkshire the following tune, founded on that of 'The Literary Dustman,' is generally used :

W. B. S.

More or less modernised forms of the Morris dance still linger in certain country places, both in the north, and in the south of England. In Oxfordshire there are Morris dancers who perform to the music of a pipe and tabor. The following tune was noted down by the present

Oxfordshire Morris Dance.

Noted from a pipe and tabor player in 1901.

¹ 'Do the sword-dance with any Morris-dancer in Christendom.' (Marston, *Malcontent*, 1604 Act I. Scene 3.)

writer from a pipe and tabor player, as one used for the Morris dance in an Oxfordshire village.

In Yorkshire, and in Northumberland, the sword-dance is a feature of the Morris (see SWORD-DANCE), and in the Whitby and other districts of north Yorkshire the pastime is called 'plew stotting,' 'Plew' is the local pronunciation of plough, and 'stot' is a young bull, formerly yoked to the plough. The 'plew stots' are bands of youths (one dressed as the 'maiden'—no doubt a survival of 'Maid Marian'—and another as the 'old man') who parade from village to village dancing the sword and other dances, to the accompaniment of a fiddle. In 'Traditional Tunes,' 1891, edited by the present writer, is a Lancashire Morris dance, danced at 'rush bearings' in that county. It is noticeable that most Morris dances are in either common or 2-4 time, and the 'Helston Furry Dance,' which is a true Morris dance, is a very characteristic example. Of a different type is the following, which we may assume to be a traditional Welsh Morris, printed in a book of country dances issued by John Walsh about 1730-35; it is there entitled 'Welsh Morris danco.'

Welsh Morris Dance.

From Walsh's Dances, circa 1730-35.

Many references to the Morris dance are found in 17th-century plays. The monetary accounts of different corporate bodies who have provided the Morris men with their bells and decorations for the dance furnish further details. There are records of the Morris dance lingering in many parts of England, more or less differing from the earlier form. There seem few records of the dancing with make-belief swords in the earlier form, though this seems part of the Morris dance as it survives to-day. In many parts the bells, so characteristic of the Morris, are not present, though the dances appear to have been originally founded on that dance. In the sword-dance the laths representing the swords are finally linked together into a 'rose' and at the finish of the dance are held up by one man.

There does not appear to have been any steps peculiar to the Morris; the performers had a knack of jerking the leg and stamping so as to make the bells ring clearly and well.

The music of the Morris was played by a pipe and tabor, or in some instances by a bagpipe. The illustration to 'Kemp's Nine Daies Wonder,' 1600, shows an accompanying musician playing on a pipe and tabor. Kemp performed the Morris dance step from London to Norwich in nine days in the year 1599.

In Hono's *Every Day Book* there is a letter from a gentleman who narrates having seen, in June 1826, a Morris dance performed by eight young men, six who were dancers, the seventh playing the pipe and tabor, and the eighth collecting the pence from the spectators.

In 1838 at the Coronation of Queen Victoria there was a Morris danced which is thus described by Mr. Shirley Hibberd, a spectator. Two teams of Morris dancers were performers. They were dressed in clean linen smocks, and the dance took place in Hyde Park. The music was given by a pipe and tabor, and one of the teams had short staves which were struck at certain turns of the dance; the other team had white handkerchiefs which by a trick of the hand were thrown out, when they acquired a momentary rigidity.¹

The late Cecil J. SHARP (*q.v.*) found a band of Morris dancers at Headington, near Oxford, in 1905, Mr. Kimber being the leader, and later discoveries revealed that Morris dancing was current in many country places in England, more especially in the south. It was also practised at the 'rush bearings' in Lancashire, and several doggerel verses were chanted by different sets of Morris dancers. It was also popular in Derbyshire. The tunes employed were generally the 18th-century song airs. Those noted by Cecil Sharp include 'Constant Billy,' 'Rigs of Marlow' (really 'Rakes of Mallow') and others, all of which will be found in 18th-century song collections.

The following is a very brief bibliography in which the Morris dance is treated:

F. K.

MORTARO, ANTONIO, of Brescia, where he entered the Minorite monastery in 1595. In 1598 he was in the Franciscan monastery, Milan; in 1602, organist at Novara Cathedral; from 1606-8 he was again at Brescia. He was a prolific composer of masses, motets, sacred songs, etc.; also 4 books of 3-part 'Fiamelle amoroso,' an Organ Canzon and pieces in collective volumes (*Riemann; Q.-L.*).

¹ See *Notes and Queries*, 7th series, vol. 6, p. 105.

MORTELLARI, MICHELE (*b.* Palermo, 1750; *d.*? London), settled in London c. 1785 where his son was teacher of music. Michele was a pupil of Piccini, and his first opera was performed 1770 at Rome, followed by others in quick succession; his first opera produced in London was 'Armida,' in 1786, when he composed also a *Mass* a 4 v. with orchestra; songs, &c. (*Q.-L.*).

MORTIER DE FONTAINE (*b.* Warsaw, May 13, 1816; *d.* London, May 10, 1883), a pianist of celebrity. He was possessed of unusual technical ability, and is said to have been the first person to play the great sonata of Beethoven, op. 106, in public. From 1853-60 he resided in St. Petersburg, and subsequently in Munich, Paris and London. M.

MORTON (MOURTON), ROBERT, clerk of the chapel of Philipp the Good and Charles the Bold of Burgundy, c. 1464-78. He held a high reputation in his time as a learned musician, greatly honoured as such in a poem of the Dijon MS., quoted by Fétis. His name is undoubtedly English. Davey (*Hist. Eng. Mus.* p. 38) suggests his identity with Robertus de Anglia, choirmaster at Bologna 1467-72, and with Robertus Anglicus, 1485, singer at St. Peter's, Rome. The former appears unlikely, as it covers the period of Morton's presence at the Burgundian court. Some of his chansons have been preserved in MS. codices mentioned in *Q.-L.*; others may yet be discovered in the Belgian Archives (*Fétis*; *Q.-L.*).

MOSCAGLIA, GIOVANNI BATTISTA, a late 16th-century composer, of Rome. He wrote 4 books of madrigals, 5 v., 2 books of madrigals, 4 v., 1 book of 'Napolitane,' 3 v. (published c. 1570-87); also single numbers and lute arrangements in collective volumes. (List in *Q.-L.*)

MOSCHELES, IGNAZ (*b.* Prague, May 30, 1794; *d.* Leipzig, Mar. 10, 1870), the foremost pianist after Hummel and before Chopin. His precocious aptitude for music aroused the interest of Dionys Weber, the director of the Prague Conservatorium. Weber brought him up on Mozart and Clementi. At 14 years of age he played a concerto of his own in public; and soon after, on the death of his father, was sent to Vienna to shift for himself as a pianoforte teacher and player, and to pursue his studies in counterpoint under Albrechtsberger, and in composition under Salieri.

The first volume of *Aus Moscheles Leben*, extracts from his diary, edited by Mme. Moscheles (Leipzig, 1872), offers bright glimpses of musical life in Vienna during the first decade of the century, and shows how quickly young Moscheles became a favourite in the best musical circles. In 1814 Artaria & Co., the publishers, honoured him with a commission to make the pianoforte arrangement of Beethoven's

'Fidelio' under the master's supervision. (See Vol. I. pp. 291 and 267.)

Moscheles's career as a virtuoso can be dated from the production of his 'Variationen über den Alexandermarsch,' op. 32, 1815. These brilliant variations met with an unprecedented success, and soon became a popular display piece for professional pianists; later in life he frequently found himself compelled to play them, though he had outgrown them both as a musician and as a player.

During the ten years following Moscheles led the life of a travelling virtuoso. In the winter of 1821 he was heard and admired in Holland, and wrote his concerto in G minor; in the same year he played in Paris, and subsequently in London, where he first appeared at the Philharmonic on June 11, 1821. Here John Cramer, and the veteran Clementi, hailed him as an equal and friend; his capital duo for two pianofortes, 'Hommage à Händel,' was written for Cramer's concert, and played by the composer and 'glorious John' at the opera concert-room on May 9, 1822. In the season of 1823 he reappeared in London, and in 1824 he gave pianoforte lessons to Felix Mendelssohn, then a youth of 15, at Berlin. In 1826, soon after his marriage, at Hamburg, with Charlotte Embden, he chose London for a permanent residence; and for a further ten years¹ he led the busy life of a prominent metropolitan musician. He appeared at the concerts of friends and rivals, gave his own concert annually, paid flying visits to Bath, Brighton, Edinburgh, etc., played much in society, did all manner of work to the order of publishers, gave innumerable lessons, and withal composed assiduously. In 1832 he was elected one of the directors of the Philharmonic Society; and in 1837 and 1838 he conducted Beethoven's Ninth Symphony with signal success at the society's concerts. In 1845, after Sir Henry Bishop's resignation, he acted as regular conductor.

When Mendelssohn, who during his repeated visits to England had become Moscheles's intimate friend, started the Conservatorium of Music at Leipzig, Moscheles was invited to take the post of first professor of the pianoforte. He began his duties in 1846; and it is but fair to add that the continued success of the institution, both during the few remaining months of Mendelssohn's life, and for full twenty years after, was in a great manner owing to Moscheles's wide and solid reputation, and to his indefatigable zeal and exemplary conscientiousness as a teacher. Moscheles took quite a paternal interest in his pupils. If the school hours proved insufficient, which was frequently the case, he would invite them to

¹ In 1827 he noted and arranged the traditional air sung by a troupe of Tyrolese singers who came to London. Two folio volumes of these songs were published by Wille with translation by W. Ball. In this collection first appeared the once favourite song, 'The Merry Swiss Boy.' F. E.

his private residence, and there continue his instructions; and when they left school he endeavoured to find suitable professional openings for them, and remained their friend, ever ready with kindly advice and assistance.

As a pianoforte-player Moscheles was distinguished by a crisp and incisive touch, clear and precise phrasing, and a pronounced preference for minute accentuation. He played octaves with stiff wrists, and was chary in the use of the pedals.

Mendelssohn and, with some reservations, Schumann were the only younger masters whose pianoforte works were congenial to him. Those of Chopin and Liszt he regarded with mingled feelings of aversion and admiration. Indeed, his method of touch and fingering did not permit him to play either Chopin's or Liszt's pieces with ease. He wrote in 1833, apropos of Chopin's *Études*, etc.:

'My thoughts, and consequently my fingers, ever stumble and sprawl at certain crude modulations, and I find Chopin's productions on the whole too sugared, too little worthy of a man and an educated musician, though there is much charm and originality in the national colour of his motives.'

It is true he somewhat modified this opinion when he heard Chopin play. Still it remains a fact that to the end of his days, both the matter and the manner of Chopin and other modern pianists appeared to him questionable.

Moscheles was renowned for the variety and brilliancy of his extempore performances, the character of which can be guessed at by his preludes, op. 73. His last improvisation in public on themes furnished by the audience formed part of the programme of a concert at St. James's Hall in 1865, given by Madame Jenny Lind-Goldschmidt 'in aid of the sufferers by the war between Austria and Prussia,' where he improvised for some twenty minutes on 'See the conquering hero comes,' and on a theme from the Andante of Beethoven's C minor symphony, in a highly interesting and astonishing manner.

The list of his numbered compositions given in a Thematic Catalogue (Leipzig, Kistner) and in *Aus Moscheles Leben*, vol. ii., extends to op. 142, and there is besides a long list of ephemera, written for the market, to please publishers and fashionable pupils. The latter, and many of the former, have had their day; but his best works, such as the concerto in G minor, op. 60 (1820-21); the 'Concerto pathétique,' op. 93; the 'Sonate mélancolique,' op. 49; the duo for pianoforte, 'Hommage à Händel,' op. 92; the three Allegri di bravura, op. 51; and above all, the twenty-four études, op. 70 (1825 and 1826), and the 'Characteristische Studien,' op. 95, occupy a place in the classical literature of the instrument from which no subsequent development can oust them. The memoir above referred to was translated by A. D. Coleridge, and published in 1873 as *The Life of Moscheles*.

His *Briefe von F. Mendelssohn-Bartholdy an Ignaz und Charlotte Moscheles* appeared in 1888. E. D.

MOSE IN EGITTO, 'oratorio,' libretto by Tottola, music by Rossini. Produced San Carlo Theatre, Naples, Mar. 5, 1818; Théâtre Italien, Paris, Oct. 22, 1822; in a revised form, text adapted by Balocchi and De Jouy, Académie, Mar. 26, 1827; King's Theatre, Haymarket, as 'Pietro l'Eremita,' Apr. 23, 1822; at Covent Garden, Feb. 22, 1833, as an oratorio, 'The Israelites in Egypt; or, The Passage of the Red Sea,' with scenery and dresses, and additions from 'Israel in Egypt'; at the Royal Italian Opera, Covent Garden, Apr. 20, 1850, as 'Zora.' In 1845 it was performed by the Handel and Haydn Society of Boston, U.S.A., in an English version of the original libretto, and on May 24, 1878, by the Sacred Harmonic Society, at Exeter Hall, in an English version by Arthur Matthison. G.

MOSEL, GIOVANNI FELICE (b. Florence, 1754), a violinist of merit. His father, who had been a pupil of Tartini, gave him his first instruction in violin-playing, and he also received lessons from Pietro Nardini. In 1793 he succeeded the latter as director of the music at the court of the Grand Duke Leopold in Florence, and in 1812 became first violin in the Theatre at Pergola. His name is chiefly known in connexion with the history of the 'Tuscan Strad,' a violin which was one of a quartet made by Stradivarius for the Grand Duke of Tuscany in 1690. Before 1792 this *chef-d'œuvre* had disappeared from the ducal collection, and was lost until 1795, when Mosel (whose possession of the instrument is unaccounted for) sold it to David Ker of Portavoe, Ireland, for £24.

PUBLISHED COMPOSITIONS.—Six duets for two violins and piano, published by Meyel in Paris in 1783. Six quartets for two violins, alto and bass; *Ibid.* 1783. Six duets for two violins, op. 3; Venice, 1791. Serenade for flute, two violins, and violoncello; Venice, 1791. MS. sonatas for violin alone; trios for two violins and violoncello, and some symphonies.

BIBL.—A. M. CLARKE, *Fiddlers Ancient and Modern; Fests; OLOA FACTOR, Chats on Violins* (London, 1906); HILL & SOSS, *The Tuscan Strad* (London, 1898, 1891). E. H.-A.

MOSEL, IGNAZ FRANZ, EDLER VON (b. Vienna, Apr. 1, 1772; d. there, Apr. 8, 1844), composer and writer on musical subjects, conducted the first musical festivals of the Gesellschaft der Musikfreunde in the Imperial Riding-school (1812-16). He was ennobled, and made a Hofrath. From 1820-29 he was vice-director of the two court theatres, and from 1829 till his death principal custos of the Imperial library. He was one of the three chief mourners at Beethoven's funeral. In his earlier years he arranged Haydn's 'Creation' (Mollo), Cherubini's 'Médée' and 'Deux journées' (Cappi), and 'Così fan tutte' (Steiner) for string-quartet; and the 'Creation' and 'Così fan tutte' for two pianofortes for the blind pianist Paradies. For the Gesellschaft der Musikfreunde he put additional instruments to several of Handel's

oratorios,¹ and translated the text. He also composed three operas (court theatre), one Singespil, several overtures and entr'actes for plays, a Missa solennis, etc. He published three collections of songs, dedicating one to Vogl, the celebrated singer of Schubert's songs, and another to Rochlitz (Steiner). Among his writings the following are of value: *Versuch einer Ästhetik des dramatischen Tonsatzes* (Vienna, Strauss, 1813); *Über das Leben und die Werke des Antonio Salieri* (*ibid.*, Wallishauser, 1827); *Über die Originalpartitur des Requiems von W. A. Mozart* (1829); *Geschichte der Hofbibliothek* (*ibid.*, Beck, 1835); and articles in various periodicals on the history of music, including *Die Tonkunst in Wien während der letzten 5 Dezennien* (1818, revised and republished 1840).

C. F. F.

MOSER, (1) ANDREAS (b. Semlin on the Danube, Nov. 29, 1859; d. Nov. 8, 1925), violinist, was pupil and afterwards colleague and biographer of Joachim. He became teacher at the Hochschule in 1888 and professor there in 1900. His biography of Joachim was first written for the latter's artistic jubilee (1899), and enlarged after Joachim's death to two volumes. Moser also edited the correspondence of Joachim and Brahms and the *Briefe von und an J. Joachim* (3 vols. 1911-12). He collaborated with Joachim in producing the 'Methodik des Violinspiels' (Eng. trans. Moffat), and did much important editing of the classics. (See *Riemann*.)

His son, (2) HANS JOACHIM (b. Berlin, May 25, 1889), has written widely on musical subjects (notably in the *Z.M.W.*), and is a professor of musical research at Halle. He has appeared as a bass singer and published a number of compositions.

C.

MOSER, FRANZ (b. Vienna, March 20, 1880), first studied music under his father and later at the Conservatorium in Vienna under Schalk, Löwe, Mandyczewski, Grädener and Fuchs. He was Kapellmeister in several provincial towns, and in 1906 was appointed *répétiteur* and assistant to Felix Motl in Munich. He returned to Vienna in 1919, where he is professor of PF. and theory of music at the State Academy, Chorus-Director at the State Opera, and Lecturer at the University.

WORKS.—Op. 1, Mass; op. 11, female choir; op. 12, 'Aus meinem Leben' PF. work; op. 18, PF. quartet; op. 19, str. quartet in G major; op. 20, 1st symphony in C sharp minor; op. 23, str. sextet; op. 28, male choir; op. 32, str. quartet in F major; op. 34, 2nd symphony in C minor; op. 35, serenade for 15 wind instruments; op. 39, 3rd str. quartet in A minor; op. 36, 4 fantastic pieces for violin and PF.; op. 37, suite for 17 wind instruments; op. 40, chamber symphony for 9 solo instruments; op. 41, symphony prelude for large orch.; op. 42, music for play, 'Das Märchen'; op. 43, scherzo for orch.; op. 45, 4th str. quartet in C major; op. 46, 3rd symphony in F sharp. Many songs with orch.

K. D. H.

MOSEWIUS, JOHANN THEODOR (b. Königsberg, Prussia, Sept. 25, 1788; d. Schaffhausen, Sept. 15, 1858), like so many others, forsook the law for music and the theatre. After a

regular musical education he became in 1814 director of the opera in his native town. He married, and in 1816 went to Breslau, and for eight years he and his wife were the pillars of the opera. His wife dying in 1825 he forsook the stage, and founded the Breslau Singakademie. He had before this started the Lieder-tafel of the town. In 1827 he followed Berner as professor at the University, and in 1832 became director of the music there. In 1831 he succeeded Schnabel as head of the Royal Institution for Church Music, which he appears to have conducted most efficiently, bringing forward a large number of pieces by the greatest of the old Italian masters, as well as the vocal works of Mendelssohn, Löwe, Spohr, Marx, etc. His activity was further shown in the foundation of an elementary class as a preparative for the Singakademie, and a society called the Musikalische Cirkel (1834) for the practice of secular music. He also initiated the musical section of the Vaterländische Gesellschaft of Silesia, and became its secretary. In England he was principally known through two pamphlets—reprints from the *A.M.Z.*—*J. S. Bach in seinen Kirchenkantaten und Choralgesängen* (Berlin, 1845), and *J. S. Bach's Matthäus Passion* (Berlin, 1852). In the copious examples which they contain, some Englishmen made their first acquaintance with Bach's finest compositions.

G.

MOSKOWA, JOSEPH NAPOLEON NEY, PRINCE DE LA (b. Paris, May 8, 1803; d. St. Germain-en-Laye, July 25, 1857), eldest son of Marshal Ney. As a lad he showed great aptitude for music, and composed a Mass, which was performed at Lucca, where he lived after his father's death. In 1831 he was made 'Pair de France,' but sought distinction in a totally different line from that of his brother the Duc d'Elchingen. He contributed to various periodicals, especially some articles in the *Revue des deux mondes* and the *Constitutionnel*, which excited considerable interest. His love of sport was great, and he was one of the founders of the Jockey Club of Paris. In 1828 he married the only daughter of Lafitte, the banker. The services rendered by the Prince to music are considerable. In connexion with Adolphe Adam he founded the Société des Concerts de Musique Religieuse et Classique, an association for the practice of vocal music, and a *Recueil des morceaux de musique ancienne* (11 vols. 8vo), which has now become very scarce,² was published for the Society by the Prince. The Prince lived on intimate terms with Delsarte the singer, and with Niedermeyer the composer, whom he materially assisted in the foundation of his École de Musique Religieuse. In 1831 a Mass of his for voices and orchestra was executed by the pupils of Choron, and called forth the strong encomiums of Fétis. Although naturally in-

¹ Haslinger published the scores of 'Belshazzar' and 'Jephtha.'

² There is a copy in the British Museum.

clined to the madrigal style and sacred music, he also attempted the theatre, producing at the Opéra-Comique, 'Le Cent-Suisse' (June 7, 1840), a 1-act piece, which had a considerable run, and 'Yvonne' (Mar. 16, 1855), a 1-act opéra-comique, a clever imitation of the antique style.

G. C.

MOSTO, GIOVANNI BATTISTA (16th cent.), of Udine; pupil of Claudio Merulo; from 1580-89 maestro di cappella at Padua Cathedral; afterwards in the service of the Prince-Cardinal Bathori of Siebenbürgen, where he still was in 1595. He composed 3 books of madrigals, 5 v., and 1 book of madrigals, 6 v. He also published 2 collective volumes of madrigals, 1577 and 1579 (Q.-L.).

MOSZKOWSKI, MORITZ (b. Breslau, Aug. 23, 1854; d. Paris, Mar. 8, 1925), pianist and composer, studied first at Dresden and afterwards at Berlin at the academies of Stern and Kullak successively. He was a teacher at the latter for a good many years. After a successful career as a pianist and composer he went in 1897 to live in Paris, and was made a member of the Berlin Academy in 1899. His compositions include two books of Spanish Dances for PF, four hands, a symphony in four movements, 'Jeanne d'Arc,' op. 19, two concertstücke and a scherzo for violin with PF.: 'Aus allen Herren Landen,' for PF, four hands, op. 23; three concert studies for PF, op. 24; Barcarolle for PF, op. 27; three pieces for violoncello and piano, op. 29; violin concerto, op. 30; two orchestral suites, opp. 39 and 47; PF, concerto in E major; 'Phantastischer Zug' for orchestra, and many PF. solos and duets, and songs. His opera 'Boabdil' was produced at Berlin, Apr. 21, 1892, and a 3-act ballet 'Laurin' in 1896. He appeared at the Philharmonic Concerts in 1886, and frequently in London afterwards as a pianist and conductor. His last appearance in London was in 1908, when he conducted a programme of his own works at Queen's Hall.

M.

MOTET. I. FROM THE EARLIEST TIMES TO THE FIRST FLEMISH SCHOOL, c. 1430.—Giving greater scope for artistic skill and technical ingenuity than did the somewhat more restricted style of the CONDUCTUS (q.v.), the motet was the form of composition most frequently employed by polyphonic composers from the beginning of the 13th century A.D. In all the collections of the more developed (as distinct from the semi-experimental) music of the 13th and 14th centuries the motet form predominates, and by 1450 it has completely ousted the conductus. It was applied to every choral part of divine worship, the Credo of the Mass alone excepted, and is of special interest because, with the occasional exception of FAUX-BOURDON (q.v.), it was the only one of the early forms which was taken over by the group of individual composers in the mid-15th century

associated with the names of Dunstable and Dufay.

The earliest school of any extent was that of Notre Dame at Paris, exhaustively treated by Wooldridge.¹ Other important collections are those of Montpelier, dealt with in the scarce works of C. E. H. de Coussemaker; Bamberg, edited by Pierre Aubry; and Worcester.² The Spanish manuscripts were described by Aubry in his *Iter Hispanicum* (Paris, Geuthner, 1908), and this writer's many other works are all deserving of study. Two important German monographs are Leichtentritt's *Geschichte der Motette* and (on the literary side) Wilhelm Meyer's *Ursprung der Motette*. The former book is of value for the complete history of the form, and not only for the early period to which this first section relates. The climax of the early mediæval motet is reached in the work of MACHAUT (q.v.), a gifted, prolific and original composer, whose treatment of this form is, however, conservative.

The structure of the motet can be best understood if we approach it in the way in which the mediæval mind would approach it, from the point of view of the text. It was essentially an embroidering of a given (not composed) theme of words-and-music by two or by three other sets of words-and-music. This being so, we are not surprised to find that it is closely connected with that expansion of a liturgical text known as the TROPE (q.v.), and this is especially true of the English motets. And it is for this reason that the motet form is not used for the Credo, the text of which was obviously inviolate.

The title, normally motetus, was spelt in a larger variety of ways than is usual even in mediæval orthography. The different spellings have given rise to various etymological guesses: it is probably either from *mot* (word), or cognate with *motion*. *Motetus* sang the chief text: or it moved, while *tenor* held on, the *triplex* being the third voice (whence is derived our modern treble). In pitch, *triplex* would usually correspond to the modern (male) alto, *motetus* to a high tenor, *tenor* to a baritone. The fourth voice, where found, might be called *quadruplum* or *quartus cantus*; its range would normally be the same as that of the *triplex*.

The tenor motive, usually but not always a liturgical piece of plainsong, was arranged in one or other of the ORDINES (q.v.), which were arbitrary schemes of rhythm founded on poetic metres, and described at length by the contemporary theorists. The *motetus* and *triplex* (and *quartus cantus* where found) also followed rhythmic schemes, but these were usually simple iambic or trochaic forms (♩ or ♪). In France, as time goes on, motets are found in

¹ *Orf. Hist. Mus.*, vol. I, p. 170 et seq.

² See *Proceedings of the Musical Association*, Dec. 1924.

which the triplex, or the two upper voices, or even all three parts, including the stiff and orthodox tenor, are provided with vernacular words borrowed, with their music, from some secular song. This practice is frequently interpreted in a loose and very thoughtless way as indicating the low degree of the singers' sense of propriety and reverence, but a moment's serious reflection will show us that this development was nothing more nor less than the effort made by the monodic troubadour minstrels to adapt for their purposes the more complex technique of the ecclesiastical musicians; and that the occurrence of these vernacular, or partly vernacular, texts in the performance of divine worship (though it did undoubtedly occur) was not the normal course of the art-development, but an illegitimate side-practice, promptly and fairly effectively dealt with by the church authorities.

The motet, unlike the conductus, was not written in score, but in separate vocal parts. The normal English method was to place the *triplex* on the left-hand page of the opening, the *motetus* on the right, and the *tenor* or *pes* at the foot of one or both pages. Continental practice varied. Occasionally, as in a Florence MS. (probably from Notre Dame at Paris) and once at Worcester, *triplex* and *motetus* are found together in quasi-score, with the tenor following them below.

Mutual Relation of the Individual Voices.—

We are forced to admit that the style of harmony in the early mediæval motet, at least as it appears on paper, is still deserving of the title 'crude'—that adjective so freely applied in the last century to all that did not conform to current taste. In the light of the harmonic effects reached by 'Sumer is icumen in' (1240) and the Agincourt Song (1415), we are disappointed to find that most of the motets of the 13th and 14th centuries consist of a succession of five-three chords, or of open fifths, occasionally relieved by other concords and sometimes by sheer discords. Machaut, whose four-part work is noteworthy for the normal completeness of its chords with third and fifth, and general tendency to harmonic propriety as understood in later times, tends to become 'square,' and to lose the advantages of contrapuntal flow. For the motet must not, of course, be judged along harmonic lines: its beauties lay in its melodic counterpoint; and by the skilful arrangement of phrases and of pauses (the old masters had a great gift for making a silence speak) considerable effect was undoubtedly attained in performance. The subjoined example shows the measure of skill with which a Worcester composer of about 1325 explored the resources of his limited equipment of one common chord. The *pes* or tenor phrase, repeated twice in this extract, forms a *basso ostinato* throughout the piece.

MOTET

Middle section from the motet "Te Domine laudat—
Te Dominum clamat."

II. FROM c. 1430 TO c. 1500.—Passing on to the days of the three Flemish or Netherland Schools (see POLYPHONY), we find that the motet now shares with the Mass the greater part of the composers' output until about halfway through the period under review, when the madrigal begins to claim some of their attention. The form of the motet still rests, as a rule, upon a slow-moving tenor, but the words are now frequently identical in all the voices, and the tenor moves faster in proportion to the upper parts than was formerly the case. Sometimes even the upper parts will also move slowly, in longs and breves, slightly reminiscent of the old conductus, as in Ex. 2 below. Or the tenor will abandon for a time, or completely, its steady course, and join in the contrapuntal flow on even terms, as in Ex. 3, while in Ex. 4 the distinctive character of the tenor voice is completely lost.

2. Opening of "Ave regina cœlorum."

Trent MS. 90. c. 1465.

"Benedicta tu."

4. MS. Pepysian 1286, Magd. Coll. Camb. c. 1460.

The great gift of DUNSTABLE, DUFAY, POWER (*q.v.*) and their followers to music was a certain freedom of thought, and a striving after musical effect, beautiful in itself and unfettered by any excessive adherence to the course of a predetermined plain-song melody. Music henceforward is to be more artistic and less mathematical, and the natural result of such a development in the composers' mental processes is to be seen in this alteration in the form. Contemporaneous with this is found a great advance on the paths of imitation, canon and fugue, as well as on that of harmonic smoothness. With OKEGHEM and OBRECHT (*q.v.*) we reach a period when the normal three-voice arrangement is expanded to a larger range of voices, though Dufay is usually credited with being the first to regard four as the ideal number. Obrecht, for instance, has left one motet for six voices, six for five voices, seven for four and seven for three, while the large majority of his other extant works, including eighteen of his twenty complete masses, are written in four parts, while Okeghem is the earliest producer of a 36-part experiment.¹

All through the great settlement and expansion of the art of composition that occurred under the leadership of JOSQUIN DES PRÉs (*q.v.*) and right up into the time of Palestrina, however, we find the plainsong-motive type predominating, if this be taken to include folk-song, chanson and Lieder motives also; and so much so, that when a group of composers, e.g. those associated with the name of MOUTON (*q.v.*), breaks away from this type to any extent, historians hail them as a new school. In this period also began the practice so marked in the Palestrina era, of a composer writing a motet and following it with a Mass on the same theme, with similar and varied treatment of the motive. This is the origin of the form known as variations. Rockstro, writing in the first edition of this Dictionary, was of opinion that 'the composer of the motet felt bound to give his whole attention to a careful rendering of the words. . . . Hence

¹ See Ambros, *Geschichte* iii. 174.

The independent motions of different parts sounding together constitute counterpoint, and are classified according to their relations, as 'contrary,' 'similar,' and 'oblique' motions. In the first the parts either distinctly converge or diverge, one rising when the other falls. In the second the parts either rise or fall together, though not necessarily at equal distances. The third refers to one part only, which moves up or down while another stands still.

Further explanations and examples will be found under the respective headings.

C. H. H. P.

NOTTA, JOSÉ VIANNA DA (b. St. Thomas, 1868), Portuguese pianist. After early studies at the Lisbon Conservatoire, he went to Berlin, where he had lessons from Xaver Scharwenka (PF.) and Philipp Scharwenka (composition). He subsequently worked with Liszt at Weimar (1885), Schäfer at Berlin (1886) and von Bülow at Frankfurt (1887). Since 1902 he has toured widely in Europe and S. America. He was also Hofpianist in Berlin, and from 1915-17 held the post formerly occupied by Stavenhagen at Geneva. He then returned to Lisbon as Director of the Conservatoire and conductor of the Symphony Orchestra. His compositions include:

Op. 9. Portuguese scenes. (PF.)
Op. 10. 5 Portuguese Rhapsodies. (PF.)
Symphony.
Str. Quartet.
'Lusiads' (Choir and orch.)
Songs.
Transcriptions for PF. (2 and 4 hands) of Alkan's works for pedal-piano.

He edited the works of Liszt for Breitkopf & Härtel, and has written a number of articles on the technical aspects of his art. J. B. T.

MOTTI, FELIX (b. Unter-St.-Veit, near Vienna, Aug. 24, 1856; d. Munich, July 2, 1911), a celebrated and highly gifted conductor. As a boy he possessed a fine soprano voice, and obtained admission to the Löwenburgische Convict, the preparatory school of the Imperial Court Chapel. Later on he entered the Vienna Conservatorium, where Josef Hellmesberger soon recognised the eminent gifts of young Motti, who in due course obtained all the prizes the college could award. The Academical Richard Wagner Verein of Vienna elected him to the post of conductor of the society's concerts, and it was there that his eminent ability as a *chef d'orchestre* attracted general notice. In 1876 Motti took part in the Bayreuth Festival performances of Wagner's 'Ring des Nibelungen' as stage conductor, and he became one of the most active members of the so-called 'Nibelungen-kanzlei.' Upon the recommendation of Dessoff he obtained in 1881 the post of conductor at the Grand Ducal Opera House at Karlsruhe, which post he held until 1903. Motti's energetic activity raised the performances at this opera-house to a place amongst the finest to be heard in Germany. A sworn enemy of all routine work, he produced at Karlsruhe

many important stage works of modern times, including the complete cycle of operas by Berlioz, and all the musical dramas of Richard Wagner. Motti also obtained brilliant successes as a conductor of concerts; he was director of the Philharmonic Society of Karlsruhe until 1892, and was in 1886 appointed by the Bayreuth authorities to conduct the festival performances of 'Tristan und Isolde,' a task which he accomplished to perfection. He conducted a Wagner Concert in the Queen's Hall on Apr. 17, 1894, and appeared often in London subsequently, at many series of similar concerts. In June 1898 he conducted the Nibelungen trilogy at Covent Garden. In 1904 he was made a director of the Berlin Royal Academy of Music. He went to New York to conduct the performance of 'Parsifal' given there in 1903-04, and in 1907 became director of the opera at Munich. He composed three operas, 'Agnes Bernauer' (successfully produced at Weimar in 1880), 'Ramin' and 'Fürst und Sänger,' a 'Festspiel,' 'Eberstein' (produced at Karlsruhe in 1881), a string quartet, a song-cycle 'Pan im Busch,' besides a considerable number of songs for one voice and pianoforte accompaniment. He edited various works of Berlioz, and the 'Barbier von Bagdad' of Cornelius; he orchestrated Liszt's pianoforte solo, 'St. Francis of Assisi preaching to the birds,' Wagner's 'Five Songs,' and edited several of the works of Bach and other classics.

C. A., with addns.

MOULU, PIERRE (early 16th cent.), pupil of Josquin des Prés. He wrote masses, motets and other church music. His Mass on a popular song, 'A deux visages et plus' (not village, as in Coussemaker and Q.-L.) appears to have been a great favourite. It appeared generally as 'Missa duarum facierum,' or 'Missa sans pause,' as it was without a rest, one of the many tricks of the old contrapuntists. Several of Moulou's works were published by Jacques Moderne (1532, 1540). (See *Fétis*; Q.-L.)

MOUNSEY, two sisters, (1) ANN SHEPPARD (b. London, Apr. 17, 1811; d. there, June 24, 1891), organist, composer and teacher, studied under Logier. She is alluded to by Spohr in his account of his visit to Logier's academy in 1820.¹ In 1828 she was elected organist to a church at Clapton; in 1829 to St. Michael's, Wood Street, E.C., and on Nov. 22, 1837, to St. Vedast's, Foster Lane. In 1834 Miss Mounsey became an associate of the Philharmonic Society. In 1843 she gave the first of six series of Classical Concerts, at Crosby Hall, London, for one of which Mendelssohn² composed 'Hear my Prayer' for voices and organ, first performed Jan. 8, 1845. On Apr. 28, 1853 she married W. Bartholomew, and in the same year composed the oratorio of 'The

¹ Autobiography, II. 99, 100.

² See his letter in Folke's *Reminiscences*, p. 220. The autograph is now in the South Kensington Museum.

Nativity,' which was performed, Jan. 17, 1855, under the direction of John Hullah at St. Martin's Hall. Mrs. Bartholomew was well known in London as a teacher; she published upwards of 100 songs, 40 partsongs, and a large number of works for piano and for organ.

(2) ELIZABETH (*b.* London, Oct. 8, 1819; *d.* there, Oct. 3, 1905), organist and composer, developed considerable musical ability at a very early age. She was appointed organist of St. Peter's, Cornhill, in 1834, when only 14 years old, a post she resigned in 1882. The organ of St. Peter's, a fine instrument by Hill, was one of those on which Mendelssohn frequently played during his visits to London. In 1842 Miss Elizabeth Mounsey was elected an associate of the Philharmonic Society. Besides the organ and piano, she at one time devoted much study to the guitar, and in 1833 and 1834 appeared in public as a performer thereon. She published several works for all three instruments. She lived in the same house, 58 Brunswick Place, City Road, for eighty-three years. See *Mus. T.*, 1905, p. 718. *g.*

MOUNTAIN, (1) HENRY (*d.* Nov. 15, 1794), a Dublin musician, and violinist of ability, who was also established as a music-seller and publisher in the Irish capital towards the latter end of the 18th century. In 1751 he was one of the Rotunda band in Dublin, and from 1765-85 was leader of the Dublin City music. From before 1785 he was at 20 Whitefriar Street, but about 1790 removed from thence to 44 Grafton Street. He published a large number of engraved single songs from the popular operas of the day, and besides, about 1785, issued a small book, 'The Gentleman's Catch Book,' which he edited and dedicated to the Hibernian Catch Club.

(2) JOSEPH, his son, was equally clever on the violin, and came to Liverpool where he was leader at the concert hall, and the theatre. In this town he married (1787) Sarah WILKINSON (*q.v.*) and came with her to Covent Garden, where he was leader of the orchestra. In 1820 he was leader at the English Opera House and was still living in 1837.

F. K.; addns. *W. H. G. F.*

MOUNTAIN SYLPH, THE, opera in 2 acts; words by J. T. Thackeray, music by Barnett. Produced Lyceum Theatre, Aug. 25, 1834. This was the first 'musical through' English opera since Arne's 'Artaxerxes.'

MOUNT-EDGCUMBE, RICHARD EDGCUMBE, second Earl of (*b.* Sept. 13, 1764; *d.* Sept. 26, 1839), an amateur musician and composer, whose Italian opera 'Zenobia' was performed at the King's Theatre in 1800 for the benefit of Banti. He is best known as author of *Musical Reminiscences, containing an Account of the Italian Opera in England from 1773*, London, 1825; an amusing, gossiping book,

containing much useful information. Two other editions, with a continuation, appeared, and in 1834 a fourth, including the Musical Festival in Westminster Abbey in that year.

W. H. H.

MOUNTIER, who is called by Burney 'the Chichester boy,' was probably of French origin, and educated musically in the choir of Chichester Cathedral. He made his first appearance 'in Character on any stage' as Acis, to the Galatea of Miss Arne (afterwards Mrs. Cibber), May 17, 1732, at the Haymarket Theatre—the performance got up by the elder Arne. Mountier sang, in the same year, the part of Neptune (though advertised for that of Phœbus, which was given afterwards to Barret) in Lediard's 'Britannia, an English Opera,' with music by Lampe, 'after the Italian manner,' a work not mentioned by the biographers of that composer. It may be, therefore, interesting to record that the cast included Cecilia Young (Britannia), afterwards Mrs. Arne, Susanna Mason (Publick Virtue), Comano, or Commano (Discord), a basso who had sung the year before on the Italian stage, Waltz (Honour), the well-known singer who, from being 'Handel's cook,' became afterwards the performer of many of that master's principal bass parts in opera and oratorio—and other performers. In the following year we find Mountier singing the part of Adelberto in Handel's 'Ottone' (revived), after which his name does not appear again in the bills.

J. M.

MOUNT OF OLIVES, the English name of Beethoven's oratorio, 'Christus am Ölberg.' It was first produced in this country on Feb. 25, 1814, by Sir George Smart, in the Lenten oratorios at Drury Lane; and the English version was probably made by Arnold, at that time manager of the King's Theatre and a prominent person in all theatrical matters. Another version was made by Thos. Oliphant, and a third by Bartholomew. The strong feeling prevailing in England against the appearance of our Saviour as a personage in the oratorio, which led to the modifications in the versions already mentioned, led to one by Dr. Hudson of Dublin in 1842, in which the story was changed to that of David, and the title to 'Engedi.' This compromise was adopted as lately as in 1905, at the Bristol Festival.

g.; addn. *M.*

MOURET, JEAN JOSEPH (*b.* Avignon, Apr. 11, 1682; *d.* Charenton, Dec. 20, 1738), was in the service of the Duchess of Maine at Paris from about 1707, and composed his first ballets in 1714; his first opera, 'Ariane,' in five acts and a prologue, was produced Apr. 6, 1717; 'Les Amours des dieux,' an 'opéra-ballet' in four scenes and a prologue, came out in 1727, and 'Les Triomphes des sens' in 1732. The names and dates of other operas and ballets will be found in *Q.-L.* Mouret was appointed

¹ Date given by *W. H. G. F.*

musical director of the Concert Spirituel in '728, and held the post till the concerts were taken over by the Académie Royale in 1734. For this institution he wrote a book of motets, published in 1742; and for the Comédie Italienne, of which he was for some time the conductor. His instrumental works, published before 1739, consist of no less than 47 'divertissements,' 'Fanfares pour des trompettes, timbales, violons et hautbois . . .'; 'Symphonies pour des violons, des hautbois et des cors de chasse . . .'; 'Concert de chambre à deux et à trois parties pour les violons, flûtes, et hautbois' (2 books).

MOUSQUETAIRES DE LA REINE, LES, opéra-comique in 3 acts; words by St. Georges, music by Halévy. Produced Opéra-Comique, Feb. 3, 1846. g.

MOUSSORGSKY, MODESTE PETROVICH (b. Karevo, Govt. of Pskov, Mar. 16/28, 1835; d. St. Petersburg, Mar. 16/28, 1881), was born at his father's country-house and spent his childhood among rural surroundings. Both his parents were musical, and his mother taught him the piano from a very early age. Before he was 9 he played several of Liszt's compositions and a pianoforte concerto of Field. While at the 'Ensigns' School' in St. Petersburg he continued to take lessons from the pianist Herke (Gerke). On leaving this institution he was gazetted to the famous 'Preobrajensky' regiment, accounted one of the smartest in the service. Gifted with a pleasant baritone voice, and a facility for improvising, his attitude towards music remained purely that of an amateur until 1857, when he became acquainted with Dargomijsky, and was thus brought in contact with all the members of the New Russian School. He now began to study the works of Beethoven, Glinka and Schumann, and generally to enlarge his musical outlook. Balakirev soon recognised the dramatic tendency in Moussorgsky, and set him to compose music to 'Œdipus,' of which an excellent translation had just appeared in Russian. He was also occupied with a project to compose an opera on the subject of Victor Hugo's 'Han d'Islande,' but got no further than the libretto.

As he became increasingly absorbed in music, Moussorgsky found his military duties more and more irksome. Cui, Rimsky-Korsakov and Borodin had accepted the necessity of a dual profession, and Stassov—who entertained the highest opinion of Moussorgsky's talents—counselled prudence, and tried to persuade him that military duties need not prove fatal to their development. But Moussorgsky had immense faith in his powers, and even the persuasions of his mother could not prevent him from sending in his papers. At 22 he began the long struggle

with poverty which lasted—with scarcely a bright interval—to the end of his life. Far from being able to devote himself exclusively to his art, he was compelled to accept a subordinate post in a government office in order to live. This uncongenial work proved a constant hindrance to his artistic projects. Highly strung, morbidly sensitive and impatient of all checks to his ambition, Moussorgsky was frequently tempted to forget his troubles in an excitable and irregular mode of life which proved injurious to his health. After the death of his mother, matters grew worse, and in 1866, after a serious breakdown, he consented to live for a time in the house of his married brother at Minkino, and then recovered sufficiently to do some of his best work. In 1868, having exhausted the patience of his Department, he returned to St. Petersburg with the score of his national music-drama, 'Boris Godounov.' The operatic direction requested Moussorgsky to shorten the work and give more opportunity to the soloists. In this revised form the work was first performed at the Maryinsky Theatre, St. Petersburg, Jan. 24 (Feb. 6), 1874. In spite of much acrimonious criticism it must have interested the public, since it was given twenty times in the course of the season. It was performed in Moscow in 1889. In 1896 a new edition was issued, the instrumentation revised by Rimsky-Korsakov. It was produced in this form at Drury Lane in Sir T. Beecham's season, June 24, 1913, and made a great success in England, and subsequently in America (see CHALIAPIN). After 'Boris Godounov' Moussorgsky turned his attention to the dramatic story of the Princes Khovanstehin, suggested to him by Stassov in 1872.

From 1870–81 Moussorgsky continued to live and work in St. Petersburg. At first he shared rooms with Rimsky-Korsakov, but when the latter married, he found himself once more upon his own resources. The pinch of poverty grew intolerable, and his health was more and more undermined. A tour in South Russia with the gifted singer Mlle. Leonov gave promise of comparative prosperity. But it came too late. During the last years of his life Moussorgsky frequently had recourse to drugs and stimulants, in which he sought relief from constant nervous depression. It is sufficient to look at Repin's portrait of the composer painted shortly before his death, and compare it with Borodin's account of the smart young guardsman, and we shall need no further biographical commentary. In this slovenly, broken-down, but not unlovable personality we may find traces of the Moussorgsky of earlier days, at once the most imaginative and realistic of musicians; something, too, still lingers of Moussorgsky the humorist, the composer of such satires upon his contemporaries as 'The Gallery' and 'The Lay of the Classicist'; still more of Mous-

sorgsky the child-lover who had such tender insight into the children's world; but the most haunting impression of the portrait is that of the pitiful, tragic Moussorgsky, dying in the prime of life, his fine genius already dimmed and deteriorated, destined never to know the invigorating joy of recognition and success. He died in the Military Hospital of St. Nicholas, in St. Petersburg, on his forty-second birthday.

Moussorgsky is the closest follower of Dargomijsky. He is not less national in sympathy than the direct disciples of Glinka; but whereas their tendencies are lyrical and ideal, those of Moussorgsky are emphatically disposed to realism. In this respect, and also because he was pre-eminently a vocal rather than a symphonic composer, his musical temperament accords with that of Dargomijsky. His dominant idea was to bring music into closer relationship with actual life. In a letter to Vladimir Stassov he reveals his artistic intentions:

'To seek assiduously the most delicate and subtle features of human nature—of the human crowd—to follow them into unknown regions, to make them our own: this seems to me the true vocation of the artist . . . to feed upon humanity as a healthy diet which has been neglected—there lies the whole problem of art.'

This view, legitimate in its first expression, led the composer insensibly to an attitude of complete negation. Of all the Russians he is the only one to whom the epithet 'musical Nihilist' can be applied with any show of justice. Seeing nature in everything and making the exact copying of nature the first duty of the artist, Moussorgsky came to reject the formula of 'art for art's sake' as meaningless. To attempt in a work of art the union of beauty with the material object seemed to him a puerility belonging to the childhood of art.

In order to understand Moussorgsky's work and his attitude towards art, it is necessary to realise the social conditions under which he lived. He was a true child of the sixties, of that period of moral and intellectual ferment which followed the accession of Alexander II. and the emancipation of the serfs. Of the little group of composers then striving to give musical expression to their newly awakened nationality, none was so entirely carried away by the literary and political movements of the time as Moussorgsky. Every man was asking himself and his comrades the question posed by the most popular novel of the day: 'What shall we do?' The answer was: 'Throw aside social and artistic conventions. Make art the hand-maiden of humanity. Seek not for beauty but for truth. Go to the people. Hold out the hand of fellowship to the liberated masses and learn from them the true purpose of life.' To this democratic and utilitarian spirit, to this deep compassion for the people, to this contempt for the dandyism and dilettantism of an earlier generation, Moussorgsky strove to give

expression in his music, as Perov expressed it in painting, as Tchernichevsky, Dostoevsky and Tolstoi expressed it in fiction. We may disagree with his aesthetic principles, but we must confess that he carried out with logical sequence and conviction a considerable portion of his programme. In his sincere efforts to attain great ends he undoubtedly overlooked the means. He could never submit to the discipline of a thorough musical training as did Tchaikovsky and Rimsky-Korsakov. He preserved his originality intact, but at a heavy cost. The weakness of his technique has been exaggerated by those who put down all his peculiarities to ignorance; but in some respects—particularly as regards orchestration—his craftsmanship was certainly unequal to the demands of his inspiration, for his aims were very lofty. Had this been otherwise Moussorgsky's name would have been more closely linked with those of Berlioz and Richard Strauss.

His songs are the finest expression of his artistic intentions. The ordinary themes of lyric verse had no attraction for Moussorgsky. Conventional subjects were failures in his hands. His songs are a series of 'human documents' in which the psychology of the Russian people is faithfully reflected. The whole army of the 'humiliated and offended' supplied him with subjects. He has re-created these types of rural life with extraordinary fidelity to nature. He had also a vein of sardonic humour, and his musical satires upon the critics, priests and minor officials of his day are unique in their clever mimicry and mordant sarcasm. He is the Juvenal of musicians. In the series of songs entitled 'The Nursery' he has done for the children what he had already done for the peasantry: caught and fixed a whole series of child-types with all their moods, engaging, petulant, capricious and whimsical. The song-cycles, 'No Sunlight' and 'Songs and Dances of Death,' were composed during his last years of suffering, and are indeed the cries of one 'who departeth in darkness.' Had the realistic schools of painting and fiction never come into being, we might still reconstruct from Moussorgsky's songs the whole psychology of Russian life.

The national music-drama, 'Boris Godounov,' was written when Moussorgsky was at the zenith of his power, and is the chief foundation on which rests his reputation as an operatic composer. The libretto is based upon Pushkin's famous historical drama which bears the same title, some scenes being kept intact as regards the original text. It is full of stirring dramatic interest, for it deals with one of the most sensational episodes of Russian history. The heir of Ivan the Terrible was of weak intellect, consequently the real power passed into the hands of the regent, the capable and

MOUSSORGSKY

crafty Boris Godounov. The only obstacle between the usurper and the crown was the Tsar's younger brother Dmitri. Boris Godounov did away with him, and ruled wisely and well for many years. Then Nemesis came in the person of the False Dmitri, a young monk who declared himself to be the heir, rescued at the eleventh hour, and concealed in a monastery. The remorse, agitation and madness of Boris are finely depicted by Poushkin, who obviously had Macbeth in his mind when creating this character. In 'Boris Godounov' Moussorgsky discards the conventional divisions and ensemble pieces of Italian opera; while the chief interest is centred in the chorus and dialogue. The period is about 1600, and the scene is laid partly in the Kremlin, partly on the borders of Poland.

The action of Moussorgsky's second music drama 'Khovanstchina' takes place in the time of Peter the Great, when all Russia was divided between the Old order and the New. It would be impossible to point to anything in Russian music more intensely and touchingly national than the prelude to this work. The orchestral introduction is built upon national airs. The scene represents dawn on the river Moskva. The bells are ringing for matins, and as the sun rises, the gathering light reveals the Holy of Holies to all Russian hearts—the Red Square in Moscow. Tchaikovsky's '1812' Overture loses its thrill in comparison. The work was given at Drury Lane, July 1, 1913. The original edition of 'Boris Godounov' (1875) was limited, and existing copies are rare. In 1896 Bessel published a new edition, edited, somewhat drastically, by Rimsky-Korsakov, the composer's intimate friend. The corrections which the distinguished theorist made in Moussorgsky's work became the subject of acrimonious discussion. In 1906 the firm of Bessel published a further edition, in which the pages added to the opera at the urgent advice of friends, were restored to the score. These are the scenes in the house of the Polish grandee Mnishek, comprising the love scenes; the song of the Hostess of the Inn; portions of the first scene of Act I.; the episodes of the Chiming Clock and the Parrakeet; also passages in the scene between Pimen and Gregory. A fresh edition, prepared from the original version of the score, has been issued by J. & W. Chester (1925), London, edited, with a biographical and critical essay, by Robert Godet and R. Aloys Mosser. (The English translation of the Bessel edition is by Rosa Newmarch; that of the Chester edition by M. C. H. Collet.) As in 'Boris Godounov,' so also in 'Khovanstchina,' religious music is introduced. In the latter work the 'Rasskolniki' or 'Old Believers' play a prominent part, and Moussorgsky has made their music distinctly archaic in char-

acter, as it should be. Martha, the loyal, passionate, fanatical Rasskolnik, is one of Moussorgsky's finest achievements in musical portraiture. Before his death the composer entrusted the instrumentation of 'Khovanstchina' to Rimsky-Korsakov.

Besides these completed operatic works Moussorgsky in 1868 made an experiment in what he described as 'opéra dialogué.' He attempted to set to music, just as it stood, the prose text of Gogol's comedy 'The Matchmaker.' He abandoned the idea after completing the first act. Another unfinished opera was based upon Flaubert's 'Salammbô.' Fragments of this music were afterwards incorporated in other works. A third operatic subject which he took up for a time was Gogol's tale 'The Fair at Sorochinsk.'

The following is probably a complete list of Moussorgsky's compositions:

VOCAL MUSIC

OPÉRATIF

'The Matchmaker,' opéra dialogué (one act only); 'Boris Godounov,' national music drama in four acts with a prologue (completed 1870, first performed at the Maryinsky Theatre, St. Petersburg, in 1874); 'Khovanstchina,' national music drama in five acts (1872-80); fragments of an opera based upon Gogol's tale 'The Fair at Sorochinsk.'

CHORUS AND ORCHESTRA

'The Destruction of Sennacherib' (1867); 'Joshua Navin' (1877) —both these works based on original Hebrew themes; female chorus from 'Salammbô'; mixed chorus from 'Œdipus.'

SONGS

'Saul' (1863); 'Night,' 'Peasant Cradle Song,' 'Savishna' (The Idiot's song, 1865); 'Gopak,' 'The Wish,' 'The Seminarian' (1866); 'Mushrooming,' 'Hebrew Song,' 'The Little Feast,' 'The Goat,' 'The Maple' (?), 'The Swagwagger,' 'The Lassie' (1867); 'The Orphan,' 'The Nurse and Child,' 'The Gallery' (musical pamphlet, 1870); 'The Nursery' (seven pictures of child-life, 1868-70); 'Left Behind'; 'No Sunlight' (a cycle of six songs, 1874-75); 'Dances of Death' (four songs, 1875), published posthumously; 'The quiet Heir'; 'O, the Honour!'; 'Dawn'; 'The Vision'; 'Down the Don,' 'The Dnieper,' 'The Flea,' 'Callistratus,' 'The Traveller.'

ORCHESTRAL

Intermezzo in modo classico (B minor); Scherzo in B; Turkish March; fantasia, 'Night in the bare Mountain.'

PIANO-FORTE

Pictures from an Exhibition (ten musical sketches, subjects taken from pictures by the celebrated Russian architect Hartmann); Meditation; Une Larme; 'The Femur'; 'On the Southern Shores of Crimea'; 'In the country'; 'A Child's Joke'; Intermezzo.

MOUTH ORGAN, see ACCORDION.

MOUTHPIECE (Fr. *bec*, *bocal*, *embouchure*; Ger. *Mundstück*), that portion of a wind instrument which, as the name implies, is inserted into the player's mouth or applied to his lips.

Of the French words, *bec* (beak) is applied to the first variety, and *embouchure* to the second or the mouthpieces of brass instruments. As an Anglicised word the name *embouchure* is also applied to the mouth-hole in the head-joint of the transverse flute, which is never spoken of as the mouthpiece, although for purposes of comparison it is convenient to refer to it under this heading. (For *bocal* see CROOK.) Including, therefore, the orifice for sound production

in the transverse flute, mouthpieces may be classed into four groups, viz.

(1) The open end of a tube, across which a stream of air is blown, as when a note is produced from a Pandean pipe, or from the pipe of a common key. This is the simplest of all forms, and possibly the most ancient; it is the form adopted in the Nay or Egyptian flute. (See FLUTE.) In the ordinary modern or transverse flute, the open end across which the stream of air is directed is obtained by means of a lateral orifice.

(2) A tubular conduit inserted between the lips by which air is conveyed under pressure to a whistle as in the flageolet; or to enclosed reeds, either directly as in the cromorne, or indirectly through a wind-bag as in the bagpipe. The beaked mouthpiece of the recorder is merely a modified form of this tubular conduit, but by its name marks the distinction between the Flute-à-bec and the transverse flute.

(3) A beak-shaped chamber forming the upper end of single-reed instruments of the clarinet and saxophone types. One side is flattened to form a bed or table for the reed, and communication is opened with the general tube of the instrument by a slot out in this table.

This variety of mouthpiece can be applied, although rather ineffectively, to the Bassoon and its diminutives. The Dolcino or small bassoon in the B \flat of the four-foot octave, was actually played in military bands by means of a single reed as late as the early years of the last century, and even since then attempts have been made to revive this means of producing tone on the bassoon.

(4) Cupped mouthpieces, which are applied to the outer surface of the lips, not inserted between them. The lips thus stretched across the calibre of the cup form a kind of double reed, closely resembling the vocal cords of the larynx. Each instrument of this class has a somewhat different form of cup, which is described under their respective headings. In the older examples, however, and in those used by uncivilised tribes, the cup consists of a simple hole, at the end of a cow's horn for instance, or in the side of an ivory tusk, communicating with the medullary cavity. The transition from this to the shaped cup can be well seen in the Swiss alpenhorn, in which a small globular cavity, like the mouthpiece of the trumpet, is rudely carved out of the wooden strips of which the long tube is built up. In more finished instruments of this class, the mouthpiece is turned out of brass, ivory, aluminium, or silver, with a rounded cushion-shaped edge for the accurate and painless pressure of the lips. Glass has also been used, and of late the cushion has been made of vulcanised indiarubber.

In all the mouthpieces comprised in the third and fourth groups, the exact dimensions and proportions exercise a great effect upon the tone-quality. In those of the clarinet type the ruling factor is the exact degree of opening between the reed and the bed of the mouthpiece; this is technically called the 'spring' or 'lay.' In the cupped mouthpieces of brass instruments the variations are even greater and of more importance, for in addition to the general size suitable to the range of compass of each class, the exact form of the cup and rim and the diameter of the bore of each mouthpiece have a marked effect.

The cups of the mouthpieces of cornets, bugles and saxhorns are intermediate in character between those of the horn and trumpet.

Double-reeds, as used on the oboe and bassoon are mouthpieces only in the literal sense that they are placed in the mouth; they are described under REED.

W. H. S.; addns. D. J. B.

MOUTON, a 17th-18th century lutenist, pupil of Gaultier, lived at Turin between 1670-1700. He visited Paris in 1675 and 1678, and lived there entirely from 1700-20. Of his numerous and once popular compositions little is left. One book of *Pièces de luth sur différents modes* (published Feb. 27, 1699), was or is in private hands at Stockholm. Many MS. pieces are in collective volumes. His portrait has been engraved by Edelinck from a painting by de Troy (Q.-L.).

MOUTON, JEAN (b. dept. of Somme,¹ c. 1475²; d. St. Quentin, 1522), French composer. He was a pupil of Josquin, teacher of Willaert, musician to Louis XII. and Francis I. of France, canon of Thérouanne,³ and afterwards, like Jos-

¹ See *Joannis Mouton Sameracensis . . . aliquot moduli*; Paris. Le Roy & Ballard, 1555 (B.M. A. 139)—an edition apparently unknown abroad, or the word 'Sameracensis' would not have escaped attention. Glarean merely calls Mouton 'Gallus'. Fétis thinks, from the inscription on the tomb, that Hollingue, a little town near Metz, may have been his birthplace. In that case 'Sameracensis' may refer simply to Mouton's residence at St. Quentin.

² Date proposed by Fétis. Mouton's first publication appeared in 1505.
³ Whence he removed, probably, when the English took the town in 1513.

quin, canon of the Collegiate Church of St. Quentin, in which place he died, and was buried in 1522, the following words being inscribed on his tomb¹:

'Ce gist malstre Jean de Hollingue dit Mouton, en son vivant chantre du Roy, chanoine de Therouanne et de cet eglise, qui trepassa le penultieme jour d'Octobre MXXII. Priez Dieu pour son ame.'

When Petrucci began to print music, Mouton was in his prime, and the edition of five masses (a 4), which Fétis assigned to the year 1508, is an early example of a whole book devoted to one composer. This book, which Glarean² found 'in manibus omnium,' is now scarce, and Fétis thinks the copy of the second edition³ in the British Museum the only complete one. Burney carefully examined the fourth Mass,⁴ and scored several movements, discovering no variety of measure or subject, no melody, no ingenuity of contrivance, no learning of modulation. Yet the masses were highly valued in their day, reprinted by other publishers⁵ and much admired, according to Glarean and Le Roy,⁶ by Pope Leo X., Giov. di Medici.⁷ As for motets, Mouton saw twenty-one printed in the best collection of his time, Petrucci's Motetti de la Corona.⁸ Posthumous publications continued for nearly forty years, and the list of known printed works includes nine masses,⁹ about seventy-five motets and psalms, and a few French chansons. (See *Q.-L.*)

The British Museum has a single voice-part (superius) of Mouton's twenty-two motets printed by Le Roy in 1555, and happily a complete MS. score of the same collection. This gives many interesting pieces: the 'Nesciens Mater' (a 8) with four of the parts derived canonically from the others; the 'Quis dabit oculis' composed in 1514 on the death of Anne of Bretagne, Queen of France; some Easter pieces, 'Alleluia,' and 'In illo tempore,' and one for Christmas, 'Noc, noe, psallite,' on which Arcadelt afterwards wrote a Mass.

Burney has scored, besides the Mass movements, three motets,¹⁰ and in this style of com-

position finds Mouton more smooth and polished than his contemporaries. 'Life in a court' can scarcely account for it. Most great musicians of the time had the same surroundings. Glarean, more reasonably, attributes to zeal and industry the rare facility which separated Mouton from his fellows. The numerous examples drawn from his works for the 'Dodecachordon,' and the evident pride with which Glarean¹¹ recalls the meeting in Paris, are evidence of the high value set upon the French composer. Had Mouton left no compositions of his own, he would still be remembered as belonging to a remarkable line of great teachers—Okeghem, Josquin, Mouton, Willaert, Zarlino. J. R. S.-B

BIBL.—*Tribune de Saint Gervais*, Dec. 1899: MICHEL BRENET, *Jean Mouton*, with a full list of his works, E. DROZ and G. THIRIAULT, *Bibliographie des recueils de chansons du X^e siècle* (Paris, 1920)

MOVEMENT, a term most customarily applied to instrumental works of the cyclic order, suite, sonata, symphony, etc. It denotes any portion of such a work sufficiently complete in itself to be regarded as a distinct entity; for example, first *allegro*, *adagio*, *scherzo* or *finale*. In modern music of the kind a movement is rarely so entirely independent as to be detachable from its associated movements, save in the case of the suite. C.

MOYSES, MIKULÁŠ (b. at Vel'ka Slatina, Zvolen district, Mar. 6, 1872), Slovak composer. His musical gift was precocious, and at 10 he was able to play the organ and accompany the choir in church. His early education was in the gymnasium at Baňská Bystrica and the teachers' normal school at Kláštor. He studied music at the State Academy in Budapest, his chief subjects being the organ and composition, and left it with a teacher's diploma. He then took the post of organist at the cathedra. of Jager, and, later on, at Velký Varadin. He held several teaching appointments under the Hungarian Government, and, in 1908, settled down as professor of music in the Training College at Prešov. He remained there after the town had passed from Hungary to Czechoslovakia. His writings include an *Organ School* (1910, Nándor Kalman, Budapest); *Introduction to the Theory of Music* (1912, F. Kalman, Prešov. A Slovak edition in preparation). Among his compositions are: Mass in C major; a scherzo for orchestra (Slovak in style); songs, partsongs, compositions for organ and piano, etc.

A. K. and R. N.

MOZART. Of the family to which the great composer belonged six members only call for mention in a musical dictionary: viz. (1) the composer himself; (2) LEOPOLD, his father; (3) MARIANNE, his sister; (4) CONSTANCE, his wife; (5) and (6) KARL and WOLFGANG, his two sons. They are here discussed in the above order.

¹¹ Speaking of it continually in the 'Dodecachordon.' See pp. 296, 320, 464. They conversed by means of an interpreter.

¹ See *Statues St. Quentinaises* (St. Quentin, 1881-82, etc.) tom. 1, p. 302. Ch. Gomart, the author took the inscription from a MS. of *Quentin Delafosse*, but does not state where it is to be found. It is the only authority for the date of Mouton's death, and for his two church preferences.

² *Δωδεκάχορδον* (Basle, 1548), p. 464.

³ *Missa* J. Mouton (Pussimbrome, Petrus, Aug. 11, 1515), containing 'Missa sine nomine,' 'Alleluia,' 'Alma redemptoris,' another 'sine nomine,' 'Regina meorum' (B.M. K. 1, d 7).

⁴ For Burney's examples from Mouton, and critical notes, see *Musical Extracts* (vol. II, pp. 104, 134, 137, 169) in B.M. Add. MSS. 11,582. Most of the notes are incorporated in his *History* (vol. II, p. 533).

⁵ The 'Alma redemptoris' was reprinted, and a new one, 'dittes moy toutes vos pensées,' added in Antiqua's famous 'Liber quindecim missarum' (Rome, 1616).

⁶ See preface to *Joannis Mouton Sumeracensis*.

⁷ 'A passionate lover of music... the sounds of which were daily heard floating through the palace, Leo himself humming the airs that were performed' (Rankin's *History of the Popes*).

⁸ Eight in book I. (1514); ten in book II. (1519); three in book III. (1519).

⁹ Besides the six mentioned in notes above, the 'Missa d'Alle-magne,' 'Tua est potentia' and 'Quem dicunt' were printed. Fétis mentions a MR. 'Missa sine cadence' at Cambrai. Zarlino speaks of a Mass 'Benedicam Dominum,' a 6 (*Intitulation harm.* pt. IV, p. 414).

¹⁰ 'Quis dabit oculis,' 'Non nobis Domine,' composed in 1509 at the birth of Renée, daughter of Louis XII. Also 'Quam pulcra es,' which Burney likes so much that he gives the first movement in his *History*. This motet had in its own time been ascribed to Josquin.

(1) WOLFGANG AMADEUS¹ (b. Salzburg, Jan. 27, 1756; d. Vienna, Dec. 5, 1791).

LIFE

Even as a child of three Mozart showed his love of music in a remarkable manner. He listened eagerly to his sister Marianne's music-lessons, amused himself for hours with picking out thirds, and showed a good memory for the pieces he heard. Encouraged by these indications his father began, almost in play, to teach him little minuets on the harpsichord; but the boy showed such aptitude that the play soon became real work. Marianne's MS. music-book² was called into requisition, the father writing down in it pieces of progressive difficulty. The impulse to compose similar pieces for himself was soon roused in the boy; these, which already betray his feeling for beauty both of sound and form, he played to his father, who wrote them down in the book. Before long he was able to enter his own compositions. Schachtner the court trumpeter, and a friend of the family, relates many touching instances of his lively and essentially child-like disposition³; of his eagerness in learning anything, especially arithmetic; of his ear, which was so delicate that he could detect and remember to the next day a difference of half a quarter of a tone, and so susceptible that he fainted away at the sound of a trumpet; and of his earnestness over his music-lessons. His father wrote to him in 1778:

'As a child and a boy you were too serious even to be childish: and when sitting at the harpsichord, or doing anything in the shape of music, you would not stand a joke from any one. Indeed, from the precocity of your talent, and the extremely thoughtful expression of your countenance, many people feared you would not live to grow up.'

When a little over five and a half, Mozart took part in a comedy, 'Sigismundus Hungariae Rex,' set to music by Eberlin the court organist, and performed in the hall of the University of Salzburg, Sept. 1 and 3, 1761. There were about 150 performers, including young counts, students and chorists of the chapel.

The father, struck by the rapid progress of his children, determined to travel with them. Their first excursion was in Jan. 1762, to Munich, where the Elector received them kindly, and expressed great admiration; and encouraged by this success the family next went to Vienna, giving a concert at Linz by the way.

¹ He was christened in full Joannes Chrysostomus Wolfgangus Theophilus. Instead of Theophilus his father wrote Gottlieb—in Latin Amadeus. In his earlier letters Mozart added his confirmation-name Sigismundus. On his first works, and those engraved in Paris in 1764, he signs himself J. G. Wolfgang, afterwards Wolfgang Amade; in private life he was always Wolfgang.

² Now in the Mozarteum at Salzburg. On his seventh name-day (1763) Wolfgang received from his father a music-book of this sort for his own use, now in the possession of Dr. L. Koenig of Kiel. It consisted of a collection of little pieces by various composers written out by Leopold in the form of suites, and designed to serve both as an album of piano music and as a guide to the various forms of composition. It was published in 1922, with an introduction by H. Aberl.

³ Letter to Mozart's sister, dated Salzburg, 1792; given entire by Jahn, i. 21. The references throughout are, unless otherwise stated, to the English translation.

The reputation of the little prodigies had preceded them to Vienna, but the reality far exceeded the expectations formed by the court and nobility. The Emperor was especially taken with the 'kleiner Hexenmeister' (little magician), and in joke made him play first with one finger only, and then with the keyboard covered. Wolfgang asked expressly for Wagenseil, the court composer, that he might be sure of having a real connoisseur among his hearers. 'I am playing a concerto of yours,' he said, 'you must turn over for me.' He treated the Empress with all the frankness of an unspoilt child, jumping up into her lap, throwing his arms round her neck and kissing her. Of course the upper classes went wild about the children, and 'all the ladies lost their hearts to the little fellow.' But a change soon came, for Wolfgang took the scarlet fever, and even after his recovery people held aloof from fear of infection. After a short excursion to Pressburg the family returned to Salzburg in the beginning of 1763.

The father now considered himself justified in attempting a longer journey, his main objective this time being Paris. They left Salzburg on June 9, and travelled by Munich, Augsburg, Schwetzingen, Mainz, Frankfurt,⁴ Coblenz, Aix-la-Chapelle and Brussels, giving public concerts, or playing at the various courts. Wolfgang played the violin, and also the organ at the various churches.

They arrived in Paris on Nov. 18, and stayed five months. The children played before the court at Versailles, gave two concerts and excited the greatest enthusiasm. Grimm, the cultivated man of letters, took them up warmly, and was of great use in procuring them introductions and rendering services of various kinds. To show Wolfgang's talent in composition, the father had four sonatas for piano-forte and violin engraved, two (K. 6, 7)⁵ being dedicated to the Princess Victoire, the King's second daughter, and two (K. 8, 9) to the witty Comtesse de Tessé. The young musician's portrait was twice painted during his stay in Paris, by Carmontelle in the well-known family group, and by M. B. Olivier in the picture of a tea-party in the Prince de Conti's salon, which now hangs in the Louvre.⁶

They left Paris, Apr. 10, 1764, and went by Calais to London, where they took lodgings in Cecil Court, St. Martin's Lane.⁷ Here also they

⁴ Here the father announced in the programme, Aug. 30, that 'he would play with the keyboard covered,' thus turning the Emperor's joke to account. Here also Goethe heard him—'I was about 14, and I still distinctly remember the little man with his frizzled wig, and sword.' Eckermann's *Gespräche mit Goethe* (Leipzig, 1908), ii. 178.

⁵ The numbers throughout refer to Köchel's catalogue of Mozart's compositions. For the actual chronology of the works, however, the dates suggested by Wyzewa and Saint-Foix have generally been adopted.

⁶ It is possible, however, that this latter picture was painted during the Mozarts' return visit in 1766.

⁷ For the details of Mozart's stay, and the condition of music at the time, see Pohl's *Haydn and Mozart in London* (Vienna, 1897). Further particulars may be gleaned from Leopold's own diary published by Dr. A. Schurig in 1920 as *Leopold Mozart: Reisen und Reisen*, and from F. G. Edwards's *Musical Haunts in London* (1895).

met with a gracious reception at court, and the children, especially Wolfgang, made an extraordinary impression. The King put before the 'invincible' Wolfgang pieces by J. C. Bach, Abel, Wagenseil and Handel, which he played at sight, and also made him play on his organ, to the still greater admiration of everybody. He then accompanied the Queen in a song, and a flute-player in his solo, and improvised a charming melody to the bass-part of one of Handel's airs. He became very intimate with the Queen's music-master, J. Christian Bach, and with the singers Tenducci and Manzuoli, the latter of whom gave him singing-lessons of his own accord. He also made the acquaintance of the Hon. Daines Barrington, a man of very versatile attainments, who after putting him to the severest tests, wrote a paper for the Royal Society, in which he detailed the facts and his own admiration and astonishment.¹ After a second performance at court the children gave their first concert on Tuesday, June 5, at the Great Room in Spring Gardens. In the advertisement the father called his children 'prodigies of nature,' and directed special attention to Wolfgang; 'his father had brought him to England, not doubting but that he will meet with success in a kingdom where his countryman Handel, the late famous virtuoso, received during his lifetime such particular protection.' The town was very full for the King's birthday (June 4), and the receipts were as much as 100 guineas; moreover, many of the professors engaged declined receiving any remuneration for their services. The sensation was immense; even the father was astonished, and wrote home describing their progress. 'To play the British patriot' he next allowed Wolfgang to play the harpsichord and organ at a concert at Ranelagh on June 29, 'for the benefit of a useful public charity.'² After this the family went to Tunbridge Wells, then at the height of its vogue as a fashionable resort, returning at the end of July; shortly after the father took cold in returning from a concert at Lord Thanet's, and had a severe illness. During his convalescence they went to Chelsea, then a detached village, and lived at the house of a Dr. Randal in Fivefields (now Lower Ebury Street). Not being able to play any instrument, on his father's account, Wolfgang composed his first symphonies (K. 16, 17, 19),³ and amused himself with a number of experiments in composition which possess a special interest in that they were never intended for his father's eyes and never underwent correction by him.⁴ On their return to town the Mozarts

lodged at a Mr. Williamson's, No. 15 Thrift Street (now Frith Street, Soho); and on Oct. 25 were again invited to court. The father had six of Wolfgang's sonatas for harpsichord and violin (K. 10-15) engraved at his own cost, and dedicated to the Queen, who sent him 50 guineas. The last two concerts, in which 'all the overtures were of the little boy's own composition,' took place respectively on Feb. 21, 1765, at the Little Theatre, Haymarket, and May 13, in Hickford's Great Room, Brewer Street, the latter at reduced prices, as the charm of novelty had worn off. Here the children played a piece of Wolfgang's for four hands on the same harpsichord, a thing then quite new.⁵ The instrument was one with two manuals and pedals, as well as a Venetian swell, made by Burkhard Shudi for the King of Prussia.⁶

From this time the father put forth repeated invitations to the public to hear and test the youthful prodigies in private, 'every day from 12 to 3, admittance 2/6 each person,' first at their lodgings, and afterwards at the Swan and Hoop Tavern, Cornhill. Playing with the keyboard covered is mentioned as a special attraction. Visitors, however, became constantly fewer, in spite of the increasing urgency with which they were invited (the *Advertiser* of July 11 contains the last advertisement), and some popular disturbances, together with the appearance of the first symptoms of George the Third's malady, made the elder Mozart determine to leave the country. The family, however, first visited the British Museum (opened Jan. 15, 1759), to which the father presented Wolfgang's printed sonatas, and a copy of the engraving from Carmontelle's picture. In memory of his visit Wolfgang composed, by request, a four-part motet,⁷ his only vocal piece to English words, and presented the autograph to the Museum, receiving a note of thanks from the secretary, Mr. Maty (July 19, 1765). They left London on July 24, stopped at Canterbury, and at Bourne with Horace Mann, and on Aug. 1 left England for the Hague in consequence of an invitation to the court of Holland.

They were detained a month at Lille by Wolfgang's falling ill, and spent a few days at Ghent and Antwerp. They arrived at the Hague on Sept. 11 and were most graciously received by the Prince of Orange and his sister, Princess Caroline of Nassau Weilburg. On Sept. 30 the children gave a concert at which, according to the announcements, the 'overtures' were again all of Wolfgang's composition. In October, however, the little

² Probably the Lying-in Hospital (Surrey), the foundation-stone of which was laid in 1768.

³ K. 18 is merely a copy by Mozart, in score, of an Overture by Abel.

⁴ They are preserved in a little music-book now in the Berlin library, and were published by Breitkopf in 1909 under the title *Mozart als selbstthätiger Komponist*. The marked difference between them and the work written under Leopold's supervision is significant.

⁵ It is possible that this sonata has been preserved in a unique printed copy in the Bibliothèque Nationale. See G. de Saint-Folz, 'Une Sonate inconnue de Mozart,' *Revue musicale*, May 1921.

⁶ See A. J. Hipkins's *History of the Piano-forte* (1897). An account of the concert was given in the *Salzburger Zeitung*, Aug. 6, 1765.

⁷ 'God is our Refuge and Strength.' For facsimile of the autograph see Pohl's *Mozart in London* and Wyzewa and Saint-Folz's *W. A. Mozart*. The piece, edited by Dr. W. H. Cummings, was reprinted in *Musical News*, Jan. 27, 1906.

girl fell ill, and then Wolfgang took a violent fever which lasted many weeks. It was not till Jan. 1766 that the family was able to proceed to Amsterdam, where two further concerts were given, at one of which the symphony in B \flat (K. 22) was probably performed. In March they were again at the Hague for the fêtes on the occasion of the installation of the Prince of Orange as Stadtholder, for which Wolfgang composed harpsichord variations on an allegretto, and on the old Volkslied 'Willem van Nassau' (K. 24, 25), which were immediately printed. He also composed for the Festival a kind of concerto grosso which he called 'Galimathias musicum' (K. 32); it concludes with a fugue on the Volkslied. Six sonatas for PF. and violin (K. 26-31), dedicated to the Princess, were also engraved.

After spending a few days in Amsterdam and Utrecht, in each of which towns a concert was given, the Mozarts started on their return journey. Travelling by Malines, they arrived at Paris towards the end of April. The children played repeatedly at court, and their improvement was appreciated, but here too there was a falling off in interest. On July 9 they left Paris, and passing through Dijon and Lyons to Switzerland, spent many pleasant days at Geneva, Lausanne, Berne, Zurich and Schaffhausen. They were fêted everywhere, but most of all at Zurich by the poet Gesner, from whom they parted with great regret. From Geneva the father took his children over to Ferney, bearing a letter of introduction from Damilaville of Paris. But Voltaire had been in bed for six weeks, and Mme. Denis, Rameau's pupil, was ill too; 'Comment pourrais-je recevoir votre jeune joueur de clavecin? Ah! nous sommes bien loin de donner des fêtes!' he wrote to his friend in Paris; and so this strange encounter between Leopold Mozart the sincere believer and Voltaire the sceptic did not take place.¹ That the former should have desired it is a proof of his readiness to sacrifice even his scruples to the interests of his children. At Donaueschingen they spent twelve pleasant days with the Prince of Fürstenberg, who had music nearly every evening, and after remunerating them very handsomely, took leave of them with tears in his eyes. At Biberach Count Fugger of Babenhausen made Wolfgang compete on the organ with Sixtus Bachmann, a gifted boy two years older than himself; neither was able to obtain a decided advantage over the other. Passing through Munich, where the Elector was much pleased with Wolfgang's progress, the travellers returned to Salzburg in Nov. 1766.

The father's first care was to carry on Wolfgang's interrupted studies; and as a solid foundation he took him through Fux's *Gradus*

ad Parnassum. The Archbishop, not believing in the boy's powers, gave him the first part of a sacred cantata, 'Die Schuldigkeit des ersten Gebotes'² (K. 35), to compose under strict surveillance. The work was eventually performed on Mar. 12 and Apr. 2, 1767, by the students in the University hall.³ To this period also belong a Passions-cantate or Grabmusik (K. 42); a Latin comedy 'Apollo et Hyacinthus,' performed May 13, at the Aula; a series of arrangements, in the form of PF. concertos, of movements from sonatas by French composers (K. 37, 39-41); and possibly a 'cassation' (K. 99), a serenade (K. 100) and two symphonies (K. 76, 43). In the beginning of September the family, attracted by the approaching betrothal of the Archduchess Maria Josepha, went to Vienna; but they came in for a series of misfortunes. The Princess Josepha died of small-pox, the upper classes took flight for fear of infection, and the Mozarts also fled to Olmütz, where, however, both children took the disease, and Wolfgang was blind for nine days. Count Podstatzky generously gave them free quarters, and every care was lavished upon them. After their recovery they made a short stay at Brünn, where they were kindly welcomed by Count Schrattenbach and other nobles.

They arrived in Vienna in Jan. 1768, and were very kindly received at court; but the Empress was living in retirement after the death of her husband, and the Emperor set an example of parsimony which was scrupulously followed by the aristocracy. Worse than all was the envy and jealousy shown by other musicians. In the midst of these various difficulties and trials, however, the Emperor invited Wolfgang to compose an opera, and conduct it at the harpsichord. Coltellini's 'La finta semplice' (K. 51) was chosen, but a series of intrigues prevented its being produced. Wolfgang had, however, the satisfaction of producing his little German oporetta 'Bastien und Bastienne' (K. 50)⁴ in the private theatre of a Doctor Mesmer, who is probably to be identified with the celebrated discoverer of animal magnetism. He had also an opportunity of appearing in public as a composer, being commissioned to furnish a mass (K. 49), an offertorium (K. 47) and a trumpet-concerto⁵ for the consecration of the new church at the Waisenhaus. The ceremony took place Dec. 7, and Wolfgang conducted in presence of the Emperor and the court. During his stay at Vienna Mozart also composed two symphonies (K. 45, 48).⁶

² The MS. is at Windsor Castle.

³ Eannerte (*Mozart und einige Zeitgenossen*, Salzburg, 1877) quotes the notice in the University minutes: '1767, 12. Martii (Jovis): Vacatio (Post prandium). Hora media 7 in Aula Oratorum fuit decantatum a D. Wolfgang Mozart adulescentulo 10 annorum in modulos multos egregie redactum.'

⁴ The libretto was a German version, by F. W. Weiskern, of Madame Favart's 'parody' on Rousseau's 'Devin du village.'

⁵ This has not been preserved.

⁶ The string quintet, which Köchel assigns to this period (K. 46), is almost certainly an arrangement, possibly by Mozart himself, of the Serenade for Wind Instruments (K. 361) written in 1760. The MS. is not in Mozart's hand, and the superscription 'Salzburg 25 Jan. 1768,' cannot usually be correct.

¹ See *Voltaire musicien*, by Edmond van der Straeten (1878).

A great pleasure awaited Wolfgang on his return to Salzburg; the Archbishop had his rejected opera performed in the palace. He also made him his Konzertmeister, though without salary. Wolfgang again devoted himself to study, composing two masses (K. 65, 66), a Te Deum (K. 141) and a 'Cassation' (K. 63). His father now determined to carry out a long-cherished plan and to take his son to Italy, the golden land of music, and the one gateway to operatic fame. They left Salzburg in the beginning of Dec. 1769, and travelling by Innsbruck, where Wolfgang was greatly admired at a private concert given by Count Künigl, visited Roveredo, Verona, Mantua, Cremona, Milan, Lodi, where Wolfgang composed his first quartet, Bologna, Rome, Florence, Naples, and on their return, Bologna, Milan and Venice. At Roveredo Wolfgang played at Baron Todeschi's, and the day after played the organ in the parish church to an immense crowd. At Verona one of his symphonies was performed, and his playing at sight, and composing and singing an air to given words, caused great astonishment. His portrait was painted by Cignaroli, and poets celebrated his praises. In Mantua, at a concert of the Società Filarmonica, nine out of fourteen pieces were by Wolfgang. In Milan they were lodged in S. Marco, and Count Firmian, the Governor-General, who was a great connoisseur, introduced them to all the principal families. 'It is the same here as everywhere,' writes the father, 'so there is no need to describe it.' The foremost musician in the city, the aged Giambattista Sammartini (see SAN MARTINI), subjected Wolfgang to severe tests. After a brilliant soirée at Count Firmian's, for which he composed four airs to words by Metastasio (K. 88, 77-79), he was commissioned to write an opera for the next season. At Parma they admired the celebrated singer Agujari.¹ At Bologna they were most hospitably received by Count Pallavicini, who gave a brilliant concert, at which even Padre Martini was present, although he had then given up attending such functions. The father writes² that Wolfgang was more admired there than anywhere, and anticipates that from Bologna, the residence of so many artists and scientific musicians, his fame will soon spread over Italy. And he was right; for the recommendation of Padre Martini, the great church composer, and referee in all musical disputes, at once gave him a position in the eyes of the world. After each visit to the Padre, Wolfgang carried away a fugue to work out at home, and in every case acquitted himself to the satisfaction of the great contrapuntist. His acquaintance, too, with the great singer Farinelli was of service to him from an artistic point of view.

In Florence, where they arrived Mar. 30, the

Mozarts were graciously received by the Archduke Leopold, who had known them in Vienna. Wolfgang played at court, accompanied Nardini the great violinist, and solved, 'as easily as if he were eating a bit of bread,' the hardest problems set him by the Marquis de Ligniville, director of the court music and a thorough contrapuntist. Wolfgang copied for his own use nine pieces from the Marquis's Stabat Mater with thirty canons, and composed in imitation of it a 'Kyrie a cinque con diversi canoni' (K. 89). Here to his great delight he again met Manzuoli, who had taught him to sing in London. He also struck up a great friendship with Thomas Linley, the young composer of 14, who was a pupil of Nardini, and already gave remarkable promise. The two young artists were inseparable for the few days of Mozart's stay, and competed 'not like boys, but like men.' They parted with many tears, but never met again, Linley being drowned in 1778. Long afterwards in Vienna Mozart spoke of him, and lamented his early death.³ Burney says that the talk throughout Italy was of the two geniuses, little Mozart and 'Tommasino,' from both of whom much was expected.⁴

The travellers reached Rome on Wednesday in Holy Week, and went straight to the Sistino Chapel to hear Allegri's celebrated Miserere, when Wolfgang gave the well-known proof of his ear and memory by writing down the entire work, after one hearing, merely correcting one or two passages during the repetition on Good Friday. (See MISERERE.⁵) This feat made a great sensation. The principal people received him with open arms, and Wolfgang played everywhere. For these concerts he composed a symphony (K. 81) and two soprano airs (K. 82, 83).

On May 8 they went direct to Naples. Wolfgang was not invited to play before the court, but the nobility treated both father and son with great respect; they also met many previous acquaintances, who were of use to them in various ways, among them the English ambassador Sir William Hamilton. On the 28th Wolfgang gave a concert, which was brilliantly attended, and brought in a good sum. When he played at the 'Conservatorio alla Pietà,' his hearers were superstitious enough to attribute his marvellous execution to the charm of a ring on his finger, and when he laid it aside their astonishment knew no bounds. On June 25 they went back to Rome, and the Pope, in a private audience, bestowed on Wolfgang the order of the 'Golden Spur'—'the same that Gluck has,' as the father wrote home with pardonable pride. He also told, as a good joke, how the guards let them pass,

¹ Wolfgang's letter to his sister of Mar. 24, 1770, affords the chief testimony to the remarkable range of this singer's voice.

² Letter to his wife, Mar. 27, 1770.

³ Kelly's *Reminiscences*, 1st ed., i. 226.

⁴ *Present State of Music in France and Italy*, 1st ed., p. 247.

⁵ The *Miserere* which Mozart composed, probably in July or Aug. 1770 (K. 85), shows traces of imitation of this model.

taking Wolfgang for a young prince, and himself for his tutor. Now he was Signor Cavaliere Amadeo, and his father insisted on his thus signing his compositions. Wolfgang, however, was less pretentious, and soon let the title drop.

Leaving Rome on July 10, they arrived on the 20th in Bologna, where a great distinction awaited Wolfgang. The Accademia Filarmonica, after testing his powers,¹ admitted him to their ranks as 'compositore,' although the statutes, besides other qualifications, required that members should be at least 20. His election as 'maestro di cappella'² followed on June 5, 1771. Again they saw much of Padre Martini, and under his influence Wolfgang wrote for practice a series of sketches in the forms of strict counterpoint.³ Finally Martini gave him a formal testimonial.⁴

By Oct. 18 they were in Milan, and Wolfgang set seriously to work on his opera, before the completion of which the usual battles with the singers, and in this case with jealous rivals, had to be gone through. On Dec. 26, however, 'Mitrìdiate Rè di Ponto' was produced for the first time, Wolfgang conducting; and it was repeated to full houses twenty times, amid cries of 'Evviva il Maestro! Evviva il Maestrino!' After an excursion to Turin, they again passed through Milan on their way to Venice, entered into all the amusements of the Carnival, were fêted by the nobility, and gave a brilliant concert. On Mar. 12 they went to Padua, where Wolfgang played the organ in S. Giustina, and was commissioned to compose an oratorio, which Jahn conjectures to have been 'Betulia liberata' (K. 118), performed in all probability during Lent, 1772.⁵ After some days' detention in Vicenza and Verona, they arrived at Salzburg, Mar. 28, 1771. Mozart's success in Italy procured him two commissions—one from Milan for an opera for the Carnival of 1773, and the other from the Empress Maria Theresa for a dramatic serenata for the marriage of the Archduke Ferdinand, to take place in Milan in October. His stay at Salzburg was to last only five months, but during that brief period he not only completed his oratorio, but found time to compose a Regina coeli (K. 108), a litany (K. 109), an offertory (K. 72), a psalm (K. 93), three symphonies (K. 75, 73, 110) and three trios with organ continuo (K. 67, 68, 69). Father and son set out again on Aug. 13, 1771, and arrived in Milan on the 21st; but the libretto of the serenata was not ready till the end of the month. Wolfgang completed the score in a fortnight, a remark-

able instance of rapidity, considering that he had a violinist overhead, an oboe-player beneath, and a pianoforte-teacher next door, all hard at work the whole day long—a Babel of sounds which he, however, pronounced to be 'delightful (*lustig*) for composing, as it gave him ideas!' He was now so firmly established in the favour both of the court and the public, that he had no intrigues to encounter. He was on the best terms, too, with Hasse, who was composing 'Ruggiero,' and who, with commendable generosity, prophetically remarked, 'This boy will cause us all to be forgotten' (*Questo ragazzo ci farà dimenticare tutti*).⁶ The marriage of the Archduke and the Princess Beatrice of Modena took place on Oct. 15; Hasse's opera was performed on the 16th, and Wolfgang's serenata 'Ascanio in Alba' (K. 111) on the 17th, with a success which enabled the father to write home, 'I am sorry to say Wolfgang's Serenata has cut out Hasse's Opera to an extent I cannot describe.' Besides his fee, the Empress sent him a gold watch set with diamonds, with her portrait at the back. After the opera he composed another symphony (K. 112), and a divertimento (K. 113).

They returned home in the middle of Dec. 1771. In the last days of the year Wolfgang composed another symphony (K. 114), and was then laid up by serious illness. Meantime the Archbishop died, and Wolfgang was commissioned to compose an opera for the allegiance festival of his successor Hieronymus, Count von Colloredo, whose election caused universal astonishment and dismay. The work chosen was Metastasio's 'Il Sogno di Scipione,' an allegorical piece whose appropriateness to the occasion is not evident. Mozart does not seem to have bothered much about it; at any rate his setting (K. 126) is one of the dullest things he ever wrote. It was performed probably in May 1772. Between Feb. and Oct. of this year Mozart also composed seven symphonies (K. 124, 128-130, 132-134), four divertimenti (K. 131, 136-138), the well-known litany 'de venerabili' in B \flat (K. 125), and a Regina coeli (K. 127).

The travellers again set out for Milan on Oct. 24, 1772, and arrived on Nov. 4. Here Wolfgang completed his new opera, 'Lucio Silla' (K. 135), produced on Dec. 26, and repeated more than twenty times to crowded and enthusiastic audiences.⁷ Rauzzini was one of the singers, and Wolfgang composed for him a motet, 'Exsultate' (K. 165), which he sang in the church of the Theatines.

They returned in the beginning of Mar. 1773 to Salzburg, where Wolfgang, still strongly

¹ An antiphon was given him to set in four parts (K. 86).

² Jahn (2nd Ger. ed.) gives—Minutes, II, 613; Letter from the Father, I, 126; Test-composition, II, Notenbeilage vill.; Diploma, II, 614.

³ Jahn (2nd Ger. ed.), II, Notenbeilage v.

⁴ See Jahn (2nd Ger. ed.), II, 616.

⁵ There is, however, no record of this. Anton André is said to have possessed a copy of the libretto, which bore a note, apparently in Mozart's hand, to the effect that the work was first performed in 1786 (Jahn, I, 197).

⁶ Mennicke (*Hasse und die Gebrüder Grimm als Musikanten*, p. 433, etc.) questions the authenticity of this remark, chiefly on the ground that Leopold Mozart says nothing about it in his letters.

⁷ Such is Leopold Mozart's account (letter of Jan. 2, 1773). It is significant, however, as Dent remarks (*Mozart's Opera*, p. 42) that Mozart received no further invitation to write for the Italian stage.

under the influence of Italian models, composed four symphonies (K. 184, 181, 162, 182), a divertimento for wind-band (K. 166), a grand concerto for two violins (K. 190), a quartet (K. 180), a violin sonata (K. 56) and a mass (K. 167). In the summer the father and son took the opportunity of the Archbishop's absence in Vienna, to go there themselves. Their immediate object is not known, but probably the father was trying to obtain some court appointment. He had made a similar attempt in Florence, but without success. He wrote to his wife and daughter, 'Things will and must alter; take comfort, God will help us.' This visit to Vienna, though it failed of its immediate object, had an important bearing on Mozart's artistic career. He was brought once more into contact with German music. We are told that he here made acquaintance with some of Haydn's quartets—probably those numbered as op. 17 and op. 20, the latter being the series known as the 'Sun Quartets'—and that to these we owe the six quartets (K. 168–173) which he wrote in Aug., and to which he specially referred when he spoke of Haydn as his master in this form of composition. The fugal finales of the first and last of these quartets were obviously inspired by similar movements in these works by Haydn. During his stay at the capital he also wrote a serenade for Salzburg (K. 185), and 'was bold enough,' as his father wrote, to play a violin concerto at a festival in the Theatine monastery. His Mass in C major (the *Pater Dominicus Missa*, K. 66) was performed in Aug. at the Jesuit Church, and made a great impression. Other works of this period were a symphony (K. 199), a divertimento (K. 205) and some piano variations (K. 180).

Wolfgang's return to Salzburg at the beginning of Oct. 1773 was marked by an almost feverish outburst of creative activity. Before the end of the year he had composed a symphony (K. 200), his first P.F. concerto (K. 175), refashioned a string quintet (K. 174) which he had written in the previous year, and composed entr'actes and choruses for Gebler's heroic drama 'Thamos, König in Ägypten' (K. 345).¹ In the opening months of 1774 there followed four more symphonies (K. 183, 197, 201, 202); the first, in G minor, remarkable for its sustained earnestness of mood, the third, in A, a sparkling composition which marks the beginning of Mozart's conversion to the so-called 'gallant' style—a style in which depth and solidity tended to be sacrificed to brilliance of effect. To this transitional period also belong a sonata for P.F. duet (K. 358), a bassoon concerto (K. 191), two masses, in F and D respectively (K. 192, 194), a *Dixit* and *Magnificat* (K. 193), a serenade (K. 203), the first of the sonatas for P.F. solo (K. 279), and the varia-

tions for P.F. on Fischer's minuet (K. 179) that Mozart played so frequently on his tours. The P.F. sonatas written during the following autumn (K. 280–283) show Mozart fully converted to the new style.

On Dec. 6 the father and son started for Munich, where Wolfgang was engaged, through the influence of his patron, Count Ferdinand von Zeil, Prince Archbishop of Chiemsee, to compose an opera for the Carnival of 1775. Stimulated, doubtless, by the rich resources at his disposal, Wolfgang exerted himself to the utmost, and 'La finta Giardiniera' (K. 190), produced Jan. 13, 1775, was a great success. Schubart, who had heard it, speaks of the 'wonderful genius' of the composer, and adds, 'unless Mozart should prove to be a mere overgrown product of the forcing-house, he will be the greatest composer that ever lived.'² Court and public vied with each other in paying him attentions, and the court chapel performed one of his grand litanies (K. 125), two of his masses,³ and an offertorium, 'Misericordia Domini' (K. 222), written in haste at the request of the Elector, and an admirable specimen of strict counterpoint. The P.F. sonata in D (K. 284), interesting for its unexpected traces of French influence, appears also to have been written at Munich, at the suggestion of Baron Dürnitz.

Soon after their return to Salzburg in Mar. 1775, a series of fêtes was given at court in honour of the Archduke Maximilian, afterwards Archbishop of Cologne, and Wolfgang's dramatic cantata to Metastasio's much-used 'Il Rè pastore' (K. 208) was performed on Apr. 23. To the remainder of this year belong two airs for tenor (K. 209, 210); an air for soprano (K. 217); a divertimento (K. 213); a serenade (K. 204); a 'sonata' for organ and strings (K. 212); and, above all, the five violin concertos (K. 207, 211, 216, 218, 219).⁴ All these works are typical examples of Mozart's 'gallant' style in its extreme development. The concertos show that he was working at the violin, which he did to please his father, as he disliked playing at court, though it was one of his duties. His father writes to him, Oct. 18, 1777, 'You have no idea how well you play the violin; if you would only do yourself justice, and play with boldness, spirit and fire, you would be the first violinist in Europe.' Again, 'I suspect you have scarcely touched the violin since you were in Munich; I should be very sorry if that were the case'; and later, 'The violin is hanging up on its nail. I suppose'—and the conjecture was right. The remark about Munich refers to his Cassation (K. 287), 'Everybody was staring away; and I

¹ *Teutische Chronik*, 1775, p. 287.

² One of these was probably the *Missa brevis* (K. 220), which seems to date from this time, and bears obvious signs of hurried workmanship.

³ The authenticity, in the form in which it has been preserved, of the violin concerto in E \flat (K. 268) is open to question. See the article by G. de Saint-Foix in the *Bull. de la Soc. Union Musicologique* année II. (1922), fasc. I.

⁴ Partly rewritten by Mozart in 1779.

played as if I had been the greatest violinist in Europe.' Later, in Vienna, he preferred taking the viola in quartets.

The whole of 1776, and the greater part of the following year passed quietly in the old routine, numerous compositions testifying to Wolfgang's industry. This period may be divided into three main divisions: in the first, which extends from Jan. to Sept. 1776, Mozart is found refining the cruder features of his 'gallant' style, partly under the influence of a growing acquaintance with some of the more cultured members of Salzburg society such as the Countess Lodron and her daughters; in the second (Oct.-Dec. 1776) we see him, by way of further reaction, devoting himself for a time exclusively to religious music; in the third (Jan.-Sept. 1777) we find him renewing his acquaintance with the works of the older writers and undertaking other preparations for his forthcoming journey to Paris. To the first division belong a grand mass (K. 262); a litany 'de venerabili' (K. 243); an offertorium 'Venite populi' for two choirs (K. 260); four 'organ sonatas' (K. 225, 224, 244, 245); three PF. concertos (K. 238, 242, 246), the second of which, for three pianos, was written for the Countess Lodron and her daughters; three serenades (K. 239, 249 and 250, 101), of which the first is a curious composition for two small orchestras and the second the well-known Haffner¹ serenade; six divertimenti² (K. 240, 247 and 248, 251-254), of which the second, written for the Countess Lodron, is one of Mozart's finest works in this kind; and three arias (K. 126, 255, 256) for soprano, alto and tenor respectively. The second division is represented by three masses (K. 257, 259, 258), the last of which marks a definite advance in Mozart's attitude to religious music. To the third division belong a *Missa brevis* (K. 275); an offertorium (K. 277); the beautiful *Sancta Maria* (K. 273); two organ sonatas (K. 274, 278); a remarkable PF. concerto written for the French pianist Mlle. Jeunehomme (K. 271); a violin concerto³ (K. 271a), a 'Nocturne' for four orchestras (K. 286); four divertimenti (K. 270, 287, 289, 188), the second of which was written for the Countess Lodron as a companion piece to the work already mentioned, and is perhaps an even finer composition; a trio for two violins and bass (K. 266); a series of dances (K. 267); and a fine scena written for Mme. Duschek (K. 272).

Mozart was now 21 years of age, a skilled performer on three instruments, and at home in the most varied branches of composition.

His father had given him a conscientious and systematic education, protected him from all injurious influences, and made him concentrate his whole powers on his artistic cultivation. All that teaching could do for him had been done in Salzburg; the time had now come for him to go out into the world, and let the discipline of life complete the work. His existence at Salzburg had long been intolerable to him; beyond a few intimate friends he had no society; he was disgusted at the want of appreciation for art, and his relations with Archbishop Hieronymus became daily more and more strained. On this point both he and his father became anxious. Something must be done. Not daring as yet to send his son alone into the world, the father asked leave to take a professional tour with him. It was refused, the Archbishop's reason being, as he said afterwards, 'that he could not bear people going about begging in that fashion.' The cup was now full, and Wolfgang applied for his discharge.⁴ Irritated that any one should dare to leave him so abruptly, and quite aware of what he was losing, the Archbishop granted the request on Aug. 28, adding that, 'after the Gospel⁵ both father and son were free to seek their fortune wherever they pleased.' He relented, however, with regard to the father, who came to the painful resolve of sending his son away with his mother. It was true that she had little bodily, and still less intellectual energy; but she was an experienced traveller, and could be useful to her son in many practical ways. The necessary preparations were accordingly made, even to the purchase of a carriage, that they might present a suitable appearance. On Sept. 23, 1777, mother and son left home. The father bore up bravely till they were really off, and then going to his room, sank exhausted on a chair. Suddenly he remembered that in his distress he had forgotten to give his son his blessing. He rushed to the window with outstretched hand, but the carriage was already out of sight. His son, however, breathed freely when once fairly off; the deliverance from a position which he had long groaned under was delightful enough to mitigate even the pain of separation from his father and sister. Fortunately for him he could not foresee the life which lay before him—a life full to its close of crosses and disappointments, and with so few joys!

Their first halting-place was Munich, where Mozart was at once in great demand as a performer, but was not successful in his efforts to obtain a permanent appointment. At Augsburg he visited J. Andreas Stein, the celebrated

¹ Composed for the wedding of Elisabeth Haffner, the daughter of the Salzburg burgo-master. The work is so long that it was probably intended to be performed in sections at appropriate intervals in the festival.

² K. 254 is, in form, a PF. trio, but is described by Mozart himself as a divertimento.

³ This concerto was first published in 1907. The authenticity of the work, which in any case raises many problems, has been questioned by some critics, notably by A. Moser in his *Geschichte des Violinspiels* (1922).

⁴ This interesting document was found in the archiepiscopal archives of Freisinger the custodian, and published with other matter under the title of *Zur Lebensgeschichte Mozarts*, Salzburg, 1876; also copied in the Preface to Nohl's *Mozartbriefe*, 2nd ed., 1877.

⁵ 'Nach dem Evangelio.' Perhaps this means 'as the Gospel directs,' and is a hint at Mozart's reference, in his petition, to the passage about hiding one's light under a bushel.

maker of organs and pianofortes, and both at his house and in the monastery of St. Ulrich charmed all hearers by his playing. A concert, however, produced but a small sum. On Oct. 30 they reached Mannheim, where they stayed much longer than they anticipated. The good prospects which at first seemed to open before them were not indeed realised; but the visit formed a decisive epoch in Mozart's life. Under the Elector Karl Theodor, Mannheim possessed a good opera, with an orchestra containing virtuosi of the first rank, and at that time considered the first in Europe for instrumental music.¹ Mozart made great friends with Cannabich, an excellent conductor and good teacher, and gave pianoforte lessons to his daughter Rose, who for a time undoubtedly captured his heart. He also made the acquaintance of the poets Wieland² and Freiherr von Gemmingen, the composers Holzbauer³ and Schweitzer, Raaff the great tenor, Wendling, Ramm and Ritter, excellent performers on the flute, oboe and bassoon. Here also his playing, both on the pianoforte and the organ, was much admired, and he had opportunities of measuring himself with Sterkel and Vogler, neither of whom impressed him much. The latter, indeed, he positively disliked. Upon the failure of his attempts to gain admittance to the Elector's Chapel, Wendling, Ramm and Ritter tried to persuade him to accompany them to Paris and give concerts there. He was inclined to the plan, and his father agreed, though with reluctance; but when it came to the point he allowed his friends to start without him. The truth was he had again fallen in love, and this time more seriously. Aloysia, the second daughter of Fridolin Weber, prompter and copyist, was a gifted singer, with a fine voice and considerable beauty, and during an excursion to Kirchheim, where the Princess of Orange kept a private orchestra and had daily concerts, these qualities made a due impression upon Wolfgang. Aloysia returned his attachment, and allowed him to teach her singing; and he, touched by the poverty of the family, conceived the plan of taking her to Italy, and there writing a new opera for her first appearance. So romantic a proposition drove his father nearly out of his senses. In such a case quick action was everything. Urging upon him the doubtful character of the plan, he used all his endeavours to tear him away from those dangerous surroundings. 'Off with you to Paris, and that immediately! Take up your position among those who are really great—*aut Caesar aut nihil!* From Paris the name and fame of a man of talent spreads throughout the world.' As for his Aloysia, he

advised him to commend her to Raaff, who would not only be able to teach her, but whose good word would have great weight with impresarios. It was a hard struggle for Wolfgang, but his love for his father enabled him to defer to his authority, and the time for departure was fixed. Before leaving, however, he gave some concerts, at which he played, and produced both his compositions and his pupils; and now for the first time Mannheim became aware of what it was losing. Parting with the Webers was hard work; they all wept, and thanked him as their 'greatest benefactor.' In Mannheim he composed: a Kyrie (K. 322); two soprano arias, one for Aloysia Weber (K. 294), the other for Dorothea Wendling (K. 486a); a tenor air for Raaff (K. 295); two Lieder (K. 307, 308); two flute concertos (K. 313, 314); an andante for flute (K. 315); a quartet for flute and strings (K. 285)⁴; seven sonatas for PF. and violin, partly composed in Paris (K. 296, 301-306); three PF. sonatas (K. 309-311), including the beautiful one in A minor. In all these works it is easy to trace the influence of the 'Mannheim school,' especially evident in the sudden alternations of *piano* and *forte*.

Leaving Mannheim on Mar. 14, 1778, the travellers reached Paris on the 23rd. The father's anticipations did not in this instance prove correct; their old friend Grimm was still there, but by no means so devoted to their interests as he had been; the youth was not the same attraction as the marvellous boy had been; and the musical world was absorbed in the Gluck and Piccinni controversy. Nor had they succeeded in obtaining from Vienna a recommendation to Marie Antoinette. They were thus thrown upon their Mannheim friends, and upon Count von Sickingen, to whom von Gemmingen had given them an introduction. Wolfgang renewed his acquaintance with Piccinni, whom he had met in Italy, but they never got beyond the terms of ordinary courtesy; 'I know my business, and he his—that is enough,' writes Wolfgang. Gossec he calls 'my very good friend, and an uncommonly dry man.' There is no trace of any acquaintance with Grétry. Grimm procured him admittance to the Duo de Guisnes, who played the flute superbly, as Mozart says, and whose daughter was a skilful performer on the harp. Accordingly he had to compose a concerto (K. 299) for these two instruments, for which, as solo instruments, he cared less than for any others. To the daughter he gave daily lessons in composition, and he had a few other lady-pupils. But he was not given the opportunity of writing an opera. Noverre, ballet-master at the Opéra, promised to use his influence, which was great, in his favour; but all he did was to employ him to compose twelve

¹ Although Mozart had heard (and had written for) the clarinet before he became acquainted with this orchestra, it was at Mannheim that he first learnt its value as an orchestral instrument.

² Mozart drew a very unfattering portrait of the poet in a letter to his father dated Dec. 27, 1777.

³ Holzbauer's 'Günther von Schwarzbürg,' which Mozart heard during his stay, seems to have made a deep impression on him, as even in 'Die Zauberflöte' there are reminiscences of it.

⁴ Wysewa and Saint-Foré (II. 404) assign to this period another flute quartet (in G) printed in the Peters' edition but not recorded in Köchel.

pieces for his ballet 'Les petits riens.'¹ He composed a 'sinfonie concertante' (K. Anh. 9) for oboe, clarinet, bassoon and French horn, at the request of Le Gros, director of the Concert Spirituel, but it was never performed. Some airs in a *Miserere* by Holzbauer, produced at the Concert Spirituel without Mozart's name, passed unnoticed except by Gossec, who expressed great admiration. Le Gros afterwards ordered another symphony, which pleased greatly—the Paris or French symphony in three movements (K. 297); and at his request Mozart wrote a second Andante in place of the original one.

In the meantime, his mother, who had never been well in Paris, became seriously ill, and died in Wolfgang's arms on July 3. With great thoughtfulness he wrote to their friend Bullinger to prepare his father for the sad news, and then sent a letter direct. He felt he could not remain longer in Paris, and his father even urged his departure, especially as there was now some prospect for him in Salzburg, owing to the deaths of Adlgasser the court organist, and Lolli the old Kapellmeister. Moreover, the Archbishop had promised to allow him to go anywhere to superintend the production of an opera, should he be commissioned to write one. His last few days in Paris were cheered by his old London friend, Christian Bach, who had come over for the performance of his 'Amadis.' 'His joy, and mine too, at meeting again, you can well imagine,' he wrote to his father. With Bach came Tenducci, and the three spent a few pleasant days at the Maréchal de Noailles's château at Saint Germain. Mozart wrote a scena for Tenducci,² with accompaniment for pianoforte, oboe, horn and bassoon, and this was played by the Maréchal's servants, who were all Germans. In addition to the works already mentioned, Mozart composed during his stay in Paris: an overture for orchestra (K. Anh. 8); a quartet for flute and strings based on favourite airs of the day (K. 298); four sets of PF. variations on popular French tunes (K. 264, 265, 353, 354); four PF. sonatas (K. 330-333), and, in all probability, the little prelude for PF. (K. 395).

On Sept. 26, 1778, Mozart left Paris, still heavier at heart than he had entered it six months before, but displayed no haste in returning to his native town. He went by Nancy and Strassburg, which he reached in the middle of October. Here he gave three concerts, which produced much applause but little money, and played on Silbermann's two best organs in the Neukirche and St. Thomas. On Nov. 3 he started for Mannheim, although it was, as his father said, a foolish notion to go there when the court, the Webers, and his best friends were

all absent at Munich, and there was nothing for him to do. But it did him good to recall the old memories, and, as he said, 'I love Mannheim, and Mannheim loves me.' Besides, he had some prospect of an engagement for an opera. Seyler's troupe was still at the theatre; they were indeed only an operetta company, but there was some talk of founding a German national opera. Here, too, Mozart saw two of Benda's melodramas, 'Medea' and 'Ariadne auf Naxos,' and was so delighted with them that he willingly undertook to set von Gemmingen's 'Semiramis' in the same fashion.³ Von Dalberg, director of the theatre, also had his eye upon Mozart for his opera 'Cora,' although he was already in negotiation with Gluck and Schweitzer. However, all came to nothing; and his father, who had run into debt on his account, and had, moreover, great hopes of seeing him well placed in Salzburg, put forth his authority to make him return.—'You will start immediately on receipt of this.' The son obeyed, and by Dec. 25 was at Munich; but his father, anxious lest he should be detained for good, and fearing the proximity of his beloved, did not let him rest there. Cannabich and Raaff were indeed 'working for him hand and foot,' but there was no need for anxiety on Aloysia's account. Her family welcomed him warmly, but she who 'had wept for him' seemed now scarcely to remember him, and was even displeased that he had altered the fashion of his clothes. Yet he again offered her his musical homage, composing a grand aria (K. 316) suited to her present capabilities, to words taken from Gluck's 'Alceste,' and with an obligato accompaniment intended for Ramm and Ritter. This air was his farewell to Aloysia Weber, about whom he wrote to his father in May 1781,

'I did love her truly, and feel still that I am not indifferent to her; but luckily for me her husband is a jealous fool, and never lets her go anywhere, so that I rarely see her.'⁴

In mourning for his mother, disappointed in his first love, and with all his hopes falsified, Mozart returned in the middle of Jan. 1779 to the home of his childhood. In such circumstances the warmth with which he was received was doubly grateful. A good many of his old friends were still there to rally round him, but nothing could overcome his dislike of Salzburg. Even the duties entailed by his position as Konzertmeister and organist to the court and Cathedral⁵ were fulfilled as an irksome task.

¹ He took the libretto home with him to compose 'gratuitously.' 'You see,' he writes to his father, 'how strong my liking for this kind of composition is.' It is uncertain whether Mozart ever completed this work. See Jahn, ii. 78; Albert, i. 782.

² She was engaged as prima donna in Vienna in 1780, and married Joseph Lange, the court actor. She acknowledged afterwards that as a young girl she had not appreciated Mozart as highly as she ought to have done, but she became a great admirer of his music, and a true friend. She did not live happily with her husband, but their intercourse with Mozart was quite unconstrained. He composed for her in Vienna five more airs, and they gave mutual assistance at each other's concerts. Kelly (*Reminiscences*, i. 263) admired her as a singer of the first rank. Her voice had an exceptionally high range.

³ His father succeeded in getting him appointed successor to Adlgasser, with a salary of 400 florins (about £40).

¹ Discovered and printed some years ago. See NOVERAX.
² Tenducci appears to have taken this composition with him to London. Burney (see Barrington's *Miscellanies*, p. 289) speaks of it as a masterpiece of invention and technique (Fohl's *Mozart in London*, p. 121). Unfortunately it has now completely disappeared.

His desire to write for the stage was rekindled by the presence of the dramatic companies directed by Böhm and Schikaneder. With Schikaneder Mozart was soon on excellent terms, and it was to oblige him that he refashioned and supplemented the music to Gebler's 'Thamos' which he had originally composed in 1773. To this period also belongs the uncompleted German opera, on a libretto by Schachtner, to which André afterwards gave the title of 'Zaïde' (K. 344).¹

During his stay at Salzburg in 1779–80 Mozart produced the following works: two masses (K. 317, the 'Coronation Mass,' and K. 337); a Kyrie (K. 323); two vespers (K. 321, 339), among his best compositions; a Regina coeli (K. 276); two symphonies (K. 319, 338); an 'overture-symphony' (K. 318); a 'sinfonie concertante' for violin and viola (K. 364); a serenade (K. 320); a divertimento for string-quartet and two horns (K. 334); a concerto for two P.F.s. (K. 365); and three 'organ sonatas' (K. 328, 329, 336).

His next employment was most congenial. Through the exertions of his friends at Munich the grand opera for the Carnival of 1781 was put into his hands. The libretto was by Abbate Varesco, court chaplain at Salzburg, who consulted Mozart at every step, as he began the work at home. He went to Munich in the beginning of November, and at the very first rehearsals the music was highly approved by the Elector and the performers. His father even wrote to him from Salzburg, 'The universal subject of conversation here is your opera.' The Archbishop being in Vienna at the time, his father and sister were able to go to Munich for the first performance on Jan. 29, 1781. 'Idomeneo, Re di Creta,' opera seria (K. 366; ballet-music, K. 367), was enthusiastically received, and decided once for all Mozart's position as a dramatic composer. During his stay at Munich he also wrote a Kyrie (K. 341); two concert airs for soprano (K. 368, 369); two Lieder with mandoline accompaniment (K. 349, 351); and a quartet for oboe and strings for his friend Ramm (K. 370).

But while he was in the full enjoyment of the pleasures of the Carnival, into which he plunged as soon as his labours were over, he suddenly received a summons from the Archbishop to join him in Vienna.

He started immediately, and on Mar. 16, 1781, after a journey of four days, arrived 'all by himself in a post-chaise' ² in Vienna, where he was to remain, save for a few brief excursions, for the rest of his life. His first experiences in

the Austrian capital were not encouraging. He was made to live with the Archbishop's household, and dine at the servants' table—treatment in striking contrast to that he received from the aristocracy in general. The Countess Thun, 'the most charming and attractive woman I have ever seen in my life,' invited him to dinner, and so did vice-chancellor Count Cobenzl and others. The Archbishop liked the prestige of appearing in society with Mozart, Ceccarelli and Brunetti as his domestic virtuosi, but did not allow Mozart either to play alone in any house but his own, or to give a concert. He was obliged, however, to yield to the entreaties of the nobility and allow him to appear at the concert of the Tonkünstler-Societät. 'I am so happy,' Mozart exclaimed beforehand, and wrote to his father afterwards of his great success. At the Archbishop's private concert, too, he excited the greatest enthusiasm, though he was often addressed in that very house as 'Gassenhube' (low fellow of the streets). It was useless for his father to urge him to forbearance: he was determined not to remain in a position where he had such indignities to endure. The opportunity came only too soon. The Archbishop, detested by the nobility, and above all by the Emperor Joseph, did not receive an invitation to Laxenburg, the summer residence of the court, and in his disgust determined to leave Vienna. The household was to start first, but Mozart, 'the villain, the low fellow,' was turned out of the house before the others. He took lodgings with the Webers, who were living in the Petersplatz at a house called 'zum Auge Gottes.' At his next audience he was greeted with 'Lump,' 'Lausbubo' and 'Fex' (untranslatable terms of abuse). 'None of his servants treated him so badly,' continued the Archbishop. 'Your Grace is dissatisfied with me then?' said Mozart. 'What! you dare to use threats?' (using all the time the contemptuous 'Er'). 'Fex! there is the door; I will have nothing more to do with such a vile wretch' ('elenden Buben'). 'Nor I with you,' retorted Mozart, and turned on his heel. Not having received an answer to his application for his discharge, Mozart drew up a fresh memorial, with which he presented himself in the ante-chamber of this Prince of the Church; but as a culmination to all the brutal treatment he had already received, Count Arco, the high-steward, addressed him as 'Flegel' (clown), 'Bursch' (fellow), etc., and kicked him out of the room. This took place on the 8th of June. Mozart was now free, though he had not received his formal dismissal: 'I will never have anything more to do with Salzburg,' he wrote to his father, 'I hate the Archbishop almost to fury.' It was summer, the nobility were all going into the country, and there was no demand for either concerts or lessons. The

¹ It seems merely to want the overture and the concluding finale. André himself supplied these numbers for his edition. The score contains some of Mozart's most delightful music, and it is a pity that it is not better known.

² Generally quoted as overture composed for Bianchi's 'Villanella rapita.' Mozart wrote a trio and a quartet for performance in this opera, but is not known to have written an overture; nor are there any grounds, apart from tradition, for connecting this symphony with the opera.

³ Letter of Mar. 17, 1781.

Countess Rumbeck was his only pupil. Composition was of course his resource, and while thus employing his leisure, he fulfilled his long-cherished desire of writing an opera for the National Singspiel (German opera), founded by the Emperor in 1778. The Emperor interested himself in his favour, and he soon received a libretto to his taste. He was hurt, however, at finding himself passed over at the fêtes in honour of the Grand Duke Paul and his wife; even his 'Idomeneo' had to give way to two operas of Gluck's. His contest with Clementi, in the presence of the Emperor and the Grand Duchess on Dec. 24,¹ afforded him some slight compensation. He had previously (Nov. 16) played at the house of Archduke Maximilian, who was very fond of him, though under the circumstances unable to do anything for him. It was probably during this winter that he first met Haydn,² who visited the Viennese court to superintend the performance of the six quartets (op. 33) dedicated to the Grand Duke Paul. From this meeting dates a ten years' friendship which ceased only at Mozart's death, and which influenced for good the compositions of both masters. It is no coincidence that the greatest works of both were written after 1781. Haydn learned from Mozart a rounder phrase, a richer harmonisation, and a fuller command of the orchestra; Mozart learned from Haydn a wider range of structure, and a gravity and dignity of expression which are particularly noticeable in his later symphonies. Amongst the works written by Mozart before the production of 'Die Entführung' may be mentioned: four sonatas and two sets of variations for PF. and violin (K. 376, 377, 379, 380; K. 359, 360); two serenades for wind instruments (K. 361, 375); the sonata for two PFs. (K. 448); the prelude and fugue for PF. in C (K. 394); and two sets of PF. variations (K. 398, 352). In spite of unrelenting intrigues his 'Entführung aus dem Serail' (K. 384), libretto by Bretzner, was produced by the Emperor's express command, with great success, on July 16, 1782.³ Mozart was arranging it for wind-band when he received through his father a request for a serenade, to be composed in all haste, for the Haffners of Salzburg. This is the work which was afterwards transformed by Mozart into the well-known Symphony in D (K. 385). He had forgotten all about it, and when he came to rearrange it was quite surprised to find how good it was. At the same time Mozart also composed the fine serenade for wind instru-

ments in C min. (K. 388), better known in his own arrangement of it for string quintet (K. 406).

On the Grand Duke's second visit to Vienna in October, he attended Mozart's opera, which was still attracting 'swarms of people'; the composer conducted in person, 'to show himself the father of his own child.' Prague soon produced it with great success; a foretaste of the many honours Mozart was to receive in that city.

He found his new abode with the Webers very comfortable; but the world soon began to inquire whether he were not intending to marry one of the daughters. The report reached his father, who admonished him seriously; but Wolfgang solemnly declared that he was thinking of nothing of the kind, and to prove his statement took another lodging, in the 'Graben.' Here, however, the want of the attentions to which he had been accustomed drove him to a new step, for which we soon find him preparing his father. 'To my mind a bachelor lives only half a life,' he writes, and hesitatingly names the object of his love. 'But surely not a Weber?' 'Yes, a Weber, Constanze, the third daughter.' All attempts at dissuasion were vain; his resolution was fixed, and on Aug. 4, scarcely a month after the production of his opera, he led Constanze to the altar, at St. Stephen's. Bringing home his bride was his 'Entführung aus dem Auge Gottes' as he told his friends. 'As soon as we were married, my wife and I both began to weep; all present, even the priest, were touched at seeing us so moved, and wept too.'

His marriage involved Mozart in innumerable troubles. With many good qualities his wife was a thoroughly bad manager, and this was the worst defect possible, since Mozart was naturally careless in money matters, and his life as a busy artist was an unfavourable one for economy. The young couple began house-keeping with next to nothing, and their resources were uncertain at the best. No wonder, then, that in six months they were in serious difficulties; and so it went on to the end. His friends, the worthy Puchberg especially, were always ready to come to his assistance, but they could not prevent his often being put to embarrassing and humiliating straits. Without even a prospect of a fixed appointment he was thrown back upon lessons and concerts. Pupils were scarce, but he was more fortunate as a virtuoso; and for the next few years he was constantly employed with concerts, his own and those of other artists, and still more in playing at the houses of the nobility. Lent and Advent were the regular concert seasons in Vienna. The Emperor was frequently present, and always had a loud 'bravo' for Mozart, speaking of him, too, at his own table 'in the highest terms' as 'un talent décidé.' This makes it

¹ The theme of the sonata played by Clementi (*Œuvres*, vi. 1) on this occasion was utilised by Mozart in the overture to the 'Zauberflöte.'

² It is, however, just possible that the Haydn whom the Mozarts met at Augsburg in 1763 was the great Josef. See Schurik, *L. Mozart: Lebensaufzeichnungen*, pp. 22, 65.

³ July 12, in Jehn (2nd Germ. ed.), i. 648, is wrong, as is also the alteration to July 13 in the Eng. trans. (ii. 209). The Emperor is reported to have said, 'Too fine for our ears, my dear Mozart, and much too many notes,' meaning that the accompaniments overpowered the voices. Mozart answered frankly, 'Exactly as many notes as are necessary, your Majesty.'

all the more difficult to exonerate His Majesty from the charge of yielding to the efforts of those immediately about him, to prevent his bestowing some suitable post on Mozart. The latter writes on this subject to his father,

'Countess Thun, Count Zichy, Baron van Swieten, even Prince Kaunitz, are all much vexed at the little value that the Emperor puts on men of talent. Kaunitz said lately, when talking to the Archduke Maximilian about me, that men of that stamp only came into the world once in a hundred years, and that they ought not to be driven out of Germany, especially when, as good luck would have it, they were already in the capital.'

After the success of his first concert in Lent 1782, Mozart entered into an engagement with Martin, who had instituted a series of concerts held in the winter at the 'Mehlgrube,'¹ and removed in May to the Augarten,² where Mozart played for the first time on May 26. He afterwards joined the pianist Richter, who gave subscription concerts. Among the artists at whose concerts he appeared were the singers Laschi, Teyber and Storace, and his sister-in-law, Mme. Lange.

His own subscription concerts, generally three or four, were held in the theatre, at the Mehlgrube, or in the Trattnerhof, and being attended by the cream of nobility,³ produced both honour and profit. The programme consisted chiefly, sometimes entirely, of his own compositions—a symphony, two PF. concertos, an orchestral piece with an instrument concertante, three or four airs, and an improvised fantasia. The latter, in which he showed incomparable skill, always roused a perfect storm of applause. For each concert he composed a new PF. concerto, the greatest number and the best belonging to this time. With so much on his hands he might well say, when excusing himself to his sister for writing so seldom, 'Has not a man without a kreutzer of fixed income enough to do and to think of day and night in a place like this?' A list he sent to his father of the concerts for 1784 will best show the request he was in. During six weeks (Feb. 26 to Apr. 3) he played five times at Prince Gallitzin's, nine times at Count John Esterhazy's, at three of Richter's concerts, and five of his own.

Tired of waiting for an appointment, which must have been most trying to one of his excitable nature, Mozart seriously thought of going to London and Paris, and began to practise himself in English and French. He had even written to Le Gros in Paris about

engagements for the Concert Spirituel and the Concerts des Amateurs, but his father, horrified at the idea of a newly married man without resources thus wandering about the world succeeded in putting a stop to the scheme. As a compensation for the postponement of one desire, he was able to fulfil another, that of presenting his young wife to his father. Starting after her recovery from her first confinement (June 17) they reached Salzburg at the end of July 1783.

Before his marriage Mozart had made a vow that if ever Constanze became his wife he would have a new Mass of his own composition performed in Salzburg. The work was nearly ready, and the missing numbers having been supplied from one of his older masses, this fine and broadly designed composition (K. 427)⁴ was given at the end of August in the Peterskirche, Constanze herself singing the soprano part. Opera buffa having been reintroduced in Vienna he began a new opera, 'L'oca del Cairo' (K. 422), but after some progress found the libretto (by Varesco) so wretched that he let it drop.⁵ A second opera, 'Lo sposo deluso' (K. 430), only reached the fifth number, partly perhaps because he despaired of being able to produce it, as Sarti and Paisiello were then in Vienna, and the latter in particular was absorbing public attention with the triumph of his 'Il Rè Teodoro' (1784). In the meantime Mozart rendered a service of love to his friend Michael Haydn, who was incapacitated by illness from completing two duets for violin and viola for the Archbishop. The Archbishop characteristically threatened to stop his Konzertmeister's salary, but Mozart came to the rescue, and undertook to write the two pieces 'with unmistakable pleasure.' His friend retained his salary, and the Archbishop received the duets (K. 423, 424) as Haydn's. Mozart also took an active interest in his father's pupils—Marchand the violinist of 12 (then playing in Vienna), his sister Margarethe, then 14, afterwards Mme. Danzi, the well-known singer, and a child of 9, the daughter of Brochard the celebrated actor. He also became intimate with Marie Thérèse Paradies, the blind pianist, who was then in Salzburg, and for whom he afterwards composed a concerto (K. 456). The main object of his visit, however, was not fulfilled. It was only after long opposition that his father had unwillingly given his consent to his marriage, but Wolfgang hoped that his prejudice against Constanze would disappear on acquaintance; neither his father nor his sister, however, could ever reconcile themselves to the match.

Leaving Salzburg on Oct. 30, and stopping

⁴ Afterwards converted by Mozart into the cantata 'Davide penitente' (K. 469).

¹ A very old building, with rooms in which balls and concerts were held. A flour-warehouse in the basement gave its name to the house. It is now the Hotel Munch.

² See *Antiquarian*, vol. 1.

³ In the list of his subscribers for 1784 we find, besides his regular patrons, Countess Thun, Baroness Waldstätten, Count Zichy, van Swieten, etc., the Duke of Württemberg, Princess Lichtenstein, Anspersberg, Kaunitz, Lichnowsky, Lobkowitz, Paar, Palm and Schwarzenberg; the distinguished families of Bathany, Dietrichstein, Erdody, Esterhazy, Harrach, Herberstein, Kiegwitz, Noetzl, Palfy, Schaffgotsch, Stahrenberg and Waldstein; the Russian, Spanish, Sardinian, Dutch and Danish ambassadors; the eminent financiers Fries, Henckelslein, Arenfeld, Eisenfeld, Pleyer and Wetzlar; government officials of position, and scientific men, such as Isidore, Bedekovich, Nevsky, Braun, Greiner, Kess, Fuffendorf, Born, Martini, Sonnenfels, etc.

⁵ It was completed by André, with a Rondeau, quartetto from 'Lo sposo deluso,' finale from 'La villanella rapita,' by Mozart; was adapted to new words by Victor Wilder, and performed in Paris, Théâtre des Fantaisies-Parisiennes, June 6, 1867; at Vienna in the Carltheater, 1868; at Drury Lane, May 12, 1870.

at Lambach for Mozart to play the organ in the monastery, they found Count Thun waiting for them at Linz, and stayed with him for some time, being treated with every consideration. For a concert which Mozart gave in the theatre, he composed in haste a new symphony (K. 425).¹

In 1785 the father returned his son's visit, staying with him in the Grosse Schulerstrasse (now No. 8) from Feb. 11 to Apr. 25. He was rejected to find their domestic arrangements and money matters for the time being in good order. He found a grandson too—'little Karl's very like your brother.' Though not yet on thoroughly good terms with his son or his daughter-in-law, he derived all the old pleasure from his successes as an artist, and listened with delight to his productions. He had come just at the right time, when concerts were succeeding each other as fast as possible, and his son taking part in all; and at the first he attended his eyes filled with tears of happiness at Wolfgang's playing and compositions. The day after his arrival Wolfgang invited his friend Haydn and the two Barons Todi; and his father wrote home² a full account of this memorable evening. 'Three new quartets were played,' writes the happy father,

'the three [K. 458, 464, 465] he has added to those we already have [K. 387, 421, 428]; they are perhaps a trifle easier, but excellently composed. Herr Haydn said to me, *I declare to you before God as a man of honour, that your son is the greatest composer that I know, either personally or by reputation; he has taste, and beyond that the most consummate knowledge of the art of composition.*'

In return for this avowal Mozart dedicated to Haydn, with a laudatory preface, these six quartets, 'the fruits of long and arduous toil.' 'It is but his due,' he said, 'for from Haydn I first learnt how to compose a quartet.' The success of his pupil Marchand, and the great progress of Aloisia Lange, both as a singer and actress, also afforded pleasure to Leopold Mozart. It is a significant fact that a man of his way of thinking should have joined the Freemasons, avowedly through his son's influence. This, however, was their last meeting, for soon after his return from Vienna his health began to fail, and on May 28, 1787, he ended a life which had been wholly consecrated to his children.

Mozart the son belonged to the eighth and oldest Freemasons' Lodge ('zur gekrönten Hoffnung') in Vienna. His interest in the order was great, indeed he at one time thought of founding a society of his own to be called 'Die Grotte,' and had drawn up the rules. A letter to his father, during his illness, in which he enlarges upon the true significance of death to a Mason, is a proof of the serious light in which he considered his obligations. His connexion with the order also inspired many of his compositions. For it he wrote—'Gesellen-

reise (K. 468); 'Maurerfreude' (K. 471), a short cantata, at the performance of which his father was present shortly before his death; the noble 'Maurerische Trauermusik' (K. 477), for strings and wind; a 'Lied,' with chorus, and a chorus in three parts, both with organ (K. 483, 484), for the ceremony at the opening of the 'Neugekrönte Hoffnung' (by a decree of the Emperor Joseph) in 1785; and a short cantata for tenor, with closing chorus (K. 623), composed Nov. 15, 1791, the last of his recorded works which he conducted himself. A short adagio for two corni di bassetto and bassoon (K. 410), an adagio for two clarinets and three corni di bassetto (K. 411) and an unfinished cantata (K. 429) were also probably intended for Masonic use.

In Mar. 1785 Mozart produced at the concert of the Tonkünstler Societät a cantata, 'Davidde penitente' (K. 469), the materials for which he drew from his last unfinished mass (K. 427), writing the Italian words below the Latin, and adding two new airs.

After a long delay he was again gratified by an opportunity of writing for the stage. An opera-buffa had been organised as far back as Apr. 1783, and the Emperor had secured an excellent company³; and after a failure the National-Singspiel had been revived in Oct. 1785. A libretto, 'Rudolf von Habsburg,' sent to Mozart from Mannheim, remained unused, but at length he and Salieri were requested to supply German and Italian 'pièces de circonstance' for some fêtes in honour of distinguished visitors at Schönbrunn. To Mozart's lot fell 'Der Schauspieldirector' (K. 486), a one-act burlesque of operatic life by Stephanie the younger, produced at Schönbrunn, Feb. 7, 1786, and afterwards at the Kärnthnerthor Theatre.⁴

In the next month a gratifying performance of 'Idomeneo' took place at the palace of Prince Auersperg, by a troupe of titled and efficient performers, under Mozart's own supervision.⁵ This mark of the favourable disposition of the aristocracy towards him bore fruit, attracting the attention of Lorenzo da Ponte, the well-known dramatist. His proposal to adapt Beaumarchais's 'Mariage de Figaro' for Mozart received the Emperor's consent—reluctantly given on account of the political implications of the original plot—and the first performance of 'Le nozze di Figaro' (K. 492) took place after violent intrigues, on May 1, 1786. The theatre was crowded, and the audience enthusiastic; several numbers were repeated twice, and the little duet three times, and this went on at succeeding representations till the Emperor

¹ Including three English singers, Nancy Storace, her brother Stephen and the tenor Kelly.

² See R. Hirsch: *Mozart's Schauspieldirector* (1859). This Singspiel was given several times with a new libretto and several interpolations. A later attempt by Schneider (1861), introducing both Mozart and Schubäner, was particularly unfortunate.

³ He composed for it a new duet for soprano and tenor (K. 489) and a rondo for soprano with violin solo (K. 490).

¹ Dedicated to Count Thun. André imagined K. 444 to have been the one composed for this occasion, but this is a copy by Mozart of a work by Michael Haydn.

² Feb. 14, 1785.

prohibited encores.¹ Kelly, who took the parts of Basilio and Don Curzio, writes with great spirit:

'Never was anything more complete than the triumph of Mozart, and his "Nozze di Figaro," to which numerous overflowing audiences bore witness. Even at the first full band rehearsal, all present were roused to enthusiasm, and when Bennucci came to the fine passage, "Cherubino, alla vittoria, alla gloria militar," which he gave with stentorian lungs, the effect was electric, for the whole of the performers on the stage, and those in the orchestra, as if actuated by one feeling of delight, vociferated "Bravo! Bravo, Maestro! Viva, viva, grande Mozart!" Those in the orchestra I thought would never have ceased applauding, by beating the bows of their violins against the music desks.'

And Mozart?

'I never shall forget his little animated countenance when lighted up with the glowing rays of genius;—it is as impossible to describe it, as it would be to paint sunbeams.'

And yet, after all this success, nothing was done for him. Earning a living by giving lessons and playing in public was in every respect unsatisfactory. 'You lucky man,' he said to young Gyrowetz as he was starting to Italy, 'and I am still obliged to give lessons to earn a trifle.' Moreover, he soon found himself eclipsed on the stage by two new pieces, which for a time absorbed the public entirely; these were Dittersdorf's Singspiel, 'Doctor und Apotheker' (July 11), and Martin's 'Cosa rara' (Nov. 17). Again he resolved to go to England, and was again dissuaded by his father. A gleam of light came, however, from Prague, whither he was invited to see for himself the immense success of his 'Figaro,' which, like 'Die Entführung,' had been produced there immediately after its performance at Vienna. Count Johann Jos. Thun, one of the greatest amateurs in Prague, placed his house at Mozart's disposal, and he joyfully accepted the invitation. His first letter² gives a vivid picture of what he found at Prague, 'the one subject of conversation here is—Figaro; nothing is played, sung or whistled but—Figaro; nobody goes to any opera but—Figaro; everlastingly Figaro!' He was literally overwhelmed with attentions, and felt himself at the summit of bliss; at the opera, which was given quite to his satisfaction, he received a perfect ovation. Furthermore, two concerts were brilliantly successful; at the first, his new symphony (K. 504) having been loudly applauded, he sat down to the piano, and improvised for fully half an hour, rousing the audience to the highest pitch of enthusiasm. Again and yet once again he had to resume, till, obeying the general acclamation, he finished by extemporising variations on 'Non più andrai,' which completed his triumph. The receipts

also were thoroughly satisfactory. He chanced to let fall the remark that he should like to compose an opera for so intelligent and appreciative a public, whereupon the impresario Bondini at once took him at his word, and concluded a contract with him for an opera for the ensuing season, for which he was to receive the usual fee of 100 ducats. The distractions of society in Prague took up all his time, and his only compositions while there were nine contredanses for orchestra (K. 510)³ written for Count Pachtá, who locked him in for an hour before dinner for the purpose, and six German dances for full orchestra (K. 509).

On his return to Vienna after this magnificent reception, he felt his position more galling than ever; and his desire to visit England was re-kindled by the departure of his friends Nancy Storace and her brother, Kelly, and his pupil Attwood, who promised to endeavour to secure him some position there, so that he would be able to go without undue risk.

The libretto of 'Figaro' having proved so satisfactory, Mozart applied again to Da Ponte, and this time their choice fell upon 'Don Giovanni.' In Sept. 1787 Mozart and his wife went to Prague, and took lodgings 'Bei den drei Löwen' No. 420 in the Kohlmarkt. But his favourite resort was the vineyard of his friend Duschek at Koschirz near the city, where are still shown his room and the stone table at which he used to sit working at his score, often in the midst of conversation or skittle-playing.⁴ Before the production of his new opera, Mozart conducted a festival performance of 'Figaro' on Oct. 14, in honour of the Archduchess Maria Theresa, bride of Prince Anton of Saxony. He was very anxious about the success of 'Don Giovanni,' although, as he assured Kucharz, the conductor of the orchestra, he had spared neither pains nor labour in order to produce something really good for Prague. On the evening before the representation the overture was still wanting, and he worked at it far into the night, while his wife kept him supplied with punch, and told him fairy stories to keep him awake.⁵ Sleep, however, overcame him, and he was obliged to rest for a few hours, but at seven in the morning the copyist received the score, and it was played at sight in the evening. This first performance of 'Don Giovanni' (K. 527) took place on Oct. 29, 1787. On Mozart's appearance in the orchestra he was greeted with enthusiastic applause and a triple flourish of trumpets, and the opera was accompanied from beginning to end with rapturous

¹ There is, however, some doubt whether the dances listed by Köchel as No. 510 are those written for Count Pachtá or are even Mozart's work at all. See the note by G. Nottebohm quoted in the 2nd ed. of Köchel.

² The villa is now called 'Bertramka.' A bust of Mozart, by Seidan, was placed on a slight eminence in the grounds, and solemnly unveiled on June 3, 1876, by the then possessor, Herr Lambert Popelka.

³ Unless this is also a fairy story. Various conflicting accounts of the composition of the overture have been preserved. See, e.g., Dent, *Mozart's Operas*, pp. 190, 191.

¹ Kelly relates (*Reminiscences*, i. 262), 'When the singers were one day rehearsing, the Emperor said, "I dare say you are all pleased that I have desired there shall be no more encores." To which they all bowed assent, but Kelly said boldly, "Do not believe them, sire, they all like to be encoered, at least I am sure I always do."

² *Reminiscences*, i. 258, 269.

³ To his friend Gottfried von Jacquin, Jan. 15, 1787.

marks of approval. He had of course no time for other compositions, but his friend Mme. Duschek locked him into her summer-house to ensure his writing an aria he had promised her. He revenged himself by making it difficult, and would only give it her on condition that she should sing it at sight. It is one of his finest airs (K. 528).

About the time of his return to Vienna Gluck died (Nov. 15, 1787), and Mozart had reason to hope that some suitable position would now be open to him.¹ But the Emperor was in no hurry. By way, however, of recognising his recent triumph at Prague, and in order to retain him in Vienna (his hankering after England being well known), he appointed him Kammer-compositor with a salary of 800 gulden² (about £80). Mozart looked upon this appointment as a mere beggar's dole, and when, according to custom, he had to send in a sealed letter stating his income, he wrote bitterly, 'Too much for what I produce³; too little for what I could produce.' 'Don Giovanni' was not given in Vienna till May 7, 1788, and then did not please.⁴ Mozart added a new air for Donna Elvira, a short air for Don Ottavio, and a duet for Zerlina and Leporello.

In spite of the success of his last opera, Mozart's pecuniary condition continued desperate. This is shown convincingly by a letter (June 27) to his friend Puchberg, in which the poor fellow begs piteously for a loan, and speaks of 'gloomy thoughts which he must repel with all his might.' And yet at the very height of his distress he manifests extraordinary power. Besides other compositions, he wrote within six weeks (June 26 to Aug. 10) his three last and finest symphonies, in E♭, G minor and C (Jupiter) (K. 543, 550, 551). But other very congenial work awaited him. From the beginning of his life in Vienna he had been acquainted with van Swieten, director of the Hofbibliothek, who was a great amateur of classical music, and who with a small band of friends devoted every Sunday morning to studying the works of the old masters. He himself sang the treble,⁵ Mozart (who sat at the piano) the alto, and Starzer and Teyber tenor and bass. It was for these practices that Mozart sent for his MS. book of pieces by Michael Haydn and Eberlin, and afterwards for the fugues of Bach and Handel.

By 1788, however, van Swieten's practices had assumed larger proportions. At his instigation a number of gentlemen united to provide the necessary funds for performances of

oratorios with chorus and orchestra. The fine large hall of the Hofbibliothek served as their concert-room, Mozart conducted and young Weigl took the pianoforte. It was for these performances that Mozart added wind-parts to Handel's 'Acis and Galatea' (Nov. 1788), 'Messiah' (Mar. 1789), 'Ode to St. Cecilia's Day' and 'Alexander's Feast' (July 1790).⁶ (See ADDITIONAL ACCOMPANIMENTS.)

The whole-heartedness with which Mozart threw himself into the study of these older masters and strove to assimilate their style is shown not merely by the numerous contrapuntal sketches by him that have been preserved, but also by various compositions in which he has taken them for his model. Of these the most important are a Prelude and Fugue for PF. in C (K. 394); a Fugue in C minor for two PF. (K. 426), afterwards arranged for string quartet and provided with an introductory adagio (K. 546); a Suite for PF. in the Handelian style (K. 399)⁷; and a Fugue for PF. in G minor (K. 401). These were, however, only the more obvious fruits of his new studies, the influence of which can be traced no less certainly in almost everything he wrote from 1782 till his death in 1791.

Such work as this, however, did nothing to improve his pecuniary condition; and in the hope that the journey might bring to light some means of extricating himself, he gratefully accepted an invitation from his pupil and patron Prince Karl Lichnowsky, to accompany him to Berlin.

Leaving Vienna on Apr. 8, 1789, their first halting-place worth noting was Dresden, where Mozart played at court, exciting great admiration and receiving 100 ducats. He was well received also in private circles, and the general interest was increased by a competition with J. W. Hässler of Erfurt, then distinguished as pianist and organist.⁸ Without considering him a formidable opponent, Mozart acknowledged his talent. Here also he made the acquaintance of the poet Körner, and his sister-in-law Dora Stock, who drew a charming portrait of Mozart in silver-point. He produced a still greater effect in Leipzig, where he made the acquaintance of Rochlitz, who has preserved innumerable interesting traits both of the man and the artist.⁹ On Apr. 22 he played the organ in the St. Thomas Church, Doles the cantor and Görner the organist pulling out the stops for him. All present were enchanted, especially Doles, who could almost have believed in the

¹ Gluck had been 'Kammercompositeur' to Maria Theresa since Oct. 7, 1774.

² His father did not live to see this partial realisation of his hopes; he had died, as already stated, on May 28.

³ Viz. the dances for the Imperial Redouten-balls, which it was his duty to supply.

⁴ According to Da Ponte the Emperor said, 'The opera is divine, finer perhaps than "Figaro," but it is not the meat for my Viennese. When the saying was reported to Mozart he replied, "We must give them time to chew it."'

⁵ Diskant. Mozart's letter, Mar. 12, 1788.

⁶ The 'arrangement' of Judas Maccabæus, sometimes attributed to Mozart, was really the work of Starzer. As to the public adoption of these additional accompaniments in England, see *Mus. T.* 1899, p. 18. Of the beauty of Mozart's additions, in most instances, there can be no question; but they are not always faithful to the spirit of Handel's work. In recent years the 'Messiah,' at any rate, has often been performed with Handel's original instrumentation.

⁷ The concluding Sarabande of this Suite was not completed.

⁸ Hässler played a concerto of Mozart's at his concert in London, May 30, 1792. See Pohl's *Haydn in London*, pt. 2, p. 200.

⁹ In a series of articles in the *A. M. Z.* (1787-1802), subsequently reprinted in his *Für Freunde der Tonkunst*. Unfortunately Boettke was a born romancer, and must be read with caution.

restoration to life of his teacher, the great Bach himself. In return he made the choir of the Thomas-school sing Bach's 8-part motet 'Singet dem Herrn,' at which Mozart exclaimed with delight, 'Here is something from which one may still learn,' and having secured the parts of the other motets (no score being at hand), spread them out before him, and became absorbed in study.

On their arrival in Berlin the travellers went straight to Potsdam, where Prince Lichnowsky presented Mozart to the King, who had been anxiously expecting him. Frederick William II. was musical, played the violoncello well (he was a pupil of the elder Duport), and had a well-selected orchestra. The opera was conducted by Reichardt, and the concerts by Duport. The King's favourable anticipations were fully realised in Mozart, but Reichardt and Duport were set against him by his candidly replying to the King's question, what he thought of the band, 'It contains great virtuosi, but if the gentlemen would play together, they would make a better effect.'

On May 8 Mozart returned for a while to Leipzig, where, on the 12th, he gave a public concert. The programme consisted entirely of his own unpublished compositions, and at the close he improvised by general request; but the audience was a scanty one. For Engel, the court-organist, he composed a charming little gigue for pianoforte (K. 574). Returning to Berlin on May 19, he rushed to the theatre, where his 'Entführung' was being performed, and taking a seat near the orchestra, made observations in a half-audible tone; the second violins, however, playing D sharp instead of D, he called out, 'Confound it, do take D!' and was recognised immediately. He was much pleased to meet his pupil Hummel, who only became aware while playing of his master's presence at his concert. This time Mozart played before the Queen, but gave no public performance. The King sent him 100 Friedrichs d'or, and asked him to compose some quartets for him. As to the pecuniary results of the tour, Mozart wrote laconically to his wife, 'On my return you must be glad to have me, and not think about money.' The story goes that before Mozart left Potsdam the King offered him the post of Kapellmeister at a salary of 3000 thalers (about £600), but that the composer refused the offer, replying with emotion: 'How could I desert my good Emperor.' There is, however, every ground for believing that this story is a pure invention.¹ The musical outcome of the tour was even slighter. Apart from the little gigue already mentioned the only work which Mozart composed during his visit was the PF. variations on a theme by M. Duport (K. 573). He started on his homeward journey on May 28, and passing through Dres-

den and Prague, reached Vienna on June 4, 1789. He set to work immediately on the first quartet (K. 575) for the King of Prussia, and received a kind letter of thanks, with a gold snuff-box and a second 100 Friedrichs d'or. The two others (K. 589, 590) followed in May and June 1790.

His position still continued a most melancholy one, his wife's constant illnesses adding to his expenses. Again he applies to his friend and brother Freemason, Puchberg, 'for immediate assistance. I am still most unfortunate! Always hovering between hope and anxiety!' On Aug. 29 'Figaro' was revived² after a long interval, and it was no doubt the success of the revival that induced the Emperor to order a new opera, for which Da Ponte again furnished the libretto (said to have been founded on recent occurrences in Vienna). This was the opera-buffa 'Così fan tutte' (K. 588), produced Jan. 26, 1790, but soon interrupted by the Emperor's serious illness, terminating in death on Feb. 20. Musicians had little to expect from his successor, Leopold II., and there was no break in the clouds which overshadowed poor Mozart. The rough draft is still preserved of an application for the post of second Kapellmeister, but he did not obtain it. The magistrate did indeed grant (May 9, 1791) his request to be appointed assistant, 'without pay for the present,' to the cathedral Kapellmeister, which gave him the right to succeed to this lucrative post on the death of Hoffmann the Kapellmeister, but Hoffmann outlived him.

The coronation of the Emperor Leopold at Frankfort on Oct. 9 was the occasion of his last artistic tour. Having pawned his plate to procure funds, he started on Sept. 23, and after a journey of six days arrived in the ancient Reichstadt. He gave a concert on Oct. 15, in the Stadttheater, the programme consisting entirely of his own compositions. On the return journey he visited Mainz, Mannheim and Munich. At Munich, at the Elector's request, he played at a court concert given in honour of the King of Naples. He had not been invited to play before the latter in Vienna, and he wrote to his wife with some bitterness, 'It sounds well for the court of Vienna, that members of their own family should hear me for the first time at a foreign court!' Soon after his return to Vienna, Mozart had to take leave of his best friend, for Salomon, the impresario, had come in person to carry Haydn off to London.³ With a heavy heart he said good-bye to the only artist who understood him thoroughly, and honestly wished to see him prosper. They were never to meet again.

The year 1790 was a critical period in Mozart's life. The previous nine years, with all their hardships, had been for him one prolonged

¹ Mozart composed a new air (K. 577) for Mlle. Ferrarese del Bene.

² He made preliminary offers of a similar kind to Mozart.

¹ See Abert, I. 1004, 1005.

spell of creative activity, during which he had written nearly 200 compositions of the most varied character. It has not been possible to mention more than a few of these in the course of the preceding narrative; of the remainder the following are, perhaps, the most important: the great series of PF. concertos (K. 413-415, 449-451, 453, 456, 459, 466, 467, 482, 488, 491, 503, 537); two symphonies, in C (K. 425) and in D (K. 504); two serenades (K. 361, 375); two string quintets, in C (K. 515) and G min. (K. 516); the serenade for strings in G ('Eine kleine Nachtmusik', K. 525); a 'musical joke' for strings and two horns (K. 522); the quintet for PF. and wind (K. 452); two PF. quartets (K. 478, 493); a string quartet in D (K. 499); the E \flat divertimento for string trio (K. 563); the clarinet trio (K. 498) and quintet (K. 581); the PF. trio in E (K. 542); the violin sonatas in B \flat (K. 454) and A (K. 526); the sonata for two PF. (K. 448); of other PF. works the duet in F (K. 497), the sonatas in C minor (K. 457), with the fantasia (K. 475) afterwards associated with it, and in D (K. 576), the allegro and andante in F (K. 533), an adagio (K. 540), a rondo (K. 511), and two sets of variations (K. 455, 460); the aria for soprano 'Bella mia fiamma' (K. 528); and, last but not least, the song 'Das Veilchen' (K. 476). Towards the end of 1789 the strain seems already to have begun to tell, and in 1790 there is a marked falling off in the number of Mozart's compositions, the most important work, apart from 'Così fan tutte,' which was mainly written in 1789, being the quintet in D (K. 593), which was completed in December. In 1791 Mozart's affairs were, if anything, worse than ever, but he seems to have spurred himself to a final effort, with the result that the last year of his life is one of the most prolific periods in his whole career, and musically one of the most interesting. Apart from his last two operas and the Requiem, he wrote the string quintet in E \flat (K. 614); adagios for two basset-horns and bassoon (K. 410) and for two clarinets and three bassoons (K. 411); an adagio and rondo for harmonika, flute, oboe, violin and violoncello (K. 617); an adagio for harmonika solo (K. 356); three compositions for a mechanical organ (K. 594, 608, 616); his last PF. concerto (K. 595); the clarinet concerto (K. 622); a set of PF. variations (K. 613) and a minuet for PF. (K. 355); three lieder (K. 596-598); a bass air with obbligato double-bass and orchestra (K. 612); two masonic cantatas (K. 619, 623); the beautiful motet 'Ave verum corpus' (K. 618), and a few compositions of less importance, including the inevitable dance music for the court.

In March, Schikaneder, the Salzburg acquaintance of 1780, now manager of a little theatre in the grounds of Prince Starhemberg's house in the suburb of Wieden, invited Mozart to compose a magic opera to a libretto he had

himself written. Mozart, after some hesitation as to his fitness for the task, finally agreed, and set to work on the score, the greater part of which was written in a little pavilion¹ near the theatre, and in a summer-house in the little village of Josefsdorf, on the Kahlenberg, close to Vienna. To keep him in good humour, Schikaneder provided him with wine and amusing society—his enjoyment of which good things, grossly exaggerated, has tended more than anything to throw discredit upon his character.

In July, while hard at work, he received a visit from a stranger, who, enjoining secrecy, commissioned him to write a Requiem for an unknown individual.² The price (50, or, according to some, 100 ducats) was fixed, and Mozart set to work with the more ardour in that he had composed no church music since the Mass of 1783. But once more he was interrupted, this time by an urgent invitation from the Estates of Bohemia to compose an opera for the approaching coronation of Leopold II. at Prague. Mozart was on the point of stepping into the travelling carriage when the mysterious messenger suddenly stood before him, and asked what had become of the Requiem. Touched and distressed by the question, Mozart assured the man that he would do his best on his return; and so saying, departed with his pupil Süßmayer. He worked hard at the opera during the journey, Süßmayer filling in the recitative secco. The coronation took place on Sept. 6, and 'La clemenza di Tito' (K. 621) was performed the same evening in the National Theatre, in presence of their Majesties and a select audience, who were too much absorbed by the occurrences of the day to pay great attention to the opera. Indeed, the Empress is said to have made very disparaging remarks on the 'porcheria' of German music. Mozart, who was not well when he came to Prague, suffered severely from the strain, but he spent a few pleasant hours with his friends, and parted from them with tears.

Disappointed and suffering he reached home in the middle of September, and at once set to work with energy at Schikaneder's opera. The overture and introductory march to the second act were finished Sept. 28, and two days later, on the 30th, the 'Zauberflöte' (K. 620) was given for the first time. Mozart conducted at the piano, Süßmayer turned over for him, and Henneberg, who had conducted the rehearsals, played the bells. It was coldly received at the outset, and at the end of the first act Mozart, looking pale and agitated, went on the stage to Schikaneder, who endeavoured to comfort him.³

¹ Now on the Kapuzinerberg in Salzburg, a gift from Prince Starhemberg.

² Proved after his death to have been Count Walsegg, an amateur anxious to be thought a great composer, who really had the Requiem performed under his own name. The messenger was his steward Lextgeb.

³ Schenk, in his MS. autobiography, tells how he had a place in the orchestra at the first performance, and was so enchanted with the overture that he crept up to the conductor's chair, seized Mozart's hand and kissed it. Mozart, putting out his right hand, looked kindly at him, and stroked his cheek.

The audience recovered from their coldness so far as to call for Mozart at the close, but he was with difficulty persuaded to appear before the curtain. The interest in the opera increased, however, with each representation, and soon the 'Zauberflöte' was as great a 'draw' as Schikaneder could desire.

Mozart now hoped to be able to devote his whole time to the Requiem, but his late exertions and excitement had proved too much for him, sorely tried as he was in other respects. Fainting fits came on, and he fell into a state of deep depression.¹ His wife tried in vain to raise his spirits. During a drive in the Prater, he suddenly began to talk of death, and said with tears in his eyes that he was writing the Requiem for himself. 'I feel certain,' he continued, 'that I shall not be here long; some one has poisoned me, I am convinced. I cannot shake off the idea.'² By the advice of his physicians, his terrified wife took the score away from him, and he rallied sufficiently to compose on Nov. 15 a cantata (K. 623) for his Lodge to words by Schikaneder. He even conducted the performance himself; but the improvement was of short duration, and he took to his bed. Now, when it was too late, favourable prospects opened before him. He was informed that some of the nobility of Hungary had clubbed together to guarantee him a yearly sum, and at the same time a subscription was got up in Amsterdam, for which he was to furnish compositions to become the property of the subscribers. When the hour for the theatre arrived, he would follow in imagination the performance of the 'Zauberflöte,' and the Requiem continued to occupy his mind. On Dec. 4 he had the score brought to him in bed, and tried a passage, singing the alto himself, while his brother-in-law Hofer took the tenor, and Schack and Gerl from the theatre the soprano and bass. When they got to the first few bars of the *Lacrimosa*, it suddenly came home to him that he should never finish it, and he burst out crying, and put away the score. In the evening Süßmayer came in, and he gave him some directions about the Requiem, with which his thoughts seemed constantly occupied, for even while dozing he puffed out his cheeks as if trying to imitate the drums. Towards midnight he suddenly sat up with his eyes fixed; then he turned his head on one side, and appeared to fall asleep. By one o'clock in the morning of Dec. 5, 1791, his spirit had fled. He died of malignant typhus

fever.³ At three o'clock in the afternoon of the 6th his body was removed to St. Stephen's⁴; the service was held in the open air, as was the custom with the poorest class of funeral, and van Swieten, Süßmayer, Salieri, Deiner, Roser and Orsler stood round the bier. They followed as far as the city gates, and then turned back, as a violent storm was raging, and the hearse went its way, unaccompanied, to the churchyard of St. Marx. Thus, without a note of music, forsaken by all he held dear, the remains of this prince of harmony were committed to the earth—not even in a grave of his own, but in the common paupers' grave.⁵

The whole rev. with further addns. by C. B. O.

PERSONALIA AND PORTRAITS.—Mozart was short, but slim and well-proportioned, with small feet and good hands. As a young man he was thin, and it was then that the prominence of his nose was most noticeable; later in life he became much stouter. His head was somewhat large in proportion to his body, and he had a profusion of fine hair, of which he was rather vain. His large blue eyes were well-formed, with fine eyebrows and lashes, but as a rule they looked languid, and his gaze was restless and absent. His general appearance was perhaps somewhat insignificant, and it was partly for this reason, no doubt, that he was very particular about his clothes, and wore a good deal of embroidery and jewellery. When playing, however, his appearance was completely different. His countenance changed, his eye settled at once into a steady calm gaze, and every movement of his muscles conveyed the sentiment expressed in his playing.

Of the numerous portraits that tradition has associated with Mozart's name only a few are of indisputable authenticity. These, together with one or two which are probably though not certainly genuine, are set out in the following list⁶:

¹ The official certificate gives 'ein hitziges Frieselfieber' as the cause of death, and Schiedermair (p. 468) quotes a remarkable passage from an unpublished diary by Karl Burzy which seems to support this diagnosis. Dr. J. Barrard, however, in his study *De quoi est mort Mozart?* (*Chronique médicale*, 1905; reprinted in his *Promenade d'un médecin à travers l'histoire*, 1906) unhesitatingly rejects it. His opinion is that Mozart's death was the result of a complete collapse of the system, brought on by prolonged overwork, and culminating in some kind of nephritis. There is no ground for the oft-repeated assertion that Mozart died of consumption.

² Rauhensteingasse, on the site of the present Galvan'sche Gebäude, in the vault of which the builder has placed a bust of Mozart.

³ By van Swieten's orders the strictest economy was observed in the funeral arrangements. The site of the actual grave was soon forgotten; but the city of Vienna erected on the probable spot a handsome monument by Hans Gasser, solemnly unveiled on the anniversary of Mozart's death, Dec. 6, 1859.

⁴ For further information see vol. II. of Dr. Schurig's biography (2nd ed.), pp. 441-52, the same author's *Leopold Mozart: Reiseaufzeichnungen*, pp. 83-97, and two excellent papers by E. Speyer, one ('Mozart at the National Gallery') in the *Burlington Magazine* for Mar. 1916, and the other ('Some Notes on the Iconography of Wolfgang Amadeus Mozart') in the *Musical Quarterly* for Apr. 1919. The detailed article by Emil Vogel in the *Jahrbuch der Musikbibl. Peters für 1899* is still of value. With the exception of No. 6, all the portraits here mentioned are reproduced in Schurig's biography, and the majority of them in the 5th vol. of L. Schiedermair's ed. of the *Lettere*.

¹ A note (Jahn, III, 358) to some unknown person (? De Ponte) strikingly confirms this.

² It is notorious that Salieri was very much suspected, but he indignantly repudiated the accusation. His own words (reported by Niemcewicz, p. 81) prove that he was not displeased at Mozart's death: 'It is indeed a pity to lose so great a genius, but his death is a good thing for us. If he had lived longer not a soul would have given us a bit of bread for our compositions.' The answer given to the accusation by Salieri's friend, Kapellmeister Schwaneburg, was, to say the least of it, remarkable: 'Pazzi! non ha fatto niente per meritar un tal onore.' (Geosse!) what has he done to deserve so great an honour? This legend is the subject of a powerful little sketch by Pouchkin which was set to music by Rimsky-Korsakov.

1. 1762. An oil-painting, by an unknown artist, representing the composer in the Archduke Maximilian's gold-laced suit, given him by the Empress. This now hangs in the Mozart Museum.

2. 1763. A small family picture in water-colour painted by Carmontelle in Paris. Mozart is seated at the harpsichord, presumably accompanying his sister, who is singing. Leopold stands behind his son with his violin, possibly playing an obligato accompaniment. The picture is preserved in several replicas, one of which is now in the National Gallery.¹ It was engraved by Delafosse,² and has been frequently reproduced since.

3. 1763 or 1766. An oil-painting by M. B. Ollivier, now hanging in the Louvre. It represents a tea-party in Prince Conti's salon, with Mozart—a very tiny figure—playing at the harpsichord.

4. 1764-65? A portrait of the young Mozart with a bird's nest in his hand, possibly by Zoffany and painted during the Mozarts' visit to London, as Zoffany's name is mentioned in Leopold Mozart's diary among the notabilities whose acquaintance he made there. The portrait, which was formerly in an English collection, was acquired in 1924 by the Salzburg Mozart-Genossenschaft.

5. 1770. A portrait painted at Verona, now in the possession of Dr. K. Kupelwieser of Lunz. (See *PLATE LI.*) Leopold Mozart mentions 'Sgr. Cignaroli, Pittore' in the list of his acquaintance at Verona. The portrait is generally ascribed to one of several painters of that name.

6. 1770. A portrait-group by an unknown artist, painted on the occasion of Mozart's reception into the Accademia Filarmonica di Bologna (Oct. 9, 1770). The composer is shown exhibiting a contrapuntal exercise to a nobleman (Count Baldassare Carrati?) in the presence of a third person in clerical dress (Petrone Lanzani, the Kapellmeister of the Academy). This picture remained unknown until 1925, when it was discovered in the shop of a dealer at Bologna, among a number of canvases purchased from the Municipality, and said to have been formerly in the possession of the Liceo Musicale.³

7. 1771? A three-quarter length oil-painting, by an unknown artist, representing Wolfgang wearing his diamond ring. This portrait, which has been in the possession of the Salzburg family of Helmreich von Brunnfeld ever since Mozart's own day, is said to have been painted in Salzburg in 1771.⁴

8. 1773? An ivory miniature, formerly in the possession of Mozart's sister. It was possibly painted by Martin Knoller, who is mentioned by Mozart in a letter dated Feb. 20, 1773, during the composer's stay in Milan.

9. 1777. A portrait in oils representing Mozart as a 'Knight of the Golden Spur'. The original, which was painted at Bologna, has disappeared, but the Liceo Musicale possesses a copy made at Salzburg for the Padre Martini.

10. 1777. An ivory miniature, painted in Mannheim in Nov. 1777 and presented by Mozart to his cousin Marie Anna Thekla Mozart (the 'Bäsele' of his letters). It is now in the possession of Frau Justizrat Marie Vogel of Regensburg.

11. 1780. A family group painted by J. N. della Croce at Salzburg in the autumn of 1780 and now in the Mozart Museum. The picture shows Wolfgang and Marianne playing a duet upon the harpsichord. The father is seated at the side of the instrument, and the mother's portrait hangs on the wall.

12. 1786. An engraving by G. A. Sasso after a drawing by G. B. Bosio. The original has not been preserved. Mozart is seated at the harpsichord, on the top of which lies a score of 'Figaro'. The portrait, which is certainly not flattering, bears every sign of having been done from the life.

13. 1788. The profile by Leonard Posch, the best-known of all portraits of the composer. This has been preserved in many forms, the relation of

which to one another has only recently been established.⁵ There are two main types. In the first the head and neck only are shown; the hair falls in loose curls, and there is no indication of any clothing. The second shows the complete bust; the hair is dressed in the typical Mozartian manner and the composer is wearing a cloak. The original of the first type is undoubtedly a wax-relief now in the Mozart Museum at Salzburg. It bears the artist's signature on the back and is dated 1788. In 1820 it was presented by him to the composer's son Franz Xaver Wolfgang, who ultimately presented it to the Museum. Posch seems also to have made a number of plaster copies of it, one of which is now in the possession of Franklin Hildegard Lehnert of Berlin. The second type represents a later and more realistic treatment of the same portrait, possibly undertaken at the request of Mozart's friends. The original, which was in a mixture of plaster and wax, has now disappeared. It was formerly in the possession of the sculptor C. Waschmann, who took a bronze cast from it in 1904, which is now in the Department of Coins and Medals of the National Museum at Vienna. This version has been preserved in two other forms which may both have been the work of Posch himself: in a box-wood relief, and on a belt-clasp, said to have belonged formerly to the composer's wife. Both are now in the Mozart Museum. The well-known engravings by J. G. Mansfeld (during Mozart's lifetime) and by A. Kohl (1793) were also based on this second type.

14. 1789. A portrait in silver-point by Dora Stock, the sister-in-law of Körner and friend of Schiller, drawn during Mozart's short stay in Dresden in 1789, and now in the Musikbibliothek Peters at Leipzig. Artistically this is the finest of all the portraits.

15. 1791? An unfinished portrait by Lange, Mozart's brother-in-law, now in the Mozart Museum. Mozart is shown, seated at the piano, apparently absorbed in improvisation. The date of this picture has been the subject of much discussion.⁶ Tradition associates it with the last year of the composer's life, possibly on account of its unfinished character. Some writers, on the other hand, maintain that it was the original of one of a pair of miniatures (now lost, but preserved in the form of lithograph illustrations to Nissen's biography) which Mozart sent to his father in 1783. This, however, is a pure assumption, and in the absence of definite information the later date, which the character of the portrait seems to support, may be accepted.

These are the only portraits of Mozart the credentials of which can be considered satisfactory.⁷ Of the doubtful or unauthenticated portraits the best-known are those ascribed to T. Helbling, A. de Saint-Aubin, P. Battoni, Greuze and Tischbein. Full particulars of these and of numerous other portraits will be found in the literature referred to above.

Mozart was fond of active exercise, which was the more necessary as he suffered materially in health from his habit of working far into the night. At one time he took a regular morning ride, but had to give it up, not being able to conquer his nervousness. It was replaced by billiards and skittles, his fondness for which we have already mentioned. He even had a billiard-table in his own house: 'Many and many a game have I played with him,' says Kelly, 'but always came off second best.' When no one else was there he would play with

¹ Reproduced in the *Burlington Magazine*, Mar. 1916. Another is preserved in the Musée Chantilly, and there are at least two versions in private collections in England.

² It is curious that Leopold Mozart in a letter dated Apr. 1, 1764, explicitly states that the portrait was being engraved by 'M. de Mechel' (Christian von Mechel, 1736-1813).

³ See the articles by R. Prunieres (*Rev. musicale*, Oct. 1925) and by E. Schade (*Die Musik*, Feb. 1926). Both are accompanied by reproductions of the picture.

⁴ Dr. Schurig prefers to date it about 1774, but does not give his reasons. In 1920 it was acquired for the Mozart Museum.

⁵ By R. Lewicki, in two papers in the *Zeitschrift für Musikwissenschaft*, 1919-1920. See also a note in the *Mozartiana Mitteilungen* for Feb.-May 1921.

⁶ See especially the article by E. Speyer in the *Musical Quarterly* for Apr. 1919 where a good case is made out for the later date.

⁷ While Mozart lay on his death-bed Count Deym, for whose mechanical clock he had written one or two pieces, took a death-mask, and with its aid constructed a wax figure which he dressed in the composer's clothes and exhibited in his gallery. The mask, or at least a copy of it, remained in the widow's possession, until she smashed it one day while cleaning. She is said to have remarked that 'she was glad that that was the end of the hateful old thing.' (Schurig, *L. Mozart*, p. 92, *Constanze Mozart*, p. 26; L. Nohl, *Mozart nach der Schilderungen seiner Zeitgenossen*, p. 998.)

MOZART

From a painting by an unknown artist, in the collection of the late Dr. Karl Kupelwieser

his wife, or even by himself. His favourite amusement of all, however, was dancing, for which Vienna afforded ample opportunities. This, too, Kelly mentions (i. 226): 'Mmo. Mozart told me that, great as his genius was, he was an enthusiast for dancing, and often said that his taste lay in that art, rather than in music.'

In society Mozart found amusement of the highest kind, and inspiration, as well as affection and true sympathy. No house offered him so much of these as that of Countess Thun, whom he described as 'the most charming and attractive lady I have ever seen.' Other associates were the Countess's son-in-law and Mozart's pupil Prince Karl Lichnowsky, Hofrath von Born, Baron Otto von Gemmingen, Hofrath von Spielmann, Prince Kaunitz, Count Cobenzl, Field-Marshal Haddik, Geheimrath von Kees, who had weekly orchestral concerts at his house, the botanist Jacquin and his son and daughter, Count Hatzfeld, an intimate friend who played in his quartets, Kaufmann Bridi, a good tenor who sang in 'Idomeneo,' the families Greiner, Martinez and Ployer, all of whom had constant music, and the Baron van Swieten, who kindled his enthusiasm for the works of Bach and Handel. Another great admirer of his was Burian the physician, 'that noble man, my best and dearest friend, who saved my life' (when seriously ill in 1784), and whose unexpected death in 1787 was a great shock to him. It is easy to imagine how gratefully the composer enjoyed the refreshment of social intercourse after long hours of solitary creative work. On such occasions he was full of fun, ready at a moment's notice to pour out a stream of doggerel rhymes or irresistibly droll remarks; in short, he was a frank, open-hearted child, whom it was almost impossible to identify with Mozart the great artist. His brother-in-law Lange¹ says that he was never so unlike a 'great man' as when he was occupied with some important work.

It has been reiterated *ad nauseam* that Mozart was a drunkard, whose indulgence in this and cognate vices brought him to an early grave,² but that such a charge was totally unfounded no one who has studied his life can doubt for a moment. That, like other people, he enjoyed a good glass of wine nobody can deny, but his laborious life and the prodigious number of his compositions convincingly prove that he was never given to excess. Those who accused him of intemperance also magnified his debts tenfold when he died, and thus inflicted grievous injury on his widow.³ These 'friends' propagated the worst reports as to his domestic affairs and constant embarrassments. Undoubtedly his

wife was a bad manager, and this was a serious defect in a household which only acquired a regular income (800 fl., about £80 !) in 1788, and whose resources before and after that time were most irregular. Her constant illnesses, too, were a great additional burden. Though naturally unfitted for anything of the kind, Mozart made many serious attempts to regulate his expenses, and would every now and then keep strict accounts of income and expenditure, but these good resolutions did not last.⁴ In most cases he was led astray by sheer good-nature, as he never could refuse any one in need. His kindness was grievously abused by false friends, whose acquaintance was damaging to his character, but he never learned prudence. The worst offender in this respect was Stadler, the eminent clarinet-player, who often dined at his table, and repeatedly wheedled money out of him under pretext of poverty. After all that had passed, Mozart composed a concerto (K. 622) for Stadler's tour, finishing it two days only before the production of the 'Zauberflöte,' when he was, of course, particularly hard pressed.

Mozart was brought up by his father as a pious Catholic, and although subsequently, when he became interested in freemasonry, he found himself drifting further and further away from strict orthodoxy, he never definitely broke with the Church. The peculiar tone—there is more than a trace of mysticism in it—which his religious opinions took on in his later years comes out clearly in a letter which he wrote to his father in Apr. 1787, when Leopold was already lying on his death-bed. 'As death,' he writes, 'is, strictly speaking, the true end and aim of our lives, I have for the last two years made myself so well acquainted with this true, best friend of mankind, that his image no longer terrifies, but calms and consoles me. And I thank God for giving me the opportunity (you know what I mean⁵) of learning to look upon death as the key which unlocks the gate of true bliss. I never lie down to rest without thinking that, young as I am, before the dawn of another day I may be no more; and yet nobody who knows me would call me morose and discontented. For this blessing I thank my Creator every day, and wish from my heart that I could share it with all my fellow-men.' The best commentary on this passage is Mozart's own 'Maurerische Trauermusik,' written some two years before.

A few words on various aspects of Mozart's life as an artist may serve as a suitable transition to a discussion of his music. First, as to his methods of composition. There can be no

¹ *Biographie des Joseph Lange k. k. Hofchauspieler* (Vienna, 1804), p. 172.

² Compare Schlichtegroll's *Nekrolog*. Arnold's language is even worse (*Mozart's Geist*, p. 68).

³ His association with Schikaneder gave some colour to the reports. Hummel protested vehemently against such accusations.

⁴ In one of these orderly fits he began (1784) a thematic register of all his compositions as they were completed, and continued the practice up to a short time before his death. This invaluable document was first published by André in 1805 (revised ed. 1828).

⁵ A reference to the doctrine of the Freemasons.

doubt that with Mozart the creative process was to a very large extent completed before he put pen to paper. The work of recording his ideas was in the main a purely mechanical task, and one that he always tried to postpone to the very last moment. But his thoughts were always occupied with music. 'You know,' he wrote to his father, 'that I am, so to speak, swallowed up in music, that I am busy with it all day—speculating, studying, considering.' Many works which seemed to be thrown off on the spur of the moment may thus have been the fruit of long meditation: the rapidity with which he committed them to paper, often in the intervals of playing billiards or skittles, must not be taken to imply a careless and light-hearted attitude towards his art. His handwriting was always, even when he was most hurried, beautifully neat and clear, and he very rarely found it necessary to make any alterations and erasures. Several manuscripts have, however, been preserved which show that he occasionally made preliminary sketches for passages which presented some special difficulty.

As a performer Mozart distinguished himself as a virtuoso on the pianoforte, organ and violin; the viola, which he preferred to the violin in later life, he played only when he took part in chamber music with his friends. As a pianist he impressed his contemporaries above all by his marvellous gift of extemporisation. 'If I might have the fulfilment of one wish on earth,' said his biographer Niemetschek, 'it would be to hear Mozart improvise once more on the piano; those who never heard him cannot have the faintest idea what it was.' The qualities in performance on which he laid the greatest stress were a singing tone, a quiet steady hand, a strict sense of time, and a smoothness of execution that made rapid passage-work 'flow like oil.'

As a teacher of music Mozart was never in very great request. Such men as Steffan, Kozeluch and Righini had a far larger number of pupils. Mozart, it is true, hated the work, but poverty often drove him to it, and from 1778 till the end of his life he was scarcely ever free from the necessity of giving lessons, either in clavier-playing or in composition. When he found pupils who could really profit by his instruction he spared no pains, although even with them he was never methodical enough to make an ideal teacher. When Hummel came to him in 1787 he took him into his house in order to be able to supervise his instruction more thoroughly, but, as it turned out, his lessons were extremely irregular, and the less tangible influences of daily intercourse with the master were probably of more value to him than any special tuition that he received. Thomas Attwood, who came to him from Italy in Aug. 1785 to study composition and, accord-

ing to Kelly, became his favourite pupil,¹ used to say that Mozart 'would at any time rather play a game of billiards with him than give him a lesson.' Kelly himself, who had some talent for song-writing, wished to have some instruction from Mozart in composition, but the latter dissuaded him from it, on the ground that it was too late for technical training to do him anything but harm.² Mozart also gave lessons in composition to a niece of his friend the Abbé Stadler. The music book in which she worked her exercises is still preserved in the Nationalbibliothek at Vienna, and is interesting as showing how strictly Mozart kept to the orthodox 'theory' of the day, however much he may have seasoned its exposition with characteristic jokes and playful remarks.³ His pianoforte pupils were more numerous, and included several ladies, some of them of high rank. Of the majority little is recorded except that they were Mozart's pupils, and perhaps that recognition was all that they sought. Others, however, such as Franziska von Jacquin, Barbara Ployer, Josephine Aurnhammer, and above all Frau von Trattenrath, wife of the wealthy bookseller, possessed real talent, and some of the composer's best music was written specially for them.⁴

MUSIC

Köchel's catalogue of Mozart's compositions records roughly some 600 authentic works that have been preserved, and a large number which, when he compiled his list, were considered to be of doubtful genuineness or were known only by name. Very few of these works were printed in Mozart's lifetime, although many were in circulation in manuscript copies. Practically the whole of this vast mass of music has, however, now been published in the standard edition of the master's works issued by Breitkopf & Härtel. The following classified list, based on the catalogue of this edition, and providing a rough index to it, shows at a glance the number and variety of the works included. Wherever possible the year of composition has been added, as established by the latest research. In many cases, however, the dates given are conjectural only.

¹ *Reminiscences*, I. 228. 'Attwood is a young man for whom I have a sincere affection and esteem: he conducts himself with great propriety, and I feel much pleasure in telling you that he partakes more of my style than any scholar I ever had, and I predict that he will prove a sound musician.' Mozart's tuition was certainly the making of Attwood. In spite of two years' study under Neapolitan masters he seems to have been amazingly ignorant when he came to Vienna. The exercises which he worked under Mozart have been preserved (they are at present in the possession of the reviewer of this article) and show that in spite of the composer's dislike to teaching, he was ready to take great pains even over the most elementary matters once he became interested in his pupil.

² *Reminiscences*, I. 227.

³ This music book forms the main subject of an excellent monograph by Dr. R. Lach, *W. A. Mozart als Theoretiker* (Vienna, 1918).

⁴ For Franziska von Jacquin he wrote the 'Clarinet Trio' (K. 408); for Barbara Ployer, the Sonata for two pianos (K. 448) and two PP. concertos (K. 440, 453); for Josephine Aurnhammer (presumably), the six violin sonatas which he dedicated to her (K. 376, 394, 377-380); for Frau von Trattenrath, the Fantasia and Sonata for PP. in G min. (K. 457, 475), about which he is said to have written her two interesting letters, which have, unfortunately, disappeared.

I. VOCAL

SERIES 1. 15 Masses: K. 49 in G (1768), K. 65 in D min. (1769), K. 66 in C (1769), K. 139 in G min. (1772), K. 167 in C (1773), K. 192 in F (1774), K. 194 in D (1774), K. 230 in C (1775), K. 257 in C (1776), K. 258 in C (1776), K. 269 in C (1776), K. 262 in C (1776), K. 275 in Bp (1777), K. 317 in C (1779), K. 337 in C (1780). [See also Ser. 24.]

SERIES 2. 2 *Stanzas*: K. 109 in Bp (1771), K. 126 in Bp (1772), K. 195 in D (1774), K. 243 in Ep (1778), 2 *Vesperae*: K. 321 in C (1779), K. 339 in C (1780); 1 *Dixit* and *Magnificat*: K. 193 (1774).

SERIES 3. 5 *Kyrias*: K. 33 in F (1766), K. 89 in G (1770), K. 322 in Ep (1774), K. 323 in C (unpublished, 1779), K. 341 in D min. (1781); 3 *Regina coeli's*: K. 108 in C (1771), K. 127 in Bp (1772), K. 276 in C (1780); 6 *Offertories*: K. 54 in F (1766), K. 72 in G (1771), K. 117 in C (1770), K. 198 in F (not doubtful authentically), K. 260 in D (1776), K. 277 in F (1777); and a number of smaller works for the Church, the most important of which is the Motet *'Ave verum corpus'* (K. 618, 1791).

SERIES 4. 2 *Passion Cantatas* ('*Grabmusik*'): K. 42, 1767; '*Die Maurer-Kantate*' (K. 471, 1765); '*Eine kleine Freimaurer-Kantate*' (K. 623, 1791); '*La Bechula liberata*', oratorio (K. 118, 1771); '*Da' idde penitente*', cantata (K. 469, 1785).

SERIES 5. 'Die Schuldigkeit des ersten Gebotes' (K. 35, 1766), sacred Singpiel in 3 parts (the first only by Mozart): '*Apollo et Hyacinthus*', 3 acts (K. 357, 1767); '*Die Entführung aus dem Serail*', German opera, 1 act (K. 59, 1768); '*La finta semplice*', opera-buffa, 3 acts (K. 51, 1768); '*Mitridate*, *Roi di Ponto*', opera seria, 3 acts (K. 87, 1770); '*Ascanio in Alba*', theatrical serenade, 2 acts (K. 111, 1771); '*Il sogno di Scipione*', dramatic serenade, 1 act (K. 126, 1772); '*Lucio Silla*, *dramma per musica*' (K. 136, 1772); '*La finta giardiniera* (*Die Gärtnerin aus Liebe*)', opera-buffa, 3 acts (K. 196, 1774); '*Il re pastore*', dramatic cantata, 2 acts (K. 208, 1775); '*Zaide*', German opera, 2 acts, unpublished (K. 344, 1779); 2 *clowns and entr'actes*: '*Thamos, König in Ägypten, herolisches Drama*' (K. 345, 1773, partly rewritten 1779); '*Idomeneo, Rè di Creta, ossia Il re Idamante*', opera-seria, 3 acts (K. 366, 1780-81); '*Die Entführung vom Meer*', komisches Singpiel, 3 acts (K. 394, 1783); '*Der Schauspieler-theater*', comedy with music, 1 act (K. 486, 1786); '*Le nozze di Figaro*', opera-buffa, 4 acts (K. 492, 1786); '*Il dissoluto punito, ossia Il Don Giovanni*', opera-buffa, 2 acts (K. 527, 1787); '*Così fan tutte*', opera-buffa, 2 acts (K. 590, 1800); '*La clemenza di Tito*', opera-seria, 2 acts (K. 621, 1791); '*Die Zauberflöte*', German opera, 2 acts (K. 620, 1791). [See also Ser. 24.]

SERIES 6. 46 arias, duets, terzets and quartets, with orchestral accompaniment, of which the most important are (1) for soprano solo: a scena 'Ah, lo previdi' (K. 272, 1777), a recitative and aria 'Alcandro in confessione', 'Non so dove sono' (K. 294, 1778), a recitative and aria 'Popoli di Tessaglia' (K. 316, 1779), a scena and aria 'Mia speranza', 'Ah non sai qual pena' (K. 416, 1783), an aria 'Vorrei spiegarvi', 'Ah Conte, partite' (K. 418, 1783), a scena and rondò 'E io mi accordi', 'Non temo tanto bene', with PF obbligato (K. 606, 1786), and a scena 'Bella mia fiamma' (K. 528, 1787); (2) for alto: a recitative and aria 'Ombra felice', 'Io ti lascio' (K. 355, 1776); (3) for tenor: the arias 'Se all'abbro mio' (K. 298, 1778) and 'O pietà, non rievocare' (K. 420, 1783), and the recitative and aria 'Misero, o sogno' (K. 431, 1783); and (4) for bass: the recitatives and arias 'Così dunque tradisci' (K. 432, 1783) and 'Non so donde vieni' (K. 512, 1787), and the arias 'Mentre ti lascio, o figlia' (K. 513, 1787) and 'Rivolgete a lui lo sguardo' (K. 684, 1789).

SERIES 7. 34 *Lieder* for solo voice with PF accompaniment, of which the most important are: '*An die Hoffnung*' (K. 390, 1780), '*Der Zauberer*' (K. 472, 1785), '*Das Veilchen*' (K. 476, 1785); '*Als Luise die Briefe ihres ungetreuen Liebhabers verbrannte*' (K. 520, 1787); '*Die Kanne des Teufels*' (K. 570, 1787); '*Abendempfindung*' (K. 573, 1787); a Masonic song 'Zerbrüchelt heut', geliebte Brüder', with chorus and organ accompaniment (K. 483, 1788); a Masonic chorus, in three parts, with organ accompaniment (K. 484, 1788); '*Eine kleine deutsche Komödie* for solo voice with PF accompaniment (K. 619, 1791); a comic terzet (Das Bändel) for soprano, tenor and bass (K. 441, 1783); and 21 canons for 2 or more voices.

II. INSTRUMENTAL

(1.) ORCHESTRAL WORKS

SERIES 8. 39 *Symphonies*: K. 16 in Ep (1764), K. 17 in Bp (1764), K. 19 in D (1766), K. 22 in Bp (1766), K. 43 in F (1767), K. 45 in D (1768), K. 48 in D (1768), K. 73 in G (1771), K. 74 in G (1771), K. 84 in D (1770), K. 110 in G (1771), K. 112 in F (1771), K. 114 in A (1772), K. 124 in G (1772), K. 125 in G (1772), K. 129 in G (1772), K. 130 in F (1772), K. 132 in Ep (1772), K. 133 in D (1772), K. 134 in A (1772), K. 162 in C (1773), K. 181 in D (1773), K. 182 in Bp (1773), K. 183 in G min. (1773-74), K. 184 in Ep (1773), K. 199 in G (1774), K. 200 in C (1778), K. 201 in D (1774), K. 202 in D (1774), K. 207 in D (the Paris symphony, 1778), K. 318 in G (1779), K. 319 in Bp (1779), K. 338 in C (1780), K. 385 in D (the Haffner symphony, 1782), K. 425 in C (1783), K. 504 in D (1788), K. 548 in Bp (1778), K. 592 in G min. (1788), K. 651 in C (the Jupiter symphony, 1788). [See also Ser. 24.]

SERIES 9. 2 *Cassations*: K. 63 in G (1769), K. 99 in Bp (1766-1767); 8 *Serenades* for string and wind: K. 100 in D (1767), K. 101 in F (1776), K. 186 in D (1773), K. 203 in D (1774), K. 204 in D (1776), K. 250 in D (the Haffner Serenade, 1766), K. 286 in D (Nocturne for 4 orchestras, 1779), K. 292 in F (1776); 3 *Serenades* for 2 string orchestras, one with drums (K. 239, 1776); 3 *Serenades* for wind instruments: K. 361 in Bp (for 13 instruments); 1780, with additions in 1790, K. 375 in Ep (1781), and K. 388 in C min. (1782); 7 *Divertimenti* for strings and wind: K. 113 in Ep (1771), K. 131 in D (1772), K. 205 in D (1773), K. 247 in F (1776), K. 261 in D (1776), K. 287 in Bp (1777), K. 334 in D (1779); and 10 *Divertimenti* for wind instruments: K. 166 in Ep (1773), K. 186 in Bp (1773-75), K. 187 in C (1773-75), K. 188 in C (1777-77), K. 213 in F (1776), K. 249 in Bp (1776), K. 292 in F (1776), K. 325 in F (1776), K. 270 in Bp (1777), and K. 289 in Ep (1777).

SERIES 10. 10 sets of *Marches* for orchestra: 2 symphonic movements; '*Maurerische Trauermusik*' for orchestra (K. 477, 1785); '*Ein musikalischer Spas*' for 2 vlns., vla., bass, 2 horns

(K. 522, 1787); a *Sonata* for bassoon and violoncello (K. 292, 1774-75); an *Adagio* for 2 basset horns and bassoon (K. 410, 1789-90); an *Adagio* for 2 clarinets and 3 basset horns (K. 411, 1789-90); an *Adagio* for harmonica (K. 356, 1791); an *Adagio* and *Rondo* for harmonica, flute, ob., vla. and c. (K. 617, 1791); a *Fantasia* (K. 608), and an *Andante* (K. 616) for a mechanical organ, both completed in 1791. [See also Ser. 24.]

SERIES 11. 23 sets of Dances for orchestra.

SERIES 12. *Concertos* other than those for FF., 5 *Concertos* for vln.: K. 207 in Bp (1776), K. 311 in D (1776), K. 216 in G (1776), K. 218 in D (1776), K. 219 in A (1776); 2 *Rondos* for vln.: K. 269 in Bp (1776), K. 375 in G (1781); a *Concerto* for 2 solo vlns. (K. 190, 1773); a *Sinfonia concertante* for vln. and c. (K. 364, 1779); a *bassoon concerto* (K. 191, 1774); a *concerto* for flute and harp (K. 299, 1778); 2 *flute concertos*: K. 313 in G (1778), K. 314 in D (1778); an *Andante* for flute (K. 316, 1778); 4 *horn concertos*: K. 412 in D (1782), K. 417 in Ep (1783), K. 447 in Ep (1783), K. 405 in Ep (1789); and a *clarinet concerto* (K. 622, 1791). [See also Ser. 24.]

(II.) CHAMBER MUSIC WORKS FOR FF., ETC.

SERIES 13. 7 *Quintets* for 2 vlns., 2 vlns. and vcl.: K. 174 in Bp (1773), K. 406 in C min. (1783), K. 515 in C (1787), K. 516 in G min. (1787), K. 593 in D (1790); a *Quintet* for vln., 2 vlns., horn and vcl. (K. 407, 1782); a *Quintet* for clarinet, 2 vlns., horn and vcl. (K. 591, 1789); '*Eine kleine Nachtmusik*' for 2 vlns., vln. and bass (K. 525, 1787).

SERIES 14. 23 *Quartets* for 2 vlns., vln. and vcl.: K. 80 in G (1770), K. 155 in D (1772), K. 156 in G (1772), K. 157 in C (1772-1773), K. 158 in F (1773), K. 159 in Bp (1773), K. 160 in Ep (1773), K. 161 in G (1773), K. 169 in A (1773), K. 146 in D min. (1773), K. 171 in Ep (1773), K. 172 in Bp (1773), K. 173 in D min. (1773), K. 387 in G (1782), K. 421 in D min. (1783), K. 428 in Ep (1783), K. 448 in Bp (1784), K. 464 in A (1785), K. 465 in C (1786), K. 493 in D (1786), K. 575 in D (1789), K. 589 in Bp (1790), K. 596 in F (1790); 2 *Divertimenti* for 2 vlns., vla. and bass (1772); K. 136 in D, K. 137 in Bp, K. 138 in F; an *Adagio* and *Fugue* for string quartet (K. 546, 1788); 2 *flute quartets*: K. 285 in D (1777) and K. 298 in A (1778); 1 *oboe quartet*: K. 370 (1781).

SERIES 15. 2 *Duos* for vln. and vla. (K. 423, 242); completed 1783; a *Divertimento* for vln., vla. and vcl. (K. 653, 1789).

SERIES 16. 25 *concertos* for FF. and orchestra; the first 4 adaptations: K. 37, 39-41 (1767); K. 478 in D (1773), K. 238 in Bp (1776), K. 246 in C (1776), K. 271 in Ep (1777), K. 413 in F (1782), K. 414 in A (1782), K. 415 in C (1782), K. 449 in Ep (1784), K. 450 in Bp (1784), K. 451 in D (1784), K. 453 in G (1784), K. 456 in Bp (1784), K. 459 in F (1784), K. 468 in D min. (1785), K. 467 in C (1785), K. 482 in Ep (1785), K. 488 in A (1786), K. 491 in C min. (1786), K. 503 in G (1786), K. 537 in D (the coronation Concerto, 1788), and K. 595 in Bp (1791); one *Rondo* for FF. and orchestra (K. 364, 1778); one *Concerto* for 2 FF. (K. 365, 1779); and one for 3 FF. (K. 242, 1766).

SERIES 17. A *Quintet* for FF., ob., clar., horn, and bassoon (K. 452, 1784); 2 *Quartets* for FF., vln., vla. and vcl.: K. 478 in G min. (1785), K. 493 in Ep (1786); 7 *Trios* for FF., vln. and c.: K. 425 in D (1770), K. 443 in G (1773), K. 454 in G (unpublished movements), K. 496 in D (1786), K. 602 in Bp (1786), K. 642 in F (1788), K. 548 in C (1788) and K. 664 in G (1788); a *Trio* for FF., clar. and vla. (K. 498, 1786).

SERIES 18. 35 *Sonatas* for FF. and vln.: K. 6 in C (1763-64), K. 18 in D (1763-64), K. 8 in Bp (1768), K. 9 in G (1764), K. 10 in Bp (1764), K. 11 in G (1764), K. 12 in A (1764), K. 13 in F (1764), K. 14 in C (1764), K. 15 in Bp (1764), K. 26 in Ep (1766), K. 27 in G (1766), K. 28 in C (1766), K. 29 in D (1766), K. 30 in F (1768), K. 31 in Bp (1766), K. 296 in C (1778), K. 301 in G (1778), K. 302 in Ep (1778), K. 304 in C (1778), K. 304 in E min. (unpublished), K. 305 in A (1778), K. 306 in D (1774), K. 376 in F (1781), K. 377 in F (1781), K. 378 in Bp (1781), K. 379 in G (1781), K. 380 in Ep (1781), K. 402 in A (1782), K. 403 in C (1782), K. 454 in Bp (1784), K. 481 in Bp (1785), K. 606 in A (1787), K. 647 in F (1788); an *Allegro* (K. 372, 1781) and an *Andante* and *Allegretto* (K. 404, 1782); 2 sets of variations for FF. and vln. (K. 359, K. 360, 1781).

SERIES 19. 6 *Sonatas* for FF. duo: K. 357 in G (1780), K. 358 in Bp (1774), K. 381 in D (1772), K. 497 in F (1786), K. 621 in C (1787); 2 sets of Variations for FF. duo (K. 601, 1786); a *Fugue* for FF. (K. 498, 1789); a *Sonata* for 2 FF. (K. 454, 1781).

SERIES 20. 17 *Sonatas* for FF. solo: K. 270 in C (1774), K. 280 in F (1774), K. 281 in Bp (1774), K. 282 in Fp (1773-74), K. 283 in G (1774), K. 284 in D (1774), K. 290 in C (1777), K. 310 in A min. (1778), K. 311 in D (1777), K. 330 in C (1778), K. 331 in A (1778), K. 332 in D (1778), K. 333 in G (1778), K. 334 in G min. (1784), K. 345 in C (1784), K. 670 in Bp (1789), K. 676 in D (1789); a *Fantasia* and *Fugue* in C (K. 394, 1782); 3 *Fantasias*: K. 396 in G min. (1782-84), K. 397 in D min. (1782), K. 476 in G min. (1785).

SERIES 21. 15 sets of variations for FF.: on an *Allegretto* in G (K. 24, 1766), on '*Wilhelm von Nauau*' (K. 25, 1766), on a *Minuet* by Fischer (K. 179, 1774), on '*Mio caro Adone*' (K. 180, 1773), on '*Ilmon dormito*' (K. 204, 1778), on '*Ad, vous dirai-je, maman*' (K. 255, 1778), on '*Adieu, from Grétry*' (K. 256, 1778), on '*Les sœurs*' (K. 1792), on '*La Belle Francoise*' (K. 355, 1778), on '*Je suis Lindor*' (K. 354, 1778), on '*Salve tu Domine*' (K. 398, 1782), on '*Unser dumme Pöbel*' (K. 453, 1784), on '*Comme un agneau*' (K. 460, 1784), on an *Allegretto* in Bp (K. 600, 1786), on a *Marche* by Dupont (K. 573, 1789), on '*Ein Weib ist das herrlichste Ding*' (K. 613, 1791).

SERIES 22. 18 miscellaneous pieces for FF.: 6 *Minuets*, including the well-known one in D (K. 305, 1789-90); 3 *Rondos*: K. 465 in D (1786), K. 494 in F (1788), K. 611 in A min. (1787); an unpublished *Minuet* in G (K. 306, 1789); a *Marche* in G (K. 574, 1789); 36 *Valzen* to 14 of the FF. *Concertos* (K. 624).

SERIES 23. 17 *Sonatas* for Organ with accompaniment (chiefly for 2 vlns. and bass): K. 87 in Ep (1771), K. 88 in Bp (1771), K. 69 in D (1771), K. 144 in D (1772), K. 145 in F (1772),

K. 212 in Bb (1775), K. 224 in F (1776), K. 225 in A (1775-76), K. 244 in F (1776), K. 245 in D (1776), K. 274 in G (1777), K. 278 in C (1777), K. 328 in C (1779), K. 329 in C (1779), K. 336 in C (1780).

SKANES 24. Supplement containing, in addition to a few doubtful works, some 60 works which are either incomplete or were rediscovered too late for inclusion in their proper classes. The most important are: the Requiem (K. 626, 1791), the unfinished Mass in C min. (K. 427, 1782), the unfinished opera 'L'oca del Cairo' (K. 422) and 'Le sposo deluso' (K. 430), both completed in 1783, 5 Symphonies (K. 75 in F, 1771; K. 76 in F, 1767; K. 95 in D, 1770; K. 96 in C, 1772; K. 97 in D, 1770), the Ballet Music to the pantomime 'Les Fêtes Chinoises' (K. Anh. 10, 1778), a 'Sinfonie concertante' for ob., clar., horn and bassoon, with orchestra accompaniment (K. Anh. 9, 1778), and an Adagio and Allegro for mechanical organ (PF. arrangement: K. 594, 1790). Mozart's adaptations of Handel's 'Arie', 'Messiah', 'Alexander's Feast' and 'Ode on St. Cecilia's Day' are also included in this supplement.

It is hardly necessary to say that the compositions contained in this list vary greatly in merit. Some are youthful and immature; others are experiments in which Mozart is endeavouring to assimilate a strange technique; others (and these form a fairly numerous class) are *pièces d'occasion* written without enthusiasm in the fulfilment of his duties as a court composer, or, at the best, to oblige patrons and pupils whose abilities and limitations had carefully to be regarded. But nothing is more remarkable in Mozart's career than the versatility with which he was able to adapt himself to the most varied and hampering conditions, and when everything of merely ephemeral importance has been eliminated, there still remain an astonishingly large number of compositions which, even at the present day, seem to have lost little, if any, of their vitality. We can here do no more than discuss the more important works in each class.¹

THE PIANO, ETC.—It will be convenient to consider first the compositions for pianoforte solo, as it is through them that the average student gains his first introduction to Mozart's music. On the whole, they do not represent the composer at his best, and they certainly give but an imperfect idea of his pianoforte technique, which is most fully exemplified in the concertos. The majority of them are comparatively early works and exhibit passing mannerisms of style which Mozart soon outgrew. Thus, whilst most sides of his genius—his wit, humour, melancholy and passion—find expression in them, it is only to a limited extent. The customary explanation—that they were written mainly for pupils—will hardly serve. The first six sonatas (K. 279-284), which are on the whole the weakest, were not, so far as is known, written for pupils, and were certainly frequently performed by Mozart himself in the course of his tours. On the other hand, the Sonatas in C min. (K. 457) and in D (K. 576), written respectively for Frau von Trattner and Princess Frederica of Prussia, are among the composer's best works in this form. The fact that one or two are slight and unpretentious does not preclude the possibility that Mozart wrote them for his own use: he was accustomed to adapt himself to his company. Some of them, moreover, seem

¹ More space has been devoted to the discussion of works which, in the writer's opinion, are unduly neglected or often misinterpreted, than to criticism of the acknowledged masterpieces.

to call for the clavichord for their proper performance, although Mozart soon developed the clavichord style of the earlier works into a technique more suited to the already fashionable pianoforte. The last sonata of the first group (K. 284, written in 1775) already demands the new instrument; in the C min. sonata (K. 457, written in 1784) full use is made of all its resources, including its greatly increased compass. This sonata is undoubtedly the finest of those written for the solo instrument; of the others only the comparatively early work in A min. (K. 310, 1778) displays anything like the same intensity of fire and passion. Next in importance comes the unfinished Sonata in F (K. 533, 1788; afterwards published with the rondo K. 494), the allegro of which is remarkable for the boldness of its counterpoint, and the andante for some interesting harmonic progressions. Ingenuity of contrapuntal treatment also distinguishes the brilliant Sonata in D (K. 576, 1789), sometimes known as the 'Trumpet sonata' from the fanfare-like character of its opening theme. Of the earlier sonatas that in A min. has already been mentioned. In complete contrast with it is the delightful work in A maj. (K. 331, 1778), with a set of variations as opening movement and a spirited 'Rondo alla Turca' as finale. Of other works for PF. solo the Fantasia in C min. (K. 475, 1785) is of special importance: its earnestness of mood and dramatic force make it a worthy prelude to the sonata in the same key with which it was afterwards united. The Fantasias in C (K. 395, 1778), in C min. (K. 396, 1782-84), and in D min. (K. 397, 1782) are in a different style, being indeed strongly reminiscent of Philip Emanuel Bach, particularly the two former works, which are almost of the character of free improvisations. Another Fantasia in C (K. 394, 1782) forms the prelude to a fine fugue in the Handelian manner. Handel also served as model for the unfinished suite (K. 399, 1782-84?), in which Mozart seems to revel in the keen harmonic clashes resulting from an un-sparing polyphony. A little masterpiece in the same somewhat impersonal style is the gigue (K. 574) which the composer wrote at Leipzig in 1789 in the album of the court organist Engel. The Rondo in A min. (K. 511, 1787) and the Adagio in B min. (K. 540, 1788) have, on the other hand, all the intimacy of personal confessions, and breathe that spirit of noble resignation which is so characteristic of Mozart's later years. Technically they are of great interest: the rondo for the homogeneity of its form and the adagio for its keen harmonies. In both works the writing is often more quartet-like in style than specifically pianistic. The variations for PF. solo are mostly of the ornamental or 'melismatic' type, in which the melodic outline of the original theme is easily recognisable throughout. Curiously enough the

set which is most free in style (the variations on 'Mio caro Adone,' K. 180, 1773) is also one of the earliest. The best of them, such as those on 'Unser dummer Pöbel meint' (K. 455, 1784), on 'Come un' agnello' (K. 460, 1784) and on 'Ein Weib ist das herrlichste Ding' (K. 613, 1791), deserve to be rescued from the neglect into which they have fallen. Of the sonatas for 4 hands that in F (K. 497, 1786) is unquestionably the most important: it is indeed one of the composer's finest works. That in C (K. 521, 1787) is slighter, though extremely effective in performance. Two pieces for a musical clock (K. 594, 608), ordered by Count Deym for his so-called 'Art Gallery,' are only known in the arrangement for PF. duet; they belong to the close of Mozart's life, and the earnestness of purpose and thoroughness of technique which they exhibit show how conscientiously he executed such works to order. For two PF. there are two important works: the lively Sonata in D (K. 448, 1781), and the vigorous—and, in parts exhilaratingly cacophonous—Fugue in C min. (K. 426, 1783), afterwards arranged by the composer himself for string quartet, with the addition of a moving adagio (K. 546) by way of introduction. It should be added that to do justice to Mozart's pianoforte compositions something more is required than the fastidious and rather finicking elegance with which it was long the custom to perform them. The mature works, at any rate, admit of the employment of the full range of tone at the modern pianist's command, and their rapid alternations of mood and frequent imitation of orchestral effects call for a quick brain and a responsive touch for their proper rendering.

Of the sonatas for PF. and violin the earliest sets (K. 6-9, 10-15, 26-31) are really sonatas for the keyboard instrument with violin obbligato. The sonatas K. 55-60, however, which were long classed with them as juvenile works and consequently omitted from the ordinary editions of Mozart's violin sonatas,¹ are of an entirely different character, and indeed of far greater importance than many of his later works in this form. They really belong, as recent research² has shown, to the composer's Italian tour of 1772-73, and betray the influence of the older suite-form of Corelli and Sammartini. Especially interesting is the Sonata in E min. (K. 60), the allegro of which contains a passage strongly reminiscent of a theme in the last movement of Beethoven's Sonata in C♯ min. Even in these works, however, the violin part is mainly of an obbligato character, and Mozart's first sonatas in the modern style, in which both instruments

are of equal importance, were those written partly at Mannheim and partly at Paris in 1778 (K. 296, 301-6), largely on the model of the 'Duetti' of Josef Schuster (1748-1812), which Mozart took with him on the journey. Of this group the tragic Sonata in E min. (K. 304) is perhaps the finest. But Mozart's most important contributions to this form date from his Viennese period and include the works in E♭ (K. 380, 1781), in B♭ (K. 454) written in 1784 for the brilliant young violinist Mlle. Strinasacchi from Mantua, in E♭ (K. 481, 1785) and in A (K. 526, 1787). In all four the slow movements are of especial beauty. Two sonatas which date from the period of Mozart's absorption in the works of Bach and Handel (K. 402 in A min., K. 403 in C) were unfortunately left unfinished by the composer and were subsequently completed by the Abbé Stadler. The Sonata in F (K. 547), written for beginners, has as its final movement a spirited set of variations that is often printed in editions of the composer's variations for PF. solo.

The PF. trios were mainly written for performance at private music meetings, and two at least (K. 496 and 564) were hastily adapted from works originally written for PF. solo. In all of them the PF. (at which in all probability Mozart himself presided) has the lion's share of the work, but modest as the function of the strings often is (particularly that of the violoncello) they are handled so skilfully that they often produce an effect quite out of proportion to the technical demands made upon them, as, to give but one example, at their entry in the andante of the Trio in E (K. 542). This, which Mozart wrote in 1788 for his friend Puchberg, is the most important of the set, but those in B♭ (K. 502, 1786) and in C (K. 548, 1788) are very little inferior. On a far higher level, however, than any of the trios for PF. and strings is the Clarinet Trio in E♭ (K. 498, 1786), which Mozart wrote for performance with his friends the von Jacquins. The distinctive timbres of the clarinet and viola give the work a peculiarly 'romantic' colouring that at times takes on an almost sombre tinge, particularly in the minuet which, somewhat unexpectedly, is the most serious of the three movements. Of the two quartets for strings and PF., in G min. (K. 478, 1785) and in E♭ (K. 493, 1786), the former is unquestionably the finer. The passionate first movement, the gentle melancholy of the andante, and the exuberant finale, with its long chain of exquisite melodies, make it a veritable epitome of Mozart's art. The Quintet in E♭, for PF., ob., clar., horn and bassoon (K. 452, 1784), is another characteristic work. Nowhere are Mozart's skill in writing for wind instruments and his marvellous sense of tonal balance better exemplified. He himself was particularly proud of it. He played it before Paisiello when the latter was in Vienna in 1784 and

¹ Both Breitkopf and Peters have now published editions of them.

² To the French scholars Wyzewa and Saint-Foix belongs the credit for rehabilitating these delightful works. It should, however, be stated that Dr. Schiederemair (*Mozart, sein Leben und seine Werke*, 1922, p. 452), while reserving his evidence, hints that he expects to be able to prove that these sonatas are not original compositions by Mozart.

described it in a letter to his father as the best work that he had so far written.

STRINGS, ETC.—We now pass to the chamber compositions in which the piano plays no part. The violin duets written for Michael Haydn in 1783 (K. 423 and 424) have already been mentioned. The only string trio, apart from the early work for 2 violins and bass (K. 266), is the great E \flat 'Divertimento' (K. 563) for violin, viola and violoncello, composed in 1788. With the composer's other divertimenti it has little in common beyond the number of its movements (there are six in all) and the 'folk-song' character of some of its themes; its breadth of design and careful workmanship make it more akin to the quartets and quintets. Mozart's first seven string quartets (K. 80, 155-160) were written in Italy, the first in 1770, the remaining six in 1772-73, and the influence of Italian models, of Sammartini in particular, is unmistakable.¹ In 1773, as we have already related, Mozart, during a brief visit to Vienna, fell completely under the spell of Joseph Haydn and wrote six contrapuntal quartets (K. 168-173) in imitation of a similar set by the older master. Henceforward Haydn is the predominant influence in the formation of Mozart's instrumental style, and it is significant that it was the publication by Haydn of a further series of quartets (op. 33) in 1781 that stimulated Mozart to take up again a form that he had in the meantime neglected. The first of the new group of six was written in Dec. 1782, the last in Jan. 1785, and in Sept. of the latter year Mozart dedicated them to Haydn as 'the fruit of prolonged and laborious toil,' with a generous admission of his indebtedness to him. They are too well known to call for detailed discussion; it is enough that they are now universally recognised as amongst the supreme examples of their kind. Such, however, was not the general verdict at the time. A critic of the day found them 'much too highly spiced'; Prince Grassalkowics tore up the parts in a rage on finding that they really contained the 'hideous stuff' that was being played before him; and they were returned from Italy to the publisher Artaria as so full of mistakes that it was impossible to play from them. Even Attwood in sending them to his friend Ferrari at Naples advised him to hear them played through several times before passing an opinion on them. The chief stumbling-block was the much-discussed introduction to the quartet in C.² It may have been due to an attempt to meet such criticisms that Mozart's next quartet, that in D (K. 499, 1786), is lighter in style and content,

though technically in no way inferior to its predecessors. The last three (K. 575, 589, 590) were written for the King of Prussia in 1789-90, and, fine as they are (particularly the first, in D) the prominence given to the King's favourite instrument, the violoncello, undoubtedly disturbs at times the balance of the ensemble. The quartets for flute and strings (K. 285, 1777; K. 298, 1778) and for oboe (K. 370, 1781) are delightful but unpretentious works in Mozart's lightest style.³

Of the quintets, in which Mozart invariably doubled the viola instead of the violoncello as Boccherini had done, the earliest (K. 174, 1773) is chiefly of interest on account of the preservation of two versions of the trio of the second minuet and of the finale (the second in each case being probably only some few months later than the earlier), comparison of which affords striking evidence of the rapidity with which the composer's genius developed. The Quintet in C minor (K. 406, 1782) is, again, merely an arrangement by Mozart himself of the fine serenade for wind instruments (K. 388). On the other hand, of the last four quintets (K. 515 in C, K. 516 in G minor, 1787; K. 593 in D, 1790; K. 614 in E \flat , 1791), three at least may be reckoned as masterpieces. The greatest is that in G minor, in which a mood of spiritual anguish has by the magic of genius been crystallised into a work of immortal beauty. Very little inferior, however, are the vigorous and highly contrapuntal works in C and D, entirely different as they are in mood. That in E \flat is a sunny and genial composition which does not quite reach the same level. Four other quintets remain to be mentioned. Both the delightful clarinet quintet (K. 581, 1789) written for Anton Stadler, and the less-known horn quintet (K. 407, 1782?) written for Leutgeb, are rather solos with string accompaniment than quintets properly so called. In the latter work two violas are employed and only one violin. The quintet for glass harmonica, flute, oboe, viola and violoncello (K. 617), composed in May 1791 for Marianne Kirchgässner, seems doomed to neglect unless the harmonica should one day become fashionable again. Mozart obviously selected his accompanying instruments with a view to its peculiar timbre, and the effect of the whole is spoilt by the use of the pianoforte in its place. Possibly the celesta would be a more satisfactory substitute. Last, but by no means least, comes the delicious 'Nacht-musik' (K. 525, 1787) for 2 violins, viola, violoncello and bass, which was possibly designed not for solo instruments but for a small orchestra, and so occupies a position mid-way between Mozart's chamber-music

¹ The 4 quartets K. Anh. 210-213 have recently been discovered in a transcript in the Berlin Library by G. de Saint-Foix, who unhesitatingly accepts them as genuine works by Mozart, and assigns them to the Italian period of 1772-73. (See *Bull. de la Soc. Union Musicologique*, année 3, fasc. 2, 1923.)

² Bart's objections are admirably summarised and sympathetically discussed in E. Newman's *A Musical Critic's Holiday* (1926), pp. 181-180.

³ The poignant little adagio of the oboe quartet is nevertheless a remarkable example of Mozart's genius for saying as much as possible in the smallest possible space.

proper and the group of compositions we shall have next to consider.

THE ORCHESTRA.—The serenades, nocturnes, cassations and divertimenti all conform to the same main type, widely as they differ in detail, particularly as regards their instrumentation. They are essentially what the Germans call 'Unterhaltungsmusik,' and their individual characteristics were determined in the main by the occasion of their performance. The fact that many were intended to be played in the open air accounts, for instance, for the important rôle played by the wind instruments. The staple number of movements was six, but a sort of miniature concerto was often interpolated in which some of the players were given the opportunity of showing their skill as soloists. The main composition was, moreover, frequently introduced and concluded with a march. A good example of the full form is provided by the Cassation in G (K. 63). Mozart's compositions in this kind range from unpretentious works like the cassation just mentioned to others like the serenades for wind in B \flat (K. 361), E \flat (K. 375) and C minor (K. 388), which pass far beyond the sphere of conventional fête-music. Indeed the adagio of the first-named work, written for 13 wind-instruments, is one of the sublimest slow movements that Mozart ever wrote. A divertimento for strings and horns (K. 522, 1787), entitled 'Ein musikalischer Spass' (a musical joke), deserves special mention as one of the few successful examples of satire in music. Although it does not exempt the performer from ridicule it is essentially a hit at the unskilful composer who can think of nothing but musical clichés, and when he has got an idea doesn't know what to do with it. In these compositions the most unusual combinations of instruments are sometimes employed; for example, two divertimenti written between 1772 and 1775 (K. 187, 188) are scored for 2 flutes, 5 trumpets and 4 drums, and one of the nocturnes (K. 286, 1777), for four orchestras, each consisting of 2 vlms., vla., bass and 2 horns, by means of which a triple echo is produced.

Quite as remarkable is the orchestration of many of the dances for orchestra which Mozart wrote in such numbers during his Viennese period for performance at the court balls. A striking example is the trio of the last of the three 'Deutsche Tänze' (K. 605), entitled 'Die Schlittenfahrt,' where post-horns and sleigh-bells are used with piquant effect. Nearly all of them, however, deserve careful study from this point of view.

Mozart's 40 or more symphonies¹ are evenly distributed over practically the whole of his career, and thus afford excellent material for

studying the development of his style. We can see him first making sure of his materials and technique, and then observe how the separate parts gradually acquire more freedom and independence, how melody and invention grow, the subjects gain in character and details are better worked out, how the wind instruments, no longer used merely to strengthen the strings, attain an independent existence and materially contribute to the effects of light and shade, until at length the various component parts of the orchestra become one animated whole. We can see him passing from one model to another, Christian Bach and Abel giving place to the Italian masters, and they in turn to the Viennese school represented by Wagenseil, Monn, Starzer, and above all Josef Haydn, whose influence, after a brief period during which the Mannheim composers were paramount, ultimately predominated. More than twenty of the symphonies were written at Salzburg. Of these the first in which Mozart shows something approaching real mastery over the symphonic form are the two works in A (K. 114, 1771; K. 134, 1772) and that in F (K. 130, 1772), written on the composer's return from his first Italian tour. Of far higher importance, however, are the symphonies written after the second tour, particularly the impassioned work in G minor (K. 183, 1773-74), a not unworthy precursor of the later work in the same key, and the bright and genial work in A (K. 201, 1774). The brilliant 'Parisian' Symphony in D (K. 297, 1778) was written with the object of humouring the taste of the French public, but is much more than a mere *pièce d'occasion*, and is specially noteworthy for the large orchestra employed (there are, in addition to the strings, 2 flutes, 2 oboes, 2 clarinets, 2 bassoons, 2 horns, 2 trumpets and drums). Three further symphonies written at Salzburg in 1779 and 1780 include one in G (K. 318) in one movement, performed, according to tradition, as an overture to Bianchi's 'La vilanella rapita,' and a vigorous and broadly designed work in C (K. 338). With the exception of one in C (K. 425) composed at Linz in 1783 and showing visible traces of Haydn's influence, all the rest were written at Vienna. The earliest of these was the bright and energetic symphony in D major (K. 385), composed in 1782 for his friend Haffner of Salzburg; four years later followed the Prague Symphony (K. 504), also in D major, the orchestration of which reminds us that it had recently been preceded by 'Figaro.' The last three, in E \flat , G minor, and C with the fugue (Jupiter) (K. 543, 550, 551), were composed in 1788 between the 26th of June and the 10th August, in a space of just over six weeks! Like most of Mozart's works which can be treated as a group, these three symphonies are in strong contrast to one

¹ Mozart's development as a symphonic composer is admirably treated in D. Schultze's *Mozart's Symphonien* (1900).

another. None of the attempts, however, to sum up their respective characteristics in a brief phrase or epithet have been very successful. Even the title 'Jupiter' is not altogether happy, and still less satisfactory are the descriptions of the E♭ symphony as Mozart's 'swan song' (B. T. A. Hoffmann) or his 'Eroica' (Kretschmar), or Schumann's phrase about the 'swaying Grecian grace' of the G minor. It is rather just because each work comprises within it such a wealth and variety of moods that these symphonies represent the very pinnacle of Mozart's achievement as an instrumental composer.

THE CONCERTO FORM.—Equal in historical interest is Mozart's treatment of the concerto, which may justly be regarded as his chief contribution to the growth of the instrumental forms. Up to the middle of the century the concerto was not distinguished in essential structure from the current types of orchestral or chamber music, and indeed only differed from the overture and the concerted sonata in the opportunity which it afforded for contrasted masses or timbres. Even in the concertos of Handel and J. S. Bach the solo instruments are only 'primi inter pares'; the distinction of protagonist and chorus is not as yet fully felt. The first to perceive the real æsthetic value of this contrast was C. P. E. Bach, whose clavier-concertos definitely modify the symphonic texture, and his tentative suggestions were developed by Mozart with a richer invention, a wider melodic range, and a far greater command of orchestral effect. (For a description of the form as he established it see CONCERTO, subsection 'THE CLASSICAL FORM'.)

He composed in all twenty-five concertos for clavier solo, the first four (K. 37-41), which were merely adaptations from works by other composers, at Salzburg in 1767, the next six (K. 175-271) at Salzburg between 1773 and 1777, the last fifteen (K. 413-595) at Vienna between 1782 and 1791. To these should be added a concerto for three claviers (K. 242), written in 1776, and one for two claviers (K. 365) in 1779. During the years 1775-77 he wrote six¹ for violin (K. 207, 211, 216, 218, 219, 271 a), mainly, it would appear, as studies for his own practice, and followed them in 1779 with a 'Konzertante Symphonie' (K. 364) for violin and viola. His other works in this form are a concertone for two violins and a concerto for bassoon (K. 190, 191) written at Salzburg in 1773 and 1774 respectively, a concerto for oboe (K. 293?) written in 1777,² one for flute and harp (K. 299) written at Paris in 1778, two for flute solo (K. 313, 314) on his

return to Mannheim, four for horn (K. 412, 417, 447, 495) at Leutgeb's house in Vienna, and the clarinet concerto (K. 622) composed for Stadler in 1791.

These works fall naturally into two groups which respectively precede and follow the beginning of his residence in Vienna. Those of the earlier group are, comparatively speaking, of less importance, and though they exhibit all his delicacy of touch and daintiness of invention, are mainly interesting as stages in his treatment of the form. The most noticeable among them are those in D major (K. 175), F major (K. 242), and E♭ major (K. 365) for one clavier or more, together with the six for violin, which make charming use of a medium that has been somewhat neglected by the great masters. The concerto for flute and harp (K. 298), written apparently with some reluctance on the commission of the Duc de Guisnes, is a brilliant virtuoso-piece³ with a graceful and tender andante. The Viennese clavier concertos⁴ are all masterly, especially those in D minor (K. 466), C major (K. 467), C minor (K. 491) and C major (K. 503); perfect in style, melody and balance, and often showing a freedom of structural organisation which is not to be found in Mozart's other instrumental works. It is well known that they were carefully studied by Beethoven, in whose early compositions their influence can clearly be traced. The horn concertos were evidently intended as a jest; they are written at breakneck speed, and the rondo of the first (K. 412) is scrawled over with extravagant mock-directions. The concerto for clarinet (K. 622) is, on the other hand, a careful study of one of Mozart's favourite instruments, and may be regarded as the basis of modern clarinet-playing.

VOCAL COMPOSITIONS.—Lieder Mozart wrote only casually; and unfortunately for the most part to very insignificant words. The greater number are in stanza-form, but some few are continuously composed (*durchcomponirt*), such as 'An Chloe' (K. 524), which is in the style of an Italian canzonet; 'Abendempfindung' (K. 523), fine both in form and expression; 'Unglückliche Liebe' and 'Trennung und Wiedervereinigung' (K. 520, 519), almost passionate in tone; and the sportive 'Zu meiner Zeit' (K. 517). Of three Kinderlieder (K. 529, 596, 598), the second, 'Komm' lieber Mai,' has passed into a traditional song. But the finest of Mozart's Lieder is undoubtedly the exquisite setting of Goethe's 'Das Veilchen,' which shows what he might have accomplished if he had devoted himself more seriously to this form.

¹ The Concerto in E♭ (K. 268) is, as has already been stated, of doubtful authenticity in its present form. The Mozartian material which it embodies is probably of a later date than the rest of the concertos.

² Mozart appears to have written two concertos for oboe, one of which was not completed. It seems probable that the work written for Ferlend in 1777 has disappeared, and that the fragment K. 293 is part of a fresh concerto undertaken later (possibly in 1783).

³ The finest virtuoso, however, can make little of some of the passages for the harp. Here, for once, Mozart does not seem to have taken his usual pains to understand the possibilities of an unfamiliar instrument.

⁴ Brilliantly analysed by Albert, II. 209-241. Cf. F. Blume, *Die formgeschichtliche Stellung der Klavierkonzerte Mozarts* (Münch. Jahrb., 1924). The question whether the FF. parts as printed were elaborated by Mozart in performance, and should be similarly treated by the present-day soloist, is fully discussed in C. Reinecke's *Zur Wiederbelebung der Mozart'schen Clavier-Konzerte* (1891).

The canons require sifting; even our English 'NON NOBIS DOMINE' (*q.v.*) has been set to German words, and ascribed to him. Several are composed to words in the Viennese dialect, and their effect is completely ruined by the modern drawing-room text which is often substituted.

As we have seen already, Mozart was frequently called upon to write airs for concert performance, and for insertion in operas by other composers: many of these are noteworthy examples of Mozart's skill in writing for the voice; for instance, the soprano airs 'Misera dove son' (K. 369), 'Non temer amato bene' with PF. obbligato (K. 505), 'Un moto di gioja' (K. 579), 'Bella mia fiamma' (K. 528), one of his finest airs; the tenor air 'Per pietà' (K. 420), and the bass airs 'Non so d'onde viene' (K. 512), 'Mentre ti lascio' (K. 513), and 'Per questa bella mano' with double-bass obbligato (K. 612).

We will now pass to the consideration of Mozart's religious music, and before discussing his Masses, will deal briefly with his other compositions for the Church. First and foremost come the Litanies and Vespers, each of which consists, like the Mass, of a number of distinct sections. There are two main types of litany: the 'Litania de venerabili (altaris sacramento)' and the 'Litania Lauretana' or 'Marienlitanoi' (see LITANY). The chief characteristic of the former is solemnity and of the latter tenderness, and these Mozart has succeeded in preserving in his settings. Of his works in the latter kind, the first, in B \flat , composed in 1771 (K. 109), already shows fluency in part-writing, and mastery of form and modulation; but the second, in D (K. 195), composed in 1774, is far more important, the voices being treated contrapuntally against an independent orchestra. There are also two Litanie *de venerabili* in B \flat and E \flat (K. 125, 243), composed in 1772 and 1776, the lapse of time between the two being clearly marked in the compositions themselves. The fine choruses in Nos. 3 and 5 of the latter point to the Requiem, and, like the fugue 'Pignus futurae,' almost startle by their power, as does also the opening of the 'Panis vivus,' identical with the 'Tuba mirum' in the Requiem. A still stronger sense of the dignity of church music is shown in two vespers in C (K. 321, 339) composed in 1779 and 1780, the greater part of both thoroughly deserving a place among the composer's most important works. The 'Confitebor' in the first, and 'Laudate pueri' and 'Laudate Dominum' in the latter, are real gems. The motet 'Misericordias Domine' (K. 222), which Mozart wrote as an exercise for Padre Martini, who gave him a brilliant testimonial for it in 1775, is in strict counterpoint throughout. In 1776 he composed a 'Venite populi' for double chorus (K. 260); the parts are in imitation, strict or

free, and the whole work is full of force and freshness. A list of innumerable small pieces of church music closes with the beautiful motet 'Ave verum' (K. 618), composed on the 18th of June 1791, at Baden, near Vienna.

Mozart's first Masses (K. 49, 65, 66), written while he was still a mere boy, show how thoroughly he had mastered the forms then in use for that style of music. But there is a tremendous gulf between these early works and the 6th Mass in F \sharp (K. 192), written only five years later. This mass, in which the master-hand is clearly discernible, recalls the finest models of the old Neapolitan school; the Credo is based on the subject so well known in the finale to the Jupiter Symphony. It is written in counterpoint throughout with only two violins, bass and organ as accompaniment. The next, in D \sharp (K. 194, 1774), is also next in order of merit; it has perhaps more grace, but less earnestness and ideality. These two masses show what Mozart could do when his genius was unfettered; but in the five which followed in 1775 and 1776³ (K. 220, 257-259, 262) he was forced to suit his patron's taste by aiming at display, and the result is less fortunate. Unhappily these, being his best-known masses, are generally taken as his standard church works. Hardly more important are the next three⁴ (K. 275, 1777; K. 317, 1779; K. 337, 1780), although Mozart himself seems to have had a preference for the first, in B \flat , since he chose it to conduct himself in 1791; the second, in C, composed in 1779, is called the 'Coronation-mass'—why, nobody knows; the third, also in C, was composed in 1780; and all three fulfil the conventional requirements, but seldom show a glimpse of the true Mozart, and then only in court uniform. We have already mentioned the last mass, in C minor (K. 427), and the circumstances under which it was written. It is broadly designed, each section being treated as a separate movement, and the whole bears clear traces of his studies at the time (1783) with van Swieten. It is to be regretted that it was never finished; the Kyrie, Gloria, Sanctus and Benedictus alone are complete; of the Credo only half was written.⁵ Very remarkable are the varying length of the different movements, the large dimensions of the choruses and fugues, and the bravura style of the solos. The Kyrie, Gloria and Sanctus are excellent; the five-part *Gratias* and the eight-part *Qui tollis*, of incomparable beauty.

¹ Mozart's Masses, arranged by V. Novello, No. 3.

² Novello, No. 6.

³ The second, in B \flat (K. 257; Novello 2), is called the 'Credo Mass,' from the peculiar treatment of the Credo. Novello printed it in a very mutilated form: even the characteristic subject in the Credo itself being left out whenever possible. The much-used subject from the Jupiter Symphony is introduced again in the Sanctus.

⁴ Novello, 10, 1, 14.

⁵ The Credo was completed by the adaptation of other church compositions of the master, for the Agnus Dei, the opening Kyrie was repeated, and the mass, as thus made fit for public performance, was given by the Mozartverein at Dresden, Apr. 3, 1801, and at the Bristol Festival of 1805, for the first time in England.

Wenow cometo the Requiem, that work of pain, which the composer was not permitted to finish. The following pieces are in his own handwriting:

—(1) Requiem and Kyrie, complete; (2) voice-parts, organ and notes of the accompaniment of Nos. 2 to 9, as follows: Dies irae, 68 bars; Tuba mirum, 62; Rex tremendae, 22; Recordare, 130; Confutatis, 40; Lacrymosa, 8; Domine, 78; Hostias, 54: the last eight bars, containing voice-parts, organ and first violin, go to the words 'Fac eas Domine de morte transire ad vitam,' followed by the direction 'Quam olim Da Capo,' that is to say, repeat the last 35 bars of the Domine. His widow, in her anxiety to have the score completed, and thus satisfy the person who had ordered it, first applied to Eybler, but after a few attempts he threw up the task, and she then entrusted it to Süssmayer, who not only had more courage, but was able to imitate Mozart's hand. He copied what Mozart had sketched in, filled up the gaps, wrote a Sanctus, Benedictus and Agnus Dei, possibly utilising rough sketches left by the master, and, to give unity to the work, wound it up by repeating the fugue of the Kyrie to the words 'Cum sanctis tuis.' The score thus completed was handed to the messenger, who afterwards proved to have been Leutgeb, steward to Count Franz von Walsegg, of Ruppach. The Count, who had lost his wife, Anna Edlen von Flammberg, on Feb. 14, 1791, and wished to perform a Requiem to her memory, copied out the score, inscribed it 'Requiem composito dal Conte Walsegg,' and actually had it performed as his own work on Dec. 14, 1793.¹ After wanderings almost as complicated as those of Ulysses, the various portions, in the original handwriting, at length found their way safely to the Hofbibliothek of Vienna. They consist of — (1) the autograph Requiem² and Kyrie, with the remainder complete in Süssmayer's hand, bought by the Hofbibliothek in 1839 for fifty ducats; (2) Nos. 2 to 9 just as they were left by Mozart; (3) twelve sheets presented by the Abbé Stadler, and (4) thirteen bequeathed by Eybler in 1846.³ Mozart, it is well known, imagined that he was

writing the Requiem for himself, and traces of the agony of spirit in which he wrote it have passed into his music. For this reason, in spite of all its beauties, it is a work which many lovers of Mozart can never hear without pain.⁴

We have seen Mozart, when a mere boy, turning from childish play to serious occupations: a striking instance of this is his 'Grab-musik' or German cantata (K. 42), written in 1767, which is anything but a boyish composition. About five years later he wrote, apparently in consequence of his visit to Padua, an oratorio by Metastasio called 'Betulia liberata' (K. 118), which in style is not unlike an opera seria of the period. The refrain in the last number but one, alternately sung by solo and chorus, is an ancient canto fermo harmonised in four parts, in fact the same which is introduced in the Requiem to the words 'To decet hymnus.' This is the only independent work of the kind, the cantata 'Davidde penitente' (K. 469) being made up from the Kyrie and Gloria of the unfinished mass in C min. (K. 427) set to Italian words, with two interpolated airs in concert style, which are not altogether in keeping with the severity of the rest of the piece.

Of smaller cantatas, three written for masonic use (K. 429, 471, 623) are the only specimens. All show much earnestness and depth of feeling. The first was composed in 1783, the second in 1785; the last, consisting of six numbers, written on Nov. 15, 1791, Mozart conducted in person only two days before his last illness.

DRAMATIC COMPOSITIONS.—The long list of Mozart's dramatic compositions⁵ is headed by a sacred Singspiel, 'Die Schuldigkeit des ersten Gebotes,' in three parts, the first being composed by him in Salzburg during the winter of 1766-67, and the others added by Michael Haydn and Adlgasser, the court organist. Mozart's work occupies 208 pages, and is in the style of the Italian oratorios of the period, the conventions of which are handled with extraordinary precocity. Mingled with the boy's unsteady writing there are occasional passages, mostly florid, in his father's hand, and the words to the recitatives are by a third person. The third tenor air is interesting, and Mozart himself evidently thought well of it, as he introduced it with slight variations into his first opera. Immediately afterwards followed the music to a Latin comedy 'Apollo et Hyacinthus,' given in the University on May 13, 1767, a dull piece of work on the whole, though it contains a few premonitions of the later Mozart. In Vienna in 1768 he composed a German operetta or pastorale in one act, 'Bastien und Bastienne,' and an opera buffa in three acts, 'La finta semplice.' With the simple

¹ This, Mozart's last work, was the first of his vocal works (including his operas) to be performed in England. John Ashley introduced it at Covent Garden Theatre on the first oratorio evening during Lent, Feb. 20, 1801. The piece which preceded it was a French March with corni di bassetto, double bassoons, and two pairs of double drums; after it came a F.F. concerto played by John Field, and Handel's 'L'Allegro ed il Penseroso.' Books of the words, with a translation of the Requiem and a biographical sketch of Mozart, were sold at 6d. each. Of the Requiem Parke says, "It is a composition of infinite science and dulness, from the effects of which the audience was happily relieved by Incledon's song in 'L'Allegro,' 'Easier than Nymph.'" The *Morning Post* said, "The talents which have celebrated the name of Mozart can scarcely be justly appreciated by such a composition as the Requiem"; and wound up with, "It is upon the whole a composition which could only have come from the hand of a master. From the performers it received ample justice." According to the *Porcupine*, "the performance was far from being well managed." It was repeated on Mar. 4. (Pohl, *Mozart in London*, p. 144.)

² The whole story of the history of the MSS. and of the long controversy as to the work's authenticity is told with admirable lucidity in W. Pole's *The Story of Mozart's Requiem* (1879). The best analysis of the music is that by Albert (W. A. Mozart, II, 851-87). The heading 'Requiem in G, W. A. Mozart, mp 799' is touching, as showing how he looked forward to its completion.

³ A facsimile of Mozart's contributions was published at Vienna in 1914, under the editorship of Dr. A. Scherlich.

⁴ Cf. Dent (*Mozart's Operas*, p. 380), where, however, too much stress is laid upon these traces of morbidity.

⁵ Special literature: E. J. Dent, *Mozart's Operas* (1913); E. Lortz, *Mozart auf dem Theater* (3rd ed., 1921).

emotions of his shepherd and shepherdess Mozart succeeded well enough, and his little piece still makes pleasant hearing, but to the complicated network of emotions—often sordid enough—of the stock Italian opera buffa he was as yet quite unequal. The three works composed and performed in Milan—'Mitridate' (opera seria, 1770), 'Ascanio in Alba' (theatrical serenade, 1771), and 'Lucio Silla' (opera seria, 1772)—are scarcely more important, except as marking stages in the composer's development and as providing him with experience that was to prove invaluable later. The serenade 'Il sogno di Scipione,' written at Salzburg in 1772, was, as has been already described, an uninspired piece written hastily to order. The first version of the incidental music which Mozart wrote to Gobler's masonic drama

Thamos' dates from the end of 1773, but the two choruses (Nos. 6 and 7b), which are the finest features in the score as we now know it, were written in 1779, when the composer, anxious to come before the public once more as a writer of dramatic music, subjected it to a fairly drastic revision. It is also necessary to distinguish the original score from later accretions in the case of the opera buffa 'La finta giardiniera,' which was first produced in its Italian form at Munich in Jan. 1775, but later, when a German text was substituted, underwent two successive revisions (the first in 1779 or 1780 and the second in 1789). The early score, so far as it can be reconstituted, shows a considerable advance upon Mozart's first attempt at opera buffa. Though largely modelled upon Anfossi's setting of the same text, produced about a year before, and owing much to other masters of opera buffa, such as Piccini, Traetta and Majo, it is characterised by a gentle poetic charm that is all Mozart's own. As yet, however, there is little attempt at musical characterisation, and it shows only traces of the wit and verve of its Italian models. The treatment of the voice is interesting: it holds no paramount position, but is treated as only one of several strands in the symphonic ensemble. The same general features characterise the serenata 'Il rè pastore,' produced at Salzburg in 1775, now remembered only by the song 'L'amero,' which still finds a place in our concert programmes. Mozart's hopes of writing an opera in Paris in 1778 were disappointed, and he had to console himself with the composition of some of the numbers for Noverre's ballet 'Les Petits Riens.' The most important of these is the spirited overture, containing a theme which afterwards played a part in 'Figaro.' The remaining pieces are graceful and dainty enough but of no special importance. The unfinished opera 'Zaide,' to a wretched text by Schachtner, which busied Mozart for some months at Salzburg in 1779, exhibits that curious mixture of styles which was a feature of the Viennese Singspiel. Italian

arias and German song forms are found side by side, and there are even traces of French influences. To this medley Mozart has added interludes of 'melodrama'—spoken recitative to an orchestral accompaniment—on the model of Benda's experiments. The work contains much fine music, especially in the ensembles, but is chiefly of interest for certain numbers in which Mozart seems to have been striving to evolve a specifically German style.

But Mozart's first great opportunity was to be provided not by a German but by an Italian opera. This was 'Idomeneo,' first performed at Munich in Jan. 1781. The original text to the opera, as written by the Abbé Varesco, the court chaplain of Salzburg, was far from satisfying the composer, and it was only by the exertion of constant pressure that he finally got it altered to suit his wishes. His correspondence with his father about the libretto affords instructive evidence of his remarkable instinct for the dramatically effective. In accordance with the taste of the moment the conventional form of opera seria was, in 'Idomeneo,' modified by the introduction of choruses and ballets after the model of Gluck's French operas, and Mozart's music also pays allegiance to these diverse schools, the influence of Gluck predominating. The whole work is conceived on a grand scale, and its tragic force, the majesty of the choruses, and the brilliance of the orchestration give it a unique place among the composer's works. He himself thought very highly of it, and when he was at Vienna in 1781 hoped to get it performed in a German version, for which he proposed recasting the music 'more in the French style.' He had, however, to wait till 1786, and even then had to be content with a private performance by distinguished amateurs, for which he made several alterations and additions (see e.g. K. 489, 490).

In the year following the production of 'Idomeneo' Mozart's desire to write a German opera was at length gratified. The text of 'Die Entführung aus dem Serail' was adapted by the younger Stephanie from a libretto by Bretzner, and it is again interesting to observe that Mozart's practical acquaintance with the stage dictated many alterations—much, it may be said, to Bretzner's disgust. Osmin, one of the most original characters in the opera, was entirely the composer's own creation. There remained, however, certain structural weaknesses which even the beauty of Mozart's music could not quite conceal. The general effect is of a series of detached numbers, often developed to a disproportionate length, rather than of a unified whole. What makes the opera so perennially attractive in spite of its defects is that spirit of freshness and youthful exuberance which led Weber to say that 'Of such operas as "Figaro" and "Don Juan" we might have had many more; but with all the

good will in the world Mozart could never have written another "Entführung."

The unfinished scores of 'L' oca del Cairo' and 'Lo sposo deluso,' which date from 1783, need not detain us, although Mozart completed several numbers of each before the poverty of the libretti compelled him to give them up; nor is the amusing skit on theatrical and operatic life 'Der Schauspieldirektor,' which was performed at Schönbrunn on Feb. 7, 1786, of sufficient importance to call for discussion here, in spite of the exquisite finish of the music. We must pass at once to a brief consideration of the five works on which, Mozart's operatic fame chiefly rests: 'Le nozze di Figaro' (1786), 'Don Giovanni' (1787), 'Così fan tutte' (1790), 'La clemenza di Tito' (1791) and 'Die Zauberflöte' (1791).

The unity that was lacking in 'Die Entführung' is one of the most marked features of 'Figaro,' in some respects the most perfect of Mozart's operas. In no work is his power of dramatic characterisation more brilliantly exemplified. In the concerted numbers, which form so large a proportion of the whole, it is amazing to see the skill with which the voices, whilst forming part of a complex musical tissue, are made to express the personalities of the various characters. Perhaps they are not the personages of Beaumarchais' satirical comedy; but what does it matter? Mozart, with the help of the witty Da Ponte, has created them afresh, and they are unmistakable flesh and blood.

If 'Figaro' is not Mozart's finest opera, it is because it deals after all with a somewhat narrow range of emotions. In 'Don Giovanni,' on the other hand, less homogeneous as it is in style, there is scarcely a feeling known to humanity that is not expressed in some one of the situations or characters. It must not be forgotten, however, that Mozart himself described it as an 'opera buffa,' and even its most serious moments are tempered with that spirit of irony which gives such a characteristic flavour to so much of his music.

This spirit is given full rein in 'Così fan tutte,' where Da Ponte's amusing comedy of intrigue gave him full opportunity for its exercise. It seems incredible that any one should ever have imagined that this was a work which Mozart undertook with reluctance, and that he regarded the libretto as so beneath contempt that he was satisfied to compose a string of beautiful airs which had nothing to do with it.

'La clemenza di Tito' he certainly was reluctant to undertake, busied as he was already with 'Die Zauberflöte,' to say nothing of the Requiem. 'La clemenza' carries us back to the old opera seria which Mozart had not touched since 'Idomeneo.' Metastasio's libretto, written in 1734, required considerable modifications to adapt it to the altered taste of

the day, the most important being the introduction of ensembles wherever the situations allowed and the curtailment of the original three acts to two. Nothing availed, however, to make the plot or the characters interesting. Throughout it was evident that the characteristics which had most attracted in Metastasio's day were now only so many obstacles and hindrances to the composer. The most important thing in Mozart's score is the finale to Act, 1, noteworthy as the first instance in which he employs solo voices in an ensemble, and for the important dramatic function which the chorus performs.

In 'Figaro,' 'Don Giovanni' and 'Così fan tutte' Mozart's task had been considerably lightened by Da Ponte's excellent libretti. At first sight it would not seem that Schikaneder deserved much credit for his text to 'Die Zauberflöte.' On the surface it appears to be a tissue of improbabilities and absurdities. Its main characteristics are only explicable in relation to contemporary theatrical history. Spectacular operas, of a highly romantic cast, were the fashion in Vienna at the time, and numbers of them were produced not only at Schikaneder's theatre but on other stages also. For this particular production Schikaneder drew in the main upon a fairy-tale 'Lulu, oder die Zauberflöte' from Wieland's 'Dschinnistan.' Its peculiar weakness as it is now printed is due to the fact that at the last moment—when, indeed, Mozart had already composed a good deal of the music—it was suddenly decided to alter the whole character of the story by introducing allusions to Freemasonry and giving the whole an ideal and symbolical character. This sudden change has generally been attributed to the influence of a certain Karl Ludwig Giesecke, who in fact afterwards laid claim to the authorship of the libretto, but it may have been largely at the instance of Mozart himself. Its immediate occasion may have been the death of the prominent Freemason Ignaz von Born on July 24, 1791. In any case there is no evidence that Mozart was at all dissatisfied with the libretto in its final form, and there is certainly no sign of it in his music. As a matter of fact, with all its contradictions and occasional fatuities, it is undoubtedly adapted to the stage. Goethe, whilst acknowledging its weaknesses, claimed that 'the author had a perfect knowledge of the art of contrast and a wonderful knack of introducing stage effects.' It is well known that the poet himself began a continuation of the libretto and entered into an agreement with Wranitzky on the subject in 1796. The deeper signification of the text undoubtedly appealed strongly to Mozart's imagination and called forth some of his sublimest music. Beethoven declared 'Die Zauberflöte' to be Mozart's greatest work. Unfortunately Schindler adds that his reason for estimating

It so highly was that in it were to be found specimens of nearly every species of music from the Lied to the chorale and fugue. It is a composer's explanation: the layman, if he is not content simply to drink in its beauty, will prefer to think of it as the perfect expression of the two complementary—though apparently contradictory—sides of Mozart's character, his ideality and his realism. As Schurig has well remarked, he was himself both Tamino and Papageno.

THE SPURIOUS AND DOUBTFUL WORKS.—No discussion of Mozart's music would be complete without at least a brief mention of some of the spurious works that have been attributed to him. Of these, various Masses are the most important. In the early part of the 19th century Vincent Novello searched the Continent for unpublished masses by Mozart. Unfortunately he does not seem always to have investigated the authenticity of the works that were offered him, with the result that, of the 17 masses ultimately published by him, five (Nos. 7, 8, 9, 12, 18) have since proved to be spurious, and three (Nos. 13, 16 and 17) must be regarded as of doubtful genuineness. The best known of these is the so-called Twelfth Mass (K. Anh. 232), which gained its English title simply from the fact that it formed No. 12 in Novello's collection. This Mass was first published under Mozart's name by Simrock of Bonn in 1821 from a MS. obtained from Carl Zulehner; but the violinist Leopold Jansa subsequently identified it as a work which he used to sing as a boy in a musical school in his native country of Bohemia, where it was known as 'Müllers Mass.' On purely internal grounds it certainly seems difficult to accept it as a work of Mozart.¹ Of other religious works formerly ascribed to Mozart the Mass K. 140 is by Süßmayer, the Hymn K. 327 by Gasperini, and the Offertory K. 177 probably by Leopold Mozart. Numerous spurious songs were published as Mozart's during the early part of the 19th century: Köchel (Anh. 245) mentions in particular a collection of 33 published by Reilstab of Berlin, of which only 5 were genuine! The most important of them is the 'Wiegenlied' (K. Anh. 284f), which is still frequently sung as a work of Mozart, but has been shown by Dr. Max Friedländer to be by the Berlin composer Bernhard Plics. Almost equally well known is the song 'Vergiss mein nicht' (K. Anh. 246), which as 'Forget me not' long enjoyed a considerable vogue in this country. Its real composer was Ludwig Schneider of Coburg. The beautiful bass air 'Io ti lascio, cara, addio' (K. Anh. 245) was written by Mozart's friend Gottfried von Jacquin. A number of instrumental works have also been erroneously attributed to Mozart. The three symphonies K. 18, K. 444 and K.

Anh. 293 are respectively by Abel, Michael Haydn and Leopold Mozart, while the Minuet and Trio for orchestra (K. 25a), preserved in a MS. at the British Museum, is probably a youthful work by Beethoven. Of the large number of spurious piano pieces the best known is the set of variations (really by Förster) on a theme from Sarti's 'I finti eredi' (K. Anh. 289) that has frequently been printed in editions of Mozart's PF. works. The 'Pastorale variée' (K. Anh. 209b) is also still published under Mozart's name. The grandiose Sonata in C min. (K. 284a), which was printed by Pleyel as 'Mozart's last Grand Sonata,' was composed by Anton Eberl. Finally, the Rondo for PF. (K. 511a), which is bound with the Minuet and Trio for orchestra mentioned above, is probably, like that, an early work by Beethoven.

BIBLIOGRAPHY

This list is confined to works of a general character. The most important of the books and papers on special subjects have been mentioned in the appropriate places in the body of this article. H. de CUKSON's *Essai de bibliographie mozartine* (1900) records some 450 books and articles, and the later literature is fully discussed in the prefaces to the biographies by Jahn, Abert, Schurig and Schiedermair.

1. **CHIEF SOURCES.**—L. von KÖCHEL: *Chronologisch-thematisches Verzeichnis sämtlicher Tonwerke W. A. Mozarts*, 1862; 2nd ed., 1905. (Not always trustworthy on points of chronology, but indispensable for the identification and description of the works.)—A. JAIN: *Wolfgang Amadeus Mozart*, 4 vols., 1864-70; 2nd ed. in 2 vols., 1867-71; 3rd, 1889-91; 4th, 1905-7; 2nd ed. trans. into English by Miss P. D. Townsend, 2 vols., 1882. (Still the fullest of all the biographies, although as a critical survey of Mozart's music it no longer holds pride of place.)—H. ABERT: *W. A. Mozart*, 2 vols., 1919-21; revised ed., 1923-24. (Issued as a revised ed. of Jahn, but practically a new book. The best guide to the music.)—T. de WYZEWA and G. de SAINT-FOIX: *W. A. Mozart. Sa vie musicale et son œuvre de l'enfance à la pleine maturité*, 1756-77, 2 vols., 1912. (An epoch-making book, the first to investigate with any thoroughness the sources and development of Mozart's style. It provides a revised chronology of the whole of the works.)—L. SCHIEDERMAIR ed.: *Die Briefe W. A. Mozarts und seiner Familie*, 5 vols., 1914. (The standard ed. of the letters. Vol. 6 is a collection of portraits and other illustrations.)

2. **SUPPLEMENTARY LITERATURE.**—A. OTLINICHEFF: *Nouvelle Biographie de Mozart*, 3 vols., 1843; Germ. trans. by A. Strahschun, 1847; 2nd ed., 1859. (Still valuable for its musical criticism.)—H. de CUKSON: *Mozart*, 1914. (In French. Chiefly critical.)—A. SCHURIG: *Wolfgang Amadeus Mozart*, 2 vols., 1913; 2nd ed., 1923. (Useful for biographical details. The illustrations are excellent. The French adaptation by J. G. Prod'homme (1923) omits them, as well as many other distinctive features of the original.)—L. SCHIEDERMAIR: *Mozart, sein Leben und seine Werke*, 1922. (The best critical biography of a handy size. Well illustrated.) Since 1923 an important *Mozart-Jahrbuch* has been published under the editorship of HERMANN ABERT. The reader who only knows English should consult—in addition to the English trans. of Jahn already mentioned—the biographies by E. HOLMES (1845; 2nd ed., 1878; Everyman's Library; 1912), V. WILDER (trans. by L. LICHNER, 2 vols., 1906), and E. J. BRILLANTEAU (1902), and the trans. of the letters by Lady WALLACE (2 vols., 1865).

C. B. O.; incorporating material from C. F. F. and W. H. H^w.

(2) **JOHANN GEORG LEOPOLD** (b. Augsburg, Nov. 14, 1719; d. Salzburg, May 28, 1787), father of the great composer, was himself a musician of some note. The son of Johann Georg Mozart, a bookbinder at Augsburg, he determined to push himself beyond the narrow circle of his parental home. He studied for two years (1737-39) at the University of Salzburg with the intention of entering the priesthood, but his love of music proving too strong for him (he was already an excellent violinist), he obtained an appointment in 1740 as musician and chamberlain to Count Thurn und Taxis, Canon of Salzburg. Three years later he was appointed fourth violinist in the private orchestra of the Archbishop of Salzburg, in whose service he ultimately (1763) attained to the post of

¹ For further details of the controversy regarding the authenticity of this Mass, the previous edition of this Dictionary should be consulted.

vice-Kapellmeister, after having already in 1757 been granted the additional appointment of court composer. On Nov. 21, 1747, he married Anna Maria Pertl, daughter of an official of St. Gilgen. They were described as the handsomest couple in Salzburg. Of their seven children only two survived—a daughter, Maria Anna, and a son, the illustrious Wolfgang. Both showed great musical gifts at an early age, and Leopold soon found himself compelled to devote almost the whole of his time to their training. The story of his travels with them has been told above. There is perhaps something that smacks a little of the showman in the manner in which he rushed them round Europe and exhibited them as prodigies, and the strain of these years of travel undoubtedly had a very bad effect on Wolfgang's health. On the other hand, the latter owed much to his father's careful training and strict supervision, irksome as this often was to one so different in temperament. The list of Leopold Mozart's compositions is fairly extensive, and includes religious music, symphonies and concertos, divertimenti, and PF. sonatas. A selection, edited by Max Seiffert, was published by Breitkopf & Härtel in 1908.¹ Six divertimenti written about 1760, and included in this collection, possess considerable merit and deserve to be better known. Leopold's great work, however, was his *Versuch einer gründlichen Violinschule* (Augsburg, 1756), which passed through many editions in several languages and was for long the standard method for the violin.

BIBL.—A selection from Leopold Mozart's letters is given in vols. 3 and 4 of L. Schiedermair's *Die Briefe Mozarts und seiner Familie* (1914). In 1920 the diary that he kept during his travels with his children was published by A. Schurig under the title *Leopold Mozart: Reiseaufzeichnungen, 1764-1771*. A good study of Leopold's character is to be found in J. Kreitmair's biography of his son (1919).

(3) MARIA ANNA, Mozart's sister (b. Salzburg, July 30, 1751; d. there, Oct. 29, 1829), was, like her brother, a child prodigy, but, unlike him, never developed into anything more. She shared her brother's successes as a pianist on their joint tours, but later in life was chiefly in request as a teacher. In 1784 she married Baron von Berchthold zu Sonnenberg, Hofrath of Salzburg and Warden of St. Gilgen. On his death in 1801 she returned to Salzburg and again occupied herself with teaching. She became blind in 1820 and ended her days in comparative poverty.

(4) CONSTANCE (née Weber), Mozart's wife (b. Zell, Lower Austria, Jan. 6, 1763; d. Salzburg, Mar. 6, 1842), was not herself gifted with any great musical talent, although she had a pleasing, well-trained voice and was possessed of some skill on the piano. She sang the soprano part in her husband's Mass in C minor (K. 427) on its performance in Salzburg in 1783, and after his death appeared in public at one or two of the concerts of his works that she directed. In 1799

she helped to improve her penurious position by selling all her husband's remaining MSS. to André, the composer and music-publisher of Offenbach. In 1809 she married Georg Nikolaus Nissen, an official in the Danish diplomatic service, whose acquaintance she had made at Vienna in 1797. There were no children of this second marriage. On Nissen's retirement from office in 1820, he and Constanze retired to Salzburg, where Nissen collected the materials for his Mozart biography. He died in 1826, however, before its publication, and Constanze had the task of seeing it through the press. The rest of her life was uneventful. Her character is an interesting study. After Mozart's death she seems to have lost all traces of the slovenliness and improvidence that helped to wreck his affairs, and, as her diary and correspondence² show, became a capable business woman and a devoted mother to his children.

(5) KARL THOMAS (b. Vienna, Sept. 21, 1784; d. Milan, Oct. 31, 1858), the elder of the two sons who survived the composer, did not become a professional musician, though during his early life in Prague he enjoyed Duschek's instruction and became a gifted pianist. In 1798 he was apprenticed to a merchant at Leghorn. For a long time he still debated the advisability of turning to music as a career, but finally entered the service of the Austrian government and became an official at Milan, where he died unmarried in 1858.

(6) FRANZ XAVER WOLFGANG, later known as WOLFGANG AMADEUS (b. Vienna, July 26, 1791; d. Carlsbad, July 29, 1844), was intended from the first for a musical career. He studied in Vienna under Hummel, Salieri, the Abbé Vogler, and perhaps Albrechtsberger, and gave his first public concert in 1804. From 1808-14 he held posts as music-master to two noble families in Lemberg. In 1819 he set out on a long musical tour, finally settling again in Lemberg in 1822, where he remained for the rest of his life composing, conducting and teaching music. Both as pianist and composer he was held in high esteem, but his name alone was sufficient to preclude his rising to eminence. It is only fair to add, however, that his music has never yet been subjected to a thorough-going examination.

C. B. O.

MOZARTEUM OF SALZBURG, THE. An educational institution for musicians, housed since 1914 in a handsome building which also serves as the headquarters of the Mozart-Gemeinde, an international society which collects funds for the upkeep of Mozart's birthplace and other places associated with the composer, and for the acquisition of Mozart relics. The present director is Dr. Bernhard Paumgartner.

MOZARTSTIFTUNG, see FRANKFORT.

¹ *Denkmäler der Tonkunst in Bayern*, ix. 2. There is a valuable introduction.

MUCH ADO ABOUT NOTHING, opera in 4 acts after Shakespeare, text by Julian Sturgis, music by Stanford. Produced Covent Garden, May 30, 1901. In German (John Bernhoff), Stadttheater, Leipzig, Apr. 25, 1902.

MUCK, KARL (b. Darmstadt, Oct. 22, 1859), a distinguished conductor.

His father was a Bavarian magistrate (Ministerialrat). He studied at Heidelberg and Leipzig, and at the latter place visited both University and Conservatorium, and graduated as Doctor of Philosophy. The same year (1880) he made his début as a pianist in the Gewandhaus. Shortly afterwards he became Kapellmeister at Salzburg, then at Brünn, Graz, and in 1886 first Kapellmeister at Prague. As director of Neumann's Travelling Opera Company he appeared in Berlin, and was appointed in 1892 Kapellmeister at the Royal Opera in that capital, and became General Music Director in 1908. Meantime in 1899 he had conducted Wagner at Covent Garden, and through the winter seasons 1903-06, in conjunction with Mottl, he conducted Philharmonic Concerts in Vienna. His performances of 'Parsifal' at Bayreuth have been famous since 1901. In 1906 he went to America to take charge of the Boston Symphony Orchestra. His second term of office there was abruptly terminated by the war (see Boston).

Since the war he has conducted at Munich, Hamburg and Amsterdam.

H. V. H.: addns. from *Riemann*.

MUDARRA, ALONSO DE (16th cent.), Spanish lutenist, said to have been a canon of Seville, who published a book of lute tablature entitled:

Tres libros de musica en cifras para vihuela . . . 1546. (Bibl. Nat., Madrid; Escorial.)

It includes sets of variations (*diferencias*) on popular tunes of the day, and settings of Spanish ballads, e.g. on the siege of Antequera (1410) and on the death of Absalom, together with passages from Virgil and Ovid and sonnets by Petrarch and Sannazzaro, and also by the Spanish poets Jorge Manrique, Boscán and Garcí-Lasso. There are also pavaues, a galliard and a fantasía, and fragments of psalms and motets by Josquin des Prés (v. Morphy, *Les Luthistes espagnols*, Leipzig, 1902, and P. Villalba, *Canciones españolas de los siglos XV. y XVI.*). J. B. T.

MUDD (MUDDÉ, MUDES, MUDS), THOMAS (b. circa 1560), composer of English church music, attended St. Paul's School and went to Cambridge in 1578 with one of the sizarships for the sons of London merchants (Davey, *Hist. Eng. Mus.*). He became a Fellow of Pembroke Hall, and continued to be so until as late as 1590. A fair number of compositions by Mudd are preserved, but as there was also a **JOHN MUDD** (organist of Peterborough Cathedral from 1583, probably until 1620—*West's Cath. Org.*) living about the same time, it is often difficult to

differentiate between them. A service and 4 anthems at Ely Cathedral are by John, but the nine dances for 3 viols (3 Aires, Allemande, Courante, 2 Sarabandes, Courante and 'Echo') (B.M. Add. MSS. 18,940-1-3-4) are by 'Tho. Mudde.' A 5-part In Nomine, arranged for viols in a MS. of about 1578 (B.M. Add. MSS. 31,390/177), is described simply as by 'Mudd.' The anthem 'God which has prepared' is put down in the MS. (written in 1717) as by 'John or Thomas,' which shows that a certain amount of confusion between them was prevalent even then. An 'In Nomine, De Profundis,' described as by Mudd in Batten's Organ Book at St. Michael's College, Tenbury, is probably by Mundy. The words of an anthem by 'Mudd' are included in Clifford's collection (1663). Below is a list of anthems by Mudd (any designation as to authorship is given as it stands in the MSS.).

God which has prepared ('Thomas or John Mudd'). Durh.: Harl. 7340/436. Score; B.M. Add. MSS. 30,478-9. Tenor cantoris part only.

I will always give thanks ('Mudd,' 'Mudes'). PH.; B.M. Add. MSS. 30,478-9. Tenor cantoris part only.

Let Thy merciful ears ('Mudd,' 'Mud'). Durh.; B.M. Add. MSS. 30,478-9. Tenor cantoris part only.

Lift up your heads. Durh.; incomp.

Lord hear my voice when I cry ('Tho. Mudde'). Harl. 6347 78.

Words only.

O clap your hands. PH.

O God Thou art my God ('Mudd'). B.M. Add. MSS. 30,478.

Tenor cantoris part only.

There was also a third Mudd living in the 17th century, organist of Lincoln Cathedral in 1662. As, however, he lived much later than John or Thomas, it is unlikely that he wrote any of the above anthems. Certain extracts from letters written by the precentor to the Dean of Lincoln in 1662, complaining about Mudd's drinking habits, will no doubt confirm this assumption (*West's Cath. Org.*). J. M.^c.

MUDIE, THOMAS MOLESON (b. Chelsea, Nov. 30, 1809; d. London, July 24, 1876), one of the ten successful candidates for entry into the R.A.M., in the severe first examination of 1823. Mudie was a pupil of Dr. Crotch for composition, of Cipriani Potter for the pianoforte—who also gave him useful advice as to his writings—and of Willman for the clarinet. His song 'Lungi dal caro bene' was so esteemed that the Committee of Management paid the cost of its publication, an act repeated in the case of Sterndale Bennett's first concerto, but in no other. Several vocal pieces with orchestral accompaniment, a symphony in C and one in B₇ were also works of his student time. Mudie's pupilage terminated in 1832, by his appointment as a professor of the pianoforte in the Academy, which post he held till 1844. The Society of British Musicians, founded in 1834, furnished an arena for the performance of several of the works of Mudie. The symphony in B₇, already mentioned, was played at the concert of Feb. 9, 1835; a symphony in F, remarkable for a movement in F minor, Nov. 10, 1835; a symphony in D, Mar. 10, 1837; a quintet in E₇ for pianoforte and strings, Jan. 5, 1843, and Mar. 7,

1844; a trio in D for pianoforte and strings, Oct. 6, 1843; and several songs and concerted vocal pieces on many occasions. On the death of Alfred Devaux, in 1844, Mudie went to succeed him in his occupation as teacher in Edinburgh. While there he published several pianoforte pieces and songs, and wrote accompaniments to many in Wood's collection of the Songs of Scotland; he also occasionally gave pianoforte recitals. In 1863 he returned permanently to London, but from that time, except with an overture at one of the Crystal Palace concerts, came little before the public. The existing scores of his symphonies and the whole of his printed works are deposited in the library of the R.A.M. He was buried in Highgate Cemetery.

G. A. M.

MÜHLFELD, RICHARD (*b.* Salzungen, Feb. 28, 1856; *d.* June 1, 1907), was a member of the Grand Ducal Orchestra of Meiningen from 1873, at first as a violinist, but from 1876 as first clarinet, having taught himself the latter instrument with such success that he rapidly gained an unique position among modern players. He took part in the Bayreuth festival plays from 1884-96, and came to England for the first time in 1892, appearing on Mar. 28 at the Popular Concerts, in Brahms's quintet for clarinet and strings, a work, like the master's trio and the two sonatas in which the same instrument is employed, written with special view to Mühlfeld's great qualities as a player. In all kinds of music his performance was a perfect model of what musical interpretation should be. Many a detail of excellence in the Meiningen orchestra was due to him, for he was accustomed for many years to act as sub-conductor, and to rehearse the players singly and in groups. (*Riemann.*)

M.

MÜLLER, THE BROTHERS, celebrated quartet-players, four sons of the Duke of Brunswick's Hofmusik, AEGIDIUS CHRISTOPH MÜLLER (*b.* Nordhausen, July 2, 1766; *d.* Brunswick, Aug. 14, 1841). All his sons were born in Brunswick.

The brothers were (1) KARL FRIEDRICH (*b.* Nov. 11, 1797; *d.* Apr. 4, 1873), first violin and Konzertmeister to the Duke; (2) THEODOR HEINRICH GUSTAV (*b.* Dec. 3, 1799; *d.* Sept. 7, 1855), viola player; (3) AUGUST THEODOR (*b.* Sept. 27, 1802; *d.* Oct. 20, 1875), violoncellist; (4) FRANZ FERDINAND GEORG (*b.* July 29, 1808; *d.* May 22, 1855), second violinist of the quartet and Kapellmeister to the Duke.

Educated by their father expressly with a view to quartet-playing, they brought the art to a perfection then unknown. The Duke of Brunswick's somewhat tyrannical regulation, by which none of his musicians were allowed to take any part in the music of the town, obliged them to prepare in secret for appearing in public, and in 1830 they sent in their resignations. They gave concerts at Hamburg in 1831, and

in 1832 at Berlin, where the public gradually learned to appreciate their wonderful ensemble. In 1833 they left Berlin, and visited in turn all the principal cities of Germany and Paris, extending their tours farther and farther, till 1845, when they went to Russia. Their repertory consisted almost entirely of the works of Haydn, Mozart and Beethoven. Their performance of Haydn's 'Kaiser quartett' especially had a world-wide reputation.

The eldest brother, Karl Friedrich, also had four sons, known as the younger Müller brothers; (5) BERNHARD (*b.* Feb. 24, 1825; *d.* Sept. 4, 1895), viola; (6) KARL (*b.* Apr. 14, 1829; *d.* Stuttgart, Nov. 11, 1907), first violinist (he married a singer, Elvira Berghaus, and was known as Müller-Berghaus); (7) HUGO (*b.* Sept. 21, 1832; *d.* June 26, 1886), second violin; and (8) WILHELM (*b.* June 1, 1834; *d.* New York, Sept. 1897), violoncellist, the most important individually, was for ten years a member of the JOACHIM QUARTET (*q.v.*). They were court quartet-players to the Duke of Meiningen, and also made extended tours, visiting Russia, Denmark and France. In 1866 they settled for a short time in Wiesbaden, and then at Rostock, where Karl became Kapellmeister, his place in the quartet being supplied when travelling by Leopold Auer. It was, however, broken up entirely in 1873, by the appointment of Wilhelm as Kammermusik, and teacher at the Hochschule für Musik in Berlin. The younger Müllers, though distinguished for their ensemble, did not reach the standard maintained by the elder brothers; the chief reason being that, instead of restricting themselves to genuine quartets, they played music which, though good of its kind, was in reality better suited to a small orchestra.

F. G.

MÜLLER, AUGUST EBERHARDT (*b.* Nordheim, Hanover, Dec. 13, 1767; *d.* Dec. 3, 1817). His father, organist at Rinteln, was his first instructor, and he subsequently learnt of J. C. F. Bach at Bückeburg. In 1785 he went to Leipzig to study law, but soon gave it up, and became in 1789 organist of St. Ulrich's Church, Magdeburg. In 1792 he was chosen to direct the concerts, etc., at Berlin, and there became intimate with Marpurg, Fasch, Reichardt and other distinguished men. He was made organist of St. Nicholas' Church, Leipzig, in 1794. He played the organ and harpsichord equally well, and was also a proficient on the flute. In 1800 he was appointed deputy to Hiller at the Thomasschule, and cantor on Hiller's death in 1804. In 1810 he moved to Weimar. The following is a list of his compositions:

(1) Piano: Two concertos; a trio for piano and strings, op. 17; two sonatas for violin and piano; many sonatas for piano solo, besides variations, etc. (2) Organ: Suites, a sonata and Choral variations. (3) Flute: Eleven concertos; a fantasia with orchestra and twenty-three duets for two flutes. (4) Vocal: Three cantatas for four voices and orchestra; two posthumous operettas (*Singspiele*); songs with piano accompaniment. (5) Instruction: Method for the piano, and instruction-book for the flute. (*See Q. L.*)

M.

MÜLLER, CHRISTIAN, of Amsterdam, between 1720 and 1770 built the finest organs in Holland, and especially the celebrated instrument at Haarlem in 1738. v. de p.

MÜLLER, HEINRICH (b. Lübeck, Oct. 18, 1631; d. Sept. 17, 1675), pastor and archdeacon of the St. Marienkirche, Rostock, from 1653 till his death. He was also a distinguished professor of theology at the University there.

Among his numerous theological and homiletical works he published in 1659 a book entitled 'Geistliche Seelen-Musik,' containing about 400 hymns, for which 126 tunes are provided with figured bass. As the hymns are characterised by almost an excess of subjective devotional sentiment, some of them by Müller himself, and a large number from Angelus Silesius, so the tunes bear witness to a corresponding change in musical taste, and the gradual suppression of the older rhythmical choral in favour of the secular aria-form in modern keys. The work is even more of a pioneer in this direction than Crüger's 'Praxis pietatis melica.' Of the tunes fifty new ones are the invention of Nicolaus Hasse, then organist of the Marienkirche.¹ None of these tunes have continued in general use. Müller prefaces his work with a series of ten chapters on the origin and use of spiritual songs, in the course of which he deplors the decay of congregational interest in church music and hymn-singing, and of the devotional sentiment in connexion therewith. Another work of Müller may be mentioned. *Geistliche Erquick-stunden* (1664-66), the devotions in which were afterwards versified, and provided with tunes in the form of spiritual arias by several Nuremberg poets and musicians, members of the Pegnitz-Blumen-Genossenschaft, and published under the title *Poetischer Andacht-Klang* (1673-91).

J. R. M.

MÜLLER, IWAN (b. Roval, Dec. 3, 1786; d. Bückeburg, Germany, Feb. 4, 1854), a renowned clarinettist, appeared first in Paris in 1809, where he brought out many of his structural improvements in the instrument, and where, after a residence of some years, and a successful concert tour through all the principal European cities, undertaken 1820-26, he was appointed professor in the Conservatoire. In later life he returned to Germany. His compositions (concertante for two clarinets, three quartets for clarinet, violin, viola and violoncello, etc.) have an educational value for players of his instrument, but beyond that they are of no importance. His best production is a 'Gamme pour la nouvelle clarinette,' published at Berlin in 1825. M.

MÜLLER, WENZEL (b. Tnava, Moravia, Sept. 26, 1767; d. Baden, near Vienna, Aug. 3,

1835), was for some time a pupil of Dittersdorf, and became conductor in the Brno Theatre in 1783 and three years afterwards, when only nineteen, obtained a similar post at Marinelli's theatre in Vienna, where the rest of his life was spent, with the exception of the years 1808-13. During this period he was director of the opera at Prague, where his daughter Thérèse, afterwards known as Madame Grünbaum, was engaged as a singer. On his return to Vienna, he became conductor at the Leopoldstadt Theatre, and retained the post until within a short time of his death. As a composer of light operas, he enjoyed enormous popularity for many years, and his productions in this kind are said to number over 200. His more ambitious works, as symphonies, masses, etc., were less successful. Among his dramatic works may be mentioned: 'Das Sonnenfest der Braminen' (1790); 'Das neue Sontagskind' (1793); 'Die Schwestern von Prag' (1794); 'Die Teufelsmühle auf dem Wienerberge' (1799). A peculiar interest attaches to his 'Zauberzither' or 'Kaspar der Fagottist,' produced June 8, 1791, since Schikaneder took several suggestions from it for the plot of 'Die Zauberflöte.' In 1818 Müller produced his 'travestierte Zauberflöte' ('The Magic Drum') (Mendel's *Conversations-Lexikon*; Riemann's *Opernhandbuch*). M.

MÜNTZBERGER (MÜNTZ - BERGER), JOSEPH, called LE JEUNE on some title-pages of his works (b. Brussels, 1769; d. Paris, Jan. 1844), pupil of his father and van Maldere. He chose the violoncello as his principal instrument; went to Paris in 1783, was violoncellist at the Opéra-Comique in 1790, and was later at Favart, retiring with a pension in 1830. He composed 2 concertos, trios, sonatas, solos and studies (E. v. d. Stratten, *History of the Violoncello*; Q.-L.).

MÜTHEL, JOHANN GOTTFRIED (b. Mölln, Lauenburg, c. 1720), became a pupil of J. P. Kuntzen at Lübeck, and in 1738 received the appointment of chamber-musician and court organist at Schwerin, in which capacity he also gave musical instruction to the members of the ducal family of Mecklenburg-Schwerin. Provided with a letter of introduction from the Duke he went to Leipzig in May 1750 to perfect himself in playing and composition under the tuition of Sebastian Bach. It was the last year of Bach's life, but he received Müthel into his house, and Müthel was with him in his last illness; and at his death. He then went to Naumburg to Bach's son-in-law Altnikol, and afterwards visited Dresden and Potsdam, at which latter place he made the acquaintance of Emanuel Bach, with whom he continued on terms of close friendship. In 1753 he accepted a call to Riga, where he remained for the rest of his life as organist to the Lutheran church, and where he died some time after 1790. Müthel is described as one of the best organ and

¹ One has reappeared in 'Songs of Syon,' edited by the Rev. G. E. Woodward (No. 2).

clavier players and composers of his time. Dr. Burney speaks of his clavier works in the highest terms, describing them indeed as more difficult than those of Handel, Scarlatti, Schobert and Emanuel Bach; but as characterised by so much novelty, taste, grace, and contrivance as entitle them to be ranked among the best productions of the kind (see his *Present State of Music in Germany*, 1773, vol. ii. pp. 328-9). Only a few of his works were published, among them two concertos, C minor and D minor, for clavier with accompaniment of strings, published at Riga in 1767; three sonatas and two ariosi with variations published by Haffner at Nuremberg; a 'Duetto für 2 Claviere, 2 Flügel, oder 2 Fortepiano,' Riga, 1771, which appears to be the earliest work with Fortepiano on the title. In Madame D'Arblay's *Diary* mention is made of this duet as played by two members of Dr. Burney's family at one of his house-concerts. If Mützel's clavier works have that originality which Burney and Schubart (*Ideen zur Ästhetik der Tonkunst*, 1784), ascribe to them, it is surprising that in these days of revivals none of them have ever been republished. J. R. M.

MUETTE DI PORTICI, LA, see MASA-NIELLO.

MUFFAT, (1) GEORG (b. Schlettstadt c. 1645; d. Passau, Feb. 23, 1704), highly esteemed composer, of Scottish extraction,¹ studied Lully's style for six years in Paris; was organist of Strassburg Cathedral till 1675; became organist to the Bishop of Salzburg about 1678; visited Vienna and Rome; became in 1690 organist, and in 1695 Kapellmeister and Master of the Pages to the Bishop of Passau. He published 'Armonico tributo' (sonate di camera, Salzburg, 1682); 'Apparatus musico-organisticus'—twelve toccatas, chaconne, passacaglia, Augsburg, 1690, dedicated to Leopold I.—of importance as regards the development of organ-playing; 'Svaviore harmoniac. . . Florilegium I.' (Augsburg, 1695); 'Florilegium secundum' (Passau, 1698), both with autobiographical proface in four languages; 'Auserlesene mit Ernst und Lust gemengte Instrumental-Musik' (1701).² The 'Apparatus' was republished in the *Trésor des pianistes*, and the two works called 'Florilegium' in *D.T.Ö.* I. and II., the 'Auserlesene mit Ernst und Lust gemengte,' etc. in *D.T.Ö.* XI. His son

(2) GOTTLIEB (Theophil) (b. Passau, 1690; bapt. Apr. 25; d. Vienna, Dec. 10, 1770), a pupil of J. J. Fux, became in 1717 court and chamber-organist to the Emperor Charles VI., and to the widowed Empress Amalie Wilhelmine (d. 1742), and music-master to the royal children. He retired on a pension in 1763. He was a distinguished organist and a composer of taste, and published for organ 72 Versetten

oder Fugen, sammt 12 Toccaten, besonders zum Kirchendienst bei Choral-Aemtern und Vespren dienlich' (Vienna, 1726); for harpsichord, 'Componimenti musicali,' containing overtures, caprices, sarabandes, etc., with a preface; and ending with 'Particolari segni delle maniere' (see ORNAMENTS) etc., dedicated to Charles VI., at whose expense it was engraved. He was one of the many composers whom Handel laid under contribution for subjects and phrases in his oratorios. The date of this work was formerly given as 1727. Subsequent research by Adler⁴ and others fixed it at or about 1739; probably not more than three or four months, if so many, intervened before Handel's use of it in the 'Ode on St. Cecilia's Day' (Sept. 1739). The 'Componimenti,' republished in the *Trésor des pianistes*, were again brought out by Chrysander, as No. 5 of his 'Supplemente.' (See DENKMÄLER, vol. i. p. 689). Adler⁵ again edited the work for *D.T.Ö.* III.

There were two violinists of the same name in the Imperial Chapel, GOTTFRIED, from 1701-49, and JOHANN ERNST, appointed in 1730, died in 1746, aged 48.

C. F. P. rev.

BIBL.—HEINRICH JOHANN KNÖLL, *Die Clavier- und Orgelwerke von Theophil Muffat*. (Vienna Dissertation, 1916.)

MUGNONE, LEOPOLDO (b. Naples, Sept. 29, 1858), conductor and composer. He came of a musical family and studied at the Conservatoire of S. Pietro a Majella under Cesi and Serras. At the age of 12 he wrote a pretty comic opera, 'Il dott. Bartolo Salsapariglia,' which was successfully performed at various academies. Another, 'Don Bizzarro e le sue figlie,' was given in 1875 at the Teatro Nuovo, Naples, together with some of his Neapolitan songs. In collaboration with Enrico Golisciani he wrote, when still a youth, several other comic works, including two, 'Madame Angot al serraglio' (3 acts) and 'Il Birichino' (1 act), which enjoyed lengthy runs, the latter being given in turn at Venice (1892), Florence, Rome, Vienna, and Barcelona. The opera 'Vita Brettona' was produced at the San Carlo, Naples, under his own direction in 1905 and well received. His career as a conductor began when he was only 16 with a season of comic opera at the Fenice, in his native city, after which he had experience as a chorus-trainer and as accompanist to Bottesini, the eminent double-bass player. His talent was recognised by Sonzogno, the publisher, who engaged him for various operatic undertakings, including that in Rome (1890) which gave him the direction of the first performance of 'Cavalleria Rusticana.' He also shared with Toscanini the direction of the special performances at La Scala in honour of Verdi, whose 'Nabucco' he conducted with

conspicuous ability. He distinguished himself no less in the handling of symphonic orchestras, particularly in the scores of the modern Italian school; a well-known writer, Amintore Galli, once said of him, 'He is the personification of Italian art as well as the manifestation of a sensitive and essentially musical soul.' His individuality and sincerity were clearly revealed during the seasons that he conducted at Covent Garden, where he made his début ('La Bohème') in the autumn of 1905 and directed the *première* here of Giordano's 'André Chénier.' A year later he brought out the same composer's 'Fédora' and, in 1919, Mascagni's 'Iris.' H. K.

MUHAMMEDAN MUSIC. Oriental melodies are almost always handed down orally, and so we have no direct practical knowledge of them, and can argue back to their original condition and subsequent development only from chronicles and theoretical works.

HISTORY.—We know little of the music of the pre-Muhammedan Arabs. It was inseparable from their desert life, and that has remained unchanged. Perhaps the present Bedouin music, with its monotonous rhythms, short compass and faint pipe and string accompaniment, is a fair representative of it.

1. Bedouin Song from Southern Algeria.

Arabic music, as we understand it, is rather that composite edifice, with a foundation in Arabic poetry and superstructure of Persian and Byzantine elements, which has persisted in Muhammedan centres and dates from the 7th century. Practised in the first instance by freedmen and slaves of both sexes and, together with the wine whose praises it sang, under the ban of the Church, it became socially indispensable. The zenith of the practice of music¹ was the period of Haroun al Rashid (786-809), and its two rival representatives were the conservative Ishāq-al-Mausili, a Persian by blood, and the progressive Ibrāhīm ibn al-Mahdī, the Caliph's nephew.

The writings on the theory of music which began about the 8th century culminated in Al Fārābī (900-950). They were all framed on Greek theory, but include valuable hints of Arabic origins. A second climax came three centuries later in the person of Safi-ud-Dīn, and with his successors, chief of whom was Abd al Kadr, 15th century, who wrote in Persian.

Politically, the Muhammedan world divided itself, after the Arabian expansion, into an eastern group, running from the Persian Gulf to the Mediterranean and including Persia, and

a western, comprising N. Africa, Sicily and Spain. Music naturally followed this division. In the west, the extension of Muhammedan sway and the absorption of foreign peoples introduced new elements. The Syrian 'Umayyads had carried the court music into Spain, and the Baghdad tradition obtained a footing there in the 9th century. Side by side with it sprang up in Spain a new style of song with strophic forms. In the course of the 11th and 12th centuries this penetrated N. Africa,

2. Prelude and Song from Morocco.

(a) *senza misura.*

(b) *Tempo giusto.*

and remained the prominent type in Andalus and Granada, the last stronghold of the Moors. In the east, the Persian practice had been a feature from the beginning. The whole area was gradually overrun by tribes of Central Asia, who influenced, but did not vitally change, the character of the music. The kind of influence exercised by particular tribes of east and west is to be seen in Examples 1, 2, 3.

3. Dance from Aidin, a Province of Anatolia.

♩ = 118.

Drum.
loud
soft

This general grouping of east and west holds good in the music of to-day. The western musicians consider themselves to be heirs of the Andalusian style. The musical centres of the east are now Cairo and Constantinople. In both the musical centre of gravity has been shifted from the courts to the bourgeoisie. The practitioners are mainly professionals, still as ever held in disdain, or belong to communities

¹ See the *Kitab al Aghani* of Ali al Isbahani 10th century.

which originally practised music as an incentive to religious ecstasy. European music has affected principally the military music and the street songs; its effect on the pure style has been chiefly to drive it into corners.

SCALE.—The scale of Al Fārābī's predecessors was, as far as we know it, Pythagorean. This is clear from their description of the fretted string instruments, especially the 'Ud of Persian origin, the classical instrument and the prototype of the European lute. It had either four or five strings tuned in fourths; the little finger stopped a fourth from the open note, the first finger stopped one tone and the third two tones above the open string, and the middle finger a tone below the fourth (all fretted). The middle and third fingers were used only in alternation, and two groups of melodies were distinguished by the practice of Baghdad according as one or other of the frets was used. The particular tonality depended on the combination of this chosen note with the tonic.

The next step was to introduce a fret one tone below the middle finger, giving the Pythagorean *Limma* at the lower as well as the upper end of the tetrachord; thus, in cents (see INTERVAL),

Nut.	New Fret.		Middle.		
0	90	204	294	408	498
90	114	90	114	90	

But there were other methods in actual practice. On the Tanbūr of Baghdad, a long-necked two-stringed lute, the lowest eighth of the string was in pre-Muhammedan times divided into five equal parts. The second string was usually tuned to the lowest note but one of the first. In this there were no Greek intervals, not even the fourth as a terminal. This same system of equal divisions, mechanically arrived at, accounts for the position of certain frets by which the executants of Al Fārābī's time replaced the Pythagorean. Thus the Persian 2nd finger was half-way between the 1st and 3rd, and the 2nd finger of Zalzal, a Baghdad lutenist of the 8th century, was half-way between the 'Persian' and the 3rd. Similarly the 'new' half-way fret, between nut and 1st finger, could also be taken as between the nut and the Persian, or between the nut and Zalzal's.

	String lengths.	Cents.
4th	27	498
3rd	28.44	408
2nd { Zalzal	29.33	355
(Middle) { Persian	30.22	303
{ Pythagorean	30.38	294
1st	32	204
New { Zalzal	32.67	168
{ Persian	33.11	145
{ Pythagorean	34.17	90
Nut	36	0

Besides this division, another common one on the Tanbūr was that of the whole tone into three equal parts (on the string).

Al Fārābī exhibits the Greek *systema teleion* on a five-stringed 'Ud comprising two octaves and one note. The double octave is arrived at by every conceivable arrangement of conjunct and disjunct tetrachords. The principal intervals are 'superparticulars,' that is, fractions¹ of the form $\frac{n+1}{n}$. His tetrachord has two

distributions—(i.) the fourth is diminished by a superparticular and its residue is divided in the proportion 1 : 1 or 1 : 2; or (ii.) it is diminished by two equal or unequal superparticulars leaving a residue. Tetrachords of different kinds result from (i.) and (ii.). Saif-ud-Dīn repeats Al Fārābī's tetrachords but rejects a number of them, including those which involve the Greek enharmonic genus 'on account of their defective harmony,' and merges groups which are mathematically distinct, since they are aurally indistinguishable.

The fretting of the 'Ud is from now on exclusively Pythagorean. Zalzal's two frets are shifted to places one tone and two tones above the open string; each semitone is a limma, and each tone two limmas and a Pythagorean comma—

Nut	1st	2nd	3rd
90 24 90	90 24 90	90	

and the octave, being two fourths and a tone, has therefore 17 frets.

The normal type of scale before the Persian period was a Pythagorean G-scale. After that period it was a C-scale in just intonation, derived possibly from the Tanbūr. With Saif-ud-Dīn the scales can begin either on a common tonic or, as before the 10th century and at the present day, on this or that degree; but the older degrees are more often employed than the later ones in those scales which are in common use.

The theorists of the 19th century construct their scales from 24 degrees of the octave, the increase being due to the need for transposition. They call their divisions 'quarter tones' and usually regard them as equally tempered. The movable frets of the 'Ud have disappeared. The lowest string (of four) is now a tone (not, as before, a fourth) below the 3rd string, and an octave below the first.

The general tendency throughout Arab music is towards finer distinctions of interval.

4. Prelude and (composed) Song from Tunis.

(a) *senza misura*. $\sigma=140$. Phonogram.

¹ Saif-ud-Dīn held that the consonance of these intervals diminished with their size, and their octave-extensions and their inversions similarly. Aricenna (980-1037) fixed the limit at which two pitches could be distinguished as 46/40 (35 cents).

(b) *Tempo giusto.* ♩=148.

5. Turkish (composed) Song. Wrongly attributed to 'Abd al-qādir, the theorist; prob. 18th cent.

MELODY

GENERAL CHARACTERISTICS.—The old theorists gave rules; we have to confine ourselves to the practice. The things that strike us in that are the abundance of sequences and grace notes, the preference for descent over ascent and for steps over leaps. Steps are from one to three semitones; leaps are anything larger. After a third, return is usually made to one of the notes which have been leapt over. Fourths and fifths are mainly used to bring back a sequential ascent or descent to a central position for a new start. Larger intervals than these do not occur within a section, only at a change from one section to another. This helps us to see that their songs are in a framework of tetrachords,

either continuous or overlapping, which is more or less what the theory says. In a song a note may often occur in two forms—natural and sharp. At such a place it is common to hear a $\frac{3}{2}$ -tone substituted. This points back to the alternative frets of the lute and to the neutral intonation of Zalzal's 'middle finger.'

GROUPING.—Some theorists felt that their system of scales did not do justice to the variety of melody, and they therefore supplemented the system by scales which varied in ascent and descent. The practical musician is not concerned with scales; he thinks, not in notes, but in melodic figures, and groups the melodies accordingly. These groups are *maqāms*, the exact counterpoint of *Rāgs* (see INDIAN MUSIC). *Maqām* has four distinguishing marks: (1) the selection of constituent notes, (2) compass, (3) position of the important notes, (4) typical phrases. These characteristics of the *maqām* are most fully exhibited in the indispensable prelude to song or piece (see Exs. 2a, 4a). This prelude is improvised and in free time; its purpose is to establish the *maqām* in the mind both of performer and listener (cp. the Indian *ālāp*). Melodies in the more elaborate style are not restricted to one *maqām*, but may even run through a series of them. The word *maqām* means 'a recitation from a raised position': the term is used in Syria and Turkey; in Algeria the word is *sana'a*; in Tunis, *taba'*; in Egypt, *naghma*. A few individual names of *maqāms* point to a local origin (e.g. *Iligāz*, the district of Mecca). The *maqāms* as a whole have sprung from particular folk-songs, or composed songs, or both, and they naturally vary according to the school they come from. The east is distinguished from the west by a preference for leading notes, which entail augmented and diminished intervals, and by a healthy contempt for those who have no such preference.

RHYTHM.—Al Fārābī has a system for time as well as for tune, and later theorists have followed suit. There is, of course, at that period, no notation for either; he merely describes. He has two systems. (i.) His bar contains anything from one to five units (*chronoi protoi*). It has two to four parts of unequal length, and the last part must be longer than any of the others. (ii.) Instead of piling up from a small duration he splits up a large one into two equal parts. In fact, (i.) provides for any kind of time, and (ii.) only for duple. He finds, as was to be expected, that his system does not cover all the cases, and he falls back on a list and a description of the different times in use in his own day. Theorists have also, at all times, utilised the natural connexion between music and verse to transfer the actual prosodical names to music; but the connexion does not, and probably never did, amount to identity.

As for the practice, two of our examples will show the difference between the Arab and the European conception. We interpret nine-four as 3×3 ; they can take it as thrice $2 + \text{once } 3$ (as in Ex. 3) or in many other ways. Similarly, in Ex. 4b, they divide an eight-four bar into twice $3 + \text{once } 2$.

CROSS-RHYTHM.—All melodies have a rhythmic accompaniment, of drum or string, like a *basso ostinato*. These may coincide in simple pieces like Ex. 3, but the Arabs much prefer cross-rhythm. Here are three usual forms of accentuation in an eight-four bar:

(a)	$\frac{1}{2}$	2	$\frac{3}{4}$	4	$\frac{5}{6}$	6	$\frac{7}{8}$	8
(b)	$\frac{1}{2}$	2	3	$\frac{4}{5}$	6	$\frac{7}{8}$	8	
(c)	1	$\frac{2}{3}$	3	$\frac{4}{5}$	6	7	$\frac{8}{8}$	

The drum may choose any one of these, and stick to it throughout the piece; and so, independently, may the melody. There will then be cross-rhythm in two out of three of the cases. Besides this, the drum having selected its rhythm, the melody may interchange (a) and (b), or (a) and (c), but not (b) and (c). There is then cross-rhythm in half the possible cases. Of the two regions already mentioned, the east prefers long and metrically intricate rhythms—as many as 88 beats in a bar are known—but employs little cross-rhythm; the west prefers short bars and elaborate cross-rhythm (see Ex. 4b).

FORM.—From a comparison of several hundreds of their songs and pieces the formal structure may be put down in general terms thus. (The letters *a*, *b*, *c* represent melodies of indeterminate length, which may be highly elaborate; *z* stands for a development section.) These are typical examples only.

Folk music $\left\{ \begin{array}{l} a \ a \ a, \text{ etc.} \\ a \ a \ b \ a \ a \ b, \text{ etc.} \\ a \ a \ b \ a \ a \ b \ c \ c \ c \ d, \text{ etc.} \end{array} \right.$

(There is no space for all the varieties.)

Composed music (west) $a \ a \ a \ z \ a$ (voc. and instr.).

" " (east) $\left\{ \begin{array}{l} a \ b \ z \ b \text{ (voc.)} \\ b \ a \ c \ a \ d \ a \ e \ a \text{ (instr.)} \end{array} \right.$

Potpourris are a favourite form in folk-music and suites in composed music. In each suite a 'prelude,' representing the *maqām*, is followed by vocal and instrumental pieces gradually increasing in pace. As part of the connexion between music and magic, common to all the East, *maqāms* were, rather than are, appropriate to some one hour of the day.

INSTRUMENTS may be divided into melodic and rhythmic. Melodic are the bowed lute (Kamanja and Rabāb) and the flute held lengthways (Nai). Rhythmic are the tambourine (Duf) and drum (Darbūka, struck by two hands), neither of them tuned. The dulcimer (Qānūn), the short-necked lute ('Ud) and, in the east, the long-necked lute (Tanbīr) may serve both purposes. Choir and orchestra are now unknown. Unison singing and the ensemble of

ORIENTAL INSTRUMENTS

1. Indian Lute (*Tamburi*). 2. African Musical Bow (*Gubo*). 3. Persian Fiddle (*Kemancheh*). 4. Chinese Fiddle (*Erhchen*).
 1 and 3. By permission of Messrs. Novello & Co., Ltd. 2. Galpin Collection. 4. By permission of The Encyclopedia Britannica Co., Ltd.

homogeneous instruments are hinted at in old books. Unaccompanied solo singing is reserved for the recitation of the Koran and of prayers; it follows the *maqāms* but is in verbal rhythm. Instrumental solos exhibit virtuosity. Though expression by means of volume or pace is unknown, the performance does not sound meagre; this is due to the various qualities of tone and styles of playing, to the complexity of rhythms, and to the copious *melismata*. The whole forms a heterophony in the Greek sense rather than a monody or polyphony in ours.

R. L. and A. H. F. S.

MUÑEIRA (MUÑEIRA), see SONG, SPAIN (1).

MUKLE, MAY HENRIETTA (b. London, May 14, 1880), violoncellist, was educated at the R.A.M. As her public career began at the age of nine and has been continued since with successful tours at home, in various European countries, and in America, she may be regarded as a pioneer among women violoncellists (see VIOLONCELLO-PLAYING). She is a player of first-rate ability who has constantly set herself to enlarge the repertory of her instrument by the introduction of new works of serious aim. c.

MULLINGS, FRANK (b. Walsall, May 10, 1881), operatic and concert tenor. He received his musical training at the Birmingham and Midland Institute under Prof. Granville Bantock and G. A. Breeden (vocal). In 1904 he won the Maas scholarship at that school, and three years later he made a public appearance in opera at Coventry in the part of Faust. He sang first in London at a Queen's Hall concert in 1911, but his experience as an operatic tenor really dates from a tour which he made with the Denhof company in 1913. Subsequently he came under the notice of Sir Thomas Beecham and extended his growing reputation as a lyric tenor to the metropolis. He made his début at Covent Garden during the Beecham summer season of 1919 as Hadyar in the first English performance of Isidore de Lara's opera 'Nail.' In the autumn of the same year he did more conspicuous work by appearing as Othello in Verdi's opera and (Nov. 17) as the hero in the first English performance of Wagner's 'Parsifal.' Both these impersonations gained for him warm praise and encouragement, while other rôles in which he appeared to notable advantage were Tristan, Tannhäuser, Siegfried and Radamès. After the formation of the B.N.O.C. his work in opera was mainly

associated with that organisation, and among other parts he created that of Apollo in Rutland Boughton's opera 'Alkestis' on its production at Covent Garden, Jan. 11, 1924. During all this period he was doing important concert work and appearing at most of the principal musical festivals. Both as a singer and an actor he has made consistent improvement, but on the other hand he has never wholly rid himself of certain faults of production and style acquired during his early training. He has a powerful robust organ of genuine tenor quality, and his singing is marked by notable sincerity of expression. He married in 1924 Eleanor Vera Maude Ashbee. H. K.

MULTIPLE TONALITY, see TONALITY; HARMONY.

MUNCK, (1) FRANÇOIS DE (b. Brussels, 1815; d. there, 1854), Belgian violoncellist, trained at the Brussels Conservatoire under Platel, in which institution he eventually became that famous teacher's successor as first professor of the violoncello. As a soloist he was well known in Germany. In 1848 he accepted a position in the orchestra of Her Majesty's Theatre, London, but returned to Brussels in 1853. His chroniclers unite in ascribing to him exceptional talents, the development of which was hindered by a somewhat disorderly course of life. His one published composition was a 'Fantaisie et variations sur un thème russe.'

(2) ERNEST (b. Brussels, 1840; d. London, Jan. 19, 1915), son of the above, was a pupil of his father, and of Servais, and was a capable violoncellist at the age of 10. In 1855 he went on tour in Great Britain with Jullien's band, and ultimately settled down in London, where he was engaged as professor at the Guildhall School of Music. His residence in London, however, was not continuous. In 1868 he was in Paris, and in 1870 at Weimar, where he formed part of the court orchestra. He married Carlotta Patti in 1879. In 1893 he was appointed professor at the R.A.M.

w. w. c.

MUNDY (1), WILLIAM (d. circa 1591) a vicar-choral of St. Paul's, was sworn a gentleman of the Chapel Royal on Feb. 21, 1563/4. A service and three anthems by him, and also the anthem 'O Lord, the Maker of all thing' (sometimes assigned to Henry VIII.), are printed in Barnard's 'Selected Church Music.' Another service and two other anthems are contained in Barnard's MS. collections, and eleven Latin motets in a set of MS. parts by him, both in the R.C.M. A number of compositions are in the Christ Church and Music School collections, Oxford. The words of several of his anthems are contained in Clifford's *Divine Services and Anthems*, 1664. He is mentioned by Morley in his *Introduction*, in company with Byrd and others, as never having 'thought it

greater sacrilege to spurne against the Image of a Saint then to take two perfect cordes of one kinde together.' The date of his death is not recorded, but it was probably in 1591, as on Oct. 12 in that year Anthony Anderson was sworn gentleman of the Chapel Royal in his room.

(2) JOHN, Mus.D. (d. 1630), son of William (1), gentleman of the Chapel Royal, was educated by his father, became organist of Eton College, and about 1585 succeeded John Marbeck as one of the organists of St. George's Chapel, Windsor. On July 9, 1586, he graduated Mus.B. at Oxford. Both he and his father are mentioned in some verses at the end of a MS. collection of motets and madrigals transcribed in 1591 by John Baldwin, singing man of Windsor, recounting the celebrated musicians of the time. In 1594 he published 'Songs and Psalmes, composed into 3, 4 and 5 parts, for the use and delight of such as either love or learne Musicke,' published in ENGLISH MADRIGAL SCHOOL, vol. xxxv. He contributed a madrigal, 'Lightly she tripped o'er the dales' to 'The Triumphes of Oriana,' 1601. He took his Mus.D. degree in 1624. An anthem by him is contained in Barnard's MS. collections, and three of the pieces in his 'Songs and Psalmes' were scored by Burney (B.M. Add. MSS. 11,588). Burney gives a partsong by him, 'In deep distress,' in his *History*, vol. iii., p. 55. Several of his compositions for the keyboard are contained in the Fitzwilliam Virginal Book, among them a curious fantasia describing 'Faure Wether,' 'Lightning,' 'Thunder,' 'Calme Wether,' and 'A faire Day.' He died in 1630 and was buried in the Cloisters of St. George's Chapel, Windsor. w. h. h.

MUNICH. Throughout its history until 1918 Munich's musical life has been closely bound up with that of the Bavarian court. To go no farther back, Orlando di Lasso spent the last thirty-four years of his life as Hofkapellmeister, his most prolific if not his best period, to be followed at intervals by his son Ferdinand (1609) and his grandson Ferdinand (1616-29). The first opera recorded at Munich was brought there by the Electress Adelaide from her home in Savoy. This opera seria had given way to the opera buffa by 1745.

The Residenztheater, an interesting example of the theatrical rococo, was begun in 1751 and opened in 1753. Mozart's 'Idomeneo' was produced in Munich in 1781. Side by side with the Italian opera occasional German music-plays were produced. The era of the Italian opera, however, was drawing to a close with the arrival of Gluck. A new opera house had been built in 1818 on the site of the Franciscan convent from plans of Karl von Fischer. In 1818, however, it was burnt down. King Ludwig I. had it rebuilt according to Fischer's plans in 1823, it was re-opened on

Jan. 2, 1825, as the Hof- und Nationaltheater. Shortly afterwards the king disbanded the Italian opera; it is said that he was finally converted by a performance of 'Fidelio.'

With Johann Aiblinger as chief Kapellmeister came the new period when the German opera at Munich began to rank with the best in the country. The subsequent hundred years of opera in Munich may be said to form an epitome of the development of the opera in Germany. First there came the period of Franz Lachner. With his production of Meyerbeer's 'Les Huguenots' he lifted the Munich opera on to a new plane; another landmark was his production of 'Tannhäuser' in 1855, in the face of strong opposition and intrigue. After his death in 1860 the second period may be said to have begun. It was signalised by the friendship between the new King, Ludwig II., and Richard Wagner. The composer brought Hans von Bülow to Munich, first as court pianist, but soon to be advanced (in 1867) to general music director. A year later Hans Richter came to Munich as director of the opera chorus, also under the influence of Wagner, and in 1869 Franz Wüllner became chief Kapellmeister. In the year in which Hans von Bülow became general music director, Karl von Perfall was appointed intendant. Under this combination, stimulated by the personality of the composer, the Wagner operas began to be lifted to a world-wide reputation, and to lift the Munich opera with them. 'Tristan' had been produced in 1865; it was to be followed by 'Rheingold' (1869), 'Die Walküre' (1870), 'Rienzi' (1871). When 'Siegfried' and the 'Götterdämmerung' were produced in 1878 Hermann Levi had been Kapellmeister for six years, Wüllner had died, and Rheinberger was chief Kapellmeister, assisted by Franz Fischer, who had been a violoncellist in the orchestra.

In the period that followed new influences were at work in Munich. Thuille had begun teaching at the composition school in 1883 (he remained till 1907) and Alexander Ritter came to live in Munich. Ritter had great influence on the younger musicians, and among those who came under him was Richard Strauss, who had a post as Kapellmeister from 1886-89, and again from 1894-98. Ritter died in Munich in 1896. Stavenhagen was Kapellmeister in 1898, Felix Weingartner conducted the Kaim orchestra from 1898-1907, and Max Roger lived in Munich from 1901-07. In 1903 Felix Mottl arrived for his all-too-short career in Munich—he died there in 1911—and set a tradition that was felt through every German school of conducting. He was succeeded by Bruno Walter. At this period Pfitzner, after many vicissitudes, came to Munich as conductor of the Kaim orchestra, and ten years later had his triumph when the Munich opera

produced his 'Palestrina' as the climax of a Pfützner week.

After an interval, due to the revolution of 1918, the Hof- und Nationaltheater was reconstructed and reorganised as the Bayerische Staatstheater, the name covering the Nationaltheater, the Residenztheater and the Prinzregenten-Theater, the last having been built in 1901 as a Wagner memorial theatre for performances after the manner of Bayreuth. Dr. Karl Zeiss then took over the management of the whole, but died in 1923. Baron Frankenstein, the intendant at the time of the revolution, who had then been compelled to retire, now returned, with Hans Knappertsbusch, who had succeeded von Hausegger under Zeiss, as general music director. The Munich festivals were revived in the 2nd and 3rd weeks of Aug. 1924. The centenary of the opera house was celebrated with great ceremony by a gala performance of the 'Meistersinger' on Jan. 1, 1925. Operatic performances are given occasionally at the Theater am Gärtnerplatz (Kapellmeister, Fritz Werther) and at the Münchner Volkstheater (Glinschegg). Light opera is given at the Operettenbühne (Kurt Pastor).

The principal orchestra is the Orchester des Bayerischen Staatstheaters with 130 members (founded in 1911 as the Hof-Orchester). The Musikalische Akademie gives 10 concerts with this orchestra each season, under the direction of Knappertsbusch. The Münchner Konzertverein Orchestra, with 65 members, gives twelve subscription concerts (director S. von Hausegger), regular weekly popular symphony concerts (Friedrich Munter) and popular Sunday concerts (Friedrich Rammelt). The Philharmonische Konzerte (Julius Ringer) gives symphony and chamber concerts. There are four other orchestral associations.

Among the many chamber-music associations the chief are the Münchner Kammermusik Vereinigung, the Münchner Streichquartett, the Berber Quartett and the Vereinigung für alte Musik (viola da gamba, viola d'amore and cembalo). Chief among the choral associations is the Domchor (Berberich), with state and royal associations and a long history. There are over 100 choirs in Munich, several of which have celebrated their 50 years' jubilee. The Oratorienverein was founded by Karl von Perfall in 1854. The principal halls are the Odeon (1500), Tonhalle (large, 1800; small, 400), Künstlerhaus (600) and Museum (400). The state, city and Konzertverein have planned to build a Musikhaus with a hall to hold 2000-3000 persons.

The leading institution for musical education is the Staatliche Akademie der Tonkunst, founded in 1846 and reconstructed in 1867 under Hans von Bülow. The president is Professor S. von Hausegger. It gives teaching

in every branch of music, especially in association with opera, solo and chorus. There are departments devoted to professional classes in composition, conducting, orchestral and church music. The school begins on or about Sept. 16. There are several private music schools, seminaries and singing schools. At the University there is a chair of Musikwissenschaft, held for many years past by Dr. Adolf Sandberger. The Bavarian State Library (librarian Dr. G. Schulz) possesses a fine collection of MSS. of the 15th to 17th centuries and a noteworthy collection of modern literature of music.

H. G. D.

MUNRO, ALEXANDER, a Scottish musician settled in Paris. He published there 'A Collection of the best Scots tunes fitted to the German flute', folio, license dated 1732. This work is particularly rare—a copy was sold at the Tap-house sale in July 1905. Hawkins criticises the arrangements of the melodies thus: 'The simplicity of the airs is lost in the attempts of the author to accommodate them to the style of the Italian music.'

F. K.

MURCIANA, see FANDANGO; SONG, subsection SPAIN (4).

MURIS, JOHANNES DE, a celebrated musical theorist of the early part of the 14th century. He has been claimed as an Englishman, but on what grounds it is difficult to say. Gesner, in his *Bibliotheca universalis* of 1545, p. 441, cites a mathematical treatise of De Muris printed at Mainz in 1538, but gives no indication of his nationality. Bale, who appears to have relied on information received from the learned Oxford mathematician, physician and antiquary Robert Record, included 'Joannes de Muris, quem Anglum fuisse scriptores ferunt,' in the second part of the enlarged edition of his *Scriptores illustres Majoris Britanniae* (Basle, 1559, p. 69). Neither Gesner nor Bale makes any reference to his reputation as a musician. At a later date Tanner describes him as 'natione Anglus, philosophus, mathematicus et musicus insignis' (*Bibliotheca Britannico-Hibernica*, 1748, p. 537), and Sir John Hawkins found confirmation of his English origin in the following verses which occur in a treatise 'De origine et effectu Musice' in MS. Lansdowne 763 of the British Museum, at fol. 17:

'Pausas. luncturas. fracturas. atque figuras
Mensuratarum formavit Franco notarum.
Et Jhon de Muris varlis floruitque figuris.
Anglia cantorum nomen gignit plurimorum.'

But, in whatever way these lines are punctuated, it is difficult to see how they can be made to attribute an English origin to De Muris. No locality in England is known with an English or Latinised name at all resembling Muri or Muris.

When we look abroad, the great Benedictine abbey of Muri in Switzerland at once suggests itself; but the chronicles of this abbey,

which have been published by P. M. Keim (Zürich, 1877), contain no reference to our author. In France there are several communes of the name of Murs or Meurs, and M. l'abbé Normand, who under the pseudonym of Théodore Nisard published a short paper on Jean de Muris in 1886, gives reasons for selecting Murs or Meurs in the cantonne of Sézanne, which lies about half-way between Meaux and Vitry, as the home of the De Muris family. Henri de Muris, bishop of Thérouane (*d.* 1286), was a benefactor of the abbey of Saint Faron at Meaux. Another Henri de Muris, chevalier, owned land at Saint Fiacre in Brie in 1313. This is in the near neighbourhood.

On the other hand Fétis favours a Norman origin on the ground that De Muris, in a letter written late in life to Pope Clement VI., alludes to the friendship of their youth, and that Clement had in fact been a monk at the Chaise Dieu in Normandy and afterwards Archbishop of Rouen. He cites a Padua manuscript dated 1404, and entitled

'Mag. Joh. de Muris de Normandia alias Parisiensis practica mensurabilia cantus cum expositione Prodocimi de Beldemandis'; but one may suspect that the title is a later addition. In a mathematical treatise at Oxford dated 1321 (MS Digby 190, fol. 66) Johannes de Muris is again described as a Norman; but this is in a colophon which is clearly not part of the original treatise. No place of the name of Murs is known in Normandy.

Whatever doubt there may be about his birthplace, there is abundant evidence that De Muris resided for some part of his life in Paris. He himself speaks of having heard at Paris a triplum composed by Franco (Coussemaker, *Scriptores*, ii. 402a), and at least two of his treatises are dated from the Sorbonne in Paris. One is the *Musica speculativa* printed by Gerbert (*Scriptores*, vol. iii.), the Paris manuscript of which ends with the words: 'Explicit musica speculativa secundum Boetium per magistrum Johannem de Muris abbreviata Parisiis in Sorbona anno Domini 1323.' The other is the *Canones de eclipsi lunae*, the Bodleian manuscript of which (MS. Digby 97, fol. 124b) ends thus: 'Hos autem canones disposuit Johannes de Muris Parisiis in anno Domini 1339 in domo scolarium de Sorbona.' Leopold Delisle (*Le Cabinet des manuscrits de la Bibliothèque Nationale*, 1874, vol. ii. p. 186) has noticed that many of the Sorbonne manuscripts bear the names, and possibly the signatures, of teachers through whose hands they passed. One of them (Latin MS. 16,646) is an Euclid bearing the name of J. de Muris, but this may be the Julianus de Muris who was elected Rector of the Sorbonne in Dec. 1350 (*Du Boulay, Historia Universitatis Parisiensis*, iv. 973). Mersenne (*Harmonicorum libri XII.*, Paris, 1648, i. xxv. 8) speaks of De Muris as 'Canonicus et Decanus Ecclesiae Parisiensis'; but his

name does not occur in the *Cartulary* of Notre Dame published in four volumes in 1850, nor in the *Gallia Christiana*, nor in *La France pontificale*.

Beyond 1339 the existence of De Muris can be traced down to 1350 or a little later. The authors of the *Gallia Christiana*, writing in 1744 (vol. vii. p. 1636), speak of 'epistolae Johannis Muri famosi theologi anni 1340' as attesting Philip de Vitry's skill in music; but the letters are not now known, unless that mentioned below should prove to be one of them, and it may be doubted whether De Muris the musician is the person referred to. The Paris MS. 7443 of the Bibliothèque Nationale contains a letter of De Muris to Pope Clement the Sixth, who succeeded to the papacy in 1342. MS. Digby 176 of the Bodleian Library contains (at fol. 17b) an astrological treatise by De Muris on the conjunction of Saturn and Jupiter in 1345. Another Paris manuscript of the 15th century (Fonds Latin 14,736) is catalogued as containing: (1) *Theorica numerorum* auct. Jo. de Muris; (2) *Ejusdem epistola metrica ad Philip-pum de Vitriaco, episcopum Meldensem*; (3) *De arte mensurandi*. If this description be correct, De Muris must have been living at least as late as 1350, the year in which Philip de Vitry was appointed Bishop of Meaux. Weiss in Michaud's *Biographie universelle* (Paris, 1821) asserts that De Muris is known to have been still alive in 1358, but he gives no authority.

The reputation of De Muris, not only as musician, but as mathematician, astronomer and astrologer, is attested by the numerous manuscripts bearing his name to be found in most of the principal libraries of Europe. Mathematical treatises by him were printed at Vienna in 1515 and at Mainz in 1538. A copy of the latter is in the British Museum. The *Musica speculativa*, an abridgment of Boetius attributed to De Muris, was printed at Frankfurt in 1508 and is probably the work cited by Panzer, i. 486, as 'Joann. Muris Musica manuscripta et composita. Lipsiae, 1496, fol.' As early as 1404 a commentary on his treatise on mensurable music was written by Prodocimus de Beldemandis, and his authority is constantly appealed to by the theorists who followed him.

Of the musical works of De Muris by far the most important, and the only one of which the authenticity has never been questioned, is the *Speculum musicæ*, preserved in two manuscripts of the Bibliothèque Nationale at Paris, Nos. 7207 and 7207A, the former of which is said to date from the end of the 14th century. It is a treatise in seven books, the first five of which deal with the theory and the last two with the practice of music. Owing to its great length it has never been printed in its entirety, but Coussemaker has included the last two books in the second volume of his *Scriptores*, and has also, in the preface to that volume, given us the

chapter-headings of the first five books.¹ These treat of intervals and ratios, consonances, proportions, scales, tetrachords and the like, and are professedly based on Boetius. The sixth book is devoted to the church modes, and expounds the doctrines first of Boetius, then (cap. xv.) of Guido and his successors, and finally (cap. lx. to cxiii.) of the moderns. The seventh book deals with mensurable music, and is remarkable for the protest it contains against modern divergence from the theory and practice of Franco and his school, against innovations in notation, exaggerated sentiment in descant, the liberties taken by singers in the matter of embellishment, the excessive use of discords and the abandonment of the old organum and conductus in favour of the motet and cantilena. De Muris never refers to contemporary musicians by name, but the passages he cites from their writings show that Philip de Vitry, the champion of the 'ars nova,' was one of those attacked. This lends point to the sentence at the end of his first chapter, in which De Muris disclaims any personal enmity against those whose doctrines he controverts. It has been thought that the *Speculum musice* is the treatise mentioned with three others at the end of the mathematical treatise of 1321 as having been completed in the same year, and that its publication was the immediate cause of the papal decree of 1322 prohibiting the use of descant in churches (see Ambros, ii. 347). The passage in MS. Digby 190 is as follows:

'Eodemque anno noticia artis musice proferende, figurande, tam mensurabilis quam plane, quantum ad omnem modum possibilem discantandi, non solum per integra sed usque ad minutissimas fractiones; Cognitioque circuli quadrature perfectissime demonstrata; Expositioque tabularum Alphonsi regis Castellæ; ac Genealogia Astronomie nobis claruit.'

This is not a very apt description of the *Speculum musice*, nor is the expression 'nobis claruit' such as one would expect an author to use of his own work. On the other hand, it is unlikely that De Muris would have troubled to note down such a list of works unless they were his own, and no other musical treatise of his is known to which the description would at all apply. A further difficulty is caused by the fact that in the *Speculum* De Muris speaks of himself as old and feeble, which is hardly consistent with his having lived another thirty years, and it may be doubted whether the 'ars nova' could have won by 1321 such general acceptance as is indicated by the language of the seventh book of the *Speculum*.

Several minor treatises attributed to De Muris have been printed by Gerbert and Coussemaker. Some of them do not profess to be more than epitomes of his teaching; such are

the *Summa Magistri Johannis de Muris* (Gerbert, iii. 190) and the *Ars contrapuncti secundum Johannem de Muris* (Coussemaker, iii. 59). Others contain details of notation which did not come into use till long after his death, and doctrines which are entirely at variance with those of the *Speculum*. Such are the *Libellus practice cantus mensurabilis* (Coussemaker, iii. 46), which authorises the use of white or open-headed notes in *proportio sesquialtera*, and the *Ars discantus*, which is not only inconsistent with the *Speculum* in many respects, but actually cites De Muris as an authority (Coussemaker, iii. 68, 108). Others again contain passages which are quoted verbatim and confuted in the *Speculum*. Such are the *Musica speculativa* and the *Quæstiones super partes musicae* (Gerbert, iii. 256, 301).² For these reasons the *Speculum musice* is the only work which, in the present state of our knowledge, can be attributed without hesitation to De Muris. The treatises with the next best claim to authenticity are the *Summa musice*, the *Libellus* and the *Musica speculativa*. The *Summa musice* is not inconsistent with the *Speculum*, and the difference of style may be accounted for by supposing it to be an early work written for the use of students. The *Libellus* is accepted and quoted as the work of De Muris by Prosdocimus de Beldemandis and all the early theorists. The anachronism above referred to may perhaps be explained as a later addition intended to bring the book up to date. On the other hand, in all the manuscripts it is entitled *Libellus secundum (not per) J. de Muris*, and the mention by name of the contemporary Guillaume de Machaut (Guillaume de Machaut) is not in accordance with the practice of the *Speculum*. The *Musica speculativa* follows immediately after the *Speculum* in the Paris MS. 7207, and was printed as the work of De Muris in 1508, but Dr. Hirschfeld's demonstration of the attack made upon it in the *Speculum* seems fatal to its authenticity.

Extravagant claims were formerly made for De Muris as a pioneer and inventor. Nicola Vicentino first made the astonishing statement that musical notes, the long, breve, etc., were the invention of De Muris (*L'antica musica*, Rome, 1555, p. 9). Prior to the publications of Gerbert and Coussemaker this was repeated in many books of reference (as, for instance, in Grassineau's *Musical Dictionary* of 1740), though Mersenne and after him Rousseau (*Dict. de musique*, 1767), both of whom were at pains to consult the Paris manuscripts, had no difficulty in refuting it. If we ask what was the contribution of De Muris to the progress of the art of music, the answer must be that his was purely a restraining influence. Neither on the

¹ The text of liber I., cap. i.-xix., is printed in the pamphlet *Die stielenden Kapitel des Speculum Musice von Johannes de Muris*, by Walter Grossmann (B. & H. 1924). The pamphlet includes an analysis of the text of this portion of the *Speculum*, together with an attempt to answer the questions raised as to the identity of the author.

² See Dr. Robert Hirschfeld's *Johann de Muris*, Leipzig, 1881, pp. 11-20.

theoretical nor on the practical side of the art did he take any step forward. It is to his personality as a teacher, his vast erudition and his lucidity in definition and exposition that his reputation as a musician must be attributed.

J. F. R. S.

MURSCHHAUSER, FRANZ XAVIER ANTON (b. Zabern, Alsace, 1663¹; d. Munich, Jan. 6, 1738), came early to Munich, and became a pupil of Johann Caspar Kerl, with whom he remained till his death in 1690. From the title-page of his book '*Vespertinus latræ, et hyperdulæ cultus*' (Ulm, 1700; for four voices, two principal and four ripieno violins), we learn that he was then Kapellmeister to the Frauenkirche at Munich. Besides the work already mentioned, he left: '*Oecitonium novum organum*' (Augsburg, 1696); '*Prototypon longobreve organicum*' (Nuremberg, 1700)—preludes and fugues for organ, lately re-edited by Franz Commer. A second part appeared later: '*Fundamentalische . . . Handleitung gewohl zur Figural- als Choral-Musik*' (1707); '*Opus organicum tripartitum*' (1712, 1714). His most important and best-known work is the *Academia musico-poetica bipartita, oder hohe Schule der musikalischen Composition* (Nuremberg, 1721). Towards the close of the first part he incautiously used the words 'to give a little more light to the excellent Herr Mattheson,' for which he was so severely taken to task by that irascible musician in a pamphlet *Melopoetische Lichtscheere in drei verschiedenen Schneitzungen* (*Critica musica*, pp. 1-88), that he relinquished the publication of the *Academia*. An 'Aria pastoralis variata' of his is given in Pauer's 'Alte Klaviermusik'; his organ works have been reprinted in *D.D.T.* (2nd series), xviii.

F. G.

MURSKA, ILMA DE (b. 1836; d. Jan. 14, 1889), a native of Croatia, taught singing at Vienna and Paris by Madame Marchesi; made her début in opera at the Pergola, Florence, in Apr. 1862, sang at Pest, Berlin, Hamburg, Barcelona, etc.; obtained an engagement in Vienna as a bravura singer in parts such as Constanze ('Seraglio'), Martha, Inez ('L'Africaine'), etc., and appeared in London at Her Majesty's Theatre, as Lucia, May 11, 1865. She played also Linda, Amina and Astrifiamante, and sang at the Philharmonic, May 29, and always with great applause. Between this date and 1873 she acted and sang repeatedly in London, at Her Majesty's, Covent Garden, and Drury Lane, returning to the Continent in the off seasons. One of her most congenial parts and best achievements was Senta in the Italian version of the 'Flying Dutchman,' July 23, 1870. Between 1873 and 1876 she visited America, Australia, New Zealand, etc., returning to this country in 1879. On Dec. 29, 1875, she married for the second

time (her first marriage having taken place many years before), Alfred Anderson at Sydney; and, after his death, she took for her third husband J. T. Hill, at Otago, New Zealand, May 15, 1876. Her voice was a soprano of nearly three octaves compass, with great execution. Her acting was brilliant and original, though sometimes bordering on extravagance. After spending some time from 1879 onwards in London, she went to New York as a teacher of singing, but, finding this work uncongenial, returned to Munich, to live with a married daughter. Interesting and amusing particulars of Murska's career may be read in *Marchesi and Music*, Santley's *Student and Singer*, and *The Mapleson Memoirs*.

A. C.

MUSARD, (1) PHILIPPE (b. Tours, 1793; d. Mar. 31, 1859), took private lessons for some years from Reicha, to whom he dedicated his *Nouvelle Méthode de composition musicale* (1832). This long-forgotten work, of which only eight chapters appeared, contains the announcement of a *Traité complet et raisonné du système musical*, with curious historical notes, implying that Musard was dissatisfied with his position as an obscure violinist and conductor, and proposed to make his mark as a solid and erudite musician. A series of concerts and 'bals masqués,' held in the bazaar in the Rue St. Honoré (afterwards the Salle Valentino), however, gave him the opportunity of distinguishing himself in a different direction. The most salient feature of these promenade concerts (instituted Nov. 1833) was the introduction of the cornet-à-pistons. In fact Dufresne, the cornet-player, owed much of his success to the solos composed for him by the conductor. In 1835 and 1836 Musard conducted the balls at the Opéra, and his band of seventy musicians was rapturously applauded. 'Gustave III.' had set the fashion of the galop, and with Musard's music, and the 'entrain' of the orchestra, the new dance deserved its nickname of 'Le galop infernal.' Meantime a better room had been built in the Rue Vivienne, and thither Musard removed in 1837. Here he had to sustain a competition with Johann Strauss of Vienna. His first experiment, the introduction of a chorus, having succeeded, he next attempted classical music, and in Holy Week gave a concert, consisting of Handel's music only.

Having secured a reputation in France, he came to England, and made his first appearance at Drury Lane on Monday, Oct. 12, 1840, as conductor of the Promenade Concerts, or Concerts d'hiver, given there under the management of Eliason. The series terminated in Mar. 1841, and on Sept. 30, Musard appeared again as conductor of a set of Promenade Concerts at the Lyceum, under the management of Henri Laurent, which continued up to

¹ Bapt. July 1, 1663.

Christmas. He was long remembered in London, and his appearance is well described by Hood :

'From bottom to top
There's no bit of the *Fop*,
No trace of your *Macaroni*;
But looking on him,
So solemn and grim,

You think of the Marshals who served under Boney.'

Up to 1852 Musard was considered the best composer of dance-music and conductor of promenade concerts in France. His quadrilles — 'Venise,' 'Les Echos,' etc.—contain many happy and at that time novel effects, and his music is well written and well scored. Having made money he bought a house at Auteuil, where he lived, much respected. Symptoms of paralysis appeared in 1852, and he died in 1859. His son

(2) ALFRED (*b.* Paris, 1828; *d.* Apr. 1881) followed his father's profession. As early as 1847 he conducted the orchestra at a ball given at the Opéra-Comique, and in 1856 Besse-lièvre selected him to conduct the Concerts des Champs-Élysées, but he did not retain the post, and never rose above mediocrity. *a. c.*

MUSETTE, (1) a name indiscriminately given to a small keyless oboe or shawm in G, sometimes A flat, and to the Pastoral Oboe or SHEPHERD'S PIPE (*q.v.*), either in its single pipe form or double pipe and drone form. In the latter case the wind is supplied from a leathern reservoir in the manner of the BAGPIPE (*q.v.*). All are characterised by the use of a double reed, the pipe with its finger holes giving a natural scale similar to that of the OBOE (*q.v.*).

(2) The term is also applied to an air in 2-4, 3-4 or 6-8 time, of a moderate tempo, and smooth and simple character, appropriate to the instrument from which it takes its name. Thus a musette generally has a pedal-bass answering to the drone or *bourdon*, and the upper part abounds in grace-notes and rapid passages. To these airs were arranged pastoral dances, also called musettes, which were in great favour under Louis XIV. and Louis XV., especially the latter, as may be seen by the pictures of Watteau and others of that school.

Among the most celebrated musettes may be mentioned those in 'Callirhoé' and 'Nina,' operas by Destouches and Dalayrac. Musettes are to be found in Bach's English Suites, Nos. 3 and 6, in the sixth of Handel's grand concertos and the overture to 'Alcina.' *a. c.*

MUSICA ANTIQUA, a collection of music compiled and published by John Stafford SMITH (*q.v.*), and published in 1812 in two vols. folio, with a preface and translations of the Provençal songs inserted in the work by John Sidney Hawkins, and some notes by the editor. Its nature and objects will be best described by quoting the very ample title—

'Musica Antiqua. A Selection of Music of this and other countries from the commencement of the twelfth to the beginning of the eighteenth century, comprising some of the earliest & most curious Motetts, Madrigals, Hymns, Anthems, Songs, Lessons & Dance Tunes, some of them now first published from manuscripts and printed works of great rarity & value. The whole calculated to shew the original sources of the melody & harmony of this country, & to exhibit the different styles and degree of improvement of the several periods.'

The work contains 190 separate pieces. The selections are made with great skill and judgment, but are very ill digested, as instead of being arranged in strict chronological order, they are intermingled in a very confused manner. The composers from whose works the specimens are selected are :

John Ambrose, Hugh Aston, Thibaut de Blason, Dr. John Blow, Gaces Brulez, William Byrd, Dr. Thomas Campion, Peter Certon, Dr. William Child, Clemens non Papa, John Cole, Raoul de Coucy, Perrin Dangecourt, John Dowland, John Earlsden, Jehan Erars, Thomas Erars, Francesco Geminiani, Jhan Gero, Orlando Gibbons, Heath, Henry VIII., Pelham Humfrey, Simon Ives, John Jenkins, Robert Johnson, Robert Jones, Nicholas Lanier, Orlando di Lasso, Jehan de Latre, William Lawes, Matthew Locke, George Mason, Tiburcio Massaino, Christoforo Morales, Thibaut King of Navarre, Jacob Obrecht, Johannes Ockeghem, Parker, monk of Stratford, Francis Pilkington, Jodocus Pratensis, Daniel Purcell, Henry Purcell, Richafort, Dr. Nicholas Staggins, Thomas Tallis, Richierres, Orazio Vecchi, Thomas Weelkes, Giaches Wert, Adrian Willaert and Gioseffo Zarlino, besides others whose names are unknown.

The principal pieces include four ancient chants for the Te Deum as given by Meibomius, Diruta, Lucas Lossius and Merbecke; the canon, 'Sumer is icumen in'; chansons by troubadours of Navarre and Normandy; part of Robert Johnson's music for Middleton's 'Witch'; two or three masques of the time of James I., copious extracts from 'Musick's Handmaid,' two parts, 1678 and 1689; etc., etc.

W. H. H.

MUSICA DIVINA. (1) A collection of 42 madrigals by various composers published in 1583 at Antwerp by PHALISE (*q.v.*).

(2) An important collection of church music, edited by Carolus PROSKE, priest and Kapellmeister of the cathedral at Ratisbon, and published there by Pustet. The materials were collected by Proske himself from the libraries of the Papal Chapel, St. Peter's, St. John Lateran, S. Maria Maggiore, S. Maria in Vallicella, the Vatican, the Roman Colloge and other libraries in Rome, and also from the best collections in Naples. The prospectus was issued in Jan. 1853, and the first volume, 'Liber missarum,' was published in the same year. The second volume, 'Liber motetorum,' followed in 1854; the third, 'Liber vespertinus' (Psalms, etc.), in 1859; and the fourth, 'Liber vespertinus' (Passions, Lamentations, etc.), at Easter 1862. All these contained compositions for four voices, and belong to the 'first year.' The publication was continued by a 'Selectus novus missarum' in two vols. (1857-1861), after which Proske died, Dec. 20, 1861. An 'Annus secundus,' four volumes having the same general arrangement as the 'Annus

primus,' was issued subsequently under the editorship of Schrems and Haberl.

MUSICA FICTA, or FALSA, or COLORATA (*Cantus Fictus*). Early music presents many insoluble problems to those who set out to reconstruct and interpret it. In few of the problems, however, is it so hazardous to attempt any definite codex of law and practice as in that of *Musica ficta*—i.e. the insertion of accidentals into a text. That composers, from the earliest times, intended such occasional modifications to be made by the performers is beyond any possible doubt: indeed the ancient name for an accidental (*signum asininum* or 'asses' mark') is clear evidence that its insertion by a composer was a reflection on the competence of the singer. But there is little or no agreement amongst the old theorists as to the laws of interpretation; which seems to imply either that there was no unanimity in practice, or that the theorists themselves suffered from the malady endemic to their tribe. For it is characteristic of all theorists to epitomise and codify the very usages which the creative minds of their contemporaries have decisively abandoned. Nor is there, at the present day, any solid agreement amongst the most thoughtful students of ancient music—no two of whom would, in all probability, produce an identical 'fair-copy' of any given manuscript from the earliest times down to Orlando Gibbons. The most reasonable course, therefore, is to attempt to state impartially the conditions of the problem and the difficulties inherent in its solution.

'Music is called *Ficta* when we make a tone to be a semitone, or, conversely, a semitone to be a tone.'¹ And the problem for the student consists in this: since the composer did not (or seldom did) tell the performer, by means of accidentals, when these changes were to be made, how could the performer know?

The most usual cases in which accidentals were assumed to be too obvious for insertion were the following:

Notes to be raised a semitone:

- (a) The seventh note of the scale, if rising to the tonic, in order to create a major sixth with the supertonic:

- (b) To avoid a diminished fifth, if rising subsequently:

- (c) To avoid the tritone:

¹ *Ars Contrapuncti*, early 14th century.

- (d) To avoid the minor third in a full close:

Notes to be lowered a semitone:

- (a) To avoid the tritone:

- (b) To avoid the chord of the diminished fifth (*Quinta falsa*).

It is beyond doubt that the singers, in any early period, were capable of a performance comparatively free from error, and it is customary nowadays to marvel at their skill, with an accompanying gibe at the deterioration of their descendants. But such easy wit ignores the fact which lies at the root of the matter: i.e. the immense strain on the resources of notation which accompanied, *pari passu*, the transition from the homophonic modal melody to the polyphonic harmonies of the major and minor scales. If an edition of a hymn-book were published to-day with all accidentals omitted any fair musician could play it through with but few catastrophes; and such accidents as occurred would be due to one of two causes.

(1) In equal temperament the music may at any moment modulate anywhere, and therefore cases of ambiguity may arise when the signposts are absent. (2) Certain hymn tunes would be 'modal' (or pseudo-modal) and the idiom might be unfamiliar to a performer accustomed only to major and minor keys.

But when all music was modal the first of these difficulties was practically non-existent. Given the mode, the excursions from it were circumscribed and definite, and a mistake would betray either culpable ignorance or pure carelessness. The second difficulty, however, was always present from the moment when the simplest two-part harmony existed; at first involving little more than careful attention, but decade by decade more imperatively demanding concentration of mind. And the appreciation of the ever-growing insistence of this demand gives the key to the whole development of music from the simplicity of a plain-song melody to the complexity of a Bach motet.

A short outline of the functions of the accidental in this evolution may help to make clearer the lines on which it developed. Originally, when melodies were purely modal and structurally simple, no need occurred for the

alteration of any note of the mode chosen. Given an appreciation of the relationship of tonic and dominant, the melodies travelled evenly along the path of conjunct motion. But as soon as a more enterprising ambition began to explore the possibilities of disjunct motion, the angularity of the tritone became apparent and was felt to be the bar to progress. And undoubtedly the first use of a note foreign to the mode (i.e. a note chromatically altered) was for the purpose of softening this obtrusion.

Later, when the combination of voices had passed the experimental stage, and normal music had become definitely harmonic, the accidental acquired other functions. For example, the *Clausula vera*, or true CAELENCE (q.v.) in two parts, necessitated a penultimate chord which was a major sixth (or its inversion); and the feeling for the 'leading note,' which was destined to revolutionise the whole modal system, was given its first impetus. And when increased harmonic technique had established three-part writing, the laws of acoustics led composers, unconsciously obedient to them, to sharpen the third in the final chord. Once started, the swing away from the severity of diatonic modal melody to the freedom of non-modal chromatic harmony gathered momentum with every experiment. The process is described in a passage from the preface to vol. i. (Taverner) of the Carnegie Edition of *Tudor Church Music*:

'At the present moment the world has so tired of the limitations of the major and minor scales that our composers are deliberately exploring those harmonic fields which are conveniently labelled "modal." But in Taverner's time the musical sense of Europe was moving, in the unconscious fulfilment of an evolution it could not escape, in exactly the reverse direction: from the modal system to the system with which we are now surfeited. The modes are for melody, and for melody alone, and the birth of polyphony rang the death-knell of the whole modal system. Consequently, the pioneer of those days was the man who saw his way to cast aside some of the angular conventions that had grown out of the vain attempt to combine modal laws with harmonic exigencies, and to foreshadow the ease and smoothness of texture and progression which later, in the days of equal temperament, were to be the common accomplishment of every student. In the days when the modes were living things such terms as leading-note, dominant, or any sort of cadence, meant something different in kind from what they of necessity meant to the later polyphonic composer: for his standpoint was no longer primarily melodic. Horizontal it still was, in the matter of texture and combination of rhythms, but his mind was at last—what it had never been before—chained and tethered to the perpendicular chord as seen from the bass upwards. Smoothness of chord-progression meant manipulation of the notes constituting chords, so that in the passage from austere diatonic modality to the flexibility of the modern tonality, increase of technique and craftsmanship synchronised with increased freedom in the use of accidentals.' (See also HARMONY.)

This inexorable trend towards our modern scales, spread over the centuries, produced in composers a sense of tonality which was never final or stagnant, but continuously developing. Their conception of the material at their disposal, notes, chords, keys and modulations,

was never for any group of years truly static, and in this ceaseless growth of an idea lies the difficulty of the student of to-day in determining the intention of a composer at any given moment. At either end of the period the problem is seldom really baffling: one expert will feel as secure in his transcription of a purely modal melody as another in his reading of one of the Forty-eight: in both cases there may, here and there, be a choice between two possibilities, but not a doubt as to whether any reading at all will 'make sense.' But in the intervening centuries uncertainty dogs every conclusion, and many questions arise. What was the feeling for tonality at this moment? Was this particular composer a pioneer or a 'die-hard'? Is this curious passage a survival of modal influence or an experiment in modernity? And in such a work as a Tallis motet questions such as these must be answered a dozen times, and no two scholars will coincide in every solution. And when it is added that right up to the end of the period, until the complexities of equal temperament forced composers to say exactly what they meant—there persisted the old tradition that to insert *all* the accidentals was to insult the intelligence of the performer, some conception will be formed of the brambles and briars that bestrew the path of a modern editor.

Scholars who desire first-hand acquaintance with the ancient authorities on *Musica ficta* are referred to

MUSICA FIGURATA (Figured music).

Used in mediæval music of embellishments to the plain-song itself, but more frequently of descants added by singers in counterpoint with the *canto fermo* or plain-song.

W. S. R.

MUSICAL ANTIQUARIAN SOCIETY, THE (1840-47), 'for the publication of scarce and valuable works by the early English composers,' was established in 1840, and started its publications in November of that year.

Nineteen works were published, in large folio, and to these were added sixteen corresponding folios of compressed scores by Sir G. A. Macfarren. These were undertaken by the publisher on his own responsibility, with a view of increasing the subscription list.

The Society lasted seven years, and in its second year numbered nearly a thousand members. The annual subscription was one pound, and the works were supplied to the members at prime cost.

The nineteen works issued by the Society were:

1. A Mass for five voices, by William Byrd. Edited by E. F. Rimbault.
2. The first set of Madrigals by John Wilbye. Edited by James Turle.

3. Madrigals and Motets for five voices, by Orlando Gibbons. Edited by Sir George Smart.
4. Dido and Aeneas, a tragic opera by Henry Purcell. Edited by G. A. Macfarren.
5. The first set of Ballets for five voices by Thomas Morley. Edited by E. F. Rimbault.
6. Book I. of Cantiones Sacrae for five voices, by William Byrd. Edited by W. Horsley.
7. Bonduca, a tragedy by Henry Purcell. Edited by E. F. Rimbault.
8. The first set of Madrigals by Thomas Weelkes. Edited by Edward J. Hopkins.
9. Fantasies in three parts composed for Viola, by Orlando Gibbons. Edited by E. F. Rimbault.
10. King Arthur, an opera, by Henry Purcell. Edited by Professor Edward Taylor.
11. The whole Book of Psalms with their wonted tunes, in four parts, as published by Thomas Este. Edited by E. F. Rimbault.
12. The first set of Songs by John Dowland. Edited by William Chappell.
13. Airs or Fa-las by John Hilton. Edited by Joseph Warren.
14. A collection of Anthems by M. Este, T. Ford, Weelkes and Bateson. Edited by E. F. Rimbault.
15. Madrigals by John Bennet. Edited by E. J. Hopkins.
16. The second set of Madrigals by John Wilbye. Edited by George William Budd.
17. The first set of Madrigals by Thomas Bateson. Edited by E. F. Rimbault.
18. Partitura, or the first music ever printed for the Virginals, by W. Byrd, John Bull and Orlando Gibbons. Edited by E. F. Rimbault.
19. Ode composed for St. Cecilia's Day by Henry Purcell. Edited by E. F. Rimbault.

Dr. Rimbault acted throughout as hon. secretary, and W. Chappell, the projector of the Society, acted for about five years as treasurer and manager of the publications. He was then succeeded by his younger brother, Thomas P. Chappell. The publications of the Society, useful in their day, are now for the most part superseded by later and more authoritative editions, such as those of the PURCELL SOCIETY, the ENGLISH MADRIGAL SCHOOL and TUNOR MUSIC (Carnegie Trust).

MUSICAL ARTISTS' SOCIETY, THE (1873-99). Among the numerous attempts made for the direct encouragement of British music towards the end of the 19th century, those for which this Society was responsible hold no small place. Projected in 1873 by Arthur O'Leary, C. E. Stephens and other musicians, the Society was established in the following year, when a series of semi-private concerts was inaugurated, at which performances were given of chamber music, chiefly by members of the Society—Algernon Ashton, J. F. Barnett, F. Davenport, Dr. F. E. Gladstone and Sir G. A. Macfarren being some of the composers whose works had a hearing. Among the list of original members may be mentioned J. F. Barnett, H. R. Bird, Alfred Gilbert, A. Randegger and Olaf Svendsen; while the vice-presidents were Sir G. A. Macfarren, Sir Arthur Sullivan and others; the Duke of Beaufort being president. The first concert took place at the premises of Messrs. Stanley Lucas, Weber & Co., others (being three in number a year, though later this number was increased) at such places as the R.A.M., Grosvenor Gallery, and St. Martin's Town Hall, where the last concert was given on June 6, 1898, the Society dissolving itself early in 1899.

N. C. O.

MUSICAL ART SOCIETY OF NEW YORK, see NEW YORK.

MUSICAL ASSOCIATION, THE, initiated

by Sir John Stainer and the Rev. Sir F. A. Gore Ouseley, Bart., was established in 1874, after preliminary meetings at the house of W. Spottiswoode, F.R.S., and at South Kensington Museum, at the latter of which, on May 29, John Hullah presided, and several members were enrolled. On Aug. 4, 1874, the first general meeting of the members was held, A. J. Ellis, F.R.S., in the chair; and it was resolved that the Society's title should be:

'Musical Association for the investigation and discussion of subjects connected with the Science and Art of Music.'

The members, according to the rules,

'consist of practical and theoretical musicians as well as those whose researches have been directed to the science of acoustics, the history of music or other kindred subjects.'

The Association met for many years at the Beethoven Rooms, Harley Street, on the first Monday of every month from Nov. to June, when papers were read and discussed. Later both the place and the day of meeting have varied at convenience. The subscription is one guinea a year, and members are elected by ballot. The first president was the Rev. Sir F. A. G. Ouseley, Bart., whose successor was Sir John Stainer. The vice-presidents were G. Grove; J. Hullah; G. A. Macfarren, Mus.D.; W. Spottiswoode, and J. Tyndall. The original Council included the vice-presidents and Messrs. W. Chappell, G. A. Osborne, Dr. W. Pole, Messrs. A. H. D. Prendergast, C. K. Salaman (the first hon. secretary), Dr. Stainer and Dr. W. H. Stone. The Society's Proceedings were published annually by Chappell & Co. for the first three years, and then by Stanley Lucas & Weber, until 1887 inclusive; in 1888 Novello's name appeared on the title-page as publisher. The present publishers (1926) are Whitehead & Miller, Leeds. The early volumes of Proceedings are of extreme rarity. The whole represents an important body of research, and numerous references to the contents will be found in this Dictionary. In 1900 the Association entered into special relations with the INTERNATIONAL MUSICAL SOCIETY (*q.v.*) with certain privileges in the way of subscription to members of both societies. In 1904 the Association became incorporated. The Secretary of the Musical Association is Mr. J. Percy Baker.

C. M., with addns.

MUSICAL BOW, a primitive type of musical instrument found among savage tribes in such widely distant places as New Mexico, Patagonia, Central and South Africa, India and the Spice Islands (see *PLATE LII*. No. 2).

The types which have been collected and deposited in our museums are astonishingly similar, the general form being an ordinary bow such as is used for shooting arrows, formed of cane or pliable wood, bent by a tight cord. The size varies from 5 or 6 feet in length to

18 inches or 2 feet. In almost every case a dried gourd or other hollow vessel is fixed to the cane or wood portion, and this acts as a resonator. Generally, the string is also kept taut by a smaller cord passing over it, below the middle, and attached to the wood or cane part. The sound is produced by striking or plucking the tightened string with a piece of wood or bone, and by skilful performance various notes are produced.

It is important to discriminate between the Musical Bow and the Oriental Kite Bows and African Goura, in both of which the string is set in vibration by a current of air; nor does the Musical Bow appear to have much affinity with the Jew's Harp, another widely distributed sound producer, in which, however, the tones are varied by altering the resonating cavity of the mouth.

MUSICAL SOCIETY OF LONDON, THE (1858-67). This Society was founded in Apr. 1858 by a body of musicians, professional and amateur, who had originally been members of the New Philharmonic Society, and wished to reconstitute it. This being found impracticable, they established a new institution, under the name of the Musical Society of London. Among the names of this body are found those of Charles Salaman, the chief mover of the project, who held the post of honorary secretary until 1865, when G. C. Verrinder succeeded him; Augustine Sargood (treasurer); C. E. Horsley (honorary librarian); W. V. Wallace; G. A. Macfarren; Henry Smart; Jules Benedict; Stephen Elvey; John Goss; E. J. Hopkins; B. Molique; Sir F. A. Gore Ouseley, Bart.; and Dr. S. S. Wesley; besides other prominent musicians. The objects of the Society, as stated in its early prospectuses were:

To promote social intercourse among its members and with musicians of this and other countries; to form a musical library for the use of members; to hold conversazioni, at which papers on musical subjects might be read, and subjects of musical interest discussed; to give orchestral, choral, and chamber concerts, and occasionally lectures; to afford the opportunity of trying new compositions; to publish occasional papers calculated to extend the theoretical and historical knowledge of music.

The members consisted of fellows, associates and lady-associates, whose subscription was fixed at one guinea. The following were honorary fellows: Auber, Berlioz, Ernst, Joachim, Meyerbeer, Moscheles, Rossini and Spohr. The conductor of the Society during the whole period of its existence was Alfred Mellon. The

first concert took place on Jan. 26, 1859, when the C minor symphony of Beethoven, the 'Melusina' overture of Mendelssohn, and a cantata by G. A. Macfarren, 'May-Day,' etc., were given. At the last concert, Mar. 20, 1867, the most interesting feature of the programme was Beethoven's Choral Fantasia, the piano-forte part of which was played by Mme. Schumann.

M.

MUSICAL UNION, THE, see ELLA, JOHN.

MUSICA MENSURATA, or CANTUS MENSURABILIS (Measured Music). The notes of plain-song were originally of indeterminate length; and were lengthened or shortened indefinitely, in accordance with the rhythm or accent of the words to which they were adapted. But after the invention of figured music it became necessary to design a system of notation capable of expressing the relative duration, as well as the pitch, of every note intended to be sung; and thus arose a new species of song, called *Cantus mensurabilis* or measured music. (See NOTATION, subsection MUSICA MENSURATA, where the system is described; also RHYTHMIC MODES.)

One of the earliest known writers on this subject was Franco of Cologne (see FRANCO, Magister), author of *Ars cantus mensurabilis*.

Next in point of antiquity to Franco's treatise is one written by our own countryman, Walter OWINGTON (q.v.) of Evesham, in the 13th century. Others follow, by Marchettus of Padua, in 1274; Johannes de Muris, in 1321; Robert de Handlo—another Englishman—in 1326; Prosdocimus de Beldemandis, in 1410; Franchinus Gafurius, in 1480.

MUSICA TRANSALPINA, the name of the first printed collection of Italian madrigals with English words. It was published in London in 1588 (the dedicatory epistle is dated Oct. 1), soon after Byrd had issued his 'Psalmes, Sonets and Songs,' the first printed collection of English madrigals. The title is:

'Musica Transalpina. Madrigales translated of foure, five and six parts, chosen out of divers excellent Authors, with the first and second part of *La Verginella*, made by Maister Byrd vpon two Stanzas of *Ariosto*, and brought to speak English with the rest. Published by N. Yonge, in fauour of such as take pleasure in Musicke of voice. Imprinted at London by Thomas East, the assignee of William Byrd, 1588. Cum Privilegio Regiæ Maiestatis.'

Nicholas YONGE (q.v.) was the compiler. The collection contains fifty-seven madrigals, viz. sixteen by Ferrabosco, ten by Marenzio, four each by Palestrina and Filippo di Monte, three by Conversi, two each by Byrd, Faigment, Donato, Orlando Lasso, Ferretti and Felis, and one each by di Macque, Pordenoni, de Vert, Verdonek, Palestrina, Rinaldo del Mel, Bertani and Pinello. In the table of contents the original initial Italian words are given, side by

side with the English. In 1597 Yonge published a second book under the same name, containing twenty-four madrigals, viz. six by Ferrabosco, three each by Marenzio, Croce and Quintiani, two each by Eremita and Palavicino, and one each by Vecchi, Nanini, Venturi, Feliciani and Bicci. The English words in both books are almost literal translations of the original Italian, and are generally well fitted to the notes, but as verses are singularly crude, and in some instances—notably the well-known 'Cynthia, thy song and chanting' of Giovanni Croce—almost unmeaning. W. H. H.

MUSICIANS' COMPANY. The Worshipful Company of Musicians of London has a history and associations which carry back the mind to the musical life of the Middle Ages, the days of the troubadours and minstrels. The Charter by which the Company received its corporate existence and legal status dates back no farther, it is true, than 1604, in which year it was granted by James the First. This was not, however, the first instrument by which minstrels in England had been empowered to form themselves into Guilds or Fraternities, for the Patent Roll gives us the Charter granted by King Edward IV. in 1469 to his 'beloved minstrels,' empowering them to constitute themselves into a guild and make rules and regulations for the government of the craft or 'mystery' of musicians, and to adopt measures to remedy grievances and improve the poor estate into which the calling had evidently then fallen from the high esteem in which it had been held in previous centuries. This Charter, preserved by Rymer in his well-known *Foedera*, where the original Latin text is given, possesses great interest, by reason of the light it throws upon the musical practitioners of those days. Though apparently the earliest on record, it cannot have been the first of its kind, for in it we are told that 'the brothers and sisters of the Fraternity of Minstrels' had established and ordained similar brotherhoods or guilds 'in times past.' Of these earlier Charters, unfortunately, no copy is known, but it will be safe to assume that the rules which they contained for the government of the guild differed little from those laid down in the document here referred to.

This earlier Charter was granted in response to the prayer of the King's Minstrels, whose names are given. They were Walter Halliday (Marshal), John Cliff, Robert Marshall, Thomas Grene, Thomas Calthorne, William Cliff, William Christean and William Eynsham. They complain of the wrong done them by 'certain ignorant rustics and craftsmen of various callings, who falsely represent themselves to be minstrels; although they are in that art by no means learned or skilled, they nevertheless move from place to place on festival days and collect all those profits by means of which the

King's Minstrels should obtain their living'; and, furthermore, that thus 'much disgrace is brought upon the art or occupation of minstrels.' To remedy the grievances thus complained of, the minstrels named were erected into a corporation with perpetual succession, and were given powers of examination, supervision, control and correction of all minstrels throughout the Kingdom, the County of Chester excepted, for there the minstrels were under other special control (see Sir Peter Leycester's *Historical Antiquities of Cheshire*). What measure of success attended the efforts of the new guild to improve the condition of the members, or what was its eventual fate, is not recorded. Its existence must have been short-lived, however, for at the opening of the 16th century we find mention of a new guild, a 'Fellowship of Minstrels and Freemen of the City of London,' though when and by whom it was instituted there is nothing so far discovered to show. However, in the history of the Pewterers' Company by Welch, under date 1500 and 1501, it is stated that the Pewterers' Hall was frequently let, the Minstrels or Musicians being amongst the principal hirers.

It may be remarked in passing that the term 'Minstrel' is a loose one and has led to some confusion, a notable instance being the Henry Walker, 'citizen and minstrel of London,' from whom Shakespeare held his house in Black friars. Walker's connexion with the Musicians' Company is mentioned in his will with codicil proved Aug. 30, 1616, where he describes himself as a 'Musitian of London.'

The association that existed between music and players leads one to suppose that in all probability Shakespeare, too, was a member of the Musicians' Company, but owing to the Roll of the Freemen connected with the Company at that period having been destroyed we are unable to find any proof for this supposition.

In the early days one of the principal duties of these City Musicians or 'waits,' as they were commonly called, was to supply the music for the City Pageants and Festivities.¹

The Fellowship of the Freemen and Minstrels of the City of London have many complaints to make of precisely the same character as those raised by the minstrels of Edward IV., 'the poverty and decay' to which they are brought by the 'continuall recorse of foreign minstrels daily resorting to the City out of all the Contrays of England.' For the remedy of this, and

¹ The livery of the London Waits in 1575 is described in Fairholt's *Lord Mayors' Pageants*, Pl. 1, p. 23, as follows: 'Blue gowns, red sleeves and caps, every one having his silver collar about his neck.' The gowns worn by the Masters and Wardens of the present day are blue, trimmed with fur. In the Diary of Henry Machyn, citizen and merchant-taylor of London, 1550-63, may be seen such entries as the following:

The first day of September [1556] was Sant Gylles day, and ther was a goodly processyon abowt the parriche with the whettes (waits) and the canope borne, and the Sacrement, and ther was a goodly masse songe as bene hard; and master Thomas Grenelle, wax-chandler made a greet denier for master Garter and my ladye, and master Machylye the shreffe and ys wife, and both the chamberlaine, and many worshipfull men and women at denier, and the whettes playing and dyvers odur mynsterelles, for ther was a greet denier.'

for the better government of the London Minstrels, the testing of 'their sufficiency in their art,' and the control and regulation of the teaching of music and dancing, we find that rules were continually enacted and re-enacted, but without, as it would seem, any permanent measure of success.¹

Eventually the Fellowship appears to have been reduced to such a condition that it was deemed necessary to reconstitute it upon a new basis. This was furnished by the Charter of James I., which brought into existence the Worshipful Company of Musicians. It was incorporated at the prayer of the above-mentioned Fellowship of the Minstrels of London (of which it was consequently the direct successor and representative), under the style and title of 'the Master, Wardens and Commonalty of the Musicians of London.' It was to be governed by a master, two wardens and a body of assistants numbering not less than thirteen and not more than twenty, and it was to be invested with full powers for the control and government of all minstrels and musicians in the City of London and within three miles thereof. In accordance with the authority conferred in the Charter, the Company drew up an elaborate series of by-laws for the regulation of the teaching of music within its jurisdiction. These rules, which are too elaborate and extensive to quote here, afford some interesting matter for readers of to-day. It must be admitted, however, that they exhibit a business-like and wise regard for the interests of its members, their proficiency in their art, and also for the training and morals of the apprentices.

The Arms of the Company were granted by Camden, Oct. 15, 1604, and approved by Sir Henry St. George Richmond, 1634, Philip Pikeman being master, Walter Clarke and Philip Janvrin, wardens, and Nicholas Pinny, clerk. We may add that the principal charge of the Arms is the swan, the bird of Apollo and emblem of the musician's or poet's song.

The state of decline into which the art of music as a profession had fallen during the 17th century is no doubt due to the Revolution and Puritan domination. It is therefore not surprising that the Musicians' Company should have sunk into comparative obscurity, as is proved by a MS. dated about 1660, which is preserved in the Bodleian Library, wherein the members of the Company are enumerated as being thirteen in number. Later on, however, it appears to have come once more to the front, for in 1700 the Company was authorised by an Act of Common Council to exercise jurisdiction over dancing-masters. It likewise appears that the Company's jurisdiction was enforced as late as 1763, in which year an action was suc-

cessfully brought by the Musicians' Company before the Recorder of London against Barton Hudson for employing persons not free as musicians at a Lord Mayor's Banquet.

Though the Company is still in active existence, it possesses, unfortunately, no records of its history and acts during the greater part of the last three centuries. These have been lost, and with them, of course, many interesting details of the musical life of London during that period. However, some glimpses of the Company's history may be found in the Records of the City of London.

Times are changed since the Guilds were potent factors in the political and social life of England, when it was necessary for those living in the City to take up the Freedom and Livery of the City Guilds in order to be allowed to carry on their trade or profession in the confines of the City. Nevertheless, many of them still exist, and although they no longer discharge to the full the functions for the exercise of which they were originally founded, most of them have adapted themselves to the new conditions and seek to the best of their power to further the interests of the calling with which they have been so long associated. Such is the case with the Musicians' Company. It is doing all that lies within its limited means, by the institution of scholarships, competitions, the award of medals and in other ways, to stimulate and promote the study and practice of the art which it was established to supervise and control. We may add in passing, however, that the Musicians' Company has never possessed any great wealth.

In addition to the above-mentioned awards, a sum is granted annually for a scholarship in composition to be held at the G.S.M. In 1904 Andrew Carnegie founded in connexion with the Company, of which he was an honorary freeman, two scholarships entitling the holders to three years' free tuition at the G.S.M., and in 1905 Sir S. Ernest Palmer, whose benefactions to the musical world are so well known, presented to the Company, of which he also is an honorary freeman, the sum of £1250. With the interest derived therefrom two other scholarships have been created, tenable, at the same Institution, the one by a boy and the other by a girl. In 1904, in connexion with the tercentenary of the granting of the Company's Charter, prizes were given by Charles T. D. Crews, the Master, and H. T. C. de Lafontaine, liveryman of the Company, for various musical compositions, including a grace for the use of the Company. In addition the Master presented fifty guineas to the G.S.M. to be employed in assisting poor students, a window of St. Cecilia to St. Paul's Cathedral to commemorate the revival in 1904 of the custom of attending a special service on St. Cecilia's Day, and a bust of

¹ Thomas Morley writes as follows in the 'Dedication of First Booke of Consort Lessons,' 1599: 'The ancient custome of this honourable and renowned Citie hath been ever to traine and maintaine excellent and expert Musicians.'

Orlando Gibbons to Westminster Abbey. W. W. Cobbett, a member of the Court of the Company, has also given a prize of £50 for a 'Phantasy' for string quartet, and has instituted the annual presentation of a medal for chamber music. The Company also presents annually silver medals to the R.A.M., R.C.M. and the G.S.M. (in rotation), the Royal Naval and Royal Military Schools of Music, and triennially to the R.C.O. and Trinity College of Music.

Specially worthy of mention is the Exhibition held by the Company in commemoration of its tercentenary at the Fishmongers' Hall, which was opened by the Prince and Princess of Wales on June 28, 1904, under the patronage of the King and Queen, His Majesty heading the list of lenders. Then was brought together a remarkable collection of instruments, books, manuscripts, portraits and other objects bearing upon the history and practice of music, probably more complete, valuable and instructive than anything of the kind that had ever before been got together. A finely illustrated catalogue of the entire collection was published subsequently.

In order that all possible advantage might be derived from the Exhibition, a series of lectures on the exhibits, with musical illustrations, was delivered. (These have since been published in book form.)

At the present time (1926) the Musicians' Company consists of about 140 members. Election to the Company rests with the Court, which consists of the Master, two Wardens and not less than thirteen assistants. Fees, amounting to £52:10s., are payable on taking the Livery. The Livery of the Company carries with it the Freedom of the City and the privilege of a vote for Civic elections. The Musicians' Company is the only City Company concerned with the exercise of a profession.

By arrangement the Musicians' Company enjoys the use of the Worshipful Company of Stationers' magnificent old Hall.

The Company, as regards members and influence, is at present in a stronger position than it has been for upwards of a century, and the greater number of the liverymen are connected with and interested in the art of music. The majority are musicians, both professional and amateur. The clerk to the Company is T. C. Fenwick.

The Livery Club of the Musicians' Company, founded in 1902 to promote the interests of the Company and its usefulness to the art of music, has issued for private circulation two handbooks dealing with the history of the Company, reprinting the two Charters and giving the by-laws and other information of interest to the liverymen; and a third handbook was issued in 1915 by Clifford B. Edgar, a past-master of the Company. During the war of

1914-18 the Company presented a gold watch to each bandsman who won the V.C., such presentation being made at the Mansion House by the Lord Mayor at appropriate functions. In recent years the Company has become possessed of many handsome pieces of plate through the beneficence of its members. King George V. accepted the gold medal of the Company, and the Prince of Wales and the Duke of Connaught were admitted to the Honorary Freedom of the Company in 1921.

A. F. H.

MUSICIANS OF GREAT BRITAIN, ROYAL SOCIETY OF, see ROYAL SOCIETY OF MUSICIANS.

MUSICIANS' UNION. This Society, a registered Trade Union, was formed in 1921 by the amalgamation of the National Orchestral Association of Professional Musicians and the Amalgamated Musicians' Union, two independent organisations which, under various titles, had been in existence since 1893. Their aims and objects were to improve the status of the professional musician, more especially the orchestral players, amongst whom, for various reasons, chiefly the speculative nature of so many of their engagements, great hardships had frequently arisen in the past. For example, a great deal of time would be expended in rehearsing a musical play which, upon production, would prove to be a complete failure, yet the musicians were expected to rehearse unrestrictedly as though a long run were assured.

The Musicians' Union has proved of the utmost importance in securing adequate payment for rehearsals and fixing their duration, while in other matters its activities extend to controlling the entry into the profession and to ensuring it being sufficiently lucrative to eliminate the necessity of members having to resort to non-professional employment, to the establishment of benefit funds for illness, to the insurance of instruments and to legal assistance when required, etc. The registered offices of the Union are in Manchester, the London offices being in Archer Street, W.1. The general secretary is E. S. Teale.

MUSIC PRINTING, see PRINTING.

MUSIC SCHOOL, THE, OXFORD, is situated on the south side of the Schools quadrangle, under the Bodleian Library. This building was rebuilt in its present form at the beginning of the 17th century, but the interior of the Music School was altered in 1780 by the architect Wyatt under the direction of the then Professor of Music, Dr. Philip Hayes. The expenses of these alterations were defrayed by a grant of £50 from the University and by the proceeds of three choral concerts given at the following Commemoration, at one of which Dr. Hayes's oratorio 'Prophecy' was performed. The Music School was formerly used for the performance of the exercises for the degree of

Mus.B. and Mus.D. The collection of music (see **LIBRARIES**) which belongs to the Music School is no longer preserved there, having been removed to the Bodleian; and the famous collection of portraits,¹ of which a list is appended, was moved in 1887 to the New Schools. They were shown at the Music and Inventions Exhibition of 1885, where Salomon's portrait was identified.

MUSIC SOCIETY, THE. This Society was formed in London by André Mangeot in 1920, giving its first concert on Nov. 2. It is run on a subscription basis, and has always paid attention to the production of contemporary chamber-music in addition to the revival of less well-known works in the classical repertory, and to the informality of the performances, which take place at St. John's Hall, Westminster. Among the composers who have been represented in the programme there may be mentioned the names of Bux, Bloch, Goossens, Honegger, de Maleingreau, Turina and Wiener.

MUSIKALISCHES OPFER, i.e. Musical Offering; one of Bach's works, containing various treatments of a subject given him by Frederick the Great to extemporise upon during his visit to Potsdam in May 1747. The work, as published by Breitkopf & Härtel (Nov. 1831) contains two ricercari, one for three voices and one for six voices (the latter in score), one fuga canonica for two voices, five sonatas for flute (the king's own instrument), violin and continuo, and eight canons; sixteen pieces in all. The work was published by Bach with a dedication dated July 7, 1747—a curious medley of five sheets oblong folio and one sheet upright folio, containing the ricercar *a 3* and a canon perpetuus (the third in B. & H.'s edition), five canons, and the fuga canonica. In the dedication copy, now in the Amalienbibliothek at Berlin, Bach has written 'Regis Iussu Cantio Et Reliqua Canonica Arte Resoluta'—'the

theme demanded by the king with other things developed by canonical art.' Four more oblong folio sheets seem to have been afterwards added, containing the ricercar *a 6* and two canons, and lastly three sheets containing the sonatas and one canon. (See Spitta's *Bach*, Engl. transl. iii. 191-7, 233, 292, 294.) g.

MUSIN, OVIDE (b. Nandrin, near Liège, Belgium, Sept. 22, 1854), entered Liège Conservatoire in 1863; was a pupil of Hyneberg, and two years later took first prize for violin-playing. In 1870 Henri Léonard was appointed professor at the Liège Conservatoire; Musin studied with him, and eventually followed him to the Paris Conservatoire, where—at the age of 14—he was awarded the gold medal for solo and quartet playing. A year later he made his début, replacing Léonard at a concert. After touring in France, he visited Holland in 1875, and, meeting the impresario Jarreth, was engaged by him for a prolonged tour. Under Mapleson's direction he came to London in 1877, remaining here for five years. Finally he made a tour round the world, returned to Liège in 1897, and succeeded César Thomson as violin professor at the Conservatoire. His last appearance in London was on May 6, 1888, at the Prince's Hall, where he played Leopold Damrosch's Concertstück for violin and orchestra, under the baton of Walter Damrosch. Subsequently his residence was divided between Brussels and New York. (*Liège Artiste*, Sept. 30, 1905; *Baker*.)

E. H. A.

MUSTEL, VICTOR (b. Le Havre, June 13, 1815; d. Paris, 1890), a manufacturer of harmoniums, whose several inventions resulted in the instrument known as the 'Mustel Organ.'

Left an orphan at the age of 12, he was apprenticed to a shipbuilder, and in 1838 set up in business for himself in that trade at the little hamlet of Sanvic. Endowed from youth with a peculiarly constructive genius, his first attempts at making musical instruments were devoted to the improvement of an accordion which he had bought in Havre. Elated with his success, he disposed of his workshop in May 1844, and set out for Paris with his wife and two children. For the next nine years he worked in several different workshops, but never obtained high wages. In 1853 he determined to start in business for himself as a harmonium maker, and in 1855 exhibited his harmonium with 'Double Expression,' and a new stop 'Harpe éolienne,' for which he gained a medal of the first class. For the first year after this Mustel (now assisted by his two sons) did fairly well, but business rapidly declined, and he would perhaps have been obliged to succumb but for the sale of a little land which he had inherited from his father. Even in 1866 his receipts did little more than cover the costs, but since that date the firm of 'Victor Mustel et ses Fils' has gained

¹ See B.M. Add. MSS. 23,071, folio 65, for a list of them in 1733-34. See also *Mus. Ant.*, iv. 143.

* Those printed in capitals are reproduced on Plates in this Dictionary.

a reputation that has been as noteworthy in England as in France. The present name of the firm is 'Mustel et Cie.'

The inventions due to the Mustels are—'La Double Expression' (patented 1854), whereby the natural preponderance of the bass tones over those of the treble is, with complete power of increase and decrease in either half, brought under direct control of the player by means of knee pedals (*genouillères*) that control the energy and pressure of the wind; 'Le Forté expressif,' a divided swell governed by pneumatic agency; and 'La Harpe éolienne,' a tremolo register of two ranks of vibrators, 2 ft. pitch, which offer a gently beating variation to the unison by being slightly less and more than the normal pitch of the instrument, the impression of which remains unimpaired. Mustel subsequently invented 'Le Typophone' and 'Le Métaphone.' The first of these is a keyboard percussion instrument, made of tuning-forks in resonance boxes of the proper acoustic capacity. The principle is very similar to that of the *CELESTA* (*q.v.*). The *Métaphone* (patented in 1878) is an invention to soften at pleasure the somewhat strident tones of the harmonium. It is produced by a sliding shutter of leather to each compartment, and is governed by draw-stops, as with other modifications of tone and power. A. J. H.

MUSURGIA UNIVERSALIS, see *KIRCHER*, *ATHANASIUS*.

MUTA (Italian), *i.e.* change, a word often seen attached to horn parts—'muta in Es,' 'muta in B,' etc., meaning simply 'change to E_♭ or B_♭,' etc.; that is, take off the crook in which you are playing and put on that which will make the horn sound in E_♭ or B_♭. G.

MUTATION (Lat. *mutatio*, from *mutō*, 'I change'). (1) When in the Solmisation of a plain-song melody it becomes necessary to pass from one hexachord to another, the process by which the transfer is effected is called a mutation. (See *HEXACHORD* and *SOLMISATION*.)

(2) The term is also applied to the change which takes place in a boy's voice, when it passes from treble or alto into tenor or bass. The period of this transformation is uncertain; but it generally declares itself between the ages of 14 and 16, and is very rarely deferred later than the completion of the seventeenth year.

(3) More rarely, the word is used to denote that change in the position of the hand upon the violin, which, by English violinists, is called the *SHIFT* (*q.v.*). W. S. B.

MUTATION STOPS, in an organ, are those registers which do not produce a sound agreeing with the name of the key pressed down, but either the perfect fifth or the major third to it, as G or E on the C key. The former are called fifth-sounding, or Quint stops; the latter third-sounding, or Tierce stops. The proper relative size of the largest fifth-sounding stop

is one-third that of the Foundation stop from which it is deduced; as 10 $\frac{2}{3}$, 5 $\frac{1}{3}$ or 2 $\frac{2}{3}$ from the 32, 16 or 8-foot stops respectively. The largest Tierce-sounding stops are one-fifth the size of the Foundation stops from which they are deduced; as 6 $\frac{2}{3}$, 3 $\frac{1}{3}$ and 1 $\frac{2}{3}$ feet respectively. The third-sounding rank on the manual has been much more sparingly used since the introduction of Equal Temperament, as it does not sound agreeably with that system of tuning; and an additional rank of pipes consequently becomes available for some other purpose.

The only Mutation stop in use in England previously to the arrival of Smith and Harris (1860) was the twelfth (2 $\frac{2}{3}$ feet). After that date the Tierce (1 $\frac{2}{3}$ foot), Larigot (1 $\frac{1}{3}$ foot) and their octaves (among the small Mixture ranks) became not uncommon. (See *MIXTURE*.) E. J. H.

MUTE,¹ or Damper (Fr. *sourdine*; Ger. *Dämpfer*; Ital. *sordino*). A mechanical device for restricting the tone of instruments.

PIANOFORTE.—In the pianoforte the contrivance is called in English the damper. The first pianofortes, as we find Cristofori's and Silbermann's, were made without stops. In course of time a practice common with the harpsichord was followed in the pianoforte, and led the way to the now indispensable pedals.

The first stops were used to raise the dampers; and by two brass knobs on the player's left hand the dampers could be taken entirely off the strings in two divisions, bass and treble. C. P. E. Bach, in his *Versuch*, makes few references to the pianoforte; but in the edition of 1797 he remarks (p. 268) that the undamped register of the Fortepiano is the most agreeable, and that, with due care, it is the most charming of keyed instruments for improvising ('fantasiren'). The higher treble of the piano is not now damped. These short strings vibrate in unison with the overtones of deeper notes, and, as a distinguished pianoforte-maker has said, give life to the whole instrument.² The terms 'Senza sordini' and 'Con sordini' applied to the damper stops were used exclusively by Beethoven in his earlier sonatas. He did not use the now familiar 'Ped.' or 'Pedal,' because the pedal was of recent introduction, and was less commonly employed than the stops which the little square pianos then had. The 'Genouillière,' or knee-pedal, replaced the damper stops in the German grands. For the Italian words signifying without and with dampers the signs \oplus and \ast were substituted by Steibelt, and eventually became fixed as the constant equivalents. The oldest dated square piano existing, one of Zumppe's of 1766, has the damper stops; as to the Genouillière, Mozart tells us (letter, Oct.

¹ It will be noticed that the metaphors at the root of the Italian and English terms are deafness in one case and dumbness in the other.

² Even in *Virdung*, A.D. 1611, we find the practice of leaving sympathetic strings in the clavichords; as he says to strengthen the resonance.

1777) how Stein had one in his improved grand, and Mahillon's Stein of 1780, or thereabouts, accordingly has one. There is one in Mozart's (Walther) grand at Salzburg, and in each of the two (Huhn, Berlin) grands of 1790, or earlier, preserved at Potsdam. The action of the Genouillière consists of two levers which descend a little below the key-bottom of the piano, and meet opposite the knees of the player, who, pressing the levers together, by an upward thrust moves a bar which takes the whole of the dampers off the strings.¹

Contemporaneous with the employment of the Genouillière was that of the *piano stop* (Fr. *céleste*, Ger. *Harfenzug*), afterwards transferred, like the dampers, to a pedal. An interesting anonymous Louis Quinze square piano belonging to the painter Gosselin of Brussels had this Céleste as a stop. Its origin is clearly the harp-stop of the harpsichord, the pieces of leather being turned over so as to be interposed between the hammers and the strings.

A note of directions for the use of the pedals prefixed to Steibelt's three sonatas, op. 35, gives an approximate date to the use of the pedals becoming recognised, and put under the composer's direction, instead of being left entirely to the fancy of the player. He says:

'The Author wishing to make more Variety on the Piano Forte finds it necessary to make use of the Pedals, by which alone the tones can be united, but it requires to use them with care, without which, in going from one chord to another, Discord and Confusion would result. Hereafter the Author in all his Compositions will make use of the following signs to denote the Pedals:

⊕ The Pedal which raises the dampers.

* The Piano Pedal.

To take the foot off the Pedal that was used before.'

Steibelt's op. 35 was published in 1799, by Longman, Clementi & Co.²

The leather was applied in one length to mute the strings more effectually, and was then called in French 'sourdine.' John Broadwood was the first to put the 'sordin'—as it is called in his patent of 1783—upon a foot-pedal; he put the dampers upon a pedal at the same time, and for fifty years the pedal-foot was cloven, to divide the dampers into bass and treble sections, as the stops had previously been divided for the same purpose. The use of the pianissimo mute was indicated by the Italian word 'sordino.' This term is used in the sense of a mute as late as Thalberg's op. 41 (Ashdown's edition).

The 'Verschiebung,' or shifting pedal, for shifting the hammer first to two strings and then to one (UNA CORDA (*q.v.*)), ultimately gained the day over the muted pedals or stops. The effect of the 'una corda' was

charming and is expressly indicated by Beethoven in his G major concerto, in op. 106, etc. The *pp* and *ppp* soft pedal in course of time shared the fate of the divided damper pedal; such refinements were banished as being of small service in large rooms. In the six-pedal Viennese grand of Nannette Stein at Windsor Castle, the 'Verschiebung' and 'Harfenzug' co-exist.³ The latter has of late years again come forward, at first in oblique pianos that could not shift, and since more generally; and has, to a certain extent, gained the favour of amateurs. The material used is cloth or felt.⁴

A. J. H.

VIOLIN, etc.—The muting of violin, viola, violoncello and double bass is effected by fixing a three-pronged apparatus on the bridge, the split prongs of which grip firmly and damp the vibrations of the strings. It is also possible to mute by slipping a coin or piece of horn between the strings on the tail-side of the bridge. Mutes are made of metal, wood, ivory or xylonite and vary somewhat in their effect according to the substance employed; but the chief variation in the tone depends upon the firmness with which the prongs grip the bridge. The mute is less satisfactory on the violoncello and double-bass owing to the difficulty in devising one of the requisite weight and gripping power.

WIND INSTRUMENTS.—The horn and trumpet are the most frequently muted wind instruments, the introduction of the hand into the bell of the horn altering the pitch as well as veiling the tone (see HORN). The horn mute is a pear-shaped piece of wood or metal inserted into the bell. A similar device is used for muting the trumpet, cornet, trombone and tuba. There is also what is called the 'echo attachment,' a small double cone of metal which reduces the tone of the cornet to a mere thread.

There are no practical means of muting wood-wind instruments. For the muting of drums see DRUM.

MUWASHSHAH, see SONG, subsection SPAIN; VILLANCICO.

MYRIELL, THOMAS (b. early 16th cent.), made a most important collection of 16th and early 17th century English (and Italian) compositions, and apparently some of his own. It has an engraved title-page, 'Tristitia remedium,' and the year 1616. For a detailed description see H. Davey, *Hist. of Eng. Music*, p. 164. Another MS. collection in the Fétis Library, Brussels, bears his autograph signature.

E. v. d. s.

MYSLIWEČEK (MYSLIWECZEK), JOSEF (b. Prague, Mar. 9, 1737; d. Rome, Feb. 4, 1781), a Bohemian composer, son of a miller,

¹ See Hipkins, *History of the Pianoforte*, pp. 93, 108 and 110: footnote.

² Steibelt gives a description of the pedals, with his signs for them, in his *Méthode de piano*, first published by Junet, Paris, 1805. He names Clementi, Dussek and Cramer as having adopted his signs. They differ from and are better than Adam's *Méthode de piano du Conservatoire*, also published in Paris, 1802. Steibelt calls the 'una corda' *céleste*.

³ The remaining pedals in Nannette Stein's grand are the 'Fagotzug,' by which a piece of card or stiff paper is brought into partial contact with the strings, and the 'Janissary' drum and triangle. See STEIN.

⁴ See also the glossary of terms in Hipkins, *History of the Pianoforte*, p. 123.

had a good education in the common school, and after his father's death devoted himself to music. After many attempts at composition, and much wandering, he went to Venice, studied with Pescetti, and fell upon his feet at Parma, in 1764, with an opera, 'Il Bellerofonte,' the success of which was so great as to make his reputation; though he returned to the north of Italy he was recalled to Naples no less than nine times. In 1773 his 'Erifile' was given in Munich, and in 1775 his 'Ezio' at Naples. An oratorio 'Abramo ed Isacco' (1777) was for some time ascribed to Haydn. Mozart met him at Bologna in Nov. 1772, and again at Munich in 1777. He was evidently very gifted. Mozart says of his sonatas that 'they are bound to please, not difficult, and very effective,' and urges his sister to learn them by heart.¹ Elsewhere he speaks of him as a prize difficult to replace.² He was evidently very fascinating,³ but as evidently a loose fish,

¹ Letter, Nov. 13, 1777.
² Aug. 7, 1778. ³ Oct. 11, 1777.

unable, with all his engagements, to keep himself respectable.⁴

In 1778 he gave his 'Olimpiade' at Naples, which threw every one into transports of enthusiasm. The famous singer Gabrielli sang his songs everywhere, and was accustomed to say that none were so well suited to her voice. Mysliweček is said to have had a young English friend named Barry, who buried him in San Lorenzo in Lucina, and erected a monument to him there. The Italians called him Venatorini, or, more intimately, Il divino Boëmo, in despair at the pronunciation of his proper name. Four oratorios, thirty operas, many symphonies, concertos, sonatas and arias are mentioned in *Q.-L.* G.; rev.

MYSTÈRES D'ISIS, LES, an arrangement of Mozart's 'Zauberflöte,' words by Morel, music adapted by Lachnith; produced Opéra, Paris, Aug. 20, 1801. (See LACHNITH.) G.

BIBL.—G. SERVIERES, *Episodes d'histoire musicale* (Paris, 1914).

Feb. 22, 1778; Oct. 11, 1777.

NAAMAN, oratorio in 2 parts; words by W. Bartholomew, music by Costa; produced Birmingham Festival, Sept. 7, 1864.

NABUCCO, or **NABUCODONOSOR**, opera in 3 acts; libretto by Solera, music by Verdi. Produced La Scala, Milan, Mar. 9, 1842; Paris, Oct. 16, 1845; at Her Majesty's, as 'Nino,' Mar. 3, 1846. a.

NACHBAUR, **FRANZ** (b. Schloss Giessen, near Friedrichshafen, Wurttemberg, Mar. 25, 1835; d. Munich, Mar. 21, 1902), a noted German tenor. He was educated at the Polytechnic School, Stuttgart. As a member of a Gesangverein, his fine voice attracted the notice of Pischek, who advised him to take regular instruction in singing. He began his career as a chorister at Basle, and afterwards became a member of a German troupe travelling in France. Through the liberality of Passavant, a bar-ker at Lunéville, he found means for the culture of his voice, first through Orth, the bass singer, and afterwards with Lamperti of Milan. He afterwards sang in opera at Mannheim, Prague, Darmstadt, Vienna, and in 1866 at Munich, where he obtained a permanent engagement at the opera, enjoying a great reputation until his retirement in 1890. He created the part of Walther in 'Die Meistersinger' in 1868, and that of Froh in 'Das Rheingold' in 1869. He also sang in Italy, and appeared as Lohengrin at Rome in 1878. In 1882 he was a member of the German Opera Company at Drury Lane, and on June 3 sang the part of Walther in 'Die Meistersinger.' A. c.

NACHDRUCK, **MIT**, 'with pressure,' 'heavily'; corresponding nearly to the Italian *pesante*.

NACHEZ, **TIVADAR** (b. Budapest, May 1, 1859), violinist. His first teacher was Sabathiel, leader of the orchestra at the Royal Hungarian Opera. He remained with him till his 16th year, when he gained one of the travelling scholarships founded by the King of Hungary. With this he went to Berlin, and was for three years a pupil of Joachim. His studies concluded at Paris, where he was a pupil of Léonard for a year, and where he established himself for a time, playing at the Pasdeloup and other concerts. He made several tours on the Continent, and finally settled in London in 1889, where he earned a high reputation as a solo player. He made what was described as a farewell appearance with Thibaut in the autumn of 1926. As a composer he has been mainly successful in writing violin solos based upon Hungarian melodies. In 1923 he published a string quartet and has completed a new violin concerto. He has done much editing of classical works for his instrument. W. W. C.

NACHSCHLAG, see **ORNAMENTS**, **GERMAN**.

NACHSPIEL, 'afterpiece,' a name given by German organists to voluntaries intended to be played at the conclusion of the service, while the congregation is leaving the church. This form of composition is also called *Postludium*, and has even been Englished as 'Postlude.' The German title corresponds to the word *Vorspiel*, used as an equivalent to *Präludium* or *Prelude*. Examples of the name (*Nachspiel*) may be found in the works of Joseph André and Rinck, and examples of *Postlude* in those of Henry Smart and many others. M.

NACHTGALL, see **LUSCINIUS**, **OTTOMAR**.

NACHTLAGER VON GRANADA, **DAS**, opera in 2 acts; from Fr. Kind's drama, by Frhr. von Braun, music by Conradin Kreutzer. Produced Vienna, 1834.

NADERMANN, **FRANÇOIS JOSEPH** (b. Paris, c. 1773; d. there, Apr. 2, 1835), son of a celebrated harp-maker, became the second greatest virtuoso of his time on that instrument.¹ He was harpist at the Opéra and in the royal chapel after the Restoration, and professor of harp at the Paris Conservatoire, Jan. 1, 1825. He composed for the harp with and without other instruments: concertos, quartets, trios, duets, sonatas and solos; also (together with Duport) nocturnes for violoncello and harp.² Most of his works were published by J. H. Nadermann, probably a relative. With his brother Henri, also a harpist, he engaged in a controversy with Seb. Erard on the subject of the latter's double-action harp which ended in Erard's victory and the gradual disappearance of the once famous Nadermann instruments. E. v. d. s.

NADESHDA, opera in 4 acts; words by Julian Sturgis, music by A. Goring Thomas. Produced Carl Rosa Co., Drury Lane, Apr. 16, 1885. M.

NÄGELI, **HANS GEORG** (b. Zürich, May 26, 1773³; d. there, Dec. 26, 1836), composer, teacher, writer on musical subjects and publisher. He received his musical education at Zürich and Berne. In 1792 he started his music publishing business by producing works by Bach, Handel, Frescobaldi and other famous masters in a style surpassing in clearness of type and elegance of production most of his predecessors and contemporaries. In 1803 he started the *Répertoire des clavecinistes*, a periodical in which he published pianoforte compositions by Clementi, Cramer, Dussek, Steibelt, Beethoven and others, and which in that year contained the first edition of Beethoven's sonatas, op. 30, Nos. 1 and 2 (without opus

¹ De Maria, whom Fétis considered greater, never played in public.

³ Centenary pamphlet by Rudolf Hunziker, *Hans Georg Nägeli* (Winterthur, 1924).

number). In the first of these he committed the error of judgment of adding four bars to the first movement, an error which Beethoven magnanimously forgave, for he wrote to him even on later occasions in affectionate terms and even induced the Archduke Rudolph, in 1824, to subscribe to a volume of his poems. Apart from toccatas and other pianoforte pieces he composed a large amount of vocal compositions for the church, the school and the home, and his 15 books of songs with pianoforte accompaniment contain many numbers which are still popular among students, in elementary schools and among the people, especially his 'Lied vom Rhein' and 'Freut Euch des Lebens' (published in 1794), which became also a favourite in England as 'Life let us cherish.' His merit in the advancement of musical art is very considerable, especially by means of the 'Schweizerbund,' a choral society with branches throughout Switzerland, and the improvement of musical education in elementary schools on the principles of Pestalozzi's system, in which he adopted the method of Michael Traugott Pfeiffer, who had organised the music teaching in Pestalozzi's institute. Nägeli wrote several works on the subject, which became largely textbooks for teachers, and he translated his theory into practice by applying it for a period of 20 years in an elementary school founded by himself. In 1824 he lectured on music particularly for the benefit of musical amateurs in many towns of southern Germany. The lectures, which were published by Cotta (Tübingen, 1826), became the subject of a polemic between Nägeli and Professor Thibaut of Heidelberg, which was also published by the former as *Der Streit zwischen der alten und neuen Musik* (the controversy between old and modern music). To Nägeli belongs the merit of having revived male choir singing (Liedertafel). E. v. d. s.

BIEL.—RUDOLF HUNZIKER, *Hans Georg Nägeli. Gedenkrede zur 150. Wiederkehr seines Geburtstages, mit Bildnissen und bibliographischen Anhang*, pp. 40 (Winterthur, 1924).

NÆNIA, cantata for chorus and orchestra on Schiller's words, 'Auch das Schöne muss sterben,' set by Hermann Goetz, op. 10, and by Brahms, op. 82. Nænia or Nenia was a classical term for a funeral dirge. G.

NAGEL, WILIBALD (b. Mülheim on the Ruhr, Jan. 12, 1863), the son of a well-known singer, Siegfried Nagel; he studied music at Berlin under Ehrlich, Treibs, Spitta and Beller-mann, and after spending some years as a teacher of musical history at Zürich, came to England in order to study the records of our national music. He made many minute and valuable researches which were afterwards embodied in two books, *Geschichte der Musik in England*, 2 vols., 1891 and 1897, and *Annalen der englischen Hofmusik*, 1894-95, published as a supplement to the *Monatshefte*

für Musik. Among his other works are *Über die dramatisch-musikalischen Bearbeitungen der Genovefa-Legende* (1888) and *Beethoven und seine Claversonaten* (1903), as well as a life of Brahms. In 1896 he went back to Germany and took up his residence at Darmstadt, where in 1898 he became teacher of musical science in the Technische Hochschule, and professor in 1905. In 1913 he gave up this work and returned to Zürich, and later settled in Stuttgart. M.

NAICH, HUBERT, one of the earlier madrigal composers, of whose life nothing is known except that he was a Netherlander living in Italy towards the middle of the 16th century. The only publication which bears his name exclusively is a collection of thirty Italian madrigals a 4 and 5, printed at Rome but bearing no date, though probably about 1540. It is dedicated to Bindo Altoviti, the friend of Raphael and patron of Benvenuto Cellini, and at the end Naich himself is described as a member of the Accademia degli Amici at Rome. Other madrigals by Naich appeared in the various collections of Arcadelt and Rore. Among the half-dozen Italian madrigals contained in Ott's *Liederbuch*,¹ 1544, there is one by Naich, 'Rara beltà divina,' a very good specimen of early madrigal composition, and the only means we have at present of judging Naich's work. J. R. M.

NAIL, opera composed by Isidore de Lara. Produced Théâtre de la Gaîté, Paris, 1911; in English, Covent Garden, July 18, 1919.

NAIL VIOLIN. (In German *Nagelgeige*, *Nagelharmonika*, *Eisenvioline*.) This curious musical instrument was invented in the year 1740 by a German violinist named Johann Wilde, at that time living in St. Petersburg. The suggestion for its construction originated in Wilde's accidentally scraping the hair of his bow across the metal peg upon which he was about to hang it, and in so doing producing a musical sound of distinctive quality. The flat wooden sounding-board is in the shape of a half-moon, and the metal nails are firmly fastened perpendicularly around the edge of the curved side. These nails diminish in height as the notes rise in pitch, and the chromatic nails are distinguished by being slightly bent. It was held in the left hand by a hole underneath, and sound was produced by rubbing a strong, well-rosined, black-haired bow across the nails. In 1780 it was improved by the addition of sympathetic strings; and Senal—a Viennese artist—excelled upon it. In 1791 a new arrangement of it, called the 'Nagel-clavier,' was produced by Tröger of Bamberg, who made it of an oblong shape. It was played upon with a band coated with rosin, instead of a bow, which band was worked by keys. (Carl Engel, *Catalogue of Musical Instruments at South Kensington*.) E. H.-A.

¹ Reprinted by Bitter.

NAKERS (O. French, *nacaires*). The mediæval name for the kettledrums, and distinctly showing their Arabian or Saracenic origin; for the old English word is but a corruption of the Arabic *nacareh*, now represented by the *naqqareh* of Turkey, Egypt and Syria—small hand drums with bowl-shaped bodies of wood or metal and covered on their open top with skin. They are generally used in pairs: if small enough the performer holds them with one hand; if larger, they are placed on the ground, on either side of a camel, or even on the back of an attendant. (See *PLATE XXX.* No. 1.)

They were probably introduced into western Europe at the time of the Crusades, together with the long trumpet known as the *buzine*. At the close of the 14th century the word appears in English literature, though in 1304 amongst King Edward III. the First's musicians was one Janino le Nakerer, and in 1349 'nacaires' helped to celebrate the entry of King Edward III. into Calais. Their use in British cavalry regiments was due to King Henry VIII., who sent to Vienna 'for drums that could be played on horseback after the Hungarian manner.' For their later development see *DRUM*. F. W. G.

NALDI, GIUSEPPE (b. Bologna, Feb. 2, 1770; d. Paris, Dec. 15, 1820¹), baritone singer, was the only son of Giuseppe Naldi, who held a government appointment at Bologna. The son was educated in the universities of Bologna and Pavia, where he made very rapid progress in his studies for the law, the profession of his choice.

He achieved his first success on the stage at Milan. According to Fétis (who, however, is incorrect in some details of his biography), Naldi appeared at Rome in 1789, then at Naples, and next at Venice and Turin. In 1796 and 1797 he reappeared at Milan. In London he made his début Apr. 15, 1806, and he continued to sing here every subsequent season up to 1819 (inclusive). His principal characters were in 'Le cantatrici villane,' 'Così fan tutte' and 'Il fanatico per la musica.' In the latter he showed his skill in playing the violoncello, on which he was no mean performer. Lord Mount-Edgcumbe describes his voice as 'weak and uncertain'; while another critic² calls it 'sonorous and powerful.' All agree, however, that Naldi was extremely clever, could write very fair verses and compose very tolerable music; had an accurate ear; could play the piano and violoncello very well; and read at sight with perfect ease and intonation. As an actor he was excellent, and played with 'irresistible humour, effect, judgment and truth.' A good portrait-sketch of him as Figaro in 'Le nozze,' 'drawn and etched expressly for the British Stage,' appeared in Feb. 1818. In the next year he was engaged at Paris, where he made his début in

'Così fan tutte'; but his powers were much faded. He returned once more to London in that, his last, season; and in the following year, at Paris, met an untimely death, in the apartments of his friend Garcia, by the bursting of a newly-invented cooking-kettle, a trial of which he had been invited to witness.

His daughter, Mlle. NALDI, made her début in 1819. She sang at Paris in 1822-23, and is said by Fétis to have shared the public applause with Pasta for some years, particularly in 'Tancredi' and 'Romeo e Giulietta.' She retired in 1824, having married the Conte di Sparre. J. M.

NALDI, ROMULO, LL.D. (16th-17th cent.), priest, Knight of St. Peter's, Rome; lived at Rome and Bologna. He composed 1 book of madrigals a 5 v. (1589); 1 book of motets for double chorus (1600), both published at Venice. Other numbers are in collective volumes (*Q.-L.*).

NALSON, REV. VALENTINE (d. 1722), Sub-chantor of York Cathedral in the early part of the 18th century, composed an Evening Service in G, and also, on the occasion of the Peace of Utrecht in 1713, a Morning Service in the same key, both which are contained in the Tudway Collection, Harl. MSS. 7341 and 7342. Some anthems by him are also extant at Ely.

W. H. H.

NANGA, a Nubian harp without a fore pillar; a relic of the harps of ancient Egypt (*PLATE XXXVIII.* No. 1; see *HARP*).

F. W. G.

NANINI (NANINO), two brothers, important composers of the 16th-century Roman school.

(1) GIOVANNI MARIA (b. Tivoli, c. 1545; d. Rome, Mar. 11, 1607) was a chorister at Vallerano, and studied counterpoint at Rome under Gaudio Mell; and, on the completion of his education, he obtained a place as tenor singer in Sta. Maria Maggiore in Rome, was appointed in 1575 maestro at San Luigi de' Francesi, in 1577 a singer in the Papal Chapel, and in 1579 maestro at Sta. Maria Maggiore.

G. Maria established a public music school—the first ever opened in Rome by an Italian—in the management of which he was assisted by his brother, G. Bernardino (2), as well as by Palestrina himself. The school prospered exceedingly. G. Maria's reputation as a learned contrapuntist and gifted composer was secured. His works were received at the Sistine Chapel with marks of special approbation, and in 1604 he was appointed maestro in that chapel. On his death three years later he was buried in the church of S. Luigi de' Francesi.

Nanini was one of the brightest ornaments of the great Roman school, the highest qualities of which he cultivated in a remarkable degree. His motet for six voices, 'Hodie nobis coelorum rex,' annually sung in the Sistine Chapel on the morning of Christmas Day, is a noble

composition; and he has left us many others of equal merit, a large proportion of which still remain in MS. among the archives of the pontifical choir, the Vatican Basilica, the Collegium Romanum, the oratory of S. Maria in Vallicella and other noted collections. P. Martini mentions a MS. collection of Canons, entitled 'Cento cinquanta sette contrappunti e canoni, a 2, 3, 4, 5, 6, 7, 8 e 11 voci, sopra del canto fermo intitolato La Base di Costanzo Festa,' which contains some miracles of ingenuity and learning. Some of these, at least, have already appeared among his published works; but a dissertation on counterpoint, called 'Regole di Giov. Maria e di Bernardo Nanini, per fare contrappunto a mente sopra il canto fermo,' written conjointly by himself and his younger brother in 1619, exists only in a MS. copy—unhappily imperfect—transcribed by Orazio Griffi, and preserved in the library of the Palazzo Corsini alla Lungara. (For other copies see *Q.-L.*)

The published works of Nanini comprise a volume of 'Motetti, a 3-5 voci' (Venice, 1586); 'Madrigali,' lib. I. (1579); *idem*, lib. II. (1581, etc.); *id.* lib. III. (1586); 'Canzonetti, a 3 voci, per Alessandro Nanini raccolti' (1593)—all published at Venice, in 4to, by Gardano; some 'Salmi, a 8 voci,' printed in the well-known collection of Fabio Costantini (Naples, 1615); and a number of motets, madrigals and other isolated works included in Costantini's 'Motetti,' Waelrant's 'Symphonia angelica' and other collections published in Italy, and by P. Phalèse of Antwerp. Some very fine motets—including a masterly 'Hodie Christus natus est,' in which the characteristic Noë! Noë! is introduced with great effect—will be found in Proske's 'Musica divina.' Others are given in the collections of the Prince de la Moskowa, Rochlitz, etc. (See *Q.-L.*) A bibliography of his works is in the *Kirchen-musikalisches Jahrbuch* for 1891; see the same publication for 1898, p. 29. w. s. r.

(2) GIOVANNI BERNARDINO (*b.* Vallerano, c. 1560; *d.* Rome, 1623) studied counterpoint under his elder brother, Giovanni Maria. Removing at a later period to Rome, he held the appointment of maestro di cappella, first in 1599 at the church of S. Luigi de' Francesi, and afterwards at that of S. Lorenzo in Damaso. Beyond this little is known of his personal history; though it is certain that he took a prominent part in the management of his brother's music school.

As a composer G. B. Nanini takes rank among the best masters of his time; but his works are, for the most part, far less characteristic of the true polyphonic style than those of his brother. He was one of the first who ventured so far to depart from the traditions of the Roman school as to write church music with organ accompaniment. His published

works are: a volume of delightful madrigals entitled 'Madrigali, a 5 voci, lib. I.' (Venice, 1588, 1598); *idem*, lib. II. (Venice, 1599); *id.* lib. III. (Rome, 1612); 'Motecta, a i. ii. iii. iv. v. voc. una cum gravi voce ad organi sonitum accommodata, lib. I.' (Rome, 1610); *id.* lib. II. (Rome, 1611); *id.* lib. III. (Rome, 1612); *id.* lib. IV. (Rome, 1618); 'Salmi, a 4 voc. con l'organo' (Rome, 1620); and 'Venite, exultemus Domino, a 3 voc. coll'organo' (Assisi, 1620). In addition to these important works, many madrigals and other detached compositions will be found in the collections published by Phalèse and others at the beginning of the 17th century; and many more still remain in MS. (See *Q.-L.*) Of these last, the most important are some psalms and motets for eight voices and a Salve Regina for twelve, formerly in the collection of the Abbé Santini; and a treatise on counterpoint, written, in conjunction with G. Maria, perhaps for the use of the pupils in the music school. Proske has included four of his Psalms in the 'Musica divina.' w. s. r.

NANTIER-DIDIÉE, CONSTANCE BÉTSY ROSABELLA (*b.* St. Denis, Île de Bourbon, now Île de la Réunion, Nov. 16, 1831; *d.* Madrid, Dec. 4, 1867), mezzo-soprano singer, derived her second name from her marriage with a singer. She was at the Paris Conservatoire, under Duprez, from 1847-49, and obtained an *accessit* in the latter year in his class, and the first prize in the opera class. She made her début on the stage at the Carignan Theatre, Turin, in Mercadante's 'La Vestale.' She played in Paris at the Salle Ventadour in 1851, and afterwards joined an Italian company, of which Giuglini was one, playing at Lyons, Nîmes, Montpelier, etc.

Madame Nantier-Didiée made her first appearance in England at Covent Garden in 1853 as the Chevalier de Gondi in 'Maria di Rohan,' afterwards as Maddalena in 'Rigoletto' on its production here, and as Ascanio in 'Benvenuto Cellini'; and in all three parts was successful. From 1853-64 inclusive she sang here every year in Italian opera, at Covent Garden and the Lyceum, the usual mezzo-soprano or contralto parts, creating amongst others Nancy in 'Marta,' Rita on the revival of 'Zampa,' L'Amore in 'Orfeo,' Ulrica in Verdi's 'Ballo' and Siebel in 'Faust.' In this last opera Gounod wrote the popular air 'Quando a te lieta' expressly for her. During this time Madame Nantier-Didiée sang at court and public concerts, made an operatic provincial tour in 1855, later in that year and the early part of 1856 played in opera in America, and took part at the Bradford Festival of 1859. The rest of each year she was engaged at the Italian Opera of Paris, St. Petersburg, Moscow, Madrid, etc., or sang at concerts in the French provinces.

A. C.

NAPIER, WILLIAM (*b. circa 1740; d. London, 1812*), a Scottish musician and music-publisher.

For a number of years he played the violin in the private band belonging to George the Third, until gout in his hands prevented this. He was an energetic music-publisher, quick to see latent talent in new composers. His publications include a quantity of instrumental works, and he held the valuable copyright of such ballad operas as 'Rosina,' 'Maid of the Mill,' etc. He disposed of some of these copyrights to Dale for £549. His best-known publication is 'A Selection of Original Scots Songs,' 3 vols. folio, 1790-94, with Bartolozzi frontispieces. His earliest address (before 1773) was 474 Strand, London, at the corner of Lancaster Court. About 1788 he removed from here to 49 Great Queen Street, and finally, about 1800, to 8 Lisle Street. He died in his 72nd year in 1812, at Somers Town (see obituary notice in *The Scots Magazine* for Aug. 1812). F. K.

In 1792, when his business went through a critical period, Haydn, in order to assist him, arranged for him a book of Scottish songs with accompaniment for pianoforte, violin and violoncello. This proved so successful that Napier paid Haydn afterwards £50 and doubled that sum for a subsequent book. E. v. d. s.

NAPLES. The first school of music at Naples was founded towards the middle of the 15th century by John Tinctor. His school was short-lived, but it was immediately succeeded by the Neapolitan Conservatorios, which were both the first examples and models of all similar musical institutions, not only in Italy but in the other countries of Europe.

The Conservatorios of Naples, four in number—(1) Santa Maria di Loreto, (2) San Onofrio, (3) De' Poveri di Gesù Cristo, (4) Della Pietà de' Turchini—were originally founded by private benefactors for the purpose of affording shelter and instruction to the homeless orphans of Naples. The children were taken out of the streets and clad in a particular dress, each Conservatorio being distinguished from the others by its peculiar colour. Ecclesiastical music was at first the primary object of these institutions. They were governed after the pattern of a priests' seminary, and each had a church of which the pupils formed the choir. The funds of the institution were increased by the services of the pupils in other city churches and in the Royal Chapel, for which they received a monthly salary; also by other pious offices, such as prayers over the dead previous to burial. The elder pupils were called 'Paranze' (*i.e.* a small corps or company) and the younger ones 'Sopranelli' and 'Contraltini,' according to their voices. Besides these pious services, the pupils were engaged to sing in great musical processions or 'Flottole.' When dramatic music began to revive, they represented the mysteries in the monasteries and convents dur-

ing carnival, and later performed in the theatres. These efforts of the pupils brought in to each Conservatorio an average of 1000 ducats a year, but despite these and private benefactions the endowment of each institution was hardly sufficient to supply the bare necessities of life to the pupils. Yet from this humble origin sprang the great masters of music whose compositions are inseparably associated with Italy.

(1) SANTA MARIA DI LORETO. This originated in 1535 with a poor artisan of the name of Francesco, who received into his house on the Mercato orphans of both sexes, and caused them to be fed and clothed and instructed in music. The rich citizens of the Mercato assisted his pious design by every means in their power. The fame of the school reached the ears of Giovanni da Tappia, a Spanish priest domiciled in Naples, and he, having the progress of music at heart, volunteered to direct it and extend its powers of usefulness by a permanent endowment. This he obtained by begging alms through the Neapolitan Provinces. At the end of nine years he returned to Naples with a sufficient sum for the purpose. The original humble institution was transferred to a larger building close to the Church of Sta. Maria de Loreto. This building received the title of 'Conservatorio,' and was endowed, in 1566, with the 'Jus del forno' and 'della beccaria.' Thus established, rich citizens from time to time left their fortunes to this institution, which grew and flourished. The pupils of both sexes reached the number of 800. Among the illustrious musicians whose names are connected with Santa Maria di Loreto are Alessandro Scarlatti, Durante, Porpora, Tracitta, Sacchini, Perez, Guglielmi and many more.

In 1797 the two Conservatorios of San Onofrio and Santa Maria di Loreto were united, the former being absorbed in the latter. In 1806, by order of Joseph Buonaparte, the Conservatorio di Loreto was united to that of the 'Pietà de' Turchini,' and the building of Santa Maria di Loreto then became a hospital.

(2) SAN ONOFRIO A CAPUANA, so called because it was situated in the district of Naples known as Capuana. It was founded in 1576 by private benefactions under the name of the 'confraternity of the Bianchi.' It received 120 orphans, who were instructed in religion and music. The funds of this, as of the other similar institutions, were augmented by the exertions of the pupils as already described. In course of time it was taken out of the hands of the confraternity and established as a Conservatorio by royal warrant, with the title of San Onofrio. The dress of the pupils was black and white—hence the name 'de' Bianchi.' At a later date foreign pupils were admitted on terms of monthly payment, and on the understanding that they should continue to give their services for a few years after the end of their term of

instruction. In 1797 the building of San Onofrio was turned into barracks and the pupils were transferred to Santa Maria di Loreto. A. Scarlatti was a teacher in this Conservatorio also, likewise Durante, Leo, Feo, Cotumacci; amongst their pupils were Gizzi, Jommelli, Piccinni, Terradellas and Paisiello. Gizzi, by the advice of Scarlatti, opened in 1720 a school of singing in connexion with this Conservatorio; the famous singer Gioacchino Conti di Arpino was one of his pupils, and out of gratitude to his master took the name of GIZZIELLO (*q.v.*).

(3) *DE' POVERI DI GESÙ CRISTO*. This was established in 1589 by a Franciscan, Marcello Foscataro di Nicotera, for the foundlings of Naples. By means of alms collected from the Neapolitans, he obtained the necessary funds, and drew up the rules, which were ratified by Alfonso Gesualdo, the then Cardinal Archbishop of Naples. The pupils, 100 in number, varying in age from 7 to 11, and literally taken out of the streets, were clothed at first in the sober dress of the Franciscan order, afterwards in blue and red, fed and instructed in their own language and in music, and were governed by two canons of the cathedral of Naples.

This Conservatorio existed till 1744, when by order of Cardinal Spinelli it was converted into a Diocesan Seminary and the pupils were distributed among the three remaining Conservatorios—San Onofrio, Loreto and the Pietà de' Turchini.

This Conservatorio is by some considered as the oldest of all, and as the cradle of the great Neapolitan school of music. Feo, Greco, Durante, Vinci—all pupils of Scarlatti—Cotumacci, Porpora, Ignazio Gallo and Pergolesi were among the most famous composers which it produced.

(4) *DELLA PIETÀ DE' TURCHINI*. This originated with the confraternity of Sta. Maria della Incoronatella, who in the year 1583 made their house an asylum both for the homeless orphans of Naples and also for children whose parents were unable to support them. At first the children were only taught to read and write, and were clad in long blue garments ('color turchino'); hence the name of 'Pietà de' Turchini,' which was adopted by the institution instead of that of the 'Incoronatella.' It was not till a century later that musical instruction was given to the pupils. In 1600 it was placed under the protection of Philip III. of Spain, and in 1670 Francesco Provenzale and Gennaro Ursino were appointed to be its professors of music, Provenzale having preceded Scarlatti as maestro of the Palatine Chapel at Naples. It produced many famous composers, such as Fago, Carapella, Leo, Cafaro, Jommelli and Sala. In 1806, on the abolition of the Conservatorio of Sta. Maria di Loreto, the pupils were received into the Pietà

de' Turchini. In 1808 this, the last of the Conservatorios, was also suppressed.

Thus the 'REAL CONSERVATORIO DI MUSICA' came into existence, first with the title of San Sebastiano and afterwards with that of S. Pietro a Maiella, which it still retains.

Tritta, Paisiello and Fenaroli were the first directors and general administrators of the new Real Conservatorio. They were succeeded in 1813 by Zingarelli. In 1817 'external' preparatory schools of music were added; and the pupils who passed creditable examinations there were admitted into the Real Conservatorio. In the revolution of 1820 half the building of San Sebastiano was seized for the use of the Government, the other half was made over to the Jesuits, and the monastery of San Pietro a Maiella was assigned to the Conservatorio. In 1837 Zingarelli was followed by Donizetti, and he again in 1840 by Mercadante, who made great reforms in the discipline and efficiency of the college. In 1861, on account of his blindness, Carlo Conti was appointed his coadjutor. Conti died in 1868 and was succeeded by Paolo Serrao Mercadante, who retained his post as president till his death in 1870. Since that date the Conservatorio appears to have lost ground. In 1874 the scholarships were reduced from 100 to 50, and 25 of these were thrown open to women, with allowance for lodging; but in 1879 this allowance was abolished. The Conservatorio is now governed by a Board of professors and amateurs. Bellini, Luigi Ricci, Michael Costa, Martucci, Leoncavallo, Giordano and Cilla are the most distinguished names on the roll of the Real Conservatorio di Napoli. (See LIBRARIES.)

C. M. P.

SAN CARLO, the largest and most beautiful theatre of Naples, has almost the same proportions as La Scala of Milan, with which it contends for the theatrical primacy in Italy. It was built in 1737 by the architect Carasale, on plans by Medrano, a General of the R.E., and was completed in nine months. Some alterations and improvements were made in it by Fuga and Nicolini towards the end of the 18th century. It was completely burnt down in 1816, and rebuilt even more elegantly and quickly than before, in six months, by the said Antonio Nicolini. In 1844 the San Carlo underwent a thorough restoration and considerable improvement. The most notable operas performed for the first time at this theatre are: Rossini's 'Otello' (1816) and 'Mosé' (1818); Donizetti's 'Lucia' (1835); Verdi's 'Alzira' (1845) and 'Luisa Miller' (1849).

F. B.

NAPRAVNIK, EDWARD (*b.* Bešt, near Hradeckrálove, Bohemia, Aug. 12/24, 1839; *d.* Nov. 10, 1915), was the son of a teacher. He learnt the rudiments of music from a colleague of his father named Pugonny, and at 13

was able to play for the service in the village church. In 1854 he was left an orphan in very poor circumstances. He determined to become a musician, and succeeded in entering the School of Organists in Prague. He studied instrumentation with Kittel, and also at the piano-forte school established by Maidel, where he soon became an assistant teacher. Several essays in composition, comprising masses, symphonies, overtures on Czech themes, songs, etc., date from this early period. In 1861 Napravnik was called to St. Petersburg to be director of Prince Youssipov's private orchestra. Two years later he was appointed, at Liadov's suggestion, to be his assistant, and the organist of the Imperial Theatres. He rose to be second conductor in 1867, and succeeded Liadov as chief Kapellmeister in 1869; a position which he occupied until his death.

At the time of his appointment Russian opera was in a neglected and languishing condition, and Napravnik carried on the work of restitution begun by his predecessor Liadov with tact and zeal. The existing repertory of the Maryinsky Theatre—where Russian opera was usually performed in St. Petersburg—was largely built up on his recommendation. Mention must be made of the admirable performances of Glinka's 'A Life for the Tsar,' Tchaikovsky's 'Eugene Onegin,' 'The Oprichnik' and 'Dame de Pique,' and of Rimsky-Korsakov's 'Snow Maiden' and 'Sadko,' which were distinguishing features of Napravnik's directorship. To his remarkable talent as a conductor Napravnik joined uncommon powers of organisation. Although a strict disciplinarian, he showed great diplomacy in the management of his affairs. Not only did he so greatly improve the orchestra of the Imperial Opera—both as regards numbers and quality—that it came to be regarded as one of the finest in the world, but he did much to raise the social and material position of the players. He was universally respected, and his opinion carried weight in all strata of the musical world of Russia.

At the close of thirty-five years' service, in 1898, Napravnik had conducted over 3000 operas, including sixty-two first productions, of which thirty-six were Russian, and thirty revivals, fifteen of these being by native composers. Besides his onerous work at the Opera, Napravnik distinguished himself as a concert conductor. From 1869-81 he conducted the concerts of the Russian Musical Society, and occasionally those of the Philharmonic Society.

In his compositions Napravnik shows the qualities and defects frequently characteristic of the conductor-composer; a consummate command of technical means and the eclecticism and good taste born of vast experience; but also a certain loss of individuality and distinction, which seems the unavoidable result of perpetually assimilating other men's creations. His

operas have met with marked success, and are certainly not devoid of charm, although the nature of the music is often reminiscent.

Nappravnik's early opus numbers, up to thirteen, represent his youthful works composed before leaving Bohemia. The following is a list of his known compositions:

OPERATIC

'The Nije-Novgorodians,' opera in 4 acts, op. 15, first performance St. Petersburg, 1868 (revived in 1888); 'Harm,' opera in 5 acts, op. 46, St. Petersburg, 1886; 'Doubrovsky,' opera in 4 acts, op. 58, St. Petersburg, 1895; 'Francesca da Rimini' (libretto from Stephen Phillips's play), op. 71, St. Petersburg, 1903.

ORCHESTRAL

Four Symphonies, op. 17; 'The Demon,' op. 18, 1879; National Dances, op. 20 and 23; Symphonic poem, 'The East,' op. 40; Suite, op. 49; Solemn Overture, op. 14; Marches, opp. 33 and 38.

CHAMBER MUSIC

Three String Quartets, opp. 16, 28, 65; two Pianoforte Trios, opp. 24 and 62; Pianoforte Quartet, op. 42; String Quintet (two violoncellos), op. 19; Violin and Pianoforte Sonata, op. 52; two Suites for violoncello and pianoforte, opp. 29 and 36.

INSTRUMENTAL AND ORCHESTRAL

Pianoforte Concerto, op. 27; Fantasia on Russian themes for pianoforte and orchestra, op. 39; Fantasia for violin and orchestra, op. 30; Suite for violin and orchestra, op. 60.

VOCAL

Music to A. Tolstol's 'Don Juan,' for soli, chorus, orchestra and declamation; ballads, with orchestral accompaniment, 'The Voyevode,' op. 22 (baritone), 'The Cossack' and 'Tamara,' op. 26. For chorus—Thirteen male-voice choruses, op. 41; five choruses a cappella, op. 50; four ditto, op. 55; four ditto, op. 68. Songs, op. 21 (4), op. 25 (4), op. 31 (4), op. 36 (4), op. 44 (4), op. 56 (4), op. 59 (6), op. 68 (4), op. 70 (4 duets).

PIANOFORTE

Musical Pictures (5), op. 43; Bagatelles (4), op. 46; two Valsees, op. 48; Dance Suite, op. 67; six pieces, op. 61; three pieces for violin and piano, op. 64; three pieces for violoncello and piano, op. 37; four ditto op. 67.

R. N.

NARDINI, PIETRO (b. Fibiana, Tuscany, 1722; d. Florence, May 7, 1793), an eminent violinist and composer, received his first musical instruction at Leghorn, and afterwards studied for several years under Tartini at Padua. About the year 1753 he was appointed solo-violinist at the ducal court at Stuttgart, where he remained for fifteen years. In 1767 he returned to Italy, settled at Leghorn, and stayed with his old master Tartini during his last illness. In 1770 he accepted an appointment as director of the music at the court of the Duke of Tuscany.

Nardini was the most eminent of Tartini's disciples. Leopold Mozart, the best possible judge in matters of violin-playing, writes of him:

'The beauty, purity and equality of his tone, and the tastefulness of his cantabile-playing, cannot be surpassed; but he does not execute great difficulties.'

The well-known poet-musician Schubart relates in his flowery style:

'His playing brings tears into the eyes of stony-hearted courtiers—nay, his own tears run down on his violin!'

That Nardini was not a mere executant, but a thorough musician, is evident from the character of his compositions for the violin. Vivacity, grace, a sweet sentimentality, are the main characteristics of his style, which is altogether more modern in form and feeling than Tartini's. His allegros are often largely developed, and already display the full sonata form, while his slow movements are not unlike Viotti's. If nevertheless the greater part of his works appear to us old-fashioned and antiquated compared with those of Tartini, the reason is that he has

neither the depth of feeling, the grand pathos nor the concentrated energy of his great master. His published compositions are :

Six Concertos, op. 1 (Amsterdam); six Sonatas for violin and bass, op. 2 (Berlin, 1765; a new edition published by Cartier, Paris); six Sonatas for two violins (also numbered op. 2), London, Walsh; six Trios for flute (London); six Solos for violin, op. 6 (London, 1770); a Solo for violin with thorough-bass (London, 1780); six Quartets (Florence, 1782); six 'Duo pour deux violons' (Paris).

Some of his sonatas have latterly been re-edited by Alard in his 'Maitres classiques,' by F. David in the 'Hohe Schule des Violinspiels,' and by G. Jensen in 'Classische Violinmusik.' Leoni di Pienza published an *Elogio di Pietro Nardini* in Florence, 1793; see also J. B. de Rangoni's *Essai sur le goût de musique*, 1790.

P. D.; addns. E. H.-A.

NARDÒ, FRA BENEDETTO SERAFICO DI, of the order of the predicatori, was at Naples in 1575, at Lecce in 1581. He composed 3 books of madrigals. (See Q.-L.)

NARES, JAMES, Mus.D. (b. Stanwell, Middlesex, 1715¹; d. Feb. 10, 1783), was a chorister in the Chapel Royal under Bernard Gates and Dr. Croft, and afterwards with Dr. Pepusch. He acted for some time as deputy for Pigott, organist of St. George's Chapel, Windsor, and in 1734 was appointed, on the resignation of Salisbury, organist of York Minster. On Jan. 13, 1756, he was appointed to succeed Dr. Greene as organist and composer to the Chapel Royal, and in the same year graduated as Mus.D. at Cambridge. In Oct. 1757 he was appointed master of the children of the Chapel Royal, vice Gates, his old master. In 1770 he gained a prize from the Catch Club for his glee, 'To all Lovers of Harmony.' He resigned the mastership of the Chapel boys July 1, 1780, died in 1783, and was buried in St. Margaret's Westminster.

Nares published 'Eight Sets of Harpsichord Lessons,' 1748; 'Five Harpsichord Lessons,' op. 2, 1758; 'Three Easy Harpsichord Lessons'; 'A Treatise on Singing'; 'Il Principio, or, A regular Introduction to playing on the Harpsichord or Organ' (1759, the first set of progressive lessons published on a systematic plan); 'The Royal Pastoral,' a dramatic ode, 1767; 'Collection of Catches, Canons and Glee,' c. 1780; 'Six Organ Fugues'; 'Second Treatise on Singing, with a Set of English Ducts'; and 'Twenty Anthems,' 1778. 'A Morning and Evening Service and Six Anthems' were published in 1788, with a portrait of him, *ætat.* 65, engraved by Ward after Engleheart, prefixed. A sketch of his life is also contained in the volume by his son Robert. His Service in F and three anthems are included in Arnold's 'Cathedral Music,' an anthem in Page's 'Harmonia sacra,' and two anthems in Stevens's 'Sacred Music.' Two canons, two glees, two rounds, and a catch by him (the famous 'Wilt thou lend me thy mare?') are contained in

Warren's collections, and one of his lessons, in three movements, from the set of 1758, was reprinted in the *Oxf. Hist. Mus.* vol. iv., *The Age of Bach and Handel*.

W. H. H.

NARVAEZ (NARBAIS), LUYA DE (16th cent.), Spanish lutenist (*vihuelista*), said to have been a native of Granada, and of such extraordinary skill that he could give the illusion of playing all the parts in a work for four voices. He published a book of tablature entitled :

Los seys libros del Delphin de musica en cifras para vihuela . . . Valladolid, 1538. (B.M.; Bibl. Nac., Madrid; Bibl. Provincial, Toledo.)

Narvaez (like Luis Milan) has a definitely instrumental style, well shown in his brilliant setting of the ballad 'Ya se asienta el rey Ramiro,' printed by MORPHY (*q.v.*). He introduced into Spanish music the principle of variation, or *diferencias*, usually ascribed to DIEGO ORTIZ. In Spain the variation-form seems to have arisen through the necessity of varying the accompaniment during the singing of a long ballad. Narvaez, however, has another manner of treating *diferencias*, which arose from the first: that is, to treat them as purely instrumental variations. His works for vihuela are in course of publication by E. M. Torner (Madrid: Junta Para Ampliación de Estudios). Two motets were printed between 1539 and 1542.

J. B. T.

NASARRE, FR. PABLO (b. 1664; d. 1724), a blind organist of Saragossa, author of two theoretical works :

Fragmentos musicales . . . canto llano, canto de organo, contrapunto y composición. Saragossa, 1683 (B.M.; Madrid, 1700 (Bibl. Nac., Madrid). Escuela musica segun la practica moderna. Saragossa, Pt. I., 1724; Pt. II., 1723. (Paris, Conservatoire; Madrid, Bibl. Nac.; Barcelona, Orfeo Català.)

Though praised by Fétis, in Spain he has always been considered a pedant. He was described by Eximeno as being 'an organist by birth, and blind by profession.'

J. B. T.

NASCIMBENI, (1) MARIA FRANCESCA (late 17th cent.) of Ancona, pupil of Scipione Lazarini. She composed canzon and madrigals (1674), also 2 motets in Lazarini's *Motets* op. 2 (1674).

(2) STEFANO (NASIM-BENI) (b. Mantua, early 17th cent.), composed 8-part masses (1612); vesper-psalms and 8-part psalms (1616); concerti ecclesiastici, 12 v. for 3 choirs (1610); several songs in collective volumes (1588, 1596) (Q.-L.).

NASCO, GIOVANNI (d. before 1560), maestro of a musical academy at Verona, 1548; in 1554 and 1557 maestro di cappella at Treviso Cathedral. He composed 3 books of Lamentations (1561, 1564, 1574), and several books of madrigals and canons, some in several editions (1548-65). (List in Q.-L.)

NASOLINI, SEBASTIANO (b. Piacenza, c. 1768; d. Naples, c. 1816?), at first a pianist, devoted himself afterwards entirely to composition of operas which met with great success all over Europe. He spent some time also in

¹ Baptized Apr. 19.

London: For list of his 38 operas, arias, scenas, etc., see Sonneck's *Catalogue of Opera Librettos*.

NATALI (NATALE), PATER POMPEO, in 1674 described as 'dalla Ripa Transona' (Provincia della Marca), was a singer at S. Maria Maggiore, Rome. He composed between 1656-81, 2 books of madrigals and canzonas of 2-3 equal voices, and two books of Solfeggi, 2-3 v. (*Q.-L.; Riemann*).

NATHAN, ISAAC (b. Canterbury, 1791; d. Australia, Jan. 15, 1864), of Hebrew parentage, was intended for the priesthood, and was in 1805 sent to Cambridge to study Hebrew, but his natural bent being for music he was articulated to Domenico Corri, and devoted his attention principally to singing and composition. He appeared at Covent Garden as Henry Bertram, in 'Guy Mannering.' After composing several songs, he produced in 1815-22 'Hebrew Melodies,' to Lord Byron's poetry, with much success. Byron became very intimate with Nathan, who set many of his poems to music. (See *D.N.B.*) In 1823 he supplied part of the music for the comedy 'Sweethearts and Wives'—one song in which, 'Why are you wandering here, I pray?' became very popular—and published *Musurgia Vocalis, An Essay on the History and Theory of Music and on the qualities, capabilities, and management of the Human Voice*. In 1824 he brought out 'The Alcaid,' comic opera, and in 1827 'The Illustrious Stranger,' operatic farce. In 1836 he published *The Life of Madame Malibran de Bériot*. In 1841 he emigrated to Sydney, where he produced 'Merry Freaks in Troublous Time,' 1851, and ran a periodical, *The Southern Euphrosyne and Australian Miscellany*, from 1846. He was accidentally killed by being run over by a tramway car. He was much esteemed as a singing-master.

NATIONAL ANTHEM, see GOD SAVE THE KING.

NATIONAL CONCERTS, a series of concerts given in Her Majesty's Theatre, in Oct., Nov. and Dec. 1850, with Balfe and Charles d'Albert as conductors. The prospectuses promised many new works, most of them by English composers (probably the only origin of the name of the concerts), none of which, however, saw the light. During the season the following works came to a hearing: Spohr's symphony, 'The Seasons'; Mendelssohn's 'Fingal's Cave' and 'Melusina' overtures, one or two symphonies, and a movement or two from a concerto by Beethoven. The following artists appeared: Hallé, Molière, Sainton, Piatti, Arabella Goddard (her first appearance), Stockhausen and Sims Reeves. The concerts were an unequivocal failure, chiefly because of the enormous expectations that were excited but not fulfilled. An attempt was made in Mar.

1852 to start another series with the same title, in Exeter Hall, but the scheme fell to the ground after a few concerts.

NATIONAL TRAINING SCHOOL FOR MUSIC, THE. This institution, which had been projected and discussed since 1854, and the idea of which had emanated from the Prince Consort, was not founded until 1873, when a meeting was held at Clarence House, the Duke of Edinburgh in the chair, at which it was resolved that 'it is desirable to erect a building at a cost not exceeding £20,000 for the purposes of a Training School for Music at Kensington, in connexion with the Society of Arts.' A site on the immediate west side of the Albert Hall was granted by the Commissioners of 1851; the construction of the building,¹ on the design of Captain F. Cole, R.E., was undertaken by Charles J. Freaque (afterwards Sir Charles) at his own cost; the first stone was laid on Dec. 18, 1873, and the School was opened at Easter 1876 with 82 free scholarships, of which 4 were founded by the Society of Arts, 2 by members of the Society, 5 by Freaque, 10 by the Corporation of London, 14 by City Guilds, 33 by provincial towns, and the remainder by private donors. The scholarships were of the value of £40 a year each, and were founded for five years, by subscription renewable at the end of that term; they carried free instruction for the same period, and were obtainable 'by competitive examination alone.' The Duke of Edinburgh was chairman of the Council, Sullivan was appointed principal, with a staff of teachers; in 1881 he was succeeded by Stainer as principal, and the School continued to flourish till Easter 1882, when it came to an end owing to the determination arrived at to establish the R.C.M. on a wider and more permanent basis. The College, on its formation, took over the building, furniture and fittings, organ and music, and a balance at the banker's of £1100. (See ROYAL COLLEGE OF MUSIC.) M.

NATURAL, a word formerly applied to the scale of C major, which was called 'the natural scale' because it has no accidentals. It thus became used for the sign (♮) (Fr. *bécarre*, Ger. *Quadrat*, Ital. *quadro*), which cancels a preceding sharp or flat, whether used as a chromatic accidental or occurring in the signature. In other words, when the use of a sharp or flat has indicated that the note a semitone above or below that in the diatonic series of C major is to be taken, the introduction of a natural indicates that the unaltered note is to be resumed; and hence a naturalised note is always a white key on the pianoforte or organ, unless it be combined with a sharp or flat, as ♯♮ or ♭♮, to cancel a chromatic double-sharp or double-flat, and indicate the corresponding note of the diatonic series as shown by the existing signature.

Naturals do not occur in the signatures of

¹ Now the Royal College of Organists.

keys, except when it is necessary to cancel all or part of a previous signature, at a change of key in the course of a piece of music; as at the change from C minor to C major in the *Marcia Funebre* of the *Eroica* Symphony, or the change from E \flat to G minor in Chopin's nocturne, op. 37, No. 1. Where a complete change is made from a sharp key to a flat key, or *vice versa*, the naturals are often indicated, but with very little reason, as the mere statement of the new signature must cancel the former one.

C. H. H. F.; rev. S. T. W.

NAU, MARIA DOLORES BENEDICTA JOSEFINA (*b.* New York, Mar. 18, 1818; *d.* Levallois, near Paris, Jan. 1891), singer, of Spanish parentage, entered the Conservatoire at Paris, July 23, 1832, and became a pupil of Mme. Cinti-Damoreau, soon developing a clear and flexible voice. This, with a large share of intelligence, musical feeling and application, enabled her to take the first prize at the *concours* of 1834.

On Mar. 1, 1836, at the age of 18, Mlle. Nau made her first appearance at the Opéra, as the Page in the 'Huguenots,' and achieved a success, in spite of her inexperience. She remained six years at that establishment, but playing only secondary parts, which did not allow her real worth to appear; and at the end of that time her engagement was not renewed. Mlle. Nau determined, therefore, to travel in the provinces and abroad, where she soon was appreciated much more highly; in Brussels, particularly, her excellent vocalisation and phrasing produced a marked impression. In Oct. and Nov. 1844, she sang in London. Her foreign successes opened the eyes of the Opéra managers at Paris, where she was re-engaged at thrice her former salary. She reappeared there in December, receiving a warm welcome; and continued to sing on that stage till the end of 1848, with unabated éclat. Her farewell was on Oct. 11 of that year, in 'Lucia'; after which she went to London, and thence to the United States, where she had a triumphal progress. Returning to London, she sang at the Princess's Theatre for nearly eighteen months, with great success; and thence betook herself once more to the Opéra at Paris, where she remained during 1851, 1852 and 1853. Mlle. Nau revisited her native country in 1854, and received extravagant adoration. She returned to Paris again in 1856, when she finally quitted the stage.

J. M.

NAUDIN, EMILIO (*b.* Parma, Oct. 23, 1823; *d.* Boulogne, May, 1890), was taught singing by Giacomo Panizza of Milan, made his début at Cremona about 1845 in Pacini's 'Saffo,' and afterwards sang at the principal theatres of Italy, at Vienna and St. Petersburg. He made his first appearance in England, June 2, 1858, at Drury Lane, as the Duke in 'Rigoletto,' and remained for the season, playing Edgardo, Ernesto and Arturo, and singing in concerts.

After singing at Madrid and Turin, he reappeared in England on May 30, 1862, at Mrs. Anderson's farewell concert at Her Majesty's, and on the 31st acted Manrico at the same theatre. In November of that year he appeared as Ferrando at the Parisian revival of 'Cosi fan tutte,' and in Flotow's 'Stradella.' On Apr. 7, 1863, he appeared at Covent Garden as Massaniello, and remained there every season up to 1872 inclusive, except 1865, when he was engaged to create Vasco di Gama, on the production of 'L'Africaine,' Apr. 28; he had been mentioned in Meyerbeer's will as the most suitable singer for the part. During all these seasons he undertook several characters in addition to the above, viz. Don Ottavio, Raoul. Vasco, Danilowitz, Fra Diavolo, Carlo, etc., as well as Don Carlos, on the production of Verdi's opera of that name in England, June 4, 1867; and was always acceptable on account of his careful singing and acting. In 1873 he sang in concerts only. In 1874 he sang at Drury Lane for the season, adding Henrique ('Diamant de la couronne') to his already extensive list, and in 1875 returned to Covent Garden. In the autumn of that year he played Lohengrin for the first time in the English provinces. In Moscow he played Tannhäuser in 1877. In 1879 he sang in Spain and Italy, and added the part of Eleazar (in 'La Juive') to his repertory. He became paralysed and died at Boulogne.

A. G.

NAUDOT, JEAN-JACQUES (Paris, early 18th cent.), was one of the first of those who distinguished themselves on the traverse flute in France, and according to Laurent Grillet, one of the greatest French viellists (hrldygurdy players). He composed between 1726-1740 trios, duos and sonatas for flutes and bass, sonatas for vielle and bass, and 'Babioles' for 2 vielles or musettes (*Q.-L.*).

E. v. d. s.

NAUMANN, (1) JOHANN GOTTLIEB (GIOVANNI AMADEO) (*b.* Blasewitz, near Dresden, Apr. 17, 1741; *d.* Dresden, Oct. 23, 1801), a well-known composer in his day. Though the child of a peasant he was educated at the Kreuzschule in Dresden, and intended for a schoolmaster. He studied music by himself, until a Swedish musician resident in Dresden named Weestroem, happening to visit his home, was struck by seeing Bach's (probably Emanuel's) sonatas on the harpsichord, and determined to take Naumann on a professional tour. Starting in May 1757, they first went to Hamburg, where they were detained ten months by Weestroem's ill-health, and then to Padua, where Weestroem took lessons from Tartini, in which he did not allow Naumann to share. His treatment was altogether so bad that the young man left him, but was able to proceed with his training, as Tartini taught him for nothing, and an English musician named Hunt gave him pecuniary assistance. During his stay of three

years in Padua he made the acquaintance of Hasso. He next went to Naples in 1761 with a pupil named Pitscher, to study dramatic music for six months; and then, armed with a recommendation from Tartini, visited Padre Martini at Bologna, and received from him some instruction in counterpoint. During a lengthened stay at Venice he produced his first opera at San Samuele. In 1763 he returned home, and through the influence of the Electress was appointed court composer of sacred music. In 1765-68 he was again in Italy, composing 'Achille in Sciro' (1767) for Palermo, and 'Alessandro nelle Indie' for Venice. In 1769 he produced 'La clemenza di Tito' (Metastasio's text) in Dresden, and in 1772 'Solimanno' and 'Nozze disturbate' in Venice, 'Armida' in Padua (1773), and 'Ipermestra' in Venice (1774). On his return to Dresden in 1774 he declined a flattering invitation from Frederick the Great to Berlin, and in 1776 was rewarded by the Elector with the title of Kapellmeister, and a salary of 1200 thalers. During a temporary residence in Stockholm (1776-78) he produced in Swedish 'Amphion' (1776) and 'Cora,' his best and most popular work, published for P.F. in 1780. He was again in Sweden in 1782-84, producing 'Gustav Vasa' in 1783. In 1786 he was raised to the dignity of Oberkapellmeister, with a salary of 2000 thalers, for his refusal of a brilliant position at Copenhagen. In 1793 he produced 'Protesilao,' an opera, at Berlin, and an oratorio, 'Davidde in Terebinto,' at Potsdam, for which he received a gold snuff-box with 400 Friedrichs d'or from the King Frederick William II., who also induced Hummel to take lessons from him. His last opera, 'Aci e Galaten,' was produced, Apr. 25, 1801, at Dresden, where he died of apoplexy. For further particulars see Meissner's *Bruchstücke zur Biographie Naumanns* (Prague, 1803-04).

Naumann was also a prolific composer of church music; 13 oratorios, and 21 masses with Te Deums, and smaller church pieces, being preserved in Dresden.¹ (See Q.-L. for list.)

The R.C.M. contains a Mass of his (in G) published in London, with an accompaniment arranged by Edmund Harris; and 'The Pilgrims at the Holy Sepulchre,' an oratorio, edited with a biography by Mainzer. By his marriage with the daughter of Admiral Grottschilling he left three sons, the eldest of whom, Karl Friederich, became a well-known mineralogist, whose son (2) ERNST (b. Aug. 15, 1832) studied the organ with Johann Schneider, and composition with Hauptmann, and was from 1860 organist and musikdirector at Jena, and from 1877 professor. He published an excellent treatise, *Über die verschiedenen Bestim-*

mungen der Tonverhältnisse (Leipzig, 1858), as well as some music, among which may be named two string quintets, and a serenade for strings and wind.

The elder Naumann's second son, Moritz Ernst Adolf, a well-known physician and professor in Bonn, was father of (3) Dr. EMIL NAUMANN (b. Berlin, Sept. 8, 1827; d. Dresden, June 23, 1888), pupil of Mendelssohn and Hauptmann, and a composer of merit. An oratorio, 'Christus der Friedensbote,' was given in Dresden in 1848, and an opera, 'Judith,' was given in the same place in 1858. In 1856 his first effort in musical literature, *Die Einführung des Psalmengesangs in die Kirche*, procured him the post of court director of sacred music. Another opera, 'Loreley,' was performed after his death, in 1889. He lived chiefly in Dresden, and published many books, the most notable being *Die moderne musikalische Zopf* (1890), a pamphlet of conservative tendency, and an exhaustive *History of Music* (1880-85), translated into English by F. Praeger, and furnished with very necessary additional chapters on English music by Sir F. A. Gore Ouseley. This appeared in 1886. He succeeded W. Rust as organist of St. Thomas's, Leipzig (Mar. 1880), on the promotion of the latter to be cantor.

NAUWACH (NAUWACHEN), JOHANN, in 1627 chamber musician of the Elector of Saxony at Torgau, composed 1 book of German villanelles, 1, 2, and 3 v., for theorbo, lute, harpsichord and other instruments; also 'libro primo di arie' (1623) (*Riemann*).

NAVA, GAETANO (b. Milan, May 16, 1802; d. Mar. 31, 1875), a distinguished Italian teacher of singing, and writer of vocal exercises. His father, Antonio, taught and composed for the French guitar, then a favourite instrument, but the son received a college education previous to entering the Milan Conservatoire under Federici. Here in 1837 Nava was appointed professor, retaining his connexion with the institution—where he gave instruction both in harmony and in singing—for thirty-eight years, that is, up to the time of his death. His skill as a vocal teacher, enhanced by his cultivated intelligence and uncommon earnestness and honesty of purpose, brought him a large clientele of private pupils. Distinguished among these was Charles SANTLEY (*q.v.*). Nava's works, published at Milan, by the firms Ricordi, Lucca and Conti, comprise numerous books of *solfeggi* and *vocalizzi*, several masses and separate pieces of vocal church music, and a Method of Singing that has appeared also in London and at Leipzig. (See SOLFEGGIO.) B. T.

¹ He is reported to have composed the beautiful 'Dresden Amen,' immortalised in Wagner's 'Parsifal.'

NAVARRAISE, LA, 'Lyric Episode' in 2 acts; text by J. Claretie and H. Cain, music by Jules Massenet. Produced Covent Garden Theatre, June 20, 1894; Brussels the same year; Opéra-Comique, Paris, 1895.

NAVARRO, JUAN (b. Seville, c. 1530; d. Mexico, after 1604), Spanish church composer and madrigalist. Like Morales, he was described as *Hispalensis*, a native of Seville; and it has been conjectured that, from his style, he was a pupil of Fernandez de Castilleja, the master of both Morales and Guerrero. Since he was among the unsuccessful candidates for the post of maestro de capilla at Malaga, left vacant through the death of Morales in 1553, he cannot have been born much later than 1530. Espinel, the Spanish novelist, states that Navarro was maestro at Salamanca in the time of SALINAS, professor of music, 1567-87. He may have been in Rome in 1590; at any rate a nephew of his, Fernando Navarro Salazar, who was a jurist at the Papal court, arranged with SOTO DE LANGA for the publication of his uncle's psalms, hymns and Magnificats. The costs of printing were borne by a certain Francisco Reinoso, 'Abbatì Fusillensi,' to whom the work was dedicated. Navarro afterwards emigrated to Mexico, where, in 1604, he published a book of Passions and Lamentations (plain-song, not polyphony). His madrigals (Bibl. Medinaceli, Madrid) are good; and if the comic 'Ay Jesus, que mal fraile!' be by him, he had sense of humour not unlike that of Orazio Vecchi.

Navarro's work was approvingly quoted by Padre Martini (*Esemplare*, i. 149, 204); Eslava printed 3 Magnificats and 2 psalms.

PRINTED WORKS

Psalmi, Hymni ac Magnificat totius anni . . . 4, 5 ac 6 v. Rome, 1590. (Rome: St. Cecilia; Bologna: Toleto; Montserrat.) Liber in quo 4 Psalmodie Christi Domini continentur. 8 Lamentationes, oratioque Hieremie Prophete. Mexico, 1604 (B.M.), and elsewhere.

MSB.

Malaga: Antifona a San Sebastian. Seville: Part of Magnificat, 5 tone.

Toledo: 8 pieces.

Valencia, Col. del Patriarca, MS. G. Partbooks: Madrigal, 5 v., Recuerde el alma dormida (coplas de Jorge Manrique).

Madrid, Bibl. Medinaceli. Madrigals, 7 for 4 v., and 1 for 5 v. Also Bibl. nac. M. 1202. 'Ay de mí, sin ventura' has been printed by Pedrell (*Canc. Mus. Popular*, iii.).

J. B. T.

NAVOIGILLE (real name GUILLAUME JULIEN) (b. Givet, c. 1745; d. Paris, Nov. 1811) came to Paris, was adopted by an Italian, and patronised by Monsigny. He entered the band of the Duke of Orleans, and opened a free violin school, in which Boucher, the well-known virtuoso, was educated. He composed duets and trios for strings, and two theatrical pieces, the music of which largely consisted of well-known airs. He was a good leader, but his name would have been forgotten but for the mistake of Fétis in attributing to him the authorship of the 'Marseillaise.' G. C.

NAVRÁTIL, CARL (b. Prague, Apr. 24, 1867), was taught theory by Guido Adler and the violin by Ondříček, and is the composer of many ambitious works of considerable in-

terest and value. The operas 'Hermann' and 'Salammbô' represent his work for the stage; besides a symphony in G minor, five symphonic poems deal respectively with 'John Hus,' 'Ziska,' 'Zalov,' 'Neklan' and 'Der weisse Berg.' Concertos for violin and pianoforte with orchestra, two trios for piano and strings, two quintets for piano and strings, a sonata for violin and piano, one for viola and piano, a string quartet in D minor, two psalms for eight-part chorus, a Mass in D, much pianoforte music and many songs, show great industry, and some of the music is strongly original. Navrátil has written a life of Smetana, and is an honorary member of the Dutch Maatschappij tot Bevordering van Toonkunst. M.

NAY (NEI), an Egyptian flute consisting of a hollow reed blown across the upper end, and pierced with from 5 to 7 holes for the fingers (*PLATE XXV*, No. 1; see *FLUTE*). F. W. G.

NAYLOR, (1) JOHN (b. Stanningley, near Leeds, June 8, 1838; d. at sea, May 15, 1897), was organist in succession of St. Mary's and All Saints' Churches, Scarborough, and of York Minster. He composed church music and several cantatas, and died during a voyage to Australia. His son, (2) EDWARD WOODALL (b. Scarborough, Feb. 9, 1867), was musically educated by his father, and gained a choral scholarship at Emmanuel College, Cambridge, in 1884. He took his B.A. degree in 1887, and in 1888 entered the R.C.M., where on July 11, 1892, his scena 'Merlin and the Glean' was performed. In 1889 he was appointed organist of St. Michael's, Chester Square, and in 1896-97 was organist at St. Mary's, Kilburn. He then returned to Cambridge, as assistant master at the Leys School, and organist of his old college, Emmanuel. He had taken the degrees of Mus.B. and M.A. in 1891, and that of Mus.D. in 1897. He made considerable alterations in the character and quality of the chapel services, and wrote a large number of services and anthems for choirs of tenors and basses. A trio for piano and strings in D is in MS., but many of his church compositions have been published, as well as partsongs, 'The Merry Bells of Yule' (with some nine-part writing at the close) and 'The Charge of the Light Brigade.' A cantata, 'Arthur the King,' was produced at Harrogate, Dec. 24, 1902, in which year he was appointed lecturer on music at Emmanuel College. His lectures are singularly free from 'academicism,' and often present history, etc., in new points of view. Papers were read by him on 'Heinrich Schütz (1905) and 'Jacob Händl (Gallus)' (1908), before the Musical Association (see the *Proceedings* for those years). A book entitled *Shakespeare and Music* came out in 1896, and an analysis of the 'Fitzwilliam Virginal Book' in 1905. Dr. Naylor's name came before the general musical public most prominently in connexion with his

opera 'The Angelus,' which gained the prize offered by Ricordi for an English work. It was performed at Covent Garden, Jan. 27, 1909. It was revived there by the Carl Rosa Company in 1921. For list of compositions see *B.M.S. Ann.*, 1920. M., with addns.

NEALE, JOHN (d. before 1738) and WILLIAM (d. circa 1769) (father and son), a firm of Dublin music-sellers and publishers established before the middle of the 18th century in Christ Church Yard. It is very difficult to trace their history, though they played an important part in matters musical in the Dublin of their day, while few of their publications are left to afford clues. The elder, John Neale or 'O'Neil,' was in 1723 connected with a musical club held at a tavern in Christ Church Yard, which club afterwards developed into a very important musical association. He and his son were managers of most of the entertainments in Dublin, and built 'The Musick Hall' in Fishamble Street, opened in Oct. 1741, and wherein Handel in December of the same year conducted the first public performance of 'Messiah.'

William Neale died at an advanced age, his son John, who was a surgeon, becoming the best amateur violinist in Dublin. The above particulars are mainly gathered from Gilbert's *History of Dublin*, 1854. In turning to other references, in Bunting, 1840, p. 4, and in Petrie, 1855, pp. 39, 150-57, some confusion is apparent. They speak of certain publications issued about 1720, and it is difficult to identify these satisfactorily.

John and William Neale published a couple of thin folio works, being the songs and airs in 'The Beggar's Opera,' and in its second part. On these are advertised other of their publications, including three books of 'English Airs'; one each of 'Scotch Tunes,' 'Irish Tunes' and 'Country Dances'; while 'The Songs and Airs in *Merlin*' fixes the date of issue as after 1734 or 1736. The Neales were probably the first Irish music-publishers of any note, though perhaps exception might be made for Robert Thornton, who engraved music in Dublin at the end of the 17th century, and for Samuel Powell, a printer and bookseller, who issued psalmodes and similar works having musical notes, in the early years of the 18th century. F. K.

NEANDER, ALEXIS, of Kolberg, matriculated, 1580, at Frankfort-on-the-Oder, was music director at the College of St. Kilian, Würzburg, in 1605. He composed 4 books of motets, 4-24 v. (published Frankfort, 1605-06); also motets in various MS. collective volumes and 260 hymns and motets in organ tablature (MS. in Munich Library) (*Q.-L.*; *Fétis*).

NEATE, CHARLES (b. London, Mar. 28, 1784; d. Brighton, Mar. 30, 1877), received his early musical education from William Sharpe, and

afterwards from John Field, with whom he had formed a close intimacy. Besides the pianoforte he performed on the violoncello, he and Field both being instructed on that instrument by Sharp. He first appeared in public as a pianist at Covent Garden at the Lent 'oratorios,' in 1800, and soon established a reputation as an excellent performer of the school of Clementi and Field. He studied composition under Woelfl, and in 1808 published his first work, a sonata in C minor. In 1813 he was one of the original members of the Philharmonic Society, of which he was for many years a director, often a performer, and occasionally conductor, at its concerts. His admiration for Beethoven induced him in 1815 to visit Vienna, where he remained for eight months, enjoying the friendship and profiting by the advice of the great composer. He then went to Munich, where he stayed five months, studying counterpoint under Winter. After an absence of two years he returned to England, and was long esteemed as one of the best performers upon, and teachers of the pianoforte. His compositions were unimportant. He was the first to introduce into England Beethoven's concerto in E \flat , Weber's Concertstück, and Hummel's concerto in E and Septuor in D minor. See *Concordia*, Oct. 16, 1875; *Mus. T.*, 1901, pp. 15, 16. W. H. H.

NEBRA, JOSÉ DE (d. Madrid, July 11, 1768), Spanish composer of opera and church music. From the post of organist at the Convent of the Descalzas Reales, Madrid (formerly held by Victoria), Nebra was appointed 2nd organist to the Chapel Royal (1724). After the disastrous fire of 1734 (Dec. 24), when the musical archives of the palace were destroyed, Nebra and LITERES (*q.v.*) were asked to compose church music to replace that which had been lost. The neglect of the master of the Chapel Royal (Corbelli), owing to his time being taken up with Italian opera, led to the creation of the post of vice-master for Nebra (1751). The plans for re-organisation were drawn up by him and approved in 1756. The choir was to consist of 4 sopranos (castrati), 4 altos, 4 tenors and 3 basses. There were 3 organists (Nebra, Literes and Rabassa) and an orchestra of 2 flutes, 2 hautboys, 2 *fagotes*, 3 *baiones* (bassoons and tenor bassoons), 2 horns, 2 trumpets, 12 violins, 4 violas, 3 violoncelli and 3 basses. Besides this, a special choir of 18 voices was engaged, with a special organist, for the performance of plain-song. These arrangements were completed by Apr. 1757. The first great occasion for which they were employed was the funeral of Queen Barbara of Braganza, whose music-master had been Domenico Scarlatti, and whose husband had been consoled for twenty years by the same songs sung nightly by FARINELLI (*q.v.*). Queen Barbara died Aug. 27, 1758 (Scarlatti had died the year before, at Naples); the music written by Nebra for the royal funeral included

the Requiem for 8 v., flute and strings, publ. by Eslava.

Nebrá, however, did not devote all his energies to the Chapel Royal. Between 1744 and 1747 he produced at least three operas; one of which, 'Ante que celos y amor . . .', was a version of the story of Briseis and the wrath of Achilles, with two comic characters who sang a seguidilla in the Spanish manner beneath the walls of Troy. Of these, only the libretti have been preserved. Existing MSS. include a Miserere, 8 v. (Paris Conservatoire); 15 psalms, 4 v. (Sistine Chapel); a villancico, 4 v. (Munich), while quantities of his works are to be found in the Escorial and many Spanish cathedrals.

J. B. T.

NEBUŠKA, OTAKAR (b. Mladá Boleslav, 1875), Czech musical writer, one of the leading members of the committee of management of the Hudební Matice, the musical branch of Umělecká Beseda (Society of Arts). He also helped to found the *Hudební Revue*, a periodical chiefly devoted to the interests of national music. He has composed some lyrics and choruses (Fr. Urbánek and Mojmir Urbánek), but his most important services to the art have been effected by his personal integrity and literary gift. He is at present secretary to the Chamber of Deputies.

R. N.

NEDBAL, OSKAR (b. Tábor, Bohemia, Mar. 26, 1874), was educated at the Prague Conservatoire, and was the original viola-player of the BOHEMIAN (CZECH) STRING QUARTET (*q.v.*), as well as conductor of the Prague Philharmonic (1896-1906). Later he pursued his career as conductor chiefly in Vienna, where he directed the Tonkünstler orchestra till 1919 and also conducted at the Volksoper. Nedbal has been a fairly prolific composer, and has had some success with light operas.

C.

NEEDLER, HENRY (b. London, 1685; d. Aug. 1, 1760), was an amateur violinist, who was instructed on the instrument first by his father and afterwards by the younger Banister, and became a proficient performer. He is said to have been taught harmony by Purcell, which must probably be taken to mean Daniel Purcell. About 1710 he was appointed Accountant-General of the Excise, and in the same year assisted in establishing the Academy of Ancient Music, where he long filled the post of principal violin. He was the first to lead the concertos of Corelli in England. Twenty-eight volumes of music, almost entirely transcribed by him from the libraries at Oxford, were presented by his widow to James Mathias, who, in 1782, bequeathed them to the British Museum, where they form Add. MSS. 5035 to 5062. W. H. H.

NEEFE, CHRISTIAN GOTTLÖB (b. Chemnitz, Feb. 5, 1748; d. Jan. 26, 1798), a musician of some distinction in his day, whose claim to remembrance is his having been Beethoven's instructor. He was the son of a poor tailor,

and, possessing a lovely voice, sang in the church choir and learnt music in the school. His parents contrived to place him at the University of Leipzig to study law, but all his spare time was spent over the treatises of Marpurg and Emanuel Bach; and the acquaintance of J. A. Hiller, then cantor of Leipzig, was a great incentive. He broke with law and began his musical career by writing operettas for the theatre. In 1777 he took Hiller's place as conductor of a travelling orchestra known as the Seyler Society, which made him known in the Rhine district. At Frankfort he found a wife, in 1779 settled at Bonn as conductor of another association called the 'Grossmann-Hellmuth Society,' and on Feb. 15, 1781, entered the service of the Elector, Max Friedrich, as aspirant to the post of court organist, *vice* Van den Eeden. With the organ Neefe took over van den Eeden's pupil, Ludwig van Beethoven, then just entered on his eleventh year. Van den Eeden died in June 1782, and on Apr. 26, 1783, Neefe was promoted to the direction of both sacred and secular music at the court. A year after this, Apr. 15, 1784, the Elector died, the theatrical music was put down, and a series of economies begun by the new Elector Max Franz, which resulted in the reduction of Neefe's pay from 400 to 200 florins. In 1788 a new court theatre was organised, with Reicha as director, and Neefe as accompanist and stage manager. Then came the war, and in 1794 the theatre was shut up, the company disbanded, and Neefe lost his place. He led a poor existence as municipal official under the French, his family were dispersed, and at last we hear of him as conductor at the theatre at Dessau. Here his wife fell seriously ill, and ultimately he himself sank under his troubles, and died. Neefe was an industrious musician; the names of eight pieces are preserved which he wrote for the theatres of Leipzig and Bonn between 1772 and 1782. He wrote also for the church, and a mass of chamber music, besides arranging and adapting many operas. (See *Q.-L.*) He also published articles on musical subjects in the periodicals of the time, and left an autobiography which was communicated by his wife to the *A.M.Z.* of 1799 (p. 241). (See *Thayer*, i. 81-5, 117, etc.; *Krehbiel*, i. 67, etc.) G.

BIBL.—New ed. of Neefe's autobiography in Alfred Einstein's series *Lebensläufe deutscher Musiker von ihnen selbst erzählt* (Bd. 2, Leipzig, 1915); IRMGARD LEUX, CHR. G. NEEFE, *Biographie und Instrumentalkompositionen* (Munich Dissertation, 1921).

NEFER (NOFFE). It has been conjectured that this was the name of the ancient Egyptian Tamboura or long-necked guitar (see PANDORA),

though no direct application of the word to the instrument has been discovered. The hieroglyph which at first sight bears a curious resemblance to the Tamboura, means 'good,' and

modern Egyptologists, including Professor

Flinders Petrie, consider that it represents the heart and the throat, conveying the idea that out of the heart the mouth speaks. The marks on the body of the painted hieroglyph are similar to those on that denoting 'the heart,' and although the one cross-bar (as in the earlier form) or the two cross-bars (as in the later) suggest to us tuning pegs, there are no such pegs to be found on pictures of the instrument itself; for, as in many Oriental instruments of to-day, it was the practice to stretch the strings as tightly as possible before winding them round the head of the instrument and then to tune them finely by a slipping loop of cord or leather. The supposed 'pegs' probably represent the mouth or the open lips. Cf. F. L. Griffith, *Hieroglyphs*, 1898, and Biernath, *Die Gitarre*, 1907. F. W. G.

NEGRI, CESARE, detto il Trombone (*b. circa* 1546), ballet-master at the court of Milan. He published 'Le gratie d'amore' 1602 (modern ed. by Chilesotti; Ricordi, 1883), and 'Nuove inventioni di balli' (1604); an historically valuable collection of ancient dance tunes.

E. V. D. S.

NEGRO (NEGRI), GIULIO SANTO PIETRO DEL (*b. Milan, latter half of 16th cent.*), an amateur of noble birth. He composed 'Gl'amorosi pensieri. Canzonette, vilanelle et ario napolitane a 3 voci . . .', 3 books (1607); 'Grazie ed affetti di musica moderna a 1, 2 and 3 voci . . .', 2 books (op. 5, 1613; op. 8, 1614; 'Musica ecclesiastica concertata alla moderna a 2, e 3 voci, op. 9' (1616); 'Canti academici a 2-6 voci, op. 11' (1620) (*Q.-L.*).

NEGRO MUSIC OF THE UNITED STATES. The nearest approach to 'folk-music' in the United States is that played or sung by the negroes in the Southern States. Before the Civil War (1861-65) brought freedom to the slaves, the ability to read was very rare among those held in bondage. Indeed, in many of the States which authorised slavery, education of the slave was a misdemeanour. The tunes to which they danced or to which they sang their songs and hymns were, therefore, traditional. The origin of some of the tunes is held to be African on these grounds: they can be reduced to a pentatonic scale, which is the scale of musical instruments said to be still in use in Abyssinia, Nubia and other countries in Africa; they have the same 'catch' that appears in songs still sung in Africa, according to the observations of several travellers. Both 'catch' and scale are also common in the traditional music of the Scotch, Irish, Welsh and Magyars. There are, however, many tunes in common use among the American negroes which have neither peculiarity. The negroes have the imitative faculties very highly developed, and most of their tunes which do not resemble those of the old races were probably caught from Methodist preachers, whose system

of conducting 'revivals,' with its appeals to the imagination of the hearer, was such as readily to capture these impressionable people. Many of the negro hymns have lines and phrases that show a Wesleyan origin. Traces of Catholic teaching are visible also, but these are infrequent. Resemblances between various sections as to the tunes and the words used are noted by close observers, the differences being such as would naturally be produced in the flight of time or by lapse of memory, as they were handed down from father to son or carried across the country. The tunes are sometimes minor (generally without a sharp seventh) and sometimes major; occasionally a mixed mode is employed, beginning in a major key, and ending in either the relative or tonic minor; or the contrary course may be followed. And there are tunes which end on the subdominant or anywhere but on the tonic or the dominant. The negroes are very sensitive to rhythm. As one dances a jig, his companions gather about him and furnish a percussive accompaniment with bones (played after the manner of castanets) or roughly made tambourines, or, wanting instruments, by alternately slapping their hands together and on their knees, keeping excellent time. They have songs for all occasions where they move in concert, such as loading or unloading ships, or working at the pumps of a fire engine. Their rhythmic sympathies are most strongly active on these occasions. Often one of a gang acts as a precentor, giving a line or two by himself, and the chorus coming in with the refrain. This leader, when his supply of lines gives out or his memory fails, resorts to improvisation (cf. SHANTY).

A similar practice obtains with them at their religious and social gatherings. Sometimes the improvised lines will be given in turn by different ones in the company who have the faculty of inventing them. The women's voices have a peculiarly pathetic timbre within their natural range, which is narrow. When forced they are harsh and strident. As a rule the tenor voices are dry, but the basses are generally rich and sonorous. A quick ear is more common than tunefulness among the race, but the effect produced by the singing of a great number, always in unison, so quickens the hearer's pulse or moves him to tears that defects are forgotten. Their time is sure to be accurate. Of instruments in use among them the variety is small. Bones and tambourines are common, but the banjo is not so generally used by them as has been thought, and fiddlers are very rare. Some of the slave songs, especially those that may be classed as hymns, were made known in the Northern States for the first time by small bands of singers of both sexes who gave concerts in the principal cities in 1871 and subsequently. One troupe (the 'Jubilee singers') came from the Fisk University, Nashville, Tennessee, and in

the course of its tours, which included several trips to Europe, raised over 150,000 dollars for the University, which was established especially to educate those who had been born in slavery. Another came from a similar institution at Hampton, Virginia. One effect of their tours was the introduction of some of the songs into the religious services of the Northern negroes. It is observed, however, that the songs are everywhere gradually disappearing from use as the negroes become better educated. Their imitative faculties lead them to prefer music exactly like that which is performed in churches where the worshippers are white. Some of the secular songs of the negroes have acquired peculiar distinction. 'Jim Crow'—said to be the name both of the song and of the negro whose performance of it had a local reputation in Louisville, Kentucky, in 1830—was, indirectly, the origin of the negro minstrel show, the most familiar example of which in England was that long known as Christy's. Many of the plantation songs were introduced into these shows, 'Coal-black Rose,' 'Zip Coon' and 'Ole Virginny nebber tire' being the most familiar among them. A plantation song, 'Way down in Raccoon Hollow,' enjoyed a wide popularity set to words beginning 'Near the lake where droops the willow.'

A few examples of the negro melodies and verses are appended. They are taken from the collection 'Slave Songs of the United States.' The reader must understand that all of these are sung much faster than either the tunes or the words would seem to warrant, the rapid pace being a result of the negroes' strong rhythmic instincts. The first example shows a pentatonic scale, and the use of the 'Scotch snap':

In de morn-in' when I rise, Tell my Je-sus
hud-dy, oh; I wash my hands in de morn-in' glo-ry.
Tell my Je-sus hud-dy, oh!

The following is an illustration of the use of an unconventional ending:

Turn, sinner, turn to-day, Turn, sinner, turn O!
Turn, sinner, turn to-day, Turn, sinner, turn O!

A very popular tune, and full of pathos when sung by a large company, is the following:

No-bo-dy knows de trou-ble I've had,

No-bo-dy knows but Je-sus, No-bo-dy knows de
trou-ble I've had, Glo-ry hal-le-lu! One
[Sing]
morn-in' I was a-walk-in' down, O yes, Lord! I
saw some her-ries a-hang-in down, O yes, Lord.

Dr. W. Howard Russell describes in chapter xviii. of *My Diary North and South*, a song which made a remarkable impression on him, and which, from his description, appears to be the following:

O graveyard, O graveyard, I'm
walk-in' troo' de graveyard, Lay dis bo-dy down.

The following is a popular song among the Louisiana creoles, and the words give an idea of the dialect:

Belle Layotte.
Chorus. 3 Mo dé-ja rou-lé tout la côte, Pancer ouar par-eil
Fine. Solo. 3
belle La-yotte. Mo rou-lé tout la côte, Mo rou-lé tout la
col-o-nie; Mopan-corouar griff-one la
D.C.
Qua ma gout commela belle La-yotte. F. H. J.

The peculiarities of negro music have been introduced into works of higher artistic aim. Gottschalk used some of the creole music as subjects for free treatment on the pianoforte; J. A. Brockhoven, of Cincinnati, wrote a suite for orchestra on creole tunes; and Dvořák, during his residence in America, adopted some of the musical idioms of the negro music into his 'New World' symphony and two chamber compositions, opp. 95-97. The cult of the 'negro spiritual,' stimulated by the numerous arrangements of Henry T. BURLEIGH (q.v.), has spread among American and English singers, and many American composers, following the lead of Dvořák, have attempted to develop the negro melody as symphonic material. But a still more far-reaching manifestation is all that American product which has gone by

the successive names of 'Ragtime,' 'Jazz' and 'Syncopation,' and for which descent from the negro song is claimed. The most useful and comprehensive work on the subject is *Afro-American Folksong* (1914) by H. E. KREHBIEL, C.

BIBLIOGRAPHY

- Dwight's Journal of Music*, Nov. 8, 1862. Letter, Miss McKim, Philadelphia; probably the first occasion when public attention was called to the Slave songs.
- Continental Monthly*, Philadelphia, Aug. 1863: article, *Under the Palmetto*, H. G. Spaulding, with specimens of the music.
- Atlantic Monthly*, June 1867: article, *Negro Spirituals*, T. W. Higginson, with the words of many of the most popular hymns.
- 'Slave Songs of the United States,' New York, 1871. Words and tunes, the largest collection published.
- The Century*, New York, Feb. 1886: article, *Creole Slave Dance*. Apr. 1886: article, *Creole Slave Songs*. Both by G. W. Cable. Especially interesting because of the descriptions of negro customs in Louisiana, some of which are of remote African origin, and because of the explanation of the peculiar dialect of the Louisiana negroes—a mixture of French and English, sometimes a little Spanish, but each greatly modified by the negro's own method of speech.

NEGRO SONG IN ENGLAND

Until about 1835 English people had neither knowledge of, nor interest in, the folk-music of the American negro. Some few examples, though probably not many more than half a dozen, had appeared in print before that time, and one characteristic specimen from Aird's *Selection of Scotch, English, Irish and Foreign Airs*, vol. i. (1782), is appended. It has the incessant repetition of phrase found in so many negro airs. One or two others from Virginia are in the same work.

Pompey ran away.

Negro Jig (Virginia).

The other is taken from *The Gentleman's Amusement*, book 2, c. 1800. The words of these plantation melodies seem to have been merely a string of sentences concocted on the spur of the moment by the singer as he performed the 'Walk Round' (much the same sort of thing as the 'Cake Walk' of to-day), while a steady clapping of hands from the spectators marked the time.

NEGRO DANCE

From *The Gentleman's Amusement*, book 2, c. 1800 (a work containing many airs of American interest).

About 1834-35 one Dan Rice introduced the grotesque song and dance of the negro to the audience of American theatres and concert halls. His first song was 'Jim Crow,' the main burden of which with appropriate actions ran—

Wheel about, and turn about and jump just so,
Every time you wheel about you jump Jim Crow.

Though no doubt this was a plantation lyric, there are signs that the melody has been considerably tampered with. Rice, bringing the song to England about 1835-36, the whole nation became in a perfect ferment over it. 'Coal-black Rose,' 'Sich a getting upstairs,' 'Dandy Jim from Carolina,' and 'Jim along Josey,' whose principal phrase was—

Hey, get along, get along Josey, Hey, get along, Jim along Joe,

were others of this early period. The singing of negro songs having become general, several bands of 'Ethiopian Serenaders' appeared at the theatres of America and in England during the 'forties. Christy's, the most famous of these, was of a rather later date.

While in the earlier days the entertainments professed to represent the plantation song and dance with banjo, bones and fiddle accompaniment, this soon gave way to the introduction of other songs of better literary merit than the meaningless jumble of words of the original songs. Stephen C. Foster (1826-64) supplied such lyrics as 'Old folks at home,' etc., and an attempt was made to give some picture of the life of the slave in the songs sung. F. K.

NEITHARDT, AUGUST HEINRICH (b. Schleiz, Aug. 10, 1793; d. Berlin, Apr. 18, 1861), founder of the Berlin Domchor (Cathedral choir). His early musical studies were interrupted at twenty years of age by his military service, which lasted through the campaigns of 1813-15. This led to his becoming bandmaster to the Garde-Schützen Battalion (1816-22), for which he composed and arranged a host of pieces. From 1822-40 he was master of the band of the Kaiser Franz Grenadiers, and wrote and did much for the improvement of military music. In 1834 he wrote an opera, 'Julietta,' and in 1839 he was made 'königliche Musikdirector,' and in 1843 was commissioned to found a regular choir for the Berlin Cathedral, which he did by uniting the scholars and seminarists who sang the ordinary Cathedral service with the smaller choir who sang in the court chapel, about eighty strong in all. (See MENDELSSOHN.) In 1846 Neithardt went to St. Petersburg to hear the famous Russian choirs, and in 1850 he and

his choir visited London and created much astonishment by their extraordinarily refined and effective performances. He was a remarkably able conductor, indefatigable in drilling his choir and in providing them with masterpieces of all schools, some of which were edited by him in continuation of Commer's 'Musica sacra' (Berlin, Bote & Bock).

G.
NEJEDLÝ, ZDENĚK (b. Litomyšl, 1878), Czech musical writer and historian; Ph.D. of Prague University, where he was called to the Chair of Musical Theory and Aesthetics in 1905. His interests are by no means confined to music, for he takes an active part in political journalism, his views tending to socialism. In 1910 he founded a musical periodical, *Smetana*, in which he has carried on some acrimonious campaigns against certain movements and individuals in the world of Czechoslovak music. He would have satisfied Samuel Johnson's predilection for 'a good hater'; but his hostilities, if implacable, are fought out in the light of day. A disciple of HOSTINSKÝ (q.v.), he has brought system and consistency into Czech musical criticism. His fine historical sense and the depth of his knowledge are unquestionable. His love of music seems sometimes to come in the rear of his love of politics, literature and dialectics. His devotion to the memory of Smetana, whom he views clearly from the ethical and democratic sides, gives a central idea and distinction to his work. Criticism in Czechoslovakia has not yet shed its elementary tendency to be a question of partisanship. Apart from this disqualification, Nejedly, because of his general culture, untiring research and admirable literary style, easily takes the highest place in the contemporary musical literature of the Czechs. Nejedly delivered the public oration upon Smetana at the opening of the centenary celebrations in 1924. Besides constant journalistic activity, he has published the following books:

A History of Pre-Hussite Vocal Music in Bohemia (1904); *Beginnings of Hussite Vocal Music* (1907); *Hussite Vocal Music during the Hussite Wars* (1913). Books on Smetana: *Smetana's Operas* (1908); an exhaustive biography of Smetana in 5 vols., of which vol. i. appeared in 1922 and vol. ii. in 1925; a biography on a smaller scale in the series *Zlatoroh*; a complete edition *de luce* of Smetana's compositions, of which the first number, 'Youthful Compositions up to 1843,' appeared in 1924 (State Printing Press); *Frederick Smetana* (Geoffrey Bles, London). Also: *Zdenko Fibich* (1901); *Catechism of Czech Musical History* (1903); *Catechism of Aesthetics* (1902); *Czech Opera from Smetana onwards* (1911); *J. B. Foerster* (1910); *Gustav Mahler*; *Richard Wagner*; *Vítězslav Novák* (1921); *A General History of Music* (vol. i.).

B. N.

NELSON, SYDNEY (b. London, Jan. 1, 1800; d. there, Apr. 7, 1862), son of Solomon Nelson, was for some time a pupil of Sir George Smart. About or shortly before 1840 he entered into a partnership with Charles Jefferys (a song-writer for whose lyrics Nelson's music was mainly composed), and as 'Jefferys and Nelson' they began a music-publishing business in Frith Street, removing afterwards into Soho Square. They issued much sheet music, chiefly by Nelson, but in 1843, the concern not proving a success, Nelson left it entirely in Jefferys' hands, who greatly developed it. Nelson now arranged a musical and dramatic entertainment, and with members of his family went on tour to America, Canada and Australia.

His musical works principally consist of drawing-room ballads, which include such once popular melodies as 'The Rose of Allendale,' 'The Pilot,' etc. He also composed a burletta, 'The Grenadier,' produced by Madame Vestris, and 'The Cadi's Daughter,' while a grand opera, 'Ulrica,' was put in rehearsal, though never performed. (Information in part from *D.N.B.*)

F. K.

NENNA, POMPONIO (b. Bari, old kingdom of Naples, c. 1560; d. before 1618), distinguished himself chiefly as a composer of madrigals in the style of Monteverdi. On the titles of his publications he is described as 'Il cavaliere Cesareo,' having been made a Knight of the Golden Spur. Following further in the path opened up by MONTEVERDI (q.v.), he became the teacher and inspirer of GESUALDO, Prince of Venosa, in the direction of free chromatic modulation. He published eight books of madrigals *a 5*, and one *a 4*, appearing in various editions from 1609-24. His death must have occurred before 1618, as appears from the preface to a new edition of his eighth book of madrigals *a 5*. His other works are a set of Responsoria *a 4* for the Matins of Christmas and Holy Week, published in 1607, and another set of Responsoria *a 5* for the Matins of Holy Week, published after his death in 1622. The only sacred work of Nenna in modern score is a simple setting of the Veni Creator, printed from a Roman MS. in the continuation of the 'Musica divina' by Haberl.

J. R. M.

NEO-MODAL, a term used to describe modern melodic or harmonic idioms derived from scales which have a definite internal organisation other than that associated with the traditional major-minor system. This definition covers (1) inflections and combinations characteristic of the true ecclesiastical modes, when used on a background of classical or later harmonies or tonalities; (2) idioms derived from such folk-songs or other melodies as are themselves organised on a modal basis, whether derived or local; (3) any arbitrary scale, such as that of whole tones, which is used with fair

consistency as a melodic or harmonic medium. See *MODES*; *SCALES*; *SONG*; *HARMONY*.

G. D.

NERI, FILIPPO (SAINT) (b. Florence, July 21, 1515; d. Rome, May 26, 1595), of noble family, entered the priesthood in 1551, and joined the order of Hieronymus, where he undertook the teaching of the children. In 1564 he founded the society of the Oratorio for the cultivation of music in the oratory of the monastery of S. Girolamo, supported by Animuccia, who wrote 'Laudi spirituali' specially for this society, and was followed by Palestrina as its conductor and composer. Cavalieri's 'Mysterium Anima e corpo' was first performed here in 1600, and the modern oratorio received its name from that society. A book of 'Canzonette spirituali'—sung at the Oratorio—was published in 1657 (see *Riemann*).

NERI, MASSIMILIANO, first organist at St. Mark's, Venice, 1644, raised to the rank of nobility by the Emperor Ferdinand II. in 1651, court organist of the Elector of Cologne in 1664, composed 1 book of motets a 2 and 3 v. (1664), 1 book of 'Sonate e canzone a 4,' op. 1, to be played on sundry instruments in church or chamber (1644); sonatas for 3 to 12 instruments, op. 2 (1651). These sonatas rank among the best early instrumental music (*Q.-L.*; *Riemann*). (See *VIOLIN-PLAYING*.)

NERITI DA SALÒ (NERITO), Vicenzo, musician and chaplain to the Emperor Rudolph II., 1593; maestro di cappella of the great church at Salò, 1595-99. On a Magnificat published in 1593 he calls himself 'Capellanus et Sacellanus' in the Carmelite monastery at Mantua, and imperial musician. He composed 3 books of canzonets, etc. (1593, 1595, 1599) (*Q.-L.*).

NÉRON, opera in 4 acts; words by Jules Barbier; music by A. Rubinstein. Produced in German, as 'Nero,' Stadt Theater, Hamburg, Nov. 1, 1879, under the direction of the composer. G.

NERONE, tragedy in 4 acts, written and composed by Boito. Produced La Scala, Milan, Apr. 30, 1924. The original text included a fifth act which Boito did not set. The score was edited by Toscanini.

NERUDA, a distinguished family of violinists. According to Diabacz,¹ the founder was Jakob, who belonged to Rossice, and died Feb. 19, 1732. He left two sons: (1) JOHANN CHRYSOSTOM (b. Rossice, Dec. 1, 1705; d. Dec. 2, 1763) learnt music at Prague, became famous on the violin, and took orders at the Præmonstratensian convent there, a few months after his father's death, becoming choirmaster of the convent.

(2) JOHANN BAPTIST GEORG (b. ? 1707; d. Dresden, 1780) was first at Prague, and then, for thirty years, at the Elector's Chapel at

Dresden, where he died, leaving a mass of compositions behind him (see *Q.-L.*). His two sons, LUDWIG and ANTON, were both chamber musicians to the Elector of Dresden.

Another member of the Neruda family was JOSEF (b. 1807; d. Feb. 18, 1875), organist of the Cathedral at Brno, Moravia. He had five children, Victor, Amalie, WILMA, Marie and FRANZ. Amalie adopted the PF., and made no important career.

(3) FRANZ (b. Brno, Dec. 3, 1843; d. Copenhagen, Mar. 19, 1915), became a violoncellist, and joined his father and sister in various concert tours. In 1864-76 he was a member of the royal orchestra at Copenhagen; in 1892 he succeeded to Gade's place as director of the musical society there, and he also directed another society in Stockholm. He wrote many popular and meritorious compositions for orchestra and chamber, a violoncello concerto, string quartet, etc. The best-known of his works is a little berceuse often played by his famous sister.

(4) WILMA (WILHELMINA) (b. Mar. 21, 1839; d. Berlin, Apr. 15, 1911) began to play the violin almost as soon as she could walk, became a pupil of Jansa, and made her first appearance, with her sister, in the winter of 1846 at Vienna, where she excited much astonishment by the extraordinary power of her bow, the deep sentiment of her cantilena, and her great execution, notwithstanding the smallness of her hands.² From Vienna the family journeyed northwards, visiting Leipzig, Berlin, Breslau, Hamburg and other cities. In London, Wilma made her first appearance at the Princess's Theatre, Apr. 30, 1849, and appeared eighteen times up to May 24. She played at the Philharmonic Concert of June 11, 1849, in a concerto by De Bériot. The family returned immediately to the Continent, and passed several years in travelling, chiefly in Russia. In 1864 Mlle. Neruda found herself in Paris, where she played at the Padeloup Concerts, the Conservatoire, etc., and awakened enthusiasm. At this time she married Ludwig NORMAN (q.v.) a Swedish musician, and was henceforth known as Mme. Norman-Neruda. In 1869 she again visited London, played at the Philharmonic on May 17, and was with some difficulty induced, by the entreaties of Viextemps, to remain till the winter, when she took the first violin at the series of Monday Popular Concerts before Christmas, and at once made her mark. From that time until 1898 she was in England for each winter and spring season, playing at the Popular Concerts, the Philharmonic, the Crystal Palace, Hallé's recitals and Manchester concerts, etc., with ever-increasing power and refinement. G.; rev. R. N.

Norman died in 1885 and on July 26, 1888, she married Sir Charles HALLÉ (q.v.), and was associated with him on the concert platform

¹ *Künstler-Lexikon für Böhmen.*

² *Handlick.*

until 1895, when he died. In 1896 a public subscription was set on foot among her admirers, under the direction of a committee of which King Edward VII. (then Prince of Wales) was president. Associated with him were the King of Sweden, the King of Denmark, and a vast number of eminent musicians, statesmen and others, and the title-deeds of a palazzo at Asolo, near Venice, were presented to Lady Hallé, on behalf of the subscribers, by the President of the Committee at Marlborough House. In 1898, after the death of her eldest son in an Alpine accident, she made Berlin her headquarters, paying annual visits to England, and making artistic tours throughout Europe. In 1901 Queen Alexandra conferred upon her the distinctive title of 'Violinist to the Queen.' The Stradivarius violin upon which Lady Hallé played was one of the finest in existence, dating from 1709, and was presented to her in 1876 as the joint gift of H.R.H. the Duke of Edinburgh (afterwards Duke of Saxo-Coburg), Earl Dudley and the Earl of Hardwicke.

E. H. A.; rev. R. N.

NESBET, a 15th-century English composer who contributed a song to the Pepsysian MS. 1236, and figures among the composers of the lost parts of the Eton College MS. (Hy. Davey, *Hist. Eng. Mus.*).

NESSLER, VICTOR E. (b. Baldenheim, Alsace, Jan. 28, 1841; d. Strassburg, May 28, 1890), at first studied theology at Strassburg, but the success of his essay in operatic composition, a work entitled 'Fleurette,' and produced there in 1864, induced him to devote himself to music. He then went to Leipzig, and obtained various posts as conductor of male choral societies, for the use of which he wrote a set of partsongs, etc. In 1870 he became choral director at the Stadt Theater, and in 1879 conductor at the Carolatheater in the same town. Meanwhile various operas had been brought out with varying success. The list is as follows:

'Die Hochzeitsreise' (1867); 'Dornröschens Brautfahrt' (1869); 'Nachtwächter und Student' (1868); 'Am Alexanderstag' (1869); 'Irmingard,' a more ambitious work than the previous productions, in five acts (1879); 'Der Rattenfänger von Hameln' (1879), an opera which rapidly spread his fame throughout Germany, and attained an enormous success; 'Die wilde Jäger' (1881); 'Der Trompeter von Säckingen' (1884); 'Otto der Schütz' (1889); and 'Die Rose von Strassburg' (1890).

The success of the 'Trompeter' was almost as great as that of the 'Rattenfänger.' Both owe their popularity to an easy superficiality of style, which commended itself to the less musical portion of the German public. When the 'Rattenfänger,' under the name of 'The Piper of Hameln,' was produced at Covent Garden Theatre by the English Opera Company on Jan. 7, 1884, it proved a failure. M.

NEŠVERA, JOSEF (b. Praskolesce, Bohemia, Oct. 24, 1842; d. Olomouc, 1914), a Czech composer some time choirmaster of the Cathedral at Olomouc. He was a prolific composer, working chiefly in small forms, especially for

the piano (valse, mazurkas, studies) and the violin (popular Slumber Songs, etc.). His sacred music includes a Mass in honour of St. Procopius, the Passion (in Czech), an oratorio, *De Profundis*, etc. His best-known operas are 'Perdita' (produced Prague, 1897), 'Lesní vzduch' (The Forest Breeze), 'Bratránek' (The Cousin), and 'Radhošť,' produced in Brno (1906) under the title of 'Černokněžník' (The Black Monk), which reflects the folk life of the Moravians and the charm of their popular melodies. R. N.

NEUKOMM, SIGISMUND, CHEVALIER VON (b. Salzburg, July 10, 1778; d. Paris, Apr. 3, 1858), was a chorister at the cathedral of Salzburg in 1788-93 and first learned music from Weissauer and from Michael Haydn, who in 1798 sent him to his brother at Vienna. He studied music with Joseph Haydn for some years, and was treated by him more as a son than a pupil. His first compositions appeared in 1808, and in 1806 he went via Sweden to St. Petersburg, where he became Kapellmeister, and director of the Emperor's German theatre. He returned to Vienna just before Haydn's death, and shortly after took up his residence in Paris, and there lived on terms of intimacy with Grétry, Cherubini, Cuvier and other eminent men, and especially with Talleyrand, in whose establishment he succeeded Dussek as pianist. Their friendship survived the downfall of the Empire, and he accompanied Talleyrand to the Congress of Vienna. There he composed a Requiem for Louis XVI., which was performed at St. Stephen's before a crowd of notabilities, and for which in 1815 Louis XVIII. made him Chevalier of the Legion of Honour, with letters of nobility. In 1816 he went in the suite of the Duke of Luxemburg to Rio Janeiro, and remained there as maître de chapelle to Dom Pedro till the revolution of 1821 drove that monarch, and Neukomm with him, back to Lisbon. Having resigned his pension, he returned to Talleyrand, whom he accompanied on several of his grand tours. He came to London in the same year with Mendelssohn (1829), and they met at the house of Moscheles, with whom Neukomm remained on terms of great friendship and mutual esteem.¹ The last twenty years of his life he divided between England and France.

In England his intelligence and cultivation gave him a high position. His symphony in E_♭ was played by the Philharmonic, Mar. 21, 1831, and many other pieces at various times. His oratorio 'Mount Sinai,' was repeatedly performed in London, and at Worcester, Derby, etc., and he wrote his oratorio 'David' specially for the Birmingham Festival of 1834, where so highly was he prized as to be familiarly called 'the King of Brummagem.'² In fact his two

¹ See Mendelssohn's letters to Moscheles, pp. 116, 117.

² Mendelssohn's Letters, II. 124.

songs 'Napoleon's Midnight Review' and 'The Sea,' the latter to Barry Cornwall's words, may be said to have made him for some months the most popular person in England. But Mendelssohn's arrival at Birmingham in 1837 eclipsed Neukomm's fame, and even caused him to be as unjustly depreciated as he had before been unduly extolled. This reverse he bore with a philosophy which elicited Mendelssohn's warmest expressions.¹

Neukomm was a man of remarkable diligence and method, which nothing interrupted. The number of his compositions is prodigious. They embrace about 1000 works, including eight oratorios, numerous masses, and music for Schiller's 'Braut von Messina,' in which he endeavoured to resuscitate the ancient Greek chorus. He had a great predilection for Palestrina, and attempted to revive his style. He also wrote for several musical periodicals, especially the *Revue et Gazette musicale de Paris*. F. G.

NEUMANN, FRANTIŠEK (b. Přerov, Moravia, June 16, 1874), composer and conductor; at present (1926) chief conductor of the National Theatre in Brno.

His parents removing to Prostějov, he was sent to the Communal School there in 1880, and in 1884 passed on to the Modern School. He entered the Commercial Academy at Chrudim in 1888, and after completing his course, fulfilled his year of military service as a volunteer at Olomouc. At the age of 22 he went to the Conservatorium at Leipzig, and in the following year was appointed chorus-master to the theatre at Carlsruhe. In 1898 he accepted a similar post at the municipal theatre at Hamburg. In 1899 he was first conductor at Regensburg (Ratisbon), 1900 at Linz, 1901 at Reichenberg, 1902 at Teplice, and 1904 at Frankfurt-on-Main, where he remained until 1919. He then returned to his native land and took up the post of conductor-in-chief at the National Theatre in Brno. Here he has accomplished excellent work, thanks to his long and varied experience as an operatic conductor. Among other productions, he has to his credit the admirable first performances of most of Leoš Janáček's operas. Neumann's works include:

OPERAS

'Markýz' (Marquis), Linz, 1901 (unpublished); 'Milkovani' (Love-makings), Frankfurt, 1903 (Schott & Son, Mainz); 'Ekyvnoe' (Equivocal), Berlin, 1919 (Harnon, Berlin); 'Ketrice', Brno, 1922 (Barvič & Novotný, Brno).

MELODRAMA

'Pan' (Barvič & Novotný, Brno).

BALLETs

'V sladké pastí' (In Pleasant Pastures); 'Perý' (The Peril), and 'Pierrot'.

ORCHESTRA

Moravian Rhapsody; one or two Overtures; Symphonic Poem, 'Pekný raj' (Dance of Inferno); Suite, 'Potopený Zvon' (The Submerged Bell).

CHAMBER MUSIC

An Octet, which won a prize offered by the Czech Academy of Arts (MČ); Trio (MS.).

Some songs and choruses, and several masses and motets.

R. N.

¹ Mendelssohn's *Letters*, II. 124, 125.

NEUMARK, GEORG (b. Mühlhausen, Thuringia, May 16, 1621; d. Weimar, July 8, 1681), poet and musician.

On his way to Königsberg to study law at the University, he was robbed of all his possessions, and was obliged for a time to accept a post as private tutor at Kiel, where, it is said, he indited his best-known hymn, 'Wer nur den lieben Gott lässt walten.' After various wanderings and further misfortunes, he at last in 1651 obtained a settled position as secretary and librarian to the ducal court at Weimar, where his talents were also called into requisition as court poet for festival occasions. He was enrolled in several of the fancifully named literary societies of the time for the cultivation of poetry, such as 'die fruchtbringende Gesellschaft' and the 'Pegnitz-schäferlei.' His chief work is entitled 'Musikalisch-poetischer Lustwald' (Jena, 1657), and consists of a collection of sacred and secular songs, some of which, chiefly the sacred, are provided with melodies by Neumark himself and other musicians. The melodies have a slight instrumental accompaniment of two violins and bass. But the one hymn and tune by which Neumark really lives is the above-mentioned 'Wer nur den lieben Gott,' which, with the rhythm of the tune slightly altered, have been received into most Choralbücher, and form the basis of Bach's Church Cantata of the same name for the Fifth Sunday after Trinity. Spitta, in his comments upon Bach's Cantata, seems to consider Bach's choice of this hymn as not very appropriate to the Sunday; but it is significant of Bach's thinking otherwise that he chose the same last verse of the hymn to be the concluding Choral to another cantata for this Sunday, 'Siehe ich will viel Fischer aussenden.' Bach must have been fond of the tune, as he has adopted it with other words as the concluding Choral to four other cantatas, and has also employed the tune for organ treatment. (See his Choral-Preludes.) Mendelssohn has also adopted it in 'St. Paul' to the words (in the English version) 'To Thee, O Lord, I yield my spirit,' with special reference to the death of St. Stephen. J. R. M.

NEUMES, see NOTATION.

NEUNER, KARL (b. Munich, July 29, 1778; d. there, July 1830), studied at Tegernsee and afterwards under Valesi (singing) and Jos. Grätz (violin) at Munich where he entered the court orchestra as violinist. He composed ballets for the court the MSS. of which are in Vienna; psalms, sacred songs, etc., symphonies, overtures, songs and a book on counterpoint. E. v. d. s.

NEUSIDLER, the name of a family of German lutenists in the 16th century, of whom two are known by publications of their own. (1) HANS NEUSIDLER (b. Presburg, Hungary; d. 1563) lived as lutenist and citizen (Bürger) of Nuremberg, where in 1563, 1540 and 1544 he

published various lute-books in German tablature, usually divided into two parts, the first consisting of instructions and exercises for beginners, the second (as the titles indicate) containing fantasias, preludes, motets, secular songs and dances arranged for the lute. Oscar Chilesotti's *Lautenspieler des 16. Jhts.* (published by Breitkopf & Härtel, 1891) contains twelve of these pieces in modern notation.

(2) MELCHIOR (d. 1590), said to be the son of Hans (though this is not certain), lived chiefly at Augsburg, partly under the patronage of the merchant-prince Anton Fugger, but apparently also employed in the service of the city to provide for what is described as the *Stille Musica*, that is, the quiet, domestic music for private festivities.¹ Earlier in his life he must have been in Italy, since his first publication consists of two books of lute-pieces in Italian tablature, issued from the Venetian press of Gardano, 1566. These pieces, besides being received into Phalèse's 'Theatrum musicum' (Louvain, 1571), were afterwards republished in German tablature (Frankfort, 1573). In 1574 Neusidler published at Strassburg his 'Teutsch Lautenbuch,' which contains motets and secular songs by the best composers of the time, such as Josquin, Lassus, Arcadelt, Rore and others, arranged with little florid variations for the lute ('artlich und zierlich coloriert' as the title says), also some dances and fantasias. (See *Q.-L.*) In 1626 mention is made of a CONRAD NEUSIDLER, supposed to be a son of Melchior, living at Augsburg, and employed as a lutenist for the *Stille Musica* or private music of the citizens. No publication of his is known.

J. R. M.

NEVADA, (1) EMMA, *née* WIXOM (b. Alpha, near Nevada City, California, 1862), the daughter of a doctor, was taught singing by Mme. Marchesi at Vienna, and on May 17, 1880, made a successful début on the stage at Her Majesty's Theatre as Amina, under the name of Nevada, but did not sing again, owing to pecuniary difficulties with her manager. She then sang in all the great cities of Italy, and on May 17, 1883, made a successful début at the Opéra-Comique, Paris, as Zora in the revival of Félicien David's 'Perle du Brésil,' appearing also as Mignon until Feb. 1884. In the spring of 1884 she sang as Amina and Lucia in Italian at the Théâtre des Nations, and in the autumn at the Norwich Festival in the 'Redemption,' 'Elijah,' etc., and Oct. 16, on the production of Mackenzie's 'Rose of Sharon,' with great success, the soprano music having been written expressly for her. On Nov. 7 she sang in the last work at the 'Sacred Harmonic,' St. James's Hall. Later in the year and in 1885 she sang in Italian Opera on alternate nights with Mme. Patti at New York, San Francisco, etc., with the greatest success. On Oct. 1, 1885, she married at

Paris Dr. Raymond Palmer. She returned to America on an extended concert tour, and reappeared in England for a few nights at Covent Garden, notably on Apr. 29, 1887, in the revival of 'Mireille.' She then sang in Holland, Germany, Russia, Italy, Portugal and Spain. Her medallion as Amina, in company with those of Pasta and Malibran, was placed on the statue of Bellini at Naples, on the initiative of her friend the late Francesco Florimo, the great personal friend of the composer. A. C.

(2) MIGNON, her daughter, is also a brilliant soprano, who made her début at the Costanzi Theatre in Rome, as Rosina in 'Il Barbiere.' Her first appearance at Covent Garden was in Thomas's 'Hamlet' (Beecham season, Oct. 4, 1910), since when she has been frequently engaged in London, and has also sung in most of the principal opera-houses of Europe. C.

NEVIN, ETHELBERT (b. Edgeworth, Penn., Nov. 25, 1862; d. New Haven, Conn., Feb. 17, 1901), an American composer, made famous by his song 'The Rosary.' He studied in Boston, the pianoforte under B. J. Lang and composition under Stephen A. Emory; he then went to Berlin, where he spent the years 1884, 1885 and 1886 under the instruction of Karl Klindworth, and of Von Bülow. He returned to America, and taught for some years in Boston; then, from 1892, in Paris, Berlin, Florence and Venice, he spent his time in teaching, studying and composing. He again returned to America in broken health.

His work as a composer was confined almost entirely to songs and short pianoforte pieces, which have a graceful lyric vein, and a feeling for melody that is sometimes over sentimental, but often finely expressive of the gentler moods, amorous, gay and introspective. Among his best-known publications are a 'Sketch Book' of songs and pianoforte pieces, op. 2; pianoforte duets, op. 6; 'Water Scenes' for pianoforte, op. 13, of which one number, 'Narcissus,' attained a very wide popularity; 'A Book of Songs,' op. 20; a suite for pianoforte, 'In Tuscany,' op. 20; and a pantomime designed by Vance Thompson, entitled 'Lady Floriane's Dream.' R. A.

NEWARK, WILLIAM (b. Newark-on-Trent, c. 1450; d. Nov. 1509), English choir-trainer and composer. The following biographical details have been collected by Grattan Flood²:

- 1477. Became a gentleman of the Chapel Royal.
- 1479. Given a corrody in the Monastery of St. Mary, Thetford. (Patent Rolls, Nov. 28, 1480.)
- 1484. Granted a yearly sum of £20 accruing from the King's Manor at Bletchingley, Surrey. (Patent Rolls, Apr. 6, 1485.)
- 1487. Received a corrody from St. Benet's Monastery, Holme, Norfolk.
- 1493 (Jan. 1). Received the sum of 20s. for 'making of a song.' (*Household Book of Hy.*, vii. B.M. Add. MSS. 7099/7.)
- 1493 (May 30). Master of the children of the Chapel Royal.

¹ See document printed in *M.J.M.* xxv. 5.

² *Mus. T.*, Nov. 1921.

The corrody at St. Benet's had previously been held by Gilbert Banastir, who was master of the royal children, 1478-83. Newark's name, together with that of Fayrfax and Cornyshe, occurs in a list of the gentlemen who received liveries for the funeral of Queen Elizabeth, wife of Henry VII., Feb. 23, 1503, and later (1509) with Cornyshe, Fayrfax and William Crane (who succeeded Cornyshe in 1523 as master) for the funeral of Henry VII.¹ Actually, Newark succeeded Lawrence Squire as master of the children. His patent was renewed under Henry VIII., but he died in the first year of that king's reign, and was succeeded by Cornyshe. He was buried in Greenwich Church porch. A 2-part madrigal by him 'O my desyre' is in the Fayrfax book (B.M. Add. MSS. 5465). Six others by him, in 2 and 3 parts, are also in B.M. Add. MSS. 11,583; a duplicate of one of these, 'Thus musing,' is in R.C.M. 808/59. J. M^c.

NEW ENGLAND CONSERVATORY OF MUSIC, see BOSTON.

NEWMAN, ERNEST (b. Liverpool, Nov. 30, 1868), has succeeded in combining with a busy journalistic career the writing of a number of books which make a solid contribution to criticism.

His first books, *Gluck and the Opera* (1895) and *A Study of Wagner* (1899), appeared while he was still engaged in business at Liverpool, and during this time he made a number of contributions to current journalism, some of which were ultimately collected in his volume *Musical Studies* (1905). From 1903-05 he was on the musical staff of the Midland Institute at Birmingham, which post he left for that of music critic to the *Manchester Guardian* (1905-1906). The writings of this period showed him to be a keen student of the principles of music drama as formulated by Gluck and pursued by Wagner, as well as a champion of programme music. They proved his possession of a mind capable of combining close analysis with complete independence of outlook and vividness of expression. With them may be classed a second little book on *Wagner (Music of the Masters)* (1904), *Elgar* (1906) and *Richard Strauss* (1908); the value of the last two was necessarily limited by their dates. Of greater importance was *Hugo Wolf* (1907), the first English book to attempt an exhaustive study of Wolf's qualities as a song-writer. It was Newman's method here as elsewhere to state his case at its highest; his claims for Wolf and his comparisons of him with other German song-writers raised a controversy the echoes of which have hardly died away in close on twenty years, but at least he secured a juster appreciation of Wolf's genius in this country.

From 1906-19 Newman was music critic to the *Birmingham Daily Post*, and he then settled

in London, first as critic to the *Observer* (1919-1920), then transferring himself to the *Sunday Times*. For the winter season of 1924-25 he visited America as 'guest-critic' to the *New York Evening Post*. Books of this period are *Wagner as Man and Artist* (1914), a trenchant criticism of official views of the man as exhibited in *Mein Leben*, etc., and a sympathetic study of the artist as exhibited in the music-dramas; a further collection of essays called *A Musical Motley* (1919), and *The Piano-player and its Music* (see under MECHANICAL APPLIANCES). *A Musical Critic's Holiday* (New York, 1925) is a valuable study in the principles of criticism.

Newman translated the texts of Wagner's music-dramas from 'Der Ring des Nibelungen' to 'Parsifal' and also Schweitzer's *J. S. Bach*. Though his study of Bach deepened the hold of the classics on him the period of his special knowledge has remained the century from Berlioz to Richard Strauss with Wagner at its centre. C.

NEWMARCH, ROSA HARRIET (b. Leamington, Dec. 18, 1857), a writer on music, who has exerted an important influence in England especially through her programme notes (see ANALYTICAL PROGRAMMES) written for the concerts of the Queen's Hall Orchestra.

The daughter of Samuel Jeaffreson, M.D., and grand-daughter of James Kenney (playwright), she married (1883) Henry Charles Newmarch, and all her writings have appeared under her married name. In 1897 she made the first of a series of visits to Russia, where she worked at the Imperial Public Library of St. Petersburg, under the supervision of Vladimir Stasov (q.v.). The outcome appeared in a number of articles and lectures on Russian music and art in general, which did much to further in England that interest already awakened by Tchaikovsky's music. Her articles on Russian composers, first contributed to the second edition of this Dictionary, were to many English musicians the first source of enlightenment with regard to the aims and accomplishments of the Russian Nationalists. Mrs. Newmarch paid her last visit to Russia in the early summer of 1915, and when political events closed that country to civilisation she directed her interest to Western Slavonic music, particularly that of the Czechs and Slovaks. Here again, in her visits to Czechoslovakia, her lectures and various writings, which include important contributions to the present work, her object has been to effect introductions between the art and artists of her own and other countries. As official programme writer to the Queen's Hall Orchestra (1908-20, since then in conjunction with Eric Blom), Mrs. Newmarch has acted as the advocate before the London public of the new music of all countries, and her qualities of insight and sympathy with

¹ H. C. de Lafontaine. *The King's Music*.

every kind of high artistic aim have fitted her ideally for such work.

The following is a list of her chief musical publications:

Johannes Brahms, trans. from the German of Hermann Deiters, with a preface by J. A. Fuller Maitland (1887).
Borodin and Liszt, with an introduction to the study of Russian music (1889).
Tchaikovsky (1900).
The Life and Letters of Peter Ilich Tchaikovsky, edited and translated from the Russian (1906).
Cléopâtre Franck, translated from the French of Vincent D'Indy, with an introduction (1909).
Edits The Living Masters of Music series, to which she contributed the volume on *Henry J. Wood*.
The Russian Opera (1914; French ed., 1922).
 English translations of Moussorgsky's 'Boris Godounov', 'Khovantchina', 'Tchaikovsky's 'Queen of Spades' and Rimsky-Korsakov's 'Ivan the Terrible' (Pskovityanka).
Edits The Russian Song Books and Russian Folk Songs (J. & W. Chester).

Non-musical publications include: *Horae Amoris*, songs and sonnets (1903); *Songs to a Singer* (1906); *Poetry and Progress in Russia* (1907); *The Russian Arts* (1916); *The Devout Russian* (1918).

NEW PHILHARMONIC SOCIETY, THE (1852-79). The prospectus, dated from Cramer's, Jan. 1852, states that the Society was founded to give more perfect performances of the great works than had hitherto been attained, and to afford to modern and native composers a favourable opportunity of coming before the public. Classical music was not to be exclusively adhered to; Exeter Hall was chosen as the locale; Berlioz was engaged as conductor for the first season; the band was magnificent (twenty first violins, led by Sibori); the chorus was professional; and the subscription for stalls for six concerts was £2: 2s., professional subscribers, £1: 1s. The concerts of the second season were conducted, four by Lindpaintner, and two by Spohr, in combination with Dr. Henry Wylde. The orchestra was enlarged to twenty-four first violins, etc. For the third season the concerts were removed to St. Martin's Hall, and were conducted partly by Lindpaintner, partly by Dr. Wylde. For the fourth season they returned to Exeter Hall. For the fifth and sixth, 1856 and 1857, Hanover Square Rooms were chosen. In 1858 Wylde assumed the entire responsibility of the undertaking, and the concerts were henceforward held in St. James's Hall, season by season, as the 'New Philharmonic Concerts,' until 1879, when Wylde retired in favour of William Ganz. The programmes throughout maintained that preference for novelties which distinguished them at the outset. In 1859 the practice of making the rehearsals public was begun. In 1879 the Society came to an end, the last concert under its name being given on June 21 of that year. The scheme was carried on for three years more as 'Ganz's Orchestral Concerts.'

NEW QUEEN'S HALL ORCHESTRA. This organisation, originally known as the Queen's Hall Orchestra, was formed in 1895, with Robert Newman (*d.* 1926) as manager and Henry J. Wood as conductor for a series of PROMENADE CONCERTS (*q.v.*) given in QUEEN'S HALL (*q.v.*). The success of these concerts, due

to two things, the quickly growing reputation of the conductor as such and the musical policy adopted in the selection of the programmes, led to the establishment of a series of Saturday afternoon concerts given by the orchestra in the same hall. The first concert took place on Jan. 30, 1897, and the series has continued uninterrupted ever since under the same manager and conductor. In 1904 a dispute arose between the directors and the players over the right to send deputies, which ended in the withdrawal of a large number of the latter, who formed themselves into a separate organisation. (See LONDON SYMPHONY ORCHESTRA.) Wood, however, quickly engaged other players and the orchestra soon acquired the peculiar sensitiveness and perfection of ensemble which are characteristic of his methods of training and, incidentally, of continual performance under a permanent conductor. Orchestra and conductor have, in fact, been inseparable, except through occasional and unavoidable causes. At first the financial responsibilities of the orchestra rested upon Newman; in 1902 they were undertaken by a syndicate, with Sir Edgar Speyer as head, and in 1915 were transferred to Messrs. Chappell,¹ lessees of Queen's Hall. The title of the orchestra was then changed to that it now bears, personnel, conductor and manager remaining as before. An important feature of the establishment of the orchestra was that Wood insisted upon the introduction of the French pitch. The activities of the orchestra were extended by the Sunday afternoon orchestral concerts started at the Queen's Hall in Oct. 1895, the first two series of which were conducted by Randegger. (See QUEEN'S HALL.) It has taken part in some of the provincial festivals, such as Norwich and Sheffield, and from time to time special series of concerts have been given in London, notably the London Festival of 1911.

N. C. G.

NEW SYMPHONY ORCHESTRA, see ROYAL ALBERT HALL ORCHESTRA.

NEW YORK. The history of musical societies in New York City does not extend back further than the middle of the 18th century. Until that period the social customs and tastes of the inhabitants of the town, and the character of their entertainments, were swayed by the original settlers and their descendants. An excerpt from the writer's monograph entitled *The Philharmonic Society of New York* states the case with sufficient comprehensiveness to serve present purposes, and is therefore quoted here:

'The Dutch had brought little or no artistic sensibility with them, and their experiences from the time of their settlement of Manhattan Island till the final occupation of the town by the British were not of a kind calculated to develop a love for music. In social, political and commercial affairs their influence

¹ Messrs. Chappell announced the intention of abandoning the orchestra in March 1922.

was much more widespread and enduring; but, having come from a country where music was sadly neglected, to another where life meant a struggle and where of necessity the commercial spirit swayed everything, the Dutch could not fairly be expected to give a very appreciable tinge to the art-tastes of the growing town. After New Amsterdam had become New York, and was firmly settled in the possession of Great Britain, and English merchants and English soldiers had begun to work a change in the social life of the town, the things which embellish civilisation were speedily introduced and, very naturally, in their English types. All the musical impulses of a century ago came from England, though, after the cultivation of the serious forms of music had begun, German musicians were largely instrumental in advancing them in New York as well as Boston and the other large cities of the sea-coast.

Amateur orchestras came into existence late in the 18th century. One of these, which gave its 48th anniversary concert in 1847, was called the EUTERPEAN. Before the end of the first quarter of the 19th century there were in existence, besides the Euterpean, a PHILHARMONIC SOCIETY and the CONCORDIA, clubs of singers and instrumentalists, the former English in its constitution, the latter predominantly German. There was a professional element in these organisations, and it was in significant degree the creator of the influence which in 1842 crystallised in the present Philharmonic Society, which since then has been the most notable institution in the field of American instrumental music, and with whose foundation the professional record may be said to begin. It is the only concert organisation in New York whose history extends back to the middle of the 19th century.

The history of the choral societies using the vernacular, which preceded the present Oratorio Society, extends back to the last decades of the 18th century, and seems to have begun in its larger phase—there were Glee Unions like those of England at an earlier date—with movements looking to the betterment of church music after the shackles of the old psalmody had been cast off. William Tuckey, who had been a vicar-choral in Bristol, was brought from England in 1752 to be clerk of Trinity parish. He served in that office for four years from Jan. 1, 1753. At first his choir was composed of boys and girls from the Charity School, but he succeeded in eliminating the female element soon after he entered upon his duties. After his departure from Trinity parish he continued to labour in other parishes and outside the church walls. He raised a subscription for which he taught 'ladies and gentlemen' a *Te Deum*, evidently of his own composition, which he 'guaranteed' to be 'as good a piece of music as any of the common *Te Deums* sung in any cathedral church in England.' On Jan. 16, 1770, the same musician gave a concert for his own benefit, at which he performed the overture and sixteen numbers of Handel's 'Messiah.' A Handel and Haydn Society, Choral Society and Sacred Music Society all grew out of movements which had

their inception in the Episcopal Church, and from 1825 on there was a continuous succession of singing-societies till the field was occupied by the organisations whose histories are told below. The Sacred Music Society, under the direction of Ureli Corelli Hill, one of the founders of the Philharmonic Society, performed Handel's 'Messiah' in 1831 and Mendelssohn's 'St. Paul' in 1838. In 1844 Hill invited Spohr and Mendelssohn to visit New York for the purpose of conducting a festival after the English model. Nothing came of the enterprise at the time, but in Feb. 1847 a Mendelssohn Festival was held in Castle Garden, in which the Philharmonic Society, the German Liederkranz and the Concordia took part.

The musical societies of New York are described below in the chronological order of their foundation.

PHILHARMONIC SOCIETY (1842).—The New York Philharmonic is the oldest orchestral body in continuous service in the United States devoted to the performance of instrumental music. It is also said to be the third oldest in the world, after the like-named societies of London and Vienna, and was formerly a communistic body of professional musicians, the profit-sharing members constituting a little less than two-thirds of the performers at its concerts, who generally numbered from 90–110. Among the honorary members of the Society since its foundation have been Viennese, the first one, elected in 1843; Spohr, Mendelssohn, Jenny Lind, Sontag, Alboni, William Vincent Wallace, Thalberg, Mme. Parepa-Rosa, Franz Liszt, Richard Wagner, Joachim Raff, Anton Rubinstein and Dvořák.

The history of the Society had its beginning at a meeting of professional musicians called by Ureli Corelli Hill (an American musician, violinist and conductor, pupil of Spohr in Cassel), held on Apr. 2, 1842. The impulse to organise such a Society seems to have come from the artistic success achieved at a 'Musical Solemnity' given in June 1839, in honour of the memory of Daniel Schlesinger, one of the first thoroughly trained musicians to make his home in New York. The most prominent musicians in the city were present at this meeting and the meetings which followed, at which the organisation of the Society was perfected. Among them were Hill; A. P. Heinrich, an eccentric Bohemian composer who presided at the first meeting, but took no further interest in the affair; Charles E. Horn (*q.v.*); William Vincent Wallace, who was a member during the first two years; Alfred Boucher, a connexion of Alexandre Jean Boucher (*q.v.*); Dr. Edward Hodges, an English Cathedral musician, afterwards organist of Trinity Church; H. C. Timm and William Scharfenberg, pianists of German birth and training; George Loder, a

member of the English family of musicians of that name; and D. G. Etienne, a French pianist who could play the horn when required. To Loder, who was connected with the Society throughout the first decade, fell the honour of conducting the first performance in the United States of Beethoven's Choral Symphony at a concert of the Society on May 20, 1846. Three concerts were given in the first season (1842-1843), and the first programme is such excellent testimony to the seriousness of the founders' aims that it deserves publication here.

First Concert, Dec. 7, 1842—Symphony No. 5, in C minor, Beethoven (conducted by U. C. Hill); Scena from 'Oberon,' Weber (Madame Otto); Quintet in D minor, for pianoforte, violin, viola, violoncello and double-bass, Hummel (Messrs. Scharfberg, Hill, Derwort, Boucher and Rosler); Overture 'Oberon,' Weber (conducted by Mr. Etienne); Duet from 'Armida,' Rossini (Madame Otto and Mr. C. E. Horn); Scena from 'Fidello,' Beethoven (Mr. C. E. Horn); Aria Brava from 'The Soraglio,' Mozart (Madame Otto); New Overture in D, Kalliwoda (conducted by Mr. Timm). The orchestra during the vocal music was directed by H. C. Timm.

For the next sixteen years four regular concerts were given each season, then for ten years five. In the 27th season the number was increased to six, and this remained the rule until the 56th season, when the number was increased to eight. Out of a custom of admitting amateurs to the rehearsals of the Society, which was inaugurated in the second season, there grew the so-called public rehearsals, which for several decades differed in nothing but name and the time of performance from the regular concerts. In 1906 the title 'public rehearsals' was abandoned for 'Afternoon Concerts.' This explains the statement, heretofore made, that the Society for some years gave sixteen subscription concerts annually. It was the custom during the early years of the Society, when the president was a professional musician and necessarily a member of the Society, to leave the conducting of the concerts in his hands, though for a number of years that official found it expedient to share the duty with the leading members of the Society, especially such as were at the head of singing and other musical societies. Thus in the 1st season, though only three concerts were given, five members officiated at the conductor's desk, viz.: U. C. Hill, H. C. Timm, W. Alpers, Alfred Boucher and George Loder. D. G. Etienne aided Hill, Loder and Alpers in the 2nd season. Two new men, one of whom was destined to play an important rôle in the history of the Society, appeared in the 7th season. They were Theodore Eisfeld, who came from Europe with experience gained in conducting concerts in Paris and elsewhere; and Max Maretzek, whose real activities belonged in the field of opera. In Eisfeld's second season the directors changed their policy and elected Eisfeld sole director for the season. In 1854 Carl BERGMANN was associated with him and H. C. Timm, who was then president, and thereafter for ten years, save the 15th and 16th seasons conducted solely by Eisfeld and the 14th and 17th conducted by Bergmann, these two men conducted alter-

nately. Bergmann was sole conductor from 1865-76. Then came an interregnum of three years with Dr. Leopold DAMROSCH, Theodore THOMAS and Adolph Neuendorff as conductors. Thomas was conductor for the next twelve years, Anton SEIDL for the next seven (holding the position at the time of his death on Mar. 28, 1898), and Emil PAUR for four. Under the artistic administration of Thomas and Seidl the Society grew steadily in prosperity and reached its zenith. A falling off in popular interest during the Paur régime and the one season, the 61st, in which Walter DAMROSCH was conductor, led to the adoption of the custom, which had gained a foothold in some of the European capitals, of engaging a different conductor for each concert, instead of one for the entire season. These 'guests' in the 62nd season were Edouard Colonne of Paris, Gustav F. Kogel of Frankfort, Henry J. Wood of London, Victor Herbert of Pittsburgh, Felix Weingartner of Munich and Richard Strauss of Berlin. In the 63rd season the conductors were Gustav F. Kogel, Edouard Colonne, Wassili Safonov of Moscow, Felix Weingartner and Karl Panzner of Bremen; Theodore Thomas, who had also accepted the invitation of the directors, died before the concert which he was to conduct, and Kogel was called back from Frankfort to take his place. In the 64th season the Society's invitation was accepted by Willem Mengelberg of Amsterdam, Victor Herbert, Max Fiedler of Hamburg, M. Safonov, Dr. Ernest Kunwald of Frankfort and Fritz Steinback of Cologne. At the end of this season an engagement was made with Safonov as sole conductor for three years. To carry out these new policies a number of public-spirited citizens placed a considerable fund at the service of the Society.

Later Philharmonic conductors were; 1909-1911, Gustav Mahler; 1911-23, Josef Strinsky; 1921 and half-seasons thereafter, Willem Mengelberg; also occasional conductors, including Artur Bodanzky (1921-22), Henry Hadley (1920-25, for American programmes), Willem Van Hoogstraten (associate, 1923-25), Ernest Schelling (a series of children's concerts, begun 1924-25), Igor Stravinsky (guest, 1925), Arturo Toscanini (guest, 1926), and as Mengelberg's associate for half-seasons, Wilhelm Furtwaengler (1925 and after). The Philharmonic absorbed the National Symphony (active, 1919-1921) and the City Symphony (1921-23). It took over the Stadium Summer Concerts (started by Arnold Volpe, 1917) and the American Orchestral Society (founded 1921 by Mrs. E. H. Harriman and continued under Philharmonic auspices). A bequest of Joseph Pulitzer (1912) provided \$500,000 endowment, later said to be doubled; a building fund of \$110,000 was subscribed in the 75th jubilee year (1917); and the Society's finances were

subsequently guaranteed by a Board of Directors headed by Clarence H. Mackay. Calvin Coolidge, President of the United States, was elected an Honorary Associate, Mar. 16, 1924.

(For a history of the Society see *The Philharmonic Society of New York*, a memorial by Henry Edward Krehbiel published on the occasion of the Fiftieth Anniversary of the founding of the Society, Apr. 1892, London, Novello, Ewer & Co.)

THE DEUTSCHER LIEDERKRANZ (1847) is perhaps the most striking representative in the United States of the musical club developed on the German lines which combine the cultivation of music with good fellowship, social and domestic enjoyments. Naturally the task grows more difficult as the original immigrants die and the younger generation, born and educated in the country, take their places.

When the first steps to organise the Liederkranz were taken in the fall of 1846 the German population in New York was small, but already boasted a singing-society called the Gesangverein der Social-Reformer, a name which betrays its bond of union to have been as much political as artistic. Those who responded to the call numbered 150, but this number was cut down to 25 when it was proposed to assess would-be members twenty-five cents each. Nevertheless an organisation was effected on Jan. 9, 1847, the name Deutscher Liederkranz agreed on and Dr. Hermann E. Ludwig elected president. A musician named Krauskopf was elected conductor. Rehearsals were begun in the Shakespeare Hotel, and the first concert was given in the Apollo Rooms, then the fashionable concert-hall of the city, on May 17, 1847. The chorus numbered about 100. Julius Hecht succeeded as conductor on Aug. 20 of the same year. The Liederkranz participated in the concerts of Jenny Lind, Thalberg, the Mendelssohn Festival of 1848 (which was attended by an audience of 8000), William Vincent Wallace and the Philharmonic Society. In Feb. 1849 Hecht resigned, and was succeeded by Wilhelm Müller, who had been a conductor in Brunswick. He lasted less than a year and one Weisheit, whose tenure of office was no longer, was elected. Then Agriol Paur was elected conductor in May 1850, and remained in active duty till he retired as honorary conductor with salary in 1884. Two years before Theodore THOMAS (*q.v.*) had been elected to perform the duties which were become too onerous for Paur, and at various times during the next two years, Edward Heimendahl and Arthur Mees were frequently called in to assist Thomas, who was unable to devote himself to the work of training the singers. He declining a re-election, in 1884 Reinhold L. Herman was elected and served five years. Heinrich Zoellner was called to the post from Cologne.

and remained in office from 1890-98. From 1898-1903 the conductor was Dr. Paul Klengel, who came from Leipzig, and he was succeeded by Arthur Claassen. The club was active during its early years in manifesting sympathy with the revolutionists in Germany, and the influx of political refugees in 1849 resulted in a strengthening of its membership. Internal dissensions resulted in a defection in the membership and the organisation of the Männergesangverein Arion in 1854.

THE MÄNNERGESANGVEREIN ARION (1854-1918), as compared with the Liederkranz, had a larger devotion to characteristically German things and German methods, and a slightly larger proportion of active members. It also adhered to its original mission as a promoter of songs for men's voices, and never cultivated music for mixed voices, or founded a women's choir. In the summer of 1892 sixty singers were sent by the Society to make a tour of the principal cities of Germany under the direction of Frank van der Stucken, and made a profound impression by the excellence of their performances. In Jan. 1854 fourteen members of the Liederkranz, disagreeing violently with the majority of that Society, seceded and organised a club to which they gave the name Männergesangverein Arion. Within a week they gave a concert in the Apollo Rooms. The first conductor was a musician named Meyerhofer, who was succeeded by Carl BERGMANN (*q.v.*). Bergmann remained in the position, barring a short interregnum in 1862, till 1870. Other conductors for short terms were Carl Anschütz, F. L. Ritter, V. Hartmann and H. Grenier. In 1871 Dr. Leopold DAMROSCH (*q.v.*) was brought from Breslau, and he remained conductor until 1884, when he made way for Frank van der STUCKEN (*q.v.*), who was succeeded in the fall of 1895 by Julius Lorenz, and 1913-18, Carl Hahn. In addition to the customary music for men's voices, the Arion, from the beginning of its career, cultivated operettas. In 1855 a work of this kind, composed by Carl Bergmann and called 'Mordgrundbruck,' was performed, and a year later 'Der Gang zum Eisenhammer' by the same composer. Amusing little works in the same style, which do not call for female voices, were given at long intervals of time, but only for the diversion of the members and their families. The choruses in the first Wagner opera ever performed in America were sung by the active members of the Männergesangverein Arion. This was 'Tannhäuser,' produced under the direction of Carl Bergmann at the Stadt Theatre in the Bowery on Aug. 27, 1859. In 1869 the Society gave a public performance of 'Der Freischütz.' In 1918 the Liederkranz and Arion were reunited, following the vicissitudes of the various German-American societies during the war of 1914-18.

BROOKLYN PHILHARMONIC SOCIETY, incorporated 1857, had for its declared object 'the advancement of music in the city of Brooklyn, by procuring the public performance of the best works in this department of art.' Beginning in the autumn of 1857, five or more concerts were given in each season, that at the close of the 21st season, May 10, 1879, being the 108th—each preceded by three public rehearsals. During the first five seasons the concerts were given at the Brooklyn Athenæum. After 1862 the Brooklyn Academy of Music was made use of. The orchestral conductors have been—Theodore Eisfeld, 1857–62; Theodore Thomas, part of 1862; Eisfeld again, until the election of Carl Bergmann, Sept. 5, 1865; Thomas, re-elected Sept. 4, 1866; Bergmann again, 1870–73; succeeded May 26, 1873, by Thomas, who retained the position until his departure for Chicago, assisted by William G. Dietrich, who had charge of the orchestra at the first two rehearsals of each concert. The concerts were always of a high order; the orchestra large and composed of the best musicians procurable. Important works were produced for the first time in America, including several by native composers. Large choral works occasionally figured on the Society's programmes.

What was formerly the city of Brooklyn, N.Y., is now a borough of the American metropolis. Nevertheless the Philharmonic Society retains the corporate name by which it has been known since 1857. Theodore Thomas, with his orchestra, gave its concerts from 1873–1891. On his departure for Chicago an arrangement was made by which the concerts (five annually, by the Boston Symphony Orchestra, and later by the New York Symphony also) were continued under the joint auspices of the Philharmonic Society and the Institute of Arts and Sciences. After the destruction of the Academy of Music, Nov. 29, 1903, the concerts were transferred to the Baptist Temple until the rebuilding of the Academy on another site.

THE MENDELSSOHN GLEE CLUB (1866), organised on May 21, 1866, and incorporated under the laws of the State of New York on Oct. 21, 1876, cultivates unaccompanied part-songs, and its active membership is composed almost wholly of professional singers. In the formative period of the club's history, meetings having been held in the winter of 1865–66, rehearsals were conducted by a Mr. Schripf and Mr. Albites. In 1867, however, Joseph Mosenthal was elected conductor, and such he remained till his death, which came to him suddenly in one of the club's rooms in 1896. Mosenthal, a native of Cassel, was a violinist, pupil of Spohr, and for many years one of the leading church musicians of New York. The season of 1896 was filled out by Arthur Woodruff, one of the active members, whereupon

Edward A. MacDowell (*q.v.*) was elected, serving till May 1898, being succeeded by Arthur Mees, who, in 1904, gave way to Frank Damrosch (*q.v.*); 1909, Clarence Dickinson; and 1919, Nelson P. Coffin. Mosenthal wrote a number of songs for the club, among the best known of which are 'The Sailors' Song,' 'Music of the Sea,' 'Blest Pair of Sirens,' 'Thanatopsis.' Reinhold L. Herman wrote for it 'Song of the Seasons,' and W. W. Gilchrist 'Ode to the Sun,' 'Autumn Day' and 'Dreaming Forever.'

ORATORIO SOCIETY (1873).—When Dr. Leopold Damrosch came to New York in 1871 to assume the conductorship of the Männergesangverein Arion he had been for fourteen years conductor of singing-societies as well as the Symphony Orchestra in Breslau. In the spring of 1873 he invited a number of singers to his house, and submitted a proposition to form a singing-society of mixed voices which should consistently cultivate the higher forms of the art. The singers decided to make a beginning. True to its traditions, which show that choral music in New York had its beginnings within its walls, Trinity parish gave the new choir the use of Trinity Chapel as a meeting-place. Fifteen or eighteen persons attended the first rehearsal. Summer interrupted the meetings, and after the customary vacation it was thought wise to change the study room to a ware-room of the Knabe firm of pianoforte manufacturers. There, too, the first concert of the infant Society was held on Dec. 3, 1873. Neither Dr. Damrosch nor the officers, at the head of whom stood Prof. F. A. P. Barnard, president of Columbia College, thought it advisable to ask public support for the concert. The programme embraced a chorale by Bach, Mozart's 'Ave Verum,' the motet 'Adoramus Te,' by Palestrina, a part-song by Mendelssohn, and some of the airs and choruses from Handel's 'Samson.' The choir numbered between fifty and sixty, and the artistic success attained was encouraging. Thus was the Oratorio Society launched, which soon assumed the task of maintaining the oratorio in New York. A public hall was hired for the second concert on Feb. 26, 1874, at which the programme was still of a miscellaneous character, comprising again a chorale by Bach, Orlando Lasso's 'And the Angel,' Michael Haydn's 'Tenebrae factae sunt,' Handel's 'Zadok, the Priest.' At the third concert, on May 12, 1874, the Society entered upon its mission. It, and public interest in it, had grown apace, and it was found possible to perform an entire oratorio with orchestral accompaniment. Naturally the work was 'Samson.' The prospectus issued at the outset stated the purpose of the new Society to be the cultivation 'of the highest style of sacred and secular music,' and though the oratorio was admitted to be the objective

point, yet the compositions of masters like Lotti, Anerio, Palestrina, Lasso, Purcell and Bach were admitted to be within the purview of its activities. The third concert was held in Steinway Hall, then the best and most fashionable concert-room in the city. On Christmas night, 1874, the Oratorio Society took from the palsied hands of the Harmonic Society, which went out of existence, the pious duty of an annual performance of the 'Messiah,' a duty which it has performed ever since, and which, indeed, has enabled it to continue its ministrations. The Harmonic Society had performed Handel's sacred oratorio annually in the Christmastide ever since its organisation in 1850. Since its organisation the Oratorio Society, numbering on an average 400 singers, has given three or four concerts annually, first at Steinway Hall, then the Academy of Music, Metropolitan Opera House and Carnegie Hall. Dr. Damrosch was conductor from the beginning down to his death in Feb. 1885. He was succeeded by his son, Walter DAMROSCH (*q.v.*), who served until the season 1898-99, when he in turn yielded to his brother, Frank DAMROSCH (*q.v.*). Other conductors were Sir Edward Elgar, 1904, a guest; 1912, Louis Kocmenich; 1917, Walter Damrosch again; and 1921, Albert Stoessel. Following is a list of the less familiar works performed by the Oratorio Society:

L. Damrosch, 'Ruth and Naomi' 1875; Liszt, 'Christus' (first part), 1876; Brahms, 'A German Requiem' (first time in America), 1877; Klei, 'Christus' (first time in America), 1878; Bach, 'St. Matthew Passion', 1880; Handel, 'L' Allegro, il Penseroso ed il Moderato', 1881; Rubinstein, 'The Tower of Babel', 1881; L. Damrosch, 'Sulamith' (first performance), 1882; Berlioz, 'Grand Messe des Morts', 1882; Cowen, 'St. Ursula', 1883; Wagner, 'Parsifal' (as an oratorio), 1886; Eduard Grell, *Mass a cappella*, 1889; Brahms, 'Commemorative Sentences', 1890; Saint-Saëns, 'Samson and Delilah', 1892; Tinel, 'St. Francis' (first time in America), 1893; Dvořák, 'Psalm cxlix', 1895; Verdi, 'Mazoni Requiem', 1896; Gounod, 'The Redemption', 1897; Parker, 'St. Christopher', 1898; Goetz, '137th Psalm', 1898; Walter Damrosch, 'Manilla Te Deum' (first time), 1898; Bach, *Mass in B minor*, 1900; Dvořák, 'Requiem', 1901; Elgar, 'Dream of Gerontius', 1903; Elgar, 'The Apostles' (first time in America), 1904; Richard Strauss, 'Falleter' (first time in America), 1905; Dvořák, 'Subat Mater', 1905; Beethoven, *Mass in D*, 1905. Two popular novelties in later years were Pierné's 'The Children's Crusade,' and Wolf-Ferrari's 'La Vita Nuova,' after Dante.

THE NEW YORK SYMPHONY SOCIETY (1878).

—This organisation is a successor, *de jure* if not *de facto*, of a Society of like name, which was founded in 1878 by Dr. Leopold DAMROSCH. During the early years of its existence the New York Symphony Society maintained an exceedingly active competition with the orchestra of Theodore THOMAS, and the rivalry of the organisations had much to do with familiarising the New York public with the works of the German, French and Russian composers as fast as they were published, and even before, since Damrosch and Thomas were both in the habit of securing manuscript copies of their compositions from the leading authors of Europe. After the death of Dr. Damrosch in 1885 his son Walter succeeded to the conductorship of the Society, and has remained its administrative as well as artistic head ever since. The Society has passed through many

vicissitudes, and has several times appeared to be moribund, only to be awakened to renewed life by its energetic and indefatigable conductor. The concerts were permitted to lapse in 1899, when Damrosch devoted a year to composition; again when he travelled with his own opera company, and still again when he became conductor for a season (1902-03) of the Philharmonic Society of New York. Retiring from that post Damrosch organised what for four years was called the New York Symphony Orchestra, on a co-operative basis, profit and loss being shared by the members of the organisation and a committee of guarantors.

The plan proved to be unsatisfactory, and in the spring of 1907 the guarantors called the old Symphony Society back to life, and resolved to proceed under the old style and in the old manner, paying the players weekly wages throughout the season, and assuming all financial responsibilities. At the same time it was determined to increase the number of concerts in New York City to twenty-eight, half of them to be given on Sunday afternoons. In the season 1905-06 Felix Weingartner alternated with Damrosch in conducting concerts in New York and other cities. This orchestra was among the first to make tours to many cities and towns in the United States. It also remained intact during the summer months, and provided music for large and fashionable resorts near Philadelphia and Chicago.

More recent guest conductors of the Symphony Society, both at Æolian and Carnegie Hall, have been Vincent d'Indy and, since the war, Albert Coates, Vladimir Golschmann, Bruno Walter and Otto Klemperer. The financing of the Society, which like other American orchestras faced an annual deficit of upwards of \$100,000, was guaranteed in 1914 and yearly thereafter by Harry Harkness Flagler. In 1920 Mr. Flagler sent the orchestra to Europe at a cost of \$250,000. The Sunday concerts were moved in 1925 to the new Mecca Temple, near Carnegie Hall.

APOLLO CLUB (Borough of Brooklyn) (1878).

—A glee club devoted chiefly to the performance of part songs for men's voices. The club is the outgrowth of a meeting of fifteen gentlemen, chiefly church singers, held on Nov. 1, 1877. Membership was later fixed at 80 voices and associates at 250. Three concerts have been given every season since, and have been attended by the élite of Brooklyn society. Dudley BUCK (*q.v.*) was conductor until 1903; he was succeeded by John Hyatt Brewer. Of Buck's many compositions the following were written for the Apollo Club and first brought forward at its concerts: 'The Voyage of Columbus,' 'The Bugle Song,' 'Paul Revere's Ride,' 'The Nun of Nidaros,' 'Twilight,' 'King Olaf's Christmas' and 'Chorus of Spirits and the Hours' from Shelley's 'Prometheus.'

CHURCH CHORAL SOCIETY.—Early in Feb. 1889 a number of gentlemen met in the Rectory of St. Bartholomew's Church for the purpose of discussing a plan formulated by Richard Henry Warren, organist of the church, looking to the production of the larger forms of ecclesiastical music within the walls of metropolitan churches and under conditions calculated to enhance their dignity and solemnity. Gounod's 'Mors et Vita' was presented (for the first time in New York) in St. Bartholomew's Church on Apr. 25, in the presence of a large congregation that had responded to the invitations. The function was treated as strictly religious. At a meeting held in the rooms of St. Bartholomew's Church on Dec. 16, 1889, the Church Choral Society was organised, the officers chosen being J. Pierpont Morgan, president; the Right Rev. H. C. Potter, Bishop of New York, and the Rev. E. Winchester Donald, vice-presidents; Henry W. Hayden, secretary; John Murray Mitchell, treasurer; and Richard Henry Warren, musical director. The Society's services were continued uninterrupted for seven years, with a tentative resumption in 1903. In its first epoch the Church Choral Society performed, besides other works,

Dvořák's *Requiem Mass* (first time in America), *Mass in D* (first time in America); Liszt's *Thirteenth Psalm* (first time in New York); George W. Chadwick's 'Phoenix explains' (first time in New York); Mackenzie's 'Veni, Creator Spiritus' (first time in America); Horatio W. Parker's 'Hora Novissima' (first time); Harry Rowe Shelley's 'Vexilla Regis' (first time).

In the second epoch:

Coleridge-Taylor's 'The Atoneement' (first time in America); Elgar's 'Light of Life,' 'Te Deum' and 'Benedictus' (first time in America).

THE MANUSCRIPT SOCIETY was founded in Aug. 1889, reorganised in 1899 as the Society of American Musicians and Composers, and again reorganised a year later for the purpose of promoting the interests of American composers. It had an enrolled membership of about 100 in 1906, when, after many futile efforts to enlist the general public in its activities, it was pursuing the policy of holding meetings for its members and invited guests at intervals of a month, for the purpose of hearing compositions by its members in the smaller forms.

Since the war (1914-18) this Society has been followed by many new organisations. Chief among those active in 1925 was the SOCIETY FOR PUBLICATION OF AMERICAN MUSIC.

THE BROOKLYN INSTITUTE'S department of music dates from 1891. Brooklyn is the second in importance of the boroughs constituting the city of New York. The Brooklyn Institute of Arts and Sciences is the outgrowth of the Brooklyn Apprentices' Library Association, which was incorporated by the Legislature of the State of New York on Nov. 20, 1824. A charter granted in 1843 widened the scope of the original association, and changed the name to the Brooklyn Institute. There was a still

greater extension of the Institute activities in 1888, and to the other artistic and scientific departments that of music was added in Nov. 1891, the first public function being a lecture on Chinese Music by H. E. Krehbiel. The membership of the department was 54 originally, and Dudley Buck was the first president. Since then the membership has grown steadily. Musical knowledge is promoted by means of lectures and concerts, the largest functions being the concerts of the Brooklyn Philharmonic Society (see above). For the maintenance of these concerts and unspecified concerts of chamber music the department has a fund of \$10,000, received as a bequest under the will of Henry K. Sheldon, many years president of the Brooklyn Philharmonic Society. From this latter Society, on the disbandment of its chorus, the department received a large number of vocal scores; it has also received gifts of a collection of exotic instruments and scores from James A. H. Bell and others. In the new Academy of Music provision was made for lecture, class and concert-rooms for the uses of the department.

PEOPLE'S CHORAL UNION AND SINGING-CLASSES were the fruits of a movement begun in the autumn of 1892 by Frank Damrosch to bring choral culture home to the wage-earning classes in the population of New York. It was the outcome of Settlement work and various civic and labour movements. Meetings were held in Settlement homes and Working Girls' Clubs in the section of the city largely occupied by Polish and Russian Jews employed in clothing manufactories. Elementary classes were at first formed to teach singing and sight-reading, Damrosch beginning the work and gradually turning it over to assistants. After the first year the elementary classes, three in number, were consolidated into one class for more advanced study, which met on Sunday afternoons in the hall of Cooper Union, one of the largest rooms in the city. A nominal fee of ten cents for each lesson was exacted, and the classes were self-supporting from the beginning. The study, beginning with the most elementary exercises, led up through simple rounds and partsongs to cantatas and oratorios. For several years, beginning 1897, the Choral Union gave an annual concert, with a chorus sometimes exceeding 1000 voices, at which such works as 'Messiah,' 'Elijah,' 'Samson,' Schubert's 'Miriam's Triumph,' 'Israel in Egypt,' 'The Seasons,' 'St. Paul' and Bruch's 'Cross of Fire' were sung under the direction of Frank Damrosch, later succeeded by Harry Barnhart.

MUSICAL ART SOCIETY, founded in 1894 for the cultivation of the works of Palestrina, Bach and a *cappella* music generally, consisted of a choir of some seventy professional singers whose performance exhibited the highest

standard. After a quarter century, this Society's unique artistic activity ended in 1920. Its conductor, Frank Damrosch, was asked to head the Institute of Musical Art. (See below.)

AMERICAN GUILD OF ORGANISTS.—The work of the Guild, established 1896, has broadened and been reinforced by the **NATIONAL ASSOCIATION OF ORGANISTS** (1908) and the **SOCIETY OF THEATRE ORGANISTS** (1919), the last-named formed by professionals in the large moving picture theatres. In certain festivals of organ music, such as the free recitals at Wanamaker's, New York, members of all three organisations take part.

YOUNG PEOPLE'S SYMPHONY CONCERTS OF NEW YORK.—For the purpose of giving children and young people an opportunity not only to hear standard symphonic works, but also to become familiar with their structure and contents, Frank DAMROSCH organised an annual series of concerts under the above title in 1898. Appreciation of the compositions is helped by explanatory remarks made by the conductor, in which the forms are briefly analysed and the poetic contents suggested, themes and phrases being played in illustration by the orchestra. The orchestra has full symphonic dimensions, that of the New York Symphony Society being employed and solo artists are frequently engaged. Expenses were not always covered, though for years all the seats in Carnegie Hall have been subscribed for, and the resulting deficits were first met by private subscription of public-spirited music-lovers.

On Dr. Frank Damrosch's retirement as conductor, the Symphony Society, under Walter Damrosch, took over the Young People's Concerts, adding another series of concerts for children. These last were held on Saturday mornings at Aeolian and later at Carnegie Hall, where both series sold out annually in advance of the season and were widely copied by orchestras in other cities and abroad.

PEOPLE'S SYMPHONY CONCERTS OF NEW YORK.—Under this title a series of concerts was annually given by an orchestra of excellent proportions and artistic character, and with programmes of a high class, for which there was little more than a nominal charge for admission, the prices varying from ten cents to fifty. The concerts were given in pairs, first in the large hall of Cooper Union, situated in the densely populated district known as the East Side; then in Carnegie Hall, the home of all the fashionable concerts, the purpose being to reach all classes of the people whose tastes the concerts were designed to educate. Under the title 'The People's Symphony Concerts' auxiliary chamber concerts were also given by local combinations of players. All the concerts, which were called into being by Franz Xavier Arens in 1902 and directed by him until his removal to California, were given under the

auspices of an organisation incorporated under the laws of the State of New York, and were maintained largely by the contributions of philanthropic persons interested in musical culture. These contributions ranged from \$2500, which sum entitled the donor to be a founder, to a dollar a year. Receipts and expenses were about \$12,000 a year, and at the end of 1905 the organisation had a permanently invested fund of the same amount.

Annie Louise Cary, the American opera singer, left a bequest of \$50,000 to the People's Symphony Concerts in 1921. With this fund the founder's son, Egbert L. Arens, continued the chamber-music concerts in a municipal hall at Washington Irving High School, in Irving Place, where leading chamber organisations played in turn at a nominal charge to several thousand hearers.

H. E. K.; rev. with addns. W. B. O.; incorp. material from F. H. J.

RUSSIAN SYMPHONY ORCHESTRA (1904-18), organised under Modest Altschuler's direction, and until the war (1914-18) receiving a small annual subsidy from the Russian Ministry of Education. It gave new works by Rachmaninov, Rimsky-Korsakov, Scriabin, Liadov, Ippolitov-Ivanov and others; assisted at American débuts of Rachmaninov, Scriabin, Lhevinne and Elman, and in festivals on tour.

SCHOLA CANTORUM (founded 1912), originally the women's chorus of the MacDowell Club, recruited to a large mixed choir under the able direction of Kurt Schindler. In addition to Latin and mediæval masters, the Schola's programmes were enriched by folk-songs and modern art-songs of Russia and Finland, old French and English carols, and especially by Schindler's gatherings from Spain.

FRIENDS OF MUSIC (founded 1913) was begun as a private Sunday afternoon assembly, and became influential in producing rare or unknown works with the Metropolitan Opera Orchestra under Artur Bodanzky and the Friends of Music Chorus under Stephen Townsend. It has produced many Bach cantatas. Pfitzner's 'Von deutscher Seele,' Mahler's 'Lied von der Erde' (1923, 1924), Purcell's 'Dido and Æneas' and (1925) Honegger's 'Le Roi David.'

NEW YORK CHAMBER MUSIC SOCIETY was founded in 1914 by Carolyn Beebe, pianist, with a dozen men from the string and wind players in local orchestras. In 1925 there were nearly forty groups of chamber musicians, either resident or annual visitors to the concert platforms of New York.

PEOPLE'S CHORUS OF NEW YORK (founded 1916) was organised by Lorenzo Camilieri, and taking part in patriotic occasions during the war, became a permanent enterprise of popular education and participation in music, like its predecessor, the People's Choral Union.

BEETHOVEN ASSOCIATION (founded 1919),

was formed by volunteer artists under the presidency of Harold Bauer, for performance of rarely given chamber music of Beethoven. Its programmes were varied by songs of that master and soon extended to other classic composers. Proceeds were devoted to needy musicians and (1923) to the publication of Krehbiel's translation of Thayer's *Life of Beethoven*.

JUILLIARD FOUNDATION (founded 1919), a bequest nominally of \$5,000,000, from Augustus D. Juilliard, which proved double that amount when received (1923) and was estimated later at \$20,000,000, the largest sum ever given to music. The fund was incorporated (1920) under Dr. Eugene C. Noble and (1924) awarded its first 100 free scholarships under famous artist teachers.

AMERICAN MUSIC GUILD and **INTERNATIONAL COMPOSER'S GUILD** (founded 1921), and **LEAGUE OF COMPOSERS** (founded 1923), three musically 'radical' organisations arising through the spread of interest in modern music generally since the war (1914-18). The International produced (1923-24) Stravinsky's 'Renard,' under Stokowski. The League in recent seasons gave Schönberg's 'Pierrot Lunaire' and Respighi's 'Sette Canzoni.'

STATE SYMPHONY ORCHESTRA (founded 1923), incorporated under the laws of the State of New York by union musicians who elected Josef Stransky as their leader and Carroll Downes, a New York banker, as president. The orchestra gave fourteen concerts in its first season. Stransky, retiring in 1924, was succeeded by Ignaz Waghalter as conductor, and (1925-26) Ernst von Dohnanyi and Alfredo Casella.

AMERICAN NATIONAL ORCHESTRA (founded 1923), established under the leadership of Howard Barlow, gave concerts of serious purpose and merit thrice yearly, bringing forward the more promising works of native composers. W. B. C.

EDUCATIONAL

THE INSTITUTE OF MUSICAL ART (1904) is the principal Conservatoire of Music in New York. Founded in 1904 with an initial endowment of \$500,000 by James Loeb, it was opened in the following year in an already existing building on Fifth Avenue and 12th Street, with Frank Damrosch as director. Subsequent endowments enabled the Institute to remove (1910) up town into a new building, 120 Clarmont Avenue, specially designed and equipped for the purposes of a music school. There its work has been developed under the continued guidance of Frank Damrosch to the dimensions of a full training establishment in every branch of the art on the model of the leading music schools of Europe. There is a theatre for the study of opera, and special emphasis is laid on that

branch, on orchestral playing and other ensemble work. Courses for the training of teachers are scientifically planned. The number of students was originally fixed at about 600, but this number has been exceeded. The Institute is staffed by a faculty of over seventy leading musicians. A valuable library, to which students have access, is an important part of the Institute's equipment.

THE COLUMBIA UNIVERSITY of New York provides courses in music under a professor with assistants. The practical side is attended to at Teachers' College, while in the University itself lectures are given in history, form, theory and aesthetics of the art. Edward MacDowell was professor 1896-1904; he was succeeded by Cornelius Ryber, 1904-1919, who was followed in turn by Daniel Gregory MASON (*q.v.*).

MUSIC SCHOOL SETTLEMENTS, which had their origin in New York, are a valuable feature of the educational life in many of the greater cities of the United States. The original settlement was that started in New York in 1894 and housed at 51, 53 and 55 East 3rd Street. The object is to provide musical education in the poorer districts for children and young people largely drawn from the foreign immigrants. Many talented artists have been thus discovered, trained and produced. Along with the artistic side of the work goes the social one of producing the sense of American citizenship among the rising generation of these classes. The work has been carried on in a highly efficient manner by several directors, Thomas Tapper (1907-09), David Mannes (1910-15), Arthur Farwell (1915-19) and Melzar Chaffee. The number of pupils is about 1000 annually, and great attention is devoted to orchestral practice in a series of classes graduated according to age and ability. (Information from *The Annual Report* of the Music School Settlement; *Amer. Supp.*) C.

NIBELUNGEN, see **RING DES NIBELUNGEN**.

NICCOLINI (NICOLINI), GIUSEPPE (*b.* Piacenza, Jan. 29, 1763; *d.* there, Dec. 18, 1842), studied at the Conservatoire S. Onofrio, Naples, and under Giac. Insanguine. He was a prolific opera composer whose 'Trajano in Dacia' carried off the palm in 1807 over Cimarosa's 'Horazi e Curiazi,' but he was eventually overshadowed by Rossini and devoted himself chiefly to the composition of church music. In 1819 he became maestro di cappella of Piacenza Cathedral. A list of his operatic works, as also of his masses and other church compositions, appears in *Q.-L.* and *Fétis*. E. v. d. s.

NICHELMANN, CHRISTOPH (*b.* Treuenbrietzen, in Brandenburg, Aug. 13, 1717; *d.* Berlin, July 20, 1762), was pupil and first treble in the choir-school of St. Thomas, Leipzig, and thus enjoyed his first musical instruction from Sebastian Bach. Spitta says it was from Friedemann Bach that he had his lessons on the

clavier, although Friedemann can only have been a very young man at the time. Nichelmann betook himself for a time to Hamburg, where he made the acquaintance of Mattheson and Telemann. Coming to Berlin in 1738 he continued his studies in counterpoint under Quanz, and in 1744, probably on the recommendation of Emanuel Bach, was appointed second cembalist or harpsichord player to the Royal Chapel, in which capacity his chief duty was to accompany the flute-playing of King Frederick the Great. In 1756, for some reason or other, he was dismissed from the chapel, but continued to live in Berlin by giving private lessons, though always in straitened circumstances. He was highly esteemed by his Berlin contemporaries as a composer of odes and works for clavier, and many of his works appeared in the various collections of clavier pieces and odes, such as the *Musikalische Allerlei* of 1760, and other similar works edited by F. W. Marpurg. Twelve clavier sonatas, their style resembling that of Emanuel Bach, were published in two parts as op. 1 and op. 2 by Schmid of Nuremberg, and six of them reappeared in London. A large number of clavier concertos and other works, including a serenata, 'Il sogno di Scipione,' performed at Berlin before the King in 1746, exist in MS. Nichelmann is also known as the author of a treatise on the nature of melody (*Die Melodie nach ihrem Wesen*, etc.) published in 1755, which provoked some controversy. The six sonatas forming op. 2, and other pieces, are reprinted in the 'Trésor des pianistes.'

J. R. M.

NICHOLL, HORACE WADHAM (b. Tipton, near Birmingham, Mar. 17, 1848; d. New York, Mar. 10, 1922) (a descendant of the founder of Wadham College, Oxford), was taught music by his father and Samuel Prince, was organist at Dudley, near Birmingham in 1867-70, and at Stoke-on-Trent, 1868-70. While at the latter place he was persuaded to go to Pittsburg, where he became organist of St. Paul's Cathedral, and afterwards at a Presbyterian church. He lived in New York from 1878 onwards, for two years as organist of St. Mark's. As a composer he united great contrapuntal skill with a modern taste; his organ pieces include twelve symphonic preludes and fugues, a symphonic poem called 'Life,' in six movements, and works in various forms. Among his most important compositions in other forms are a cycle of four oratorios (1880-1890), 'Adam,' 'Abraham,' 'Isaac,' and 'Jacob,' all in MS.; a setting of 'The Golden Legend,' a 'Cloister Scene' for choir and orchestra (op. 6); and a Mass in E flat, also published. Among his orchestral works are a suite, op. 3, symphonic fantasias, opp. 5 and 7; a symphony in G minor, 'The Nation's Mourning,' op. 8; another in C, op. 12; symphonic poems, 'Tartarus,' op. 11, and 'Hamlet,' op.

14, and a 'scherzo-fugue' for small orchestra, op. 15. Besides these there are numerous pianoforte pieces, songs, anthems, etc., and some chamber music and text-books. (*Baker*.)

M.

NICHOLLS, AGNES (b. Cheltenham, July 14, 1877), a distinguished soprano singer.

In 1894 she gained a scholarship at the R.C.M., and studied singing there six years under Visetti. During this period she made her débuts on the stage at the Lyceum Theatre, Nov. 20, 1895, as the heroine on the revival of Purcell's 'Dido and Æneas,' and Dec. 11, 1896, as Anne Page, on the production in English of Verdi's 'Falstaff.' In 1897 she sang at the Gloucester Festival. As a student, she sang thrice before Queen Victoria, as Javotte at a private performance at Windsor of Delibes's 'Le Roi l'a dit,' in the 'Hymn of Praise' on Jubilee Sunday, 1897, with Albani and Lloyd, and in 1899, the principal soprano music in 'Elijah,' on both these latter occasions at St. George's Chapel, under Sir W. Parratt. On leaving the College she had further vocal instruction from John Acton of Manchester. On May 14, 1901, she made her début at Covent Garden as the Dewman in 'Hänsel und Gretel,' and was re-engaged there in 1904-08. She sang the parts of Sieglinde ('The Valkyrie') and Brunnhilde ('Siegfried') in the first production under Richter of 'The Ring' in English (Feb. 1908). Her career in opera has been intermittent but was continued with distinction in Beecham's and Denhof's companies, and in the British National Opera Company, of which she was one of the first directors. But it is as a concert and oratorio singer that she has established her highest reputation; she has sung at all the principal festivals, the Richter concerts in London and Manchester, the London festivals under Weingartner, the Royal Choral Society, etc. The soprano parts of many of Parry's choral works were written for her and the tenth book of his 'English Lyrics' (high soprano songs demanding that purity of tone and style for which she is famous) is dedicated to her. She sang the part of the Blessed Virgin in the first production of Elgar's 'The Kingdom,' and it is among her most beautiful performances. She appeared at the Cincinnati Festival and at the Jubilee Concerts at the Crystal Palace in 1904. On July 15 of the same year she married Hamilton HARTY (q.v.).

A. C.; addns. C.

NICHOLSON, CHARLES (b. Liverpool, 1795; d. London, Mar. 26, 1837), son of a flute-player, became the most eminent of English flautists. After performing in the orchestras of Drury Lane and Covent Garden he was engaged, about 1823, as principal flute at the Opera, the Philharmonic Society, the country festivals, etc. His playing was remarkable for purity and brilliance of tone and neatness of execution.

and his admirable manner of performing an adagio. He published a flute preceptor and numerous concertos, fantasias, solos and other pieces for his instrument. W. H. H.

NICHOLSON, RICHARD (*d.* 1639), English organist and composer. On Jan. 23, 1595, he became instructor of the choristers and probably organist of Magdalen College, Oxford. He resigned this post in the year of his death. He graduated Mus.B. Feb. 1596, and in 1628 became the first University Professor of Music at Oxford under Dr. William Heyther's foundation. One motet and 3 anthems by him, all for 5 voices, are in B.M. Add. MSS. 17,797. These are:

'Cantate domino'; 'Come, Holy Ghost'; 'O Lord, of whom I do depend'; 'O Lord, turne not away the face.'

Two other anthems, also for 5 voices, 'O pray for the peace' and 'When Jesus sat at meat,' are in Bodl. Mus. Sch. D 212-6. A pavan for 5 viols by him is in R.C.M. 1145. Nicholson contributed a 5-part madrigal, 'Sing, Shepherds all,' to the 'Triumphes of Oriana' (1601). B.M. Add. MSS. 17,797 also contains 13 5-part madrigals, of which 9 are by Nicholson; the remaining 4 are anonymous, but are probably his also. Nicholson's most interesting composition, however, is a setting of a dialogue 'Joane, quoth John,' apparently for 3 voices, the treble and bassus partbooks of which were once in the library of Carlisle Cathedral, but are now in the possession of J. W. Brown of Carlisle. The poem derived from some of the many 16th-century popular fragments based on the line 'I cannot come every day to woo' treats of the wooing of Joane and John, and is in 11 distinct sections. As, however, they all treat of the same subject and are set consecutively, the series is claimed by J. W. Brown to be the first example of a 'song-cycle' which has come down to us (but see Thomas RAVENSCROFT). Some portions of this dialogue are in B.M. Add. MSS. 17,786-91; but here it is definitely put down as for 5 voices. For further information about the cycle, and an account of how it came to be composed, see an article by J. W. Brown in the *Cornhill Magazine*, May 1920. J. M^c.

NICHOLSON, SYDNEY HUGO (*b.* Feb. 9, 1875), organist of Westminster Abbey in succession to Sir F. Bridge, was educated at Rugby and New College, Oxford. He studied under Parratt and Stanford at the R.C.M., and also at Frankfort-on-Main under Ivan Knorr. He became acting organist of Carlisle Cathedral in 1904 and was organist of Manchester Cathedral (1908-18).

Nicholson came to the Abbey at a critical moment when after the war the traditions of the Abbey services, no less than the fabric, were in need of restoration. He devoted himself to that work, has raised the choral performances to a high level, and has shown remarkable skill

in organising the music of special functions held there. In particular he founded and conducts with success the Westminster Abbey Special Choir which gives from time to time performances of oratorios, motets and anthems drawn from all the great periods of church music. As chairman of the CHURCH MUSIC SOCIETY (*q.v.*) he has headed a campaign for the improvement of the general level of church music throughout the country. He has done a considerable amount of composition which, however, has held a comparatively small place in a career devoted to executive and administrative work. C.

NICODÉ, JEAN LOUIS (*b.* Jerczig, near Posen, Aug. 12, 1853; *d.* Dresden, Oct. 5, 1919). His father, a skilful amateur violinist, pianist, conductor and composer, removed to Berlin in 1856. Here the young Nicodé was taught by his father and the organist Hartkäss, until, in the beginning of 1869, he entered the Neue Akademie der Tonkunst, where he studied the piano under Kullak, harmony under Wüerst, counterpoint and composition under Kiel. When he left the Akademie he was able to succeed well as a teacher in Berlin, and also to establish the Nicodé Concerts, at which he proved himself to be a brilliant and attractive pianist. A concert tour through Galicia and Roumania with Mme. Désirée Artôt increased his reputation so much that in 1878 he was led to remove to Dresden in order to become a professor at the Royal Conservatorium, of which Franz Wüllner was artistic director. Here he remained until Wüllner was ejected from his post as director of the Opera in 1885, when Nicodé left the Conservatorium and became director of the Philharmonic Concerts. He held this post for three years, gaining great success, but in 1888 he gave up his appointment in order to devote himself entirely to composition. However, in 1893 he again appeared as a conductor, and on the establishment of the Dresden 'Neustädt Chorgesangverein' he was appointed director.

As a pianist his style was full of warmth and artistic power; and as a conductor he showed an artistic insight and a genial warmth of comprehension which led him to give interpretations full of breadth and humanity. Among the larger works for orchestra, 'Marie Stuart,' 'Symphonic Variations,' 'Die Jagd nach dem Glück,' 'Das Meer' and 'Gloria,' Nicodé showed a steady advance in power of invention, construction, development and skill in orchestration. 'Marie Stuart' is a brilliant piece of character-painting. 'Die Jagd nach dem Glück' is a 'Phantasiestück' which, although practically a bravura piece, is not at all commonplace. In the 'Symphonic Variations' a beautiful theme is treated with unusual skill. It was in 1888 that Nicodé produced his more important work 'Das Meer,' a symphony for

full orchestra, organ, male chorus and soli, the poem by Karl Wörmann. Nicodé's 'Gloria' (produced 1904) may be called a symphonic opera without voices, for it occupies a whole evening in performance. Scored for a very large orchestra, organ, harps, male chorus and boys' solo, it is laid out in six movements, in which great use is made of a number of Leit-motive, and 'quotations.' His works are as follows:

- Op.
 1. Six Songs } MS.
 2. Symphony } MS.
 3. Two Waltzes.
 4. Marie Stuart. Symphonic Poem (orchestra). 1881.
 5. Characteristic Polonaise. PF. solo.
 6. Andenken an Schumann. Six Phantasiestücke, PF. solo.
 7. Miscellen. Four pieces (PF. duet).
 8. Aphorismen. (13 Klavierstücke.)
 9. Two Characteristic pieces. (1. Ep minor, 2. G minor), PF. solo.
 10. Waltz Caprice. PF. duet.
 11. Die Jagd nach dem Glück. Phantasiestück (orchestra). 1882.
 12. Two Studies (1. in C minor, 2. in C minor).
 13. Italienische Volkstänze und Lieder (orchestra). In two books. Arranged for orchestra from PF. solo.
 14. Romanze for violin and orchestra.
 15. Three Songs.
 16. Scherzo fantastique. (PF. duet.) 1877.
 17. Suite for small orchestra. Four movements. 1892.
 18. Variations and Fugue. D♭ major, 1880. PF. solo.
 19. Sonata, F minor. PF. solo.
 20. Jubiläumsmarsch (orchestra) composed for the twenty-fifth anniversary of the Berlin Academy of Music. 1880.
 21. Three Studies (1. F minor, 2. F major, 3. D minor). PF. solo.
 22. Ein Liebesleben (Ten Poems). PF. solo.
 23. Sonata for Violoncello in B minor.
 24. Feschingsbilder. Four pieces (orchestra).
 25. Sonata for Violoncello in G major. 1882.
 26. Ein Ballscene (Waltzer). PF. duet.
 27. Symphonic Variations. 1883 (orchestra.)
 28. Waltzes and Burlesques. PF. solo.
 29. Pictures from India. 1886.
 30. Dem Andenken an Amarantha. Song Cycle.
 31. Das Meer, Symphonic Ode. 1889. (Orchestra, organ, male chorus.)
 32. Two pieces for string orchestra. 2 oboes, 2 horns.
 33. Erheben. Hymn for mezzo-soprano and orchestra.
 34. Gloria (1904), in six movements.
- Wort einer mitleidigen Seele: 'Morgenwanderung im Gebirge,' 'Nach Sonnenuntergang,' Requiem'

D. H.

NICOLAI, CARL OTTO EHRENFRIED
(b. Königsberg, June 9, 1810; d. May 11, 1849),
eminent composer and conductor.

His home was unhappy, and his education neglected, except for the piano, which he was well taught. At 16 he ran away, but found a protector in Justizrat Adler of Stargard, who assisted him in his studies, and in 1827 sent him to Berlin, where he took lessons from Zelter and Klein. In 1833 the Chevalier de Bunsen sent for him to Rome as organist to the chapel of the Prussian Embassy, and there, under Baini, he studied the ancient Italian masters, without neglecting those of modern date. Towards the close of 1837 he went to Vienna, and became Kapellmeister and singing-master of the Kärnthner Theater, returning to Rome in Oct. 1838. He then composed a series of operas in the prevailing taste of the day. 'Enrico secondo' and 'Rosmonda d'Inghilterra' (1839) were given at Trieste, and 'Il templario' (1840) with great success at Turin; but 'Odoardo e Gildippe' (Genoa, 1841) and 'Il proscritto' (Milan, 1841) were not so well received. In 1841 he accepted the first Kapellmeisterhip of the court opera at Vienna, and remained till Easter, 1847, highly appreciated as a conductor. Here were produced his 'Templario' (1841, German, 1845) and 'Die Heimkehr des Ver-

bannten' (1844), a remodelling of 'Il proscritto,' in which Staudigl was much applauded. With the avowed object of giving first-rate performances of Beethoven's symphonies, he founded the Philharmonic concerts, the first of which took place Mar. 28, 1842. A Mass (composed 1843) dedicated to Frederick William IV., and a Fest-Ouverture for the Jubilee of the University of Königsberg (1844) led to his appointment as director of the newly founded Domchor, and court Kapellmeister of the opera in Berlin, and he gave a farewell concert in the large Redoutensaal at Vienna (Apr. 1, 1847), at which Jenny Lind sang, and some of the instrumental music in 'Die lustigen Weiber von Windsor' was produced for the first time. He completed that opera in Berlin, and the first performance took place on Mar. 9, 1849, with brilliant success, which he did not live to enjoy, as he expired of apoplexy on May 11. The opera was given in Vienna (with recitatives by Proch), Feb. 12, 1852, and in London (as 'Falstaff'), May 3, 1864, and long held its place as one of the most popular of comic operas.

Nicolai had a fine collection of Italian and German scores, which he left to the Imperial library at Berlin. Mendel's *Otto Nicolai* (Berlin, Heimann) contains a catalogue of all his works, printed and in MS., the latter being numerous, and including a symphony, a Requiem and a Te Deum. He was an honorary member of the Società Cecilia of Rome, and of the Filarmonici di Bologna. The Tonkünstler-Verein of Berlin erected in 1851 a monument over his grave in the churchyard of Dorotheenstadt.

C. F. P.

NICOLAI, JOHANN MICHAEL, chamber musician at the court of Würtemberg, 1669. He composed 'Erster Theil geistlicher Harmonien' (sacred songs a 3 v. with 2 violins, 1669); 12 sonatas, partly for 2 violins and a viola da gamba, partly for 2 violins and bassoon (Augsburg, 1675), one of the earliest works of sonatas for 2 violins and bass which became so popular in the 18th century.

E. v. d. s.

NICOLAI, DR. PHILIPP (b. Mengerhausen, Principality of Waldeck, Aug. 10, 1556; d. Hamburg, Oct. 26, 1608), served as Lutheran pastor at Dortmund and Cologne, was then for a while court preacher to the Dowager Countess of Waldeck, pastor again at Unna in Westphalia, and finally from 1601 to his death, first pastor of the church of St. Katherine, Hamburg. It was during a severe visitation of the plague at Unna in Westphalia that he wrote and afterwards published his *Freudenspiegel des ewigen Lebens* (Frankfort, 1599), containing the words and melodies of the two well-known Chorals, 'Wachet auf, ruft uns die Stimme,' and 'Wie schön leuchtet uns der Morgenstern,' on which J. S. Bach based two of his most beautiful church cantatas. Nicolai himself was

musician enough to harmonise these and other choral melodies for four voices. Winterfeld erroneously supposed the words of 'Wie schön leuchtet uns der Morgenstern' to have been a spiritual parody of a secular love-song 'Wie schön leuchten die Ängelchen,' to which he concluded that the melody originally belonged, but Wackernagel¹ proved the secular words to be of later origin than the spiritual, so that in this case it is the secular love-song which is the parody of the hymn and not *vice versa*. In the melody Bäumkor² traces resemblances to the old Christmas carol 'Resonet in laudibus.'

J. R. M.

NICOLAU, ANTONIO (b. Barcelona, June 8, 1858), Spanish (Catalan) composer, formerly conductor of the Sociedad de Conciertos at Barcelona and then director of the Music School. He excels as a composer for voices, his choral works being conspicuous in any Spanish programme for his technique in writing for the chorus. He has also done valuable work for musical education.

J. B. T.

NICOLETTI (NICCOLETTI), FILIPPO, of Ferrara, where he was living in 1592. In 1605 he was maestro di cappella at S. Lorenzo in Damasco, Rome. He composed madrigals a 5 v. (1578); 'I finti amori,' a 5 v., op. 2 (1585); madrigals, a 2 v. (1588; 2nd ed. 1605); villanelle, a 3 v. (1604); and various numbers in collective volumes (Q.-L.).

NICOLINI (b. S. Malo, Feb. 23, 1834; d. Pau, Jan. 19, 1898), originally ERNEST NICOLAS, son of an hotel-keeper of Dinard, Brittany. He was for a short time a pupil at the Paris Conservatoire, and in 1856 gained a second *accessit* in comic opera. In July 1857 he made his début at the Opéra-Comique in Halévy's 'Mousquetaires de la Reine'; he remained there until 1859, without any marked success. In that year he went to Italy, and under the name of Nicolini sang at Milan, Florence, Turin and elsewhere, with fair success. He returned to Paris in 1862, to the Salle Ventadour, with better results than before, and sang there for several seasons till 1870.

His first appearances in England were May 21, 1866, at a concert given by Madame Lucca, at St. James's Hall, and on the 29th of the same month at Covent Garden, as Edgardo, but with such moderate success that he did not return to London until Apr. 25, 1871, when he reappeared at Drury Lane under Mapleson, as Faust, with very fair results, and remained for the season, distinguishing himself especially as Raoul. In 1872 he was engaged at Covent Garden, where he sang every year for some time, took part in the first performance there of 'Lohengrin,' and was associated with Mme. Patti in her various operatic triumphs. They were married on Aug. 10, 1886.

A. C.

NICOLINI (NICOLINO GRIMALDI) (b. Naples, c. 1673), one of the greatest singers of the 18th century. He received a good education, and could write very fair verses, as appears from the libretti which bear his name as their author. His voice, originally a soprano, soon sank into a fine contralto. The first dramas in which his name has been found are 'Tullo Ostilio' and 'Serse,' set by Bononcini, at Rome, 1694, in which he sang with the celebrated Pistocchi. During 1697-98 he was the principal singer in the operas at Naples; and in 1699 and 1700 was again performing at Rome. After this he sang in other Italian cities, including Milan and Venice; and, being decorated at the latter place with the Order of St. Mark, he was thenceforth always known as the 'Cavaliere Nicolini.'

Late in the autumn of 1708 he came to England, drawn hither by the report of our passion for foreign operas, and 'without any particular invitation or engagement.'³ Here he made his first appearance, Dec. 14, in the 'Pyrrhus and Demetrius' of A. Scarlatti, translated into English by Owon Swiney (or MacSwiney), the manager, and arranged by N. Haym, who wrote a new overture and some songs for it. In this, of course, Nicolini sang his part in Italian, while other singers performed theirs in English. Steele describes this opera as 'a noble entertainment,' and declares that he 'was fully satisfied with the sight of an Actor [Nicolini] who, by the Grace and Propriety of his Action and Gesture, does Honour to an Human Figure,' and 'sets off the Character he bears in an Opera by his Action, as much as he does the Words of it by his Voice. Every Limb, and every Finger, contributes to the Part he acts, insomuch that a deaf Man might go along with him in the Sense of it,—with much more to the same purport.'⁴

The opera prices were raised on the arrival of this performer, 'the first truly great singer who had ever sung in our theatre.'⁵ Some curious papers exist,⁶ the collection of Vice-Chamberlain Coke, by which it appears that Nicolini furnished that official with a full account of the system on which the Venetian opera was managed, and that he suggested a similar system for that of London. One chief feature was that a subscription of 1000 gs. should be got from the Queen (Anne); and on this Coke founded a calculation which led to the remodeling of the opera subscription and raising of the prices, in order to remedy what Nicolini described as the 'annual and certain loss of money' which our opera had till then suffered.

Though not attracted to London by an engagement, Nicolini had been immediately secured by Swiney for a year. Tosi, in his *Treatise on Singing*, doubts whether a perfect singer can at the same time be a perfect actor; but Galliard, the translator of that treatise, says (in a note, 1742)—

⁶ In the writer's possession.

¹ *Das deutsche Kirchenlied*, i. pp. 617-19.
² *Das katholische deutsche Kirchenlied*, ii. p. 283.

'Nicolini had both qualities, more than any that have come hither since. He acted to perfection, and did not sing much inferior. His variations in the airs were excellent; but in his cadences he had a few antiquated tricks.'

Nicolini next appeared in 'Camilla'; and in May he signed an engagement with Swiney for three years, at a salary of 800 gs.; the singer to receive, in addition, £150 for a new opera 'to be by him fitted for the English stage every season, if such opera shall be approved of.'¹

On June 4 Nicolini had a concert for his benefit at the Opera House, where he continued to sing as before. In 1710, however, he quarrelled with Swiney, and sought, in a letter dated May 18,² to free himself from an 'esclavage inquiet et honteux qu'on ne sçaurait non plus s'imaginer ailleurs hors de l'Angleterre,'—his engagement with Swiney. The principal grievance, as usual, was that he had not been paid his due salary; but the Vice-Chamberlain patched up the quarrel, and Nicolini continued to sing at the theatre in 'Almahide' and 'Hydaspes,' the libretto of the latter being his own, or at least edited by himself. In this piece occurred the famous combat with the lion, about which Addison was so witty, while giving the greatest possible credit to Nicolini for his acting, which gave 'new majesty to kings, resolution to heroes and softness to lovers.'³ On Feb. 24, 1711, 'Rinaldo' appeared, the chief part being created by Nicolini, who had in it many opportunities for displaying his powers of declamation, execution and acting. He played in 'Antioch' Dec. 12, and in 'Ambleto' (his own libretto) in the beginning of 1712. Addison says,⁴

'I am sorry to find, by the Opera bills for this day, that we are likely to lose the greatest performer in dramatic Music that is now living, or that perhaps ever appeared upon a stage. I need not acquaint my readers, that I am speaking of Signor Nicolini. The town is highly obliged to that excellent artist, for having shewn us the Italian Music in its perfection, as well as for that generous approbation he lately gave to an opera of our own country⁵ in which the composer endeavoured to do justice to the beauty of the words, by following that noble example which has been set him by the greatest foreign masters in that art.'

Nicolini, who took his benefit, on Mar. 22, in 'the Music performed before the Queen on her birthday, and the famous scene in Thomyris, by Scaurlatti,' left England at the end of this season (he sang in Dublin in March-June, 1711), and did not return till 1714, when he appeared, June 14,⁶ for the last time before his voyage to Italy.⁶ He returned, however, in the following winter, for he sang in 'Rinaldo' (revived), Jan. 4, 1715, and afterwards in 'Amadigi.' According to the idea which tradition gives us of the abilities of Nicolini, his part in this latter opera must have drawn out all his powers, both as singer and actor.⁷ He took his benefit in

'Rinaldo.' In the following season (1716) Nicolini appeared in 'Lucio Vero,' 'Amadigi' and 'Clearto'; and in 1717 he sang again in 'Rinaldo' and 'Amadigi'—his last appearances in England. We find him at Venice in a long run of 'Rinaldo' in 1718, again in 1723, singing in Leo's 'Timocrate,' and Quantz met him there in 1726, when his singing was on the decline, though his acting still commanded admiration.

J. M.

NICOLO, the ordinary name in France for Nicolò ISOUARD (*q.v.*). G.

NIECKS, FRIEDRICH (FREDERICK), Mus.D., LL.D. (b. Düsseldorf, Feb. 3, 1845; d. Edinburgh, June 24, 1924), was for twenty-three years Reid Professor of Music at Edinburgh. His father was an orchestral musician, teacher and conductor at Düsseldorf. From him Niecks learnt the elements of music and violin-playing, before studying under a local organist and, subsequently, under Langhans, Julius Grunewald and Leopold Auer, for violin, and under Julius Tausch, for composition and piano-forte-playing. At the age of 13 Niecks made his first public appearance as a violinist at a concert of the Musikverein in Düsseldorf, where he played De Bériot's second concerto; and about the same time he became a regular member of the Theatre and Subscription Concerts Orchestra, a post he retained till after he was 21 years of age, when, owing to ill-health, he had to abandon the idea of a public career as an instrumentalist. Meanwhile his general education had been obtained from private teachers, by self-tuition and at Leipzig University, where he devoted his attention chiefly to philosophy, with a special leaning towards psychology and aesthetics, fine arts and history. In 1868 Niecks was induced by (Sir) A. C. Mackenzie to leave Düsseldorf and settle in Scotland, where later in the year he became violaplaver in Mackenzie's Edinburgh quartet, and organist and teacher in Dumfries. In 1875 a letter written to the *Monthly Musical Record*, of which Prout was editor, led to a permanent engagement in connexion with that paper, and in 1879 Niecks became a regular contributor to the *Musical Times*. His *Concise Dictionary of Musical Terms*, to which is prefixed an *Introduction to the Elements of Music*, appeared in 1884, in which year a second edition, revised and corrected, also was printed; while in 1888 his *Frederick Chopin as Man and Musician* was published, a German edition by W. Langhans appearing in the following year. In 1890 Niecks lectured before the Royal Institution of Great Britain on the early development of the forms of instrumental music, and in November of the next year he was appointed Reid Professor of Music in Edinburgh University. There he lectured on and gave practical teaching in music in all its kinds, and in each winter held a series of not less than four historical

⁷ Burney.

concerts, and from 1894-96 he led a string quartet. In 1901 he founded a Musical Education Society, and to it is attached a musical circulating library. Before the Musical Association Niecks read many interesting papers, including one on 'The Flat, the Sharp and the Natural,' and another on 'The Teaching of Musical History.' He wrote *A History of Programme Music from the 16th Century to the Present Time* which was published in 1907, and a volume on *The Nature and Capacity of Modern Music*—the latter a philosophical treatise. In 1898 Dublin University created him Mus.D. *honoris causa*. He married, in 1907, Christina, daughter of Sir John Struthers, M.D. It was under her editorship that his valuable biography, *Robert Schumann*, was published posthumously (1925).

R. H. L.

NIEDERMEYER, ABRAHAM LOUIS (*b.* Nyon, Lake of Geneva, Apr. 27, 1802; *d.* Paris, Mar. 14, 1861), composer, studied under Moscheles and Förster in Vienna, Fioravanti in Rome, and Zingarelli in Naples, where he formed a lasting intimacy with Rossini. At Naples he produced his first opera, 'Il reo per amore.' He next settled in Geneva, taught the piano and composed melodies to Lamartine's poetry, one of which, 'Le Lac,' obtained great success, and made his name known in Paris, before his arrival there in 1823. Through Rossini's influence his 1-act opera, 'La casa nel bosco,' was produced at the Théâtre Italien (May 28, 1828), but its reception not satisfying him he left Paris and became music-master at the institute founded in Brussels by Gaggia. Weary of this drudgery, he returned to Paris, and published melodies distinguished for style and sentiment, and worthy of the poems by Lamartine, Victor Hugo and Emile Deschamps, which they illustrated. The success of these songs made Niedermeyer anxious to return to the theatre, but 'Stradella' (5 acts, at the Opéra, Mar. 3, 1837) failed, though supported by Mlle. Falcon, Nourrit and Levasseur. It was, however, revived in 1843 in 3 acts. 'Marie Stuart,' 5 acts (Dec. 6, 1844), was scarcely more successful, and would be forgotten but for its 'Adieu à la France.' Other numbers, however, deserve attention. The revival of the 'Donna del lago' having been resolved on at the Opéra, Rossini summoned Niedermeyer to his residence at Bologna, and empowered him to adapt the score to a French libretto entitled 'Robert Bruce,' in 3 acts (Dec. 30, 1846). The opera failed, but the introduction of the saxhorn, the eight trumpets in four different keys in the overture and the skill with which various movements from 'Zelmira' and 'Armidia' were adapted attracted the attention of musicians. Niedermeyer's last attempt at opera was 'La Fronde' (5 acts, May 2, 1853)—a failure like its predecessors. His true vocation was sacred music. His Mass with full

orchestra, his 'messes basses,' motets and anthems, pure in style, and abounding with graceful melody, are still sung. We have mentioned elsewhere his connexion with d'Ortigue in the foundation of a periodical for sacred music, intended to maintain the old traditions. (See MAÎTRISE.) Unfortunately he knew but little of either the history or the practice of plain-song, and his *Méthode d'accompagnement du plain chant* (1855), hastily compiled, was severely criticised. The École de Musique still known by his name (a continuation of that founded by Choron) ensured for his sacred works an honourable place in the repertoires of the Maîtrises of France. There is little ground for supposing, as Riemann does, that he composed the famous song, 'Pieta, Signore' attributed to Stradella, of which Rossini was probably the real author. G. C.

NIEDERRHEINISCHE MUSIKFESTE, *i.e.* LOWER RHENISH MUSICAL FESTIVALS, held in triennial turn at Whitsuntide, at either Düsseldorf, Aix-la-Chapelle or Cologne. The originator is said to have been Dr. Ludwig F. C. BISCHOFF (*q.v.*), who assembled together the musicians in his province, and instituted a 'Thuringian Musical Festival,' held at Erfurt in 1811. In 1817, Johann Schornstein, music director at Elberfeld, following the example of Bischoff, collected the musical forces of Elberfeld and Düsseldorf, and gave a performance on a large scale in the former town. The success of the Elberfeld attempt was decided enough to induce several of the most influential persons in the two towns mentioned to arrange two grand concerts for Whitsuntide, which should take place alternately at Elberfeld and Düsseldorf. The organisation of these concerts exacted so much labour and trouble that it was resolved to propose to a third neighbouring city to take part in them, and an offer of co-operation was made to Cologne, which at first declined the proposal. The first four festivals were therefore held at Elberfeld and Düsseldorf alternately.

From the time of the retirement of Elberfeld in 1827, Aix gave in its definite adhesion, and except during the political disturbances from 1848-50, and also in 1852 and 1859, these festivals have since occurred at Düsseldorf, Aix or Cologne.

The fifteenth meeting, at Düsseldorf, in 1833, marked a new epoch in the history of these renowned festivals. For it was on this occasion that the direction of the music was first entrusted to Mendelssohn.¹ Another distinguishing feature was a third concert improvised by him on the morning of Whitsun-Tuesday, which was subsequently known as the 'Artists' concert,' in consequence of the introduction at it of detached and solo pieces. In 1835 Mendelssohn conducted at Cologne,

¹ See under MENDELSSOHN, p. 892.

and on the following Whitsuntide directed the eighteenth festival at Düsseldorf, on which occasion his oratorio 'St. Paul' was produced. He reproduced Handel's 'Joshua' at Cologne in 1838, and on that occasion continued his great work of reviving the choral works of J. S. Bach.

At the twenty-first festival, at Düsseldorf, in 1839, Mendelssohn introduced his 42nd Psalm, 'As the hart pants,' and at the 'Artists' concert' played his second pianoforte concerto. In 1842 he conducted at Düsseldorf, and made its festival memorable by the introduction of the 'Lobgesang,' which had been already performed at Leipzig and Birmingham; and in 1846, at Aix, for the seventh and last time, he directed a grand selection, when Jenny Lind sang, and produced extraordinary enthusiasm—the occasion being recorded as the 'Jenny-Lind-Fest.' Her singing of Mendelssohn's 'Auf Flügeln des Gesanges' and 'Frühlingslied,' at the 'Artists' concert,' is described by chroniclers of this festival as producing an effect wholly unparalleled. In 1852 no festival took place, but in the following year Hiller and Schumann shared the direction at Düsseldorf, respectively contributing a psalm—the 125th, and a symphony—in D minor.

From this time the Rhenish Festivals became in some respects even more than previously interesting. In 1855, at Düsseldorf, Mme. Lind-Goldschmidt sang in Haydn's 'Creation,' Schumann's 'Paradise and Peri,' and at the Artists' concert.

Düsseldorf was fortunate enough in 1863 again to secure her services, and the choral selections were conducted by Otto Goldschmidt. An unusual and interesting feature on this occasion was an organ solo by van Eyken, who played Bach's great prelude and fugue in G minor. The following Whitsuntide, 1866, Madame Lind-Goldschmidt was once more heard at a Düsseldorf festival, in Handel's 'Messiah' and Schumann's 'Paradise and Peri,' etc., Madame Schumann, Auer and Stockhausen being the other soloists, O. Goldschmidt and Tausch conducting.

The conductors of later festivals have included A. Rubinstein (1872), J. Joachim (1875, 1878), J. Brahms (1883, 1884), Hans Richter (1888, etc.), R. Strauss (1896), Julius Butts (1893, etc.), Fritz Steinbach (1904, etc.). The festival held at Düsseldorf in 1902 was specially interesting to English musicians, for the performance of Elgar's 'Dream of Gerontius' under Butts. (See ELGAR.) The festivals were discontinued between 1915–19. H. S. O., rev.

NIEDT, FRIEDRICH ERHARDT (d. Copenhagen, c. 1717), is described on the title-pages of his works as being a native or inhabitant of Jena (Jenensis), and by profession a Notary Public. He afterwards removed to Copenhagen, where he is said to have died

in 1717. He is chiefly known as the author of a work on musical composition entitled *Musicalische Handleitung*, which appeared in three parts: the first part, published at Hamburg, 1700 and 1710, treats chiefly of playing from a thorough or figured Bass; the second part, entitled *Handleitung zur Variation*, published at Hamburg, 1706, treats of the composition of preludes, chaconnes and other dance-forms on one and the same Bass. An improved and enlarged edition of this was issued by Mattheson in 1721, containing, as the title indicates, over sixty different organ-specifications. The third part of Niede's work appeared posthumously under Mattheson's editorship in 1717, and treats of counterpoint and canon, and the composition of motets and recitative. Another work of Niede's is entitled *Musicalisches A B C zum Nutzen der Lehr- und Lernenden* (1708), and contains a few practical examples. It would appear from what Spitta says that Bach was familiar with Niede's *Musicalische Handleitung*, and based his own system of instruction in Thorough-bass upon it.

J. R. M.

NIELSEN, CARL (b. Isle of Fyen, Denmark, 1865), composer, was compelled at an early age to make his own way. In his fourteenth year he joined a military band at Odense, remaining there until he was 18, when he was admitted to the Conservatoire in Copenhagen as a pupil of Gade. In 1891 he became a member of the Royal Orchestra, which, in 1908, elected him as its conductor, a post he retained until 1914. Nielsen is now principal of the Conservatoire and conductor of the 'Musical Society,' an appointment formerly held by Gade. He has frequently conducted important symphony concerts (often including his own works) in Scandinavia, Germany, Finland and Holland, and he visited London for a similar purpose in 1923.

Carl Nielsen, who in Denmark is considered as the country's most representative living composer, is known chiefly as a symphonist. He has so far written five symphonies (including one entitled 'The Four Temperaments'), the last of which was produced at Copenhagen in Jan. 1923.

E. B.

NIEMANN, ALBERT (b. Erxleben, Magdeburg, Jan. 15, 1831; d. Berlin, Jan. 13, 1917), one of the most famous tenors of Germany. His father kept an hotel in Erxleben. He was placed, when 17 years old, in a machine factory, but want of means prevented his remaining there, and he went on the stage at Dessau in 1849, first as an actor of small parts, and afterwards as a chorus-singer. Here the Hofkapellmeister Friedrich Schneider discovered his musical talent, and gave him some instruction. A baritone singer named Nusch taught him singing, and with such success that Niemann soon obtained engagements at Halle

and other small theatres. He thus came under the notice of von Hülsen, who called him to Berlin, and gave him the means of further improvement. He afterwards played at Stuttgart, Königsberg and Stettin, and from 1854–1856 at Hanover. Through the kindness of the King of Hanover he was sent to Paris to study under Duprez. From 1866 until his retirement at the end of 1888 he was engaged at Berlin; and was created 'Kammersänger' to the Emperor. In Germany he enjoyed a great reputation, especially in 'heroic parts,' for which his handsome person and powerful voice eminently fitted him. He played the parts of the Wagner heroes, also Cortez, Florestan, Joseph, Raoul, John of Leyden, Arnold, George Brown ('La Dame blanche') und Chapelon ('Postillon'); and was selected by Wagner to play Siegmund in the trilogy at Bayreuth in 1876; he appeared at Her Majesty's Theatre in the same part in 1882.

Earlier in his career he played Tannhäuser in Paris, on its production at the Opéra on Mar. 13, 1861, when the opera, received with great disfavour, was only played twice. In 1886–88 he sang in German in New York with great success. He married two eminent actresses, first, in 1859, Marie Seebach, and, second, in 1870, Hedwig Raabe (b. 1831). By his first wife he had a son, Otto, also a tenor singer, who appeared in a selection from 'Parsifal' at one of Henschel's London Symphony Concerts, in Dec. 1887. A. C.

BIBL.—R. Wagner und Albert Niemann, ed. by W. ALTSMANN. Berlin, 1924.

NIEMANN, (1) RUDOLPH FRIEDRICH (b. Wesselburen, Holstein, Dec. 4, 1838; d. Wiesbaden, May 3, 1898), the son of an organist, made a name for himself as pianist and composer. He studied at Leipzig (1853–56) under Moscheles, at the Paris Conservatoire under Marmontel and Halévy, and in Berlin under von Bülow. He became a teacher at the Conservatoire of Albert Fuchs at Wiesbaden. His compositions for the piano included many character studies.

(2) GUSTAV ADOLF (b. Wesselburen, Dec. 6, 1841; d. Helsingfors, Finland, Dec. 5, 1881), brother of the above, was a violinist, pupil of David at Leipzig, who settled at Helsingfors as leader of the orchestra. He had a distinguished career there, especially as a chamber-music player.

(3) WALTER (b. Hamburg, Oct. 10, 1876), son of Rudolph (1), besides being a voluminous composer, has done important research which has resulted in a number of literary works on musical subjects. He studied at the University and Conservatoire of Leipzig under Riemann and Reinecke and graduated with a thesis on Ligatures and Mensural Music before the time of Johannes de Garlandia. His literary works include the following:

Musik und Musiker des 19. Jahrhunderts. (1905.)
Musik Scandinaviens. (1906.)
Das Klavierbuch (shortened from *History of Piano Music*). (1907)
Grieg (with Schjelderup). (1908.)
Die musikalische Renaissance des 19. Jahrhunderts. (1911.)
Taschenlexikon für Klavierspieler. (1912.)
Die Musik der Gegenwart (since Wagner). (1913.)
Jean Sibelius. (1917.)
Die nordische Klaviermusik. (1918.)
Die Violoncelistik. (1919.)
Meister des Klaviers. (1919.)
Brahms. (1920.)

For ten years (1907–17) Niemann was music critic to the *Leipzig neuesten Nachrichten*. He has also done much editing of music. (Riemann.)

NIGHT DANCERS, THE, opera, in 2 acts, words by G. Soane, music by E. J. Loder. Produced as 'The Willis, or the Night Dancers,' Princess's Theatre, Oct. 28, 1846. Adam's ballet 'Giselle' and Puccini's 'Le Villi' have the same subject. G.

NIKISCH, ARTHUR (b. Lébényi Szent Miklos, Hungary, Oct. 12, 1855; d. Leipzig, Jan. 23, 1922), famous orchestral conductor, was the third son of the Baron Sina's chief book-keeper, August Nikisch.

At 3 he showed signs of musical aptitude, and at 6 began the study of the pianoforte and theory under Franz Prochazka at Butschowitz, whither the family had withdrawn. Even at 7 years of age Nikisch's musical memory was so remarkable that he was able to write down for pianoforte the 'Tell' and 'Barbiere' overtures, after having heard them played on an orchestration; at 8 he made his first public appearance as a pianist, and at 11 became a pupil of Hellmesberger, Schenner and Dessoff at the Vienna Conservatoire. At the entrance examination he so distinguished himself as to be placed in the highest class where his colleagues were ten and more years senior to him. For a time the violin chiefly occupied his thoughts, though at 13 he won the gold medal by the composition of a string sextet, the first prize for violin-playing, and the second for pianoforte-playing. In 1873 Nikisch left the Conservatoire; at the final concert he conducted part of his own D minor symphony. At this period he had also written a violin sonata, a string quartet, and a cantata, 'Christnacht,' with orchestra. In his student days, Nikisch on one occasion acted as spokesman for a deputation (which included Mottl and Paur) appointed to greet Wagner in 1872; and in May of that year Nikisch played among the first violins in the historic performance under Wagner of Beethoven's Choral Symphony at the laying of the foundation-stone of the Bayreuth Festspielhaus. On Jan. 1, 1874, Nikisch became an official member of the Vienna Hofkapelle, which post he occupied during the next three years, playing under such conductors as Herbeck, Dessoff, Rubinstein, Liszt, Brahms and Wagner. But his own ideal, held from childhood, to become a conductor, was ever before him, and at Christ-

mas 1877, Angelo Neumann, the director of the Leipzig Opera, invited him, on Dessoff's recommendation, to become Chorrepetitor there. The invitation was accepted, and on Jan. 15, 1878, Nikisch took up the post in the town with whose musical life he practically became, from that day, indissolubly connected. (On Feb. 11 he conducted opera for the first time in the Altes Theater, and with such success that in the following summer he replaced, temporarily, Josef Sucher, and conducted 'Tannhäuser' and 'Die Walküre.' In 1879, on Sucher's retirement, Nikisch became first conductor of the Opera in Leipzig. For the next ten years he busied himself immensely with the production of the best new operas and the revival of neglected masterpieces. In the concert-room, too, he enjoyed many a triumph, among which were his performances in 1880 of Schumann's D minor symphony, when he was semi-publicly congratulated by Mme. Schumann. In 1881 he conducted the Tonkünstler-Versammlung at Magdeburg, when Borodin's E[♭] symphony was introduced, and again at Leipzig in 1883; and two years later he startled conservative Leipzig by conducting (from memory, a rare event then) a concert of the Liszt Verein in the Opera House, when the 'Faust' and 'Dante' symphonies were played complete.

In July 1889 Nikisch accepted a call to Boston, Mass., to take up the conductorship of the famous Symphony Orchestra; he took his farewell of Leipzig—for a time only, as events proved—in a memorable performance of 'Fidelio.' In America he remained four years, travelling much; in 1893, his contract there being at an end, he returned to Europe and became Hofkapellmeister at the Budapest Opera, as well as director. These posts, however, he resigned when, being in London to conduct a series of concerts, he received an invitation to become conductor of the Leipzig Gewandhaus on Reinecke's retirement (1895). He held the post of conductor of the Gewandhaus, together with that of conductor of the Berlin Philharmonic, until his death; with the latter orchestra he visited Paris, St. Petersburg, Moscow, Switzerland, etc. From 1897 he conducted the Philharmonic Concerts in Hamburg in succession to Hans von Bülow. In 1902 he visited London for the second time, when as one of the conductors of the London Musical Festival he directed a memorable performance of Tchaikovsky's fifth symphony, a work he was the first to introduce to England on his first visit. He came to England again in 1904, and frequently conducted the London Symphony Orchestra till 1914, toured in America with that orchestra in 1912, conducted occasional opera performances at Covent Garden (notably the 'Ring,' 1913) and the Leeds Festival, 1913. In

1905-06 he was director of the Leipzig Opera. His retirement was caused partly by his ill-health, and partly, it is said, by the parsimony of the treasury in regard to the mounting of operas. On July 1, 1885, Nikisch married Amelie Heusner, of Brussels, a singer of repute in the operas of Cassel and Leipzig. His son, MITJA, is a fine pianist, and his first appearance in England soon after the death of the father created a considerable impression.

In addition to being one of the finest of orchestral conductors in musical history, Nikisch was a superb pianoforte accompanist, as appeared more particularly in his performance with his pupil Elena GERHARDT (*q.v.*). At one time he held the theory that all conductors should first be violinists, for as such they are trained to use the wrist and so to avoid the apparently great physical effort of the other class of conductors.

NILSSON, CHRISTINE (Kristina) (*b.* near Wexiö, district of Wederslöf, Sweden, Aug. 20, 1843; *d.* Stockholm, Mar. 22, 1921), famous soprano singer. Her father was a very small farmer on the estate of Count Hamilton, near Wexiö. From an early date she showed great aptitude for music, and her voice proved the means of her introduction to Baroness Leuhusen, *née* Valerius, herself formerly a singer, from whom the young vocalist received some lessons. She was afterwards instructed by Franz Berwald of Stockholm, and in six months sang at court. She next accompanied the Baroness Leuhusen to Paris, and studied singing under Masset, Wartel and Delle Sodie. She made her début at the Théâtre Lyrique, Oct. 27, 1864, as Violetta in a French version of 'La Traviata'; and afterwards appeared as Lady Henrietta, Astrifiamante, Donna Elvira, etc. She remained at the Lyrique nearly three years, during which time she created the parts of Myrrha in Joncières's 'Sardanapalo' and Estelle in Cohen's 'Bluets,' both in 1867. Between the two she came to England, and made her first appearance, June 8, 1867, at Her Majesty's as Violetta, with great success, subsequently playing in the other characters mentioned above, and as Margaret in 'Faust.' The same season she sang at the Crystal Palace, and also at the Birmingham Festival in oratorio. She was next engaged at the Paris Opéra for the part of Ophélie in Ambroise Thomas's 'Hamlet,' in which she appeared on its production, Mar. 9, 1868, with very great success.

In 1868 Mile. Nilsson reappeared in Italian opera at Drury Lane, with the same éclat as before, and sang the parts of Lucia and

Cherubino. In that year she sang at the Handel Festival. She sang in the autumn at Baden-Baden, appearing for the first time as Mignon, and in the winter returned to the Opéra, Paris. In 1869 she played Ophélie in the production of 'Hamlet' at Covent Garden, and appeared as Donna Elvira to the Donna Anna of Tietjens and the Zerlina of Patti. In the autumn she made a provincial tour, singing later in London, at Exeter Hall, in the 'Messiah,' 'Creation,' 'Hymn of Praise,' etc., and returning to Paris for the winter. In the summer season of 1870 she sang for the first time in England as Alice, the Countess ('Figaro'), Desdemona and Mignon. On July 17 she sang the scena 'Ah perfido' at the Philharmonic, on the commemoration of the centenary of Beethoven's birth. From the autumn of 1870 to the spring of 1872 she sang in America in concerts and Italian opera under Strakosch, when she added to her other parts Mme. Abeille in Flotow's comic opera 'L'Ombre.' She returned to Drury Lane in the summer of 1872, and on July 27 was married at Westminster Abbey to Augusto Rouzeaud of Paris (d. Feb. 22, 1882). From 1872-77 Madame Nilsson sang every season in Italian opera at Drury Lane and Her Majesty's, creating Edith in Balfe's 'Talismano,' June 18, 1874, and Elsa on the production of 'Lohengrin' at Drury Lane in 1875, a part which she had previously played in America. She paid a second visit to America for the winter seasons of 1873-74; in 1876 she made a tour in Scandinavia with remarkable success. In 1877, and in 1879-81, she sang at Her Majesty's Theatre, singing the part of Helen in Boito's 'Mefistofele' in the first performance of that work in England, July 6, 1880. She toured in opera and concerts in Russia, Spain, Vienna, America and Sweden about the same period, and married Count Casa di Miranda in Mar. 1887. On June 20, 1888, she gave the second of her farewell concerts, and definitely retired from the professional career, giving her services once more at what was presumed to be Sims Reeves's final retirement in the same hall, May 11, 1891.

Her voice was of moderate power, great sweetness, brilliancy, and evenness in all the register, the compass being about two and a half octaves, from *g* to *d'''*.¹ During her earlier seasons her success was helped by a certain naïveté of look and manner which was very charming.

NINTH. The compound intervals called

¹ It was formerly nearly three octaves, but she spared the higher part on the advice of Rossini, on account of the great strain.

ninths exceed the octave either by a tone or a semitone; if the former the ninth is called 'major,' if the latter it is called 'minor.' (See INTERVALS; HARMONY.)

NISARD, THEODORE (real name, Théodule Elzéar Xavier Normand) (b. Quaregnon, Belgium, Jan. 27, 1812; d. Jacquville, Seine-et-Marne, Feb. 29, 1888), was ordained priest in 1835, and in 1842 became 2nd organist at St. Germain-des-Prés, in Paris, and was employed by a large ecclesiastical bookseller to edit books of plain-song. Being naturally of a controversial turn of mind, he published many pamphlets on questions connected with musical archæology; but these are of less value than his edition of Dom Jumilhac's treatise on *La Science et la pratique du plain-chant*, from which he extracted his pamphlet *De la notation proportionnelle du moyen âge* (Paris, 1847); his *Études sur les anciennes notations musicales de l'Europe* (no date), directed against Fétis; and finally his remarkable articles in d'Ortigue's *Dictionnaire liturgique, historique, et pratique du plain-chant*, etc. (1854). Many other titles are given in Riemann.

BIBL.—*Tribune de Saint Germain*, 1899; P. AUBRY, *Les Papiers de...*, Th. Nisard.

NISSEN, ERIKA LIE-, see LIE-NISSEN.

NISSEN, GEORG NICOLAUS VON, Staatsrath of Denmark (b. Hadersleben, Denmark, Jan. 22, 1761; d. Salzburg, Mar. 24, 1826). When chargé-d'affaires at Vienna in 1797 he made the acquaintance of Mozart's widow, assisted her in regulating her embarrassed affairs, and in 1809 married her. Retiring from official life in 1820, he settled in Salzburg. His biography of Mozart, compiled from the mass of documents then in existence, and from the recollections of his wife and Mozart's sister, was published after his death by his widow, with preface by Dr. Feuerstein of Pirna, and 'Anhang' (published by Breitkopf & Härtel, with second and cheap edition by G. Senff, Leipzig, 1828).

C. F. P.

NIVERS, GUILLAUME GABRIEL (b. near Melun, c. 1617; d. Paris?, after 1701), pupil of Chambonnières; organist of St. Sulpice, 1640; organist to the King and music-master of the Queen, 1667. His book *La Gamme du si; nouvelle méthode pour apprendre à chanter sans nuances* (4 editions between 1646-96) was mainly responsible for the final abolition of solmisation. Several other theoretical works are in *Q.-L.* He composed motets and other church music, lute pieces and 3 books of organ pieces, published in modern edition by Vervoitte (Riemann; *Fétis*; *Q.-L.*).

NIXON, (1) HENRY GEORGE (b. Winchester, Feb. 20, 1796; d. Southwark, 1849), was successively organist at St. George's Chapel, London Road, 1817-20; at Warwick Street Chapel, 1820-36; at St. Andrew's Roman

Catholic Chapel, Glasgow, 1836-39; and finally at St. George's (R.C.) Cathedral, Southwark, in 1839, which post he held until his death from cholera. His compositions include five masses, a *Te Deum*, 'Respicie Victimae Paschali,' 'Dominus rognavit'; a cantata written for Malibran; Vespers for every festival in the year, many of them published after his death in two-folio volumes, besides pianoforte solos and songs. He married in 1818 Caroline Melissa Danby, the daughter of John Danby, the glee composer, who died in 1857, and by whom he had thirteen children; among them were:

(2) JAMES CASSANA (1823-42), a violinist.

(3) HENRY COTTER, the fourth son (*b.* London, 1842), who was taught music and the organ by Deval of Hull, Henry Smart, Dr. Steggall and G. A. Macfarren. He was successively organist at churches of various denominations at Hull, Woolwich, Blackheath, Spanish Place and St. Leonard's, where he officiated from 1872-77, being also the local representative of the R.A.M. He received the degree of Mus.B. at Cambridge in 1876. His compositions include a sonata for piano and violin, played by himself and Henry Blagrove in 1871; a pianoforte trio, first prize Trinity College, London, in 1880; sonata for pianoforte and violoncello; symphonic poem 'Palamon and Arctite,' overture, 'Titania' (Cowen's Concerts, Dec. 18, 1880); Concertstück for piano and orchestra; madrigals, partsongs and songs, etc. A. C.

NOBLE, THOMAS TERTIUS (*b.* Bath, May 5, 1867), English organist.

In 1881 an old friend, one of the minor canons of Gloucester Cathedral, who had been appointed rector of All Saints, Colchester, gave Noble his first organ appointment, took him to live in his house, and superintended his general as well as his musical education. He was given further lessons in organ-playing and theory by Edwin Nunn of Ipswich. Early in 1886 he entered the R.C.M., coming to London twice a week for his lessons; studying with Parratt, Bridge and Stanford. He gained an exhibition soon after entering, and a scholarship in the following year. On the completion of his studies he joined the teaching staff. In 1889 he left Colchester to take the place of organist at St. John's, Wilton Road, S.W., and soon afterwards became assistant organist to Stanford at Trinity College, Cambridge, 1890-92. In 1892 he was appointed organist and choirmaster at Ely Cathedral, and, in 1898, organist of York Minster, a post he filled with great distinction till 1912, when he accepted that of St. Thomas's Church on Fifth Avenue, New York.

Meantime, in 1899 he founded the York Symphony Orchestra, in 1901 he became conductor of the York Musical Society, and in 1906 was appointed conductor of the Hovingham Festival (where his 'Birthday Greeting to

Joachim' had been performed) in succession to Canon T. P. Pemberton, the founder. He was made an honorary fellow of the R.C.O. in 1905, and was Master of the Music and conductor of the York Pageant in 1909.

The post which he went to New York to fill was one of great importance. St. Thomas's had just been rebuilt on a new site. One of the finest Gothic churches in the city, it had been designed to reproduce the conditions of the English cathedral service. It was Noble's task to establish the musical traditions; a magnificent organ was installed under his supervision, a choir school founded, and under his direction the musical services have been maintained at a high level. His principal compositions have been in the direction of church music; he has written three full Morning and Evening Services, an Evening Service in G minor, Communion Services in A and F and one for female voices; one of the Communion Services has accompaniment for organ, wind instruments and brass instruments and drums; nine unaccompanied anthems and an eight-part motet. Many shorter church compositions, such as offertory sentences, etc., a vigorous choral work, 'The Sound of War,' a cantata for baritone solo, chorus and orchestra, 'Gloria Domini,' a madrigal, 'Come see what pleasure,' and some songs and partsongs. In a lighter vein he won success at Cambridge with his music to an A.D.C. burlesque, 'Jupiter,' and greater renown with his charming music to the *Wasps* of Aristophanes, 1897. The music for the York Pageant was a work of importance, and Noble has also written a number of orchestral and chamber compositions. M.; addns. C.

NOBLEMEN'S AND GENTLEMEN'S CATCH CLUB, see CATCH CLUB.

NOCTURNE, NOTTURNO. The use of the title 'Nocturne' for a certain kind of quiet, reflective movement for pianoforte, originated with John FIELD (*q.v.*), and it was adopted by Chopin for his opp. 9, 15, 27, 32, 37, 48, 55, 62 and 72, in which the mood became of a more melancholy nature, as though reflecting the atmosphere of night.

'Notturmo' originally meant a kind of SERENADE (*q.v.*), and was employed by Mozart in his three-movement work for strings and 2 horns (K. 286). An entr'acte in the 'Midsummer Night's Dream' music of Mendelssohn bears the same title.

NOCTURNS (Lat. *nocturni, nocturnae orationes*. The Night Hours), see MATINS.

NODE (Latin *nodus*, 'a knot'). The vibration of a string may assume many different forms. In Fig. 1 the string is shown vibrating as a whole; in Fig. 2 it divides into two equal segments; in Fig. 3 into three equal segments. These segments, where the amplitude of vibration is greatest, are called Loops (*l*, Figs. 2

and 3), and the points of rest between them are called Nodes (n).

FIG. 1.

FIG. 2.

FIG. 3.

But when a string is plucked, as in the harp and guitar, or bowed as in the violin, it does not vibrate in any one of the simple forms just described, but in several of them at once. The motion of the whole string combined with that of its halves would be represented by Fig. 4.

FIG. 4.

Here the node is no longer a point of complete rest but a point where the amplitude of vibration is least.

If the string while vibrating be touched at $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, etc., of its length, as in playing harmonics on the harp or violin, all forms of vibration which have loops at these points vanish, and all forms which have nodes there become more marked. Thus it is possible to damp the vibrations of the whole string, of its third parts, of its fifth parts, etc., leaving the vibrations of its halves, of its fourth parts, of its sixth parts, etc., unimpeded.

The column of air in an open pipe vibrating as a whole has a node in the centre towards which the particles of air press and from which they again draw back (see Fig. 5, n).

FIG. 5.

Thus at the node the air does not move but undergoes the greatest changes of density. At the loop (l) there is no change of density but great amplitude of vibration. The open ends of the pipe are always loops, for the density at these points, being the same as that of the outer air, does not change. This remains true whether the pipe have two, three or more nodes, as shown in Figs. 6 and 7.

FIG. 6.

FIG. 7.

In a stopped pipe the closed end is always a node, and the open end a loop, whether the column of air vibrates as a whole (see Fig. 8)

or divide into segments, as shown in Figs. 9 and 10.

FIG. 8.

FIG. 9.

FIG. 10.

In practice both an open and a stopped pipe vibrate not in any one of the ways just described, but in several of them at once. Here, too, as in the case of strings, the node is not a point of complete rest but of least motion.

Chladni showed that sand strewn on vibrating plates or membranes collects along the lines where the motion is least. These are called *nodal lines*, and may assume a variety of symmetric forms (see ACOUSTICS). J. L.

NODUS SALOMONIS (Solomon's knot), a celebrated canon composed by Pietro VALENTINI (*q.v.*), and described by Fr. Kircher in his 'Musurgia.'

NOËL (Old Fr. *noel*; Burgundian *noé*; Norman *nuel*; Poitevin *nau*; Ger. *Weihnachtslied*; Eng. *nowell*, *novell*, Christmas carol), a peculiar kind of hymn or canticle of mediæval origin, composed and sung in honour of the Nativity of Our Lord.

Of the numerous early examples which have fortunately been preserved to us, the most interesting is undoubtedly the famous 'Prose de l'âne.' This curious carol was annually sung at Beauvais and Sens on the Feast of the Circumcision as early as the 12th century, and formed an important part of the ceremonial connected with a certain popular festival called the 'Fête de l'âne,' on which an ass, richly caparisoned and bearing upon its back a young maiden with a child in her arms, was led through the city, in commemoration of the Flight into Egypt, and finally brought in solemn procession to the cathedral, while the crowd chanted a variant of the plain-song melody 'Jesu redemptor omnium' ¹:

Or - i - en - tie par-ti-bus, Ad-ven-ta-vit as - i - nus,
Hez, sire Asnes, car chantez, Bel-le bouche re-chig-nes,

Ful-cher et for - tis - si-mus, Bar - ci - nis ap - tis - si-mus
Vous auez du foin as - ses, Et de l'avoine a plantes.

Hez, sire As - nes, hez!
Hez, sire As - nes, hez!

Scarcely less popular in Germany than the

¹ There is a copy in the British Museum, Egerton MSS. with notes of even length.

'Prose de l'âne' in France were the beautiful carols 'Resonet in laudibus' ('Wir loben all' das Kindelein) and 'Dies est lætitiæ' ('Der Tag der ist so freundlich)—the latter equally well known in Holland as 'Tis een dach van vrolijkheit.' Both these examples are believed to be as old as the 13th century, as is also another—'Tempus adest floridum'—of equally tuneful character. 'In dulci jubilo'—a mixture of Latin and patois set to a deliciously simple melody—may possibly be of somewhat later date.

These early forms were succeeded in the 16th and 17th centuries by carols treated, with more or less success, in the polyphonic style. The credit of having first so treated them is generally given to François Eustache du Caurroy, maître de chapelle to Charles IX, Henri III and Henri IV, on the strength of a collection of pieces, entitled 'Mélanges de la musique,' published at Paris in 1610—the year following his decease. But Giovanni Maria Nanini, who died at Rome in 1607, has left us a magnificent example in the form of a motet—'Hodie Christus natus est'—in the course of which he introduces the exclamation, Noé! Noé! with striking effect; and Luca Marenzio published a similar composition adapted to the same words as early as 1588. The same words were set by Sweelinck and many other composers. As Du Caurroy's collection was contained in a posthumous volume, it would perhaps be impossible now to reconcile the claims of the rival composers as to priority of invention; though the French Noël's bear no comparison with those written in Italy in point of excellence. Still, it is only fair to say that the Italian composers seem to have excited no spirit of emulation among their countrymen; while for more than a century after the death of Du Caurroy collections of great value appeared from time to time in France, such as Jean François Dandrieu's 'Suite de Noël's,' published early in the 18th century; 'Noël Borguignon de Gui Barôzai,' 1720; 'Traduction des Noël's bourguignons,' 1735; 'Nouveaux Cantiques spirituels provençaux,' Avignon, 1750; and many others.

W. S. R.

For a wider treatment of this subject and a full bibliography see 'CAROL.

NOHL, CARL FRIEDRICH LUDWIG (*b.* Iserlohn, Westphalia, Dec. 5, 1831; *d.* Heidelberg, Dec. 16, 1885), writer on music and musical subjects. He was educated at the Gymnasium of Duisburg, and in 1850 entered the University of Bonn. From Bonn he proceeded to Heidelberg, in order to pursue his legal studies, which were, however, neglected for musical and literary pursuits. At Heidelberg he determined to make music his profession, but this idea was abandoned in accordance with his father's wishes, and he continued the study of juris-

prudence at Berlin, at the same time receiving instruction in the theory of music from Professor Dehn. In 1853 Nohl entered the Prussian Civil Service as Referendarius, but in 1856 his health broke down, and he had to undertake a journey to France and Italy. He returned to Berlin in 1857, and continued his musical studies under Professor Kiel. In 1858 he finally abandoned the legal profession and settled at Heidelberg, the university of which place conferred upon him the degree of Doctor of Philosophy (1860). In the following year he went to Munich, where in 1865 King Ludwig II. appointed him an honorary professor in the university. In 1872 he returned to Heidelberg, where he resided as teacher of musical history and æsthetics until his death. Many of Nohl's works have been translated into English. His *Mozart's Letters* (1865), *Beethoven's Letters* (1865 and 1867), *Letters of Musicians* (1866), *Gluck and Wagner* (1870), *Die Beethoven Feier* (1871), *Beethoven according to the Representations of his Contemporaries* (1877), *Life of Beethoven* (1864-77), *Mozart according to the Representations of his Contemporaries* (1880), and other works on Mozart and Beethoven, are valuable contributions to the musical literature of the time, and have gone through many editions.

W. B. S.

NOIRE, the French name for a crotchet, or quarter-note.

NOLA, DOMENICO DA (proper name Don Joan Domenico del Giovane) (*b.* Nola, kingdom of Naples, first quarter of 16th cent.), became maestro di cappella of the Church of the Annunziata, Naples. His publications, appearing between 1541 and 1564, consist of one book of motets *a* 5, some books of villanelle *a* 3, and madrigals *a* 4 and 5. His villanelle were afterwards re-edited by Claudio Merulo in 1567. Several of his madrigals appeared in later collections. Ambros mentions a book of motets *a* 5 and 6 (Venice, 1575), which is not indicated in *Q.-L.* Three of his madrigals, which have melody and good workmanship, have been republished in Torchi's *L'arte musicale in Italia*, vol. i.

J. R. M.

NONE (*Lat. officium (vel oratio) ad horam nonam, ad nonam*), the last of the 'Lesser Hours' in the Roman Breviary.

NONET (*Ger. Nonett*; *Ital. nonetto*), a composition for nine instruments. Such works are few in number and are generally designed for a string quartet or quintet (double-bass), with the addition of wind instruments. The varieties of combination are of course manifold. Stanford's op. 95 is scored for quartet, double-bass, flute, clarinet, bassoon and horn. Rheinberger has written for violin, viola, violoncello, double-bass, flute, oboe, clarinet, bassoon and horn. Ravel's 'Poèmes' are for pianoforte, string quartet, two flutes and two clarinets. (See CHAMBER MUSIC.)

N. C. G.

NONNE SANGLANTE, LA, opera in 5 acts; words by Scribe and Delavigne, from Lewis's 'Monk'; music by Gounod. Produced Opéra, Oct. 18, 1854. G.

NON NOBIS DOMINE, a celebrated canon, generally sung in England as a substitute for 'Grace after meat' at public dinners and on other festive occasions.

English historians are unanimous in describing 'Non nobis Domine' as the composition of William Byrd; but it is not to be found in any volume of his published works, though the subject appears in one of the 'Cantiones sacrae' printed by Byrd and Tallis in 1575. Burney tells us that the earliest copy to which Byrd's name is appended is that inserted in Hilton's 'Catch that Catch can.' It is undoubtedly to be found in that curious work, but neither in the edition of 1652 nor that of 1658 is the author's name mentioned; but on the title-page of Playford's 'Musical Banquet' (1651) is this canon with Byrd's name. Dr. Pepusch, in his *Treatise on Harmony* (1730-31), distinctly calls it 'the famous Canon by William Byrd.' Mattheson, in the *Vollkom. Capellm.* (1739), refers to it as being Byrd's, and no doubt seems to have been felt on the subject until about the middle of the 18th century, when Carlo Ricciotti published at Amsterdam a concerto, founded on the well-known theme, which he attributed to Palestrina. Palestrina has, indeed, used its opening clause more than once—notably in his madrigal 'When flowery meadows deck the year,' one of the loveliest that ever was written. This, however, proves nothing. He has not treated it as a canon—in which form it bears far less resemblance to his peculiar style than to that of Josquin des Prés. The subject, moreover, is by no means an unusual one, and has even been called, by Morley, 'a most common point.' Handel has used it, in his 'Hallelujah Chorus,' in 'I will sing unto the Lord' ('Israel' ¹) and in other places too numerous to mention. Bach has employed it as the subject of an 'Allabreve per organo pleno,' in D (B.-G. xxxviii. p. 121). Mendelssohn has also used the few opening notes in 'Not only unto him'—the last chorus in 'St. Paul'; and these notes, phrased exactly as in the canon, will be found among the works of so many composers that it is clear they are looked upon as common property. But the subject is not the canon. It is in the ingenuity of that that the true merit lies. We claim that merit for Byrd. Ricciotti may possibly have been tempted to accord it to Palestrina, on the authority of a very ancient copy, said to be preserved in the Vatican, engraved upon a plate of gold. But it does not appear that Palestrina's name is appended to this copy; and it is worthy of remark that in the Introduction to Dr. Blow's 'Amphion Anglicus,'

printed in 1700, special mention is made of 'Bird's Anthem in golden notes,' 'Preserv'd intire in the Vatican.'

The canon—a perpetual one, in the Mixolydian Mode—is capable of many solutions, all exhibiting a freedom of treatment not quite consistent with the strict laws of counterpoint. The most noticeable deviations from rule are some hidden octaves, which seem to form an essential element in the construction of the second clause, and a certain changing note in the form of an ascending seventh, which last fault, however, would not appear were the parts made to leave off in the old-fashioned way, one at a time, as they began. The leading part—technically termed the *Guida*—taken at its true pitch is as follows:

eighth a minim; and the three last notes in the treble must be F, F, C, instead of B, B, A. No clue can be obtained either as to the authorship or the date of this very interesting MS.

Furthermore, Burney entertains us, on the authority of Hilton, with a solution in which all the parts are inverted; thus—

The *Guida* is here led off by the second voice. The first follows after a semibreve rest, in the fourth above. The third enters, two semibreves after the second, in the twelfth below the *Guida*. We give this solution for what it is worth; but it presents so many crudities that it is impossible to believe it can ever have entered into the composer's original design. W. S. R.

NOORDEWIER-REDDINGIUS, AALTJE (b. Dourne, Holland, Sept. 1, 1868), a soprano singer and a pupil of Messchaert. She was, like her master, a member of the admirable little a cappella choir of Daniel de Lange. Since 1890 she has appeared in almost all European countries as an oratorio singer. She is one of the most distinguished representatives of the new school of Dutch singing, and she is especially a fine interpreter of Bach. Mrs. Noordewier lives at Hilversum, Holland, where she is a well-known teacher. R. M^o.

NOORDT (NOORTH), ANTHONY VAN, is only known as being in 1659 organist of the Nieuwe Kerk at Amsterdam. In that year was published his 'Tabulatur-Boeck' for the organ containing a number of the French psalm tunes varied according to the verses, and six fantasias in fuguo form. The music appears on a double stave of six lines each with two clef-signatures to each stave, and occasionally there is a part for the left hand given in Old German tablature under the stave. The work has been republished in modern score by the Vereeniging voor Noord-Nederlands Muziek-geschiedenis, vol. xix. One of the fantasias is also given in Ritter, *Geschichte des Orgelspiels*, Bd. ii. No. 35. J. R. M.

NORCOTE (NORCUM), DANIEL (b. Windsor, 1576; d. before 1626¹), son of a lay-clerk of St. George's Chapel, Windsor, was himself a lay-clerk. Having become a Roman Catholic, he was deprived of his lay-clerkship and went to Brussels, where he became one of the instrumentalists in the viceregal chapel. His name occurs in a list of the members of the chapel in 1641. He was at the Danish court (1599), whence he fled with John Meinert (? Maynard), travelling through Germany and Hungary to

Venice. He contributed a madrigal, 'With angel's face and brightness,' to 'The Triumphes of Oriana,' 1601. He is mentioned by SYMPSON (q.v.) in *The Division Viol*, which contains viol pieces by Norcome. (See copies at Oxford and R.C.M.) W. H. H., with addns.

NORDICA, LILIAN (LILLIAN), née NORTON (b. Farmington, Maine, U.S.A., May 12, 1859; d. Batavia, Java, May 10, 1914), was taught singing by John O'Neill, New England Conservatory, Boston. She first sang in the vocal quartet of Dr. Putnam's church, and afterwards 'in an extended concert tour throughout America, principally with the Handel and Haydn Society and with Theodore Thomas's Orchestra, with unvarying success.'² On May 21 and 22, 1878, she came to England and sang at the Crystal Palace with Gilmore's American band. She then studied singing at Milan with Sangiovanni, and on Apr. 30, 1879, made a successful début, under the name of Nordica, at Brescia as Violetta in 'Traviata.' After singing in other cities, Berlin, Dantzig, etc., she was engaged in 1881 at St. Petersburg, and sang as Philine, Amalia in 'Un ballo,' etc. On July 21, 1882, she made her début in 'Faust,' and sang on Dec. 15 in 'Hamlet,' having studied the leading soprano parts under Gounod and Thomas. In the same year she married Frederick A. Gower, and for a time retired into private life. After eighteen months of married life she lost her husband in a balloon accident in an attempt to cross the English Channel. In 1885 she reappeared on the stage at Boston, made a long tour with Mapleson in America and the English provinces, and under him on Mar. 12, 1887, she made her début at Covent Garden as Violetta—appearing later as Gilda and Margaret with instant success, on account of the purity of her style and the richness and roundness of her upper register. On Mar. 24 she sang at the Philharmonic. The same year she was engaged by Harris for his Drury Lane season, where she sang as Lucia, Donna Elvira, Valentine, Aida, etc. From 1888-93 she sang every season under Harris, at Covent Garden, in a great variety of parts. On July 26, 1893, she sang the part of Zelica in Stanford's 'Veiled Prophet.' She also sang with much success in concerts at the Crystal Palace, in oratorio at Albert Hall and St. James's Hall (Novello concerts), the Handel and provincial festivals, and other concerts. In 1889 she sang in the winter season under Abbey and Grau, and again in 1893. In 1894 she sang Elsa in 'Lohengrin' at Bayreuth. In 1896 she married in America a Hungarian tenor, Zoltan Dome, whom she afterwards divorced. In 1897 she sang again at the Handel Festival. In 1898, 1899 and 1902 she returned to Covent Garden, and added to her repertory Donna Anna, Susanna, Isolde Brunnhilde, etc. She excelled both in dramatic

¹ The registers of St. George's Chapel, Windsor, record the burial of Norcome's widow in this year. (See Fellows, *English Madrigal Composers*, p. 246.)

² Pratt.

and florid singing, though she was a better singer than actress.

A. C.

NORDISA, opera in 3 acts, words and music by F. Corder. Produced Carl Rosa Co., Liverpool, Jan. 26, Drury Lane, May 4, 1887. M.

NORDRAAK, RICHARD (b. Christiania, June 12, 1842; d. Mar. 20, 1866), a name known mainly to the biographers of Grieg, as he had an important influence on that composer's career. He was a pupil of Kiel and Kullak; he wrote incidental music to Björnson's 'Mary Stuart' and 'Sigurd Slembe,' and threw himself with ardour into the cause of Norwegian national music, collecting and editing folk-songs, etc. He and Grieg were fellow-workers with this object, and his early death deprived his friend and his country of an enthusiastic supporter.

M.

NORLIND, TOBIAS (b. Hvellinge, Sweden, May 6, 1879), studied with Jadassohn at Leipzig and with Thuille at Munich, where he began his studies in musical history and research with Sandberger. He extended them later in Paris, London and Berlin. Returning to his own country he engaged in educational work, and established himself as a teacher of musical science in the University of Lund. He has published many works in Swedish on a variety of musical subjects, including Swedish folklore and history, *Allmän Musikhistoria* (1920). He has edited the most important Swedish Dictionary of Music, *Allmänt Musiklexikon* (2 vols., 1916), and is also editor of a musical paper, *Svensk Tidskrift för Musikforskning*. (Riemann.)

C.

NORMA, opera in 2 acts; words by Romani, music by Bellini. Produced La Scala, Milan, Dec. 26, 1831; Paris, Italiens, Dec. 8, 1835; King's Theatre, June 20, 1833; in English (Planché), Drury Lane, June 24, 1837; New York, Park Theatre, Nov. 13, 1835. G.

NORMAN, BARAK, viol- and violoncello-maker, London, 1688-1740; one of the best of the old English school of viol-makers, and one of the first—if not the first—to manufacture violoncellos in England. His earliest work is in imitation of Thomas Urquhart, whose pupil he is thought to have been; later he copied the Maggini models, especially in the matter of double purfling. His violoncellos and tenors are skillfully modelled; they are rather high in build, the *f* holes somewhat German in character; the wood used for the bellies is of good quality; the varnish is very dark. His name or monogram is found executed in purfling under the finger-board of all his instruments. In 1715 Barak Norman went into partnership with Nathaniel Cross and carried on a joint business with him at the sign of the Bass Viol in St. Paul's Churchyard.

E. H.-A.

NORMAN, FREDRIK VILHELM LUDVIG (b. Stockholm, Aug. 28, 1831; d. there, Mar. 28, 1885), a Swedish composer who has created works of deep and lasting value. He showed an early talent in improvisations on the piano and composition. Already in 1843 a book of 'Songs composed at 11 years of age' was published.

His father's death left Norman poor, but through the kind interest shown him by the Crown Prince Oscar, Jenny Lind and others, he was enabled to continue his musical education in Leipzig, where he remained for four years, studying at the Conservatoire under Hauptmann, Moscheles and Rietz. Through the mediation of Schumann, his first opus, 'Zwei Klavierstücke,' was published in 1851 by Kistner; this Leipzig firm also later on undertook the publication of his various instrumental compositions.

On his return to Stockholm, Norman, at the age of 30, became conductor of the Royal Orchestra, which post he held till 1879; up to the last year of his life he conducted the Symphony Concerts.

But it is as a composer that Norman ranks highest. He was one of the first to show the importance of Franz Berwald's art by following in his footsteps. He wrote three symphonies, four overtures and three sonatas; also a good deal of chamber music and a number of songs. Many honours were bestowed on the distinguished composer; he received several orders, and in 1884 the prize medal of the Swedish Academy, for his merits as a musician and author. He edited *The Journal for the Theatre and Music*, and also wrote musical articles and criticisms for various papers. He was a member of the Academy of Music in 1857, and this society in 1910 engraved a medal in commemoration of him. He married in 1864 the celebrated violinist Wilma (Wilhelmina) NERUDA, afterwards Lady Hallé. G. A. S.

NORMAN, JOHN, English organist and church music composer of the late 15th and early 16th centuries. In his MS., *Memoria sacra*, Archdeacon Yardley mentions that in Bishop Vaughan's time (1509-22) 'Mr. John Norman, a Skillful and Learned Musician, was Organist and Master of ye Choristers' at St. David's Cathedral (West's *Cath. Org.*). Norman was thus a contemporary of Aston, Taverner and Fayrfax, and a Mass, 'Resurrexit,' by him (Bodl. Mus. Sch.) is written out in the same hand as other masses in this collection by these three composers. There is also a motet by him, 'Euge dicta,' in some partbooks at Peterhouse, Cambridge (the tenor book is missing), as well as the score of another 3-part one, in a MS. of Henry VIII.'s time (B.M. Add. MSS. 5665/145). J. M^{rs}.

NORRIS, THOMAS, Mus.B. (b. Mere, near Salisbury, Aug. 1741; d. Himley Hall, near

1 Baptized Aug. 15, 1741.

Stourbridge, Sept. 3, 1790), was a chorister of Salisbury Cathedral under Dr. Stephens. He appeared as one of the principal sopranis at the Worcester Festival, 1761, and Hereford Festival, 1762, and in the latter year at Drury Lane in 'The Spring,' a pasticcio. In 1765 he was appointed organist of Christ Church Cathedral, Oxford; in November of the same year graduated at Oxford as Mus.B., his exercise (two anthems, 'The Lord is king' and 'I will alway give thanks') being performed in the Music School, Nov. 12; and on Dec. 15 was chosen organist of St. John's College. In 1766 he appeared at the Gloucester Festival as a tenor singer, and continued to sing at the meetings of the Three Choirs until 1788. On Nov. 5, 1771, he was admitted a lay-clerk of Magdalen College, Oxford.¹ He sang at the commemoration of Handel in 1784 (where his delivery of the final recitatives in 'Israel in Egypt,' and of 'Thy rebuke' and 'Behold and see' in 'Messiah,' was greatly admired), and at most of the subsequent performances in the Abbey. He sang also at the oratorios in London. In 1790 he was engaged at the Birmingham Festival, but ten days afterwards died at Himley Hall, near Stourbridge, the seat of Lord Dudley and Ward. Norris composed several anthems, only one of which has been printed, six symphonies for strings, with two hautboys and two horns (in the R.C.M.), and some glees and other vocal pieces. A catch by him is in the third volume of Sibbald's Collection of Catches, and he wrote an overture to Purcell's 'Tempest' music, of which a copy is in B.M. Add. MSS. 31,450.

W. H. H.

NORRIS, WILLIAM (*d. circa* 1710), one of the children of the Chapel Royal at the coronation of James II. in 1685; afterwards a member of the choir, and master of the choristers of Lincoln, his appointment to the latter office being confirmed in 1691. An anthem by him, 'Blessed are those,' was printed in Playford's 'Divine Companion,' and a service and two anthems are in the Tudway collection (Harl. MS. 7340). He composed an ode for St. Cecilia's Day, believed to have been performed in London in 1702; the MS. was in the possession of Benjamin Jacob, and was sold with the rest of his library in 1830, but has not been traced. Norris is supposed to have died about 1710, but his name does not occur in the Chapter Rolls after 1700.

W. H. H.

NORTH, (1) FRANCIS, LORD GUILFORD (*b.* Kirtling, Cambridgeshire, in 1637²; *d.* Sept. 5, 1685), Chief Justice of the Common Pleas, and afterwards Keeper of the Great Seal, one of the best amateur musicians of his time, published anonymously in 1677 *A Philosophical Essay on Musick*, containing some

curious observations on the phenomena of sounds.

(2) The HON. ROGER, his brother (*b.* Tostock, Suffolk, Sept. 3, 1653; *d.* Rougham, Mar. 1, 1733/34), was also bred to the Bar, and became Attorney-General to James II. He wrote several family biographies and other works, but his claim to mention here is as author of *Memoires of Musick*, a well-written sketch of the progress of the art from the time of the ancient Greeks to 1728. The MS. remained in the family's possession, unpublished, until 1842, when, after being rescued from the shop of a country broker, it came into the hands of George Townshend Smith, then organist of Lynn, Norfolk, through whose exertions it was published in 1846 under the editorship of Dr. Rimbault. The first 185 pages of the MS. contain a treatise, *The Musical Grammarian*, never printed.

W. H. H.; corr. D.N.B.; addns. F. K.

NORTHBROKE, JAMES (first half of 16th cent.), English church composer. He was a secular chaplain and graduated Mus.B. at Oxford in 1531.³ There is a motet by him, 'Sum tuam protectionem' (PH.; tenor part-book missing). J. M^K.

NORTH STAFFORDSHIRE FESTIVALS, see HANLEY.

NORWICH FESTIVAL. The establishment of Triennial Festivals at Norwich dates from the year 1824, but previous to this Musical Festivals were held in 1770, 1802, 1809, 1811, 1813, 1814 and 1817. These generally consisted of two or more miscellaneous concerts held either in St. Andrew's Hall or the theatre, and of oratorios and selections of sacred music performed in the church of St. Peter's Mancroft. On these occasions the band was chiefly composed of local musicians, both amateur and professional, led by London principals under different conductors, the most prominent of whom was Dr. Beckwith.

In 1824 the scheme of Triennial Festivals, after having been broached by R. M. Bacon and discussed for some years, was finally adopted on the motion of Philip Martineau, surgeon, of Norwich. A chorus of 150 voices was formed and trained by Edward Taylor, afterwards Gresham Professor, assisted by the Cathedral organist, Zechariah Buck. The band consisted of 110 performers, and the conductor was Sir George Smart. The Festival was attended by 10,087 people, and was a great financial success, the sum of £2411 : 4 : 2 being handed over to the Norfolk and Norwich Hospital after paying all expenses. Thenceforward festivals were held at Norwich triennially until 1911. That proposed for 1914 was postponed by the war, and the Festival was only revived in 1924.

The conductor from 1824-36 was Sir George Smart; from 1839-42, Professor Taylor; from

¹ An amusing extract from the *Magdalen Registers* is given in *Walt's Cath. Org.* p. 66.

² Baptized Nov. 2, 1637.

³ Cf. F. Abdy Williams, *Degrees in Music*.

1842-78, Sir Julius Benedict; from 1881-1905, Alberto Randegger; and from 1908-24, Sir Henry Wood.

In 1839 Spohr was present, conducted his 'Calvary,' played his concertino 'Sonst und jetzt,' and with Blagrove a concertante for two violins. A list of all the artists who have sung at these festivals would include the names of all the greatest vocalists of the century, from Mrs. Billington and Braham (in 1802) downwards. Apart from the stock pieces the following may be mentioned: Mozart's 'Davidde Penitente' (1848), Bexfield's 'Israel Restored' (1852), Pierson's 'Jerusalem' (1852) and 'Hezekiah' (1869), Molique's 'Abraham' (1860) and Handel's 'Passion Music' (1866). 'St. Paul' was given for the first time at Norwich in 1881, when the new works were Cowen's 'St. Ursula' and A. Goring Thomas's 'Sun-worshippers,' and, for orchestra alone, Barnett's 'Harvest Festival' and W. Macfarren's 'Henry V.' In 1884 the chief novelties were Mackenzie's 'Rose of Sharon' and Stanford's 'Elegiac Ode.' In 1887 the new works were both Italian oratorios, 'The Garden of Olivet,' by Bottesini, and Mancinelli's 'Isaias.' In 1890 Parry's 'L' Allegro' and Mackenzie's 'Dream of Jubal' were the novelties (the latter had been performed elsewhere previously). In 1893 Paderewski and Sarasate were engaged, the former to play his 'Polish Fantasia' and the latter to introduce Mackenzie's 'Pibroch'; Cowen's 'Water Lily' was the most important new choral work. In 1896 Mancinelli's 'Hero and Leander,' an opera performed as a cantata; Stanford's 'Phauidrig Crohoore,' and a violin concerto by Frederick Cliffe, were the principal new works. In 1899 the three new sacred compositions of Verdi, Dvořák's 'Biblical Songs,' Perosi's 'Passion according to St. Mark,' Parry's 'Song of Darkness and Light' and Elgar's 'Sea Pictures' were given for the first time. From 1902-11 the programmes contain an increasing number of works by native composers, including many new ones in the shorter forms of cantata, choral ballad or orchestral tone-poem. The revival of 1924 was more remarkable for its series of classical masterpieces, including Beethoven's Mass in D, Bach's 'St. John Passion' and Verdi's Requiem. Its English works included Holst's 'Hymn of Jesus,' and Vaughan Williams's 'Sea Symphony.'

BIBL.—*Annals of the Norfolk and Norwich Triennial Musical Festivals*, by R. H. LEGGE and W. E. HANBELL, 1906.

NOTA CAMBITA (Ital. *nota cambiata*; Ger. *Wechselnote*; Eng. *changing note*). (1) A note of irregular transition; in other words, a passing note, on the strong part of the measure, as opposed to the note of regular transition or true passing note, which occurs upon the weak part of the measure.

In the following example from Cherubini the

D is a changing, and the second G a passing note:

(2) Fux applies the term *Nota cambiata*¹ to a peculiar licence sometimes known as 'Die Fux'sche Wechselnote' by virtue of which the contrapuntist, instead of resolving a passing discord at once, suffered it to descend a third, and then to rise a second to its resolution. Cherubini condemns this licence as one which should 'neither be admitted nor tolerated in strict Counterpoint.' Fux accounts for it by the omission of an imaginary quaver. The norm of the passage is, he says, as at (a) in the following example. By leaving out the first quaver it is made to appear as at (b); by leaving out the second, as at (c):

Cherubini recommends the form shown at (b). The common consent of the great Polyphonic composers justifies the preference of (c), and their best defence lies in the exquisitely beautiful effects they produce by means of it. Without multiplying examples we may mention innumerable instances in the 'Missa Papae Marcelli,' and in Orlando Gibbons's full anthem 'Hosanna to the Son of David.' The last-named composition derives a great part of its wonderful beauty from the judicious use of this unjustly condemned licence. (See CHANGING NOTE, COUNTERPOINT.) W. S. R.

NOTARI (NOTARY, NOTARIO), ANGELO (d. London, before Nov. 28, 1664), singer and lutenist in the King's private music, London, from 1625. He composed 'Prime musiche nuove, a 1, 2 et 3 voci per cantare con la Tiorba, et altri strumenti' (London, 1613). F. v. d. s.

NOTATION (Lat. *notatio*; Fr. *sémiographie*; Ger. *Notirung*, *Notenschrist*, *Tonschrift*; Ital. *annotazione*), the art of expressing musical ideas in writing.

Musical notation is so familiar to us that few are aware of the difficulty of the problems which had to be solved, and the innumerable experiments undertaken for the invention and perfecting of a satisfactory method of recording musical sounds. In early stages the transference of melody from composer to performer is made through the ear only; but as the art develops and increases in complexity the assistance of the eye becomes a necessity, for the memory can no longer retain the growing mass of new compositions. Methods of expressing musical sounds in writing may be conveniently

¹ 'Nota cambiata, ab Italis cambiata nuncupata.' (*Gradus ad Parnassum*, ed. 1726, p. 66.)

grouped under two heads: (1) the Phonetic, in which words, letters or numerals indicate the degrees of the scale, with the addition of signs to show time values and rhythm; and (2) the Diastematic, or 'Notation by intervals,' in which the rise and fall of melody is presented to the eye by the relative positions of certain signs called Neumes, or Figures, or Notes (Lat. *figurae, notae, notulae*).

Amongst Phonetic notations are those of (1) the Hindus, one of the oldest in use, consisting of five consonants and two vowels, representing the names of the scale degrees, while the addition of other vowels doubles the value of the notes; (2) the Chinese, who use characters derived from the names of the scale degrees, with signs for values; (3) the ancient Greek system of letters and signs; (4) the Arabs, who divide their octave into thirds of a tone, and write the scale in groups of three Arabic letters or Persian numerals, a survival of the Greek system; (5) the tablatures, in which letters or figures represented the keys or fingering of instruments rather than the scale degree; (6) the Tonic SOL-FA (*q.v.*), in which (as in that of the Hindus) letters represent the names of the scale degrees, and other signs show time values; (7) the Paris - Galin - Chev  (see CHEV ), in which numerals are used for the scale degrees.

The Diastematic method embraces the neumes of the Western Church, the notation of the Greek Church (a survival, in a much altered form, of the neumes), the classical notation of Japan, the Mensural music of the Middle Ages, and its descendant, the familiar notation of modern Europe.

The function of a complete notational system is twofold: to indicate relations in pitch and relations in time. There is also a notation to indicate the method of performance, *i.e.* fingering, bowing, etc.; but this is a separate and accessory development, and except in such cases as *TABLATURE* (*q.v.*), where the relation in pitch is directly indicated by the notation of performance, the message of notation is directed to the conceptive and not to the executive faculty, or, in other words, it is symbolical and not practical.

For notation to be translated into conception two mental processes must be gone through, recognition and deduction. The brain, presented by the eye with certain symbols, must recognise them, and from their mutual relationship must deduce the corresponding mutual relationship of the musical elements they represent. In the phonetic notations pitch relationships are absolutely represented: the intervals of an unknown melody are as certainly perceived as those of a melody which is already familiar. But in that early form of Diastematic notation which is called neumatic notation, pitch relationship was only approximately conveyed, and the processes of memory or guessing were sub-

stituted for the process of deduction. It was to remedy this deficiency that the Stave, that essential element in our common notation, was evolved; and it is probable that the continued predominance of staff notation over modern phonetic methods, such as tonic sol-fa, is due to the fact that in the former the exact indication of pitch relationship is reinforced by the pictorial element which it possesses.

THE NEUMES.—All variations and developments of notation are, naturally, determined by the variations and developments of the music which it is its function to convey; and the neumatic method is the notational equivalent of that style of music known as plain-song. So well fitted was the one to the other that at the present day plain-song retains a specialised neumatic notation, for no other has been found so suitable. The Greek system of notation by alphabetical letters seems gradually to have dropped out of use between A.D. 200 and 500. Boethius and Gaudentius, referring to it, say that the 'ancients made use of little signs, called *notulae*, by which any melody could be noted down.' Boethius knew of no contemporary means of writing music, and the so-called Boethian notation was in reality simply a means of referring to his diagrams of tetrachords by letters of the alphabet, having no connexion with the musical scale. It is probable that up to this time, or even later, the teachers sent out from the singing-schools of Rome and Milan taught the melodies of the church by ear. But with its rapidly advancing development, church music began to feel the pressing need of preserving the purity of its melodies by some means of recording them in writing, and recourse was had to the methods used in rhetoric, in which the rise and fall of the speaking voice was regulated by certain rules, and indicated in writing by signs, called accents, *i.e.* *ad cantus*, 'belonging to the (rhetorical) song.' A rise of the speaker's voice was indicated by an upward stroke of the pen from left to right, a fall by a downward stroke, and a rise and fall on a single syllable by the junction of the two signs, which thus formed the circumflex accent. The rhetorical accents seem to have originated in Byzantium, and Gevaert supposes that they were first used in connexion with the melodies of the church about A.D. 680.¹ Their adoption was a natural outcome of the singing of the prose words of Scripture, from which metre was absent, and which only differed from rhetoric in that the rise and fall of the voice was regulated by the musical scale. The melodies naturally required additions to the grave, acute and circumflex

¹ A similar system of denoting upward and downward movements of melody by strokes of the pen is found in the Japanese notation of the 14th century. The reciting note is shown by a stroke like the Punctum of the neumes, while the inflections are indicated by up-and-down strokes. A new reciting note is indicated by a down or up stroke placed before the first of a series of 'level' strokes. Signs for ornaments of the nature of the *quillama*, *preessa*, etc., together with some other features, make a striking resemblance in the principles of the two notations. This ancient Japanese diastematic notation was in use before there was any known communication between Europe and Japan. (See *JAPANESE MUSIC*.)

accents : and by the 9th century an organised system of notation had arisen, under the name

for the proper accentuation, *crescendo*, *diminuendo*, *ritardando*, etc., of the various groups of

of neumes, from *νεῦμα*,¹ a 'nod,' or 'sign.' Each neume was given a name, and there were rules

sounds. No time measurement was required, for the words were sung as they would be pronounced in clear reading, according to the rules of rhetoric.

¹ *νεῦμα*, a sign, must not be confounded with *πνεῦμα*, a breathing, hence a long florid passage of plain-song sung without words.

The neumes were originally intended only to refresh the memory of those who had previously

important, since they show the proper grouping and accentuation of the sounds. But

learned the melodies by ear in the singing-schools; they made no attempt to represent the actual intervals, and hence are in this respect untranslatable; their study is, however, very

the numerous photographic reproductions of ancient MSS. published by the Benedictines of Solesmes, and other learned societies, have shown that the church melodies whose structure

is known through the square notation on a stave, are the same as those written in the early neumes of the 9th century, whose intervals can thus be known by comparing their notation with that of later times.

The figure shows the elements out of which some of the more important neumes are derived, and the forms they have taken in different countries and at various times. The table (which might be extended indefinitely) shows how carefully the unity of the individual neumes has been preserved in the Gothic and Square notation. A comparison of numbers of photographic facsimiles reveals the fact that the groups of square and lozenge notes found in plain-song MSS. of the 13th century and onwards are not merely haphazard ligatures and arbitrary combinations, but the mediæval forms of the neumes of earlier MSS., and the Benedictines, in their latest editions, have restored to them their proper name of Neumes.

The Punctum appears at first as a dot, and afterwards takes the form of a lozenge, as shown in column 7; this shape is due to a short downward stroke of a broad-nibbed pen. When a knowledge of sight-singing became part of the education of all priests and choirmen, a custom arose, which is still continued, for choirs and priests to sing from a single large book, placed on a high reading-desk, the words and music being written so boldly that they could be seen at a distance. The single Punctum then took the form shown in column 13, though it retained its lozenge shape in compound figures. It originally represented a low note.

The Virga, or rod, derived from the acute accent, gradually acquired a head, perhaps at first from the action of the pen in rapid writing; when the stave came into general use, the head of the Virga was enlarged, and placed on the line or space belonging to the scale degree it indicated. (See columns 11 to 14.) It represented a higher note than the Punctum.

The Clivis and Podatus are compound notes, the component parts of which are rarely found separated. In the square notation the Podatus is represented by two squares placed vertically, and connected by a stem. These two neumes represented respectively a higher followed by a lower, and a lower followed by a higher note.

The Scandicus, an ascending passage, becomes vertical in the Sarum Gradual, but in most MSS. it retains its oblique position.

The Climacus, a descending group, the Torculus (i.e. twisted), a group of low, high, low and its converse, the Porrectus, retain their structural principles throughout: the down stroke of the Porrectus becomes, in the square notation, a thick oblique line, representing two notes, the first higher than the second, while the third note is in the form of a Virga, or Punctum, joined to the lower extremity of the oblique line. The construction of the remaining

neumes can easily be understood by comparing them with those described, and their translation as given in columns 11 to 15.

Space forbids us to give more than a passing reference to the accentuation, on which depend the rhythmical properties of the neumes. It must be understood that neumes, whether in the forms of columns 3 to 10 or 11 to 15, have in themselves no time values; any variation of time comes, not from the shape of the notes, but from the rules for the verbal and vocal phrasing, etc. The two simple neumes, the Virga and Punctum, take their time and their accent from the words to which they are allied; the compound neumes are as a rule to have their first note accented, i.e. the first note forms the *thesis*, and the other notes the *arsis*; but to this there are many exceptions, which can only be learned from a treatise. The time of the several notes of the compound neumes is that of the syllables of the text; but here again the exceptions are numerous.

Certain ornaments must be mentioned, viz. the Quilisma, written thus in the Solesmes

version: , a kind of mordent, generally

occurring on the lower note of an ascending minor third; the Strophicus (Apostropha, Distropha, Tristropha), representing a sustained

sound, sung with a vibrato effect: ; the
A - men.

Pressus, a junction of two neumes by means of a common note, producing an effect of the nature of syncope; and the Liquescents, or Seminotes, represented in the Solesmes version by . They seem to have indicated a kind of

mezza voce sound on the liquescent letters L, M, N, R, and became the Plica of the mensuralists.

A complete system of signs of expression is found in many MSS. under the name of Romanian Letters, from its supposed inventor, Romanus, a monk of St. Gall. The most notable example of the system is in an Antiphonary, in the library at Einsiedeln (Codex 121), which is known to have been written before A.D. 996. The signs refer to Intonation, Rhythm and Intensity; the following are a few examples:

Intonation: *a*, *ut altius elevetur admonet.*

l, *levare neumam.*

d, *ut deprimitur.*

Rhythm: *c*, *celeriter.*

t, *tenere*

x, *expectare* } (*ritardando*).

m, *moderari*

Intensity: *f*, *frangere.*

k, *clangere clamitat.*

Any of the signs could be modified by the addition of the letters

b, *bene.*

v, *valde.*

m, *mediocriter.*

It will be seen that non-linear neumatic notation was developed into a system of considerable fullness and expressiveness: and as long as nothing more was required of it than that it should suggest to singers the proper execution of melodies already established in the ecclesiastical repertory it was satisfactory enough; so satisfactory, indeed, that even when its inherent deficiencies in regard to establishing exact pitch and time relationships had brought into being new systems of notation more satisfactory in these regards, they were for some time considered as supplementing, not supplanting it. In this connexion it should be pointed out that nearly all early notational innovations arose from a theoretical dissatisfaction with existing methods; that they were originally products of the study and not of the scriptorium. The experiments which we have now to consider exemplify this in a marked degree. The invention of organum in the 9th century is generally said to have been the spur to these new developments in notation; it would perhaps be more correct to suppose that organum on the one hand, and notational experiments on the other, were expressions of the fact that music had reached one point of culmination and was then entering upon a new stage of its evolution. The first concern was to find some method of indicating exact intervals. However much the Greek alphabetical notation had been superseded by the neumes in practical music, some knowledge of it must have been preserved as a matter of scholarship: and this was now made the basis of a series of attempts to evolve a fixed notation of pitch relationships, either by the alphabet alone or by combinations of the alphabet and the neumes. An immediate problem was to fix a convenient nomenclature for the degrees of the scale, hitherto known by their unwieldy Greek names. The MONOCHORD (*q.v.*), the instrument used for teaching the theory of music, was marked with the letters of the alphabet, but apparently without system, each teacher marking it as he liked. Experiments were made, at first without success, of adapting the letters of the monochord to the neumes. Notker Balbulus (*d.* 912) suggests the following nomenclature, showing that the importance of the modern major mode was already beginning to be recognised, and that the octave had taken the place of the tetrachord as the basis of the scale:

This nomenclature, which is also found in other treatises, seems to have been applied to instruments rather than voices.

Two 11th-century treatises—*Musica Enchiridis* by pseudo-Hucbald, and *Opuscula musica* by Hermannus Contractus—describe the Dasia

notation, in which the ancient sign for the aspirate (προσφθια δασεία), with certain additional features attached, is used to indicate the first, second and fourth notes of each tetrachord, the third being shown by other signs.

The ancient form of the aspirate, †, continued in use as an alphabetical letter until the 12th century of our era, and was therefore familiar to the musicians of the 11th century; it was also the ancient instrumental note corresponding to Lichanos Hypaton, which became the final (D) of the first mode.

The various additions to the aspirate sign used in the Dasia notation make it appear something like the letter F in various shapes; and it was used in different positions for the different notes, in accordance with Greek precedent. This notation represented eighteen notes; its signs were as follows:

† † † † † † † † † † † † † † † † † †

For the sake of beginners it was used in combination with horizontal lines, and the letters T, S (tone, semitone), the words of the *cantus*, being written between the lines. This is probably the earliest attempt to invent a Diastematic notation in which the intervals were indicated with absolute precision.

Solution.

The theorists, however, failed to see what an immense advance they had accidentally made, and when the student had become familiar with the signs of the Dasia notation he was expected to be able to use them without the lines. They were then placed over the words, and must have been even more troublesome to read than Odo's system described below.

Adelbold, a contemporary writer, being influenced by the Katapyknosis of Greek music, proposes to use the whole alphabet, to represent the three genera, with large capitals for 'fixed,' and small ones for 'movable' sounds. The diatonic genus works out by his system as follows:

An anonymous writer calls Proslambanomenos A, goes up the scale as far as our G in

Latin capitals, uses the round and square *b* for our *b* flat and *b* natural, shows the second and third octaves by small Latin and Greek letters respectively, and the *G* below Proslambanomenos by a capital Gamma. Odo of Clugny, the inventor of the Guidonian system (*vid. infra*), made an attempt to combine the alphabet with the neumes, after the manner of the Montpellier Antiphonary, where letters from *a* to *k* are placed below the neumes; but this suggestion seems to have been soon given up. In the middle of the 11th century Hermannus Contractus invented a system of indicating intervals thus:

- E = Unison.
- S = Semitone.
- T = Tone.
- TS = Minor Third (Tone & Semitone).
- TT = Major Third.
- D = Diatessaron (Fourth).
- Δ = Diapente (Fifth).
- ΔS = Diapente & Semitone (Minor Sixth).
- ΔT = Diapente & Tone (Major Sixth).
- ΔΔ = Diapente & Diatessaron (Octave).

A dot above or below the letters indicated, respectively, a rising or falling interval. This notation had the fatal defect that a single mistake in an interval would destroy the whole of the subsequent melody.

Vincenzo Galilei, writing in 1571, says that he found in a MS. of the 10th century, in the monastery of San Salvatore at Messina, a notation on lines, the spaces not being utilised, thus:

It cannot be translated with certainty, since the Greek letters belong to no known system of notation. The lines, however, probably represent the degrees of an ascending or descending scale.

The outcome of the experiments was the general adoption of the system known as 'Guidonian,' since it was perfected and utilised by GUIDO D'AREZZO (*q.v.*) (though suggested by Odo of Clugny) in the first decades of the 11th century; and this has remained, with certain modifications, to the present day. Beginning with Gamma for *G* (whence the French *Gamme* and the English *Gamut*, meaning scale), Latin capitals were given to the note Proslambanomenos¹ and the six notes above it, small Latin letters to the next octave and doubled letters to the third.

It will be seen that this represents the 'natural' scale, a scale without sharps or flats. Actually the Guidonian scale contained a *Bb*, and was

¹ The lowest note, and considered as an adjunct to the scale.

thought of, not as a series of octaves, but as a series of Hexachords, or six-note sections. The intervals of each Hexachord were the same, but as they overlapped the *Bb* was necessary to the system, not as a chromatic but as an alternative note, thus:

Fourth, fifth and sixth Hexachords were the first, second and third repeated an octave higher: thus the fourth Hexachord would introduce a *Bb* as against the *Bb* of the third; but the flat and natural *B*'s would be understood as proper to their own Hexachords, and not contradictory, the one being the third note of the Hexachord on *G*, the other the fourth note of the Hexachord on *F*. Two different forms of the letter *B* were used to distinguish these notes in the alphabetical notation: the round or roman *b* for the flat, the square or Gothic *b* for the natural. This differentiation has provided notation with the signs *b* and *ḃ*; but it should be remembered that in the Guidonian system they bore none of their later sense of chromatic alteration of pitch.

The Hexachordal system was primarily a teaching system; and in order to make it easier for singers to learn the different intervals the six syllables *ut, re, mi, fa, sol, la* were associated with the six degrees of the Hexachord.² These being invariable, it became possible to note musical intervals with certainty by either alphabetical or phonetic methods.

But the alphabetical notation, however necessary for teaching, was not found satisfactory for recording melodies, since it was inconvenient for sight-singing; and experiments were now made in another direction. 'Points' were placed at definite distances above the words, and above and below one another. In this system, called by the Solesmes writers *Notation à points superposés*, everything depended on the accuracy with which the points were interspaced; and the scribes, as a guide to their eye, began to scratch a straight line across the page, to indicate the position of one particular scale degree, from which all the others could be shown by the relative distances of their 'points.' But this was not found sufficiently definite. The scratched line was therefore coloured red, and a second line was added, coloured yellow, indi-

cating the interval of a fifth above the first. Neumes placed on these two lines were to repre-

² For the 'shifting' of the Hexachords, if the interval exceeded the sixth degree, see HEXACHORD and GAMUT.

sent the sounds F and c of the Guidonian alphabet, and the other sounds were shown by the relative position of the neumes between, above or below them. (See GUIDO D'AREZZO.) The pitch of every note within a certain compass was definitely shown by its position on a line or a space, and four lines have continued to form the orthodox stave of plain-song to the present day. Neumes, however, continued to be written without a stave in Germany as late as the 14th century, while staves of one, two and three lines only are of frequent occurrence in 12th- and 13th-century MSS.

When the compass of a melody overlapped that of the stave, it became necessary to alter the names of the lines; hence arose the practice of placing one or more letters at the beginning of each stave, called *Claves signatae*, our 'Clefs,' since, as explained by several writers, they are 'the keys, by which the secrets of the stave are unlocked.'

With the apparatus of the stave, the clefs and the \flat and \sharp signs the problem of the notation of pitch relationship was practically overcome, and subsequent additions were merely amplifications and adaptations of this existing material. Meanwhile the development of organum and the custom of improvising upon a plain-song (free descent) had been combined into a system of organised descent, the earliest form of true polyphonic composition (cf. *CONDUCTUS*; *MOTET*); and this raised the problem of the exact indication of time relationship. This aspect of notation is distinguished by the terms *Musica mensurabilis*, *mensurata*, *figurata*, etc.; mensural music or 'measured song'; or by the phrase 'Franconian notation' in commemoration of FRANCO OF COLOGNE (q.v.), whose treatise upon the subject was the first systematic statement of the new practice.

MUSICA MENSURATA.—The first step was to select from existing material simple and easily recognisable signs for a long and a short note. The square-headed virga (p. 648, col. 6) was chosen to represent the 'Longa' or long note; the punctum, enlarged into a square or a lozenge, represented the 'Brevis' or short note. The proportion of the short note to the long was fixed as either two- or threefold. The Brevis was soon subdivided into the 'Semibrevis,' again in the proportion of two or three to one; and the lozenge-shaped Punctum became the accepted form of the semibrevis, the brevis being represented by a square note. These three signs were further augmented on both the greater and the lesser side, the square head of the virga being extended into an oblong for the 'Maxima,' a note standing to the longa as the longa stood to the brevis, the semibrevis being subdivided into the 'Minima' or 'Semibrevis Minor,' and graced with a tail, or two tails. Besides these single notes, or 'Figurae,' there were also com-

pound figures of two or more notes, known as Ligatures and derived from the compound neumes, and a sign called the Plica. The Ligatures were brought into conformity with the mensural system by certain fixed rules (see below); the Plica did not establish itself in the new notation. It had four figures: ascending long, ; ascending short, ; descending long, ; descending short, ; equalling: 

the ascent or descent of the second note being shown by the position of the tails.

It was with the long, breve and semibreve that the development of measured music was mainly wrought out. It has been mentioned above that the long and the breve were susceptible of a threefold or a twofold division; moreover, the threefold division could be compounded as two and one, or one and two, i.e. $\square \circ$, or $\circ \square$ equalling $\square \circ$; and this ambiguity between perfect (threefold) and imperfect (twofold) notes, identical in appearance, was the first problem which the mensural notationers had to overcome.

The first expedient, the system of the rhythmic modes, was not, strictly speaking, a method of mensural notation, but rather a method of mensural structure; that is to say, it governed the actual music, not the writing of it; but it is properly included in a study of mensural notation, for till it be understood the notational expedients which supplemented and eventually superseded it will scarcely be perceived for what they originally were: a series of experimental safeguards, at first mutually independent, and applied in somewhat haphazard fashion, then overlapping with each other and giving rise to many seeming inconsistencies and redundancies, and only after a long process of shaking down together becoming truly one compound system instead of several single systems in practice at the same time.

The Rhythmic Modes¹ were a quantitative system, based on the poetic metres. As given by Franco, they are as follows²:

1. Molossic, all longs: ---, noted 
2. Trochaic, long-short: - u, noted 
3. Iambic, short-long: u -, noted 
4. Dactylic, long-short-short: - u u, noted 
5. Anapestic, short-short-long: u u -, noted 
6. Tribrachic, all shorts: u u u: noted 

(Cf. *METRE*.)
It is clear that if melodies had been constructed in a succession of unaltered poetic feet, the respective values of long and short, long and breve, would have been clear enough; but this exemplary dullness would be intolerable;

¹ Or *moda*.

² Franco included the molossic and trochaic modes in one, treating the trochee as a dissolved form of the molossic unit, and thereby reducing the number of the modes to five. The above description, however, is the more systematic.

and since the dissolution of a whole into its parts (Molossus into Trochees), or the occasional substitution of one mode for another (Trochee for Iambus), made the value of the long an uncertain quality, the rule was made that the value of a note was determinable by its position.

1. A note was perfect if it was followed by a note or rest of its own denomination.

2. A note was imperfect if it was followed or preceded by a note of the next denomination below it.

Examples given by Franco. Rhythmic translation (values quartered):

Vir-go vi-get me-li-us.

A-ce-to fe-li po-ta-ri.

But this was by no means enough. Even in the examples given there is room for misunderstanding: for instance, the third, fourth and fifth notes of the third example might be $\text{a} \cdot \text{p} \text{a} \cdot$ or $\text{a} \cdot \text{p} \text{a}$, as the short was either taken to follow the first long or to precede the second. And the Dactylic and Anapaestic modes were even more fruitful in ambiguities; for though appearing to be in duple time they were given a triple significance, the second breve being sung as an imperfect long, to balance with the normal breve the perfect long of the other half of the foot. Here again, if it were understood at the start what value should be given to long and second breve, and if the succession of tripled dactyls or anapaests was unbroken, the notation of long and breve was adequate representation enough; but the moment another variety of foot was interpolated the notation broke down hopelessly. For example, were the first half of a triple dactyl dissolved into a trochee, the notation $\text{a} \text{a} \text{a} \text{a}$ might be taken for $\text{a} \cdot \text{a} \text{a} \text{a}$ instead of $\text{a} \text{a} \text{a} \text{a}$; and had other irregularities of dissolved or compounded feet preceded or followed this group, the interpretation of these four notes would be even more conjectural. To remedy this state of things three notational devices were evolved:

- (1) The Point of Perfection, or Dot.
- (2) The Coloration of Notes.
- (3) Time-signatures.

THE POINT OF PERFECTION.—This was a small dot which was placed after the note or group of notes affected, and either on the staff or just above it. In its simplest and best-known form it indicates the perfection or triplicity of a single long, breve or semibreve. Thus used it is most commonly placed on the staff. Its function is to confirm the perfection of the preceding note. Besides confirming perfection, the

dot can be used to confer it. If placed after a note either imperfect by position, i.e. after a long followed by a breve, or imperfect by scheme, i.e. a long in duple measure, the dot added one-half to its value. This was called the dot of addition or of augmentation, and was invariably placed on the staff. These two uses of the dot have persisted to the present day, as, for example, $\frac{3}{4} \text{a} \cdot | \text{a} \cdot \text{a} \text{a} |$. The first is a dot of perfection, the second of augmentation. These may be called the arithmetical functions of the dot.

The dot could also be used with a mensural purpose, as a sort of bar-line.¹ A dot placed after a long and a breve, or a long and a breve rest, indicated that the long was imperfect and the breve was needed to complete the triple measure. Thus used the dot was a safeguard against a potential redundancy of the mensural material. It could also be used with something like the significance of a tie to show the end of a triple measure when the notes involved were not enough on their face value to make it up. Thus a dot placed after a long and a semibreve showed that the long was to be considered equal to five semibreves, five-sixths of a triple measure.

There was also the dot *Divisio modi*, used in connexion with the special difficulties of the tripled Dactylic and Anapaestic modes (*v.a.*). When in deference to the poetic metre the twofold long of the second half of a dactylic foot was noted as a breve, a dot placed before the group of two breves showed that the second breve was a twofold long, i.e. $\text{a} \cdot \text{a} \text{a} = \text{a} \cdot \text{a} \text{a}$, or $\text{a} \text{a} \cdot \text{a} \text{a} = \text{a} \text{a} \text{a} \text{a}$. The position of the dot coming before the two breves, the second of which is to be altered, may seem a little irrational, since in all other cases the dot comes after the note or notes it affects; but the function of the dot *divisio modi* coming at the hinge of a compound foot (commonly between a trochee and an iamb, hence the name *Divisio modi*) is that, by showing the triplicity of the note or group of notes preceding it, it also shows that the two apparently equal notes following it need the alteration of the second to convert them into a corresponding triplicity. This conversion of the second breve into a twofold long was known as alteration, or the change from *Brevis recta* into *Brevis altera*.

The custom of writing $\text{a} \text{a}$ or $\text{a} \text{a}$ in triple measure as $\text{a} \text{a}$ or $\text{a} \text{a}$ persisted long after the rhythmic modes had gone out of use; and if the need for alteration was obscured by what followed (i.e. $\text{a} \text{a} \text{a} \text{a}$), which might be read as $\text{a} \text{a} \text{a} \text{a}$ instead of $\text{a} \text{a} \text{a} \text{a}$), a dot was sometimes placed after the *Brevis altera*; but this is, strictly speaking, the dot used in its

¹ It was then placed higher than the notes and generally above the staff.

sense of a point of perfection, *i.e.* to show the perfection of a measure. The true dot of alteration was always placed before the group which was to take alteration.

This completes the mensural functions of the dot, which were to show the perfection of a measure either potentially redundant or seemingly inadequate. One further use of this sign remains to be noted. It could be used extra-mensurally,¹ and therefore either in perfect or imperfect time, to mark a break or articulation of the melodic flow. Thus used it corresponds to our phrase-marks, either to the end of a slur or to the comma sometimes placed above the stave to show that what follows is the beginning of a new phrase. This use of the dot is of course in direct contradiction to its original nature, which was to assure mensural (*N.B.*—not rhythmical) symmetry. It is, however, common in 16th-century notation, and a similar change from mensural to extra-mensural significance also marks the later development of the next notational device to be discussed.

COLORATION.—The significant use of colour in notation had already been essayed in the development of the stave, and the same idea was applied to the notes to define their value. At first all notes were filled in with ink, normally black, or red to show change of value. Philip of Vitry (c. 1290–1361) says that red notes change what was perfect by position to imperfect and *vice versa*,² and a white or empty note is said by Philip of Caserta to bear the same meaning as a red note, if the scribe had no red ink handy. Morley³ says that the custom of old time was to have four kinds of coloured notes—black full, black void (*i.e.* white or empty), red full, red void. A black void among a dominant notation of black full lost half its value, *i.e.* minim = crotchet; a red full among black notation, apparently either full or void, lost a fourth part of its value, *i.e.* three red semibreves equalled two black ones. It seems doubtful if red notation ever established itself in a systematised notation; by Morley's account a red note was on the minus side of value; on the other hand, if it were considered to be represented equally well by a white note, it is possible that in some usages it may have been on the plus side; for the custom of indicating an imperfect note by black (black full), as opposed to a perfect note represented by white (black void), was common.

It is reasonable to suppose that the evolution of coloured notation was largely determined by convenience. Scribes availed themselves of the permission to represent a red note by a white one; the dot was a speedier way of indicating perfection than blackening which was imperfect;

and the black notation was mainly reserved for the special purposes of indicating (1) changes of note value incident to proportional writing, (2) changes of accentuation.⁴ 'There was no real ambiguity in the use of the same notational device for these two different purposes since when the blackening of a series of notes indicated their change of time-value consequent upon the introduction of a PROPORTION (*q.v.*) that indication was reinforced by the appearance of the sign for that Proportion at the place where the changed time-values took effect, and so long as the notes continued to be blackened, they would be understood as being under the influence of the proportional sign. Thus if the Proportion were that of *sesquialtra*, three blackened semibreves, or blackened notes of corresponding value, would be measured against two unaffected white semibreves or their equivalents, either present in another part or, if the *sesquialtra* were universal, mentally acknowledged. The only likelihood of misunderstanding in this class of black notation arises from the fact that, if a minim be blackened, there is nothing to distinguish it from a crotchet. This difficulty was overcome thus: a black minim always represented a minim, so, if crotchets occurred in a blackened passage, they were whitened. Thus treated, there is nothing to distinguish them from minims, but the inconsistency is only to the eye, since the whitening of the crotchet exactly carries out the principle of black proportional notation, which shows the alteration of the time-value of a note by the alteration of its colour.

'Notationers were not so consistent in their treatment of *sesquialtra* breves in black notation. A triple breve in *sesquialtra* is properly noted black with a dot; but it was sometimes left white, owing to a confusion with non-proportional black notation, where a black breve is imperfect (duple), as against a white one which is perfect (triple). A triple breve in *sesquialtra* is perfect in relation to the rest of the *sesquialtra* passage wherein it occurs, but it is not perfect in relation to the mensural structure of the whole, since it corresponds to an imperfect breve in the normal underlying measure. But though indefensible in theory the white *sesquialtra* breve is perfectly comprehensible in practice.'⁵

A further complication sometimes arises when the scribe in noting a blackened proportional passage wishes to emphasise some specifically triple piece of phrasing: = *c* left white in such a case does not contradict the proportional

⁴ The practice of blackening notes was also used in many MSS. to indicate a plain-song *canto fermo*. No special rules attach to this form of black notation, which may be compared to the practice in modern typography of using a black letter font to emphasise the antiquity of some rhyme or motto. Another variation of blackened notation came into being with the mid-16th-century movement for a non-plain-song syllabic style of composition (see *MEASUREMENT*). If this also the object was presumably to look old-world: the notation has no points of interest if it be not for the fact that what appears to be a black long = is in reality but half the value of the breve figure =.

⁵ From *Tudor Church Music*, vol. I, p. xxxviii.

¹ Again higher than the notes, and generally above the stave.

² And also that in some cases they are used to show that the passage is to be sung an octave higher, a survival of the early stave experiments of connecting colour and pitch.

³ He gives no authorities for this statement, which is probably his own confabulation of the many contradictory earlier rules and exceptions.

values of these notes, which are still governed by the sign for the proportion; it merely shows that the notes constitute a triple group, a fact that could be better expressed by the dot.

It has already been said that a blackened note indicates its imperfection or duple value. This principle was extended to the non-proportional blackening of notes to show a duple accentuation. In a passage where the prevailing accentuation is triple, this group of notes $\square \cdot \square \square \square$ by being blackened would be understood as requiring a duple accentuation $\square \cdot \square | \square \square |$ as against the normal $\square \cdot \square \square | \square \cdot$: the time value was unaltered; the rhythmic significance was reversed.

One other use of non-proportional black notation remains to be noted. If a single triple group of black breve and semibreve, or semibreve and minim, were introduced into prevailing white notation without being preceded by a proportional sign, the effect was equal to a diminution of both note values by half and a dot of augmentation placed after the first; i.e. $\square \blacksquare \bullet \square = \square \cdot \text{f} \square$. This singularly clumsy device is explained by Morley thus:

'The semibreve so blacke is a minime and a dott is.' and the blacke minime a Crochet, as indeede it is.'

As indeed it is: but this will not apply to $\blacksquare \bullet = \square \cdot \text{f}$; and if the blackening of the second note is to be theoretically explained, it seems best to suppose that while the first note is blackened for value, the second note (whose lesser value is already determined by the blackening of the first) is blackened for duple accentuation. Morley adds that this method of noting $\square \cdot \text{f}$ frequently led to misunderstanding, the two notes thus blackened being sung as an ordinarily triple proportional group, 3 against 2; and there is reason to suppose that in some cases this is the right interpretation, the proportional sign having been omitted by inadvertence. In any case, the interpretation $\square \cdot \text{f}$ only holds good for a single introduction of such blackened triples.

Black notation advanced to its most systematic and skilful development in the 16th century, after which it went rapidly out of use. Proportional black notation was the first to be discarded, when the proportions were discovered to be ridiculously old-fashioned and scholastic (cf. Morley's *Plaine and Easie Introduction*, the third Part); accentual black notation lasted a little longer, though only in certain restricted and conventional forms, and thus used occurs in Barnard's *Church Musick* (1641).

TIME-SIGNATURES.—The essential division of value in measured music has never varied: it was Perfect or Imperfect; in other words, triple or duple. But the nomenclature and symbolism of the mensural scheme has been complicated

by the fact that the relationships of large to long, and long to breve, and breve to semibreve, and of semibreve to minim, have each in turn been endowed with special names and special signs. This is not unnatural, since it must be remembered that the tendency of notation has been for the normal unit of one period to be supplanted by the unit next in value; in other words, for the fraction of one rhythmic division to become the integer of the next.

The oldest of the mensural divisions was the Moods, major and minor. The major mood expressed the relationship of the theoretically longest note, the Maxima or large, and the long. In major perfect mood the large equalled three longs: in major imperfect mood the large equalled two longs. The minor mood expressed the relationship of the long and the breve. In minor perfect mood the long equalled three breves: in minor imperfect mood the long equalled two breves.

The second mensural division was Time. It expressed the relationship of breve and semibreve.

In perfect time the breve equalled three semibreves.

In imperfect time the breve equalled two semibreves.

The third mensural division was Prolation. It expressed the relationship of semibreve and minim. The division of prolation was also triple and duple; but instead of being called Perfect and Imperfect, it was called Major and Minor.

In major prolation the semibreve equalled three minims.

In minor prolation the semibreve equalled two minims.

Signs were invented to represent each of these classes of mood, time and prolation. They were placed at the beginning of the stave or in the margin to the left of it. They were as follows¹:

Mood: Major Perfect. Major Imperfect.
 or 3  or 2

Mood: Minor Perfect. Minor Imperfect.
 or 2  or 2

Time: Perfect O Imperfect C

The signatures for prolation are compounded of the circle and half-circle for time, and a dot expressing triplicity, for the major prolation, the minor (two minims) prolation being shown by the absence of the dot.

Perfect time with the major prolation, \odot ; with the minor prolation, \bigcirc .

Imperfect time with the major prolation, \odot ; with the minor prolation, \bigcirc .

¹ The strokes represent the number of breve rests equivalent to the whole note.

This constitutes the basis of the mensural signatures¹; further additions were (1) the stroke; (2) the retort; (3) numerals. If a stroke were drawn through the circle or semicircle, the notes were understood as having only half their value, *i.e.* the tempo was twice as fast. An unstroked semicircle 'retorted,' *i.e.* turned back to front, expressed the same thing.² If the circle had two strokes through it, parallel or crossing, the notes were diminished to one-fourth their value. A retorted semicircle with a stroke would express the same thing.

Ex. of diminution $\Phi \Phi \Phi \Phi \supset \supset 1 = \frac{1}{2}$.

Ex. of double diminution $\Phi \oplus \Phi \supset 1 = \frac{1}{4}$.

It should be realised that these time-signatures expressed no more than an arithmetical scheme of note division. Thus it was possible to employ simultaneously different time-signatures in the different voices (*i.e.* \bigcirc in one voice, \bigcirc in another, \bigcirc in a third, the first two equalising each other in the measure, as they contained six minims each, the third equalling a measure and a half of the other two); or in the same voice even, if the composer wanted to show his ingenuity. Bach's signature, $\Phi \frac{1}{2}$, to the prelude in D ma. (48, bk. ii.) is a later instance of a multiple time-signature.

Numerals were also used; it is necessary that a distinction should be made between the integral figures 3 and 2 sometimes used in conjunction with the signatures for mood and time as an additional emphasis on perfection and imperfection, and the fractional figures which were used to express the Proportions. Properly these were distinct from the normal signatures, but two of them, 3:1 and 3:2, expressing the proportions known as *tripla* and *sesquialtra*, came into use in 16th-century notation as subsidiary time-signatures. *Tripla* expressed the proportion of three to one, *sesquialtra* of three to two, of the normal unit. (See PROPORTIONS.) As a rule the proportion was only sustained by some of the parts against the normal system of the others; but it could also be expressed by all the voices, when a measure of three semibreves would be sung in the time of one (*tripla*) or two (*sesquialtra*). Thus the signs 3:1 and 3:2 came to stand for a brisk triple time. These *quasi* time-signatures are especially common in the works of the madrigalists (Byrd, further,

employs 6:1, No. 26 of his 1611 Set), either with or without the true time-signatures. Sometimes the fractional 3 alone is given, the integer sign having lost its proportional significance.³

Mood, Time, Prolation, Perfection, Imperfection, Major and Minor, led to the construction of enormous time-tables, many examples of which are found in mediæval treatises. Hothby and Prosdocimus each give no less than twenty-six such tables, the complication of which can be gathered from a remark of Hamboys that, if a *larga* be perfect, it contains 3 double longs, 27 breves, 81 semibreves, 241 minor semibreves, 721 semiminors and 2187 minims, and each of the notes, perfect and imperfect, is similarly described in detail. In the 16th century we find evidence of a revolt against the complications of the time-tables, which led to the gradual disappearance of the Franconian system and the adoption of simpler and more practical methods of indicating rhythm. The expression 'The Moderns love brevity' begins to occur in the treatises, and the duple division begins to take on the character of 'the musical time called Natural.' The old rules are collected by Zarlino in his *Istitutioni armoniche*, 1558, not because they were any longer of practical value to musicians, but 'lest they should be lost.' 'Some musicians might like,' he says, 'to read some ancient cantilena; but if the modern composer should not number his cantilena according to the Moods, he could really say that the matter was of little account, and that he had no knowledge of such things.' Thomas Morley collects the rules in his *Plaine and Easie Introduction* in 1597, and regrets the loss of the old teaching, saying that 'a more slight and superficial knowledge (is) come in steede thereof; so that it is come nowadays to that, that if they know the Common Moode and some Triples, they seeke no further.'

By the beginning of the 17th century the semibreve was the basis of the time-signatures, as it is with us; the circle still continued to show three semibreves in a measure, but it disappeared in the course of the century, and the only remnant of mediæval signatures now in use is the C, or semicircle, indicating the 'Common,' or 'Natural,' or duple division of the semibreve, and the same figure with a line through it to show diminution.

LESSER NOTE VALUES. — The 'simple'⁴ notes other than those already mentioned (large, long, breve, semibreve) were the minim, introduced about the end of the 13th century and mentioned early in the 14th century by Johannes de Muris; the crotchet, mentioned

¹ These signatures were not arrived at without many experiments, some of which are referred to by Johannes de Muris the Norman, in his *Spectrum musicæ*, written in 1321, where he complains that to show Perfect Mood (the moderns) use three lines enclosed in a quadrangle, and for Imperfect Mood two lines in a quadrangle. Some again presume to use M for Perfect Mood, and N for Imperfect, saying that as C and C are used for variations of Time, so M and N may show mood. But others reverse the matter, and use C for Perfect Mood and C for Imperfect Mood. Others use for Perfect Time a circle containing three strokes, and for Imperfect Time a semicircle containing two strokes. Such and many other things do the moderns, which the ancients never did; and thus they have added many burdens to the art, which was formerly free, but has now become like a slave in such matters.

² The doubled semicircle \bigcirc indicates that the note values were doubled. It was, however, a very theoretical signature. It was tentatively revived in Germany as the sign for the four-beat measure called *Grosse Allabreviati*, as opposed to Φ for the two-beat measure called *Kleine Allabreviati*.

³ Strozio, in his *Elementorum musicæ praxia*, 1683, gives a list of proportions in which he makes $\frac{3}{2}$ indicate four minims, $\frac{3}{4}$ six semibreves, $\frac{3}{8}$ four semibreves, $\frac{3}{16}$ two and a half breves, etc. This shows the proportional signatures in process of emancipation, *i.e.* $\frac{3}{2}$ originally meant six falsified semibreves against five normal, not six semibreves absolutely.

⁴ As opposed to compound notes, *i.e.* ligatures.

with disapprobation as a recent introduction, in a treatise (c. 1440) by Thomas de Walsingham (his disapprobation is theoretical: since 'minima' means least note, it is irrational to have new notes of smaller value); the croma or quaver, and the semicroma or semiquaver.

These smaller notes appeared in various forms and under various names. The following table will show something of the development of the 'simple' notes.

N.B.—In the mensural system minim, crotchet, quaver and semiquaver were imperfect notes. They could, of course, be given a triple value by use of the dot; but by system they were capable of a duple division only.

Notes deriving from the Virga

These notes could also have their tails going up. The little divisions in the maxima were a way of marking perfection or imperfection. They could also be applied to the large.

Notes deriving from the Punctum

N.B.—Crotchets, quavers and semiquavers were black unless in proportional black notation, when they were white; similarly minims were white except in proportional black notation, when they were black. The tendency with such notes as breve or semibreve was always to write them as empty notes in order to save time.

Lozenge-shaped breves, semibreves, minims, crotchets, etc., slowly gave way to the more rapidly written and more easily read oval and round notes of modern music. In the beginning of the 18th century a new method of saving time and facilitating reading was found by joining the crooks of quavers and semiquavers, etc., instead of writing each crook separately. This had been done in the tablatures some centuries before. Playford, in 1712, describes

notes thus joined as 'the new tyed note,' e.g.

The corresponding RESTS, called in Latin *Pausae* or *Pausationes*, were:

A dot was sometimes placed on the staff after the breve rest standing for a perfect breve, and after a triple semibreve rest in the greater prolation. A group of rests, thus,

was a conventional way of indicating that a voice part was to be silent for a prolonged period. These rests need not exactly correspond with the number of silent measures; but the colon corresponded to the close in the other voices which most immediately preceded the entry of the resting voice, and after the colon any rests preceding the entry were exactly given.

Akin to this colon were the REPETITION DOTS placed by the mensuralist on each side of a 'Period' rest, which was double or triple, etc., according to the number of times the passage was to be repeated, thus: :||: :|||: :|||:|. When words were to be repeated a smaller sign was used: %. The modern *Segno* S was borrowed from the tablatures. The *Presa* S was used in canons, to show where the various voices entered, and the *Fermata*, called in English *Pause*, showed where they closed. The pause was also used both in the tablatures and in mensural music, in its modern sense of showing an indefinite dwelling on a note.

The LIGATURES were survivals of the compound neumes, put into Franconian notation and supplied with rules of mensural value. Any account of the ligatures must be preceded by a general rule, and a general qualification of it. The rule is that one syllable only can be sung to a ligature; the qualification is that ligatures were constantly written in the middle of long melismatic passages, where they can have no significance as regards the words, since several ligatures together with intervening passages of simple notes are all to be sung on a single drawn-out syllable.

Ligatures could be of two or more notes; they were written in two forms—square and oblique:

Square and oblique writing could be combined in one ligature. In oblique ligature two notes

are expressed — the first where the ligature begins, the second where it ends. Thus in Ex. 2 the notes are C and F.

Ligatures were described as ascending and descending. Ex. 1 is an ascending, Ex. 2 a descending, ligature.

The rules for the mensural values of ligatures are as follows :

(1) If the ligature, either square or oblique, be an ascending one, the first note, being without a tail, is a breve.

(2) If the ligature, either square or oblique, be a descending one, the first note, being without a tail, is a long.

(3) If in a ligature, either square or oblique, either ascending or descending, the first note have a tail downwards on the left side, the first note is a breve.

(4) If in a ligature, either square or oblique, ascending or descending, any note have a tail upwards on the left side, that note and the next are semibreves.

This concludes the rules for initial notes of ligatures

(5) If the last note descends, and is square, it is a long.

(6) If the last note descends, and is oblique, it is a breve.

(7) If the last note ascend, be it square or oblique, it is a breve.

This concludes the rules for the final notes.

(8) The middle note or notes of any ligature is a breve ; unless (a) it be governed by rule 4 ; or (b) has a tail on its right side, when it is a long.

N.B.—Rule 4 takes precedence over rules 5,

6 and 7, i.e.  = long breve breve breve.

A note having a tail on its right side is a long wherever it occurs, and takes precedence over rule 4, i.e.  = long breve breve.

Ligatures can be perfect or imperfect in accordance with the time-signature. They can also be perfected or imperfected by use of the dot or black notation, exactly as though they would be were they written as separate notes.

Franco's definition of ligatures as being *con proprietate*, *sine proprietate* and *con opposita proprietate* refers them by the position or lack of tails to the corresponding ligature forms in plain-song. A downward tail before a descending ligature is the scribal convention in plain-song, hence this corresponding mensural ligature is *con proprietate*, i.e. correct to type.¹

Towards the end of the 16th century ligatures, except the simple two-semibreve ligature, had almost passed from practical use. How fast they were being forgotten is shown in various MSS. of this period, where the respective value of their constituent notes is added

beneath them in figures. In theoretical works, however, they endured into the 17th century, and an 18th-century example is to be found in Martini's *Essempiare ossia Saggio di contrappunto*, Bologna, 1774.

Measures were called BARS in 1584 by William Bathe, in his *A Brief Introduction to the True Arte of Musicke*, and in 1597 by Morley ; and about this time bar-lines, which had already been used for more than a century in the tabia-tures, began to take their place on the stave. They were sometimes placed at irregular intervals,² and in some instances with such rhythmical fitness that the irregularity would appear to be of musical significance. In other cases, however, notably in some of the early 17th-century MS. organ books, the bar-lines, though irregular, would appear to have no function beyond assuring the eye by a semi-periodic measurement. Bar-lines did not come into general use until about a century after their introduction. Caccini's 'Euridice,' composed in 1600, is barred throughout ; while a book of Solfeggi by Caresana of the year 1693 is unbarred.

Like the other features of our notation, the STAVE passed through many vicissitudes before its general acceptance in the form that we know it. While plain-song has found a stave of four red or black lines sufficient for its needs, measured music, whose whole *raison d'être* was the notation of two or more simultaneous melodies, made use in early times of staves containing lines varying in number from 4 to 15 and even to 25, on which all the voice parts were written. Clefs were given to several lines, and sometimes to all the lines, and even to the spaces. Vertical lines were roughly 'scored' through the staves at indefinite intervals (hence our word 'Score') as a guide to the eye and a help to keeping the singers together ; perhaps they were used at rehearsals, in the same way as the capital letters or numerals printed over modern scores, to aid the conductor.

In course of time the inconvenience of so many lines was felt, and they were divided into groups of four for each voice, by the insertion of red lines in the stave, on which no notes were written. The next step was to make a space between the several voice parts by omitting the red lines, and it was found convenient to use five instead of four lines for each voice part, though sometimes, as in the famous rota 'Sumer is icumen in' (13th century), six lines are used. The stave of five lines first appeared in the 12th century, and its convenience caused its gradual adoption to the exclusion of all others. It must not be imagined, however, that its general acceptance by musicians can be assigned to any particular date, or even any century ; on the contrary, just as we find unstaved neumes continuing to be written for centuries after the

¹ See *Proc. Mus. Ass.*, 1900, vol. 26, p. 126.

² See the *Fitzwilliam Virginal Book*.

invention of so important an improvement as the stave, so we find, in measured music, staves of eleven to fifteen lines in the 14th century, long after one would have expected composers to have recognised the more practicable and convenient smaller staves. A little two-part composition of the 12th century in the Bodleian Library (Douce MS. 139), 'Fowles in ye frich,'¹ written in square-headed neumes (see p. 649, col. 11), therefore not in measured notes, shows two separate five-lined staves, bearing the soprano and tenor clefs, and, except for the shape of the notes, it might have been written in the 17th century; while a book of Theological treatises and hymns (Brit. Mus., Codex Arundel 248) of the 14th century has staves of varying numbers of lines, from fifteen downwards.

The vocal stave was fixed at five lines by the 15th century; but this was not the case with instrumental music, which continued to use large staves till well into the 17th century.

The Fitzwilliam and other contemporaneous collections of English harpsichord and organ music make use of staves of six lines; while the Bolognese, Venetian and Neapolitan organists of the end of the 16th and beginning of the 17th centuries use a stave of six lines for the right hand, and eight for the left hand and feet combined. The so-called 'Great Stave' of eleven lines has never been used except for the purpose of illustration in modern theoretical works: De Muris and others certainly use staves of eleven lines in their treatises, but not in the sense of the 'Great Stave.'

The invention of Ledger- or Leger-lines in the 16th century enabled composers not only to reduce the instrumental stave to the convenient number of five lines, but also to lessen the number of changes of clef; though they were slow to perceive the latter advantage, for changes of clef are as frequent in music for keyed instruments in the 18th century as they are in viola and violoncello music to-day. Of the clefs we shall speak later.

EXPRESSION SIGNS,² though used by the earliest neume-writers, were entirely absent from mensural music, and seem to have been first reintroduced in connexion with the lute, in whose notation Morley indicates 'Soft and Loud play' by So: Lo: calling this 'as good a grace as any other.' About 1638 we find in lute music *Piano*, *Forte*, the sign \vee for *Mezzoforte*, \leftarrow for *Crescendo* and *Diminuendo*, besides tempo indications, as *Presto*, *Adagio*, etc. (But see MAZZOCCHI.) Expression words and signs were gradually introduced into vocal music after having found a place in that for instruments, and have always had a tendency to increase in number and refinement. Italian has been the language most used for the purpose, and is generally understood in this connexion,

¹ Published in facsimile by the Plain-song and Med. Mus. Soc. ('Early English Harmony,' Plate 7).

² Though not phrasing signs: for accentual black notation and the extra-mensural use of the dot were early forms of these.

but English, German and French have been employed, latterly with increasing frequency, by composers of those nations. The Staccato sign first appeared in the works of Couperin, J. S. Bach and Rameau, in the form of a dot; in those of J. C. Bach it is a dot or an upright stroke, according to the degree of staccato required. (See DOT, DASH.) The Legato sign appears early in the 18th century, and is used for the first time in combination with the staccato dots by Mozart.

The CLEFS have varied considerably, both as to form and method of use, in the course of time. Plain-song has practically used only the C and F clefs; while mensural music, after employing all the letters of the musical alphabet, together with \sharp , at different periods, finally reduced its clefs to the three which are now in use, and whose shapes have gradually become conventionalised thus:

The F clef is now always placed on the fourth line, and is called the Bass clef; in the 17th and 18th centuries it was frequently placed on the middle line, and, when in this position, it was called the Baritone clef. This is the oldest of the clefs, having been the one used when the stave consisted of only a single line. It marked the *mi fa* or semitone of the *Hexachordum naturale*. The C clef was formerly the most used of all for vocal music, but during the last century it has been more and more confined to instruments. It has been used on each of the five lines, though now restricted to three. It is named after the voices it formerly represented, soprano, alto or tenor.

Rockstro gave the following scheme of clefs in use in the time of Palestrina:

The G, or treble, clef can hardly be said to have come into general use till the rise of instrumental music into importance during the 16th and 17th centuries; and even then, on keyed instruments, it had to share a place with the C clefs; hence it has altered its shape less than the others. Until the 19th century it was hardly looked upon as a vocal clef, and, except in England, it was never used for chorus parts, though it was for solo voices. Its

foreign names imply an instrumental rather than a vocal use: Italian, *chiave di violino*; German, *Violonschlüssel*. It was formerly sometimes placed on the lowest line, and called, when in this position, the 'High treble' or 'French violin clef.' C. P. E. Bach in 'Die Israeliten in der Wüste,' 1775, doubles the G clef thus, , to show that two flute parts are written on a single stave. This doubling of the treble clef is now the familiar sign for the tenor clef. It only dates from the middle of the last century, and it is already threatened by the

growing use of the sign , a combination of the G and C clefs. In either of these clefs it is understood that the music is to be sung an octave lower than it is written.¹ The alto voice part when not written with the C clef on the third line, is written in the G clef at the actual pitch; but when the G clef first superseded the C clef for the alto voice the music was written an octave higher, as in the tenor G clef.

The clefs are now distributed amongst the instruments and voices in the following way: In full scores the soprano, alto and tenor voices are given either their own proper clefs or three G clefs, and the bass voice always has the F clef. The violins use the G clef, the violas the alto clef, changing to the G to avoid many ledger-lines. The violoncellos use the F and tenor clefs, with an occasional passage in the G clef, causing some ambiguity, as in some instances the G clef is used, as in writing for the tenor voice, to indicate sounds an octave below what is written; all modern writers use this clef only in its real position in writing for the violoncello. The double-basses use the F clef, but sound an octave below the written notes. The flutes, oboes and clarinets use the G clef. The corno di bassetto and the cor anglais play from the G clef. The bassoon uses the F and tenor clefs, and the double bassoon the F clef only, transposing an octave lower. Trumpets and horns use the G clef. The extreme low notes of the horn are, however, written in the F clef in many classical scores. Alto (now almost obsolete), tenor and bass trombones use the corresponding clefs. Drums use the F clef.

The history of the SHARP, FLAT and NATURAL must now be referred to. When the Guidonian alphabet was arranged, the Roman *b*, called *B rotundum*, or *B mollis*, was given to the sound called *Trite synemmenon*, and the Gothic *b*, called *B quadratum*, *B quadratum*, *B durum*, was applied to *Paramese*: a survival of the two forms of *b* is seen in the modern German nomenclature, in which B flat is called *B*, and B natural is called *H*, from the old form of the

square *b*, which was something like the letter *h*. Guido called the hexachord beginning on C, to whose scale the *B quadratum* belonged, *Hexachordum naturale*; hence arose the English name of 'Natural' for the sign of the square *b*.

It is obvious that *B rotundum* would be the first to be introduced into stave notation, where all B's, unless qualified by the *b* sign, would be taken as B natural *per se*. The *b* was at first applied only to the note immediately below middle C, that being the only B which lay within the strict compass of the ecclesiastical chant, and the common staves of the C clef on the third or fourth line. With the notation of organised descant or prick-song came the need for a *b* in the octave above, and this was supplied in a doubled form of the letter *β*, a distinction also employed by some notationers for a *b* in the octave below. As music became more developed it was necessary for notation to become more systematic, and by the 15th century a *b* in the signature was accepted as governing all occurrences of a B in that line. Its dominion, however, was restricted to a horizontal significance, and it is common to find in MSS. down to the end of the 16th century either what we should now call a superfluous

flat in the signature, , or a *b* implied in the signature appearing as an accidental,

It has been pointed out that in a strict application of the hexachordal system to stave notation there was no logical place for the *B quadratum*. Notation, however, is rightly influenced by the desire to be explicit rather than logical, and the convenient *B rotundum* so soon began to establish itself as the rule and not the exception that the *B quadratum* was introduced to correct or contradict it. In the notation of music in the first modes in which the sixth note, B, is variable, sometimes B, sometimes *B_♭*, according to the inflexions of the plain-chant, the *B_♭* is strictly an accidental and should alone be indicated; but notationers introduced the *B quadratum* as a safeguard against the growing tendency of singers to regard the *B rotundum* as the dominant indication. Thus introduced the *B quadratum* is a redundancy, a superfluous natural. In the notation of cadences and *Musica ficta* it assumes the character of a true accidental. In this function, however, it was supplanted by the sign for raising a note by a semitone. This, the origin of our sharp, is said to have been invented by Josquin de Près (1450–1521). Its form is supposed to be derived from the *B quadratum*; it was called *B cancellatum*, or *Diësis*, or, from its shape, *Crux* (whence the French *dièse* and German *Kreuz*: the English 'sharp' and 'flat' refer to function). A curious little anonymous chapter quoted by

¹ One other late 19th-century variation (not at all to be commended) must be mentioned. It is to use the tenor C clef and write the music as though the clef were a G clef.

de Coussemaker with the heading *de Sinemensis* (evidently a corruption of *synnemenon*) refers to the *crux* as the conjunction between the tones, and gives a complete semitonic scale, explaining, however, that the *crux* between B *rotundum* and C is represented by the sign \sharp ; and according to the vulgar such music is called False Music. (See *MUSICA FICTA*.)

The new sign, \times , had the great advantage of being easily distinguishable from the B *rotundum*, while the B *quadratum* was not. To us a system in which the same sign is used for sharpening one note and for restoring the pitch of another seems oddly ambiguous. But it is the way of notation to prefer convenience to correctness, to risk an ambiguity in the sense rather than an ambiguity in the presentation. Moreover, it must be borne in mind that key-signatures were extremely simple, one \flat , two at the most, no \sharp signatures; that the principle that an accidental only affected the note it preceded was still observed,¹ at any rate in the printed partbooks; and that most of the writing was diatonic. If this be considered it will be seen that B \sharp and E \sharp , to represent the raising of a signatural B \flat and E \flat , or even a corrective C \flat introduced as a safeguard to mark that a C just previously sharpened in a cadence is C natural once more, are not such arbitrary absurdities as they seem at first sight.

The use of the \sharp to contradict a \flat (its function in the innocent days when B *rotundum* and B *quadratum* knew not B *cancellatum*) had been reintroduced by the middle of the 17th century, for Kircher in his *Musurgia* (1650) gives this passage as an example of chromatic notation:

but not until the beginning of the 18th century was the \sharp used to contradict both \sharp and \flat , as in modern notation. A 16th-century expedient of restoring the natural pitch of C, F and G after they had been sharpened, by introducing the capital letter, *i.e.*

might be attributed to a sensitive notational conscience. It occurs, though not very frequently or at all consistently, in various MSS.; and four instances of a naturalising capital F are to be found in the printed partbooks of Pilkington's second set of Madrigals, 1624.

¹ Except in the case of the common cadence figures such as

where it is usual in MSS. to make the one \sharp serve for G and F, G and B \flat together. In MSS. the accidental does not always immediately precede the note it affects, *i.e.*

It is a question of scribal convenience, or scribal carelessness.

The flat and natural have never altered their shapes, except that the form \flat for the higher and lower octave was given up in favour of a uniform \flat . The sharp has undergone many modifications, of which the following are the principal:

\times \times $\sharp\sharp$

The double sharp and double flat became necessary when equal temperament gave composers command of the complete circle of keys. The double sharp was at first represented by the natural of the note above the note affected, but this unscientific and misleading method was successfully combated by Mattheson, who proposed a St. Andrew's cross, and by Leopold Mozart, who proposed an upright cross. Other forms suggested were \times and $\sharp\sharp$; but the one proposed by Mattheson has superseded all the others. He also proposed a Greek β for the double flat, but this was given up in favour of the form familiar to us. The conventional way of contradicting a double sharp and flat by $\sharp\sharp$ and $\flat\flat$ has been objected to by some, and possibly a new method may be invented and find acceptance in the future.

KEY-SIGNATURES were probably suggested by the early use of B *rotundum* as a clef. They are found in the compositions printed by Petrucci at Fossombrone, 1513-23. In the 17th century composers, besides frequently duplicating sharps and flats, frequently omitted the last sharp or flat of the signature. This practice continued to the time of J. S. Bach and Handel. (See ACCIDENTALS.)

The 18th-century composers employed a great number of signs called *Agréments* or *Graces*, as a kind of shorthand for certain well-recognised ORNAMENTS (*q.v.*). They are now for the most part written out in full by notes of smaller type than the rest, and the only survivals of the old shorthand signs are the shake, the turn and the mordent.

SUMMARY

The successive labours of the neume-writers, the mensuralists, and the tablaturists, and the impetus given to composers by the rise of instrumental and dramatic music during the 17th and 18th centuries, have resulted in a notation \flat at is now accepted by the whole of the civilised world; that is equally applicable to instruments and voices; that is easily learned by all who have musical instincts; that is capable of expansion to meet new requirements; and whose very inconsistencies (which are a stumbling-block to those who begin to learn it late in life) are, in reality, an assistance to the eye, which would easily become confused by too great a uniformity. Changes will undoubtedly come, as long as music continues to be a living and advancing art; but they will only come slowly and gradually, as they have done in the

past, and it is probable that in its general structural principles our notation will last as long as our present system of music. Its principles may be thus summarised:

1. The relative pitch of sounds is indicated by the position of signs, called notes, on a staff of five lines, which can be extended when required by the addition of ledger- or leger-lines. The clef forms the key of the staff.

2. The relative time values of notes are shown by their shapes.

3. The relative force of accents is shown by the position of the notes with regard to the bar-lines.

4. The key and rhythm of a composition are shown by signatures.

5. The semibreve is the 'mother of the other notes,'¹ the remaining notes taking their values as $\frac{1}{2}$, $\frac{1}{4}$, etc., of the semibreve.²

6. The rhythmical scheme is shown by bar-lines.

7. The expressional requirements of the music thus written are shown by easily understood words and signs placed above or below the staff.

Innumerable efforts have been made to supersede this system of notation by the invention of others, which are supposed to be easier to learn or more simple in construction; but, with one partial exception, *Tonic Sol-fa* (*q.v.*), the new notations have not made good. A pinch of practice is worth a peck of theory: whatever its claims on the score of system or facility, no *invented* notation is likely to supplant a notation which has been *evolved*. To suppose, however, that staff notation has attained its final form is to be alike blind to the present outlook of music and singularly unappreciative of the power to adapt itself to new conditions which our notation has shown in the past.

ATTIBUTIONS.—*Scriptores ecclesiastici de musica sacra potissimum*, edited by GIBBERTI, 1781; *Scriptores de musica mediæ ævi*, edited by COSSELMAYER, 1864–70; Zarlino, *Istitutioni armoniche*, 1558; MORLEY, *A Plain and Easy Introduction to Practical Music*, 1597. For the history of plain-song notation the chief authority is the *Paléographie musicale*, a periodical published by the Benedictines of Solesmes.

S. T. W., incorporating material from C. F. A. W.

NOTE, NOTES (*Lat. nota*), the marks or signs by which music is put on paper. (See NOTATION.) Hence the word is used for the sounds represented by the notes. (See SCALE.) Also for the keys of a pianoforte; and for a tune or song, as the 'note' of a bird. a.

NOTKER (*b.* early 9th cent.; *d.* 912), a monk of St. Gall, composer and writer on music, who died at a great age. His chief title to fame rests on his work in the development and popularisation of the SEQUENCES (*q.v.*), and as his share in that has been overestimated, so the

value of his brief theoretical writings has been much overlooked. There is a letter from him to his colleague, Lambert, on the subject of the so-called 'Romanian letters'—a series of letters found in early MSS. of plain-song giving directions as to the execution of the music. The value of Notker's exposition in all respects may be doubted, but it seems to explain rightly the more important signs and their use by the important but somewhat eccentric school of St. Gall.

Of greater interest are Notker's three short treatises in Old German, on the theory of music and on organs. The first describes a peculiar method of alphabetic notation, and the others have some curious features. His writings are printed in Gerbert, *Scriptores*, i. 95–102. He is generally distinguished from other writers of the same name by the nickname Ballulus—the stammerer. W. H. F.

NOTOT, JOSEPH (*b.* Arras, Pas-de-Calais, 1755). From his earliest infancy he manifested a wonderful aptitude for music. His father intended to educate him for the Church or the Bar, and for the purpose of diverting his mind from the pursuit he most loved, sent him to Paris. It happened soon after his arrival in that city that a friend took him to St. Germain-des-Prés, where, having obtained permission of the organist to sit at the organ, he performed extempore in so ingenious a manner that Leclerc would not believe it possible the boy could be playing from his own ideas. Leclerc therefore gave him a subject, upon which the boy instantly formed a fugue, and acquitted himself so admirably that the great composer seized him in his arms and, lifting him up as high as he could, exclaimed, in an ecstasy of delight, 'Tu resteras à Paris.' His father, finding him to have really a genius for music, permitted the boy to adhere to the study of music as his future profession, and he consequently remained in Paris, where he soon acquired a great reputation. On his return to Arras he was appointed organist there. His compositions, which were greatly admired by John Christian Bach, consist of four symphonies, three pianoforte concertos and a number of sonatas for that instrument. And it is said that in his style of accompanying from a full score Joseph Notot was unequalled. At the French Revolution this excellent musician renounced music as a profession and came to reside in England. C. H. F.

NOTTEBOHM, MARTIN GUSTAV (*b.* Lüdenscheid, near Arnsberg, Westphalia, Nov. 12, 1817; *d.* Gratz, Oct. 29, 1882), composer, teacher and writer on music, son of a manufacturer. In 1838 and 1839, when in Berlin as a volunteer in the Gardeschützenbataillon, he took lessons on the piano and composition

¹ An expression found in 16th-century writers, during the revolt against the Moons.

² In Germany and America the notes are named after their values, the old words semibreve, minims, crotchets, etc., being given up in favour of *time-note*, whole-note, *half-note*, half-note, *quarter-note*, etc.

from L. Berger and Dehn. In 1840 he removed to Leipzig, where he became intimate with Mendelssohn and Schumann, particularly the latter. A testimonial from Mendelssohn, stating his qualifications as a musician, procured his discharge from the army, and in Sept. 1846 he settled finally in Vienna. In 1847 he went through a course of counterpoint with Sechter, and was for long esteemed as an able and conscientious teacher of the pianoforte and composition. But it is as a solid and scientific writer on music that his name will live; indeed his critical researches on Beethoven's works constitute him an authority of the first rank. His co-operation in the revised editions of the works of Bach, Handel, Beethoven, Mendelssohn and Mozart is of the highest value. If not the first to explore Beethoven's sketch-books, he certainly investigated them more thoroughly and to more purpose than any one else, and his works on this subject deserve the gratitude of every student of the great composer.

Nottebohm wrote:

Musikwissenschaftliche Beiträge in die Monatschrift für Theater und Musik (1855 and 1857, Vienna, Klemm); *Ein Skizzenbuch von Beethoven*, description with extracts (1865, Breitkopf & Härtel); *Thematisches Verzeichnis der im Druck erschienenen Werke von Beethoven*, 2nd ed. enlarged, and with chronological and critical observations (1868, B. & H.); *Beethoveniana* (1872, Rieter-Biedermann); *Beethoven's Studien*, vol. 1, containing the instruction received by Beethoven from Haydn, Albrechtsberger and Salieri, from the original MSS. (1873, *ibid.*); *Thematisches Verzeichnis der im Druck erschienenen Werke Franz Schuberts* (1874, Vienna, Schönböck); *Neue Beethoveniana*, papers appearing from time to time in the *Musikalisches Wochenblatt*, 1875-79—this last, and the *Beethoveniana*, are founded on the examination of Beethoven's sketch-books to which allusion has been made; *Mozartiana* (1880, B. & H.); *Ein Skizzenbuch von Beethoven aus dem Jahr 1803* (1880, B. & H.)—this contains the sketches for the Froica.

His compositions include:

Op. 1, piano quartet; op. 4, piano trios (both Peters); solos for FF., opp. 2 and 3 (Peters), opp. 6, 10, 11, 13-15 (Sphna); op. 16 (Peters); op. 17, Variationen über ein Thema von J. S. Bach, FF., four hands (B. & H.).

Since then the papers which appeared in the *Mus. Wochenblatt* as *Neue Beethoveniana*, with others of the same nature by him, have been collected by E. Mandyczewski, and published in 1887 by Rieter-Biedermann of Leipzig in a volume of 590 pages, as *Zweite Beethoveniana*. An index to both the Beethoveniana volumes was published in Oct. 1888.

C. F. F.

NOTTURNO, see NOCTURNE.

NOURRIT, (1) Louis (b. Montpellier, Aug. 4, 1780; d. Brunoy, Sept. 23, 1831), tenor singer, educated in the Maitrise at Montpellier. Through the influence of Mchul he entered the Conservatoire at Paris, became the favourite pupil of Garat, and won prizes. He made his first appearance at the Opéra as Renaud in Gluck's 'Armide.' A good singer, but unambitious and cold, he contented himself with taking Lainé's parts in the old operas, and seldom created new rôles. He retired in 1826, and lived at his country house at Brunoy till his death. During the whole of his operatic career he carried on the business of a diamond merchant, and wished to make a tradesman of his eldest son,

(2) ADOLPHE (b. Paris, Mar. 3, 1802; d. Naples, Mar. 8, 1839). This gifted youth received a good classical education at the Collège Ste. Barbe, but was then put into an office, the drudgery of which he beguiled by studying music in secret. On the representation of García, however, he was allowed to follow his wishes. His first appearance at the Opéra took place Sept. 10, 1821, as Pylade in Gluck's 'Iphigénie en Tauride,' when he was favourably received, partly because, in voice, manner and appearance, he was strikingly like his father. This resemblance suggested to Mchul an opéra-féerie, 'Les Deux Salem' (July 12, 1824), which, however, failed. On his father's retirement he succeeded him as leading tenor, and for more than ten years created the first tenor rôle in all the operas produced at the Opéra. The following is a list of the parts written for him:

1826, Nodés in 'Le Siège de Corinthe.' 1827, Aménophis in 'Morse'; and Douglas in 'Macbeth.' 1828, Masanello in 'La Muette de Portici'; and 'Le Comte Ory.' 1829, Arnold in 'Guillaume Tell.' 1830, Léonard de Vinci in 'Gustave.' 1830, J. F. Chambord; and 'Un Inconnu in 'Le Dieu et la Bayadère.' 1831, Guillaume in 'Le Philire'; and Robert in 'Robert le Diable.' 1832, Edmond in 'Le Serment.' 1833, Gustave III.; and Nadir in Cherubini's 'Ali Baba.' 1835, Eléazar in 'La Juive.' 1836, Raoul in 'Les Huguenots'; and Phœbus in 'La Esmeralda,' by Louise Bertin. 1837, Stradella in Niedermeyer's opera. In 1831 he sang Alfihmar in 'Euryanthe,' and in 1834 Don Juan in a new translation of Mozart's opera.

The writer of this article was a personal friend of Nourrit and heard him in nearly all the rôles which he created, and to which he imparted a distinct stamp of his own. Though rather stout, and short in the neck, he had a fine presence, and could be refined and pleasing in comedy or pathetic and commanding in tragedy, at will. He used his falsetto with great skill, and was energetic without exhausting his powers. He was idolised by the public, and his influence both with them and with his brother artists was great. He was consulted by managers and authors alike; he wrote the words for Eléazar's fine air in 'La Juive,' and suggested the abrupt and pathetic close of the duet in 'Les Huguenots.' His poetic imagination is shown by the libretti for the ballets of 'La Sylphide,' 'La Tempête,' 'L'Île des pirates,' 'Le Diable boiteux,' etc., danced by Tagliioni and Fanny Elssler—all of which were written by him. Besides securing large receipts for the Opéra, he popularised Schubert's songs in France, made the fortune of various composers of romances, and was always ready to sing the first act of 'La Dame Blanche' with Mmc. Damoreau for any charitable purpose. In conversation he was witty and refined. Duprez's engagement at the Opéra was a severe mortification for so earnest and so popular an artist, and rather than divide honours to which he felt he had an exclusive right, or provoke comparisons which would in all probability have been made in his favour, he resolved to retire. On his last appearance at the Opéra (Apr. 1, 1837) he received the most enthusiastic and flattering ovation ever perhaps

accorded to a French artist, but nothing would induce him to remain in Paris. He obtained leave of absence from the Conservatoire in 1837, where he had been professeur de déclama-tion lyrique from Jan. 1, 1828, started for Brussels, and thence proceeded to Marseilles, Lyons and Toulouse. His idea was to produce during his tour scenas or acts composed expressly for him, and Ambroise Thomas furnished him with a dramatic cantata called 'Silvio Pellico' (words by Legouv  ), which he carried off with expressions of delight at having found something which would display his powers in a new light. Of this piece, however, nothing has ever been heard since. While at Marseilles and Toulouse Nourrit's customary excitement increased to an alarming degree, and was aggravated after his return to Paris by a series of newspaper articles praising Duprez at his expense. These drove him away a second time. He started for Italy in a state of deep depression, but was temporarily restored by Rossini's kindness and by the cordiality of his reception in most of the great towns. Unfortunately 'Poly-eucte,' which Donizetti had composed for him, was interdicted in Naples, and he made his first appearance at San Carlo in Mercadante's 'Il giuramento.' He was well received both in this and in 'Norma,' but could not be persuaded of the fact. After singing at a benefit concert in a state of great mental fatigue, he had a sudden access of delirium in the night, and throwing himself out of window, was killed on the spot. His remains were brought to Paris, and interred amid a crowd of sorrowing friends. He was much valued by Mendelssohn, who made his acquaintance in 1831, and who notices his death in terms of great sorrow.¹

There is a fine marble medallion of Nourrit by Pradier; and he was often painted in scenes from 'La Muette,' 'Robert,' 'La Juive' and 'Les Huguenots.' The portrait by F. R. Spencer is very like. M. L. Quicherat, one of his sons-in-law, published *Adolphe Nourrit: sa vie*, etc. (Paris, 1867, 3 vols.), containing ample details. (See also Ferdinand Hiller's *K  nstler-leben*, 1880.)

His brother, (3) AUGUSTE (b. Paris, 1808; d. Isle-Adam, July 11, 1853), was also a distinguished tenor singer, and for some time directed the chief theatres at The Hague, Amsterdam and Brussels. He visited the United States, and after his return devoted himself to teaching singing. G. C.

BIBL.—ALPH. DUPRASQUIER, *Adolphe Nourrit* (Lyons, 1839); BOUVET DE MONVEL, *Adolphe Nourrit* (Paris, 1903).

NOV  ČEK, OTTOKAR (b. Fohertemplom, Hungary, May 13, 1866; d. New York, Feb. 3, 1900), violinist and composer, was a pupil first of his father, second, of Dont in Vienna, and lastly of Schradieck and Brodsky at the Leipzig Conservatoire, where he gained the Mendelssohn

prize in 1885. He played at the Gewandhaus, and joined the Brodsky Quartet, first as second violin and later as viola. He was a member of the Boston Symphony Orchestra under Nikisch, and solo viola in the New York Damrosch Orchestra from 1892–93. Weakness of the heart caused him to retire from active work in 1899, and being unable to play he devoted himself to composition. Published compositions:

Three string quartets, No. 1 in E minor, No. 2 in E, No. 3 in G (posthumous); concerto for piano (introduced by Busoni); two concerti caprices for piano; eight ditto for violin and piano; Bulgarian dances for violin and piano; Perpetuum Mobile for violin and orchestra; air for violin and pianoforte; six songs, the words by Tolstol.

(Baker.)

E. H.-A.

NOV  K, VIT  ZSLAV (b. Kamenice-on-Lipa, Southern Bohemia, Dec. 5, 1870), composer and teacher. Early in the present century he became, in association with his contemporary Josef Suk (q.v.), one of the leaders of modern Czech music. He was the son of the local doctor at Kamenice, and, losing his father early in life, he had to maintain his mother and younger brothers and sisters by giving lessons. He attended the Gymnasium at Jindřich  v Hradec (Neuhaus) and afterwards entered the Prague University, where he studied jurisprudence and philosophy. At the same time he worked at the Prague Conservatoire (piano with Josef Jir  nek, and composition with Antonin Dvoř  k). Dvoř  k took him into special favour, and, acting on the master's advice, Nov  k decided to devote himself entirely to music. Having passed through the school of composition he began to take private pupils, and soon made a reputation as composer and teacher. During the first decade of the 20th century most of the younger Czech musicians were indebted to him for their training (Štěp  n, Vycp  lek, Novotn  , Vom  čka and others). In 1909 Nov  k became professor of composition at the Conservatoire. After the political changes in 1918, when the institution was reorganised and passed under State control, Nov  k was appointed professor in the 'master school,' and was elected director in the years 1919–22.

Nov  k's early attempts at composition date from his school days. He already inclined towards programme music. Touched by the 'Weltschmerz' and romanticism of the young generation, he was a devoted admirer of Heine and Byron in poetry, and of Mendelssohn in music; although afterwards Schumann claimed his special homage, and Grieg enjoyed favour for a time. The violin sonata, the first pianoforte trio (G minor) and the 'Variations on a Theme by Schumann,' reflect the young Nov  k. At the Conservatoire he also came under the spell of the neo-romantics. We find the influence of Berlioz in the overture 'The Corsair,' and of Liszt in the ballad for piano, 'Manfred.' Dvoř  k also made some impression upon him. From him Nov  k

¹ Hiller's *Mendelssohn*, p. 137.

learned the strong and logical structure of musical forms, and the need for a thorough study of the classical composers. His ideal now became Brahms, whose influence, together with Dvořák's, prevails in the piano and chamber music. The central point of this period of Novák's activity is found in his music for piano (the Concerto, the Souvenirs, Serenades, Eclogues, Barcarolles, etc.), and his songs (particularly 'A Tale of the Heart'). An erotic feeling, dreamy or passionate, or sometimes linked to a gift of apt irony, distinguishes these little works.

Up to this time the national character is hardly perceptible in Novák's compositions. But the longing for the beauties of nature, which, together with the erotic impulse, has always been one of the chief incitements to his inspiration, attracted him one summer to Moravia, where he suddenly discovered a new horizon. Hitherto he had felt no wish merely to copy Smetana and Dvořák, who specialised in Czech local colour, but now that he had learnt to know the Moravian and Slovak folk, he saw them as his kinsmen, with their peculiar qualities and customs, and, above all, he heard their characteristic songs. He began to compose in this newly recognised spirit. In this respect he approaches the native Moravian musician Leoš JANÁČEK (*q.v.*), and it is interesting to observe how each works in his own way. Janáček is a realist, an 'expressionist,' who often leaves his raw material intentionally undeveloped; Novák idealises and polishes the Slovak folk-tunes, and frames them in the logical structure of polyphonic forms. Here we trace the origin of Novák's own music written to Moravian folk-texts, and also of the pianoforte quartet and quintet, the first string quartet, the four choral ballads (with orchestra), the overture to the Moravian folk-drama 'Maryša,' the piano pieces 'My Maytide,' the 'Sonata eroica' and the Valachian Dances.¹ These works have had a lasting influence upon the successive phases of Novák's art, because, having experienced all the impressions which grew out of intercourse with the folk, he assimilated these national elements with his own individuality. He soon returned to subjective music, inspired from within; but the Slovak idiom remains a distinguishing feature of all his work.

Novák was next attracted to impressionism. Simultaneously with the renewal of the subjective phase, the element of colour became prominent, and steadily took the ascendant in his orchestral works. The central inspiration of his art was now twofold—love of woman and of nature. His eroticism sometimes rises to an immensity of passion; while in his description of nature he seeks for the sublime

aspects of the mountains and the sea. He often has recourse (like Richard Strauss) to very subtle methods of tone-painting. His modern tendency is first revealed in the song cycle 'Melancholy,' op. 25, followed soon afterwards by the characteristic ballads, and later by the song cycle which marks the climax of his lyrical work, 'In the Valley of a new Kingdom,' op. 31. This valuable series of modern Czech songs ends with the 'Melancholy Songs of Love,' op. 38, and the Eight Nocturnes, op. 39. The pianoforte music belonging to this period includes the 'Winter Night Songs,' a monothematic cycle of pieces. Among the chamber music is the impassioned pianoforte trio 'Quasi una ballata,' op. 27. Novák was the first Czech composer to make use, early in the 20th century, of the single-movement form in which the character of all the sonata movements is preserved. In the same group must be placed the second string quartet (in two movements) in D, which is also monothematic. It contains a fugue in which Novák expresses himself in an unusually calm and clear mood.

Novák's strong, reflective, logical mind progresses continuously from simple to complex forms. He began with pianoforte music and songs, passed on to chamber music, and finally to orchestral composition. His serenade for small orchestra, in which passion is only lightly treated and satirical wit plays an important part, seems to be a kind of episode in his creative work. His programme works for full orchestra are on a large scale: 'In the Tatra' is a fine picture of nature in the mountain heights; 'Eternal Longing' is the outcome of a sublime impression of the Adriatic sea; 'Toman and the Wood Nymph' is the most temperamental of all Novák's works, and draws a twofold picture of ideal love and baneful love (*serus necans*). Upon these works followed 'Lady Godiva,' the apotheosis of ideal womanly love; 'The Storm,' a picture of the wild destructive ocean, by the power of which all the emotions and passions of which human nature is capable are brought to naught; and 'Pan'—originally written for piano—in which is revealed the old god and the joy of the nature-worshipper in the mountains, the sea, the forests and in woman.

'The Spectre's Bride' already shows the transition to Novák's latest period. Here the resources of tone-painting come to the front. Novák finally turned his attention to opera, the importance of which he had underrated for a time. He first composed a comic opera in one act, 'The Imp of Zvíkov,' in which we find a good deal of that personal irony already familiar in his instrumental works. At this time there is a new departure in the character of his music. It was natural that the passion of his earlier music should calm with advancing

¹ Moravian Valachia must not be confounded with the Roumanian province Wallachia.

years. The works of his maturity are penetrated by a compensating serenity. Biting irony is softened to kindly humour. He chooses no highly dramatic material for his operas, but rather that which intimately reveals the spirit of the Czechoslovak people and gives sufficient opportunity for nature-painting. 'Karlstein,' which originated during the war, is an expression of profound patriotism. 'The Lantern' is a genre picture depicting the sufferings of the Czechs in the years of their oppression; but it contains also a good many folk-tale elements which are treated with subtle humour. Whereas in 'The Lantern' Novák gives us a musical picture of the Czechs, in his latest legendary opera he returns to his favourite Slovak environment.

Besides opera, Novák has written in recent years the songs entitled 'Eroticon' and the piano suite 'Exoticon' (the outcome of his study of the folk-songs of foreign lands). On the establishment of the Czechoslovak Republic he composed two occasional works—the patriotic choruses for male voice choir, and military marches; also a number of children's songs and piano pieces, mostly for his little son.

Novák's early works without opus numbers are:

Sonata in D minor (violin and piano) (Hudební Matice, Prague); concert overture, 'The Corsair' (MSS.); 'Variations on a Theme by Schubert' (MSS.); Serenade in F for small orchestra (with exception of the second number—J. Otto, Prague); Piano Concerto (MSS.); Choruses for female voices (MSS.), and some MSS. Songs.

The following are published without opus numbers:

Slovak Songs (book 3, with English words by Rosa Newmarch, Hudební Matice, Prague); 25 Slovak Songs (Momin Urbánek, Prague); two Festival Choruses to President Masaryk (F. A. Urbánek); two marches—'Masaryk March' and 'Heroes of Czechoslovakia' (F. A. Urbánek).

WORKS WITH OPUS NUMBERS

OPERAS

'Zvíkovský rarášek' (The Imp. of Zvíkov), op. 47; 'A Night at Karlstein', op. 50; 'Lucerna' (The Lantern), op. 56 (all produced at the National Theatre, Prague); 'Dědův odkaz', op. 87 (Brno, June 1925).

CANTATAS

'Bohře' (The Storm), op. 42, for solo voices, chorus and orchestra; 'Svatební Košile' (The Spectre's Bride), op. 48.

ORCHESTRAL WORKS

Symphonic poems: 'In the Tatra', op. 26; 'Eternal Longing', op. 23; 'Toman and the Wood Nymph', op. 40. Overtures: 'Máryša', op. 18; 'Lady Godiva', op. 41. Serenade in D for small orchestra, op. 36 (Universal Edition, Vienna).

CHORAL WORKS AND SONGS

Ballads for chorus and orchestra: 'Ranofa' (The Accursed Daughter), 'The Murderer-lover' (Sluji Jano při potoce), 'The Unhappy War' (Nešťastný vojna) (all to Moravian folk-songs). Ballads for one voice, with pianoforte or orchestra: 'The Child Ballad' and 'The Mountain Ballad', op. 28 (Czech and German words, M. Urbánek, Prague); 'The Ballad of the Soul of Jan Neruda', for bass and orchestra, op. 29 (M. Urbánek). Song cycles: op. 4, 8, 14 (Eight Songs, F. A. Urbánek, Prague), 16, 17, 21, 25 ('Melancholy', M. Urbánek, Prague), 31 ('In the Valley of a new Kingdom'), 38 ('Melancholy Songs of Love', Hudební Matice), 39 (Eight, Notturnes, Rimrock and Universal Edition), op. 46; 'Eroticon' (Universal Edition, Czech and German), op. 62; 'Spring', children's songs in two books (Universal Edition).

Op. 47, Four Poems for mixed chorus; op. 37, 44, 51, Songs for male chorus; op. 53, Three Silesian Songs for chorus and orchestra (Hudební Matice).

FOR PIANO

'Manfred', ballad, op. 2; Bagatelles, op. 5; Souvenirs, op. 61. Serenades, op. 9; Barcarolles, op. 10; Eclogues, op. 11; 'Twilight', op. 13; Three Bohemian Dances, op. 15; 'My Mayday', op. 20 (F. A. Urbánek); 'Sonata eroica', op. 24; 'Songs of Winter Nights', op. 30; Two Valachian Dances, op. 34; 'Pan', op. 43 (Universal Edition); 'Exoticon', op. 46; Six Sonatinas, op. 64; 'Youth', op. 65 (children's pieces, Hudební Matice, Prague). Three short pieces for violin and piano, op. 3.

R. V.

NOVELLO, (1) VINCENT (b. London, Sept. 6, 1781; d. Nice, Aug. 9, 1861), son of an Italian father and English mother, was born at 240 Oxford Street. He was a chorister at the Sardinian Chapel, Duke Street, Lincoln's Inn Fields, under Samuel Webbe the organist, and after the breaking of his voice officiated as deputy for Webbe, and also for Danby, organist of the Spanish Chapel, Manchester Square. At 16 years of age he became organist of the Portuguese Chapel in South Street, Grosvenor Square, which office he held until 1822. In 1812 he was pianist to the Italian Opera Company at the Pantheon. He was one of the original members of the Philharmonic Society, and occasionally directed its concerts. Having attained great eminence as an organist, he was selected to take the organ in the 'Creation' at the Westminster Abbey Festival in 1834. From 1840-43 he was organist of the Roman Catholic Chapel in Moorfields. He was one of the founders of the Classical Harmonists and Choral Harmonists Societies, of both of which he was for some time conductor. In 1849 he quitted England for Nice, where he resided until his death.

Novello's compositions were numerous and varied, and if not remarkable for invention or originality, are marked by grace and solid musicianship. They include 'Rosalba,' a cantata composed for the Philharmonic Society, and first performed in 1834; 'Old May Morning,' a 'cheerful glee' which gained a prize at Manchester in 1832; and 'The Infant's Prayer,' a recitative and air which was long the favourite of every choir-boy who was qualified for concert-singing, and of which nearly 100,000 copies were sold. He also composed many masses, motets and sacred pieces to Latin words. But it was as an editor and arranger that he principally deserves the gratitude of lovers of music. His first work was 'A Collection of Sacred Music' (masses and motets, including many by himself), 2 vols., 1811, 2nd edit. 1825; which was followed by 'Twelve Easy Masses,' 3 vols., 1816; 'The Evening Service,' including the Gregorian hymns, 2 vols., 1822; 'The Fitzwilliam Music,' a noble selection of sacred pieces by Italian composers from MSS. in the Fitzwilliam Museum, Cambridge, 5 vols., 1825; 'Purcell's Sacred Music,' 5 vols., 1828-32, containing many anthems, services and other pieces never before printed, afterwards republished in 4 vols. But for the accident that Novello was allowed, after the York Festival of 1828, to copy the MSS. in the library of the Minster, many of those must have been lost to the world; 18 masses by Mozart, and 16 by Haydn, of which 10 of the former and 9 of the latter were printed for the first time; 'Convent Music,' a collection of pieces for treble voices, 2 vols., 1834; 'Studies in Madrigalian Scoring,' 1841; 'The Psalmist,' a collection of psalm tunes; 'The Congregational

1 'The Wood Nymph,' not yet quite finished.

and Chorister's Psalm and Hymn Book'; Croft's Anthems, 2 vols.; Greene's Anthems, 2 vols.; Boyce's Anthems, 4 vols.; Organ part to Boyce's 'Cathedral Music'; the masses of Beethoven, Hummel, etc. He took a number of madrigals by Wilbye and others, originally written for three and four voices, and added two, three and even four additional parts to them with great, if misplaced, ingenuity. For the organ he published, amongst others, 'Select Organ Pieces,' 3 vols.; 'Cathedral Voluntaries,' 2 vols.; and 'Short Melodies,' 1 vol.

Novello possessed well-cultivated literary taste, and numbered among his intimate friends Charles and Mary Lamb, Shelley, Keats, Leigh Hunt, Hazlitt, Edward Holmes and Charles Cowden Clarke, the latter of whom married his eldest daughter, Mary (*d.* Genoa, Jan. 12, 1898). Lamb mentions him with affection in more than one passage (see 'A Chapter on Fars' in the *Essays of Elia*). His family circle was greatly beloved by those who had access to it, amongst others by Mendelssohn, who was often there during his early visits to this country, and many of whose extraordinary improvisations took place in the Novellos' drawing-room. (See Joseph Bennett's 'A Novello Centenary,' *Mus. T.*, 1881, p. 495; and *D.N.B.*)

The following among Vincent Novello's children followed musical careers:

(2) CECILIA (*d.* Genoa, June 20, 1890), his second daughter, studied singing under Mrs. Blane Hunt, and appeared upon the stage. She was a good musician, and an excellent and useful singer of secondary parts. She became the wife of Thomas James Serle, actor, dramatist and journalist. Their daughter, EMMA CLARA, a promising soprano singer, died at an early age, Oct. 4, 1877.

(3) CLARA ANASTASIA (*b.* June 10, 1818; *d.* Rome, Mar. 12, 1908), his fourth daughter, was at 9 years of age placed under Miss Hill and John Robinson, at York, to learn singing and pianoforte-playing. In 1829 she became a pupil of the Conservatoire at Paris, but returned to England in the following year on account of the Revolution. In 1833 she made her first public appearance at a concert at Windsor, with such success that she was immediately engaged at the Ancient and Philharmonic Concerts and Worcester Festival, and in the next year at the Westminster Abbey Festival. She sang at all the principal concerts and festivals until 1837, when, at the invitation of Mendelssohn, she went to Leipzig, and appeared at the Gewandhaus Concerts, whence she passed on to Berlin, Vienna, St. Petersburg and Düsseldorf. Writing to the secretary of the Philharmonic Society in Jan. 1839, Mendelssohn speaks of her and Mrs. Shaw as 'the best concert-singers we have heard in Germany for a long time,' and Schumann (*Gesamm.*

Schriften, iii. 47) dwells on the extraordinary interest she excited, and the universal surprise at her noble simple style of interpreting Handel. In 1839 she went to Italy to study for the stage, and became a pupil of Micheroux at Milan, with whom she remained for a year. She made her first appearance in opera at Padua, July 6, 1841, in Rossini's 'Semiramide,' with great success. She afterwards sang at Rome, Milan, Bologna, Modena and other places. She returned to England in Mar. 1843, and appeared in opera at Drury Lane, and in oratorio at the Sacred Harmonic Concerts, and the Birmingham Festival. On Nov. 22, 1843, she was married to Count Gigliucci, and withdrew from public life; but circumstances compelled her, a few years later, to return to the exercise of her profession, and in 1850 she sang in opera at Rome and Lisbon. In 1851 she returned to England and appeared in oratorio, in which she achieved her greatest successes, and at concerts. She also made one more appearance here on the stage, namely, in the 'Puritani' at Drury Lane, July 5, 1853. In 1854 she sang in opera at Milan. Her greatest triumphs were at the opening of the Crystal Palace, June 10, 1854, and at the Handel Festivals in 1857 and 1859, where her clear pure notes penetrated the vast space in a manner not to be easily forgotten. In Nov. 1860 she took leave of the public in a performance of 'Messiah' at the Crystal Palace, and at a benefit concert at St. James's Hall, and returned to Italy. Her voice was a high soprano, extending from C below the stave to D *in alt*, retaining till old age its purity of tone, brilliance and power. She excelled in oratorio, particularly in devotional songs, and she enjoyed the distinction of having drawn praise from Charles Lamb, notwithstanding his insensibility to music. Her reminiscences were published in 1910.

(4) MARY SABILLA (*d.* Genoa, Jan. 8, 1904), the sixth daughter, was also a soprano vocalist, but delicacy of throat and susceptibility to cold compelled her to relinquish singing. She translated several theoretical works into English. From 1849 she resided in Italy.

(5) JOSEPH ALFRED (*b.* Aug. 12, 1810; *d.* Genoa, July 16, 1896), the eldest son, was a bass singer, and for many years sang in oratorios and concerts. He was for some time choir-master at Lincoln's Inn Chapel. He adapted the English text to the 'Lobgesang' and several of the Psalms of Mendelssohn. He was actively engaged in obtaining the repeal of the advertisement duty, the paper duty, the stamp on newspapers, and other imposts generally known as the 'Taxes upon Knowledge.' He was, however, best known as a music publisher. (See NOVELLO & COMPANY.) He retired in 1856 and went to reside at Nice, whence he removed to Genoa.

W. H. H.

NOVELLO & CO. A firm of music publishers founded in 1811 by Vincent Novello. His first issue—'Novello's Sacred Music as performed at the Royal Portuguese Chapel'—deserves mention for two reasons. The work consisted of two folio volumes of music sung at the chapel of the Portuguese Embassy, where Novello was organist. Finding no publisher willing to undertake the risk of production, he issued the works from his private residence, and so laid the foundation of the present house. Apart from the interest that must always attach to the small beginnings of great enterprises, this 'Sacred Music' is notable for another reason. Hitherto all works of the kind had been issued with figured bass accompaniment only. Novello broke away from custom by writing out the organ part in full—an innovation which was disapproved by organists as a body. It seems certain, however, that the plan, by thus making the music accessible to the less skilled among players, was largely responsible for a success which encouraged Novello to continue and extend his venture. (For a list of the more important of his publications see the article under his name.)

In 1829 his son, JOSEPH ALFRED (*q.v.*) opened a music-publishing business at 67 Frith Street, Soho, whence he removed, five years later, to 69 Dean Street. Alfred Novello must be credited with the discovery of the possibilities, artistic and commercial, of cheap editions of standard works. A detailed account of the bold and energetic methods by which he carried the idea into practice appears in *A Short History of Cheap Music*, by Joseph Bennett, with a preface by Sir George Grove (Novello, 1887). The present widespread musical activity in this country (especially in choral singing) is due largely to the enterprise of Alfred Novello and his successor, Henry Littleton. A history of the steady growth of the popular interest in classical choral music during the period 1830-70 would be little more than a history of the house of Novello during those years. A few salient points will enable the reader to realise this. Sir George Grove, in the Preface mentioned above (dated 1887), says,

'When the present writer was in his teens [1830-40] the price of music was more than twenty times what it now is. The first guinea that he recollects having given him, in 1837, was expended in a pianoforte score of the 'Messiah' which is now published at a shilling.'

It is hard to realise to-day that when Alfred Novello began to publish there were few choral societies, and that the members of one of the most important in London—the Cecilian Society—were accustomed to sing the 'Messiah' from manuscript copies, or from old scores issued by Button and Whitaker, St. Paul's Churchyard, at two guineas each. Not only were cheap copies of Handel's oratorios un-

known: so small was the demand for any complete works of large scale, that when in 1836 Alfred Novello announced his purchase of the English copyright of 'St. Paul,' and the issue of the pianoforte score at thirty-two shillings, the music trade felt that he was courting disaster. The step, followed as it was by the publication of other choral works by Mendelssohn—the Psalms, 'Lobgesang,' etc.—proved on the contrary to be a means of consolidating the position of the firm. The needs of many small bodies that were springing up at this period were met by such issues as 'Novello's Choral Handbook,' issued in separate parts at 3d. a page, and Mainzer's 'Singing for the Million,' a series of choruses published by Novello in penny numbers. Popular choralism was further stimulated by Alfred Novello himself during his commercial tours, which were

'exalted into the dignity of musical missions. His cheap publications had made the formation of choral societies possible. In the large factories of Yorkshire and Lancashire many choral unions existed, and the publications of the house were gladly welcomed, because of their modest price and accuracy. The publisher in his progress was always cordially received, and often concerts were given in his honour, the performers making extra exertions to show their advancement since his last issue.'

The year 1844 saw the beginning of *The Musical Times* (see PERIODICALS, MUSICAL). From the first it contained one or more pieces of choral music, and the size adopted for the purpose of the journal led to the idea of the 'Octavo Editions' which have ever since been a prominent feature in the firm's output. In 1846 began the issue of the 'Messiah' in twelve monthly numbers at 6d. each, the complete work costing 6s. 6d. 'The Creation,' 'Judas Maccabeus,' 'Jephtha,' 'St. Paul,' and other oratorios followed in the same cheap form. Ten years later the 'Messiah' was issued complete for 1s. 4d. These and other steps in the direction of Alfred Novello's goal of cheap music were made possible by the repeal of the various 'Taxes on Knowledge' (a reform in which he played a prominent part), and by his prompt adoption and development of improvements in printing.

In 1857 Alfred Novello retired to Italy, leaving the rapidly growing business to be managed by Henry Littleton, who had entered his employ as a lad. Four years later Littleton was taken into partnership (the title of the firm becoming Novello & Co.), and soon afterwards he bought the business, having thus risen in about twenty-five years from the humble post of 'collector' to sole proprietor. In 1867 the business of Ewer & Co. was acquired, and with it all the existing Mendelssohn copyrights. The same year saw the opening of the premises at 1 Berners Street. The present address of the firm is 160 Wardour Street. Henry Littleton's conduct of the business was even more daring²

¹ *A Short History of Cheap Music.*

² For a detailed account of his operations, which included suc-

than that of his predecessor, and was so successful that on his retirement in 1887 the firm had become one of the largest of its kind in the world.

On Henry Littleton's death (May 11, 1888) he was succeeded by his sons ALFRED (d. Nov. 8, 1914) and AUGUSTUS, the present (1926) chairman, the firm reverting to its former title of Novello & Co. H. G.

NOVERRE, JEAN GEORGES (b. Paris, Apr. 29, 1727; d. St. Germain-en-Laye, Oct.¹ or Nov. 19,² 1810³). His father, who had formerly served under Charles XII., intended him for the army, but his love of dancing and the theatre were invincible, and he became the great authority on dancing, and the reformer of the French ballet. A pupil of the celebrated dancer Dupré, he made his début before the court at Fontainebleau in 1743. He was engaged by Frederick the Great in Berlin to organise the opera ballet, and was well received. In 1747 he returned to Paris, and composed several ballets, among them the 'Ballet chinois,' for the Opéra-Comique (where he became ballet-master in 1749), the success of which aroused so much jealousy as to induce him to accept Garrick's invitation to London in 1755 as ballet-master. The 'Chinese Festival,' produced at Drury Lane, Nov. 8, 1755, provoked great opposition owing to political circumstances. There he spent two years, profiting in more ways than one, as may be seen by the more extended knowledge and more elevated imagination of his ballets of that date. He returned to Paris hoping for the appointment of ballet-master to the Académie Royale de Musique, but failing this, he accepted a lucrative engagement at the large theatre of Lyons. Here, in conjunction with Granier, he produced three ballets (1758 and 1759) of which the scenarios were printed. Here also he published his *Lettres sur la danse et les ballets* (1760, 1 vol. 8vo), which attracted general notice, and greatly increased his reputation. Remaining still without a summons to Paris, he found a patron in the Duke of Wurtemberg, for whom he composed no less than twenty divertissements and ballets-pantomimes. In 1765 he returned to Paris and produced 'Médée.' In 1770 Empress Maria Theresa summoned him to Vienna, as director of the court fêtes, and dancing-master to the Imperial family; and here again he composed a dozen ballets for the court theatre, the scenarios of

which were printed separately. On the marriage of Archduke Ferdinand, Noverre received the Order of Christ, and permission to take part in the wedding fêtes at Milan, when he produced several new ballets, afterwards given in Vienna. His two letters to Voltaire describing Garrick (printed in the French translation of the *Life of Garrick*, 1801) probably date from a visit to London which Noverre paid at this time.

On his return to Paris in 1775, Noverre obtained, through his former pupil Marie Antoinette, now Queen of France, the long-coveted post of 'Maître des ballets en chef' at the Opéra. In addition to revivals of earlier works he composed specially for the Opéra 'Les Caprices de Galathée' (Sept. 30, 1776); 'Annette et Lubin' (June 9, 1778); 'Les Petits Riens' (June 11, 1778), for which Mozart wrote fourteen pieces; the music was long supposed to be lost, but was discovered in 1873 in the library of the Opéra in Paris by Nutter; it was printed in *extenso* in C. E. Noverre's *Life and Works of the Chevalier Noverre* (1882), but is placed by Koehel in his appendix of lost works, where, however, he gives the themes of thirteen out of the fourteen movements; and 'Médée' (Jan. 30, 1780). He also arranged the divertissements of several operas by Gluck and Piccinni. In the famous quarrel over these two composers Noverre took the side of Piccinni. He retired with a pension in 1780, and lived at St. Germain-en-Laye. His 'works' in three volumes were published in an English translation in 1782. On the outbreak of the Revolution he fled to London, and there produced two of his best ballets, 'Les Noces de Thétis' and 'Iphigénie en Aulide.' After so successful a career he was justified in looking forward to an old age of affluence, but during the Revolution he lost the savings of fifty years and was reduced to poverty, which he bore with dignity and resignation.

Noverre several times remodelled his standard work *Lettres sur la danse et les ballets* (Lyons; Stuttgart, 1760; Paris, 1760, 1783; Vienna, 1767; Copenhagen, 1803).⁴ An edition published at St. Petersburg (1803-04), *Lettres sur la danse, sur les ballets et les arts*, 4 vols., scarce, and apparently unknown to Fétis, contains analyses of numerous ballets. The best known is the Paris edition of 1807, *Lettres sur les arts imitateurs en général, et sur la danse en particulier*, 2 vols., with portrait engraved by Roger after Guérin, and the following lines by Imbert:

'Du feu de son génie il anima la danse :
Aux beaux jours de la Grèce il sut la rappeler ;
Et, recouvrant par lui leur antique gloquence,
Les gestes et les pas apprirent à parler !'

gigantic concert enterprise as the series of two hundred given at the International Exhibition in 1873-74; the nightly concerts launched at the Albert Hall in 1874, which anticipated the present 'Promenades' by adopting a weekly scheme of 'night's', 'Classical', 'Wagner', 'Oratorio', 'English', 'Ballad', and 'Popular'; the formation of the Barby Choir; the undertaking of the general direction of the Royal Choral Society when Barby succeeded Gounod as conductor, the reader is referred to *A History of Cheap Music* and the biographical sketch which appeared in *The Musical Times* of Jan. 1928, the centenary of his birth.

¹ Chron. and Écroule.

² Some authorities give 1807, but that is apparently a mistake. The date given in his descendant's biography is Oct. 18, 1809, but no authority is quoted in support.

⁴ German translation: *Briefe über die Tanzkunst* (Hamburg and Bremen, 1760), J. H. Cramer; also in *Hamburger Blättern für Unterhaltung*, vol. I.

which give a good summary of what Noverre effected. He invented the ballet d'action, reformed the costume of the dancers, abolished routine in favour of taste, compelled composers to conform their music to the situations in the drama and the sentiments of the characters, and succeeded in making the pantomime appeal to the intellect as well as to the eye.

Among Noverre's writings may be specified *Observations sur la construction d'une nouvelle Salle de l'Opéra* (Paris, 1770¹; Amsterdam, 1787); and *Lettres à un artiste sur les fêtes publiques* (Year IX.). The MS. notes of an eminent bibliophile allude to another, *Théorie et pratique de la danse en général*, which seems not to have been printed, and was doubtless intended for the *Dictionnaire de la danse*, projected by Noverre, but not finished. G. G.

NOVOTNY, JAROSLAV (*b.* Jičín, 1886; *d.* 1918), a Czech composer of promise, killed in the Ural district while fighting with the Czech legionaries against the Bolsheviks. He studied under Vít. Novák and was making his mark in the musical world of Prague when he was called upon to serve in the Austrian army. Having been taken prisoner by the Russians, he joined the Czech legion, and, like his compatriot, Rudolf KAREL (*q.v.*) managed to carry on his art amid a strenuous campaign. The choruses written in Russia show a marked tendency to adopt the newest theories of composition. His works include: 'Večna avatba' (The Eternal Wedding), a cycle of 4 songs, op. 2, and 'Balady duše' (Ballads of the Soul), four settings of poems by Sová, op. 4 (Hudební Matici); children's songs (MS.); string quartet; pianofortesonata; choruses (Hudební Matici). R. N.

NOWELL, see NOËL.

NOZZE DI FIGARO, LE, opera buffa by Mozart, in 4 acts; libretto by L. da Ponte after Beaumarchais's 'Mariage de Figaro,' on Mozart's own suggestion. It is dated, in Mozart's Autograph Catalogue, Vienna, Apr. 29, 1786. Produced National Theatre, Vienna, May 1, 1786; Opéra, Paris, in 5 acts, with Beaumarchais's spoken dialogue, Mar. 20, 1793; King's Theatre (in Italian), June 18, 1812; in English, Covent Garden, Mar. 6, 1819; New York in 1823. G.

NUCIUS (Nux; NUCIS), JOANNES (*b.* Görlitz, Silesia, c. 1556). In the *M.f.M.* xxxvi. 200-209, Reinhold Starke corrects and supplements from documentary evidence the details given in *Q.-L.* as to the life and works of Nucus. From this we learn that Nucus received his musical instruction from a certain Johannes Winckler, whom he describes as a very capable musician. He afterwards took the monastic vows in the Cistercian Abbey of Raudon in Upper Silesia, and in 1591 was elected Abbot of the daughter-house of Him-

melwitz. The Abbey was burnt down in 1617, but Nucus survived the partial rebuilding of it to Mar. 25, 1620. His published works consist of two books of motets for five and six voices (Cantiones Sacrae . . . Prague, 1591, 1595, and Liegnitz, 1609), containing altogether 129 numbers, including second parts. His intention to publish a book of masses does not appear to have been carried out. Two masses with missing parts exist in MS. Nucus also put forth in 1613 a theoretical work entitled *Musices poeticae sive de compositione cantus*. Of this work Starke gives a pretty full account in the *Monatshefte* referred to above. Nucus expresses his great veneration for the works of Josquin des Prés and Orlando Lassus.

J. R. M.

NUIT DE MAI, opera in 3 acts; text after Gogol, music by Rimsky-Korsakov. Produced St. Petersburg, 1880; Drury Lane, June 26, 1914.

NUITTER,² CHARLES LOUIS ÉTIENNE (originally TRUINET) (*b.* Paris, Apr. 24, 1828; *d.* there, Feb. 24, 1899), librettist and French writer on music. In 1849 he was a lawyer, devoting his spare time to the theatre, and from 1855 he collaborated (notably with de Beaume, called Beaumont), in a large number of *vaudevilles* and libretti for opera, operettes, ballets; also translations, amongst others, at the Théâtre Lyrique: Weber's 'Obéron,' 'Preciosa,' 'Abou-Hassan' (1857-59); Bellini's 'Roméo' (1859); Mozart's 'La Flûte enchantée' (1865); Wagner's 'Rienzi' (1869). At the Opéra: 'Tannhäuser' (1861), 'Lohengrin' (1891; Brussels, 1870); Verdi's 'Aïda' (1800); Delibes' ballets, 'La Source' and 'Coppélia' (1866 and 1870); Lalo's ballet, 'Namouna' (1882). At the Bouffes he gave 'La Prise de Trébizonde' and 'Boule de neige' with Offenbach (1869 and 1871). At the Nouveautés: 'Le Cœur et la main' with Lecocq (1880). At the Opéra-Comique: Wagner's 'Le Vaisseau-fantôme' (1897; Brussels, 1872).

In 1865 Nuitter was appointed archivist at the Opéra. With Théodore de Lajarte, keeper of the music, he reorganised the important department which had been put under his care, and he enriched it with numerous works, drawings, autographs, play-bills and documents of all kinds connected with the theatre and music in Paris (notably a very important collection of journals), acquisitions the greater part of which were paid for out of his own pocket.

Nuitter contributed to the *Chronique musicale* (1873 et seq.) and published the following: *Le Nouvel Opéra* (1875); *Histoire et description du nouvel opéra* (1884); with

¹ 1781. *F.M.C.*

² Name derived as an anagram from the patronymic

Thoinan, a fine work, *Les Origines de l'opéra français* (1886); in the *Bayreuther Festspiel-Blätter* (1884), a documented article on the first production of 'Tannhäuser' in Paris.

NUNC DIMITTIS. The first words of the Song of Simeon used as an Evening Canticle from very early days, and especially at Compline, where it was not likely to receive elaborate musical treatment. But in the making of the Anglican Prayer Book it became an integral part of English Evensong; and as such it has been set by a great number of the best English church composers on large lines. (See SERVICE.)

W. H. F.

NURMAHAL, see **LALLA ROOKH** (2).

NUT. (1) Of the violin (Fr. *sillet*; Ger. *Sattel*). A slip of ebony or ivory (the former chiefly used) glued to the neck of the violin at the upper end of the FINGER-BOARD (*q.v.*), and over which the strings pass. It is slightly raised above the level of the finger-board, and serves to keep the strings from touching it except when pressed down by the finger. It existed in the old instruments which preceded the violin, and in them was ruder and larger.

(2) Of the bow (Fr. *hausse*; Ger. *Frosch*). A piece of ebony or ivory, over which the hairs pass, attached to the end of the bow by a metal shank working in a groove cut in the bow. A screw working in the shank serves to tighten or slacken the hairs. The nut is slightly hollowed in the cheeks, and is accurately fitted to the stick by means of a metallic groove. The nut is as old as the bow itself.

The name in both cases is equivalent to 'knob' or 'projection.'

E. J. P.

NYASTARANGA (Throat Trumpet), a brass instrument used in the N.W. provinces of India. Though resembling in shape a small trumpet it is not blown by the mouth, but placed on the vibrating chords of the throat. As the performer hums the melody the sound is taken up sympathetically by a delicate membrane (the cocoon or egg-case of a spider, or a piece of very thin rice paper) placed over the hole at the bottom of the shallow cup-mouthpiece, the sound being then reinforced by the resonating tube of the trumpet. In India it is considered a classical instrument and very ancient; it is generally used in pairs, one placed on each side of the throat. The tone is reedy and somewhat uncanny; it is more readily produced if the membrane is slightly moistened.

F. W. G.

OAKELEY, SIR HERBERT STANLEY, Mus.D.

(*b.* Ealing, July 22, 1830; *d.* Eastbourne, Oct. 26, 1903), second son of Sir Herbert Oakeley, Bart., was educated at Rugby and Christ Church, Oxford. He graduated B.A. in 1853 and M.A. in 1856. He studied harmony under Dr. Stephen Elvey, and the organ under Dr. Johann Schneider at Dresden, and completed his musical studies at Leipzig, with Prof. Breidenstein of Bonn. In 1865 he was elected professor of music in the University of Edinburgh. He received his Mus.D. degree from the Archbishop of Canterbury (Tait) in 1871, and was knighted in 1876. He received in 1879 the degree of Mus.D. from the University of Oxford, and in 1881 that of LL.D. from the University of Aberdeen; he was created in the same year composer of music to Her Majesty in Scotland. In 1886 the University of Toronto conferred on him the degree of D.C.L., and in 1887 he received the degree of Mus.D. from the University of Dublin. In 1891 he resigned the Edinburgh professorship, and was made Emeritus Professor in the following year. A year after his death a memoir by his brother, E. M. Oakeley, was published in London. Among his own publications are many songs, with pianoforte or orchestral accompaniment, twenty of which were published in a 'Jubilee Album' dedicated to Queen Victoria; three vocal duets; twelve part-songs; students' songs and choral arrangements of eighteen Scottish National melodies, and of various others for male voices. For the church, some dozen anthems, a Jubilee Cantata for 1887, a motet with orchestral accompaniment, a Morning and Evening Service and many hymn-tunes. He also published a few of his compositions for pianoforte and organ, and for orchestra, including a festal and a funeral march.

Sir Herbert Oakeley had a remarkable gift of improvisation, and was an organ-player of exceptional ability. During his tenure of the professorship he gave a great impulse to the public performance of music at the REID CONCERT (*q.v.*); he inaugurated an annual festival which did a good work for some years. W. H. H.

OBLIGATO, *i.e.* necessary, a term signifying that the instrument with which it is coupled is indispensable in that place or that piece. It is in this respect the opposite to **AD LIBITUM**. (See **ACCOMPANIMENT**.) G.

OBERMEYER, JOSEPH (*b.* Nezabudicz, Bohemia, in 1749), violinist. Kamel was his first master and, owing to the generosity of his patron Count Vincent Waldstein, Tartini was his second. He is said to have closely imitated the broad adagio playing of the great maestro. On his return to Bohemia he resumed his post of valet-de-chambre (which it need hardly be

observed was a household position different from that which is nowadays implied by the term) to Count Waldstein. Eventually he relinquished this situation, and becoming a farmer performed but rarely in public. In 1801 he reappeared at Prague with great success, and three years later his playing at some musical fêtes at Strathaw was, according to Fétis, greatly admired. He was then 55. He was still alive in 1816. E. H. A.

BIBL.—*Fétis*; CLARKE, *Dictionary of Fiddlers*; *Q.-L.*

OBERNDÖRFFER, DAVID, an early 17th-century instrumental player at Frankfort-on-M., wrote 'Allegrezza musicale,' an important collection of pavans, galliards, canzonets, etc., for sundry instruments in 4-6 parts, including some by Wm. Brade, Tho. Simpson, J. H. Schein, Val. Haussmann, etc. (*Q.-L.*).

OBERON, opera in 3 acts; words (English) by J. R. Planché, music by Weber. Produced Covent Garden, Apr. 12, 1826; in Italian (Maggione), Her Majesty's (in 4 acts), July 3, 1860, with recitatives by Benedict and six additional numbers from 'Euryanthe' and elsewhere; in German, Leipzig (Hell's translation), Dec. 23, 1826; Théâtre Allemand, Paris, 1830; Théâtre Lyrique (transl. by Nuitter, Beaumont Chazot), 1857. G.

OBERTAS. From 'Obracać,' signifying 'to turn round.' 'Obertas' has a second meaning, 'confusion' or 'perplexity.' The accent lies on the second syllable. This is described in the *Encyklopedia Powszechna* (Warsaw, 1884) as the most popular of Polish national dances.

The couples follow their leader, turning from right to left, and describing a circle or oval ring. The woman sometimes dances round her partner, and sometimes *vice versa*; a song is often sung at the same time. The obertas is evidently regarded by the Poles as their national waltz, though, as will have been seen, it differs from the German waltz in several characteristics of the dance as well as in the style of the music associated with it by modern composers. Wioniański's 'Mazurka caractéristique' for violin No. 1 bears the sub-title 'Obertas'; it is deficient in the rough, wild character, without which the dance is scarcely to be distinguished from a mazurka. Boito introduces the obertas into the first scene of Act i. of 'Mefistofele'; whether he was guilty of an anachronism in representing his 16th-century Frankfort populace indulging in a national dance of Poland (to say nothing of Polish exclamations) is open to question. The Mazurka found its way into North-Germany only after August III. of Saxony ascended the throne in 1733 (Brockhaus). Had the obertas been adopted at any time by the German people, such writers

as Angerstein, Czerwinski, Voss, etc., could not have ignored it in their works on the art and history of the Dance; though their neglect to include the name of a dance known only in Poland in their enumeration of dances of all nations is at least excusable. However, the charm of these stirring strains, no doubt suggested to Boito by his Polish mother, renders very welcome the composer's possible deviation from historic truth.

Wieniawski and Boito suggest by a drone bass in fifths the rude accompaniment of the bagpipes or other primitive combination of instruments.

'Tutto vanno alla rinfusa
Sulla musica confusa
Così far la cornamusa—'

writes Boito for his chorus. The wild and romping nature of this dance and music must have proved without attraction for Chopin, who has at any rate not included by name an obertas among his mazurkas. Nevertheless, we may recognise that in C major, op. 56, No. 2 (Vivace), as being in harmony and rhythm the nearest approach to the obertas attempted by this fastidious and undramatic composer.

L. M. M.

OBERTHÜR, CHARLES (*b.* Munich, Mar. 4, 1819; *d.* London, Nov. 8, 1895), a distinguished performer on and composer for the harp. His father carried on a manufactory of strings for musical instruments in Munich. His teachers were Elise Brauchle and G. V. Röder, the court Director of Music. In the autumn of 1837 he was engaged by Charlotte Birch-Pfeiffer as harp-player at the Zurich theatre. He stayed there until Sept. 1839, when, after a concert tour through Switzerland, he accepted an engagement at Wiesbaden. In 1842 he went to Mannheim, where he remained until 1844. A difference with V. Lachner, and the representations of English friends then living at Mannheim, induced Oberthür in Oct. 1844 to come to England, where he found a firm protector in Moscheles, and where he took up his residence. He first obtained an engagement at the Italian Opera, but soon gave this up, and devoted himself to private teaching and composition, with occasional appearances as a soloist at the principal concerts in England and abroad.

The list of Oberthür's compositions (more than 200 in number) includes two operas, 'Floris von Namur' and 'Der Berggeist des Harzes,' successfully performed at Wiesbaden; a Mass, 'St. Philip de Neri'; cantatas, 'The Pilgrim Queen,' 'The Red Cross Knight' and 'Lady Jane Grey'; Overtures ('Macbeth' and 'Rübezahl'); Trios for harp, violin and violoncello; a Concertino for harp and orchestra; 'Loreley'—a legend for harp and orchestra; a Quartet for four harps, etc.

W. B. S.

OBLIQUE PIANO, a cottage pianoforte the

strings of which are disposed diagonally. The greatest angle, however, is at the longest and lowest string, the bias gradually diminishing until the shortest and highest string is vertical or nearly so. The object is to get greater length in the bass strings. The invention of the Oblique Piano is due to Robert Wornum, of London, who, in 1811, took out a patent for an upright piano with the strings set diagonally, and the heads of the hammers in the same rake as the strings. The Oblique Piano was comparatively early adopted in France, especially by Roller & Blanchet, who made very distinguished small instruments in this manner. The principle was then generally adopted by the best French and English makers, and later by the Germans and Americans. (See PIANO-FORTE.)

A. J. H.

OBOE (or HAUTOBOY) (Fr. *hautbois*; Ger. *Oboe*, *Hoboe*, *Hochholz*; Ital. *oboe*), a wooden instrument of conical bore played with a double reed. There are several varieties: (1) the OBOE proper, (2) the COR ANGLAIS, (3) the OBOE D'AMORE, (4) the BARTONE OBOE and (5) the obsolete OBOE DI CACCIA. For the PASTORAL OBOE see BAGPIPE and SHEPHERD'S PIPE.

(1) The orchestral OBOE as now made sounds *d'* when the six holes controlled by the fingers and others by key-work are closed, and by raising the fingers in succession the scale of D major is obtained as on the flute. Strictly speaking, the instrument is therefore in D, but as the notes sound as written, it is customarily spoken of as being in C. Its tube is conical, enlarging from the reed to the bell, and it therefore overblows to the octave, and is usually built up of three portions, the 'top joint,' 'lower joint' and 'bell.' In addition to these there is the small metal tube, or 'staple,' to which the blades of cane forming the double reed are secured. To facilitate the fingering of semitones, the third and fourth finger-holes were formerly made double, that is to say, instead of a full-sized hole, two small ones placed side by side were used in each case, one or both of which could be covered by the finger, but although this arrangement was long maintained, the necessity for it has passed away with the modern free use of key-work. By the end of the 17th century two keys giving *c'* and *e'* were introduced; in 1727 Gerard Hofmann of Rastenburg added two keys for *g''*, *a''*, and in the 19th century the instrument gradually attained its present delicacy and excellence. The *Method* by Sellner, published in 1825 at Vienna, describes keys producing *c'*, *c''*, *d''*, *f'*, *f''*, *g''*, *a''*, *c'*, and also an octave key. The present compass of the instrument extends downwards to *b*, and sometimes to *b*, and the fingering of the less complicated models is not dissimilar from that of the flute and the bassoon. (See PLATE V. No. 6.)

1. DOLCIAN (Fagotto) (c. 1620). 2. BASSET HORN (J. Stengel, c. 1820).
 OBOE D'AMORE (J. Poerschmann, c. 1725). 4. OBOE DA CACCIA (C. Strisch, 18th cent.)
 5. STOCK HORN (18th cent.).

2. Heyer Museum, formerly Cologne, now Leipzig. 3, 4. Metropolitan Museum, New York. 5. Royal College of Music.

From the lowest note, whether $b\flat$ or $b\sharp$ (1) to the $b'\sharp$ next above (2), thirteen or twelve consecutive semitones are successively obtained by lifting fingers or depressing keys. For c'' (3) the middle finger of the left hand is kept down and the forefinger lifted, as on the flute, the note being improved by covering the right-hand finger-holes. For $c''\sharp$ all finger-holes are open, or as an alternative the fingering of its lower octave $c''\sharp$ can be used, the emission of the note being aided by a slight opening of the $c''\sharp$ hole, which in this way serves as a vent or speaker. Continuing to repeat the fingering of the lower octave, d' and $d''\sharp$ are obtained by a similar use of the $c''\sharp$ hole. From e'' (4) to a'' (5) the first octave or speaker-key which is worked by the thumb is used, and in all modern instruments there is a second octave key worked by the knuckle of the left forefinger, by means of which the scale can be extended from a'' to a''' (6), though

the f''' below this may be considered as the practical limit of the oboe's compass. In the most recent instruments of all, these two 'vent-holes,' or harmonic keys, which serve only to determine a node in the tube, and which, unlike the corresponding mechanism of the clarinet, do not furnish an independent note of their own, are made automatic, and practically independent of the player's will. For most of the higher notes above a'' , the bottom $d''\sharp$ key requires to be raised by the right little finger, just as occurs in the flute.

The above scale, from its close similarity to those of the flute and bassoon, may be looked upon as traditional and fundamental. But hardly any wind-instrument, except the flute, has been so altered and modified of late years in its mechanism as the oboe. The form most in use at the present day is a modification of the older model described above, with many devices borrowed from the Boehm system of fingering. It has thus become by far the most elaborate and complicated of reed instruments, and it is a question whether a return to an older and simpler pattern, by lessening the weight of the machine, and the number of holes breaking the continuity of the bore, and by increasing the vibratory powers of the wooden tube, would not conduce to an improved quality of tone.

The chief improvements due to BARRÉ and TRIEBERT (*q.v.*) may be briefly named as (1) the introduction of a plate for the left-hand thumb, somewhat similar to that on modern flutes, by which this member, formerly idle, is called into action; (2) the double automatic octave keys, an improvement upon the two separate octave keys, named above; (3) a vast

number of double, triple and even quadruple alternative fingerings for particular notes, which materially reduce the mechanical difficulty of inconvenient passages.¹

It is not, however, in the mechanism only that the oboe of to-day is entirely different from that used in the early part of the 19th century, but also in the sound-producer or reed, as is shown by the accompanying illustration

of two examples, half the actual size. The right-hand cut is a reproduction of the modern reed, that on the left is one of several given to the late Dr. W. H. Stone; they belonged to the oboist who accompanied Rossini on his first visit to this country, in 1823, the composer being unwilling to entrust his elaborate oboe parts to any English pretender. It will be at once seen that the latter is a

reproduction of the Pifferaro reed, approximating more to that of the bassoon than to that of the modern oboe.

The oboe as above described is the instrument practically in general use both in orchestras and military bands. For the latter, however, the oboe is sometimes, but not often, made in $B\flat$ instead of in C , and a smaller instrument in $E\flat$, or soprano oboe, is also occasionally used; the two instruments thus pitched are in correspondence with the $B\flat$ and $E\flat$ clarinets respectively, and therefore require the same transpositions of the written parts.

A small oboe or shawm was formerly made in G or A flat, without keys, and called Musette.

The development of the modern oboe and its relationship to other double reed instruments can be best traced by reference to some primitive types. The double reed is certainly prehistoric, and the oboe in its rudest form is of the highest antiquity, and has been used in all parts of the globe. It can be traced in the sculptures and paintings of ancient Egypt and Greece; indeed, specimens are preserved in the British and Leyden Museums, which were found with straws beside them, probably to be used in making the reed. Instruments from Arabia, ancient America, China, Hindustan, Italy and Wallachia are deposited in the Victoria and Albert Museum.

HISTORY.—Although some of these ancient instruments were undoubtedly rude, yet others, both in design and workmanship, were of high class, and it is therefore impossible to speak of the modern oboe as an invention of any particular date. It should rather be regarded as the outcome of a gradual differentiation of type, accentuated by the refinement of a particular

¹ On these and other points the writer has to thank Mr. Mitcalf, of Lowestoft, for some valuable suggestions.

member of a family. By the 16th century, two chief families of double reed instruments were well established, and are described by Sebastian Virdung (1511) and by Michael Praetorius (1618). One of these families, in which the double reed is associated with a cylindrical tube, is represented by the KRUMMHORN (*q.v.*), and lies outside the scope of this article. In the other chief family the double reed is fitted to a conical tube, and the oboe is the aristocratic descendant of one branch of this family. The whole group comprised schalmeyes or shawms, and pommers, known also as bombards, from the humming or buzzing tone of the lower-pitched members of the group. The little schalmey with lowest note *a'* was, according to Praetorius, not much used; the discant schalmey with lowest note *d'* has been developed into the modern oboe. These two schalmeyes were the treble members of the family, the set or choir of six being completed by the alto, tenor and bass pommers, with the great double-quint pommer descending to the contra F (FF). The typical instrument had six finger-holes, and in the tenor, bass and double-quint instruments these were supplemented by extra holes closed by keys to extend the compass downwards. The differentiation of this primitive type above referred to has resulted in the oboes and bassoons as we now know them, for the distinction between these is not mainly that of pitch as between treble and bass, but one of quality, instruments of the oboe group having a lighter and more delicate quality than bassoons, irrespective of pitch. In the 17th century the little and discant schalmeyes, with the alto and tenor pommers, were grouped together and called 'haulx-bois' or 'hautbois,' to distinguish them from the two larger pommers called 'gros-bois.' We thus obtain the modern French and English names Hautbois and Oboe, and it was early in the 17th century that the discant schalmey assumed the form of the oboe, the addition of key-work since that date being a gradual development, and not the introduction of any distinctively new principle.

The oboe with its congeners was formerly used for town bands and military purposes to an extent not now seen, and long before it was introduced into church and artistic secular music, indeed, military bands were in Germany termed 'Hautboisten,' and a well-known copperplate engraving of the 18th century shows the band of the English Guards passing to St. James's Palace, consisting principally of oboes of different sizes, with bassoons of primitive shape, drums and cymbals.

The tone is peculiarly distinctive, and without being powerful or obtrusive it is very penetrating. A character of sportiveness and light-heartedness seems proper to it in quick movements, and yet in slow passages there is perhaps no instrument which can better give

the effect of a 'pleading' or 'beseeching' as distinguished from a 'plaintive' voice.

The oboe appears to have been first introduced into the orchestra in Cambert's opera, 'Pomone,' given in Paris in 1671.

(2) COR ANGLAIS (English Horn) (Ger. *englisches Horn*; Ital. *corno inglese*) differs in build from the oboe in that the tube is longer and ends in a globular or pear-shaped bell, and the crook which holds the reed is bent back at an angle. (See PLATE V. No. 5). It is a refined development of the tenor pommer, and in early examples is found with the whole tube bent either into a curve or at an obtuse angle. The derivation of the name is uncertain; the instrument is neither 'English' nor is it a 'horn,' 'cor angé' (angled horn) has been suggested as being due to the last-named or angled form.

Built in F, it sounds a fifth lower than the oboe and possesses the same compass. The part is written a fifth higher with a key-signature of one flat less or one sharp more than that of the music. In old French scores the part is found written with a mezzo-soprano clef, the player reading it as though from the treble clef. The Italians formerly adopted the plan of writing the part in the bass clef an octave below the sounds required.

The tone-colour possesses a peculiar melancholy or reflective sadness strikingly exemplified by the familiar shepherd's pipe melody in Act iii. of 'Tristan,' or the melody of the slow movement from Dvořák's 'New World' Symphony. Gluck wrote for the cor anglais in 'Alceste' and 'Orfeo,' the parts being arranged for clarinet for performance in Paris, as the instrument was not introduced into the opera orchestra until 1808. Although Mozart, Haydn and Beethoven wrote for it occasionally, it did not become a regular member of the German orchestra till Wagner's day.

(3) OBOE D'AMORE (Fr. *hautbois d'amour*). This instrument is built a minor third lower than the oboe proper, and its part is therefore written in a key with three flats or three sharps less than that of the piece. The compass is:

from  (there is no key extension for obtaining the B₂) to the high E sounding

 (See PLATE LIV. No. 3.)

Since the time of Bach, who wrote for it in the 'Christmas Oratorio,' the Passion music and other works, the oboe d'amore appears to have fallen into complete disuse until its revival by Strauss in his 'Sinfonia domestica.'

(4) BARITONE OBOE, BASSET OBOE (Ger. *Heckelphon*), is a development of the tenor pommer. Various attempts have been made from time to time to establish a bass oboe, an instrument, that is, an octave lower than the

ordinary oboe and with a similar compass. Such an one was exhibited at the Paris Exhibition in 1889. The 'Heckelphon' is a German instrument of this type made by Heckel, and was used by Strauss in 'Salome.'

(5) OBOE DI CACCIA (hunting oboe), an obsolete type of alto oboe, a development of the alto pommer and possessing the same pitch as the cor anglais, which has now taken its place. Parts for it are to be found in Bach's 'Christmas Oratorio,' the 'St. Matthew' and 'St. John' Passions and numerous cantatas. (See PLATE LIV. No. 4.)

The late Dr. Stone in earlier editions of this Dictionary seems to have confused the oboe di caccia with the tenor bassoon. (See BASSOON (3).)

OBOE D' AMORE (Fr. *hautbois d'amour*), see OBOE (3).

OBOE DI CACCIA, see OBOE (5).

OBRECHT (HOBRECHT), JACOB (*b.?* Utrecht, c. 1430; *d.* Ferrara,¹ 1505), one of the great masters of the 15th century. In early life he was maître de chapelle at Utrecht, and Erasmus² learnt music from him, as a choir-boy in the cathedral, about the year 1474. Traces of a visit to Italy, where he entered the services of Duke Ercole of Ferrara, in 1474, have been found by Van der Straeten.³ In 1483-85 he was director of the school of singing at Cambridge, and in 1489-1500 held the office of teacher at St. Donat at Bruges. He was also living some time in Florence, where Aaron met him in company with Josquin, Isaac and Agricola at the court of Lorenzo il Magnifico.

In 1491 Obrecht was elected maître de chapelle in Antwerp Cathedral, already a great musical centre, with a fine choir of nearly seventy voices, exclusive of boys. Of the higher honours and emoluments he received there, of the visits paid him by foreign musicians, of his work in the revision of the cathedral music-books, and lastly of his poor health, Léon de Burbure has found ample evidence in the records of that church.⁴ Obrecht's Passion Music is a noteworthy and early contribution to the development of that form. It is described under PASSION MUSIC, subsection THE MOTETT PASSION.

Of his works eight masses were printed, the merits of which are fully discussed by Ambros.⁵ The finest of these, 'Fortuna desperata,' was first published in modern notation (Amsterdam, 1870) and reprinted as No. IX. of the publications of the Maatschappij tot Beoordering der Toonkunst (1880). Since then a definitive edition of his works edited by Johannes Wolf has appeared under the auspices of the same society (see VEREENIGING).

The first volume of printed music in 1501

¹ Riemann.

² Glarean, who was a pupil of Erasmus, mentions this in the *Dodecachordon*.

³ *Musique aux Pays-Bas*.

⁴ *Geschichte der Musik*, III. 180.

⁵ See article 'Obrecht' in *F&H*.

contained two secular pieces, and Petrucci included many more in his collection of the next few years. Eitner gives titles of about thirty printed chansons and motets still existing. Burney scored some movements from the Mass 'Si dederò,' in his notebooks, and Forkel gave two examples in his history. (See Q.-L.)

J. R. S. B.

O'BRIEN, VINCENT (*b.* Dublin, May 1870), son of R. V. O'Brien, a Dublin organist, studied at the R.I.A.M. and was organist of Rathmines R.C. church (1885-88), and of the Carmelite church, Dublin (1897-99). He produced an opera, 'Hester,' in 1893, and in 1902 was appointed musical director of the pro-Cathedral Palestrina Choir, a post which he still (1926) fills with distinction. John MacCormack was one of his discoveries in 1902, and he was musical director of MacCormack's first world tour in 1913.

W. H. G. F.

OCA DEL CAIRO, L', opera buffa in 2 acts; libretto by Varesco, music by Mozart, 1783. Mozart left it unfinished, being dissatisfied with the text. It was completed by André with pieces from other operas of Mozart, adapted to new French words by Victor Wilder, and performed at the Théâtre des Fantaies Parisiennes, June 6, 1867; Vienna, 1868; Drury Lane, in Italian, May 12, 1870. G.

O'CARINA, a family of small terra-cotta instruments, in character somewhat resembling flageolets, made of various sizes, and introduced into this country in the 19th century by a travelling troupe of German or Tyrolese musicians. The fingering is something intermediate between that of the flageolet and that of the 'pico' pipe. The only point of acoustical importance they illustrate is due to their large internal cavity, and the absence of any bell. They have in consequence a hollow, rather sweet tone, similar to that of a stopped organ pipe. (See ACOUSTICS.)

W. H. S.

O'CAROLAN (CAROLAN), TURLOUGH (*b.* Newtown, Co. Meath, 1670; *d.* Mar. 25, 1738), one of the last and certainly the most famous of the bards of Ireland. He lost his sight in his 22nd year from smallpox, and, in allusion to this, used to say, 'my eyes are transplanted into my ears.'

He was descended from an ancient and respectable family in Meath, where a district was known as Carolanstown (now Carlanstown). Turloagh began to learn the harp at 12 years of age, but owed nearly all his education to Madam Macdermot Roe of Alderford, a fine dame of the old school, who lived to 80 years of age, and survived her *protégé*. She it was who, when O'Carolan's father settled at Carrick-on-Shannon, perceived the talent of the boy, had him taught the Irish language and music, and provided him with a horse and an attendant, when, at 22, he became an

itinerant minstrel. It was said that Geminiani and other foreign artists entertained a very high opinion of his musical talents, but, though some stories are told of his immediately executing from memory long and difficult pieces which the Italian musicians had just played, these tales are musically improbable, and are inconsistent with the generally received accounts of his moderate skill on the harp. It is enough to allow him the decided talent 'or improvising music and words, to which his claim has been undisputed. As early as 1727 several of O'Carolan's airs were printed in Daniel Wright's 'Aria di camera.' His 'Bumpers Squire Jones,' 'One bottle more,' 'Down beside me,' 'Grace Nugent,' and 'O'Rourke's noble feast,' were enormously popular, whilst his 'Princess Royal' was adapted by Shield as 'The Arethusa,' on which account many have considered the melody as of English origin. Lampe introduced two of O'Carolan's airs into a Dublin-printed Wesleyan Hymn-Book (1749). Tom Moore adapted ten of his tunes, including 'Fly not yet,' 'The Young May Moon,' 'Oh! banquet not,' 'Oh! blame not the bard,' 'Oh, the sight entrancing,' and 'The Wandering Bard.' Of his 200 songs all are in Irish, save one, 'O'Carolan's Devotion,' set to English words. His harp became the property of the Right Hon. O'Connor Don, P.C., Clonalis, as also the best-known portrait of the great minstrel. Four editions of his airs were printed between the years 1780 and 1800; and, in 1804, Broderip & Wilkinson published an edition, suppressing the names of the tunes. O'Carolan's skull was presented by George Nugent Reynolds to Sir John Caldwell, for his museum, in 1796.

His son taught the Irish harp in London, and before he quitted Ireland, in 1747, published an imperfect collection of his father's compositions. Turlogh O'Carolan died at Alderford House, where his room is still shown. Of late years the grave of the bard (hardly to be distinguished from those of the Macdermot Roe family amongst whom he lies) has been neatly enclosed, and an inscription placed over the arch of the gateway, by Lady Louisa Tenison. O'Carolan's fecundity as a musician was undoubted; one of the ten harpers assembled at Belfast in 1792 had acquired more than 100 tunes composed by him, and asserted that this was but a small portion of them. In Sept. 1809, a sort of commemoration of him was held in Dublin. Lady Morgan bequeathed £100 for a fine bas-relief of O'Carolan, executed by a son of the Irish sculptor Hogan. It was placed in St. Patrick's Cathedral.

R. P. S.; addns. and corr. W. H. G. F.

OCCASIONAL ORATORIO, THE, a work of Handel, probably intended to celebrate the failure of the Jacobite rising of 1745. It consists of an overture and three parts, among

which are 'O liberty,' afterwards transferred to 'Judas Maccabeus,' some of the choruses from 'Israel in Egypt,' and a Coronation Anthem, introduced into Part III. The words of Part I. are in great part taken from Milton's Psalms, and many numbers appear to be written by Dr. Morell. (See pref. to the work in the Händel-Gesellschaft edition.) It was performed at Covent Garden on Feb. 14, 19 and 26, 1746. (Rockstro's *Life of Handel*.)

M.

OCHETTO (OCHETUS). See HOCKET.

OCHSENKUHN, SEBASTIAN (*b.* Feb. 6, 1521; *d.* Heidelberg, Aug. 20, 1574), lute-player in the service of the enlightened patron of art and literature, Otho Henry, the Elector Palatine of the Rhine. (Otho Henry was the founder of the famous Palatine Library at Heidelberg, and the builder of the best part of the Castle.) Ochsenkuhn seems to have continued in the service of succeeding Electors till his death at Heidelberg. He is the author of a German Tablature Book for the lute (Heidelberg, 1558), containing transcriptions of motets and French and German secular songs. As his book also contains some of the texts to these songs, it is of some importance in the endeavour to ascertain the original form of the tunes, and is frequently referred to in this connexion by Eitner in his various publications on the German song.

J. R. M.

OCKEGHEM, JOANNES, see OKEGHEM.

OCTAVE. An octave is the interval of eight notes, which is the most perfect consonance in music. The ratio of its sounds is 1 : 2; that is, every note has twice the number of vibrations of its corresponding note an octave lower. For the space-saving device in keyed instruments, known as SHORT OCTAVE, see that article; see also ORGAN and SPINET. For consecutive octaves see CONSECUTIVE.

C. H. H. P.

OCTAVE, or PRINCIPAL, an open metal cylindrical organ-stop, of four feet on the manual and eight feet on the pedal; the scale and strength of tone of which are determined by those of the open diapason on the same department. (See under ORGAN, *Vocabulary of Stops*.)

E. J. H.

OCTAVE FLUTE, see FLUTE (2).

OCTET (Fr. *octuor*, *octette*; Ger. *Oktett*; Ital. *ottetto*), a composition for eight solo instruments. Theoretically any number of solo players can be combined in chamber music, but the multiplicity of parts or colour is limited in practice. Octets for strings, four violins, two violas and two violoncellos have been written by Mendelssohn, Gade, Svendsen and Enescu, and for strings and wind by Schubert and Spohr. Beethoven's op. 103, for 2 oboes, 2 clarinets, 2 horns and 2 bassoons is the original form of his string quintet, op. 4. Stravinsky has written an octet for wind instruments. Spohr, realising the

limitations of true chamber-music, attempted double string quartets in which antiphonal effects were aimed at. (See CHAMBER MUSIC.)

N. C. G.

OCTO BASSE, a double bass of gigantic proportions, invented by Vuillaume of Paris in 1849, of which only two specimens are known to exist, the one in the museum of the Paris Conservatoire of Music and the other, made originally for the Moscow Opera House, in Vienna. It is 10 ft. in height with 3 strings tuned to C, G, and C₂, the lowest note being an octave below that of the violoncello. The neck is 'fretted' like a guitar, and, by a system of lever keys for the left hand placed at the back of the instrument which press the strings upon the frets and seven pedal keys for the same purpose, the performer is able to produce a chromatic scale of 2 octaves and a fifth. Rapid music is not effective, but the tone is said to be full and strong without roughness. Berlioz¹ recommends the employment of at least three of these instruments in an orchestra of over 150 performers.

F. W. O.

ODE (Gr. ὕμνος, from αἰδω, 'I sing'), a form of poetry which, both in its origin and in its later forms, has been peculiarly adapted for musical expression; in fact, the words of the earliest odes were probably written to fit music already existing. The form which has been most frequently and successfully set to music in modern times is that of the Greek odes, in which the rhythm and metre are constantly changing, thus giving great scope for variety of treatment. English instances of this kind of odes are Milton's 'L' Allegro' and 'Il Penseroso,' Dryden's 'Ode on St. Cecilia's Day,' Gray's 'Bard' and 'Progress of Poesy,' Collins's 'Ode to the Passions,' Wordsworth's 'Ode on Intimations of Immortality' and Shelley's odes. Another form of ode is one in which the metre of the verses remains the same, as in the Odes of Horace, Milton's 'Ode on the Nativity,' etc. To this class belongs Schiller's 'Ode to Joy,' used by Beethoven in the Ninth Symphony. Among musical settings of odes the following are important, besides those already mentioned: Handel's four odes, a list of which is given in the catalogue of his works (see HANDEL-GESELLSCHAFT); Purcell's 'Odes and Welcome Songs,' twenty-nine in number (see PURCELL SOCIETY), and others written for the festival of St. CECILIA (q.v.). Sterndale Bennett's setting of Tennyson's 'Ode for the opening of the International Exhibition of 1862'; Parry's setting of Shirley's ode, 'The Glories of our Blood and State' (1883); Stanford's of Whitman's 'Elegiac Ode' (1884); and Parry's of Milton's 'Ode at a Solemn Music' (1887) were followed by many other odes, and set the fashion in England for short choral works more or less strictly in the ode form.

¹ *Traité de l'instrumentation.*

Most of these compositions are for chorus and orchestra, and in many there are solos or semi-choruses interspersed, representing the Strophe and Antistrophe of the classic chorus. M.

ODINGTON, WALTER DE, or Walter of Evesham (13th cent.), as he appears to have been indifferently called, probably took his name from Oddington, in Gloucestershire. It has been the fashion among musical historians to identify him with the Walter, monk of Canterbury, whose election to the primacy was quashed by the Pope in 1229; but unfortunately the true spelling of his name was Einesham or Eynsham.

The subject of this article could not have been born much before the middle of the 13th century, if, as appears beyond doubt, he was the Walter de Evesham who is referred to in a list of mathematicians as living in 1316. Upon this supposition we may accept the date, 1280, at which Leland states that Odington was flourishing. In all probability his musical works were written early in his life, his latter days being given up to astronomy, in which science he is known to have been proficient from several treatises which have come down to us. His only known musical work was the *De speculatione musicæ*, of which there is a MS. copy in Corpus Christi College, Cambridge. Another copy is supposed to have been contained in one of the Cotton MSS. of which the remains are now at the British Museum. In this treatise Walter shows himself a sound musician as well as a learned writer, supplying in almost all cases examples of his own composition. The principal subjects he handles are musical intervals, notation, rhythm, musical instruments and harmony, which latter term he uses instead of the old 'discantus'; he gives interesting definitions of such words as 'roudeau,' 'motet' (which he calls 'motus brevis cantilenæ'), etc. But the treatise is especially important for the study of rhythm in the 13th century. It was printed, by no means accurately, by Coussemaker (*Scriptores*, i.) in 1864, and was discussed at length by Riemann.

All that is known of his life is that he was a Benedictine of the monastery at Evesham, and that he was at Oxford, as stated above, in 1316. He compiled a calendar, beginning with the year 1301; and lodged in Merton College about 1330. (D.N.B.)

A. H.-H.

ODO (OTTO) (b. 879; d. Tours, Nov. 18, 943), Abbot of Cluny from 927-43, is the reputed author of a *Dialogus de musica*² printed by Gerbert (*Scriptores*, i. 252). A large amount of biographical material concerning Odo is collected in Mabillon's *Acta Sanctorum Ordinis S. Benedicti* (1685), vol. vii. pp. 124-99. It includes a contemporary memoir by Frater

² Gaston and M. Brenet ascribe the authorship of the *Dialogus* to Odon de Cluny at the end of the 10th century. See *Tribuna de St. Gervais*, 1902, pp. 126-7.

Johannes, an Italian who was brought back from Rome by Odo in 939, and spent two years as a monk at Cluny in immediate attendance on the Abbot.

Odo was brought up at the court of William, Duke of Aquitaine. At the age of 19 he took Holy Orders and joined the establishment of St. Martin's at Tours. He subsequently studied dialectics and music at Paris under Remy d'Auxerre, and on his return to Tours was appointed 'Archicantor,' in which capacity he composed three hymns and twelve antiphons in honour of St. Martin. In 909 he left Tours and entered the Benedictine monastery of Beaume (near Besançon), one of the dependencies of the great monastery of Cluny (near Macon). Here he was entrusted with the care of the choir-school, and here, if anywhere, he probably wrote the *Dialogus*. On the death of Berno in 927 he succeeded to the Abbacy of Cluny itself. Throughout his life he was distinguished for zeal and piety. He was buried in the crypt of St. Julian's at Tours.

On the vexed question of the authorship of the *Dialogus de musica* we learn nothing from the biographers beyond the fact that Odo was a skilled teacher and composer of church music. The dialogue, which is between master and student, treats of the monochord and its use, the 'consonantiae et conjunctiones vocum,' i.e. the construction of plain-song melodies, and the eight ecclesiastical modes. In the prologue, addressed to his 'carissimi fratres,' the author states that he was induced to write in consequence of his success in training choir-boys, but further on (Gerbert, i. 256 b) he speaks of an antiphon 'quae a Domino Oddone curiosissime est emendata,' a statement which has been held to show conclusively that Odo was not the author of the *Dialogus*. The diagram on p. 253 exhibits (1) the 'monochordum Guidonis,' not necessarily Guido of Arezzo, and (2) the gamut divided into tetrachords on Hucbald's system and with Hucbald's letter-signs, with the words 'Enchiriadis Odonis' added. In several of the MSS. collated by Gerbert this title 'Enchiridion,' i.e. Manual, is given to the *Dialogus*, and it has been generally assumed that this is the book referred to by Guido d'Arezzo in his letter to the monk Michael, where he recommends to students 'librum Enchiridion quem reverendissimus Oddo abbas luculentissime composuit' (Gerbert, ii. 50). Further, most of the MSS. of the *Dialogus* name Odo as the author, so that the generally received opinion is not lightly to be set aside.

Some writers, however, have claimed the *Dialogus* for Guido of Arezzo, on the ground of the addition of the note *gamma ut* at the bottom of the scale, the insertion of the 'monochordum Guidonis,' and the fact that it is usually found

with Guido's writings and is actually ascribed to him in some of the earliest MSS. But *gamma ut* had certainly been introduced before Guido's time, and no other of the Guidonian 'inventions' is to be found in the *Dialogus*.

The problem is further complicated by the suggestion that the Enchiridion referred to by Guido is really the *Musica enchiriadis* generally attributed to Hucbald. For this again there is considerable authority, though it is possible that it is all derived from the statement of Guido as quoted above. Hermann Contractus, who died in 1055, speaks hesitatingly of 'quidam enchiriadis musicae auctor,' but William of Hirschau (d. 1091) distinctly attributes it to a 'venerable Otto,' and many MSS. name Odo or Otto as the author of both the *Musica enchiriadis* and the *Scholia enchiriadis*. The question is elaborately discussed by Hans Müller in his *Hucbald's echte und unechte Schriften* (Leipzig, 1884). Müller decides that neither Hucbald nor Odo was the author, but it may be questioned whether such a conclusion is justified by his premises.

Of other treatises ascribed to Odo the best authenticated is a Tonarium printed by Coussemaker (*Scriptores*, ii. 117) from a MS. at St. Dié, where it is entitled

'Intonarum a Domino Ottone abbate diligenter examinatum et ordinatum, a Guidone scientissimo monacho, optimo musico, probatum, legitime approbatum et authenticatum.'

J. F. R. S.

ODOISTIC NOTATION. When the Byzantine Scales were introduced into the Western Church the letter names (in Greek) of the notes were $\alpha \beta \gamma \delta \epsilon \zeta \eta \alpha$, but these letters had the meaning of our C D E F G A B C. The Greek letters were replaced by Latin letters A B C D E F G, but these also had the meaning of our C D E F G A B. The Western monks, probably adhering at first to the system which regarded plagal as being a fifth below authentic, were obliged, in order to provide a plagal for the authentic beginning on our D, to introduce the note *gamma I'* (c. 900). Odo of Cluny appears to have changed the letter pitch meanings so as to cause that which had previously been named *a* to be called *c*, thus altering all these meanings three degrees. The first Western use of the *sign gamma* occurs in Odo, who died 942. However, the Byzantines seem to have used the note *gamma* (see BYZANTINE MUSIC; NOTATION).

D. H.

O'DWYER, ROBERT (b. Bristol, 1860), of Irish parentage, was conductor of the Rousbey Opera Company from 1891-96, and settled in Dublin in 1897. He produced the first opera to an Irish libretto, 'Eithne,' in 1909, and has been lecturer in Irish Music at University College, Dublin, since 1914, as well as organist of the Jesuit church in Dublin. W. H. G. F.

OEDIPUS. (1) 'Oedipus Tyrannus' and 'Oedipus at Colonus,' the second and third parts of a trilogy (of which the first is 'Anti-

gone,' *q.v.*), music by Mendelssohn. 'Oedipus Tyrannus,' though completely sketched, was never performed, and the music appears to be lost. 'Oedipus at Colonus' was produced at Potsdam, Nov. 1, 1845, and was published, before the end of 1851, as op. 93 (22 of the posthumous works). A full analysis by G. A. Macfarren will be found in the earlier numbers of the *Musical World* for 1854. a.

(2) Incidental music, choruses, etc. were written to the 'Oedipus Tyrannus,' by Stanford, for the performance at Cambridge on Nov. 22-26, 1887.

OEGLIN, ERHART, of Reutlingen, established himself in Augsburg as book and music-printer and publisher at the beginning of the 16th century. He was the first to introduce into Germany Petrucci's invention of music-printing with movable metal types. His practice only differed from that of Petrucci by his printing notes and lines together by one impression. His first known work of the kind is the *Melopoiae sive harmonia* of Tritonius (a musical setting of some odes of Horace), printed in 1507. In 1512 he printed and published without special title a *Liederbuch*, containing forty-two German secular songs and six Latin motets or hymns, all for four voices. No names of composers are given, but from comparison with other sources five of the secular songs have been ascertained to be by Hofhaimer, two by Heinrich Isaac, and one by Senfl. The whole work has been reprinted in modern score by Eitner in *bd. ix.* of the *Publikation der Gesellschaft für Musikforschung*, with facsimiles of the original title-pages and some of the music. Oeglin printed another *Liederbuch*, but of this only the discant part is at present known to exist, preserved in the State Library at Berlin. (See Eitner, *Monatshefte*, xxii. pp. 214-17.) J. R. M.

OESTEN, THEODOR (b. Berlin, Dec. 31, 1813; d. Mar. 16, 1870), learned various instruments, both wind and string, from Politzki, Stadtmusicus of Fürstenwald, a small town between Berlin and Frankfurt-on-the-Oder. At 19 he went to Berlin, and studied composition with Böhmer, Rungenhagen, Schneider and A. W. Bach, but before this he had written a quantity of dance-music, variations, etc. He also learned the clarinet from Tanne, a Kammermusicus. He was soon in great request as a teacher, and in 1843 his PF. rondo called 'Les Premières Violettes,' cleverly written in the sentimental taste of the day, had an enormous success, and was followed by a host of similar pieces, easy to play and with attractive titles, which ruled the market for many years. He had many more or less successful imitators, his own son Max among the number. F. G.

OESTERREICH, GEORG, of Magdeburg, studied at the school of St. Thomas, Leipzig,

1678-80, when he left on account of the plague. In 1687 he was Kapellmeister at Gottorf, in 1694 at the court of Schleswig-Holstein, and from c. 1735 cantor of the ducal chapel, Brunswick. He composed a considerable number of cantatas, the MSS. mostly in the Berlin library (Q.-L.).

OFFENBACH, originally LEVY, JACQUES, (b. Offenbach-on-Main, June 21, 1819; d. Paris, Oct. 4, 1880), the most brilliant composer of light opera of his day, was the son of the cantor of the Jewish synagogue at Cologne. He came to Paris as a youth, and in Nov. 1833 entered the violoncello class of Vasin at the Conservatoire, where he stayed a year. He left in 1837 without having distinguished himself, or shown any taste for serious study. He then entered the orchestra of the Opéra-Comique, where he played by the side of Seligmann, and doubtless picked up much of his knowledge. In early life he wrote several pieces for the violoncello.

He first appears as the composer of some chansonsettes to parodies of La Fontaine's poems. He next became conductor of the orchestra at the Théâtre Français, and composed the 'Chanson de Fortunio,' in Alfred de Musset's 'Chandelier' (1848), a song which is certainly one of the best of his melodies. Henceforward he made use of every expedient to place himself before the public, giving concerts of a kind to excite public curiosity, and in various ways illustrating the saying that 'a grain of wit is better than a bushel of learning' (le savoir-faire vaut mieux que le savoir). His first piece, 'Pepito,' produced at the Variétés, Oct. 28, 1853, attracted little notice, but he followed it by a host of operettas, and at last found his real field in 'Les Deux Aveugles,' 'Le Violoncelle,' and other musical trifles which he gave at the small theatre in the Champs Elysées, of which he became manager in July 1855. In December of that year he took the 'Théâtre Comto' in the Passage Choiseul, named it the 'Bouffes Parisiens,' and produced a succession of operettas which became immensely popular, and eventually opened to him the doors of the Opéra-Comique, and even of the Opéra, where his ballet-pantomime, 'Le Papillon,' was brought out, Nov. 26, 1860, with considerable success. In 1861 he gave up management on his own account and produced pieces in various other theatres; but in 1873 he once more became a manager, taking the Théâtre de la Gaité till 1875, when he went to America, without much success.¹ The following list of his works is arranged for convenience' sake in alphabetical order:

Apothicaire et perruquier, one act; 1861.	Ba-la-clan, one act; 1866.
Arlequin barbier, one act pantomime; 1855.	Bavards, Les, two acts; 1862.
Bagatelle, one act; 1874.	Belle Héloïse, La, three acts; 1865.
Barbe bleue, three acts; 1866.	Bergers, Les, three acts; 1866.
Barkout, three acts; 1861.	Bergers de Watteau, Les, one act; 1860.

¹ See his *Notes d'un musicien en voyage*, 1877.

Boîte au lait, La, four acts; 1877.
 Bonne d'enfants, La, one act; 1886.
 Boulangerie, La, a des écus, three acts; 1879.
 Boule de neige, three acts; 1872.
 Braconniers, Les, three acts; 1873.
 Brigrande, Les, three acts; 1869.
 Carnaval des revues, one act; 1860.
 Chanson de Fortunio, La, one act; 1861.
 Château à Toto, Le, three acts; 1867.
 Chatte, La, métamorphosée en femme, one act; 1858.
 Corsaire noir, Le, three acts; Vienna, 1872.
 Coscioletto, one act; Ems, 1865.
 Créole, La, three acts; 1878.
 Croquer, one act; 1867.
 Daphnis et Chloé, one act; 1860.
 Deux Aveugles, Les, one act; 1855.
 Deux Pêcheurs, Les, one act; 1857.
 Diva, La, three acts; 1869.
 Docteur Ox, Le, three acts; 1877.
 Dragées du baptême, Les, one act; 1866.
 Dragonette, one act; 1857.
 Entrez, Mesieurs, Mesdames, one act; 1855.
 Fantasio; three acts; 1872.
 Filz enchanté, Le, one act; 1868.
 Fille du tambour major, La, three acts; 1879.
 Financier, Le, et le savetier, one act; 1856.
 Foire St. Laurent, La, three acts; 1877.
 Geneviève de Brabant, two acts; Bouffes, 1839; five acts, Galtz, 1875.
 Georgiennes, Les, three acts; 1864.
 Grande duchesse de Gérolstein, La, three acts; 1867.
 Île de Tulipatan, L', one act; 1866.
 Jacqueline, one act; 1862.
 Jeanne qui pleure et Jean qui rit, one act; 1865.
 Jolie Parfumeuse, La, three acts; 1873.
 Leçon des chants, La, one act; Ems, 1867.
 Lichen et Fritzen, one act; Ems, 1865.
 Madame Favart, three acts; 1878.
 Madame l'Archiduc, three acts; 1874.
 Mme. Papillon, one act; 1855.

Maître Péronilla, three acts; 1878.
 Mariage aux lanternes, Le, one act; 1858.
 Marocaine, La, three acts; 1879.
 Mesdames de la Halle, one act; 1858.
 Monsieur Choufleur, one act; 1861.
 Monsieur et Madame Denis, one act; 1862.
 Nuit blanche, La, one act; 1857.
 Orphée aux Enfers, two acts; 1858; 1874, in four acts.
 Papillon, Le, ballet, two acts; 1860.
 Pépito, one act; 1853.
 Pêricle, La, three acts; 1868.
 Pêrincte, one act; 1855.
 Permission de dix heures, La, one act; 1874.
 Petits Froligès, Les, one act; 1858.
 Pierrette et Jacquot, one act; 1875.
 Pierrot Clown, one act pantomime; 1855.
 Polichinelle dans le monde, one act; 1862.
 Pomme d'api, one act; 1873.
 Pont des soupis, Le, two acts; 1861.
 Pripiuse de Trébizonde, three acts; 1869.
 Rêve d'une nuit d'été, Le, one act; 1855.
 Rheinzigen, three acts; Vienna, 1867.
 Robinson Crusoe, three acts; 1867.
 Roi Carotte, Le, four acts; 1872.
 Romance de la rose, La, one act; 1870.
 Rose de St. Flour, La, one act; 1856.
 Sigmund Pagotto, one act; 1864.
 Soixante-dixième, Le, one act; 1856.
 Trols Balzers du diable, Les, one act; 1867.
 Tromb al Cazar, one act; 1856.
 Une Demoiselle en loterie, one act; 1857.
 Un fil à la porte, one act; 1859.
 Vent du nord, one act; 1857.
 Vert-Vert, three acts; 1869.
 Vie parisienne, La, five acts; 1866.
 Violonne, Le, one act; 1855.
 Vivandières de la grande armée, Les, one act; 1859.
 Voyage dans la lune, Le, four acts; 1875.
 Voyage de MM. Dumanan, Le, three acts; 1862.
 Whittington and his Cat, three acts; Alhambra, London, 1870.

—ninety pieces, written in twenty-five years!

Offenbach visited England at least four times. In 1844 he played the violoncello in public and private at the concerts of El'a, Benedict, Mme. Puzzi, etc. In 1857 he conducted the performances of the Bouffes Parisiens company at the St. James's Theatre, and for his benefit played a musette of his own on the violoncello. In 1866, when his 'Belle Hélène' was running at the Adelphi, and in 1870, he made no public appearance.

He died of gout on the heart at his residence on the Boulevard des Capucines. His posthumous works include 'La Belle Lurette,' composed within a short time of his death, and 'Les Contes d'Hoffmann,' opéra-comique. The former was revised by Léo Delibes, and produced at the Renaissance, Oct. 30, 1880, with Jane Hading, Milly Meyer, Vauthier, Jolly, etc. (in English at the Avenue Theatre, Mar. 24, 1883). The second opera was the composer's most cherished work, on which he had been working for years. For some time Offenbach had felt his end approaching, and said to Carvalho, 'Make haste, make haste to mount my piece; I am in a hurry, and have only one

wish in the world—that of witnessing the *première* of this work.'¹ It was finally revised and partly orchestrated by Guiraud, and produced at the Opéra-Comique, Feb. 10, 1881, with Adèle Isaac, Marguerite Ugalde, Talazac, Taskin, Grivot, etc. It was played no less than 101 nights in the year of its production. It was given in Germany, and at the Ring Theatre, Vienna, at the time of its conflagration. Some of the music was adapted to a 1-act farce by Leterrier and Vanloo, 'Mamzelle Moucheron,' produced at the Renaissance, May 10, 1881. Offenbach's widow, to whom he was married in 1844, died Apr. 19, 1887. After enjoying extraordinary popularity in London during the sixties and seventies, Offenbach's music almost completely lost its vogue in England, though there was a revival of 'La Grande Duchesse' at the Savoy Theatre in 1897-98. 'Les Contes d'Hoffmann' ('Tales of Hoffmann') had to wait for popularity in this country until Beecham gave it at His Majesty's Theatre in 1910. It is now (1925) a favourite in the repertory of the British National Opera Company. In Germany, and especially in Berlin, the tradition of Offenbach's light-hearted and witty music has been more consistently preserved. Revivals take place fairly often at the Variétés and other Parisian theatres and 'Contes d'Hoffmann' remains in the repertory of the Opéra-Comique.

G. C., with addns.

OFFERTORIUM (Eng. *offertory*, Fr. *offertoire*), a portion of a Psalm, or verse from some other part of Holy Scripture, sung by the choir, at High Mass, immediately after the Credo, during the time occupied by the priest in making ready the Oblations and offering them upon the altar.

In early times there was antiphonal psalm-singing at this point; when simple psalmody gave place to the elaborate performances of trained singers there arose a form of composition consisting of an elaborate *antiphona ad offerendum*, with three or four verses to be sung alternately with the antiphon, and in early Gregorian music the Offertory takes this form. The curtailment of the ceremonies in this part of the service from the 9th century onward led to a curtailment of the music, the verses were diminished in number or restricted so much that after the 12th century it was rare to find even one left. They survived, however, on some few occasions right down to the 16th century; but the modern Roman rite has scarcely anything left except the Offertory-antiphon alone.

¹ *Daily Telegraph*, Paris Correspondence, Oct. 7, 1880.

As the plain-song settings have been curtailed until they are not long enough to fill up the interval before the priest is ready to begin the 'Sursum corda,' they are usually supplemented, either by a motet—as in the Pontifical Chapel—or by a grand voluntary on the organ. Palestrina provided for this contingency by setting the special forms for all the Sundays and most of the principal festivals in the year in the motet style, for five voices, and publishing them in the year 1593 in two books, entitled 'Offertoria totius anni.'¹ But when the appointed words have already been sung in plain-song, it is not at all *de rigueur* that they should be repeated in the motet which follows, provided this be an appropriate one for the festival. It is, indeed, in this part of the Mass that the MOTET (*q.v.*), properly so called, finds its strongest *raison d'être*; and a rich store of compositions, well adapted to the end in view, has been bequeathed to us by the great masters of the 15th and 16th centuries.

The Sentences appointed to be used at the Offertory, in the Book of Common Prayer, were printed by John Merbecke in his 'Booke of Common Praier noted' in 1550, with melodies, evidently adapted from ancient sources.

W. S. R.

OGINSKI, a noble and distinguished Polish family.

(1) Prince MICHAEL CASIMIR (*b.* Warsaw, 1731; *d.* there, 1803) resided at Slonin in Lithuania, where he maintained an establishment of orchestra and singers. He is said to have invented the addition of pedals to the harp, and to have proposed the Creation to Haydn as the subject of an oratorio. He formed a canal between two rivers at his own expense—a national work, which connected the Baltic with the Black Sea.

(2) His nephew, MICHAEL CLEOPAS (*b.* Gut-zow, near Warsaw, Sept. 25, 1765; *d.* Florence, Oct. 31, 1833), was grand treasurer of Lithuania and senator of the Russian Empire. Of his diplomatic and literary achievements we need not speak. In the matter of music he was a pupil of Kozłowski's, and was known for his Polonaises. Of these fourteen are published, one of which became very widely celebrated owing to its merit and to a romantic story attached to its origin. It was printed in the *Musical Library*, with the story referred to. Twelve others were printed in the *Harmonicon* of 1824. He also wrote songs to French words. During his residence in Paris in 1823 Prince Oginski was well known in the best musical circles. He died at Florence and was buried in Santa Maria Novella.

(3) Prince GABRIEL (*b.* 1788; *d.* Lithuania, 1843), though a musician and violin-player,

left no compositions. He was driven from home by the revolutions of 1831, but was forced to return by nostalgia. o.

O'HARA, KANE (*b.* Feb. 1711; *d.* Dublin, June 17, 1782), entered T.C.D. 3 March, 1727/8, aged 16; B.A. 1732; M.A. 1735, was a composer of light operatic pieces (see BURLETTA). Of these 'Midas' (1762) and 'The Golden Pippin' (1773) were the most famous. The latter was popularised by the singing of Anne CATLEY (*q.v.*)

OIREACHTAS (pronounced *Urracktus*). In 1896 the executive committee of the Gaelic League in Ireland decided on holding an annual Oireachtas, or Festival, at which competitions were to take place in various subjects, including literary and musical. The first Oireachtas was held in Dublin, in 1897, and was a marked success. Each year has shown that the Irish revival is gaining strength; and the tenth Oireachtas, in Aug. 1906, was the most representative yet held. In the musical section, prizes are awarded for solo and choral singing, also for harp, fiddle, war pipes, uilleann (union) pipes, and flutes, as well as dancing. For the solo and choral competitions (as well as in the literary section) only Irish words are permitted, and there is a distinction made between 'native' and 'non-native' speakers. The Oireachtas, since 1900, lasts five days, but the musical element, which at first predominated, is now (1926) mainly devoted to the language.

W. H. G. F.

OKEGHEM (OCKEGHEM, OCKENHEIM, HOC QUEHAM, JEAN DE (JOANNES) (*b.* probably Termonde,² East Flanders, early 15th cent.³; *d. circa* 1495). The form OCKENHEIM was introduced by Glarean, and has been very generally copied, but Okeghem (with such slight variations as Okenghem, Okekem, etc.) appears on his compositions and in all important documents relating to him. There is some reason for supposing Binchois to have been his master, but in any case there was no lack of excellent musicians at the time when he was a boy. He gave up his place as chorister at Antwerp in 1444, from 1446–48 was in the service of the Duke Charles of Bourbon at Moulins, and about 1452 entered that of the King of France. In 1454 he is styled 'Johannes Hoquegan, premier chappellain.' In 1461, the year of Charles VII.'s death, he is mentioned as head of the chapel. With Louis XI. he appears to have been in great favour, and was by him appointed treasurer of the church of St. Martin's at Tours, where he resided the greater part of his life. He made a journey to Spain in 1469, and his post at Tours was filled up in 1496. He is said to have served three kings of France for forty years.

No wonder if by this time he was somewhat out of fashion, and that the invention of music-

¹ They form the fifth vol. of Alfieri's edition and the ninth of Breitkopf's. Burney has printed one of them—'Exaltabo te Domine,' the Offertory for the eleventh Sunday after Pentecost—in vol. iii. p. 191.

² Where a family of that name then resided.

³ Pétis suggests about 1450.

printing at the beginning of the 16th century was more to the advantage of his distinguished pupils than to his own. In the earliest of Petrucci's publications five French chansons are given; but no Mass or motet bearing Okeghem's name was printed till many years after his death, and even then the Mass which Petreus published, 'Missa cujusvis toni,' seems to have been chosen on account of its special scientific interest, and no others were printed entire. Extracts from the 'Missa prolationum' were given in various theoretical treatises, but both these Masses exhibit Okeghem as a great teacher rather than a great church composer. In the royal collection at Dresden is the MS. Kyrie from a Mass 'Gaudeamus,' and the court library at Vienna contains MS. copies of this whole Mass as well as of the 'Missa cujusvis toni.' The Brussels library possesses two MS. Masses, 'Pour quelque peine' and 'Ecce ancilla Domini,' and the Papal Chapel one, 'De plus en plus.' Other masses are in the Sistine Chapel at Rome and in the cathedral archives at Trient. A tradition asserts that costly music books containing many of Okeghem's works were destroyed when the Imperial troops plundered the city in 1527, and his compositions at St. Martin's at Tours were probably lost in the same way. A motet, 'Alma redemptoris,' and three songs, 'D'ung aultre amer,' 'Aultre Venus' and 'Rondo Royal,' in MS., are in the Bibl. Riccardiana at Florence, and other chansons at Rome and Dijon. (See Q.-L.)

These compositions are sufficient to separate him very distinctly from his predecessors, and show the astonishing progress made during the forty years of his supremacy (1450-90). He is regarded as the founder of the second or new Netherland school, in contradistinction to the older school of Dufay, Brassart, Eloy, Binchois and Faugues. Kiesewetter, who first made this classification, and has given numerous examples from the works of the earlier period, distinguishes Okeghem and his contemporaries

'by a greater facility in counterpoint and fertility in invention; their compositions, moreover, being no longer mere premeditated submissions to the contrapuntal operation, but for the most part being indicative of thought and sketched out with manifest design,' being also full of ingenious contrivances of an obbligato counterpoint, at that time just discovered, such as augmentation, diminution, inversion, imitation: together with canons and fugues of the most manifold description.'

One of these canons has gone the round of the musical histories, but its solution has not always been successful, and Fétis has had to correct the editions given by Forkel, Kiesewetter, Burney and Hawkins. The 'Missa cujusvis toni,' which Kiesewetter, without sufficient reason, regards as a comical Mass, is a work possibly written for the sake of his pupils, but more probably as an intellectual treat for the

highly educated musicians who formed the church choirs in those days. It would be valued by them not only as a test of their thorough acquaintance with the church modes, and an exercise in transposition from one mode to the next, but also for the endless charm of variety which the special characteristics of the various modes would impart to it. Another piece of Okeghem's, famous in its time, was a motet for thirty-six voices, which was probably (like Josquin's 'Qui habitat in adjutorio') written with six voices, the other parts being derived from them canonically.² Most important among modern reprints are the two Masses (Trent Codices) in *D.T.Ö.* Four chansons are in Ambros's *Geschichte*, vol. v.

As a teacher Okeghem stands alone in the whole history of music:

'Through his pupils the art was transplanted into all countries, and he must be regarded (for it can be proved by genealogy) as the founder of all schools from his own to the present age.'³

The names of JOSQUIN⁴ and DE LA RUE stand foremost in the list of his pupils. Josquin, himself a great teacher, carried the new Netherland art into Italy, and the first important representatives both of German and French music, Isaac and Mouton, with many others less famous, learnt through him the Okeghem traditions.

OKELAND (1st half of 16th cent.), English composer of church music. A 'Robert Okelaund' appears among the 'Gentlemen of the Chapell' who received new liveries for the coronation of Edward VI. in 1547, but his name is given as 'Hockland' in a similar list for the burial of Henry VIII. in that year.⁵ He contributed an anthem, 'Praise we the Father,' and a 'prayer,' 'Praise the Lord, O our souls,' to Day's 'Certaine Notes' (1560). A 4-part Mass by him is in B.M. Add. MSS. 17,802-5. J. M^c.

OKEOVER (OKER, OKAR), JOHN, organist in 1619 of Wells Cathedral. His 2 pavans and 7 fancies from early 17th century MSS. in the British Museum rank with the compositions of Ward and Peerson. The songs mentioned in Q.-L. cannot be traced (probably an error on Eitner's part). E. v. d. s.

² Ambros, III 174.

³ Kiesewetter's *History of Music*, English edition, p. 131.

⁴ The elegy composed by Josquin in memory of his master is spoken of elsewhere. See JOSQUIN.

⁵ See H. C. de Lafontaine, *The King's Music*.

¹ Ambros (III 175) mentions the motet 'Alma redemptoris' as affording a proof of this statement.

OKER (OCKEOVER, OKAR), JOHN (1st half of 17th cent.), organist and English Church music composer. He graduated Mus.B. at Oxford in 1633, was organist of Wells Cathedral, 1619-39, and of Gloucester Cathedral, 1640 (?)—44 (West's *Cath. Org.* p. 108). Some early 17th century MSS. (B.M. Add. MSS. 17,786-89, 17,791) are a collection of 5-part fancies for viols, and include two pavans by 'John Ockeover' or 'Oker'; Add. MSS. 17,792-6 is a similar collection and contains a 5-part fantasia for viols by 'Okar.' Single parts of the following anthems by 'Oker—of Wells Orgt' are in Barnard's MS. collection (now at R.C.M.).

(Grant we beseech Thee. R.C.M. 1045/51. Medius decani part only. God shall send. R.C.M. 1051/57. Bassus Cantoris part only. The King shall reign. R.C.M. 1051/48. Bassus Cantoris part only. J. M^{re}.

OKTAVGEIGE (OCTAVE FIDDLE), a small violoncello tuned an octave below the violin. (See VIOL FAMILY.) F. W. G.

OLI'ZEWSKA, MARIA (b. Bavaria, Aug. 12, 1892), operatic contralto, an artist of distinction whose co-operation lent appreciable strength to the revival of German opera which marked the Covent Garden 'grand' season of 1924. She had been singing for the three preceding years at the Vienna Fofoper, and was re-engaged there on a lengthy contract in consequence of her great success. Her first experiences on the stage, after an apprenticeship in 'operette,' were gained at Leipzig through the influence of Nikisch, who heard her at a concert at Hamburg and was much struck by the beauty of her voice and the rare emotional quality of her singing. These were precisely the characteristics that brought her into immediate prominence on her début in London (May 13, 1924) as Fricka, in 'Das Rheingold,' and again even more strongly by her fine delineations of Brangäne, Herodias and Waltraute. She also took part in the German seasons of 1925 and 1926, and added to her reputation by a powerful yet subtle impersonation of Ortrud in the revival of 'Lohengrin,' fifty years after its first production in this country. In fact, in all of these heavy parts she displayed declamatory gifts of the highest order.

OLD ENGLISH EDITION, THE, a valuable series of musical reprints, edited by G. E. P. Arkwright, was published by Joseph Williams of London, and Parker & Sons of Oxford, from 1889-1902. The list of contents is as follows:

1. Campton, Lupo, and Gilles. *Masque for Lord Hayes's Marriage*, 1607.
2. Arne. *Six Songs*.
- 3-5. Kirbye's *Madrigals*, 1597.
- 6-9. Byrd's *Songs of Sundry Natures*, 1589.
10. Tye. *Mass*, 'Euge bone.'
- 11-12. Ferrabosco's *Madrigals*.
- 13-15. Weelkes's *Ballets and Madrigals*, 1598.
- 16-17. Weelkes's *Ayres or Phantasick Spirites*, 1608.
- 18-20. Pilkington's *Songs or Aires*, 1605.
21. White, Kirbye, Wilbye and Daines. *Anthems, Motets, etc.*
22. Milton. *Six Anthems*.
23. Blow. *Six Songs*.
24. *Six Songs* by Henry Purcell from 'Orpheus Britannicus.'
25. Blow. *Masque*, 'Venus and Adonis.'

OLDFIELD, THOMAS (16th-17th cent.), known so far only by a prelude in the 'Fitzwilliam Virginal book.'

OLD HUNDREDTH TUNE, THE, is the melody adapted to Beza's version of the 134th Psalm included in the first instalment of psalms, thirty-four in number, added by him to the Genevan Psalter in 1551. No copy of that Psalter containing the tunes to these psalms is known of earlier date than 1554, but there is little doubt that they were added to the psalms either at the time of publication of the latter or in 1552; and this date falls within the time when Bourgeois was musical editor of the Genevan Psalter—that is, from 1542-57. To Bourgeois, therefore, the tune in its present form may be ascribed, but how far it is original is uncertain.

In 1561 Kethe wrote versions of twenty-five psalms for the enlarged edition of Knox's Anglo-Genevan Psalter published in that year. One of these was the long measure version of Psalm C., 'All people that on earth do dwell,' to which the Genevan tune was then for the first time adapted.

The name 'Old Hundredth' is peculiar to England.¹ The psalm was originally known as the 'Hundredth,' but after the appearance of the New Version by Brady and Tate in 1696, the word 'Old' was added to the titles of the tunes continued in use from the preceding Psalter of Sternhold and Hopkins, to which no special names had been given. The name 'Savoy,' sometimes applied to the Old Hundredth in the 18th century, was derived, not as Havergal supposes, from a vague fancy respecting its Savoyard origin, but from its use by the French congregation established in the Savoy, London, in the reign of Charles II. G. A. C.

OLD VIC, THE. The popular name of the Royal Victoria Hall, Waterloo Road, S.E., at which performances of opera in English and of Shakespeare plays are given regularly at popular prices.

This theatre, originally known as the Royal Coburg Theatre, was opened in 1818 for the best kind of theatrical performance; in 1833 it was re-named the Royal Victoria Theatre—it was here that Paganini gave his 'farewell' concert—and after some years of prosperity became the home of melodrama and eventually a place where the entertainment was frequently accompanied by drunkenness and disorder. At this moment the lease was acquired by a small company at the instigation of Emma Cons, an ardent social reformer, and as the Royal Victoria Coffee Hall, the theatre was reopened on Boxing Day, 1880, to provide entertainment of a more refined nature and without drink. In 1884 the lease was taken over by a body of trustees, chiefly owing to the help of Samuel

¹ In America the tune is commonly called 'Old Hundred'; probably an English provincialism imported by some of the early colonists.

Morley, and in 1888 the freehold was acquired and a grant obtained from the Charity Commissioners. In 1889 the back of the stage was remodelled to accommodate the Working Men's College instituted as a Morley Memorial. Opera first appeared at the theatre in the form of excerpts which were sung at the ballad concerts which formed so important a part of the entertainment provided by Emma Cons. Having no dramatic licence, it became the practice to give selections from some particular opera in costume, followed by tableaux to illustrate the action. A chorus was employed in 1895, and in the following year whole operas were given under the direction of Alfred Dove; but as a dramatic licence would have prevented smoking in the theatre it was necessary to make a technical break in the continuity of the action, and this was done by drawing the curtain to shut off the scene during the performance of concerted numbers. The regulation about smoking was set aside during the war, and so in 1914, the year when Shakespeare's plays were first given in the theatre, opera was presented in the normal manner. But the alteration that had been made to the stage could not now be accepted by the London County Council, and after the war great efforts were made to raise the money required for the necessary reconstruction, a problem solved in 1923 by the generosity of Sir George Dance.

Meanwhile, upon the retirement of Emma Cons in 1898, her niece, Lilian Baylis, had become manager, and upon her has fallen the difficult rôle of dramatic and operatic manager in one. Naturally an institution which runs both plays and operas at the cheapest possible prices, and with only a small grant, cannot aim at elaboration of production, but the seriousness of purpose and the remarkable receptivity of the audience has gradually built up a standard of performance which in spirit and intelligence sometimes achieves an effect not always obtainable in more favoured circumstances. Operas are given on two nights in the week and on alternate Saturday afternoons. The orchestra is small, but as the policy has been adopted of engaging some first-rate players, the want of volume is balanced by general accuracy, good tone and intonation. A performance of 'Tristan and Isolde' has been given with the score so skillfully reduced by Charles Corri, the musical director, that a remarkable reflection of the original orchestration has been obtained. A valuable interpretative quality was secured in the production of 'Figaro' in 1919 by Clive Carey with E. J. Dent's translation, and this was repeated later in the revivals of 'Don Giovanni' and 'The Magic Flute.' The enterprise of the management has been extended to contemporary British opera in the performances of Ethel Smyth's 'The Boatswain's Mate' and 'Fête galante' and Nicholas Gatty's 'The

Tempest' and 'Prince Fereolon,' the last-named being given for the first time in public. It should be added that the mostly 'part-time' chorus generally includes some young singers who may be called upon to take small parts and thus gain valuable operatic experience. Principal parts have often been taken by singers whose public reputation is in nowise to be measured by the necessarily small fee; but then, to sing at the 'Old Vic' is an experience of a peculiarly happy nature. N. C. G.

BIBL.—LILIAN BAYLIS and CICELY HAMILTON, *The Old Vic Book* (1925).

OLDYS, VALENTINE, a chemist in the Black Friars, contributed some pieces to Playford's 'Court Ayres,' 1655.

O'LEARY, ARTHUR (b. Tralee, co. Kerry, Ireland, Mar. 15, 1834; d. Mar. 13, 1919). He received his early instruction in music at home. When between 7 and 8 years old, his pianoforte-playing attracted the attention of Wyndham Goold, through whose instrumentality he was sent to the Leipzig Conservatorium in Jan. 1847. At a dinner-party given in Goold's honour by Mendelssohn, the boy sat next the composer, who was in many ways most kind to him afterwards. At Leipzig he studied the piano with Moscheles and Plaidy, counterpoint with Hauptmann, and composition with Richter and Julius Rietz. At the house of Preusser he became acquainted with Robert and Clara Schumann, and many other musical celebrities. After a five years' stay at Leipzig, O'Leary returned to London and entered the R.A.M., studying under Cipriani Potter and Sterndale Bennett. In 1856 Lord Westmorland appointed him professor at the Academy, and on the opening of the National Training School for Music, he was appointed to that institution. He retired from the R.A.M. in 1903, but continued to teach privately. O'Leary's compositions include orchestral pieces, songs, dance-music, transcriptions and original pieces for the pianoforte, etc. His toccata in F was played at the Popular Concert of Dec. 14, 1885. He also edited Bach's Christmas Oratorio, Bennett's Pianoforte works, and masses by Hummel, Sechter and Schubert.

His wife, ROSETTA (d. London, June 17, 1909), was the daughter of W. S. Vinning, of Newton Abbot, and was married to O'Leary in Nov. 1860. She was elected King's Scholar at the R.A.M. in 1851, and is known as the composer of several successful songs.

W. B. S.

OLIMPIADE. An opera of Metastasio's, written in 1733 to celebrate the birthday of the Empress Elizabeth, wife of Charles VI, Emperor of Germany. It was set no less than thirty-one times, by the following composers: Caldara (1733), Pergolesi, Leo, Duni, Scolari, Latilla, Perez, Sarti, Hasse, Piccinni

(2), Bernasconi, Gassmann, Bertoni, Jommelli, Cafaro, J. C. Bach, Traetta, Arne, Anfossi, Mysliweczek, Andreozzi, Schwanberg, Gatti, Borghi, Paisiello-Federici, Reichardt, Tarchi, Perrino, Conti (1829), as given in Clement's *Dict. Lyrique*. a.

OLIPHANT (OLIFANT from *olifaunt*, elephant), a short horn or bugle, made from the tusk of an elephant, from which the name comes. These instruments were used for signalling and hunting, and some existing specimens are very richly carved. They have no musical value, but are interesting in connexion with the development of the horn, and of wind instruments generally. (See HORN; WIND INSTRUMENTS; PLATE LXVIII. No. 3.) D. J. B.

OLIPHANT, THOMAS (b. Condie, Perthshire, Dec. 25, 1799; d. Mar. 9, 1873), was in 1830 admitted a member of the Madrigal Society, and soon afterwards became its honorary secretary. He adapted English words to many Italian madrigals, some of which have become exceedingly popular, notably 'Down in a flow'ry Vale,' adapted to Festa's 'Quando ritrovo.' In 1834 he published *A Brief Account of the Madrigal Society*, and in 1836 *A Short Account of Madrigals*. In 1837 he published an 8vo volume entitled *La musa madrigalesca*, a collection of the words of nearly 400 madrigals, with remarks and annotations. He wrote an English version of Beethoven's 'Fidelio,' and English words to several songs, and edited Tallis's 'Service and Responses.' In his latter years he was president of the Madrigal Society. W. H. H.

OLIVER Y ASTORGA, see ASTORGA, Jean Oliver y.

OLMEDA, P. FEDERICO (b. Burgo de Osma, 1865; d. Madrid, Feb. 11, 1909), Spanish musical historian, organist and composer. After occupying the post of organist at Tudela, Navarro (1887) and Burgos (1888-93), he became maestro de capilla at the Convent of the Descalzas Reales, Madrid, an office once held by Victoria. His importance in Spanish musical research rests mainly on his work on early polyphony; some of his conclusions are stated in a rare pamphlet, *Viaje musical a Santiago de Galicia* (1895), describing the 12th-century 'Codex Calixti II.' (Santiago Cathedral MS.). He also published a valuable study on the folk-songs of the district of Burgos, *Folklore de Castilla* (1902), and other works concerning the performance of liturgical music. His compositions include 4 symphonies; string quartet; PF. pieces; Salve Regina for vln. and orch.; and other church music. J. B. T.

OLSEN, OLE (b. Hammerfest, July 4, 1850), distinguished Norwegian musician and composer, who at the early age of 7 was able to take his father's place at the organ and play the services. It was originally intended that he should become an engineer, and he was

sent, in 1865, to study at Drontheim; but his strong bias in favour of music continued to assert itself, and it was not long before he placed himself under the guidance of Fust Lendermann. This was in 1867; and from that date until 1870 Olsen studied regularly during the winter months, while in the summer time he joined various travelling theatrical companies as conductor. In the year 1870, however, he betook himself to Leipzig, where he became the pupil of E. F. Richter, Oscar Paul and Reinecke. After a course of four years at Leipzig Olsen returned to Sweden and settled at Christiania (1874), where he worked as a teacher of the piano, and as a choirmaster. He also made use of his great talent for writing by becoming a musical critic. When Svendsen retired from the directorship of the Musical Society the post was offered to Olsen, who accepted it and retained it for many years. In 1884 he became musical director to the 2nd Norwegian Infantry Brigade; and the experience and skill which he acquired in this leading position led to his being asked to undertake the onerous duties of musical director under the Military Board, when that office was established by the Swedish Government in 1900.

Ole Olsen has produced compositions of all kinds, excepting chamber music. Of his orchestral works the symphony in G major, together with the symphonic poems 'Aasgaardsroien' and 'Elf-dance' are accounted very fine examples of their class. In the sphere of operatic music Olsen is well represented by three grand operas, 'Stig Hvide,' 'Lajla,' and 'Stallo,' the libretti of which he wrote himself. He has written one oratorio, 'Nideros,' a fairy comedy, 'Svein Urad,' and four great cantatas, 'Ludwig Holberg,' 'Griffenfeld,' 'Broderbud,' and the 'Tourist Cantata.' D. H.

OLTHOFF, STATIUS (b. Osnabrück, 1555; d. Rostock, Feb. 28, 1629), was called in 1579 to the post of cantor to the Marien-Kirche at Rostock in Mecklenburg. In 1593 he is described in the account-books of the church as *Magister Statius* and as occupying the higher position of con-rector. At the instigation of Nathan or Nathaniel Chytraeus, the Humanist Professor of Latin and Poetry at the University of Rostock, who also as rector reorganised the chief school of the town, Olthoff composed a series of four-part settings of George Buchanan's famous Latin-verse paraphrases of the Psalms. This work was published at Frankfurt 1585 with the title: *Psalmorum Davidis paraphrasis poetica Georgii Buchanan Scoti argumentis ac melodiis explicata atque illustrata*, etc. Eitner enumerates successive editions of this work up to 1656. The musical settings have been republished in the *Vierteljahrsschrift für Musikwissenschaft*, bd. v. Olthoff retired from active work in 1614. J. R. M.

OLYMPIE, tragédie lyrique, in 3 acts, imitated from Voltaire by Dieulafoy, Briffault and Bujac; music by Spontini. Produced Paris Opéra, Dec. 20, 1819; Berlin, in German (E. T. A. Hoffmann), May 14, 1821.

G.; rev. M. L. P.

O'MARA, JOSEPH (b. Limerick, July 16, 1866), son of James O'Mara, J.P., late high sheriff for that city. In 1889 he studied singing in Milan under Perini and Moretti. On Feb. 4, 1891, he made his début as Ivanhoe at the Royal English Opera-House, and was favourably received. He had further teaching from Edwin Holland, and in 1892 he sang at the Popular Concerts. In 1894-95 he sang under Harris, both in English and Italian, at Drury Lane and Covent Garden as Don César, Hardress Cregan, Faust, Philémon, Don José, Turiddu, etc. On Mar. 2, 1896, he made a great success as Mike Murphy on the production of Stanford's 'Shamus O'Brien' at the Opéra-Comique Theatre. He became a favourite tenor in the Moody-Manners Opera Company in their London and provincial seasons, and added to his repertory many Wagnerian parts, Myles in 'Lily of Killarney,' Raoul, etc. Subsequently he toured the provinces with an opera company bearing his own name. He retired from the operatic stage in 1926.

A. C.

ONDŘÍČEK, FRANZ (b. Prague, Apr. 29, 1859; d. Milan, Apr. 13, 1922), violinist, of Czech parentage. His father, a good violinist, was the leader of a small orchestra performing in cafés, ballrooms, etc., and early conveyed a knowledge of his instrument to his son, who, at the age of 7, was able to take a part in the orchestra, and was known in Prague as a prodigy. In 1873 he was sent to the Conservatorium of his native town, where he received free tuition for three years. In 1876 he gave a concert at Prague. Wieniawski, who was present, after hearing Ondříček play a movement from a concerto of Molique, stepped on to the platform and publicly embraced the young artist. The result of this successful appearance was that a rich merchant undertook his further education, and sent him to the Paris Conservatoire, where he entered the class of Massart, gaining a *premier prix* at the end of two years. Had he been eligible he would have won it in his first year. After leaving the Conservatoire he remained in France for two years, played in Paris at Padeloup's Concerts, and in other French towns, and then visited London, where he appeared at a concert of the Philharmonic Society, of which he was an honorary member. After returning for a short time to Bohemia, he made a series of tours on the continent, in the course of which he visited Berlin (in 1884) and gave two successful concerts in the opera-house. Later, he played as a soloist in most musical centres

of the world: in Russia, Italy, Holland, America, the East, etc., and was the recipient of many orders and decorations. In 1911 he was appointed professor in the Vienna Conservatoire, remaining there until 1919, when he moved on to the Conservatorium at Prague. He collaborated with Dr. Mittelman in a *New Method of Learning the Higher Technique of Violin-Playing on Anatomical and Physiological Principles* (1909). His compositions include a rhapsody for orchestra 'Bohème,' a concerto and smaller pieces. He occasionally visited London, playing at the Popular Concerts and elsewhere.

w. w. c.

O'NEILL, NORMAN (b. Kensington, Mar. 14, 1875), composer and musical director of the Haymarket Theatre, London, is son of the painter, G. B. O'Neill. He studied with Dr. A. Somervell in 1890-93; in the latter year he entered the Hoch Conservatorium at Frankfurt, where he studied until 1897 with Iwan Knorr. In 1899 he married Adine Rückert, a pupil of Mme. Schumann and of Mme. Wilhelmine Clauss-Szarvady; under her married name she has won much acceptance as a pianist in London. O'Neill's chief work as composer and conductor has been done chiefly in the theatre. He was musical director of the Haymarket (1908-19) and during that time wrote the music for several important plays, including that to Maeterlinck's *The Blue Bird* (1909). Previously he had written music for a production of *Hamlet* (Dublin, 1904, and Lyric Theatre, London, 1905). In 1919 he transferred to the St. James's Theatre, but returned to the Haymarket in 1920 for the production of *Mary Rose* (J. M. Barrie), for which he wrote music. Since then his connexion with the Haymarket has been maintained, and he wrote again for the revival of *A Kiss for Cinderella* (Barrie) in 1925. In such work O'Neill shows a remarkable aptitude for devising music which will enhance a situation and reflect the stage character, and he brings to the task the accomplishment of thorough musicianship. His connexion with the Royal Philharmonic Society has been a long one, and in 1919 he became its treasurer, a post held by his great-grandfather, Dr. CALLCOTT (*q.v.*), nearly a hundred years earlier. In September 1924 O'Neill joined the staff of the R.A.M. as a teacher of harmony and composition.

The following is the list of his principal compositions:

- Op.
 1. Variations for violin, violoncello and piano.
 2. Sonata for violoncello and piano.
 3. Suite for string orchestra. Played first at Frankfurt.
 4. Four compositions for piano.
 5. Variations and Fugue for piano.
 6. Romance and Scherzo for violin and piano.
 7. Trio for piano, violin and violoncello.
 8. Overture, 'In Autumn.'
 9. Quintet for piano and strings.
 10. Overture to *Hamlet*. Played at Birmingham, 1903.
 11. Ballad for contralto and orchestra.
 12. Overture, entr'actes, and incidental music to *Hamlet* 1904
 13. Miniatures for small orchestra.
 14. Variations and Fugue on an Irish air for two pianofortes.

- Op.
 18. *Five Rondels*.
 19. 'Waldemar,' fantasy for solo voices, chorus and orchestra.
 20. Overture, 'In Spring Time.' Birmingham, 1904.
 22. Overture, entr'actes, and incidental music to J. Comyns Carr's play, *A Lonely Queen*. New York.
 23. Prelude, intermezzo and musical accompaniment to the play, *A Tragedy of Truth*. Manchester, 1906, and Adelphi Theatre, London, 1907.
 24. Two piano-forte studies.
 25. Miniatures for full orchestra. Birmingham, 1907.
 26. Overture, entr'actes, and incidental music to Stephen Phillips's *The Lost Hero*. Glasgow, 1908, and Adelphi Theatre, London, 1908.
 29. Variations for orchestra (orchestral version of op. 17).
 30. Scotch Rhapsody for orchestra.
 31. 'La Belle Dame sans merci,' ballad for baritone and orchestra, London, 1910.
 32. Trio for piano, violin and violoncello in one movement. 1908.
 34. Eight National Songs for unison chorus and orchestra.
 36. Music to *King Lear* (overture, entr'actes and incidental music). Haymarket Theatre, Sept. 8, 1909.
 37. Music to Maetzel's *Blue Bird* (overture, dances and incidental music). Haymarket Theatre, Dec. 8, 1909.
 Suite of four dances from the above, for orchestra, published in a piano arrangement.

Music to the following plays :
Julius Caesar. (St. James's Theatre, 1919.)
Mary Rose. (Haymarket, 1920.)
Macbeth. (Aldwych, 1920.)
The Merchant of Venice. (New York, 1922.)
A Kiss for Cinderella. (Haymarket, 1925.)
Kismet. (New Oxford Theatre, 1925.)

Ballets :
 'The Swinburne Ballet.' (Coliseum, 1917.)
 'The Punch and Judy Ballet.' (Duke of York's Theatre, 1924.)
 Publications include many selections from these stage works, songs, piano pieces, etc.

M.; rev. C.

ONSLOW, GEORGE (b. Clermont-Ferrand, Puy-de-Dôme, July 27, 1784; d. Clermont, Oct. 3, 1853), was a grandson of the first Lord Onslow, and descended through his mother, a de Bourdeilles, from the family of Brantôme. Although eventually a prolific composer, he showed as a child no special love for music, and the lessons he took on the piano from Hullmandel, Dussek and Cramer, during a stay of some years in London, developed nothing beyond manual dexterity. Having returned to France, and settled in a province more famous for its scenery than for its opportunities of artistic relaxation, he associated with some amateurs who played chamber music, and was thus induced first to study the violoncello, and then after a two-years' visit to Vienna to compose works modelled after those which gave so much pleasure to himself and his friends. Onslow, even after he had composed a considerable amount of chamber-music, felt the necessity for further instruction before attempting dramatic composition, and studied with Reicha. His three opéras-comiques, 'L'Alcalde de la Vega' (Aug. 10, 1824), 'Le Colporteur' (Nov. 22, 1827), and 'Le Duc de Guise' (Sept. 8, 1837), however, after securing successive *succès d'estime*, disappeared, leaving the overture to 'The Colporteur,' which for some time was to be heard in concert rooms, as their only representative. His three published symphonies, though performed several times by the Société des Concerts du Conservatoire, are also forgotten. He was elected a member of the Philharmonic Society in London in 1832, and wrote a symphony for it.

A musician of respectable attainments and indefatigable industry, an accomplished gentleman, and moreover a man of fortune, he had

no difficulty in finding either publishers or appreciative friends, as was proved by his election in 1842 to succeed Cherubini at the Institut. With the above reservations it must be admitted that Onslow, by the number of his works and the elegant style of his best passages, merited the reputation he enjoyed during his lifetime.

His works include a scena, 'La Mort d'Abel,' for bass-solo and orchestra; four symphonies; thirty-four quintets and thirty-six quartets for strings, six trios for PF., violin and violoncello; a sextuor (op. 30) for PF., flute, clarinet, horn, bassoon and contrabasso, or PF., two violins, viola, violoncello, and contrabasso; a nonetto (op. 77) for violin, viola, violoncello, contrabasso, flute, oboe, clarinet, bassoon and horn, which he also arranged (op. 77 *bis*) as a sextuor for PF., flute, clarinet, horn, bassoon and contrabasso, or for PF., two violins, viola, violoncello and contrabasso; a septet (op. 79) for PF., flute, oboe, clarinet, horn, bassoon and contrabasso; sonatas and duos for PF. and violin, or violoncello; sonatas for PF., four hands, and many pieces for PF. solo.

His quintets are undoubtedly his best works, and contain much charming music. No. 15, called 'Le Quintette de la balle,' describes his emotions—the pain, the irregular beating of his pulse, and his gratitude on his recovery—consequent on an accident that happened to him in 1829 at a wolf-hunt, where a spent ball hit him in the face, rendering him somewhat deaf in one ear for the rest of his life. His earlier quintets were written for two violoncelli, but at a certain performance in England the second violoncello failed to arrive, and it was proposed that Dragonetti should play the part on his double-bass. Onslow positively refused, saying the effect would be dreadful. However, after waiting some time, he was obliged to consent, and after a few bars was delighted with the effect. After this he wrote them for violoncello and double-bass, and the preceding ones were then rearranged in that way under his own inspection by Gouffé, the accomplished double-bass of the Paris Opéra. Halévy pronounced his eulogium at the Institut, and printed it in his *Souvenirs et portraits*. D'Ortigue collected materials for his biography, but only published an abstract of them in the *Ménestrel* (1863–64, p. 113). Fétis drew his information from these two sources, to which the reader is referred for further detail.

OPEN NOTES. On wind instruments those notes which are proper to the tube employed, and occur as natural harmonics of the fundamental tone, are known as open notes, and are thus distinguished from 'stopped' notes obtained on the horn by the closing of the bell to a greater or lesser degree by the hand, and from notes produced by the means of keys or valves.

When keys or valves are used the fundamental length of the tube is changed, and consequently a new series of harmonics is introduced.

D. J. B.

OPEN STRINGS. In instruments of the violin type the term 'Open String' is employed to indicate the unstopped sound of one of the stretched strings (see STOPPING). Example: On the violin, the note *e'* can be sounded by pressing a finger on the A, D, or G strings, or by vibrating the first string which is tuned to the pitch of that note. There is a difference of quality between stopped and open notes of the same pitch. A small *o* placed over the note indicates when the 'open string' is to be played.

O. R.

OPERA (Ital. *opera*, abbrev. of *opera in musica*, a 'musical work,' *dramma per la musica*; Fr. *opéra*; Ger. *Oper*, *Singspiel*), a drama, either tragic or comic, sung throughout, with appropriate scenery and acting, to the accompaniment of an orchestra.

This article outlines the development of operatic style and structure to about the year 1900. References to composers who have attained distinction since that date will be found at the end.

It may seem strange to speak of the Opera as one of the oldest institutions in existence; yet our search for its origin leads us back to a time long antecedent to the beginning of the Christian era; and he who would read the story of its infancy aright must collect its details from the history of ancient Greece; for it is as old as the drama itself. It was nurtured at Athens, in that glorious theatre the acoustic properties of which have never yet been rivalled. Its earliest librettists were Æschylus and Sophocles, and its earliest orchestra a band of lyres and flutes. There is no doubt about this. It is quite certain that not only were the choruses of the 'Agamemnon' and the 'Antigone' sung to the grandest music that could be produced at the time they were written, but also that every word of the dialogue was musically declaimed. Musical dialogue has been censured by unmusical critics as contrary to nature. It is, undoubtedly, contrary to the practice of everyday life, but not to the principles of art. It is necessary that the truth of this proposition should be very clearly established, for unless we make it our starting-point we shall never arrive at the true *raison d'être* of the Lyric Drama, nor be prepared with a satisfactory answer to the cavils of those who, like Addison and Steele, condemn it as a monstrous anomaly. It is open to no charge of inconsistency to which the spoken drama is not equally exposed. The poet writes his tragedy in verse, because he thereby gains the power of expressing great thoughts with the greatest amount of dignity that language can command. His verses are sung, in order that they may be invested with a

deeper pathos than the most careful form of ordinary declamation can reach. No one objects to the iambs of the 'Seven against Thebes,' or the blank verse of 'King John'; yet surely our sense of the fitness of things is not more rudely shocked by the melodious *Ah! soccorso! son tradito!* uttered by the Commendatore after Don Giovanni has pierced him through with his sword, than by the touching couplet with which Prince Arthur, at the moment of his death, breaks forth into rhyme—

'O me! my uncle's spirit is in these stones:—
Heaven take my soul, and England keep my bones!'

The conventionalities of common life are violated no less signally in the one case than in the other; yet, in the opera as well as in the play, the result of their violation is an artistic conception, as easily defensible on logical grounds as the proportions of a statue or the colouring of a picture—neither of which are faithful imitations of nature, though founded upon a natural ideal.

These appear to have been the views entertained, towards the close of the 16th century, by a little band of men of letters and musicians—all ardent disciples of the Renaissance—who met in Florence at the house of Giovanni Bardi, Conte di Vernio, with the avowed object of resuscitating the style of musical declamation peculiar to Greek tragedy. This end was unattainable. The antagonism between Greek and modern tonalities would alone have sufficed to make it an impossibility, had there been no other difficulties in the way. But, just as the search for the philosopher's stone resulted in some of the most important discoveries known to chemistry, this vain endeavour to restore a lost art led to the one thing upon which, above all others, the future fate of the Lyric Drama depended—and compassed it, on this wise.

Among the musicians who frequented the Count of Vernio's *réunions* were three whose names afterwards became celebrated. Vincenzo Galilei—the father of the great astronomer—was a pupil of the old school, but burning to strike out something new. Jacopo Peri and Giulio Caccini were young men, with little or no knowledge of counterpoint, but gifted with a wealth of original genius, and sufficient energy of character to enable them to turn it to the best account. All were thoroughly in earnest, thoroughly dissatisfied with the music of the period, and longing for a style of composition better fitted to express the varying shades of human passion than that then generally cultivated. The first result of their tentative efforts to reach this long-cherished ideal was the invention of the cantata—a secular composition for a single voice accompanied by a single instrument. Galilei produced a work of this description entitled 'Il Conte Ugolino,' which has unhappily been lost. Caccini—already celebrated for the beauty of his voice, and the

excellence of his performance upon the lute—wrote a number of shorter pieces, which he sang with unbounded applause at Bardi's house, to the accompaniment of a theorbo, played by Bardilla.

Some of these Canzonette were published, in 1602, under the title of 'Le nuove musiche.' They are, indeed, most interesting, as examples of the earliest phase of the style—fitly called Monodic—which exchanged the contrapuntal richness of the polyphonic school for the simplest of melodies, confined to a single part, and accompanied by a bass, which was often not only simple, but of the rudest possible construction. The particular verse to which we have referred—*Diteli voi se di me vi cale*—is exceptionally symmetrical in form. As a general rule, the melodies of this transitional period were so destitute of what we now call 'figure,' as to be all but amorphous; and it is precisely to this peculiarity that we are indebted for the extraordinary effect they wrought. All that their composers aimed at in constructing them was the exact oratorical rendering of the words with which they had to deal; and in striving to attain this they unconsciously, and as if by a kind of inspiration, achieved that potent medium of passionate expression which alone was needed to make the Lyric Drama possible—pure, well-accented, declamatory recitative. Not, as they fondly imagined, the exact method of delivery cultivated by the Greek dramatists; but, we may fairly believe, the nearest approach to it consistent with the modern scale—the true *musica parlante*, or *stilo rappresentativo*, which, by regulating the inflections of the voice in accordance with the principles of sound rhetorical science, invests them, if the experience of three centuries may be trusted, with an amount of dramatic power attainable by no other means.

The necessity for some such provision as this must have been painfully apparent to all thinking men. The polyphonic school, brought to perfection by Palestrina and his great contemporaries, was utterly unfit for dramatic purposes; yet, in ignorance of a more appropriate form of expression, attempts to turn it to account in that direction had not been wanting.¹ (See INTERMEZZO.) It is certain that great part of Poliziano's 'Orfeo,' written in the latter half of the 15th century, was set to music of some kind; and Leo Allatius mentions, in his 'Drammaturgia,' the names of eight musical representations produced between the years 1569 and 1582. The bare titles of these works, to one of which the name of Claudio Merulo is attached, are all that now remain to us; and, unfortunately, we possess no printed copies of three still more important productions—'Il Satio,' 'La disperazione di Fileno,' and 'Il

giuoco della cieca'—set to music by Emilio del Cavalieri, the two first in 1590, and the last in 1595; but we may form a tolerably safe estimate of their style from that of Orazio Vecchi's 'L' Amfiparnasso,' performed at Modena in 1594, and printed soon afterwards in Venice.² This curious *Commedia armonica*, as the composer himself calls it, is presented in the form of a series of madrigals for five voices, written in the true polyphonic style, and equally remarkable for the beauty of their effect and the learning displayed in their construction. There is no overture; and no instrumental accompaniment or ritornello of any kind. When the stage is occupied by a single character only, the four superfluous voices are made to sing behind the scenes; when two persons are needed for the action three are kept out of sight. All doubt on this point is removed by the woodcuts with which the music is illustrated; but before we condemn the absurdity of the arrangement we must remember that the grand old madrigalist only uses his unseen voices as later composers have used the orchestra. He could not leave his characters to sing without any accompaniment whatever; and has therefore supported them, and, to the best of his ability, enforced the action of the scene by the only harmonic means within his reach.³

It must be confessed that though Vecchi was a skilful contrapuntist and Peri was not, the latter had all the advantage on his side, when, three years after the first performance of 'L' Amfiparnasso,' he produced his music to Rinuccini's 'Dafne.' It was at the Palazzo Corsi that 'Dafne' was first privately performed in 1597.

1600. PERI'S 'EURIDICE.'—The success of the experiment was so decided that in the year 1600 Peri was invited to provide a still greater work to grace the festivities which followed the marriage of King Henri IV. of France with Maria de' Medici. It was on this occasion that he produced his famous 'Euridice,' the acknowledged prototype of all later developments of the *Dramma per la musica*. The work excited an extraordinary amount of attention. Rinuccini furnished the libretto. Several noblemen took part in the public performance. Behind the scenes, Corsi himself presided at the harpsichord, assisted by three friends, who played upon the chitarrone, the lira grande or viola da gamba, and the theorbo or large lute. These instruments, with the addition of three flutes used in a certain ritornello, seem to have comprised the entire orchestra; and a considerable amount of freedom must have been accorded to the performers with regard to their manner of employing them; for in the barred score

² A modern edition by Eitner is published by Breitkopf & Haertel.

³ On the condition of performance of the earliest operas, see the *Sammelbande* of the Int. Mus. Ges. iv. 175 and 404, by Alfred Eitner; and the *Monthly Musical Record*, Mar. 1906, article by E. J. Dent.

¹ See *Some Forerunners of Italian Opera*, by W. J. Henderson (1911).

published at Florence, with a dedication to Maria de' Medici, in 1600, and reprinted at Venice in 1608, the accompaniment consists of little more than an ordinary figured bass. This score is now exceedingly scarce. Hawkins did not even know of its existence, and Burney succeeded in discovering one example only, in the possession of the Marchese Rinuccini, a descendant of the poet, at Florence; but a copy of the Venice edition is happily preserved in the library of the British Museum.

Peri himself tells us, in his preface, that a portion of this interesting work was written by Caccini, though his own name alone appears upon the title-page; but Caccini also set the entire libretto to music, on his own account, and published it in Florence in the same year (1600), with a dedication to Giovanni Bardi. The style of the two operas is so nearly identical, that whole scenes might easily be transferred from one to the other without attracting notice; though it cannot be denied that there are situations, such as that in which Orpheus returns with Euridice from Hades, wherein Peri has reached a higher level of dramatic expression than his rival. Caccini's 'Euridice' seems never to have been honoured with a public performance; the young composer was, however, commissioned to produce for the wedding festivities another *favola in musica*, entitled 'Il rapimento di Cefalo,' some portion of which afterwards appeared among the 'Nuove musiche.'

The immediate result of these early experiments was the recognition of the opera as a form of art no longer tentative, but fairly established upon true æsthetic principles, embarrassed by no grave practical difficulties, and perfectly consistent, in all its details, with the received traditions of classical antiquity—which last recommendation was no light one, in the estimation of men whose reverence for Greek and Roman customs amounted to a species of insanity.

MONTEVERDI'S 'ORFEO.'—The next development of importance took place in 1607 at Mantua. At the invitation of Vincenzo Gonzaga, the reigning Duke, Rinuccini prepared for the festival organised on the occasion of the marriage of Francesco Gonzaga with Margherita Infanta of Savoy the libretti of two operas, entitled 'Dafne' and 'Arianna,' the first of which was set to music by Marco di Zanobi da Gagliano, and the second by Claudio Monteverdi, the Duke's maestro di cappella—a man of extraordinary genius, already famous for the boldness of his innovations in the style of the Madrigal. Both operas were written in the *stilo rappresentativo*; and both were deservedly successful, though not in an equal degree. After the first performance of

'Dafne' we hear of it no more; but 'Arianna' produced so extraordinary an effect upon the audience, more especially in the scene in which the forsaken Ariadne bewails the departure of her faithless lover,² that Monteverdi was at once invited to compose another opera, for the ensuing year. For the subject of this he chose the story of Orpheus and Eurydice, dramatised by some poet whose name has not transpired. The new work—entitled 'Orfeo,' to distinguish it from Peri's setting—was in many respects immeasurably superior to any that had preceded it. Dramatic expression was one of the most prominent characteristics of Monteverdi's genius, and while his natural love for instrumental music tempted him to write for a far larger orchestra than any of his predecessors had ventured to bring together, his technical skill enabled him to turn its resources to excellent account.³ The instruments used on the occasion of the first performance were—

2 Gravicembali.	3 Bassi da gamba.
2 Contrabassi da Viola.	4 Tromboni.
10 Viole da braccio.	4 Regule.
1 Arpa doppia.	2 Cornetti.
2 Violini piccoli alla Francese.	1 Flautino alla vigesima seconda.
2 Chitarroni.	1 Clarino, con 3 trombe sordine.
2 Organi di legno.	

Hawkins, strangely misinterpreting the lists of characters and instruments given at the beginning of the printed score, imagines every singer to have been accompanied by an instrument of some particular kind set apart for his exclusive use. A very slight examination of the music will suffice to expose the fallacy of this idea. Nevertheless, the instruments are really so contrasted and combined as to invest each character and scene with a marked individuality which added greatly to the interest of the performance. The recitatives are accompanied, sometimes by a figured bass only, and sometimes by two or more instruments, the names of which are indicated at the beginning. A complete score of the opera was published at Venice in 1609, and reprinted in 1615.⁴ A copy of the second edition, now preserved in the Roy. Lib. B.M., was formerly in the possession of Sir John Hawkins, who quoted from it largely in vol. iii. of his *History of Music*.

Pietro della Valle, writing in 1640, tells us that, like Tragedy at Athens under the guidance of Thespis, the Lyric Drama made its first appearance in Rome upon a cart. During the Carnival of 1606 this ambulant theatre was

² This scene—*Lasciatemi morire*—generally known as the 'Lament of Ariadne'—is almost the only portion of the opera that has been preserved to us. It may be found entire in C. von Winterfeld's *Joannes Gabrieli*, and has often been reprinted. See *Opz. Hist. Mus.* vol. iii. p. 47 et seq.

³ See MONTVERDI for an account of his organisation of the orchestra in subsequent works.

⁴ See *The Life, Work, and Influence of Monteverdi*, printed in the *Mus. T.* for Apr. 1880. See also Parry's *Music of the 17th Century* (*Opz. Hist. Mus.* vol. iii. p. 81), where a close analysis of the whole work is given. The latest of several modern editions of the 'Orfeo' is that edited by Francesco Malpietro, pub. by Cies & Co. (1923). An English text translated by R. L. Stuart was published for the revival at Oxford, 1926.

¹ Fittner has published a modern edition of Caccini's 'Euridice' as *Dis Opæ* vol. I.

driven from street to street, surmounted by a movable stage, whereon five masked performers enacted a little play, set to music for them by Paolo Quagliati. The idea seems to have originated with Della Valle himself. He it was who arranged the performances, and induced Quagliati to write the music; and so great was the success of the experiment that from four o'clock in the afternoon until after midnight the little band of strollers found themselves surrounded by a never-failing concourse of admiring spectators. Rough indeed must these primitive performances have been when compared with the entertainments presented to the Florentines by Peri and Caccini; yet it is strange that, notwithstanding their favourable reception, we hear of no attempts either to repeat them or to encourage the introduction of anything better until the year 1632, when a musical drama called '*Il ritorno di Angelica nell' Indie*' appears to have been privately performed in the palace of one of the Roman nobles. The composition is ascribed in Lady Morgan's *Life and Times of Salvator Rosa*, to a composer named Tignali. This name is considered by S. S. Stratton to be a corruption of Tenaglia, whose '*Clearco*' was produced at Rome in 1661.

VENICE AND CAVALLI, 1637.—The actual transfer of the patronage of opera from the nobles to the people took place in 1637 in Venice, the famous theorbo-player, Benedetto Ferrari, and Francesco Manelli da Tivoli, the composer, opening at their own private risk the first public opera-house, under the name of the Teatro di San Cassiano. For this new theatre Ferrari wrote the words, and Manelli the music, of an opera called '*Andromeda*,' which was so well received that in the following year the same two authors brought out a second work, '*La maga fulminata*'; while in 1639 the text of Giulio Strozzi's '*La Delia, ossia la sposa del sole*' was set to music, either by Manelli or Paolo Saccati—it is difficult to say which—and Ferrari produced '*L' Armida*' to poetry of his own. This was an eventful season. Before its close, Monteverdi once more appeared before the public with a new opera called '*L' Adone*,' which ran continuously till the Carnival of 1640; and his pupil, Pier-Francesco Caletti-Bruni, nicknamed by the Venetians '*il Checco Cà-Cavalli*,'¹ made his first appearance as a dramatic composer with '*Le nozze di Peleo e di Tetide*.' Cavalli's natural taste suggested the cultivation of a more flowing style of melody than that in which his contemporaries were wont to indulge; and he was not so bigoted a disciple of the Renaissance as to think it necessary to sacrifice that taste to the insane Hellenic prejudice which would have banished rhythmic melody from the opera for no better reason than that it was unknown in

the time of Pericles. Vincenzo Galilei and his Florentine associates condemned such melody as puerile and degraded to the last degree. But Cavalli—as he is now generally called—not only employed it constantly, for the sake of relieving the monotony of continuous recitative, but even foreshadowed the form of the regular aria, by that return to the first part which was afterwards indicated by the term *da capo*.

Cavalli's predilection for rhythmic melody was fully shared by his talented contemporary, Marc Antonio Cesti—a pupil of Giacomo Carissimi, to whose example, though he himself did not care to write for the stage, the dramatic composers of the day were indebted for a higher ideal than they could possibly have conceived without his assistance. Honest work in one branch of art seldom fails to react favourably upon another; and it is certain that, by transferring to the opera the methods of phrasing and instrumentation employed by Carissimi in the *Cantata di Camera*, Cesti not only elevated the former to a more dignified level than it had ever before attained, but at the same time laid the foundation of his own triumphant success. His earliest attempt, '*L' Oronte*,'—first performed at Venice in 1649, at the Teatro dei SS. Apostoli, in the teeth of Cavalli's '*Giasone*' at the rival house of S. Cassiano—retained its popularity, throughout the whole of Italy, for more than thirty years.

The honours of the Venetian school were upheld, about this time, by a crowd of popular composers, the most successful of whom were Carlo Pallavicino, D. Giov. Legrenzi, Antonio Sartorio, Pietro and Marc Antonio Ziani, Castrovillari, Strozzi, and some other aspirants for public fame, who found ample employment in the numerous opera houses which before the close of the century sprang up in every quarter of the city. Between 1637 and 1699 eleven theatres came into existence (see VENICE) proving more clearly than any amount of written description the readiness with which the Venetians received the opera as one of their most cherished amusements. They had already learned to look upon it as quite a national institution; and supported it with a liberality altogether unknown elsewhere. In Rome, for instance, there were at this time three opera-houses only—the Torre di Nona, opened in 1671 with Cavalli's '*Giasone*'; the Sala de' Signori Capranica, for the inauguration of which Bernardo Pasquini composed his '*Dov' è amore e pietà*' in 1679; and a theatre in the Palazzo Aliberti, which started with Perti's '*Penelope la casta*' in 1696. No public theatre was established in Bologna till 1690.

SCARLATTI.—The next period of our history was a very significant one, and productive of results so important that it may be said to

¹ That is, 'Little Frank, of the House of Cavalli.'

mark the boundary between a class of works interesting chiefly from an antiquarian point of view and those grander productions the intrinsic value of which entitles them to be remembered throughout all time.

Alessandro Scarlatti, beyond all comparison the brightest genius of the epoch we are considering, and universally recognised as the most learned musician of his day, took even the best of his contemporaries at an incalculable disadvantage. His knowledge so far aided him in the construction of his basses and the elaboration of his accompaniments that, under his masterly treatment, the timidity which, in the infancy of modern art, so fatally weakened its effect, and rendered it so miserable a substitute for the richer combinations of polyphony, was exchanged for a freedom of style and breadth of design which at once elevated it to the rank of a finished school, capable indeed of future development to an unlimited extent, but no longer either tentative in conception or rudimentary in structure. On the other hand, his splendid natural talents did him good service in quite another way. Tired of the monotony of uninterrupted recitative, he boldly started on a new path, and, rejecting the experience of his immediate predecessors as altogether effete, availed himself of three distinct forms of dramatic expression—the simple form of recitative, called by the Italians *recitativo secco*; accompanied recitative, or *recitativo stromentato*; and the regular *aria*. The first of these he employed for the ordinary business of the stage; the second, for the expression of deep pathos, or violent emotion of any kind; the third, for impassioned, or at least strongly individualised soliloquy. *Recitativo secco* was supported by a simple ‘Thorough-bass,’ the chords of which were filled in, in former times, upon the harpsichord, and later, in England, played on the violoncello and double bass. Accompanied recitative has since passed through an infinity of changes, naturally dictated by the gradual enlargement of the orchestra and the increased strength of its resources. But it is still what its inventor intended it to be—a passionate form of declamation, in which the sense of the verbal text is enforced by the continual interposition of orchestral symphonies of more or less elaborate construction. Lastly, the symmetrical form of the *aria* had only been very imperfectly suggested before Scarlatti stereotyped it by the addition of a ‘Second Part,’ followed by that repetition of the original strain now known as the *DA CAPO* (*g.v.*). That this indication of a desire to escape from the dreariness of the interminable monologue which preceded it ultimately led to a formality and a pandering to a singer’s vanity, which it was Gluck’s task to attempt to sweep away, was not the fault of Scarlatti: and indeed we owe something to the

composer who first made it a distinctive feature in the dramatic music he did so much to perfect, and whose love of regular design led him to introduce improvements of equal value into the form of the instrumental prelude which was afterwards recognised as the indispensable overture. (See SCARLATTI, Alessandro.)

The most talented of Scarlatti’s contemporaries were, among Neapolitans, Alessandro Stradella and Francesco Rossi; in Venice, Antonio Caldara and Antonio Lotti; in Bologna, Antonio Perti, Francesco Pistocchi, and Giovanni Maria Buononcini; and, in Vicenza, Domenico Freschi. But for his untimely death, Stradella’s genius would undoubtedly have entitled him to take rank as the founder of an original and highly characteristic school. As it was, he lived but to compose one single opera, ‘La forza dell’ amor paterno,’ the libretto of which was printed at Genoa in 1678. Rossi, though born in Naples, wrote chiefly for Venice, where he met with very great success. Lotti produced eighteen successful operas in that city, between the years 1683 and 1717; and one in Dresden. Caldara enriched the Venetian school with five, besides writing many more for Vienna, founded for the most part upon the libretti of Apostolo Zeno and Metastasio. The greater number of Freschi’s works were also written for Venice; but his famous ‘Berenice’ was first performed at Padua, in 1680, the year after Scarlatti made his first appearance in Rome, with a *mise en scène* which exceeded in magnificence anything that had ever been previously attempted. Among the attractions mentioned in the printed book of the opera, we find choruses of 100 virgins, 100 soldiers and 100 horsemen in iron armour; besides 40 cornets, on horseback; 6 mounted trumpeters; 6 drummers; 6 ensigns; 6 sackbuts; 6 flutes; 12 minstrels, playing on Turkish and other instruments; 6 pages; 3 sergeants; 6 cymbaleers; 12 huntsmen; 12 grooms; 12 chariotteers; 2 lions, led by 2 Turks; 2 led elephants; Berenice’s triumphal car, drawn by 4 horses; six other cars, drawn by 12 horses; 6 chariots, for the procession; a stable containing 100 living horses; a forest, filled with wild-boar, deer and bears; and other scenic splendours, too numerous to mention in detail, but highly significant, as indicative of a condition of the drama in which, notwithstanding an honest desire on the part of many a true artist to attain æsthetic perfection, the taste of the general public was as yet unable to soar above the vulgarities of a frivolous peep-show. Pistocchi’s ‘Leandro’ (1679) and ‘Girello’ (1682) were performed in Venice by puppets, and ZIANA’s ‘Damira placata’ by mechanical figures, as large as life, while the real singers officiated behind the scenes.

FRENCH OPERA.—The scene now changes to Paris, whither Giovanni Battista Lully was

brought from Florence in the year 1646, in the character of page to Mademoiselle de Montpensier, niece of Louis XIV. The earliest suggestion of the opera form in France seems to be the dramas with music of the *trouvères* of the 13th century; indeed, 'Le Jeu de Robin et de Marion' of Adam de la HALE (*q.v.*), which has been preserved entire, is virtually an 'opéra-comique'—a form to be discussed later—with its dialogue interspersed with musical numbers. But grand opera is to be more definitely connected with the Ballet. As early as the year 1581, a piece, called 'Le Ballet comique de la roynne,' arranged by Bal-tazar de Beaujoyeaulx, with dance tunes, choruses, musical dialogues and ritornelli, composed for the occasion by Beaulieu and Salmon, was acted, at the Château de Montiers, in presence of Henri III., with extraordinary splendour. The first attempt to introduce Italian music was made by Rinuccini, who visited France in the suite of Maria de' Medici in 1600; but it does not seem to have accorded with the national taste. During the reign of Louis XIII. the Ballet was more warmly patronised at court than any other kind of musical entertainment. Cardinal Mazarin endeavoured to reintroduce the Italian Opera, during the minority of Louis XIV.; but its success was very transient, and far less encouraging than that of the early attempts at French Opera. The first of these was 'Akebar, roi de Mogol,' written and composed by the Abbé Mailly, and performed at Carpentras in 1646, in the presence of the Papal Legate, Cardinal Bichi. In 1659, Perrin wrote a Pastoral, with music by Cambert, which was first privately performed at Issy, and afterwards, in presence of the king, at Vincennes. Louis was delighted with it; and, supported by his approval, its authors produced some other works, of which the most successful was 'Pomone,' played first in 1671 at the Hôtel de Nevers, and in 1677 in the Tennis Court at the Hôtel de Guénégaud. This was the first French opera ever publicly performed in Paris. Meanwhile, Lully was industriously engaged in the composition of ballets, designed to meet the taste of the young king. But in Mar. 1672 he obtained, by Royal Patent, the entire monopoly of the ACADEMIE DE MUSIQUE (*q.v.*), and then it was that he entered upon that portion of his career which exercised the strongest influence upon the subsequent progress of dramatic music in France. Inspired by the verses of Quinault, who wrote twenty pieces for him between the years 1672 and 1686, he substituted for the Italian *recitativo secco* a style of accompanied recitative so well adapted to the spirit of the best French poetry that the declamatory portions of his operas soon became even more attractive than the scenes which depended for their success upon mere spectacular display.

In order to accomplish this purpose, he availed himself of an expedient already well known in the Venetian school—the constant alternation of duple and triple rhythm. Moreover, his bold and highly cultivated taste for instrumental music led him to mould the overture into a form more perfect than any with which it had been previously invested. (See OVERTURE.) For the meagre prelude affected by his Italian contemporaries he substituted a dignified Largo, followed by an Allegro, in the fugato style, with a well-marked subject and points of imitation. Sometimes he added a third movement, in the form of a minuet or other stately dance tune; so successful was the general effect of the whole that before long it was imitated by every composer in Europe.

Of Lully's immediate successors, Colasse, Destouches and Campra, the last-named was the most gifted, and his 'Tancredé,' produced in 1702, held the stage for many years. But at that very date, a decline in the popularity of the Lully style is evidenced by the publication of the Abbé François Raguenet's *Parallèle des Italiens et des Français, en ce qui regarde la musique et les opéras*. Some years before this publication d'Allard and Vanderberg, proprietors of 'marionette' or puppet theatres, had introduced music into their performances at the 'Foire St. Germain' with such success as to excite the jealousy of Lully, who obtained an order forbidding the performance of vocal music in the marionette theatre, and reducing the orchestra to four stringed instruments and an oboe. Moreover the entrepreneurs of the 'Comédie Française,' on whose domain the marionettes would seem considerably to have encroached, obtained another order forbidding even speech in their representations. At the instigation of two ingenious playwrights, Chaillot and Remy, the difficulty created by these orders was in some sort met by furnishing each performer with a placard on which were inscribed the words he would or should have uttered under other circumstances. These placards, of necessity large, being found to impede the action and even sight of the performers, their 'parts' were subsequently appended to the scene. The utterance, musical or other, of the songs of which these were largely made up, though forbidden to the actors, were not unallowable for the audience, who, perfectly familiar with the airs to which (vaudeville-wise) they had been written, took on themselves this portion of the dumb actors' duties—doubtless with sufficient spirit and intensity. The popularity of these performances, which, in spite (or because) of the restrictions upon them, increased day by day, eventually brought about a treaty of peace between the would-be monopolists of speech and song and the 'marionettes.' In 1716 Catherine Vanderberg, then directress, obtained a licence for the

presentation of dramatic pieces interspersed with singing and dancing, and accompanied by instruments, to which the name 'opéra-comique' was given, a form in which France was presently to excel.

ENGLISH MASQUES.—The idea of English Opera was suggested neither by the Ballet nor the Tragedy. It was the legitimate offspring of the MASQUE (*q.v.*); and the Masque, in England at least, was very far from presenting the characteristics of a true Lyric Drama. Its music was, at first, purely incidental—as much so as that introduced into the plays of Shakespeare. In the masques performed at court, *temp.* James I. and Charles I., a nearer approach was made to the opera—poetry, music, scenery, machinery and characteristic dresses and decorations being combined in them. Alfonso Ferrabosco junior, Lanieri, who in 1617 set an entire masque of Ben Jonson to music in the *stilo recitativo* and may therefore claim the credit of having composed the first English Opera, Coprario, Robert Johnson, Campian, Simon Ives, and William and Henry Lawes were the principal composers employed. The first approaches towards the revival of dramatic entertainments, which had been suspended by the closing of the theatres during the Civil War, were made during the interregnum through the medium of musical pieces. On Mar. 26, 1653, Shirley's masque, 'Cupid and Death,' with music by Matthew Locke and Christopher Gibbons, was performed before the Portuguese ambassador. Three years later Sir William Davenant gave, in a semi-public manner, 'The First Day's Entertainment at Rutland House by Declarations and Musick,' with music by Colman, Cook, H. Lawes and Hudson. In the prologue it is designated an opera, though it is not one in any respect. In the following year Davenant produced 'The Siege of Rhodes,' the dialogue of which was given in recitative, which Davenant describes as 'unpractised here, though of great reputation amongst other nations.' This piece, to which a second part was subsequently added, maintained its position for some years, but the music has not, so far as is known, been preserved. 'The Siege of Rhodes' was followed by the production by Davenant in 1658 of 'The Cruelty of the Spaniards in Peru,' expressed by instrumental and vocal music, and the art of perspective in scenes, a performance said to have been not only connived at, but secretly encouraged by Cromwell, who was then supposed to be meditating some designs against the Spaniards.

During the four or five years which followed the reopening of the public theatres in 1660, little, beyond occasional repetitions of 'The Siege of Rhodes,' appears to have been done to forward operatic performances on the English stage. The Plague in 1665 and the Great Fire of London in 1666 caused a temporary suspen-

sion of all theatrical performances, but a step onwards was made in 1667 by the production of an adaptation by Davenant and Dryden of Shakespeare's 'Tempest' with large additions to the lyric portions. The vocal music of this version was supplied by Pelham Humfrey and John Banister, and the instrumental by Matthew Locke. Soon after the opening of the theatre in Dorset Gardens (1671), the proprietor resorted to opera as the principal attraction. In 1673 they brought out Shadwell's 'Psyche,' of which the author said 'the great desire was to entertain the town with variety of musick, curious dancing, splendid scenes and machines.' Matthew Locke composed the vocal, and Giovanni Battista Draghi the instrumental music for 'Psyche,' the dances being arranged by St. André, and the scenery painted by Stephenson. In 1676 Charles Davenant's 'Circe' was produced, with the music of John Banister. The Frenchman Grabu's setting of Dryden's 'Albion and Albanus' appeared in 1685 and failed. About 1688 was 'performed at Mr. Josias Priest's Boarding School at Chelsey by young Gentlewomen' Henry Purcell's opera 'Dido and Aeneas,' the dialogue in recitative. (See PURCELL, subsection THEATRE MUSIC.)

BEGINNINGS IN GERMANY.—What Lully did for France, and Purcell began in England, Reinhard Keiser did for Germany. The Opera was first imported into that country from Italy in 1627, when Rinuccini's 'Dufne,' translated into German by Martin Opitz, and set to music by Heinrich Schütz, was performed at Torgau, on the occasion of the marriage of George II., Landgraf of Hesse, with the sister of the Elector of Saxony. At Regensburg, the musical drama made its first appearance with Benedetto Ferrari's 'L'inganno d' Amore,' in 1653. Antonio Draghi's 'Alcindo,' and 'Cloridia,' were produced in 1665 at Vienna; and Giulio Riva's 'Adelaida regina principessa di Susa' at Munich. But all these last-named works were sung in Italian. The true cradle of the German Opera, despite its transient success at Torgau, was Hamburg; in which city Johann Theile produced his 'Adam und Eva'—the first 'Sing-spiel' ever publicly performed in the German language—in 1678. This was followed, in the same year, by 'Orontes'; and from that time forward the Hamburg Theatre retained the first place among the public opera-houses of Germany for more than half a century. Nikolaus Strunck wrote six operas for it, between the years 1678 and 1685. Between 1679 and 1686 Johann Franck wrote thirteen. Johann

¹ Practically the whole of the English Restoration stage music called 'opera,' including Purcell's own works, with the exception of 'Dido and Aeneas,' was an unsatisfactory hybrid. Musical scenes, chiefly concerned with supernatural characters, alternated with spoken scenes, the characters in which had no part in the musical scheme. Such a form was incapable of artistic development. In 'Dido' Purcell merely showed what his operatic style would have been had there been a public stage for its presentation. Failing that he fell back on the opportunity of performance at a girls' school. When he wrote for the public stage he, like his predecessors and contemporaries, accepted the conditions imposed by fashion. O.

Färtsch wrote twelve, between 1684 and 1690; Johann Conradi eight, between 1691 and 1693; Johann Cousser five, between 1693 and 1697; and Mattheson three, between 1699 and 1704; but between 1694 and 1734 Keiser produced quite certainly not less than 116, and probably many more. Handel also brought out his 'Almira' and 'Nero' there in 1705, and his 'Daphne' and 'Florinda' in 1706; his connexion with Hamburg was, however, of no long duration, and it was to Keiser's exertions alone that the Theatre was indebted for its world-wide fame. Keiser's first attempt, 'Ismene,' was successfully performed at Wolfenbüttel in 1692; and after that his popularity continued undiminished, in spite of variations in his personal fortunes, until in 1734 he took leave of his admiring audience with his last production, 'Circe.' The number of his published works is exceedingly small,¹ but a large collection of the original MSS. are in Berlin. Their style is purely German; less remarkable for its rhetorical perfection than that of Lully, but exhibiting far greater variety of expression, and a more earnest endeavour to attain that spirit of dramatic truth which alone can render such music worthy of its intended purpose.

HANDEL AND 18TH-CENTURY OPERA.—Though Handel, as we have already seen, made his first essay at Hamburg in German opera, his natural taste accorded entirely with the traditions of the Italian school. His first Italian opera, 'Roderigo,' was produced at Florence in 1706, and 'Agrippina,' at Venice in 1709, put the crown on his Italian visit (see HANDEL). Even in these early works his genius asserted itself, but a still more decided triumph awaited him in London, where he brought out his famous 'Rinaldo' at the Queen's Theatre, Haymarket, in 1711, beyond all comparison the finest opera that had as yet been placed upon the stage in any country, and being indebted for its great popularity to the exceeding beauty of its arias.

When Italian operas were first introduced into this country, they were performed by a mixed company of Italians and Englishmen, each of whom sang in his own language. A similar absurdity had long prevailed in Hamburg, where the arias of certain popular operas were sung in Italian, and the recitatives in German; and even in Italy the conventionalities of fashion and the jealousies of favourite singers had already begun to exercise a far more potent influence upon the progress of dramatic art than was consistent with true æsthetic principles. During the greater part of the 18th century the laws which regulated the construction of an opera were so severely formal

that the composer was not permitted to use his own discretion, even with regard to the distribution of the voices he employed. The orthodox number of *personaggi* was six—three women and three men; or, at most, three women assisted by four men. The first woman (*prima donna*) was always a high soprano, and the second or third a contralto. Sometimes a woman was permitted to sing a man's part, especially if her voice, like those of Mrs. Barbier and Mrs. Anastasia Robinson, happened to be a low one; but, in any case, it was *de rigueur* that the first man (*primo uomo*) should be an artificial soprano (see CASTRATO), even though the rôle assigned to him might be that of Theseus or Hercules. The second man was either a soprano, like the first, or an artificial contralto; and the third, a tenor. When a fourth male character (*ultima parte*) was introduced, the part was most frequently allotted to a bass; but operas were by no means uncommon in which, as in Handel's 'Teseo,' the entire staff of male singers consisted of artificial sopranos and contraltos, who monopolised all the principal songs, and upon whose popularity for the time being the success of the work in no small degree depended.

The arias entrusted to these several performers were arranged in five classes, each distinguished by some well-defined peculiarity of style, though not of general design; the same mechanical form, consisting of a first and second part, followed by the indispensable *da capo*, being common to all alike. These were, with variants, the *aria cantabile*, *aria di portamento*, *aria di mezzo carattere*, *aria parlante* and *aria di bravura*, or *d'agilità* (see ARIA).

The sequence and distribution of these varied movements was regulated by laws no less stringent than those which governed their division into separate classes. It was necessary that every scene in every opera should terminate with an air; and every member of the *dramatis personæ* was expected to sing one, at least, in each of the three acts into which the piece was almost invariably divided; but no performer was permitted to sing two arias in succession, nor were two arias of the same class allowed to follow each other, even though assigned to two different singers. The most important arias were played at the conclusion of the first and second acts. In the second and third acts, the hero and heroine each claimed a grand scena, consisting of an accompanied recitative followed by an *aria d'agilità* calculated to display the power of the vocalist to the greatest possible advantage; in addition to which the same two characters united their voices in at least one grand duet. The third act terminated with a chorus of lively character, frequently accompanied by a dance; but no trios, quartets or other concerted movements were permitted in any part of the opera, though three or more characters were sometimes suffered—as in

¹ See, however, his 'Octavia' edited by Chrysander as a supplement to the German Handel societies edition; also *D.D.T.* xxvii. and xxviii., from reprints of 'Kreus' and 'L'inganno felice'.

'Rin, do'—to join in a harmonised exclamation, at the close of a recitative.

It seems strange that with so many voices at command, so little advantage should have been taken of the opportunity of combining them; but the law was absolute, and no doubt owed its origin to the desire of popular singers rather to shine alone, at any cost, than to share their triumphs with rival candidates for public favour.

The effect of these formal restrictions, pressing with equal severity on the composer and the author of the libretto, was fatal to the development of a natural and consistent drama. Handel himself but rarely evaded them; the third act of 'Radamisto,' however, contains an elaborate quartet, and in 'Teseo,' in five acts, two airs in succession are frequently given to the principal characters. Of the numerous poets who wrote for the lyric stage, during the earlier half of the 18th century, two only, Apostolo Zeno and Metastasio, succeeded in producing really good pieces, in spite of the difficulties thrown in their way. Goldoni would probably have been equally successful had he been equally persevering; but after one or two vexatious failures, he threw up the opera in disgust, and devoted his attention to comedy.

Though Handel's operas so far excelled all others produced, either during his lifetime or for many years after his death, they seem, except in a few isolated cases, to have excited very much less attention on the Continent than in our own country. While they were steadily increasing his fame and ruining his fortune in London, another set of works was progressing successfully on the banks of the Elbe, under the superintendence of one of the greatest of Handel's contemporaries, Johann Adolph Hasse, a native of North Germany, who, after a long course of study in Naples, adopted the Italian style, and eventually settled in Dresden, where, between the years 1731 and 1763, he brought the Italian opera to a higher condition than it enjoyed in any other continental city. He died at Venice in 1783, leaving behind him more than 100 operas, most of which exhibit great merit though little depth of inspiration, while all, probably, owed some part at least of their popularity to the matchless singing of his wife, the celebrated Faustina. To this period belong also the Italian operas produced by Graun, at Brunswick and Berlin, between the years 1726 and 1759, and those written about the same time, by Fux, at Vienna. These compositions, though they never became equally famous, were undoubtedly greater, considered as works of art, than those of Hasse; as were those, also Italian, given to the world a little later by John Christian Bach. Meanwhile,

good service was done in Italy by Vinci—his share in the development of the aria form—Domenico Scarlatti, Leonardo Leo, Francesco Feo, Nicolo Porpora and many others, including Bononcini, now chiefly remembered for his unfortunate contest with Handel.

OPERA BUFFA.—We are next transported once more to Naples, where rapid progress was made, about the middle of the 18th century, in a new direction. We have already described, in the article INTERMEZZO, the gradual development of the Opera Buffa from the interludes which were formerly presented between the acts of an Opera Seria, or spoken drama. These light works were, at first, of very simple character; but a significant change in their construction was introduced when the idea was first entertained of bringing the principal characters on the stage together towards the close of the piece, and combining their voices in a more or less elaborate concerted finale. Originally this consisted of a single movement only, and that, comparatively, a simple one. It was later extended to several movements in succession, often in different keys; and finally was introduced into the Opera Seria, in which it soon began to play a very important part, naturally leading to the introduction of trios, quartets and the host of richly harmonised *pezzi concertati* upon which the dignity of the Grand Opera was afterwards made so largely to depend.

The distribution of parts in the Opera Buffa differed, in some important particulars, from that which so long prevailed in the Opera Seria; introducing fewer artificial voices, and giving far greater prominence to the basses. The *personaggi* were grouped in two divisions. The chief, or *buffo* group, consisted of two female performers, called the *prima* and *seconda buffa*, and three men, distinguished as the *primo buffo*, the *buffo caricato* and the *ultima parte*, of whom the first was a tenor, while the second was generally, and the third always, a bass. The subordinate group was limited to the two inevitable lovers, entitled the *donna seria* and *uomo serio*. This arrangement was originally very strictly enforced; but as time progressed departures from the orthodox formula became by no means uncommon.

Most of the composers of this period excelled equally in Opera Buffa and Opera Seria; and the style of their melodies was so much more modern than that cultivated either by Handel or Hasse, that we have found it necessary to include among them some whose names, by right of chronology, should rather have been referred to the preceding epoch, with which, however, they can claim but very little æsthetic connexion. First among them stands Pergolesi, whose serious opera 'Sallustia' produced a *furore* in Naples in 1731, while his

¹ More than seventy years afterwards, Mozart used the same expedient, with irresistible effect, in 'Le nozze di Figaro.' The writer well remembers the 'double encore' which followed the delivery of the words 'E schiatti il Signor Conte al gusto mio' by Miss Jenny Lind, Mme. Grimaldi, Signor Lablache and Herr Staudigl, at Her Majesty's Theatre, in the year 1847.

comico Intermezzo, 'La serva padrona,' performed in 1733, was received with acclamations in every capital in Europe. Jommelli's style, though less truly Italian than Pergolesi's, so nearly resembled it, that it would be impossible to class him with any other composer. He wrote an immense number of operas, both serious and comic; and the melodies he introduced into them obtained for him an amount of public favour which had by no means begun to wane when Burney visited him at Naples in 1770.¹

Jommelli is also to be credited with an innovation in respect of the *da capo* aria form, thus anticipating one of Gluck's reforms (see JOMMELLI). The work of these men was vigorously supplemented by the efforts of Sacchini, Guglielmi and Perez; and still more by those of Galappi and Paisiello, both of whom worked on the development of the concerted finale. Piccini developed the duet form and wrought his finales into long concerted pieces, remarkable for their attempt to make the interest of the piece culminate, as it approaches its conclusion, in the richest harmonies producible by the united voices of the entire *dramatis personae*.

GLUCK'S REFORMS.—The climax, however, of this eventful epoch was created by Christoph Willibold Gluck, whose clear judgment and unerring dramatic instinct was to exercise a powerful influence upon the progress of operatic art. An accomplished rather than a learned musician, Gluck rendered himself remarkable, less by any extraordinary display of technical skill than by his profound critical acumen; but it was not until he was well advanced in life that this great quality bore the fruit which rendered his name famous.

His first doubt as to the logical consistency of the orthodox Italian Opera seems to have been suggested by the unsatisfactory effect of a pasticcio, called 'Piramo e Tisbe,' which he produced in London in the year 1746. In this piece he contrived to introduce a large collection of airs, chosen from his best and most popular works; yet it wholly failed to fulfil his expectations, not because the music was in fault, but because it was altogether unsuited to the situations of the drama. The reader will, it is to be hoped, remember the grand principle which we assumed as our *point d'appui* at the opening of the present article—that the Lyric Drama could neither be pronounced inconsistent nor illogical so long as music was employed as a means of intensifying the expression of poetry, and therefore (as a natural consequence) of increasing the dramatic power of the scenes it depicted; and, theoretically, the position was never disputed. But as the art of composition, assisted by increased orchestral resources and an improved system

of vocalisation, threw off the trammels of its early stiffness and attained, step by step, the perfection of symmetrical form, composers were tempted to sacrifice the interest of the drama to that of the music which should have tended to illustrate it. The real force of the most striking situations was lost in the endeavour to fill them with captivating arias, calculated to gratify, at the same time, the popular taste and the vanity of individual singers. As the number of great singers multiplied, the abuse grew daily more and more antagonistic to the enunciation of æsthetic truth, until the opera was degraded into a mere collection of songs, connected together by recitatives which seemed designed more with the idea of providing breathing-time for the singer than that of developing the plot of the piece or rendering its details intelligible to the audience. Against this state of things, which Benedetto Marcello had already censured in no measured terms, Gluck's hatred of falsehood and incongruity in all that concerned his beloved art could not fail to rebel. He felt that the system was based, from first to last, on a fatal mistake; yet could not, for the time, suggest a remedy sufficiently potent to remove an evil so deeply rooted. His first operas were written in a style which he himself was rapidly learning to despise, but with which the general public were enchanted. It was not until 1762, sixteen years after his memorable visit to England, that he made any serious attempt to express his new ideas in a tangible form when he produced 'Orfeo' to the libretto of Calzabigi, written on principles totally opposed to those of Metastasio, with whom he had previously worked in concert. Here Gluck carried out his new theories, as far as he had succeeded in perfecting them; made his music everywhere subservient to the action of the drama; finished his airs without the stereotyped *Da capo*; introduced appropriate choruses and other concerted pieces; and never sacrificed the true rendering of a dramatic situation for the sake of attracting attention to his own powers as a composer, or of affording a popular singer the opportunity of displaying the flexibility of his voice. The result of this conscientious endeavour to carry out a reform which he believed to be not only desirable but absolutely necessary, was a work which, though its success at first seemed doubtful, eventually found a place in the repertory of every theatre in Europe. Even those most violently opposed to innovation felt compelled to applaud it; for its dramatic force was irresistible, and in flow of melody it was excelled by none of the best operas of the period. Encouraged by the triumph of his first attempt in a new style, he carried out his principles still further, in two other operas, 'Alceste' (1767), and 'Paride ed Elena' (1770), which were not

¹ See his *Presses' State of Music in France and Italy*, p. 316 et seq.

received at Vienna with very great favour. The critics of the day were not yet fully prepared for the amount of reform indicated in their construction. Metastasio and Hasse had reigned too long to be deposed in a moment; and Gluck met with so much opposition that he determined to make his next venture in Paris, where, in 1774, he brought out his first French opera, '*Iphigénie en Aulide*,' under the patronage of his old pupil Marie Antoinette. The result fully justified his reliance upon the critical discernment of an audience less easily influenced by the sensuous allurements of Italian art than by the declamatory powers of their own old favourites, Lully and his successor Rameau, who both regarded the perfection of accompanied recitative as a matter of far greater importance than a continuous flow of rhythmic melody.

It is necessary at this stage to consider the position of opera in France which had received a fresh stimulus by the genius of Rameau. With his originality of harmony and rhythm and effective orchestration, Rameau's position as absolute leader of French music was assured, but it was not surprising that the arrival of the Italian troupe of singers, '*Les Bouffons*,' as they were styled, in 1752, performing Italian intermezzi, should have taken Paris by storm. There can be no question that Opera Buffa was at this time a more living thing than Opera Seria, but even so the fact remains that with all the faults which had crept into the Italian style, it was at any rate first and foremost a lyric art, and it was on the purely vocal side that the French work showed its chief limitations. It is an interesting fact that Rousseau, who had just produced his '*Devin du village*,' should have taken the side of the Italians in the famous '*Guerre des Bouffons*,' since it was not long before the French school was to become prominent in the domain of Opéra-comique.

'*Iphigénie en Aulide*' thus came at an appropriate moment.

To Lully's rhetorical purity Gluck communicated an intensity of passion which, though it would have scandalised the courtiers of the Grand Monarque, to whom the voice of nature was an unknown language, was welcome enough to those of Louis XVI. He enriched his scenic effects with an orchestral background with which the most ambitious attempts of Rameau would bear no comparison whatever. In place of Lully's formal fugue, and Rameau's scarcely less inelastic orchestral prelude, he introduced an overture, intended—in his own words—'to prepare the audience for the action of the piece, and serve as a kind of argument to it.'

The new opera was received with acclamation, and the only mistake the Parisian critics made lay in supposing that the principles of its construction were new. They were not new—

and it is well that we should state this fact clearly, because we shall have occasion to refer to it again. The abstract ideal which in the year 1600 found its highest attainable expression in Peri's '*Euridice*' was not merely analogous to, but absolutely identical with, that which, in 1774, Gluck clothed in the outward form of '*Iphigénie en Aulide*.'

Gluck's personal triumph was complete, and his success was accepted as one for French opera itself as well. A reaction, however, soon set in. Piccinni had been invited to Paris in 1776, and with the assistance of Marmontel as his librettist, produced '*Roland*,' an opera in the Italian style, which excited general admiration. This, however, was not enough to satisfy the party spirit of a large body of malcontents, who, on the arrival of the Italian composer, divided the art-world of Paris into two rival factions—the *Gluckiste* and the *Piccinniste*—which fought with a bitterness of prejudice infinitely greater than that displayed by the followers of Handel and Bononcini in London. Meanwhile the opera director conceived the idea of inviting Piccinni and Gluck to write operas on the same subject, '*Iphigénie en Tauride*.' The text supplied to Piccinni was so poor that it had to be rewritten; consequently Gluck's version was ready first, and it was produced with immense success in 1779. The comparative failure of Piccinni's work two years later did not put an end to the pretensions of his party, and the feud was continued with undiminished violence on either side, until long after Gluck had retired into private life at Vienna. Although French composers, with the exception of Méhul, made no immediate attempt to carry out the principles laid down by Gluck as indispensable to the perfection of dramatic music, they were, after their early rejection at Vienna, unhesitatingly adopted in Germany, and have ever since formed one of the strongest characteristics of German opera. On the other hand, Piccinni's development of the finale enriched the Italian school with a means of effect of which it was not slow to avail itself, and which its composers did not cease to cherish with well-directed care. Of the work wrought by one of the greatest of these we shall now proceed to speak.

FROM CIMAROSA TO MOZART.—We have already explained that, after formal recognition of the Opera Buffa as a legitimate branch of art, it was cultivated with no less assiduity than serious opera, and that the greatest writers attained equal excellence in both styles. Of none can this be more truly said than of Cimarosa, to whose fertility of invention Italian opera is indebted for the nearest approach to perfection it had as yet been permitted to achieve at the hands of a native composer. The raciness which forms so conspicuous a feature in '*Il matrimonio segreto*' is not more

remarkable than the pathos in 'Gli Orazii e Curiazii.' In neither style do we find a trace of the stiffness which no previous composer was able entirely to shake off. Cimarosa's forms, too, were moulded with equal care in movements of all descriptions. It is, however, in his treatment of the *Pezzo concertato* that he differs most essentially from all his predecessors. Taking full advantage of the improvements introduced by Piccinni, he bestowed upon them an amount of attention which proved the high value he set upon them as elements of general effect and as a powerful means of carrying on the action of the piece, instead of interrupting it, as they had too frequently done in the works of earlier writers.

What Haydn could have done for this period had he devoted his serious attention to dramatic music, at any of the larger theatres, is of course mere matter of conjecture; though it seems impossible to believe that he would have rested satisfied with the prevailing Italian model. His 'Orfeo ed Euridice,' written for the King's Theatre in the Haymarket in 1791, but not then performed, in consequence of a change in the management, is remarkable rather for its supreme refinement than for dramatic power, a qualification which it would have been unreasonable to expect from a composer whose former operas had been written expressly for Prince Esterhazy's private theatre, and, though well adapted for performances on a small scale (several were written for the marionette theatre), were not, as he himself confessed, calculated to produce a good effect elsewhere. The scores of many of these were destroyed when the little theatre was burned down in 1779; but the original autograph of 'Armida,' first performed in 1783, is happily preserved in the R.C.M. (London). 'Orfeo ed Euridice' was printed at Leipzig in 1806; and a beautiful air from it, 'Il pensier sta negli oggetti,' will be found in the collection called 'Gemme d' antichità' (Ashdown & Parry), and will give a fair idea of the general style of the work. Zingarelli, Salieri and their Italian contemporaries, though undoubtedly possessing talents of a very high order, were so far inferior to Cimarosa, in all his greatest qualities, that he will always remain the typical writer of the age; and to his works alone can we look for the link which connects it with the next period, the most glorious one the lyric drama has ever known, since it witnessed the elevation both of the Italian and German schools to what, in its own way, we must needs regard as absolute perfection.

Though Mozart was born only seven years later than Cimarosa, and died many years before him, the phase of art he represents is infinitely more advanced than that we have just described. His sympathies, like Handel's, were entirely with the Italian school, while his natural feeling for form and his fine technique

enabled him to enlarge a thousandfold upon the ideas of Piccinni and Cimarosa, and produce symmetrical movements the complications of which had never entered into their minds as possible. Thus the sestets 'Sola, sola' and 'Riconosci in questo amplesso' surpass in fullness of design the grandest *dénouements* to be found in any other operas of the period; while the two concerted finales in 'Le nozze di Figaro' contain respectively nine and seven, and those in 'Don Giovanni' no less than eleven distinct movements, are all written with the most masterly skill, and linked together in such natural sequence that each appears as a component part of a single comprehensive idea, as homogeneous as that of a symphony or a concerto. Again, Mozart's command of the orchestra, as a medium of dramatic effect, stands unrivalled. He was accused by some of his contemporaries of overloading the voice with unmeaning accompaniments; but the charge was made in ignorance of the principle upon which he worked. Grétry, when asked by Napoleon to define the difference between the styles of Mozart and Cimarosa, replied, 'Sire, Cimarosa places his statue on the stage, and its pedestal in the orchestra: Mozart places the statue in the orchestra, and the pedestal on the stage.' The metaphor, though pretty enough, conveyed a palpable untruth. Neither Mozart nor Cimarosa reversed the relative positions of the statue and the pedestal; but Cimarosa used the latter simply as a means of support, whereas Mozart adorned it with the most exquisite and appropriate *bassirilevi*. His accompaniments are always made to intensify the expression of the voice, and to aid it in explaining its meaning; and he attains this end by a mode of treatment as varied as it is original. Though his system of instrumentation has served as the basis of every other method, without exception, used by later composers, his own combinations are marked by a freshness which never fails to make known their true authorship at the very first hearing.

THE GERMAN 'SINGSPIEL.'—We must now return to Germany. For long there had been in existence a light form of musical entertainment known as the SINGSPIEL (*q.v.*) and similar to the Intermezzo and Opera Buffa except for the fact that the action was carried on by means of spoken dialogue. It received a great stimulus at Leipzig in 1764 at the hands of J. Adam Hiller. J. F. Reichardt brought forward the 'Liederspiel'—an imitation of the French 'Vaudeville'—while a third form of musical drama was introduced at Gotha in 1774 by George Benda, who, in his 'Ariadne auf Naxos' and 'Medea,' assisted the effect of a spoken dialogue by means of a highly coloured orchestral accompaniment, carried on uninterruptedly throughout the piece after the manner

of what is now called a MELODRAMA (*q.v.*). Mozart heard some of Benda's productions at Mannheim in 1778, and, though he never adopted the method in any of his greater works, was delighted with its effect. Commissioned to write a work for the National opera, founded at Vienna in 1778 by the Emperor Joseph, he threw his best energies into the task, and produced in 1782 a masterpiece—'Die Entführung aus dem Serail'—which at once elevated the Singspiel to the level he had already won for the Italian opera, and secured it a recognised status as the embodiment of a conception peculiar to and truly worthy of the great Teutonic school. It was followed in 1786 by 'Der Schauspiel-direktor,' and in 1791 by 'Die Zauberflöte,' which was described as 'Singspiel' on the pianoforte score.

'FIDELIO.'—But the history of the next period will teach us that the peculiar phase of German art over which Mozart asserted such absolute supremacy was not the only one in which it was capable of manifesting itself, and that in point of fact the inconsistent form in which singing and speaking alternated could be used impressively for subjects of a serious kind, a matter this of considerable importance. Over Beethoven's early youth the stage seems to have exercised none of that fascination which so frequently monopolises the young composer's interest, and when, in the full maturity of his genius, he turned his attention to it, he does not appear to have been attracted, like Mozart, by the force of uncontrollable instinct, but rather to have arrived at perfection by the assistance of earnest thought and unremitting study. He wrote an opera simply because the manager of the Theater-an-der-Wien found it worth while to offer him an engagement for that purpose; but having undertaken the work, he threw his whole soul into it, laboured at it, as his sketch-books prove, incessantly, and identified himself so completely with its progress that he seems as much at home in it as he had ever previously been in a sonata or a symphony. The subject selected was Bouilly's 'Léonore, ou l'amour conjugal.' A German translation was made by Sonnleithner; and that Beethoven was satisfied with it, and was conscious of no inconsistency in the dialogue being spoken, must be inferred from the careful solicitude with which he strove, not only to give due effect to the various situations of the drama, but to bring out the sense of the text, even to its lightest word.

Great, however, as the music is in depth of feeling and dramatic expression, it did nothing towards solving the problem of maintaining musical interest from the rise of the curtain to its fall. The glowing intensity of musical expression was by its very force beginning to make more apparent the gulf between the formal aria and the *recitativo secco* and *stromer-*

tato so far as the latter was developed, or the dialogue, which was spoken. Still 'Fidelio,' with its fine qualities of formal construction and musical beauty, stands alone, and has necessarily become immortal; while the works of Paër, Stüssmayer and other composers who enjoyed a high degree of popularity in the earlier years of the 19th century, have been long since almost forgotten. The only other productions of the period that can for a moment be placed in competition with it are the later operas of Cherubini, who, after writing for many years in the light Neapolitan style, struck out, in 'Lodoiska' (1791), in a manner of his own strikingly original, and based, like Beethoven's, upon the principles laid down by Gluck, and presenting the curious anomaly of a German method cultivated by an Italian for the amusement of a Parisian audience. Beethoven is known to have spoken of Cherubini as 'the greatest of all living writers for the stage,' and to have admired 'Les Deux Journées' and 'Faniska' exceedingly; and it is worthy of remark that a strong analogy is observable between the libretti of 'Fidelio,' 'Faniska,' 'Les Deux Journées' and 'Lodoiska,' in each of which the leading incident is the rescue of an unjustly detained prisoner, through the devotion of a faithful friend whose life is risked, though not lost, in the labour of love necessary to effect the desired object.

OPÉRA-COMIQUE, 1800.—The French musicians at this time had been working chiefly in the slighter form of opera styled Opéra-comique.¹ After the retirement of Gluck, Piccini still enjoyed a certain term of popularity; but when the excitement of faction had settled down into the calm of sounder judgment, the field was really open to any native composer with talent enough to secure a fair hearing. At this juncture, following on Monsigny, Grétry and Méhul stepped forward to fill the gap. Both were men of more than ordinary talent, and the works of both became extremely popular, and held firm possession of the stage for many years. Grétry's style was light and pleasing, and exactly adapted to the taste of a Parisian audience. Méhul was an even more thorough musician, and aimed at higher things, striving conscientiously to carry out the principles of his instructor, Gluck, for whom he entertained the deepest reverence, and to whose counsels he was indebted for many of the qualities which tended to make his work deservedly famous. It was chiefly by the exertions of these two genial writers and their equally talented countryman and contemporary, Boieldieu, that the Opéra-comique was raised to the position of being one of the most popular branches of French dramatic art. The true Opéra-comique

¹ The lighter form of the *Faustville* so much more nearly resembles a play, with incidental songs, than a regular opera, that we do not think it necessary to include a notice of it in the present article. (See VAUDEVILLE.)

is essentially a French creation. Beginning with the aim of amusement through real wit, piquancy of plot, simplicity and clarity of the music, it gradually developed to a point where not only the spoken dialogue could be dispensed with, but humour too. It ultimately began to differ from 'Grand Opera' only in the nature of the subject, 'romantic' rather than 'heroic,' and in the music which, while it could be serious, was at any rate never solemn.

Meanwhile the production of Spontini's 'La Vestale' (1807) and 'Olympic' (1819), works oddly enough, like those of Gluck and Cherubini, from an alien composer, marked another stage in the progress of the French type of Grand Opera, a type which preserved the breadth of the classical style, gave the fullest opportunity for scenic display, and demanded subjects of an heroic or historical nature. The music was of course continuous, still, however, leaving unbridged the gulf between the recitative, *secco* or accompanied, and the lyrical moments, the arias, duets, scenas, etc.

WEBER AND THE ROMANTIC OPERA.—The next development of German Opera is that known among musical historians as the Romantic school—a form of art which, at the beginning of the 19th century, exercised a more decided influence upon the progress of dramatic music than any other recognised agent, and of which Weber's 'Der Freischütz' is the outstanding example. Weber's share in the development of opera lay in his faculty for musical characterisation¹ and in imaginative orchestral colouring, while in his scenas he came near to evolving a successful system of continuous music. It should be remembered, however, in this connexion that German opera at this time was no more than elaborate 'Singspiel'; in 'Euryanthe' only did Weber dispense altogether with spoken dialogue. The success of 'Der Freischütz' was of great importance in Germany and ultimately elsewhere, since it popularised 'romantic' subjects, while Weber's distinctly 'national' style of melody showed that 'classical' or formal beauty was not indispensable for the lyric stage.

Spohr's imaginative temperament and creative powers enabled him to cultivate romantic opera with success; while his unlimited command over what were then considered intricacies of the chromatic and enharmonic genera lent a peculiarly luscious and novel colouring to his method of treatment. His 'Faust' has now been thrust aside to make room for another work of the same name. 'Der Berggeist,' though less generally known, is, in some respects, a finer work. Mention should be made of the once popular 'Zemire und Azor' and 'Der Alchymist' and 'Der Kreuzfahrer' (1845). In 'Jessonda,' produced in 1823, and regarded by

himself as his best opera, Spohr² made an attempt, like Weber, to abolish spoken dialogue in favour of accompanied recitative; but found that popular feeling was too strong to listen to reason on a point concerning which it still held its ground, alike in Germany, France and England. In Italy alone had uninterrupted singing been always regarded as a *sine qua non* at the opera.

Of the romantic operas of Heinrich Marschner, 'Der Vampyr,' 'Der Templer und die Jüdin,' 'Hans Heiling' and 'Adolph von Nassau' were among the best works of the kind of their day. Of the eleven operas written by Ernst Theodor Hoffmann, and now preserved in MS. at Berlin, one only, 'Undine,' enthusiastically praised by Weber, seems to have produced any very strong impression.

ENGLISH OPERAS.—Opera in England languished after the death of Purcell, and even when something characteristic did arise there was no trace of any desire for, or appreciation of, the dramatic qualities which Purcell had imparted into his works. During the 18th century Italian opera, and Handel in particular, held the field until the remarkable success of 'The Beggar's Opera' turned the attention of English composers to a form of entertainment which was cultivated with great assiduity for a number of years. (See BALLAD OPERA.) Arne did, however, try to write an opera on the Italian model with recitatives in place of spoken dialogue and with a classical text (Metastasio's 'Artaserse'). Curiously enough, although the recitative was accepted in the oratorio, the critics condemned it in English opera, and there was no composer of sufficient power and originality to follow Arne's example and convince them of its possibility. It is not necessary to dwell long on this period, the work of men like the Linleys, Shield, Dibdin, Kelly, Storace and many others was no more than melodious; dramatic qualities are far to seek either in the music or the libretti.³

ROSSINI AND HIS CONTEMPORARIES.—Italian opera meanwhile was taking on a new lease of life with the coming of Rossini. He saw now the monotony of the *recitativo secco* could be avoided by a string quartet accompaniment as in 'Elisabetta' or the addition of wind instruments in 'Otello.' Indeed, his instrumentation showed real mastery and originality. Vocally, however, the operas for the most part ended in once again disturbing the balance between the more display of effective ornamentation and musical and dramatic expression. While 'Barbiere di Siviglia' (1816) remains a masterpiece of the Opera Buffa school, the serious operas have lost their hold on the public chiefly through their lack of truth and depth of

¹ See three articles on Spohr's operas, by F. Corder, in the *Mus. T.* for 1884, pp. 385, 444 and 508.

² The use of the *Leitmotive* throughout 'Der Freischütz' seems indeed to entitle Weber to the honour of its invention, notwithstanding the suggestive notes sung by the statue in 'Don Giovanni.'

³ For a searching analysis of the latter the reader may be referred to Cecil Forsyth's *Music and Nationalism*.

feeling and homogeneity. The chief of Rossini's contemporaries and successors were Bellini and Donizetti. In the work of these men (and of the earlier operas of Verdi as well) the Italian style began to change in that the line of the melodies lost its former elegance and classic formalism, becoming more direct and 'popular' in its appeal. In other respects the music shows no departure from the accepted models of the day, and in fact, during the greater part of the 19th century, Italian opera was structurally at a standstill.

Returning to Paris where, in 1829, Rossini's 'Guillaume Tell' had made a great impression by reason of its breadth of style, wealth of melody and full measure of scenic display, French grand opera was to be still further exploited by yet another alien composer and Rossini's fame to be eclipsed by that of Meyerbeer. Alive to what Weber had achieved in 'Der Freischütz' and fully aware of the claims of the singer—indeed Rossini's example could not be ignored—Meyerbeer succeeded in 'Robert le Diable,' 'Les Huguenots,' 'Le Prophète' and 'L'Africaine' in continuing and carrying further the broad design of the French type. As a musician, however, he had not enough strength to avoid conventionality, and the lack of uniformity of style was bound to end in a reaction after the enormous successes which are said to have made the fortunes of the Paris Opéra. His chief contemporary was Halévy, whose 'La Juive' kept the stage for many years. Berlioz's operas contributed little or nothing to the development of the form. Auber continued the traditions of the opéra-comique which in its still lighter form 'opéra-bouffe' culminated in the work of Jules Offenbach. Meanwhile Gounod created a fresh point of view in grand opera with his 'Faust,' perhaps the most successful opera ever written. Here is crystallised a vein of sentimental expression which was quite novel at the time and which succeeded in giving fresh life to the standardised set forms in which they appear. Structurally, 'Faust' may not be of great importance, but it undoubtedly has exerted considerable influence upon French music in spite of its greatest weakness, the want of a complete unity of style. Thomas's 'Mignon' and the earlier works of Saint-Saëns and Massenet belong to this particular school.

VERDI was a far stronger personality than Donizetti and Bellini. There is a vigour and energy in all that he wrote coupled with a power of self-development which gradually led to remarkable results. He is to be credited also with an advance in the writing of *musica caratteristica* upon which latter-day tendencies so greatly depend. He was to some extent influenced by Meyerbeer, as in his 'Les Vêpres Siciliennes' and again 'Don Carlos,' while in addition to his own natural growth there is a

breadth of treatment in 'Aida,' the culminating point of his earlier style, which is perhaps also to be in part attributed to a like influence. 'Aida' is marked by the important part the orchestra plays and by the continuity of the musical structure tending towards the gradual elimination of the set aria. For a time it seemed that the Wagnerian movement, shortly to be mentioned, was going to discredit the works of composers trained in the old tradition. But it is now seen that this is by no means the case, and we remain face to face with the *point d'appui* from which this article started, the use of music to intensify the dramatic action. It is only the means whereby this intensification is effected that have gradually changed, and then only, if we go to the root of the matter, from simplicity to varying degrees of complexity. What has not changed is the power of song to enchain the hearer, and thus, in looking back upon what has been so far recorded, there is no difficulty in understanding why 'Figaro,' 'Orfeo,' 'Der Freischütz,' 'Rigoletto,' 'Faust,' etc., can still hold their own alongside of works which structurally are of a vastly different and more complex nature. And here, perhaps, is the place to emphasise the unvarying strength of the Italian school of opera in that, although it has often been extravagant, the instinct to rely on the voice for dramatic expression is unquestionably sound.

WAGNER.—The secret of Wagner's success lay really in his development of a system of musical composition which enabled him to build up long scenes of narration and dialogue and in a far more interesting and compelling way than had been possible with reliance upon *recitativo secco* and *recitativo stromentato* in their stereotyped forms. These passages lead up to the moments of pure lyricism which correspond to the aria and the formal movement. The effect is analogous to that of a symphonic movement where the interest is both continuous and cumulative. Of far less importance, although they have perhaps seemed the most in the public eye, are the *Leitmotiv* and the instrumentation. These and the polyphony are only the means, and the great beauty and power of all three tend to obscure what is really the important fact that the aria, disguised maybe, still remains. The development of a simple ballad into the 'durch-componirt' type of song is akin to Wagner's treatment of the 'lyrical moment.' (See, however, the article WAGNER for fuller details of his aims and methods.) It is sufficient here to state that after the Weberesque 'Flying Dutchman,' 'Tannhäuser' and 'Lohengrin,' in which there are already many suggestions of what was to come, he acquired the technique whereby a complete unity of style in the writing was possible from the beginning to end of each act and of each opera. No other composer has shown so complete a

mastery of variety of expression, and 'Tristan,' 'Parsifal,' 'Der Ring' and 'Die Meistersinger' have their own uniformity and musical character, such as might only have been expected from the pens of four different writers.

Wagner's influence was of course immense, and in a large degree due to his exceptional command over the orchestra. By the end of the 19th century, however, this instrumental glamour fell back into its proper place, while in point of fact the earlier diatribes against the disproportion between voice and orchestra were felt in some measure to be justified by many people. Moreover, the extreme length of the operas was generally recognised. For ordinary purposes the orchestration is out of proportion and the prolixity is such that the operas are generally 'cut.' It is unfortunate that we cannot always hear them under the ideal conditions of the 'festival' as originally intended and with a sunken orchestra.

END OF THE 19TH CENTURY

GERMANY.—Wagner's influence was naturally strongest in Germany, and the immediate result was a quantity of music in which the more obvious characteristics of his style were freely imitated. Only one writer, however, really succeeded in probing deeper into the method and producing something personal, and that only in a single work. Humperdinck's 'Hansel und Gretel' is a singularly successful example of the Wagnerian polyphony and orchestral style, but the use of folk-tune and melody akin to it gives it a character and charm of its own. Strauss's operas are less Wagnerian in texture and in thematic combination; he has followed up the disproportion between voice and orchestra, but on the other hand has not neglected the 'lyrical moment'; indeed in the latter respect there is something approaching to a keener appreciation of what the Italians have never forgotten, the paramount importance in stage works of the vocal line, than has been shown by many of his contemporaries.

ITALY.—To return to the Italian school, reference must be made to Verdi's friendship and collaboration with Boito, whose 'Mefistofele' (1866) contributed much towards the advance of Italian opera. There is indeed no comparison musically between the two, but Boito, who had a share of the reforming element in his mentality, was able to exert some influence upon Verdi, as was shown in 'Otello' and 'Falstaff' of which he wrote the librettos. Verdi remained really unaffected by Wagner except incidentally; he was too original a creator for one thing and, for another, his operatic style was too fixed for his technique to change materially. Indeed, except for the instrumental skill and variety of his immediate successors and the frank adoption of the *Leitmotiv* as a significant part of the musical struc-

ture, the Italian style has developed along lines which are not Wagnerian in the contrapuntal, polyphonic and symphonic sense. The aria in a more or less disguised form holds its place firmly in the operas of the later writers. Mascagni sprang into fame with his 'Cavalleria rusticana' (1890) and Leoncavallo with 'Pagliacci' (1892), both on the same lines of crude, direct melodrama. Puccini's far greater musicianship enabled him to construct scenes of stronger and more musically sustained interest. He relied largely upon the reiteration of significant melodic phrases and generally, as in 'La Bohème' (1896), 'Tosca' (1900) and 'Madama Butterfly' (1904), to name the three universally popular examples of his work, maintained a uniform and homogeneous style. He occasionally leaves the aria and the concerted finale quite clearly defined so that they can be removed as complete wholes from the context. Giordano in 'Andrea Chenier' (1896), 'Fedora' (1898) and 'Siberia' (1904) has shown dramatic power and that feeling for theatrical effect which seem to be the special heritage of Italian musicians. Among other Italian composers who have won some success for a time are Franchetti, Alèa, Tasca and Spinelli. Wolff-Ferrari's representative work belongs chronologically to a later period than that covered by this review.

FRANCE.—French composers were long in seriously responding to Wagner's influence. After 'Faust' and 'Mignon' (A. Thomas), Bizet's 'Carmen,' 1875, was the most original and successful opera; but here the form is that of opéra-comique with a certain amount of spoken dialogue, and while there are some examples of the use of the *Leitmotiv* the ordinary aria and concerted numbers form the basis of the musical structure. Ernest Reyer's 'Sigurd' (1884), however, bore witness to the growing influence, and Massenet's 'Esclarmonde' (1889) was the most serious attempt that had till then been made to graft the *Leitmotiv* system upon the stock of French opera. Since 'Esclarmonde' Massenet made few attempts to follow up his early excursions upon Wagnerian paths, and his later operas show a growing tendency to fall back upon the slighter form of opéra-comique, though he never altogether relinquished his tendency to trifle with leading motives. Alfred Bruneau in 'Le Rêve' (1891) announced himself as a staunch adherent of the Wagnerian system, and his later works, 'L'Attaque du moulin' (1893), 'Messidor' (1897), 'L'Ouragan' (1901) and 'L'Enfant Roi' (1905), though less uncompromising in style than 'Le Rêve,' are no less saturated with Wagnerian ideals. Vincent d'Indy is another staunch Wagnerian, and his 'Fervaal' (1897) and 'L'Etranger' (1903) are among the most important works produced by French musicians in which Wagner's system is fully accepted.

César Franck's two remarkable operas, 'Hulda' and 'Ghisèle,' both produced after the composer's death in 1890, are Wagnerian in their remarkable command of polyphony rather than in their adherence to the system of leading motives, and in the 'Louise' (1900) and 'Julien' of Charpentier the Wagnerian methods are only employed in a modified manner. Debussy's 'Pelléas et Mélisande' (1902) stands rather in a category of its own. Debussy here sought for a closer union between voice, orchestra and action than he considered the symphonic style of Wagner made possible, which was in effect to say that Wagner did not go far enough, that often his symphonic methods delayed the action just as did the formal aria which it superseded. Debussy therefore, while making great use of the *Leitmotiv* and of the orchestra, would not allow the music as music to obtrude. It would seem that the extreme limit has been reached in this imaginative work of a freely moving musical commentary on the action, and to the fact that the opportunities are so few for dramatic expression through the means of pure singing, which, of necessity, brings with it some form of theoretical conflict with reality, must be assigned the reason why it cannot be the foundation of a new school or cannot appeal to the general opera public at large.

ENGLAND.—During the earlier part of the 19th century English opera showed few changes. Sir Henry Bishop was an accomplished musician, but made no attempt to improve upon the form which, in his hands as in those of his predecessors, was still no more than a play diversified by songs, duets and choruses. Such works as 'The Knight of Snowdoun' (1811), 'The Miller and his Men' (1813) or 'Guy Mannering' (1816) could hardly have more than an ephemeral success. There was a grave lack of energy in the right direction at this epoch. Charles Horn, a composer with melodic gifts, could do no more than let the general character of the piece remain as he found it. Balfe, who won his first success with 'The Siege of Rochelle' in 1835, carried things a little further besides writing in 1843 the most widely known opera in the English language, 'The Bohemian Girl.' Balfe's style is simple, but he had plenty of melody, and by a careful study of the *opéra-comique*, he certainly raised the standard of the pieces he wrote, so far as their general structure was concerned. Similar work was done by Rooke, J. Barnett, Lavern, Wallace and E. F. Loder. Benedict and Macfarren achieved a higher artistic level, though, with the exception of the former's 'Lily of Killarney,' their operas have not survived. The frequent opportunities afforded for the production of operas during the century were increased by the formation of the Carl Rosa Company in 1875. It is neither possible nor necessary here to give anything approaching

a complete list of the various operatic ventures which were embarked on or of the works produced down to the end of the century. It has been often said that the continual performance of alien opera in England has militated against the production of successful native work. There would perhaps be truth in this if production had been denied to the native writer. Such, however, has been far from the case. Failure to produce successful English opera can only be explained by the lack of sufficient musico-dramatic talent. Nevertheless the work done by A. Goring Thomas, Mackenzie, Stanford and Ethel Smyth, who by 1901 was only known by her 'Der Wald,' showed an increasing command over the technical requirements of opera and a closer approximation to the advancing tendencies of the day. Moreover, a style of expression less definitely founded upon alien models has been gradually becoming apparent, without which a native school of either opera-writing or opera-performance is an impossibility.

SLAVONIC OPERA.—The history of opera in certain other countries must now be considered. Wherever a really national school of opera has been founded its rise may be dated from the time when the general feeling of society in each country succeeded in resisting the spell of a foreign influence. But it could only do this when something worthy was found to take its place. In the 18th century Italian opera ruled Europe with the sole exception of France. Germany was the first to emancipate herself, and her example was followed by other countries, notably Bohemia (Czechoslovakia) and Russia. The former distinctly national school was founded by Smetana, who became chief conductor of the new National Theatre in Prague in 1866, in which year his most famous opera, 'Prodaná nevěsta' (The Bartered Bride), was produced. The success of this and of other works naturally opened the way for his immediate successor and disciple Dvořák, whose first opera, 'Kral a Uhlir' (King and Collier), was produced at Prague in 1874. Karel Kovarovic, chief conductor of the National Opera, Prague, from 1900 till his death, produced his first opera in 1882. The work of these men has achieved popularity, although very few have been performed in other countries.

In Russia national opera was practically founded by Glinka with his 'A Life for the Tsar' (1836) and 'Russian and Lioudmilla' (1842), and continued by Dargomizsky, who in 'The Roussalka' (1856) and 'The Stone Guest' (performed posthumously 1872) sought to free the style from the Italian influence. Moussorgsky in 'Boris Godounov' (1874) and 'Khovanschina' leaned more to the realistic side than did Borodin in 'Prince Igor' or Rimsky-Korsakov in his various operas, while Tchaikovsky's broad melodic gifts and his greater susceptibility to Western ideals made his work

more national in a personal than a general sense. But these composers drew largely upon the musical idiom of their folk-music and upon Russian literature, especially the poems of Poushkin, for their subjects. For fuller details in all cases the reader may be referred to the separate articles on the various composers named.

The above article is a revision of that by w. s. r., incorporating material by R. A. S. and with additions by N. C. G.

OPÉRA BOUFFE, a French comic opera, of exceedingly light character, and constructed on too trivial a scale to entitle it to rank as an opéra-comique. (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

w. s. r.

OPERA BUFFA, an Italian opera, of light and playful character, in which the dialogue is carried on in *recitativo secco*, interposed between the airs, duets and choruses, which form the chief attraction of the piece. The subject of the Opera Buffa is always more or less comic, and not unfrequently extravagantly so. Fine examples are: Cimarosa's 'Il matrimonio segreto,' Mozart's 'Così fan tutte,' and Rossini's 'Il barbiere di Siviglia.' (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

w. s. r.

OPÉRA-COMIQUE, a designation applied to a form of French opera originally akin to Opera Buffa except that the dialogue was always spoken. (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

w. s. r.

OPÉRA-COMIQUE, see PARIS, Vol. IV. p. 46.

OPERETTA, a little opera, generally of a buffo character, too short to furnish an evening's amusement, but useful as an afterpiece or Intermezzo. We can scarcely point out more charming examples of the style than Mozart's 'Schauspieldirektor' and Rossini's 'L'inganno felice.' Both these little masterpieces are in one act, and this condition is really an essential characteristic of the Operetta; in England the term has been loosely applied to a work better described as COMIC OPERA (*q.v.*), which has no time limitation.

In Italy the dialogue of the Operetta is always carried on in *recitativo secco*. In England, Germany and France it is spoken. w. s. r.

OPHICLEIDE (Eng. and Ger.; Fr. *basse d'harmonie*). A barbarous name, compounded of the Greek words for snake and door-key, which was given to an improvement on the serpent and Russian bassoon, or bass-horn.

The invention of this instrument is attributed by Pétis to Fricot, a French musician settled in London about the year 1790. He states, moreover, that Fricot published in London in the year 1800 a description and method of playing it, under the title of *A Complete Scale*

and Gammut of the Bass-horn, a new instrument, invented by M. Fricot, and manufactured by J. Astor. It seems, however, that a musician of the church of St. Peter, at Lille, by name Regibo, had already, in 1780, made improvements on the serpent by adding several keys and modifying the bore, so that Regibo may in fact be considered as the inventor even of the so-called Russian bassoon, 'which returned from the north of Europe about thirty years later.' It seems agreed on all hands that the French were made acquainted with this instrument by the bands of the allied sovereigns when the latter occupied Paris in 1815. In this year its discovery is claimed by Halary of Paris, who patented it in 1821, and whose successor is said to possess the original model, with seven keys and a scale of twenty-seven notes. Labbaye added new keys to it, and the number was raised to eleven or twelve.

The ophicleide, like the serpent and bass-horn which it superseded, has become obsolete. The period of its rise and decline lies within the 19th century, its decline corresponding in time with the improvement of the various bass brass valved instruments; and as it may be regarded as the final development and latest survival of cup-blown instruments with side-holes (see WIND INSTRUMENTS), a general view of the relationship between the ophicleide and its immediate predecessors may be conveniently given here.

From the family of CORNETT (*zinke*) came the serpent, an instrument of large calibre, descending to the 8-foot C, and originally having six or sometimes seven finger-holes, but no keys. The serpentine form was given to the instrument to bring the finger-holes within convenient reach, but the fundamental defect was that any holes that could be covered by the fingers were necessarily far too small to allow of free ventage and good intonation. The gradual addition of keys improved the instrument, but so long as the finger-holes remained no really good scale was possible. The 'bass-horn,' or 'basson russe,' was essentially a serpent changed in form, so as, by being doubled upon itself, to have some resemblance to the bassoon, but the weakness due to the size and position of the finger-holes remained; beyond convenience in handling, the improvement upon the serpent was therefore not great. (See PLATE LXXIV. No. 8.)

To Halary of Paris appears to be due the credit of dispensing with finger-holes, and of so disposing large side-holes covered with keys as to obtain a chromatic scale with facility, both in the pedal and upper octaves. The 'bass-horn,' or 'basson russe,' thus became the ophicleide, an instrument an octave lower than the 'key' or 'Kent bugle' (and of the same family), to which similar key-work had already been applied. (See KLAPPENHORN.)

César Franck's two remarkable operas, 'Hulda' and 'Ghisèle,' both produced after the composer's death in 1890, are Wagnerian in their remarkable command of polyphony rather than in their adherence to the system of leading motives, and in the 'Louise' (1900) and 'Julien' of Charpentier the Wagnerian methods are only employed in a modified manner. Debussy's 'Pelléas et Mélisande' (1902) stands rather in a category of its own. Debussy here sought for a closer union between voice, orchestra and action than he considered the symphonic style of Wagner made possible, which was in effect to say that Wagner did not go far enough, that often his symphonic methods delayed the action just as did the formal aria which it superseded. Debussy therefore, while making great use of the *Leitmotiv* and of the orchestra, would not allow the music as music to obtrude. It would seem that the extreme limit has been reached in this imaginative work of a freely moving musical commentary on the action, and to the fact that the opportunities are so few for dramatic expression through the means of pure singing, which, of necessity, brings with it some form of theoretical conflict with reality, must be assigned the reason why it cannot be the foundation of a new school or cannot appeal to the general opera public at large.

ENGLAND.—During the earlier part of the 19th century English opera showed few changes. Sir Henry Bishop was an accomplished musician, but made no attempt to improve upon the form which, in his hands as in those of his predecessors, was still no more than a play diversified by songs, duets and choruses. Such works as 'The Knight of Snowdoun' (1811), 'The Miller and his Men' (1813) or 'Guy Mannering' (1816) could hardly have more than an ephemeral success. There was a grave lack of energy in the right direction at this epoch. Charles Horn, a composer with melodic gifts, could do no more than let the general character of the piece remain as he found it. Balfe, who won his first success with 'The Siege of Rochelle' in 1835, carried things a little further besides writing in 1843 the most widely known opera in the English language, 'The Bohemian Girl.' Balfe's style is simple, but he had plenty of melody, and by a careful study of the *opéra-comique*, he certainly raised the standard of the pieces he wrote, so far as their general structure was concerned. Similar work was done by Rooke, J. Barnett, Lavern, Wallace and E. F. Loder. Benedict and Macfarren achieved a higher artistic level, though, with the exception of the former's 'Lily of Killarney,' their operas have not survived. The frequent opportunities afforded for the production of operas during the century were increased by the formation of the Carl Rosa Company in 1875. It is neither possible nor necessary here to give anything approaching

a complete list of the various operatic ventures which were embarked on or of the works produced down to the end of the century. It has been often said that the continual performance of alien opera in England has militated against the production of successful native work. There would perhaps be truth in this if production had been denied to the native writer. Such, however, has been far from the case. Failure to produce successful English opera can only be explained by the lack of sufficient musico-dramatic talent. Nevertheless the work done by A. Goring Thomas, Mackenzie, Stanford and Ethel Smyth, who by 1901 was only known by her 'Der Wald,' showed an increasing command over the technical requirements of opera and a closer approximation to the advancing tendencies of the day. Moreover, a style of expression less definitely founded upon alien models has been gradually becoming apparent, without which a native school of either opera-writing or opera-performance is an impossibility.

SLAVONIC OPERA.—The history of opera in certain other countries must now be considered. Wherever a really national school of opera has been founded its rise may be dated from the time when the general feeling of society in each country succeeded in resisting the spell of a foreign influence. But it could only do this when something worthy was found to take its place. In the 18th century Italian opera ruled Europe with the sole exception of France. Germany was the first to emancipate herself, and her example was followed by other countries, notably Bohemia (Czechoslovakia) and Russia. The former distinctly national school was founded by Smetana, who became chief conductor of the new National Theatre in Prague in 1866, in which year his most famous opera, 'Prodaná nevěsta' (The Bartered Bride), was produced. The success of this and of other works naturally opened the way for his immediate successor and disciple Dvořák, whose first opera, 'Kral a Uhlir' (King and Collier), was produced at Prague in 1874. Karel Kovarovic, chief conductor of the National Opera, Prague, from 1900 till his death, produced his first opera in 1882. The work of these men has achieved popularity, although very few have been performed in other countries.

In Russia national opera was practically founded by Glinka with his 'A Life for the Tsar' (1836) and 'Russlan and Lioudmilla' (1842), and continued by Dargomijsky, who in 'The Roussalka' (1856) and 'The Stone Guest' (performed posthumously 1872) sought to free the style from the Italian influence. Moussorgsky in 'Boris Godounov' (1874) and 'Khovanschina' leaned more to the realistic side than did Borodin in 'Prince Igor' or Rimsky-Korsakov in his various operas, while Tchaikovsky's broad melodic gifts and his greater susceptibility to Western ideals made his work

more national in a personal than a general sense. But these composers drew largely upon the musical idiom of their folk-music and upon Russian literature, especially the poems of Poushkin, for their subjects. For fuller details in all cases the reader may be referred to the separate articles on the various composers named.

The above article is a revision of that by W. S. R., incorporating material by R. A. S. and with additions by N. C. G.

OPÉRA BOUFFE, a French comic opera, of exceedingly light character, and constructed on too trivial a scale to entitle it to rank as an opéra-comique. (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

W. S. R.

OPERA BUFFA, an Italian opera, of light and playful character, in which the dialogue is carried on in *recitativo secco*, interposed between the airs, duets and choruses, which form the chief attraction of the piece. The subject of the Opera Buffa is always more or less comic, and not unfrequently extravagantly so. Fine examples are: Cimarosa's 'Il matrimonio segreto,' Mozart's 'Così fan tutte,' and Rossini's 'Il barbiere di Siviglia.' (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

W. S. R.

OPÉRA-COMIQUE, a designation applied to a form of French opera originally akin to Opera Buffa except that the dialogue was always spoken. (See BALLAD OPERA; COMIC OPERA; INTERMEZZO; OPERA; SINGSPIEL.)

W. S. R.

OPÉRA-COMIQUE, see PARIS, Vol. IV. p. 46.

OPERETTA, a little opera, generally of a buffo character, too short to furnish an evening's amusement, but useful as an afterpiece or Intermezzo. We can scarcely point out more charming examples of the style than Mozart's 'Schauspieldirektor' and Rossini's 'L'inganno felice.' Both these little masterpieces are in one act, and this condition is really an essential characteristic of the Operetta; in England the term has been loosely applied to a work better described as COMIC OPERA (*q.v.*), which has no time limitation.

In Italy the dialogue of the Operetta is always carried on in *recitativo secco*. In England, Germany and France it is spoken. W. S. R.

OPHICLEIDE (Eng. and Ger.; Fr. *basse d'harmonie*). A barbarous name, compounded of the Greek words for snake and door-key, which was given to an improvement on the serpent and Russian bassoon, or bass-horn.

The invention of this instrument is attributed by Fétis to Frichot, a French musician settled in London about the year 1790. He states, moreover, that Frichot published in London in the year 1800 a description and method of playing it, under the title of *A Complete Scale*

and *Gammut of the Bass-horn, a new instrument, invented by M. Frichot, and manufactured by J. Astor*. It seems, however, that a musician of the church of St. Peter, at Lille, by name Regibo, had already, in 1780, made improvements on the serpent by adding several keys and modifying the bore, so that Regibo may in fact be considered as the inventor even of the so-called Russian bassoon, 'which returned from the north of Europe about thirty years later.' It seems agreed on all hands that the French were made acquainted with this instrument by the bands of the allied sovereigns when the latter occupied Paris in 1815. In this year its discovery is claimed by Halary of Paris, who patented it in 1821, and whose successor is said to possess the original model, with seven keys and a scale of twenty-seven notes. Labbaye added new keys to it, and the number was raised to eleven or twelve.

The ophicleide, like the serpent and bass-horn which it superseded, has become obsolete. The period of its rise and decline lies within the 19th century, its decline corresponding in time with the improvement of the various bass brass valved instruments; and as it may be regarded as the final development and latest survival of cup-blown instruments with side-holes (see WIND INSTRUMENTS), a general view of the relationship between the ophicleide and its immediate predecessors may be conveniently given here.

From the family of CORNETT (*zinke*) came the serpent, an instrument of large calibre, descending to the 8-foot C, and originally having six or sometimes seven finger-holes, but no keys. The serpentine form was given to the instrument to bring the finger-holes within convenient reach, but the fundamental defect was that any holes that could be covered by the fingers were necessarily far too small to allow of free ventage and good intonation. The gradual addition of keys improved the instrument, but so long as the finger-holes remained no really good scale was possible. The 'bass-horn,' or 'basson russe,' was essentially a serpent changed in form, so as, by being doubled upon itself, to have some resemblance to the bassoon, but the weakness due to the size and position of the finger-holes remained; beyond convenience in handling, the improvement upon the serpent was therefore not great. (See PLATE LXXIV. No. 8.)

To Halary of Paris appears to be due the credit of dispensing with finger-holes, and of so disposing large side-holes covered with keys as to obtain a chromatic scale with facility, both in the pedal and upper octaves. The 'bass-horn,' or 'basson russe,' thus became the ophicleide, an instrument an octave lower than the 'key' or 'Kent bugle' (and of the same family), to which similar key-work had already been applied. (See KLAPPENHORN.)

There is, however, this distinction between the two instruments, that whereas on the key-bugle the pedal octave *c* to *c'* is not used, and the key-work has therefore only to give the chromatic scale between *c'* and *g'*, on the ophicleide the pedal octave is used, and the key-work had to be schemed to give semitones from *C* to *c*.

The instrument as finally established had eleven and in some cases twelve keys, and was blown with a large cup mouthpiece of metal or ivory, very similar to those of the bass-trombone and euphonium. Some of the early specimens were made chiefly of wood, like their predecessors the serpents, and were termed *serpenteleides*, but latterly brass was almost universally used for the whole instrument.

The ophicleide being practically a conical tube possesses the usual harmonic series of all brass instruments, and its open notes are these—*C, c, g, c', e', g', b_b', c''*; but the last two were usually obtained as harmonics of lower notes produced from side-holes. The *C* speaks through a side-hole covered by an open-standing key, and the bell of the instrument is prolonged sufficiently to give *B₂*, when this open-standing key is closed by the thumb of the left hand. The series as above given then becomes *B₂, B₂, f₂, b₂*, etc., and in like manner the different effective lengths of the tube, as determined by the successive opening of the other ten keys, yield primes from *C₂* to *A₂*, each of which can give its series of harmonics by changes of lip-pressure.

A compass is thus obtained of thirty-eight semitones, or a little over three octaves—from *B₂* to *c''*—but the upper limit is indeterminate, as on nearly all wind instruments. It will be obvious that from the overlapping and coincidence of the various harmonic series many alternative methods of producing the same note with slight enharmonic changes are open to a good player.

The tone of the ophicleide is, from its difference of scale and of material, less tender and veiled than that of its predecessor the serpent, but on the other hand it has greater compass and equality than that rather primitive contrivance.

The ophicleides used in the orchestra were usually made in *C*, but in military bands they were used in *B₂*, with *A₂* for the lowest note. Alto or tenor instruments in *F* or *E_b* were sometimes made, and also contrabass ophicleides in *F* or *E_b*, an octave lower than the tenors. One such was used at the Birmingham Festival of 1834.

The complete falling into desuetude of this instrument, notwithstanding its fairly good intonation and distinctive tone-quality, must be partly attributed to this very distinctiveness, a peculiar 'hollowness' which did not blend well with other instruments; and partly to

the improvement in brass valve-instruments, with their much more simple and convenient fingering and richer tone-quality.

The ophicleide was first used in the opera in the production of Spontini's 'Olympic' in 1819. Ophicleide parts are now played on the tuba, although those in Berlioz's 'Faust' have been allotted to two trombones.

D. J. B.

OPUS, OPUS-NUMBER, OPERA, ŒUVRE. A method of numbering musical compositions in the order of their publication, using the Latin word *opus* (work), appears first, though rather spasmodically, in the 17th century; it began to come into general use in the time of Mozart, but was not fully established until Beethoven's time, the numbering not being carried out to all the published works of the former master. No rule is observed as regards the size of an *opus*; for instance, Beethoven's op. 1 consists of three pianoforte trios, while Schubert's op. 1 is only the song 'Erk König.' The opus-number has nothing to do necessarily with the date of composition, but only with that of the publication; thus some early works, both of Schubert and Mendelssohn, were published (posthumously) with very late opus-numbers. On the other hand, many composers make a practice of assigning opus-numbers to their works on completion and quite irrespective of publication.

M.; addn. c.

ORACOLO, L', opera in one act; text adapted by Camillo Zanon from C. B. Fernald's play, *The Cat and the Cherub*; music by Franco Leoni. Produced Covent Garden, June 28, 1905; New York, Metropolitan Opera House, Feb. 4, 1915.

ORATORIO (Lat. *oratorium*; Ital. *dramma sacro per musica, oratorio*; Ger. *Oratorium*). A dramatic poem, usually of a sacred character, sung throughout by solo voices and chorus, to the accompaniment of a full orchestra, but—at least in modern times—without the assistance of scenery, dresses or action.

I. ANCIENT ORATORIO

It is impossible to say when, where or by whom the first dramatic representation of a scene from Holy Writ was attempted. One of the oldest examples of which we have any certain record is the 'Festum asinorum,' celebrated at Beauvais and Sens, in the 12th century, and long remembered in connexion with a famous carol called the 'Prose de l'âne.' But it was not only in France that such representations found favour in the sight of the people. William FitzStephen mentions a Monk of Canterbury who wrote many Miracle-Plays during the reign of King Henry II., and died in 1191; and we know, from other sources, that an English audience was always ready to greet entertainments of this description with a hearty welcome. The clergy also took them under their especial protection, and retained

their interest in them for so long a period, that, in 1378 the choristers of St. Paul's performed them regularly, under careful ecclesiastical superintendence. In other countries they attained an equal degree of popularity, but at a somewhat later date. In Italy, for instance, we hear of a 'Commedia spirituale' performed for the first time at Padua in 1243, and another at Friuli in 1298; while 'Geistliche Schauspiele' first became common in Germany and Bohemia about the year 1322.

The subjects of these primitive pieces were chosen for the purpose of illustrating certain incidents selected from the history of the Old and New Testaments, the lives of celebrated Saints, or the meaning of allegorical conceits, intended to enforce important lessons in Religion and Morality. For instance, 'Il Conversione di S. Paolo' was sung in Rome in 1440, and 'Abram et Isaac suo figliuolo' at Florence in 1449. Traces are also found of 'Abel e Caino' (1554), 'Sansone' (1554), 'Abram et Sara' (1556), 'Il figliuolo prodigo' (1565), an allegorical piece, called 'La commedia spirituale dell' anima,' printed at Siena, without date 'and not to be confounded with a very interesting work bearing a somewhat similar title, to be mentioned presently), and many different settings of the history of the Passion of our Lord. This last was always a very favourite subject; and the music adapted to it, combining some of the more prominent characteristics of ecclesiastical plain-song with the freedom of the secular chanson, was certainly not wanting in solemnity. Particular care was always taken with that part of the sacred narrative which described the grief of Our Lady at the crucifixion; and we find frequent instances of the 'Lamentation' of Mary, or of S. Mary Magdalene, or of The Three Marias.

No great improvement seems to have been made in the style of these performances after the 14th century; indeed, so many abuses crept into them that they were frequently prohibited by ecclesiastical authority. But the principle upon which they were founded still remained untouched, and the general opinion seemed to be rather in favour of their reformation than their absolute discontinuance. S. Philip Neri, the founder of the congregation of Oratorians, thought very highly of them as a means of instruction, and warmly encouraged the cultivation of sacred music of all kinds. On certain evenings in the week his sermons were preceded and followed either by a selection of popular hymns (see LAUDI SPIRITUALI), or by the dramatic rendering of a scene from Scripture history, adapted to the comprehension of an audience consisting chiefly of Roman youths of the humbler classes, the discourses being delivered between the acts of the drama. As these observances were first introduced in the Oratory of S. Philip's newly built church of S. Maria in

Vallicella, the performances themselves were commonly spoken of as Oratorios, and no long time elapsed before this term was accepted, not in Rome only, but throughout the whole of Europe, as the distinguishing title of the 'dramma sacro per musica.'

S. Philip died in 1595, but the performances were not discontinued. While Peri and Caccini were feeling their way towards a new style of dramatic music in Florence, Emilio del Cavallieri was endeavouring with equal earnestness to attain the same end in Rome. With this purpose in view he set to music a sacred drama, written for him by Laura Guidiccioni, and entitled 'La rappresentazione dell' anima e del corpo.' The piece was an allegorical one, complicated in structure, and of considerable pretensions; and the music was written throughout in the *stilo rappresentativo* of which Emilio del Cavallieri claimed to be the originator. By a singular coincidence, the year 1600 witnessed the first performance, in Rome, of Emilio's 'Rappresentazione' and, in Florence, of Peri's 'Euridice.' The former was produced at the Oratory of S. Maria in Vallicella in the month of February, ten months before the appearance of 'Euridice' at Florence. Emilio del Cavallieri was then no longer living, but he had left such full directions, in his preface, as to the manner in which the work was to be performed, that no difficulty whatever lay in the way of bringing it out in exact accordance with his original intention, which included scenes, decorations, action and even dancing on a regular stage (*in palco*). The principal characters were Il Tempo (Time), La Vita (Life), Il Mondo (the World), Il Piacere (Pleasure), L' Intelletto (the Intellect), L' Anima (the Soul), Il Corpo (the Body), two youths who recited the Prologue, and the chorus. The orchestra consisted of one lira doppia, one clavicembalo, one chitarrone and two flauti, 'o vero due tibie all' antica.' No part is written for a violin, but a note states that a good effect may be produced by playing one in unison with the soprano voices throughout. The orchestra was entirely hidden from view, but it was recommended that the various characters should carry musical instruments in their hands, and pretend to accompany their voices, and to play the *ritornelli* interposed between the melodies allotted to them. A madrigal, with full instrumental accompaniment, was to take the place of the overture. The curtain then rose, and the two youths delivered the Prologue; after which a long solo¹ was sung by Time. The Body, when singing the words 'Se che hormai alma mia,' was to throw away his golden collar and the feathers from his hat. The World and Life were to be very richly dressed, but when divested of their ornaments, to appear very poor and wretched, and ultimately dead bodies

¹ Quoted in Burney's *History*, iv. p. 91.

A great number of instruments were to join in the *ritornelli*. And, finally, it was directed that the performance might be finished either with or without a dance. 'If without,' says the stage-direction,

'the vocal and instrumental parts of the last chorus must be doubled. But should a dance be preferred, the verse beginning *Chiostrì altissimi e delati* must be sung, accompanied by stately and reverent steps. To these will succeed other grave steps and figures of a solemn character. During the *ritornelli* the four principal dancers will perform a ballet, embellished with capers (*saltato con capriole*) without singing. And thus, after each verse, the steps of the dance will always be varied, the four chief dancers sometimes using the *Gagliarde*, sometimes the *Canario*, and sometimes the *Corrente*, which will do well in the *Ritornelli*.'

The general character of the music will be readily understood from the following examples¹ of portions of a solo and chorus :

L'INTELLETO.

CORO.

The occasion which immediately led to the second period of the oratorio was the Canonisa-

¹ See also *Orig. Hist. Mus.* vol. iii. pp. 37-40.

tion of SS. Ignatius Loyola and Francis Xavier. In honour of this event Kapsberger set to music an Allegorical Drama, called 'Apotheosis, seu consecratio SS. Ignatii et Francisci Xaverii,' which was several times performed at the Collegio Romano, with magnificent scenic decorations and full dramatic action, in the year 1622. The music of this piece, which is still extant, is miserably poor and so much inferior, both in originality and dramatic form, to the works of Monteverdi and other popular writers of the period, that it is impossible to believe it could have succeeded, had it not been for the splendour of the *mise en scène* with which it was accompanied. Another piece, on the same subject, entitled 'S. Ignatius Loyola,' was set to music in the same year by Vittorio Loreto. Neither the poetry nor the music of this has been preserved, but Erythraeus² assures us that, though the former was poor, the latter was of the highest order of excellence, and that the success of the performance was unprecedented. Vittorio Loreto also set to music 'La pellegrina costante,' in 1647, and 'Il sacrificio d' Abramo,' in 1648. Besides these, mention is made of 'Il Lamento di S. Maria Vergine,' by Michelagnolo Capellini, in 1627; 'S. Alessio,' by Stefano Landi, in 1634; 'Erminio sul Giordano,' by Michel Angelo Rossi, in 1637; and numerous oratorios by other composers, of which, in most instances, the words only have survived, none appearing to have been held in any great amount of popular estimation. An exception must, however, be made in favour of the works of Domenico Mazzocchi (*q.v.*), by far the greatest composer of this particular period, whose 'Querimonia di S. Maria Maddelena' rivalled in popularity even the celebrated 'Lamento d' Arianna' of Monteverdi. His oratorio, 'Il martirio di SS. Abbundio ed Abbundanzio,' was produced in Rome in 1631; but his fame rests chiefly upon the 'Querimonia,' which when performed at S. Maria in Vallicella, by such singers as Vittorio Loreto, Buonaventura, or Marcantonio, drew tears from all who heard it. The following extract will be sufficient to show the touchingly pathetic character of this famous composition :

S. Maria Maddelena.

² *Epistola ad diversos*, lib. iv

We now come to Giovanni Carissimi. His first efforts were devoted to the perfection of the sacred cantata, of which he has left us a multitude of beautiful examples; but he also wrote numerous oratorios, among which the best known are 'Jephthe,' 'Ezechias,' 'Baltazar,' 'Abraham et Isaac,' 'Jonas,' 'Judicium Salomonis,' 'L'Histoire de Job,' 'La Plainte des damnés,' 'Le Mauvais Riche,' and 'Le Jugement Dernier.' These are all full of beauties, and, in 'Jephthe'¹ especially, the composer has reached a depth of pathos which none but the greatest of singers can hope to interpret satisfactorily. The solo 'Plorate colles,' assigned to Jephtha's Daughter, is a model of tender expression; and the echo, sung by two sopranos at the end of each clause of the melody, adds an inexpressible charm to its melancholy effect.

It was about this time that the spectacular representation began gradually to fall into disuse, though the dramatic character of the poem was still retained, with certain modifications, chief among which was the introduction of a personage called the 'Historicus,' to whom were assigned certain narrative passages interpolated between the clauses of the dialogue for the purpose of carrying on the story intelligibly in the absence of scenic action. This idea was no doubt suggested by the liturgical manner of singing the Passion during Holy Week. (See *PASSION MUSIC*.) Carissimi used this expedient freely, and his example soon led to its general adoption, both in Italy and Germany.

Carissimi's most illustrious disciple—the only one perhaps whose genius shone more brightly than his own—was Alessandro Scarlatti, a composer gifted with talents so versatile that it is impossible to say whether he excelled most in the cantata, the oratorio or the opera. His sacred music, with which alone we are here concerned, was characterised by a breadth of style and dignity of manner which we cannot but regard as the natural consequence of his great contrapuntal skill. He gave to the aria a definite structure which it retained for more than a century—the well-balanced form, consisting of a first or principal strain, a second part, and a return to the original subject in the shape of the familiar 'Da Capo.' This sym-

¹ Accessible in modern reprint, notably the octavo edition of Novello.

metrical system soon came into general use in every school in Europe. Scarlatti used rhythmic melody of this kind for those highly impassioned scenes which, in a spoken drama, would have been represented by the monologue, reserving accompanied recitative for those which involved more dramatic action combined with less depth of sentiment, and using *recitativo secco* chiefly for the purpose of developing the course of the narrative. Thus carefully planned, his oratorios were full of interest, whether regarded from a musical or a dramatic point of view. The most successful among them were 'I dolori di Maria sempre Vergine' (Rome, 1693), 'Il sacrificio d' Abramo,' 'Il martirio di Santa Teodosia,' and 'La Concezione della beata Vergine'; but it is to be feared that many are lost, as very few of the composer's innumerable works were printed. Dr. Burney found a very fine one in MS. in the Library of the Chiesa Nuova at Rome, with 'an admirable overture, in a style totally different from that of Lully,' and a song with trumpet obbligato. He does not mention the title of the work, but the following lovely melody seems intended to be sung by the Blessed Virgin before the finding of our Lord in the Temple:

The publication (1905) of E. J. Dent's exhaustive monograph on Alessandro Scarlatti enables us to have a much clearer idea of the composer than was formerly possible. His researches have not unearthed the music of the above-mentioned 'I dolori di Maria sempre

Vergine' and 'Il sacrificio d' Abramo,' which are ascribed to Alessandro Scarlatti by Fétis, Florimo and others; possibly, however, the manuscripts may still be lying in one of the monastic libraries to which Dent was not able to procure access. Besides these two, three other oratorios are mentioned as having eluded his pursuit: but there remain eighteen ranging in date from a 'St. John Passion,' of about 1680, and 'Agar et Ismaele esiliati,' of 1683, to an unnamed oratorio of 1717 which Gevaert has entitled 'La Vergine addolorata.' Their subjects vary widely: two are Passion oratorios, two others works for performance at Christmas, one a Latin oratorio on the subject of David, and several hagiological—some of a modern character concerning S. Philip Neri or S. Casimir, King of Poland. Many, again, are based on librettos in honour of the Blessed Virgin, 'La Santissima Annuntiata,' 'La Santissima Vergine del Rosario,' and so on; though the general style of the words varies but little throughout the whole group of oratorios. The librettos, indeed, are in many respects very much akin to those of the operas; and even the orchestration is sometimes very uneccelesiastical, as in the above-mentioned Rosary oratorio, where 'Penitence' has an air accompanied by a toy-nightingale, played as the performer may please. As Dent remarks:

'except that the operas are in three acts and the oratorios in two, the only difference is in the absence of professedly comic characters, and of the formal statement in which the author protests that the words *Fato, Dio, Deità*, etc., are only *Seherzi poetici* and imply nothing contrary to the Catholic Faith.'

Occasionally, however, as in the 'La Santissima Trinità,' which is simply a string of theological disputations between various allegorical characters, Scarlatti comes very close to the original hortatory standpoint of the oratorio performances of S. Philip Neri, on whose life one of the best of these works is based. They seem to vary much in quality; some are tedious, not through any complexity (there is only one fugal chorus, in the early 'Il martirio di Santa Teodosia,' in the whole group), but through absence of sincerity of touch, yet usually, when human interest is derivable from the words, Scarlatti is able to meet the demand. Dent quotes from the Assumption and Christmas oratorios some singularly delicate and fascinating music which gives rise to strong wishes that the complete works might be readily accessible: the air in which the hymns of the angels and shepherds in the stable at Bethlehem are depicted is particularly interesting as showing a close likeness, which can hardly be altogether accidental, to the 'Pastoral Symphony' in Handel's 'Messiah.'

Among the most popular of Scarlatti's contemporaries were D. Francesco Federici, who wrote two oratorios, 'Santa Cristina,' and 'Santa Caterina de Siena,' for the Congregation of Oratorians, in 1676; Carolo Pallavicini, who

dedicated 'Il trionfo della castità' to Cardinal Ottoboni, about the year 1689; Fr. Ant. Pistocchi, whose 'S. Maria Vergine addolorata,' produced in 1698, is full of pathetic beauty; Giulio d' Alessandri, who wrote an interesting oratorio called 'Santa Francesca Romana,' about 1690; and three very much greater writers—Caldara, Colonna and Stradella.¹ Caldara composed—chiefly at Vienna—a large collection of delightful oratorios, most of which were adapted to the poetry of Apostolo Zeno and Metastasio. The most successful of these were 'Tobia,' 'Assalone,' 'Giuseppe,' 'Davidde,' 'La Passione di Gesù Cristo,' 'Daniele,' 'San Pietro a Cesarea,' 'Gesù presentato al Tempio,' 'Gerusalemme convertita,' and most especially 'Sisera,' which, as Zeno himself confesses, owed its reputation entirely to the beauty of the music. Colonna's style—especially that of his choruses—was broader and more dignified than Caldara's, and he did much towards raising the oratorio to the noble level it attained in the 18th century. But in point of natural genius there can be no doubt that Alessandro Stradella excelled all the best writers of this period.

W. S. R.; rev. with addns. by E. W.

II. MODERN ORATORIO

The point that these investigations have now reached is indeed the pivot of the whole history of oratorio. It had its artistic birth in Italy simultaneously with opera; and it at once gravitated in the direction of the sister form, and the two streams flowed side by side, their waters occasionally intermingling till at last they coalesced. Italian oratorio has indeed an exclusive history of its own; it never spoke another language (though in its decay composers of other races handled it), and it never abandoned its intimate connexion with Italian opera. But the spirit that animated the great 16th-century religious liturgical music passed out of Italy with the birth of opera; it met in Germany the spirit of the *Passion Music* (*q.v.*), and the offspring of the two is modern oratorio. All unconsciously, but without any break, Palestrina and Victoria passed on the pure flame to Byrd and Gibbons, and they to Schütz. We may say that all oratorio is religious recreation; but, though the great men rose above the conception, Italian oratorio as a whole, from Cavalieri to Rossini, lays the stress on the recreation, while, though some of its exponents have fallen below their ideal, all other oratorio, from Schütz to Elgar, lays the stress on the religion. Palestrina and Bach would cheerfully have persecuted each other as alien heretics, but they are spiritual brothers in their art; Palestrina and Rossini were of the same blood and professed the same faith, but there is not the slightest real tie between them. It is true that

¹ Leo is sometimes grouped with these; but as practically the whole of his life falls within the limits of the 18th century, he may perhaps be better considered separately.

what we may call modern oratorio was born long before what we may call ancient oratorio had died; and at times in the 18th century the path of the growing man came very near that of the dying child. But still the line of demarcation is there, and it is the central fact in the history of oratorio.

The actual personal link between the great Italians of the 16th century and Schütz was Giovanni Gabrieli, who received Schütz at Venice as one of his pupils during the last three years of his life (1609–12). Gabrieli was a very remarkable composer of ruggedly sincere aims, who attempted to fuse the religious earnestness of the older generation both of Italians and Netherlands with the technical methods of the operatic revolution, and produced in the process some most interesting works, though as he wrote nothing that can be called an oratorio, he remains outside the present investigation. Among his own countrymen he left no followers, but Schütz imbibed a large measure of his spirit; and the six works that we may call oratorios ('*Historia von der Auferstehung Jesu Christi*,' '*Die sieben Worte Jesu Christi am Kreuz*,' and four Passions, one according to each Evangelist), which he produced at intervals after his return to Germany, are the real first-fruits of German music. The influence of the old mystery play is no doubt present, as it was present in the earliest Italian oratorio; but the whole conception is, nevertheless, different. There is no thought of the stage, no attempt at anything like a tune or at anything 'attractive'; the solemnity of the subjects is obviously the only thing present to his mind, and his sole aim is to represent them faithfully.

EVOLUTION OF THE GERMAN STYLE.—Schütz was the last composer who was at all strongly influenced by the traditional musical formulæ of the Roman Church; and in Germany the influence of the plain-song quickly gave way before that of the CHORAL (*q.v.*), which was entirely an indigenous product, and was indeed being treated as the basis of comparatively elaborate artistic work of the motet type even before the time of Schütz, though his own oratorios show no recognisable traces of anything of the kind. In 1672, the year of Schütz's death, Johann Sebastiani produced at Königsberg a Passion oratorio in which all trace of the plain-song had completely disappeared; and from that time onwards German music knew it no more, apart from passing purely artistic references, as in the 'Credo' of Bach's Mass in B minor. But though it is certain that the noble choral tunes were more and more used by composers—sometimes in fairly plain, sometimes in highly elaborate settings¹—yet we are often in the earlier times left

¹ It must be confessed that Bach and all other adapters of chorales were the reverse of purists. Luther and all his contemporaries and followers wrote their melodies in a flexible rhythm that is as innocent of any sort of bar-fetters as plain-song itself; and a considerable torturing process was often necessary before they

without exact evidence as to the frequency of their introduction as congregational elements into the Passion oratorio, in the manner exemplified later on in Bach and Graun. Thus the two oratorios which are the greatest sacred works by a German composer between Schütz and Bach—Keiser's settings of Brockes's favourite poem *Der für die Sünde der Welt gemarterte und sterbende Jesus*, and König's poem *Der zum Tode verurtheilte und gekreuzigte Jesus*, are extant only in selections entitled respectively '*Auserlesene Soliloquiae*' and '*Seelige Erlösungsgedanken*,' which contain merely the contemplative numbers and the recitatives of the evangelist-narrator. Keiser, who was born in 1673, the year after Schütz's death, and was consequently twelve years the senior of Bach and Handel, still remains a mere name to most persons: Schütz and Buxtehude, the two greatest of the other great early Germans, have recently come to their own so far as publication is concerned, but Keiser still lacks due recognition. The above-mentioned extracts from his two masterpieces were, however, published by the composer himself, and undoubtedly express a very noble and very mature art. Bach's religious music is steeped through and through with the influence of these works, produced respectively in 1712 and 1715, just indeed at the time when he was passing out of his early rather stiff style into the enjoyment of his full powers; and though of course it would be out of the question to make any real comparison between the total output of the two men, yet nevertheless there are pages in these works of Keiser which are quite worthy of the younger composer in some of his very finest moods. Indeed, it would need considerable search before we could find six bars more full of supreme pathos than these that open a '*Soliloquium Mariæ*' in '*Der gekreuzigte Jesus*'—sung, no doubt, '*molto adagio ed espressivo*' :

could be fitted to the more modern conditions which were supposed to be indispensable.

which are followed by a sort of 'accompanied recitative' and an aria 'con affetto,' the whole forming a wonderful piece of the highest expressiveness and beauty. Or again, take from

the same work the close of the 'Chor der nachfolgenden Weiber und Verwandten des Herrn Jesu'—an 'aria a tre voci':

or the air of the 'Fromme Schächer,' with its 'violetto all' unisono, piano per tutta l' aria,' playing chiefly reiterated notes with lovely tranquil effect—or indeed very many other things. 'Der gekreuzigte Jesus' is on the whole considerably the finer of the two works; but the earlier 'Der sterbende Jesus' contains also some very beautiful numbers, such as the 'Soliloquium' for the 'Tochter Zion'—'Die Rosencrönen sonst der ranken Dornen Spitzen'—consisting of (a) a 'Cavata,' *cantabile*, in A major, (b) a recitative beginning in C and ending in A major, (c) a 'Larghetto' in B minor, (d) a 'Da capo,' presumably the 'Cavata,' (e) a recitative beginning in F# minor and ending in A major, (f) an aria, *canto cantabile*, in D major, (g) two concluding bars for the tenor-evangelist. Keiser shows several examples of this sort of extended solo scena (which really finds its closest parallel in certain works of Purcell); and though his oratorios are of course, in general scope and type, much smaller than those of Bach, yet in maturely artistic expression of notably fine ideas the best work of the older man need not be ashamed of the comparison. One of his most modern touches is his great fondness for nuances, like 'cantabile,' 'con affetto,' and so on; in later years, it is true, German religious music degenerated into a good deal of mere sentimentality, but there is as little of that in Keiser as in Schütz or Bach.

We have now four oratorios from the pen of John Sebastian Bach—three Passion oratorios and a Christmas oratorio¹: certainly a 'St. Mark Passion,' and most probably yet another, have disappeared. Of the Passion oratorios, that 'according to St. Luke' was regarded by Mendelssohn as spurious, but it is now generally accepted as a genuine but very early work; it is of but slight importance, and demands little more than historical mention. Of the other two great works the 'St. John Passion' is the earlier, dating from 1724, five years before the 'St. Matthew Passion,' and is the more dramatic and the less reflective of the two; in the 'Christmas Oratorio,' written in 1734, five years after the 'St. Matthew Passion,' the dramatic element is practically non-existent, the pastoral music being the only portion which is not, so to speak, evangelically mystical in outlook. The title is Bach's own, but the oratorio is really not a whole singly conceived work like each of the Passions, but a collection of six separate cantatas written for six separate holy-days, beginning with Christmas and ending with Epiphany.

Telemann, who was Bach's senior by four years, and survived both him and Handel, wrote forty-four Passions, and many oratorios on other subjects, among which 'Der

Tag des Gerichts' and 'Die Tageszeiten' seem to have been the best known; he was a highly skilled contrapuntist, and, according to an anecdote quoted by Schumann, boasted that 'a proper composer should be able to set a placard to music,' but his bland style lacks any sort of depth or solidity, and the shallowness of much of the subsequent ecclesiastical music in Germany—especially that designed for definitely liturgical use—is very largely traceable to his widespread influence. Very many of his works were published, while Bach's manuscripts were accumulating dust; and, anyhow, they were so much more easy and generally intelligible to the average church-goer of the period.

HANDEL AND THE 18TH CENTURY.—Handel's early essays in ecclesiastical music are, however, of different quality; they lack indeed the maturity of technical handling that we see in the great English oratorios, but as regards at any rate two of them we may perhaps say that on the whole they show more strictly religious earnestness of purpose, and that while we miss the spaciousness of the later works we miss also their careless conventionalities. In many ways both the 'St. John Passion' (1704) and the Passion set to the often-used poem of Brockes (1715) are distinctly interesting works; there are many numbers that are far closer to Keiser's and Bach's methods than anything else Handel ever wrote. He had indeed a singular genius for adaptation to his environment: to German words he wrote purely German music, while the English oratorios are totally different, as indeed again is 'La Resurrezione,' the oratorio written at Rome in 1708 and built on a purely Italian model. The Handelian English oratorio is something *sui generis*; it had no sort of precursor, and apart from some slight relics in the works of Beethoven and Spohr and some rather clearer ones in those of Mendelssohn, it has left no traces in the work of any great man. Kinship with the previous religious music of Handel's own countrymen is practically indiscernible; it is far closer to the models of the Italians. Apart from 'Messiah,' which occupies a unique position, the Handelian oratorio is an 'entertainment,' sometimes consisting, like 'Solomon' and 'Israel in Egypt,' chiefly of imposing choruses, sometimes, like 'Joseph' and 'Jephtha,' of a judicious blend of Biblical history and decorous 'love-interest,' sometimes again of vivid drama, like 'Saul' and 'Belshazzar'; but compared with Schütz or Bach it is always 'of the earth, earthy.' The atmosphere of the theatres in which they were produced hangs round them all (some pages indeed, especially in 'Joseph' and 'Susanna,' seem imperatively to demand gesture and movement); and yet they are sharply differentiated from the Italian

¹ The so-called Easter and Ascension oratorios are merely church cantatas of the normal pattern.

oratorios by the enormous stress which they lay on choral utterance, not by any means exclusively as representing the sentiments of actors in the story, but equally or even more frequently as representing the reflections of the religiously minded listener. But still these reflections are always, so to speak, external; North German pietism found little echo in the breast of the Londoner, whether Christian or Jew,¹ for whom Handel wrote.

As we have seen, Handel's Italian work merely echoed the older type, and had no real influence on his English masterpieces. And, indeed, the whole subsequent history of Italian oratorio is that of the gradual extinction of the ancient type; strictly speaking, it is not modern oratorio, but ancient oratorio *in extremis*. But still, though its last days were brightened by no music worthy to be compared with Carissimi's for really subtle artistic insight, there are yet works that show glimpses of fine music, and several names seem to demand mention, if only as historical landmarks.

The traditions of the best features of the oratorios of musicians like Alessandro Scarlatti and Stradella lingered indeed for some considerable time. Lotti's work in this direction shows much that is of high value, and Marcello's curiously named 'oratorio a quattro voci'—*Il Pianto e il Riso delle quattro Stagioni dell' anno per la Morte, Esaltazione, e Coronazione di Maria sempre Vergine Assunta in Cielo*—contains some fine dignified music, and shows in the alto aria 'Maria, Madre d' Amor' a singularly beautiful Siciliano, which is really equal to all but the very finest of Handel's songs in that measure.² Leo's 'Santa Elena al Calvario' has also much of very considerable interest; some of its choruses (particularly 'Di quanta pena è frutta') show fine strong solid workmanship, though on the whole it can perhaps hardly compare with other definitely liturgical sacred music from his pen, nor with certain sacred cantatas for solo voices. Pergolesi produced a Christmas oratorio, and also a sacred drama entitled 'La Conversione di S. Guglielmo,' into which comic intermezzi—after the very curious fashion of those days (1731)—were introduced; and this marks the beginning of the decline. Too much has indeed been made of the mere fact that religious subjects were frequently given stage presentation—from the earliest mystery play down to 'Parsifal,' such things have been done in the spirit of the very purest reverence; but the real cause of the decay was that there was not the least attempt at any elevation of style,

and that these lapses from the true path were not mere occasional accidents (as had happened before), but settled habits that were frankly avowed by the composers, and frankly welcomed by their listeners. Porpora's 'Santa Eugenia,' one of the early works of his Roman period, though not intended for stage presentation, does its best to look like an opera, with its twenty changes of scene in the first act, and seventeen in the second; and in spite of certain relics of sedateness and dignity (as in Eugenia's really pathetic 'Tu lacero esangue con pena infinita'), the work as a whole is thoroughly stilted. Men like Piccinni (whose 'Jonathan' is perhaps his best work) and Sacchini—who had both an inclination towards the serious in art—did, it is true, something to stem the current; and Jommelli's 'La Passione di nostro Signore Giesu Cristo,' which was highly successful, and had the honour of being reprinted in London, tried, with much address, to combine the 'elegance and taste' which the composer's patrons demanded with a certain sort of solidity of technique. But Jommelli's work, though one of the best of its age in this field, is extremely dull on the whole; and almost the only thing that is really noteworthy is the remarkable ending of the last chorus of the first part on the unresolved dominant harmony to the words, 'pensaci, pensaci'—an emotional effect which anticipates by nearly a century Schumann's 'Im wunderschönen Monat Mai.' The 'Assalonne' of Cimarosa, whose main line (for which he had a real genius) was comedy opera, and the oratorios of Zingarelli and Guglielmi are full of bald triviality; and Sarti, Salieri and Paër, who were, especially the first named, men of decidedly more mark, still produced in this field nothing that possesses any sort of vitality. Not indeed that they did not attempt to do things on a somewhat large scale; in the extracts from Paër's 'Il trionfo della Chiesa,' which are preserved in the British Museum, there is a very elaborate movement, 'Dio pietoso, dio clemente,' with a bass aria for an Angel combined with two separate choirs, one of female voices 'coro d' eco celeste da lontano,' and the other an ordinary four-part choir of worshippers—the whole accompanied by a full soft orchestra, with clarinets and harp, but no trumpets and drums, and a great deal of wood-wind *ad lib.* But experiments of this kind, which were not uncommon, have hardly ever any real sign of vitality about them; Italian oratorio was indeed dying, and it expired in its absolute fusion with opera in Rossini's 'Mosè in Egitto,' which was originally written for the stage (and was so performed, with two different librettos on the subjects of 'Peter the Hermit' and 'Zora' respectively, at London theatres in 1822 and 1850), but was also, under the composer's own direction, entitled 'oratorio,' and very

¹ 'Judas Maccabeus' and 'Alexander Balus' were specially written to please the Jews, who had aided Handel in his second bankruptcy in 1745.

² The MS. of this work in the British Museum has the word 'Origine' in large letters at the bottom of the title-page—presumably to show that it is not, like so many works of the period, a pastiche. The name of the author of the words has been carefully erased, but the words 'della Compagnia di Gesù' can just be traced. Is this perhaps a sign of a performance of the work in some country from which the Jesuit order was excluded?

frequently performed in the concert-room. This curious work marks the final extinction of any trace of the religious spirit, which still lingered very fitfully in Paër. With it Italian oratorio was practically silenced for seventy years; a very few works were indeed produced by composers of Italian race but cosmopolitan careers, which chiefly saw the light outside their native country, and, anyhow, are of very slight importance. But at the close of the 19th century it was revived, under the direct guidance of the Vatican, by Lorenzo Perosi, whose works were urged upon Europe for several years by the whole driving force of the Roman Church. His numerous oratorios—'The Resurrection of Lazarus' is as typical as any—while showing influences ranging from Palestrina to Wagner, remind us, in one way, more of Haydn's works than of any others; there is the similar attitude of the religiously minded child.

While Italian religious music was waning more and more, German oratorio composers of the generation after J. S. Bach were torn by diverse forces; on the one hand was the influence of the Passion music, on the other that of Italian opera, the fashionable amusement of all persons of culture and taste. This struggle between the national and the foreign strikes deeply across all the music of the 18th century in all countries north of the Alps; in Germany we see how Haydn and Mozart looked both ways, and it was indeed only the patriotic uprising at the fall of Napoleon that finally nationalised German music. Some were led more one way than the other, but others tried to keep the balance fairly even; Graun, for example, wrote both German and Italian operas, and though his style owed far more to Italian influence than to any other, yet his 'Der Tod Jesu,' by which alone his fame has survived, is in design a Passion oratorio on the strict North German model. It starts at once, without any preamble, with the 'O Haupt voll Blut und Wunden' Choral tune with which Bach's 'Matthäus-Passion' renders us so familiar; several more are introduced in the course of the work, and later on the Choral with bass solo is obviously modelled on Bach's structures. Graun was not in truth anything like a great genius, but the best things in 'Der Tod Jesu' leave a very satisfactory impression behind them; while the one oratorio of his famous contemporary Hasse that has survived complete, 'I pellegrini al Sepolcro,'¹ is (apart from its one and only chorus, which is a vast improvement on the rest of the work) merely the ordinary adequately effective dry machine-made music. And this kind of oratorio lingered on for some time; Hasse was the great fashionable autocrat of his day, and pleasant

as some of his secular music is, his influence in the oratorio field weighed altogether on the wrong side. His traditions were carried on by men like Naumann, J. C. Bach, Winter, Weigl, Hiller, Dittersdorf, Himmel and many others till they died from sheer inanition about the second decade of the 19th century: and few works are more tedious than theirs, which (save in very rare instances) have neither soul enough to be sacred music nor backbone enough to be secular. Nor indeed have we even the relief that the sight of new librettos might afford, for the same poems were amiably handed over from one oratorio composer to another: Metastasio's 'I pellegrini al Sepolcro' was, for example, set by Naumann as well as by Hasse, his 'Passione di Giesu Cristo' by Jommelli (as we have just seen), Paisiello, Salieri and Naumann, his 'Santa Elena al Calvario' by Leo, Hasse and Naumann, and so on *ad infinitum*. Some of the Italians, like Leo and Jommelli, were, as we have seen, above their school: Leo, indeed, was in some of his religious music a distinctly great man, but, apart from a very few exceptions, the decay of Italian oratorio, whether in its native land or elsewhere, leaves no regret behind it.

But while Hasse and his friends and followers were vainly trying to galvanise a dying art-form, one great composer, whose work has been, till of late years, far too much neglected, produced three oratorios which are of very high interest as well as of special historical importance; indeed, Carl Philip Emanuel Bach's 'Passions-Cantate,' 'Die Auferstehung und Himmelfahrt Jesu' and 'Die Israeliten in der Wüste' all, but especially (though it is the earliest) the last named, well repay close study.² Like all his contemporaries, he felt the pressure of the conflict of styles, and indeed is the one great man who best exemplifies them. Often he shows extensive traces of his father's influence, most of all perhaps in his recitatives and recitative-like movements in each of the three works, where he combines a large share of J. S. Bach's dignity and pathetic expressiveness with a power of dramatic word-painting that is his own great endowment. And, again, he abolishes altogether the customary overture, which even with Handel (though his workmanship is far more solid than that of the ordinary writer of Italian oratorios) is a more or less perfunctory and, anyhow, entirely irrelevant production; instead he writes, in both the 'Passions-Cantate' and 'Die Auferstehung und Himmelfahrt Jesu,' very short movements (one to each part in the latter work) only a few bars long, but obviously aiming, and with considerable success, at the preparation of the right solemn mood. Often, again, he altogether turns his back on his father and looks out in a

¹ The original perished, with many works of Hasse, in the bombardment of Dresden in 1760: what we have is a German version published by J. A. Hiller as 'Die Pilgrime auf Golgotha.'

² See especially *The Viennese Period (Oxford History of Music, vol. iv.)*, by W. H. Hadow, for an admirable account of C. P. E. Bach.

quite different direction; he introduces a Choral, 'Was der alten Väter Schaar,' into 'Die Israeliten in der Wüste,' but the harmonisation is totally unlike J. S. Bach's style, and in some of the choruses in the same work and in 'Die Auferstehung und Himmelfahrt Jesu,' notably in the very long and elaborate finale of the latter, the whole handling of the voices and the brilliance of the orchestration remind us strongly of Haydn. The one great drawback, however, is that C. P. E. Bach, of all foremost composers, was the most amateurish in technique; his dramatic feeling sometimes outruns his sense of artistic proportion, and we never feel quite certain that his powers will not give out suddenly.

VIENNESE COMPOSERS.—The two great giants of the period, who enriched so many fields of music side by side, took very diverse views of oratorio. Mozart's work in this form is altogether negligible, and consists merely of two compositions. 'La Betulia liberata,' written to a libretto by Metastasio (also set by Jommelli, Naumann and others), at the end of 1771 or beginning of 1772, was the result of a commission given him at Padua when he visited that city in the course of his Italian concert tour; the oratorio is simply an 'opera seria' without action, and, though its composer had then (in his 16th year) written many wonderful things, is of but little interest; one of its numbers contains the ancient 'intonation' introduced at the words 'Te decet hymnus' in the first chorus of the 'Requiem' twenty years later. The only other oratorio, 'Davidde penitente,' of considerably later date, is nothing but a pasticcio from the splendid C minor Mass, arranged to Italian words, and combined with a couple of incongruous and not specially noteworthy arias of a florid character. Mozart also wrote, in the very early 'sacred singspiel,' 'Die Schuldigkeit des ersten Gebotes,'¹ an example of the kind of hybrid production which, as we have seen, was not uncommon at this time; but this again is of no importance, and the composer's genius for sacred music can only be seen in the 'Requiem' and in the many splendid and far too little known liturgical works of smaller dimensions.

Haydn, on the other hand, put much of his greatest music into his oratorios. His earliest, 'Il ritorno di Tobia' (the finest example of 18th-century Italian oratorio that exists), written in 1774 for the Tonkünstler-Societät of Vienna, is laid out on a large scale, and, though it suffers by comparison with its composer's later work, represents, at its date, his largest orchestral as well as Choral manner. In the year 1785 Haydn received a commission from the authorities of the cathedral at Cadiz to write 7 instrumental

adagios for use during Lenten services as interludes between sermons on each of the 'Seven Words on the Cross.' Originally composed for orchestra and afterwards arranged for string quartet, they were yet again published in 1801 with additions and modifications and arranged for solo voices, chorus and orchestra, with an explanatory preface; and in this form, which Haydn obviously considered the best, the work may fairly be ranked as a short oratorio. Next² came the masterpiece known in England as the 'Creation,' which was written in 1797-98 on a libretto which Haydn had acquired during his last English visit: it was the culminating success of its composer's life. For his last great work Haydn had again recourse to England, the libretto of the 'Seasons' being an adaptation by van Swieten of Thomson's poem of the same name. The title of 'oratorio' is Haydn's own, but it is what would now be called merely a cantata on a large scale; there is a little 'religious application' in the words of a few numbers in two out of the four sections, but otherwise the subject is throughout purely secular. It is a case of the same mistaken nomenclature that is to be noticed with regard to several works of Handel; but it is almost the last time that we find the word oratorio thus vaguely used, as, with the spread of public music unconnected with either church or stage, other more adequate titles came into use, and the modern definite idea of oratorio as a non-liturgical work of religious character became firmly established. Haydn's work forms a sort of bypath in the history of oratorio; and we can see no reflection of it in sacred music till we come to the 'Stabat Mater' and 'Biblische Lieder' of Dvořák,³ who, though so much later in date, is the only other composer of such music who was similarly a Slav by blood and a Roman Catholic by faith, and also, like Haydn, steeped through and through in his national folk-tunes.

Though not published till 1811, Beethoven's 'Christus am Ölberge'⁴ seems to have been written between the 'Creation' and the 'Seasons'; but the world to which it introduces us is altogether different. Beethoven jokingly compared his own very successful 'Prometheus' ballet music with Haydn's masterpiece⁵; and it is very possible that it was the extraordinary reception of the 'Creation' which suggested to Beethoven the composition of an oratorio. It is Beethoven's only sacred work, apart from the two masses, though late in his life he seems to have contemplated a sort of sequel, to be entitled 'Die Höllenfahrt des Erlösers'; many

¹ The Mass in B flat, written in 1796, is the main source of an unauthorised pasticcio called the oratorio 'Judah,' which was popular in England in the days when atrocities of this kind were common.

² St. Ludmilla, Dvořák's only oratorio, in, as we shall see later, not altogether characteristic of his usual style.

³ Known in England firstly with a substituted libretto (after the barbarous fashion of older days) on the subject of 'Moses, or David in the Wilderness,' and now as 'The Mount of Olives.'

⁴ The pun on 'Die Schöpfung' and 'Die Geschehnisse des Prometheus' is obvious; but it has been sometimes unwarrantably supposed that the comparison was a piece of mere conceited pertinence.

⁵ Only the first of the three parts is by Mozart, the other two being respectively by Michael Haydn and Adigamer, the court organist of Salzburg a personage otherwise unknown to fame.

years subsequently Beethoven expressed to his friend Schindler his dissatisfaction with the work, and especially his regret that the part of Jesus had been treated in too operative a style.

Schubert's essays in oratorio writing are two: 'Miriam's Siegesgesang' (1828), and 'Lazarus' (1820)—the latter, for some reason which is unknown, left unfinished. 'Miriam's Song of Victory' is a short work that might fitly be called an 'oratorietto,' and is designed for soprano solo and chorus, with only a provisional pianoforte accompaniment, after the composer's not infrequent fashion. 'Lazarus' is, however, merely a fragment of what was designed to be an oratorio on apparently a very large scale; the libretto is laid out in three acts, but Schubert comes to an abrupt end in the middle of a number in the second of these three. The work is called a 'religious drama,' and is indeed furnished with regular scenic directions; but it seems in the highest degree unlikely that it can ever have been meant for stage performance, and in all probability the acting indications were (as in many concert-room works by various composers of both earlier and later date) merely designed to give *vraisemblance* to the situations.

GERMAN 19TH-CENTURY WORK.—Neither of Schubert's oratorios was performed during his lifetime, and, as we have seen, one of them was a fragment and the other (as regards the accompaniments) a mere temporary makeshift; but far different is the case with Spohr's works in this field. Excluding the early and altogether unimportant 'Das jüngste Gericht'—written for the 'Fête Napoléon' at Erfurt in 1812—he wrote three oratorios, 'Die letzten Dinge' ('The last Judgment')—a confusing mistranslation, in 1826, 'Des Heilands letzte Stunden' ('Calvary') in 1835, and 'Der Fall Babylons' in 1842; on each of them he lavished all the resources of his art, and each met with enormous success, alike in Germany and in England. But with the rise of Mendelssohn worship his star gradually waned. About this time there were signs that Germany, like contemporary England, was passing through a period of oratorio worship for its own sake; it hardly seems possible on any other supposition to account for the extraordinary popularity of the oratorios of Friedrich Schneider, who between 1810 and 1838 turned out no fewer than 16, all of which were apparently welcomed with enthusiasm. Like Lindpaintner's 'Abraham' and 'Der Jüngling von Nain,' Schneider's 'Das Weltgericht,' 'Die verlorene Paradies' and 'Salomonis Tempelbau' belong to that great company of musical works which, successful as they may be at the time, have no root in themselves and presently wither away. And a similar neglect has overtaken the 'Mount Sinai' and 'David' of Neukomm, a cosmopolitan composer who, after studying under Haydn,

spent the rest of his life in Paris and London, with intervals in Russia and Brazil; especially in England his works were held in very high esteem, and 'David' was specially written for the Birmingham Festival of 1834.

Very different has been the fate of the oratorios of Mendelssohn. 'St. Paul,' 'Elijah' and the 'Hymn of Praise' (which is more fitly grouped with the oratorios than with anything else) long were, and in some quarters still are, household words, and the unfinished 'Christus' shows enough of the same characteristics to warrant the supposition that, had its composer lived to finish it, it would have equalled the popularity of the others. A comparison of his oratorios with those of Spohr is not without considerable interest. Both men enjoyed unbounded popularity, and we in England welcomed them whole-heartedly as twin kings of religious art. No doubt it has been fitting that Mendelssohn should have had the longer lease of life: his touch is much the firmer, and his command over varied resources much the greater. But yet sometimes, in an uncertain vague sort of way, Spohr seems to have had a glimpse of depths unknown to the serene conservatism of the other; his visions of 'far-off things' are dim, and are inextricably mixed up with much that is weak and altogether transient, while Mendelssohn's religious music gives the impression that he lived in untroubled unconsciousness of anything outside mid-19th-century Protestantism. And this would seem to be the real secret of his vitality in this country. He appealed directly and with absolute sincerity to a particular form of religious sentiment which, from early Victorian days, has lain deep in the heart of the average Englishman and Englishwoman; he is the only great artist, in words or colour or music, who has ever touched this emotional spring, and he has had, and still has, his reward.

In 1843, half-way between the productions of the 'Hymn of Praise' and 'Elijah,' Wagner's 'Biblical scena' 'Das Liebesmahl der Apostel' saw the light; it is his solitary piece of sacred music, and, as being entirely non-liturgical in character, seems to find a place in this article. It is a comparatively brief work, written for a 'Male-chorus festival' at Dresden, and consists of two sections of contrasting character; the first part, comprising some two-thirds of the work, is entirely a *cappella*, but the second part, into which it leads without break, has an independent and elaborate orchestral accompaniment. The work as a whole is one of Wagner's mildest, and would hardly require notice were it not the solitary contribution to the oratorio field of one of the greatest of composers.

The contribution of his great German contemporary to the literature of non-liturgical religious music is, however, of a very different

character. Brahms's 'Deutsches Requiem' is not styled an oratorio, but it is far more that than it is anything else; it has no sort of connexion with any ecclesiastical service, and its whole being is religious. Indeed, it represents the supreme religious emotions in the language of his own world, as Palestrina represents them in that of mediævalism and Bach in that of the Reformation; it is alike the permanent and the solitary artistic memorial of the highest aspirations of his generation.

The later German composers have indeed ventured but little into this field; Schumann never attempted anything that could even approximately be called an oratorio (in the sense in which the term is here used), and his reluctance seems to have spread to nearly all who can in any way be called his followers. Individual works there have no doubt been, but their importance, whether artistic or historical, is very slight; and on the whole the recent generations of German composers do not seem to have turned their attention much in the direction of religious music in the concert-room, though there is a large output of works intended for liturgical use. Mention might perhaps—among the productions of the older men—be made of Raff's 'Weltende,' one of his last compositions; but the oratorios of Bruch are deserving of rather more notice. Well known as is much of his violin and violoncello music in this country, Bruch's choral compositions are not at all generally familiar to English concert-goers; among his religious works the oratorios 'Arminius' (op. 43) and 'Moses' (op. 67) are the most important, the latter a 'Biblical oratorio'—so styled probably to differentiate it from the earlier work—designed on a very large scale.

We may now perhaps briefly mention a few oratorios by composers not of German blood, but largely influenced by German methods. Gade, for example, though a pure Dane, is in all but his very earliest works a German composer; and his short oratorio-cantata 'Zion' shows many traces of his intercourse with the Mendelssohn school. No really national Scandinavian composer seems to have produced any noteworthy work in the field of oratorio; and Slavonic composers also have almost always turned their energies in other directions. Rubinstein, though musically he was really a quite denationalised Russian, nevertheless attempted no concert-oratorio, though his sacred opera 'The Tower of Babel' was once performed at a Crystal Palace concert under its composer's direction, and proved to be a somewhat unsatisfactory attempt at a realistic expression of its title; and his later strictly national compatriots seem to have done nothing even of this hybrid nature. The two oratorios of Liszt deserve, however, a few words: 'Christus'—a Latin oratorio containing com-

plete settings of the 'Stabat mater dolorosa,' the 'Stabat mater speciosa,' and much more—seems to be very little known in England, but 'St. Elizabeth' was performed in London several times during the composer's last visit to this country. The former is, as is natural, the more subjective and mystical of the two; the latter is more dramatic and spectacular, and contains (like most modern oratorios on hagiological subjects) a certain amount of purely 'secular' music.

Dvořák's 'St. Ludmila' is also an oratorio on a hagiological theme, and, like 'St. Elizabeth,' includes in one and the same work hunting choruses and solemn cathedral ceremonials. It was written on commission for the Leeds Festival of 1886, but failed to meet with the success that had been won by his 'Stabat Mater' and 'The Spectre's Bride' in the years immediately preceding. These works had aroused in England a widespread interest in the Bohemian composer; and there can be little doubt that 'St. Ludmila' was written with rather special desire to meet the wishes of the friendly patrons who had been really the first adequately to recognise him. But the result was as unsatisfactory as usually happens when an artist tries to please others rather than himself; and Dvořák's solitary oratorio does very little to add to his fame.

THE FRENCH SCHOOLS.—French oratorio, always a plant of uncertain growth, shows its earliest fruits in the music of Lully's contemporary, Charpentier, who brought back from his studies in Italy ideas about oratorio-writing which took shape in many works—'David et Jonathan,' 'L'Enfant prodigue,' 'Le Sacrifice d'Abraham,' etc. etc. The fine motets of Lalande and Campra, at the beginning of the 18th century, are as exclusively intended to be portions of an ecclesiastical service as are the contemporary English anthems, to which in many ways some of them, especially by Lalande, bear a close resemblance; and composers who desired to treat Biblical subjects outside the church resorted frankly to the stage. Rameau wrote an opera on the subject of Samson, and though it does not seem to have come to performance, the contemporary production of another on the subject of Jephtha by Montéclair shows that there was no rooted censorial objection to Biblical drama with costume and scenery. Later on, another example is visible in Méhul's 'Joseph'—the masterpiece of a remarkable composer far too neglected at the present time: also Meyerbeer, who for practical purposes may be counted as a Frenchman, made his first boyish essay in opera with a libretto on the same story as that used by Montéclair. There were, no doubt, concert-oratorios written now and then, chiefly more or less strongly influenced by Italian methods, though not to the extent (as with

contemporary Germans) of the abandonment of the native language. Gossec's 'Saul' seems to have had considerable success, and Lesueur produced a good many works of the kind—a Christmas oratorio, two Passion-oratorios, three Coronation-oratorios, 'Deborah,' 'Rachel,' etc. etc.—of which his pupil Berlioz can speak with respect. Cherubini, however, though the list of sacred works produced by him in Paris is a long one, used exclusively liturgical words; and it was reserved for the wayward pupil of those two pillars of the old regime to produce, in the year 1854, what is really the first French oratorio of lasting artistic importance that exists.

The sub-title of Berlioz's 'L'Enfance du Christ' is 'trilogie sacrée'; and as a matter of fact the work is a mosaic. The second section, 'La Fuite en Égypte,' was written several years before the others, and was published by itself as a 'mystère': the oratorio as a whole is of singular beauty, and shows Berlioz in an almost unique light. Though designed for the concert-room, it looks at times towards the stage: and a similar twofold aspect is visible in the (otherwise very different) most recent important French oratorios, d'Indy's 'Légende de St. Christophe' (1915) and Honegger's 'Le Roi David' (1921). Of all later French oratorio composers, César Franck is, however, certainly the one who has inherited most of Berlioz's spirit, though his great sacred work 'Les Béatitudes' is not entitled an oratorio, and is not strictly Biblical in subject; but, as we so often notice, the mere label that a composer may choose to give to his work is of but little importance in broad classification of art-forms. Besides this Franck also produced several 'Scènes bibliques,' or short oratorios; of these 'Rebecca' is a typical example. Almost all his vocal writings are much earlier than the instrumental by which he is best known: 'Ruth,' one of his most poetical works, dates in its original form from 1845, and his 'Rédemption' preceded its better-known namesake by half a generation.

The oratorios of Gounod and Massenet and Saint-Saëns strike other notes. Massenet's 'Ève' and 'Marie Madeleine' and Saint-Saëns's 'Le Déluge' all represent in very clear and definite shape what we may perhaps call the 'salon' idea of oratorio, though the two composers approach their goal from different sides. Massenet is the more Parisian, Saint-Saëns the more 'dans le style ancien': the latter's 'The Promised Land' (produced at the Gloucester Festival of 1913) is an appeal to what was supposed to be English taste. In the musical career of Gounod operatic composition is a long interlude of some thirty years or more, religious subjects chiefly ongrossing his pen both in his early youth and also towards the close of his life. The St. Cecilia

Mass (the first 'Messe solennelle') was the earliest work to give him fame in England; and more than thirty years afterwards 'The Redemption' was produced at Birmingham, in 1882, and was followed at the next festival three years later by 'Mors et Vita.' Gounod's two oratorios are of historical importance to English musicians, inasmuch as they represent one of the latest attempts at foreign domination of English music. While it lasted, it was a serious menace.

A brief paragraph may perhaps be given to the modern Belgian school of oratorio, the chief names in which are Peter Benoit (1834-1901), and, in the younger generation, Edgar Tincl. Franck, whom we have already mentioned, was indeed a Belgian by birth, but he was a Frenchman by long residence; and his works show no sympathy with the school founded by Benoit, the leading principle of which was the employment of the Flemish language in all vocal music. The list of Benoit's works includes several oratorios, 'Lucifer,' 'De Schelde' (more properly styled a cantata), a 'Children's Oratorio' and others; Tincl's chief work, 'Franciskus,' is laid out on a large scale so as to include musical treatment of all the salient features in the life of St. Francis of Assisi, both before and after his conversion. Neither Benoit nor Tincl can reach the level of their self-denationalised compatriot Franck; and very possibly their enthusiastic attempts to galvanise an artificial music-school hindered their really natural freedom of utterance, though still Franck would have remained as inherently far the greatest talent.

THE ENGLISH TYPES.—We may now, in conclusion, turn to the English school of oratorio composers since Handel. The great Anglo-German impresario achieved his most brilliant coup in his discovery that, although there had not been the very faintest trace of any such thing as English oratorio before he wrote one himself, yet the art-form was, above all others, the one to which the average English person would cling with the most tenacious affection. Directly after the success of 'Esther,' Greene rushed into the field with 'Deborah' (1732) and 'Jephtha' (1737); but neither these nor Boyce's 'David's Lamentation' (1736) nor the 'Judith' (1733) of the much inferior Defesch, a Fleming just then settled in London, seem to have secured more than transient fame. Arne's first oratorio, 'Abel,' dates from 1744, and his second and more important, 'Judith,' from twenty years later; his technical equipment was never of the most complete kind, but he was saved from complete submission to the Handelian domination by his artistic kinship with his native folk-music. But with Arne's death in 1775 English oratorio music entered on a century of artistic darkness, over which brooded from first to last the elephantine

shadow of Handel, to which was added in the final thirty years the almost equally universal though less ostentatiously ponderous shadow of Mendelssohn. The composers of these tons of oratorios were 'all honourable men'; their visions of things outside the organ-loft were usually fitful and reluctant, but they worked hard and conscientiously, and their music is nothing worse than intolerably dull. They set, with apparently absolute indiscrimination, wellnigh every word of the Bible; and when they were not writing oratorios of their own, they were still making them out of the mangled remains of other men's music. Operas of Handel, masses of Haydn, instrumental music of Mozart and Beethoven—all were fish to the net of this insatiable oratorio-demanding public; and most English musicians devoted the greater part of their energies to the task of satisfying it in one way or the other. From the middle of the 18th century down to the renaissance more than a hundred years later, English music is a darkness relieved only by the wandering lights of talents that, in happier circumstances, might have been geniuses.

But it is undeniable that these talents did exist; and some of them were very remarkable talents too. All through the century some, with whom we have here no concern, showed their real worth in other fields than oratorio; the greatest of these, Samuel Wesley, the remarkable father of a better-known but hardly on the whole quite so remarkable son, wrote between the ages of 6 and 11 a couple of oratorios, 'Ruth' and 'The Death of Abel,' which are at least as good as the grown-up work of most of his contemporaries, but he afterwards diverged into liturgical music. Crotch's 'Palestine' is probably the best specimen of English oratorio during the half-century after Arne's death; and anyhow, the oratorios that were mainly imitations of Handel possess a sort of satisfactory downrightness of attitude which is lacking in most of those of rather later date, where the old influence is weakened by the addition of reminiscences of the inferior moments of Spohr or Mendelssohn. Sterndale Bennett's 'The Woman of Samaria' is probably the best of the oratorios of this later period; but 'the best in this kind are but shadows.' Pierson's 'Jerusalem' (1852) represents, however, a side-path; it is a transitional work, owing very little to either Handel or Mendelssohn, and interesting as an early sign of revolt.

The notable revival of English oratorio has been chiefly due to Parry, Stanford, Mackenzie and, in later days, Elgar. Some of these have indeed turned, to a considerable extent, to other fields; Mackenzie's 'Rose of Sharon' (1883) showed a promise that has hardly been fulfilled, and Stanford produced no strictly non-liturgical religious music except 'The Three

Holy Children' and 'Eden,' both comparatively early works. But the latter's other religious music also helped on the movement very greatly; and Parry's three oratorios and numerous oratorio-like cantatas are the works that did perhaps most to build up his fame, while Elgar's three chief productions, 'The Dream of Gerontius,' 'The Apostles' and 'The Kingdom,' approach the problem with equal sincerity from an entirely different side, and, like Walford Davies's 'Everyman,' added yet further impetus to the revival.

CONCLUSION.—As we have seen, the history of oratorio has been that of an art-form with exceedingly ill-defined boundaries. On the one hand, it has in the past often, by insensible degrees, become practically identical with opera or with purely secular cantata; on the other, it still often passes imperceptibly into pure worship-music, or into the recently developed choral art-form that is associated with poetry of a lofty but non-religious character. In these pages the boundary line has been fixed so as to include, along with all works named oratorios by their composers, all those written for chorus and orchestra (on a scale of certain dimensions) to words definitely religious, but at the same time neither by fact nor by implication a mere part of a church service. Consequently, while the more modern Passion-music compositions have been included as complete 'services' in themselves,¹ the German church cantatas have been ruled out as being nothing more than an incident in regular worship, like the English anthem; and similarly all motets and settings of the ordinary Mass, the Requiem Mass, the Te Deum, the Stabat Mater, or of any Psalms, have been judged outside the field even if designed for self-contained, non-liturgical presentation. The line has been drawn in full and lively consciousness of its very faint character; but a line of some kind is necessary, and all others seemed fainter still. It appears now, however, most probable that certain kinds of oratorio, which in the not so recent past have been much favoured, will attract at any rate the foremost composers no longer. The old type of oratorio libretto, the hack-work of men totally devoid of either religious discrimination or literary instinct, is very justly dead; composers are more and more seeking their inspiration in fine original poetry, whether strictly religious or what may perhaps be called 'ethically religious' in character, and when preferring to select scriptural words, generally do so with a subtle thoughtfulness very seldom shown in earlier times.

For an art-form undergoing such a process of rejuvenation, there ought normally to be a noteworthy future; but possibly the new birth

¹ Keiser's 'Passions,' anyhow, were definitely called oratorios by their composer.

has come too late. All over Europe, and certainly not least in England, the younger musicians are turning their faces elsewhere; but this may be only a passing phase, and the fascination may again make itself felt. But the oratorio of the future will have to recognise that the days of preferential treatment are over, and that the new works must stand or fall as music, and as music alone; the demand to be heard solely in surroundings where non-musical associations are overwhelming and where the voice of criticism is silenced can no longer be tolerated, and the plea that a work can only be fairly judged in a mediæval cathedral must be taken as a confession that it cannot stand on its own merits. The appeal made by a Madonna of Giovanni Bellini loses not one whit of its essential force when addressed to those who are parted by many a long mile from its creator's own ways of thought; similarly the religious music of the future must stand, as the great religious music of the past stands now, in the light of day and in the rush of the world, by its appeal to us as men and as musicians.

ORATORIO SOCIETY, see under NEW YORK.

ORAZI ED I CURIAZI, GLI, opera in 3 acts; libretto by Sografi, music by Cimarosa. Produced Venice, 1794; Théâtre Odéon, Paris, June 16, 1813. G.

ORAZIO DEL VIOLONO (or DE PARMA; real name ORAZIO BASSANI), a 16th-17th century viol-player and composer whose fame spread all over Europe, his compositions becoming very popular. A few of his MS. pieces are in the British Museum library. André Maugars, who speaks of him in his *Réponse faite à un curieux* (1639), knew him personally, at a very advanced age (E. v. d. Straeten, *History of the Violoncello*).

ORCHÉSOGRAPHIE, see ARBEAU.

ORCHESTRA (Gr. *ὀρχήστρα* — *orchestra*; Fr. *orchestre*; Ger. *Orchester*; Ital. *orchestra*), literally 'a dancing place'; that portion of the Greek theatre between the semicircular seats of the auditorium (in Latin *cavea*; there is no Greek equivalent) and the stage buildings. This space, a few inches below the front row of seats, was about 60 feet in diameter in the theatre of Dionysus at Athens. It was here that the Chorus, numbering from 12 to 15 persons, sang or performed their evolutions round the statue of Dionysus which stood in the centre. They did not obstruct the view of the stage (*λογεῖον*—*logeion*—or 'speaking place'), which was 12 feet in height. The Greek Orchestra was also known from its shape as *σῖγμα*—*sigma*—from its resembling the curve of the archaic C, the old form of the letter Σ or S. It was also described as *κοιλίστρα*—*konistra*—'the sandy place'—either because at one time it was not paved (as it later was and still is) or in

Roman times because it was used as the arena for gladiatorial contests. With the Romans, copying, as near as need be, the Greek model of the theatre, the 'Orchestra' became absorbed into the auditorium with seats for the audience, while the Chorus performed on the stage. The departure of the word 'Orchestra' from its original meaning and its application to a body of instrumentalists and the position which they occupy in a building have yet to be explained. It may have been chosen under the mistaken idea that instrumental music was prominent in Greek choruses, whereas it was subordinate to the words and simple in character. It crept into the currency of language like other musical terms. In the comedies of Molière, in which music plays so important a part, the musicians at first were concealed behind a trellis, but in 1671 they appeared on the stage in appropriate costume. Their position varied; sometimes they were behind the audience, sometimes at the back of the stage, sometimes before the footlights as with us, or in the wings—the position adopted (1871) in the Théâtre Français when a play of Molière is being performed. When the Orchestra was not on the stage or before the footlights, the leader had to remember his cues to obviate the prompter's shouting to him 'Jouez !'

The practice initiated by Wagner at Bayreuth of placing the orchestral players out of sight of the audience has been generally adopted, but the idea was foreshadowed by Grötry.

W. W.

ORCHESTRATION (or INSTRUMENTATION). The art of combining in a musical work instruments of different timbres, so as to obtain contrast of colour, individuality and balance of tone. Composition and orchestration have gone hand in hand. At times one has been a little in advance of the other, the composer calling to his aid the maker of instruments when desiring a special effect; the maker inventing models to improve or replace instruments already in existence; the instrumentalist in his turn studying and practising the new or enlarged technique demanded by these innovations.

There are plentiful references to musical instruments from the year 1300 onwards, but we do not know what music was played in the earlier days. Voice parts at first supplied the material, and could have been followed only when the music was simple, for the instruments, with their primitive construction, could not have kept up with the complicated meanderings of mediæval counterpoint. The accounts and inventories of the Lord Chamberlain from the reign of Edward III. contain long lists of musicians attached to and paid by the English court. Edward IV. in the 14th century had trumpets, lutes, rebec, trombone, viol, cornemuse, flute, virginals and drums. In France

at the beginning of the 16th century, in the reign of Francis I., orchestras were common, and performed on all occasions. These bands were attached to a court establishment, known as the *écurie*, which had two divisions, the *grande* and the *petite*. It was from the first of these that Lully obtained his extra instruments. Stringed instruments, such as the viol family and lute, supplied the music at court, but for the dances of the people there were added oboes, flutes, trumpets, trombones and drums. In England there was much viol-playing, and in an inventory of Henry VIII., made in 1547, there were 64 stringed instruments, 215 wind instruments, not to speak of innumerable keyboard instruments. In the National Portrait Gallery there is a painting, dated 1596, in which musicians are represented playing from music on a viol, flute, cittern, pandore, lute and viola da gamba.¹ In Italy the nobility had their own private bands. The best known was that of the Duke of Ferrara, Alfonso II., whose maestro di cappella was Fiorino, born in 1540. In connexion with this band we come across one of the earliest references to the use of a baton, and also to a woman conductor. But while the strictest discipline was enforced among the musicians of Ferrara, there is a description, published in 1554, of a concert in Italy in which those taking part amused themselves by singing or playing out of time and tune. In the 16th century a curious practice crept in. It was called counterpoint *alla mente*. A theme was given out, usually one from the church ritual, which each singer embroidered according to his fancy, the instrumentalists following suit (cf. DISCANT). It came to an end about 1625, but some fifty years later a composer, Graziani, went the length of suggesting that the instrumentalist might improvise on the accompaniments of his hymns.

In Tudor days in England music was well established in royal favour. Queen Elizabeth had an orchestra of about 40, and her own prowess as a virtuoso is beyond all challenge. While the English school of players on stringed instruments reigned supreme (see FANCY; IN NOMINE), there was not yet a clear understanding as to the most fitting types of instruments. Consistency was not to be expected when everything depended on the means at hand.

In the three-score years between Queen Elizabeth's orchestra and that of Landi it is evident that composers had to make the most of their musical environment. The strings were approaching some consistency, but the instrumental body showed wide divergencies in each case. There was no recognised standard, and a score which had served its purpose in Italy could not be performed elsewhere unless local talent and conditions could be guaranteed. Technique was not within the reach of every-

body, and those who had attained it were not always disposed to impart their secrets to others. It is difficult to give a comparative table of the orchestras of this period owing to confusion as to what instruments were included under the generic names of VIOL and LUTE (*q.v.*). Later on a similar problem was to arise in the case of instruments which, though bearing the same name, could not have sounded alike owing to mechanical improvements, apart from the question of technique.

The foregoing survey of a large and important period may be summed up in a few words. The voice at first dominated the situation and the instrumentalists followed. But gradually composers, who were instrumentalists as well, rebelled against this subservience, even though they had acquired from the quartet of voices that just balance which little by little influenced their string parts. In falling back upon such instruments of the wind-type as were available, they discovered a means of escape from the tyranny of that which was meant to be sung. They contrived devices of their own; agreeable combinations of sounds of different timbres, doubtless harsh enough to modern ears, but the discovery was far-reaching. Like all innovations which aim at levelling up a groove, the response was not encouraging. Even in the section of bowed instruments the crescendo mark provoked a mutiny: the tremolo and pizzicato were regarded by viol and violin players as vulgar and degrading. But the art of music was coming into its kingdom, and whatever was new proved its worth. (See VIOLIN-PLAYING.)

There is no need to dwell upon the absurdities found in some scores of the 16th and 17th centuries—giant double basses, windmills strung with ropes, cannons and bombs. It is, however, interesting to find Wagner's use of the harp in the *Fire Music* of 'Die Walküre' anticipated by over 150 years by Brossard in a cantata on a subject taken from the Book of Daniel. To the eye, at least, the account of the score has a modern look, with flutes, oboes, bassoons, trumpets and drums, in addition to violins.

Composers appear to have been occupied more with the construction of their theme than with the manner of presenting it. Lully was content to write the melody and the bass, leaving the middle parts and such scoring as was requisite to his copyists Lalouette and Colasse. Grétry was equally indifferent, and it was said of his scores that you could drive a coach-and-four between the treble and bass. With the advanced technique of modern times it comes as a surprise to learn that some of Lully's violin passages were declared impossible and often raised storms among his instrumentalists. It is even more strange that in the first quarter of the 18th century there were

¹ Cf. Morley's *Concert Lessons*.

scarcely any violinists at the court of France who could read at sight. (See VIOLIN-PLAYING.)

THE CLASSICAL STYLE.—The point was reached when there were three elements to be considered, the music of the day, the person to play it, and the instrument itself. The last opens up a very large question. With the exception of the trombone and drums every instrument in the orchestra has been altered or modified structurally, and mechanical improvements have had their effect upon their tone or timbre. There was no organised system of laying out an orchestral score till the middle of the 18th century, when Gossec, followed by Haydn, in spite of obstacles and limitations, laid the foundations of the modern orchestra (see SCORE). This, however, needs qualification. It is by no means certain that orchestral works written before the first quarter of the 19th century, when played by a modern orchestra, would convey to modern ears what their several composers heard. At best it is only a paper estimate that can be formed: the resemblance is only in name. The flute as we know it is not the instrument that a flautist of the 18th or early 19th century had in his hands. If some of Bach's flute passages are unplayable even on the modern model with Boehm's principle, they would have been the more impossible on the contemporary instrument. The mechanism of keys and levers now enables the fingers to control holes scientifically cut at points which otherwise would have been awkward to reach. This mechanism was in use on a very primitive but unscientific scale in Haydn's day, and tentatively in Bach's. The modern flute is different in tone as well. The diameter of the holes and their position have been altered to the extent that the flute-tone in its lower compass approaches that of the clarinet. The lever system was not invented by Boehm: it was in use throughout the wood-wind group; obviously some appliance of the kind was necessary for big instruments like the obsolete ophicleide and serpent. The task for all the wood-wind group was to play the notes and to keep in tune; expression and delicacy of phrasing were an afterthought. Even the violin was not to escape reconstruction, imperative in many cases owing to worm-holes. It is safe to say that there is scarcely an instrument of the string family in use in our orchestras, from the violin to the double bass, which has not been rebuilt. The neck of the violin was lengthened and the tilt of the finger-board increased so as to conform with the height of the modern bridge. Its architecture was revised in the light of the higher pitch, and even the bow was reformed. (See BOW and VIOLIN FAMILY.) It is clear that these modifications, introduced almost imperceptibly, affected the tone of the instruments, the technique of those who

handled them, and, above all, the scope of the composer.

But beyond these a further mechanical device was to open up a fresh field, namely, the application of valves to horn and trumpet. To grasp the full significance of these revolutions a backward glance is necessary. A score of Bach, for example, corresponds with a modern score only in name. His instrumental technique was greatly determined by the limitations of the keyboard instrument of the period. The harpsichord had not sustaining power, consequently it was necessary to keep the parts moving. Hence much of his orchestration appears at first sight as if transcribed from a score for some keyboard instrument which allowed for rapidity of execution. We are left in doubt how some parts were played. It has just been pointed out that there are flute passages outside the capacity of the average player, and the same may be said of the much-debated trumpet passages, the problem of which remains unsolved. Trumpet-players there are who declare that the high and rapid passages were never played; others have suggested that these and similar florid parts were performed on appropriate organ stops. A further theory is that they demanded a technique which is now lost. This is the less credible; for the lip-pressure or embouchure of a trumpet-player cannot have changed in less than two hundred years.

Brandenburg Concerto, No. 2.

Ex. 1. Tromba in F, sounding a fourth higher.

It has been generally assumed that these so-called trumpet passages were actually played on the trumpet, but were they? Again, a theory, hitherto not put forward, may clear the air. It is on record that instrumentalists jealous of their proficiency deliberately concealed their technique from others. Might there not have been among Bach's friends some executant who, by means of a secret invention of his own, was able to play the critical phrases and to soften what to modern ears are almost invariably harsh and piercing tones? The 'Bach trumpet' in use to-day cannot be accepted as an agreeable substitute. Bach's resources were by no means limited. On paper he had as wide a field as the most exacting and unreasonable modern composer. He did not, however, employ all his instruments in every score, but selected those which he considered appropriate for each work; possibly,

too, he was limited as to use by local conditions. We find flutes, oboes, oboe d' amore, oboe da caccia, bassoons; horns, trumpets, trombones, drums, bells. There are violins, viol, piccolo, viola d' amore, viola pomposa (midway between viola and violoncello), viola da gamba, violoncello and double bass: organ and harpsichord or clavichord. The variety of type of single instruments is striking. The difficulty of obtaining competent players for out-of-the-way instruments may partly explain why Bach's music did not travel far beyond his own frontier. Neither to him nor to Handel was the art of the orchestra indebted for signs of development. To them the function of the orchestra was accompaniment for the most part, and the persistent figured bass left the empty bars to be filled in by an improvisation which may not have been discreet in hands other than the composer's. (See ADDITIONAL ACCOMPANIMENTS; THOROUGH-BASS.)

No greater contrast could there have been between the orchestration of Bach and Handel and the school of instrumental and operatic music that was arising. In accomplishment it was a protest against the shallowness of the French and Italian music in vogue in the first half of the 18th century. Bach founded his style upon structure, colour taking a secondary, almost an accidental place. Nevertheless he had a free hand in his little preludes leading up to the entrance of his voices, and, within his limited means, with the economy of timbres which tied him to the resources of his day, he embroidered his themes in his own distinctive fashion. It was not for him to erect an orchestral tradition; his instruments for the most part were destined to silence in the glass cases of museums; but he still speaks in his own tongue.

The first steps towards obtaining some consistency in the orchestral organism were taken by Rameau. Apart from his conception of the overture as a formal movement, he was a colourist as well. To colour, then, he gave his mind, and opera, not altogether formless with its slavish adherence to patterns, became the canvas for his brush. In his scores the instruments are the same in name as in Beethoven's, with the exception of the clarinet, which did not make its début in the orchestra till later. If he did nothing more than follow convention by doubling wood-wind with strings and give them holding notes, at least he gave composers an opportunity for hearing strings and wind in combination, along with timid adventurings towards thematic development. The static quality of the orchestra, however, had not yet been established, for in certain of his MSS. there were additions by another hand. Thus this composer, like Lully, and Grétry, whose *aide d'orchestre* was Panseron, seems to have been the victim of tradition in this respect.

The art of music had advanced to a point when fashion intruded. The taste of the period required of a composition that it should illustrate a thunder-storm, a tempest, the murmur of a stream, the song of a nightingale, and Rameau conceded. Was Beethoven aware of this? Rameau went further: he invented character in his orchestration, and did not hesitate to combine two opposing forms of dramatic thought. The incongruity of two antagonistic personages singing the same air with different feelings struck him as capable of interpretation only by orchestral means.

To Gossec belongs the credit of having established the symphonic orchestra, just a shade in advance of Haydn. By adding two clarinets he completed the small symphonic orchestra as we know it.¹ But the progress of the clarinet was slow, for the reason that it was still in an embryonic state, and composers who used it were limited to two keys only. Whatever its timbre at this stage of its life, it was recognised as a valuable addition to the wood-wind section, and the instrument-makers had to keep pace with the composers. Gossec was an innovator in another direction with his two orchestras in his 'Messe des Morts.' The second of these consisted of clarinets, horns or trumpets and three trombones which alternated with the first.

We now arrive at the composer who was to reform not only the orchestra but the opera as well. Gluck, born in Bavaria, greatly influenced by Handel, greatly influencing Berlioz, departed from the empty librettos which were used as stopgaps for vacuous operas and went to poets for his material. His great discovery was the emotional side of the orchestra. Not content to allow it to play a passive rôle in accompanying, he used it as the interpreter of character, as colouring, adding to the force of the words that were being sung, and heightening the dramatic situation and action. This was a marked change from the practice of earlier composers, who were content with a single line or phrase upon which to hang an entire aria. One of Gluck's greatest innovations was his emphasising the importance and function of the overture. Up to his day, in opera, at least, it served merely to play the audience in, and often it had no connexion with the work that followed, or had done duty elsewhere. In two of his operas, 'Naïs' and 'Acanto et Céphise,' Rameau had attempted to crystallise a résumé of the whole, but it was left to Gluck, and after him Mozart, to make the overture an integral part of the work. Like the preludes to 'Tristan,' 'Die Meistersinger' and 'Parsifal,' Gluck's overtures were continuous with the opening scene, and it was Wagner himself who provided a formal ending² for 'Iphigenia in Aulis' for concert

¹ See also the symphonies of Stamitz and others of the Mannheim school. 2.2.7. 2nd series, vii. 2.
² He did a good deal more. He practically rewrote the entire work and introduced a new character.

performance. As for the orchestra, Gluck banished the harpsichord, which hitherto had its place among the other instruments, and with it the last trace of the basso continuo. (The purpose of the keyboard instrument had been to supply from the figured bass the accompaniments to recitative, and also, it may be assumed, to give confidence to and prompt the singers in opera. The conductor presided at it, and constant were the differences between him and the leader of the first violins as to which was the more important personage.) Although the trombone—the oldest instrument in the orchestra—had appeared in many an earlier score, it was left to Gluck to discover its secrets, which he revealed with imposing effect in the famous ‘Divinités du Styx.’¹ Other regular constituents of his orchestra were the harp, cymbals, triangle and bass drum. While his works were being performed in Italy he employed two English horns (*cor anglais*), which were obtainable there, but in Paris the parts were transposed for the clarinets then coming into use. While opera in France about the middle of the 18th century was said to be a fracas, and, as Molière had earlier remarked, the most expensive of all noises, in Italy the orchestra was said to be treated like a huge guitar. So much attention was given to the voice that the orchestra was subordinated, and there was less freedom for purely instrumental music. Hence it was that Italian composers contributed little to the development of the orchestra, although it was mainly to them that we are indebted—whether in a good or bad sense—for the rise and spread of virtuosio violin-playing. Opera everywhere monopolised the attention, as much because there was a popular demand as because it was profitable.²

We are now at the point when the ear began to decide which instruments were to survive as fittest. It is difficult to understand how the survival came about, for, as has already been pointed out, the wood-wind up to Beethoven’s day could not have sounded exactly as we hear these instruments to-day. The lack of good players on the clarinet, even in Mozart’s time, probably delayed the adoption of this instrument until after the flute, oboe and bassoon had become regular members. There is not a clarinet in Mozart’s ‘Jupiter’ symphony, written in 1788, but in his E flat symphony he employs two, omitting the oboe. There is no need to draw far-fetched conclusions from these happenings; it is just as likely that some very commonplace explanation was at the root. We know that Mozart often had to work against time—witness the overture to ‘Don

Giovanni,’ written in a night, parts copied next day and played at sight in the evening, probably very badly. (See MOZART, *ante*, p. 551.) It may be pointed out that owing to the conditions under which they lived Haydn and Mozart frequently had to write at high pressure in order to satisfy their patrons.

It is not unlikely that the wood-wind group was selected because the instruments composing it were the least disagreeable at the time, and had the more efficient players. The Haydn and Mozart orchestra consisted of about 35 players, the wind and percussion accounting for from 11 to 13 instruments—flutes, oboes, clarinets (occasionally), bassoons, horns, trumpets, trombones (occasionally, though not in symphonies), percussion and strings. The same force was used by Beethoven, with double bassoon and cymbals added. The Dresden Opera Orchestra of 1754 consisted of 8 first and 7 second violins, 4 violas, 3 violoncellos, 3 basses, 2 flutes, 5 oboes, 5 bassoons, 2 horns, 3 trumpets and 3 timpani. This balance on paper looks too reedy in tone and probably harsh. In contrast the numbers of the performers in the Handel Commemoration Festival in Westminster Abbey in 1784 may be given. The chorus of 274 was made up of 59 sopranos, 48 altos, 83 tenors and 84 basses. With them were 48 first and 47 second violins, 26 violas, 21 violoncellos, 15 double basses. The wind section comprised 6 flutes, 26 oboes, 26 bassoons, 1 double bassoon, 12 trumpets, 12 horns, 6 trombones and 4 pairs of drums.³ Burney mentions that twelve oboes played a solo as one man, and that a bassoon solo was ‘performed by twenty-four bassoons, of which the unity of effect was truly marvellous.’ He rejoiced that there was no ‘Manuductor’⁴ or conductor, and that there was only one full rehearsal! An examination of these forces indicates a predominance of tenors and basses over the female voices. As for the orchestra, it may be asked if the proportion of 6 flutes to 26 oboes and 26 bassoons throws any light upon the relative penetrating power of these instruments in the period in which they were used.

It is interesting to note how much Mozart made of certain sections of the wood-wind when he discovered their capabilities. A *Divertissement* of 1771 is written for 2 clarinets and 2 English horns.⁵ But on one occasion when clarinets were not at hand, he transposed their parts for English horns, forming a quartet of these instruments. Another *Divertissement* of 1773 has 2 oboes, 2 clarinets, 2 English horns, 2 horns and 2 bassoons (K. 186).

¹ See Berlioz’s *Instrumentation* (English edition, Novello), p. 157.

² If we read contemporary accounts in diaries and records of travel, it appears that opera, as far as public support was concerned, was no more than a social affair in which music was the excuse for intrigue and rendezvous. At this period the opera-house and the composers of operas had lowered themselves to the prevailing unworthiness of taste and morals.

³ A pair of the last were known as the Tower drums, lent by the Ordnance from the Tower stores. They were captured by Marlborough at Malplaquet in 1709.

⁴ *Commemoration of Handel*, p. 15.

⁵ See Köchel, *Verzeichniss*, note to 173.

Mozart was fond of the basset horn (see CLARINET), an instrument which should be used more frequently. He wrote an adagio for three, combined with two clarinets, and from this it is to be inferred that players on these instruments were available (K. 411). We do not know if all his performances passed off without a hitch, but it is likely that he had trustworthy wind players, for he wrote 10 concertos for wind and only 6 for violin amid his immense output.

Important as were the mechanical improvements in the wood-wind, reforms of greater moment were approaching. The scope of horns and trumpets up to the time of Beethoven and for some little time after was restricted. They could not play a complete chromatic scale, but only the notes of the harmonic chord. Beethoven, with rare exceptions, used about a bare dozen of these notes. In the last movement of Mozart's 'Jupiter' symphony there are only eight, of which only one complete triad, that of C, can be constituted, while the dominant chord of G has the bare fifth owing to the difficulty of producing the B. (See HORN; TRUMPET; VALVE.)

Some further instances will illustrate the restrictions. The overture to 'Fidelio' is in E, but Beethoven prescribed trumpets in C, in whose harmonic series the only note common to the key is E, the major third of C. Whenever, therefore, the tonic chord of E occurs in the movement, the trumpet can play, and play it does, its single note of E, and that one hundred times, no less. In the andante of the C minor symphony, which is in the key of A flat, the horns are crooked in C, providing only one note, C, the third of A flat, but playing tonic and dominant in the key of C when the movement modulates to that key. Again, in the 'Eroica' (movement and horns in E flat), after the well-known passage with the horn playing the tonic chord against the dominant seventh of the violins, the first horn changes to his F crook when the theme appears in that key. In Schubert's 'Unfinished' symphony, in the second movement the second trumpet in the midst of a *tutti* is given rests in bars in which the then impracticable F sharp is the note required. In 'Fidelio,' in the aria 'Komm, Hoffnung,' the three horns have passages which must have sounded doubtful on the natural horn, and there is the famous passage for the fourth horn in the ninth symphony, which has given rise to various explanations.¹ It is singular that composers employed horns and trumpets at all with their obvious limitations. At the present day, even with the parts played on instruments furnished with valves, the persistence of tonic and dominant can be particularly monotonous and irritating to a mind that has grown accustomed to a wider province of

harmony. Their sudden entry and equally sudden silence suggest to those unaware of the technical defects of the instruments mistakes on the part of the musician or carelessness on the part of the conductor.

In a long work, such as an opera, the horn-player had to provide himself with a number of crooks, and be constantly putting them in or taking them out according to the directions in his part. Forsyth² mentions 35 of these changes in 'Don Giovanni.' For the four horns in 'Fidelio' there are over 25, comprising 9 different crooks. With valves the horn-player now uses one crook only, that in F, which gives him a complete chromatic scale of four octaves. With this he transposes at sight, no matter what crook other than the F is indicated, but occasionally he has to substitute the crook required in the score when the notes to be played are outside his compass.

When composers were agreed upon the constitution of the orchestra, or when it appeared to become stereotyped, the instrument-makers set to work to improve the types in vogue, with sundry excursions in search of new timbres. But even with the accepted material it was possible to carry orchestration further. It may be of antiquarian interest here to consider to whom innovations were due. It is claimed for Philidor that he introduced the tam-tam; Méhul employed four horns; Cherubini divided his violoncelli into four parts; Lesueur, in an opera based upon Ossian, had 6 first and 6 second harps. Méhul went to the same source, and in his opera 'Uthal' dispensed with violins; he also wrote a part in 'Joseph' for the tuba, probably to represent the shofar. (See HEBREW MUSIC.) In the year 1795 there was a professor of the 'tuba curva' at the Paris Conservatoire. In another direction Boieldieu, who was praised as heartily by Weber as 'La favorita' was condemned at a later date by Schumann for its 'marionette music,' outlined a definite programme in 'Le Petit Chaperon rouge,' in which the story is illustrated by music in minute detail.

In the evolution of the orchestra there are many *petits-maitres* now forgotten whose happy ideas were captured by greater men and afterwards accredited to them. The fact, however, remains that music was reaching out and bringing into the fold such diversities of thought and of invention that he would be rash who would assign to any composer the honour of having been the first to suggest a proceeding which in time became the common currency. Therefore while claims have been made on the part of this or that composer, surely enough in some corner of the world there will be produced evidence to demolish that claim.

Although orchestral music towards the close of the 18th century strikes us as simple in char-

¹ See the *Mus. T.* for Feb. and Mar. 1925.

² Cecil Forsyth, *Orchestration*, p. 82 note.

acter, it is strange to read the protest made by Grétry, Lemoine, Cherubini, Méhul and Lesueur against the contemporary school of music. They said :

' Harmony to-day is complicated to the last degree. Singers and instruments have exceeded their natural compass. The rapidity of execution makes our music inappreciable by the ear, and one step more will plunge us into chaos.'

This was Grétry's opinion, and it may be compared with another manifesto of a later date. The protest was made during the lifetime of Mozart, but from the progress of music it would be difficult to understand or to justify it nowadays. Whatever contemporaries felt as to style, with the exception of Beethoven there appears a sameness, if not a monotony, in the compositions that date from the beginning of the 19th century. It is not easy to differentiate between one composer and another. Their names, if not their music, may be familiar, but there are no very marked grounds for putting each into a self-contained compartment and considering him apart from his contemporaries. We have to resort to chronology for our bearings, rather than to schools, for there was a great deal of overlapping, and many composers were so entangled in the snares of opera that, with all that we know and have heard, we might not find arresting qualities in style between two works of the same period. There may be points in construction and development which are of interest, but orchestration was proceeding upon lines which had become conventional. But there were exceptions, and they are still with us.

We have independence of thought in Schubert, as shown in his 'Unfinished' and C major symphonies. It is inconceivable that a young composer, living in the same city with Beethoven, should not have acquired a tinge of his idiom. Almost the only music that he could have heard must have been that of his great predecessors, Haydn and Mozart, and of his contemporary, yet of their styles there is no trace in these symphonies. Like Weber in opera, Schubert went in search of character and melody in instruments that hitherto had often been humble but necessary servants. It was a great discovery that the horn was a melodic instrument, that the clarinet's independence commanded respect, that it was grateful to hear violas and violoncellos and even double basses emancipated from routine.

While the orchestra was growing in strength, its development was to have a profound effect upon composition. The art was being rent within itself by discord. Five years after the first performance of Beethoven's Choral Symphony there came the 'Symphonie fantastique' of Berlioz. The one was incomprehensible to many; the other, devastating. Whatever the views that were held it is clear that a rift had appeared, and that tradition on its complacent

side had received a shock. Composers still held to the style of Mozart or the earlier Beethoven, to the Italian or the French school of opera; some felt that the frontier of music had been extended.

The greater certainty of accurate performances assured composers and enlarged their opportunities. The fiascos in Beethoven's day—Meyerbeer's blunder with the big drum in 'The Battle of Vittoria,' when Beethoven was conducting; the extraordinary performance of the Choral Symphony, when the conductor, Polenz, was ordered to sit down—these fiascos were to be repeated up to the year 1876, when the scenic gear at Bayreuth went awry. But what at one time had been called 'the infallible test' by the pianoforte of music primarily written for the orchestra no longer could be applied. The orchestral horizon was reaching far beyond the compass of a pair of hands; themes arose suggested by the timbres of the various instruments and became intimately associated with them. At the same time composers grew conscious of a definite quality in orchestration, which, though they heard it, they were unable to analyse. Beethoven in his deafness could only fall back upon his earlier recollection of timbres; for him it was the greater glory that he was able to summon at will the tones that in less afflicted days he had treasured. He knew well what effect he wished to produce, witness his direction, *sul ponticello*, in his op. 131, 18 bars of it, corrected to *da capo per l'ordinario*.

It is difficult to account for Berlioz and Wagner, for neither was in a position to learn the amplitude of orchestration from predecessor or contemporary, with the exception of Meyerbeer. In some respects Meyerbeer was not unlike a well-to-do chemist, with the orchestra as his laboratory, and however much his results may be derided in an artistic sense, they were appreciated by those who were gifted with, and reacted to, a richer musical thought. So it was that Berlioz stampeded into darkness even those whom he had held up before all. It cannot be said of him or of Wagner at any period of their lives that they were fully aware of the bitter-sweetness produced on the ear by a studied combination of the upper partials of the wood-wind. (See ACOUSTICS.) Yet the ear, shackled to one pitch of a series, hears a good deal more, although it cannot define it in terms other than the sounds resulting from the written notes.

MODERN ORCHESTRATION may be said to date from the 'Symphonie fantastique' of Berlioz. In the 63 bars of the opening Largo there are more expression marks and indicated nuances than in a Mozart symphony. This shows that he attached the utmost importance to tone and phrasing, and left nothing to the caprice of the individual player. With him it was not so much the material of the music as the method

of handling it. In the strings he followed the conventions, for even the *col legno* effect was by no means new, it having dated from the technical studies of Michel Waldemar (1750-1816). It was copied by Meyerbeer in 'L'Africaine' some years later. In 'Also sprach Zarathustra' (p. 38, miniature score) Richard Strauss indicates a *tremolo col legno* (*sic*) not quite to the advantage of the polish on the bow.

Berlioz raised the status of the wood-wind, adding importance to the English horn and E flat clarinet. The possibilities of the horn were ever in his mind, but he was handicapped by the system of crooks and had to devise complicated means whereby he could use the instrument more freely. It was not till a later day that he could avail himself of the valve mechanism. Melodically his horn passages were rare, and probably the instrumentalists upon whom he could depend preferred the valveless form. While using for the most part the orchestra required for Beethoven's ninth symphony, he added to the scope of each instrument, not always to the improvement of the balance of tone, and in many instances apparently to display his technical knowledge. Anticipated by Boieldieu in writing harmonics for the harp, he employed them effectively in the 'fairy' music in 'Faust' and 'Romeo.' Muted horns and trumpets make their way, but while he did not exceed their conventional number he had a singular leaning towards doubling instruments of which composers in modern times are content with one. He had triangles and tamboourines in pairs in 'Romeo'; 2 ophicleides in the old edition of 'Faust' in the 'Amen' fugue (now 3 trombones and tuba); 2 tubas in 'Pandaemonium' in the same work; 4 bassoons with work for two; 4 harps (two first and two second, *al meno*, he stipulated); and 6 pianofortes in the 'Ronde du Sabbat' to sustain the two bell notes, foreshadowing the device that was adopted in 'Parsifal' for the same end.

It has never been explained why composers were reluctant to avail themselves of the advantages and facilities conferred by the use of instruments with valves. It may be that the difficulty lay with the horn-players and others, who were unwilling to accustom themselves to a new technique and were content to blare out tonic and dominant with abundance of rests. Berlioz, who had the flair for the capabilities of instruments more than any of his predecessors or contemporaries, devised an unnecessary complication of crooks for trumpets and cornets in addition to horns, in order to avail himself of their colour. Yet, though unable to play any instrument beyond the flute and guitar—if indeed he carried his experience of them beyond the elementary stage—he had mastered the mysteries of the brass instruments, of which those who used them constantly had not even dreamed. So we

find intricate problems of crooks which scarcely justified the pains. Wagner in 'Rienzi' was not timid; he asked for French horns in D, the key of the overture, pistons (? cornets) in G, valve trumpets in D, ordinary trumpets in D, three trombones, serpent and euphonium. A pretty affair this, and having got the length of 'The Dutchman' he required horns in F and D, trumpets in F, three trombones and an ophicleide.

To return to Berlioz; it is not certain where composition with him ended and orchestration began. He was so deeply read in all that concerned instruments that it is likely that he had them in mind more than any finely conceived theme. It was not always the noisy and macabre that appealed to him. The Queen Mab movement in 'Romeo' and the dance of Will-of-the-Wisps in 'Faust' belie this. The harmonics of harps and strings in the one, combined with the wood-wind, give an ethereal effect which, if not so delicate in the other, shows the importance that Berlioz attached to the wood-wind while subordinating the strings. Again in 'Faust' there are extensive passages for wood-wind, in which the strings are silent or have little to do. Striking effects are those in which what may be called the 'column' of brass is clearly balanced, but, as has been suggested, he gave himself needless trouble in crooking his horns, trumpets and cornets. In at least one movement he has six separate crooks for these instruments. It will ever be a mystery that with his analytical ear, surely the most sensitive to sound, he did not listen more to what his instruments could give forth. There are few of his bars that do not enshrine a secret; other composers, if they did not capture it wholly, at least learned from it, profited by it and then ungratefully scorned it. In the history of music there is no figure more pathetic than that of Berlioz, who, in despite, lacked the crowning gift. (See BERLIOZ; subsection THE ART OF BERLIOZ.)

These reinforcements of his outline to some extent reveal the drift of his thought as well as his profound knowledge of the orchestra. At the same time it may not be wide of the mark to assume that they indicated the general standard of ability of those who were to interpret his scores. Whatever may have been fortuitous or haphazard as regards innovations, whether conventional or standardised by custom in orchestration, it cannot be gainsaid that, apart from the unexpectedness of many of his effects, his *Traité de l'instrumentation*, published in 1844, came as an awakening and a message which no one in the world of music could afford to disregard. It is a sign of the progress of music in minds of vastly different calibre that strict chronological sequence cannot now be observed. The claims of one composer to a new orchestral device are always

subject to challenge. In the opening bars of 'Die Walküre' Wagner gave the violins a double D, on the open string third and the stopped fourth string. Berlioz, in the 'Carnaval romain' had done the same on the first E string.¹ The 'many inventions' were being gathered into the common stock. To these Meyerbeer was no small contributor. Born six years before Schubert, twelve years before Berlioz, twenty-two before Wagner, he swiftly appreciated the tendencies of popular taste, and after following them at first, ultimately dictated them. A man of many styles and an incorrigible borrower, in his orchestration he indicated, more than any of his predecessors, the way to the employment of solo instruments. He would start with a Handelian phrase and then slip into Bellini. He certainly gave the public what the public wanted, writing his music round his audiences, trying effects at rehearsal, writing and rewriting till he hit upon what he thought would be effective, and this accounts for the five months that were spent in rehearsing 'The Huguenots' for the first performance in Berlin. He worked on a huge canvas, sometimes with miniature brushes, sometimes with a whitewash weapon, but whatever may be thought of his music now, in his orchestration he suggested combinations and effects by which every composer since has profited, none more than Wagner. Meyerbeer extended the use of the wood-wind, especially in the lower octaves. The emotional character of each in the various sections of its register was being developed. Thanks to him the bass clarinet, two of which were employed in 'L'Africaine,' became a regular member of the orchestra, and he added an alto clarinet as well. In the same opera he had two English horns. The 'Shadow Song' in 'Dinorah' was accompanied by flutes, harmonics of the harp, and violoncellos. There was also a fifth horn. In 'Le Prophète' he introduced saxhorns, and could not resist having a good quantity of brass on the stage in 'L'Étoile du nord.'

While Meyerbeer's influence was far-reaching in the domain of orchestration, there were those who viewed with misgivings the immense popularity of his operas in France. It was not the music that gave them anxiety, but the political and historical ideas in the librettos. Particularly in the provinces, where the opera was the only distraction, people who never opened a book but accepted the stories of the operas as veracious, derived false impressions of the Middle Ages, the French Monarchy, the Wars of Religion and the Inquisition. This was curious in the light of the complacency with which the French people tolerated the misplaced accents and ungrammatical lines in the texts.

¹ Mozart, however, was before either. In his symphony in D (K. 385) the first note, D, is written as two semibreves touching one another.

It is not necessary to refer to all the great names inscribed on the orchestral roll. Mendelssohn with his marvel of the 'Midsummer Night's Dream' overture, perhaps retouched in the light of maturer experience, took things as they came. Schumann was acquiescent, plodding along with more thought for the idea of the theme and its development than for the heightening of its colour.² Reference, however, must be made to a composer, as exotic as Meyerbeer was, but more lasting in influence. Liszt, envied for his popularity and facility, generous and not over-critical, was destined to be associated with the greatest musical movement of the 19th century. The reign of the orchestra, mild and suave as it was in those days, compared with its later tyranny, demanded fresh forms, uncomprehended or mistrusted by the formalists. It was a phase of evolution to be spread far and wide while those of the more conservative school were content to remain primly in a comfortable groove. Liszt, with greater musical acumen than Berlioz, but influenced by him, brought to light his SYMPHONIC POEMS (q.v.). What directed his steps to the orchestra was very likely his arrangement for pianoforte of the 'Symphonie fantastique,' the details of which he had to analyse and master. It was an invaluable lesson, and answers the question which has been asked, how he learned orchestration. The friendship between him and Wagner was more one-sided than is generally known. Wagner was independent of him in his earlier days, from 'Rienzi' to 'Lohengrin,' and it was only when the last-named was accepted by Liszt for production at Weimar that the intimacy ripened. In the composition or form of these works he owed nothing to Liszt. But eventually Liszt's plan of development and metamorphosis of theme, suggested by the *idée fixe* of Berlioz, must have indicated to Wagner a wider sphere in which *Leitmotiv* were to predominate. It was clear that the reiteration of a theme employed as a LEITMOTIV (q.v.) could become commonplace if set forth always in the same orchestral colour, hence the composer's palette had to provide contrast of tone. Wagner's earlier experience as a conductor of opera at Magdeburg, Königsberg and Riga had introduced him to the conventions of orchestration. But occasions must have arisen when he had to devise makeshifts and rescue parts which were beyond the resources of his bands. Five or six years of this work were not wasted when the result was the four operas just mentioned. Before a note of 'The Ring' was written Liszt had composed eight of his symphonic poems, and although the *idée fixe*, theme-metamorphosis and *Leitmotiv* were not identical in their ultimate content, they stood for the aim of each composer towards securing a unity

² See under SCHUMANN the account of the modification which had to be made in the theme of the first symphony.

of design opposed to the older kinds of structure. Wagner was at pains to disclaim his indebtedness to Liszt in this respect, or was evasive when challenged to state his position, but whatever the divergencies due to the use of the orchestra alone and the compliance with textual exigencies, their common ancestry cannot be doubted.

Like Mendelssohn and Schumann, Brahms, too, intent upon musical form, orchestrated in such a way as to leave to conductors of his works the problem of bringing his ideas into the broad light of day. To these conductors he owes his position as a writer of orchestral music. Impervious to contemporary movements in the art he went on in his own sturdy fashion, tethered to the past, and hammering out imperishable themes. He had a sense of orchestral colour which was quite as personal as Wagner's was, but at first sight it was not clear, and the reading of one of his symphonies was in his day a test of a conductor's insight more severe than that of any contemporary work. His influence lay rather in the direction of musical form and thought than in orchestral effects, and he was content to leave his symphonies in the hands of his interpreters to discover the means of solving the many *crucis* that lay therein.

WAGNER'S CONTRIBUTION.—To those whose receptive faculties have been educated by listening to music written up to the end of the 19th century it is difficult to comprehend the ferocity with which Wagner's music was attacked in some quarters. May not the explanation lie partly in the bearing of the man himself? However that may be, every page of his orchestral work bears witness to restraint, even to reticence. These qualities perhaps, have not been without their effect on some French works that followed his day; the economy of means, the simplicity carried even to emptiness in the scoring were scarcely noticed in the pregnancy of the theme. The opening bars of 'Tristan,' for instance, on paper seem bare and inadequate. At first sight they appear wavering and indecisive, without the manliness of many another opening phrase. But the dramatic instinct was there, and the gradual working up to that tremendous climax and catastrophe justified the slenderness and tenderness of the opening bars. There are pages in Wagner's later works in which there would appear almost nothing in the orchestra; a touch of colour, a shudder of divided violoncellos and violas, a single drum-roll; a broken line, as it were, of dry-point left for the mind to complete the design; a broad expanse of colour when the situation demanded polychromatic treatment. The mystery is how Wagner, with none too many opportunities of hearing his own works, and tied as he was in Dresden and elsewhere to conducting the works of others, discovered the genius of one instru-

ment after another, held it captive and made it his servant.

As suggested above, the 'prentice hand may have had to turn to in order to make good deficiencies in the scramble of operatic performances up to the Riga period. These must have borne their lesson. But after he had recovered from the infection of opera that was grand, with the usual sequelae, in his convalescence, he found himself, as in many such cases, renewed in vigour and in experience. To conduct operas composed by others, not to speak of recomposing Gluck, with now and then performances of his own, was a schooling more direct, more practical, than a wilderness of textbooks. It is significant that for the well-being of his music the circumstances that embroiled him in, and banished him from Dresden and Munich were just those that ruptured the link with the State observances of opera that passed as music. Henceforth, out of the depths of his experience, out of the darkness of his travail, he was to bring forth a new light. Influenced by Beethoven, of whom a trace is to be found in the 'Faust' overture, passing through his mind Mozart, Weber and Meyerbeer, he discovered himself in 'Tristan.' Henceforward he was on his own ground and in his full estate. The appeal, howsoever it might be interpreted as conforming with musical design in an extended fashion, was not so much to the austerity of musical architecture, as to that curiosity which is not far removed from emotion. What he said in words—the least component in his music dramas—he magnified and exalted in sound.

THE RUSSIAN SCHOOL.—Contemporary with, if not in advance of, Wagner was the Russian School, evolved more by innate musical instinct than by systematic training. In this respect it is notable that the leading exponents were men who had begun life in careers in which music was as it were an afterthought, and not a dominating prepossession. The forerunner was Glinka who created an idiom as much as he founded a style. His case was not very different from those who came after him and spread the spirit of his example, for his early musical training was desultory and he had reached his thirtieth year before he addressed himself to serious technical study. Following him, of the Group of Five, Balakirev was alone in having pursued a musical vocation from youth. Of the others, Cui at an early age had reached a high rank in the military hierarchy, Moussorgsky was a commissioned officer, Borodin to the day of his death was a lecturer on chemistry, and Rimsky-Korsakov, a naval cadet, had put in some service at sea. Self-taught and self-trained, but charged with their earlier experiences in matters unrelated to music, they brought into the fold fresh strains in more senses than one. It was

Berlioz with his work on the orchestra who aroused curiosity. It was his teaching that drove one Russian composer after another to intervene and pontificate. As in life in Russia, so also was it in Russian music. There was docility on the one side in a composer who allowed another to take in hand and reconstruct his work: autocracy on the other, till it became a problem to trace the work of the original composer. There was a pretty state of chaos when Rimsky-Korsakov was set the task of putting in order what would have been called in the 18th century the 'Respectable Remains' of Moussorgsky and Borodin.

While it may be said of the group of Five that their tendency was ethnological, Tchaikovsky, aloof from them, went further afield than they. Not concentrated as they were upon a purely national art which geographically led nowhere eastwardly, while westwardly there were forbidden frontiers, Tchaikovsky followed the course of the sun and grafted his native song upon the stripling that had been reared in more congenial climes. Sentiment did the rest; his last symphony, and then the rumours about his death. But orchestration on the great lines owes as much to him as to the others of his nationality in consistency. In his case it was a matter of assimilation and adaptation rather than self-assertiveness and dogmatism. Music must ever remain a mystery: to the present generation at least it is incomprehensible why stylists so divergent as Tchaikovsky and Gounod should have pinned their faith to Mozart, a composer who on the face of it had little affinity with either. Again, it may be asked how it was that what came to be characteristic of the French School, to mention Debussy alone of many, should have been foreshadowed some score or two years earlier by a Russian soldier on active service.

Orchestral technique in western Europe assumed a new guise as Russian music became known. While Rimsky-Korsakov and his associates were burrowing deep into the *Trailé* of Berlioz, involving themselves in perplexing horn passages as Wagner did in the sterile pre-valve era, they discovered much virtue in the spacing and combining of timbres so that the breadth of sound was not cramped. The fascination lay in technique, not in the obsolete quotations that Berlioz supplied. Many another has spoken and written: among them Gevaert, for the most part faithful to tradition; but in the end it was, and is, the instinct of the individual that moulds the orchestra.

Apart from the question of composition attention was paid to the 'laying out,' especially of the wind section, as if the ear had become sensitive to those combinations which coalesced, without the prominence of some particular timbre. A test that was severe was the rehearsing of strings alone and wind

alone. But as orchestration advanced at the expense of co-ordinated theme, there grew up an independence on the part of every instrument, in derision, as it were, of its neighbours.

STRAUSS.—The departure from classic forms and the aim at poetic and literal or concrete effects brought a new element into orchestration, the most striking example being found in the second variation of 'Don Quixote' (1896-1897) by Richard Strauss, a unique instance of minute sound-analysis solved by instruments. But before this piece of realism, in his 'Till Eulenspiegel' (1895) Strauss had taxed the orchestra to the uttermost, and called for a revision and extension of technique in every department. What appeared impossible at that period became child's play as he proceeded from one Rabelaisian work to another, almost every page of which shows some daring feat of orchestration. There may be views as to the value of his thematic material, but on the orchestral side there can be no question of his having indicated advances in directions hitherto looked on as insurmountable and impassable.

Encouraged by the *réclame* of these works Strauss ventured a composition on a still larger scale—his 'Symphonia (*sic*) domestica.' It is dated December 31, 1903. As music nothing need be said here, but as orchestration in this period it reached the extreme point in the use of instruments. Not content with the orchestral force of his earlier works he asked for piccolo, three flutes, 2 oboes and oboe d' amore, an English horn, a clarinet in D, one in A, two in B flat, a bass clarinet, 4 saxophones ('*ad libitum* only in extreme necessity'—when?), 4 bassoons, a double bassoon, 8 horns, 4 trumpets, 3 trombones, a bass tuba, 4 timpani, 1 triangle, a tambourine, glockenspiel, cymbals, bass drum and 2 harps. Against these forty-nine the string formula was 16, 16, 12, 10, 8. What with uncles and aunts, a child having a bath at 7 P.M., wakened at 7 A.M., and doubtless other intimate details considerably withheld, one misses two instruments in the orchestra which would have added colour to this charming picture of homeliness, namely, a sewing-machine, and a vacuum cleaner in B flat *alt*.

It is too soon to say whether the presently regarded 'extra' instruments which he employs will in time become regular members of the orchestra. The question often has been asked if the composer is the ideal interpreter of his own scores. It might not be quite a bad thing to let him loose and invite him to interpret himself. The impression cannot be dispelled that a large amount of modern music is being written, like the dogmatic music of the mid or late 19th century, by what the eye sees and not by what the ear hears. A glaring instance of this occurred when a composer, conducting one of his own works and reading his score by eye

alone, turned by mistake two pages at once and indicated a 'lead' some bars before its entrance.

The later French school, basing its style, like its great writers, upon the *mot juste*, punctilious (the word is here in its full sense) as to orchestral colour, resorts to the utmost economy of means, but at the same time to so exact a valuation of timbre that the very simplicity of the score would be barren if it were not fully observed and respected. Thought in the orchestra is then expressed in a welding of timbres, almost a breath, but ample for the purpose.

GENERAL CONSIDERATIONS.—Almost every bar of orchestral music should enshrine a secret, but it is not found in all. The obvious and commonplace often enough 'lag superfluous' when the orchestra is 'busy': an apparent idleness may be part of the design in order to prepare an effective entry. Towards the end of his days Haydn was warned against being pushed by eccentricity to caricature. Will many to-day endorse that opinion? The lucidity and limpidity of Mozart, as we with perfected instruments find him, may not have struck his contemporaries. Beethoven's performances did not escape collapse on many an occasion. Routine and an enlarged comprehension have intervened. Some names, notable in their time, have become shadows, but in the progress of music the heavenly maid still keeps her eternal youth. The fracas that Molière called the music of his day is now as words of one syllable. The clamourings of a past age become mere lipings, but there is wisdom still to be learnt out of the mouths of babes and sucklings.

Orchestration for the sake of orchestration because 'the instruments are there' tends to thrust aside the pure expression of ideas. A complicated texture that seeks out many inventions exalts colour at the expense of design. The older reign of the fingers on the keyboard imposed a surrender of the ear of the mind, and fettered the analysis of sound and the fitness of the instrument appropriate to produce it. As the ear of the mind awoke to fuller consciousness the labour at the pianoforte ceased to be worthy of transmission. Man had to hear with his ears rather than with his eyes and his fingers.

Recent excursions have scorned the preachings of the elders and it would seem as if the goodly fellowship among instruments were to be sacrificed to an antagonistic and jealous clamour for supremacy. Whither the present mood is tending, or for how long it will persist, nothing can be said. The perception of the human ear may have been strained either to welcome new sounds or to return to earlier delights. From that which is new can be learnt the simple beauties of music that was in its childhood. Again, it may yet be that a great art may be built up on the debris of failures.

But it is not well for music that the orchestra should be employed for the rags and tatters of scraps of themes which ill accord with the eloquence and noble purpose of the art.

To invent new devices, such as uncertain harmonics on the double bass, to discover that a section of a plucked harp-string has its own colour—these in themselves, while technically interesting and novel, are not exactly on the same plane with the just combination of timbres so as to obtain their full value. There is no royal road to the orchestra, however paved it may be with good intentions. A *tutti* passage may be 'indicated' *fff*, but the horse-power, if a simile may be allowed, will be far below the pressure demanded if the judicious balance of tone is disregarded. The vast column of sound, thick where it should be thin, thin where it should be compact, close-knit where it should be open, muddy where it should be filigree—these are 'faults' in musical architecture which even the greatest masters have left to conductors to make good by tempering some member and enforcing some other unit of the orchestra. The surest hand is that of the composer who has spent hours, if not days, in analysing in silence and then placing for good his orchestral thought on paper. The weakest hand is his who gropes hesitatingly, rewrites, bespatters his score with alterations in red ink: who has not heard with his ears but only with his eyes. Such demolitions and reconstructions point to an uncertainty of thought, a wavering, to which no one sure of his building and his inner orchestral ear would confess for a moment. The deeper questionings, the captivings in solitude, are not for some rough and ready 'filling in,' but for a certainty of expression which is proof against later revision.

In spite of much that has been written of orchestration at the present day, the last word lies with the theme itself. The grim anatomy of music, like that of man, is changeless.

MUSICAL INSTRUMENTS — SPAIN, c. 1270

(Library of the Escorial Cantigas de S. Maria)

- 1 Portative Organ (*Organo de coll*)
- 2 Organistrum (*Cinfonia*)
- 3 Chimebells (*Cimbales*)
- 4 Cymbals (*Platillos*)
- 5 Clackers (*Tabillos*)
- 6 Drum (*Atambor*)

Lorn are furnished with shifting keyboards, in order to arrange for the mechanical transposition of the parts when these are not written in the key of C. The different qualities of tone are obtained by making the vibrating reeds of varying dimensions, and by the peculiar shape of the channels conveying the wind to them. The orchestrinas are chiefly intended to be employed as convenient substitutes for the real instruments at performances where players of the orchestral instruments cannot be obtained. Hullah, in his *Music in the House*, recommended them as valuable for the practice of concerted music as well as for the purpose of supplying obligato accompaniments.

T. L. S.

ORDINES. A conventional grouping of a number of feet of one of the first five of the RHYTHMIC MODES (*q.v.*), ending always with a rest of the duration necessary to complete the last foot. The scheme is as follows:

Ordo.	Mode.	Number of Feet.
I.	1-4	2
II.	5	1½ (i.e. O. O. O. —)
III.	1-4	3
IV.	5	2
V.	1-4	4
VI.	5	2½

A. H.

ORDOÑEZ, PEDRO (*b.* Palencia, c. 1500; *d.* Rome, 1550), Spanish church composer. He went to Rome and entered the Capella Pontificia (Apr. 29, 1539) some four years after Morales, being described as of the diocese of Palencia. In 1545 (Jan. 11) he was created *Abbas*, and was among the singers who took part in the opening ceremony of the Council of Trent (Dec. 13, 1545). He also accompanied the council when it removed to Bologna in 1547. (The question of church music did not come up until 1562.) In 1549 Ordoñez was still a member of the Capella Pontificia, and is mentioned as having leave of absence to visit some baths near Bologna. MSS. of his works exist in certain Spanish cathedrals.

J. B. T.

ORDRE, another name for *SUITE* (*q.v.*), used by Couperin and some of his contemporaries. There is no difference of arrangement or structure which would account for the employment of the two names.

M.

OREFICE, GIACOMO (*b.* Vicenza, 1865; *d.* Milan, Dec. 22, 1922), composer, studied at the Liceo di Bologna under Busi and Mancinelli. Unlike many Italian composers of his time, Orefice was not exclusively devoted to the stage. His most important operas are:

* *Consuelo* (Bologna, Teatro Comunale, 1895), * *Chopin* (Milan, Teatro Lirico, 1901), * *Cecilia* (Vicenza, Teatro Comunale, 1902), * *Mosè* (Genoa, Teatro Carlo Felice, 1905), * *Fane altrui* (Venice, Teatro Fenice, 1907), * *Radici* (Milan, Teatro Lirico, 1913) and * *Il Castello del Sogno*.

The symphonic works include:

* *Sinfonia del Bosco*, symphony in D minor, suite for violoncello and orchestra and * *Anacronistiche*, a work in four movements (Ad Artemide, A Fauna, Ad Eros, A Dionisio).

Among his chamber music may be mentioned:

Two sonatas for violin and piano and one for violoncello and piano, a trio and * *Ritornelli ed ombre* for quintet.

There are also a number of songs and piano

pieces (Preludi del mare, Quadri di Boecklin, Crespusco, Miraggi, etc.). Orefice was professor of composition at the Conservatorio of Milan.

ORFEO, see **ORPHEUS** (1).

ORGAN (Fr. *orgue*; Ital. *organo*; Ger. *Orgel*). A wind instrument, the basic principle of which is that its tones are produced by means of a number of pipes, each pipe producing only one note. The instrument is here discussed under three heads: 1, History; 2, Description of Mechanism; 3, The Modern Organ.

1. HISTORY

There can be little doubt that the principle of the three great classes of organ-pipe—Stopped, Open and Reed—was known at a very early period, as we shall have occasion to show. (See **PIPES**, EVOLUTION AND DISTRIBUTION OF MUSICAL.)

The first idea of such an instrument was doubtless suggested to man by the passing breezes as they struck against the open ends of broken reeds. A few such reeds or tubes, of varied growths or diameters, and of graduated lengths, bound together in a row, with their open tops arranged in a horizontal line, would form an instrument possessing sufficient capacity for the performance of primitive melodies.

The myth that Pan was the originator of the syrinx led to its being called 'Pan's-pipe,' under which name, or that of 'Mouth-organ,' it is known to the present day. (**PANDEAN PIPE**.)

The pipes of the syrinx being composed of reeds cut off just below the knot—which knot did not permit the wind to escape, but caused it to return to the same place where it entered, thus traversing the length of the tube twice—were in principle so many examples of the first class of pipes mentioned above. They were practically 'Stopped pipes,' producing a sound nearly an octave lower than that of an open pipe of the same length.¹

The mode of playing upon this earliest organ must have been troublesome and tiring, as either the mouth had to be in constant motion to and fro over the tubes, or they had incessantly to be shifted to the right or left under the mouth. Some other method of directing wind into them must in course of time have been felt to be desirable; and the idea would at length occur of conducting wind into the tube from below instead of above. This result—an enormous step forward—could be obtained by selecting a reed, as before, but with a short additional portion left below the knot to serve as a mouth-piece or wind-receiver (the modern 'foot'); by

FIG. 1.

¹ An exact model of a Stopped Diapason pipe of wood is presented by the well-known 'pitch-pipe' formerly in common use.

making a straight narrow slit through the knot, close to the front, to serve as a passage-way for the breath; and by cutting a small horizontal opening immediately above that slit, with a sloping notch, bevelling upwards and outwards over that again. The breath blown in at the lower end, in passing through the slit would strike against the edge of the notch above, and there produce rapid flutterings, which would be communicated to the air in the tube, and would cause a sound to be emitted. In this manner a specimen of the second class of pipe mentioned above—that of the open species—would be brought into existence.

When the first 'squeaker' was made, such as country lads still delight to construct of osiers in spring-time, a primitive model of a pipe of the third kind mentioned above, a 'Reed-pipe,' was produced. It consisted of a 'vibrator' and a tube; the former sounded by being agitated by compressed wind from an air-cavity—the breath from the human mouth. Reed-pipes, although freely used as separate wind instruments in ancient times—the bagpipe among the number—were not introduced into organs until the 15th century, so far as can be ascertained, and need not therefore be further considered in this place.

A series of pipes of the second class (receiving air from below) would be less conveniently under the immediate control of the mouth than their predecessors; hence a wooden box was devised (now the wind-chest), containing a row of holes along the top into which were placed the lower ends of the pipes; and the wind was sometimes provided by two attendants, who blew with their mouths alternately into pliable tubes, the one while the other took breath.

An antique organ supplied in this manner is sculptured under a monument in the Museum at Arles, bearing the date of XX.M.VIII.¹

FIG. 2.

The pipes are held in position by a cross-band, just as were those of the earlier syrinx. The carving represents the *back* of the instrument, as is indicated not only by the 'blowers',

¹ From Dom Bedos, *L'Art du facteur d'orgues* (Paris, 1766)

being there, but also by the order of the pipes from large to small, appearing to run the wrong way, namely, from right to left instead of the reverse. The pipes of the early organs are said to have sounded at first all together, and those which were not required to be heard had to be silenced by means of the fingers or hands. An arrangement so defective would soon call for a remedy; and the important addition was made of a slide, rule or tongue of wood, placed beneath the hole leading to each pipe, and so perforated as either to admit or exclude the wind as it was drawn in or out. Kircher² gives a

FIG. 3

The wind was conveyed to the chest through the tube projecting from the right-hand side, either from the lips or from some kind of hand-bellows. In either case the stream would be only intermittent.

Another drawing given by Kircher (said to be that of the Hebrew instrument called *Magrephah*) exhibits the important addition of two small bellows, which would afford a continuous wind-supply, the one furnishing wind while the other was replenishing.

FIG. 4.

It is very doubtful, however, whether this is an authentic representation.

Although nothing very precise can be deduced from the ancient writers as to the time, place or manner in which some of the progressive steps in the invention of the organ already detailed were made, yet it is certain that the germ of many of the most important parts of the instrument had been discovered before the Christian era.³

² *Musurgia*, Bk. II. ch. iv. § 3, p. 3.

³ A paper by Miss Kathleen Schlesinger, *Researches into the Origin of the Organs of the Ancients*, in the *Sammelbande of the Int. Mus. Ges.*, vol. II, p. 167 ff., may be referred to. The *Organ of the Ancients from Eastern Sources (Hebrew, Syriac and Arabic)*, by Dr. Henry Farmer (in the press, 1926), is looked forward to as an authoritative treatment of the subject.

THE CHRISTIAN ERA TO A.D. 1000.—During the first ten centuries but little appears to have been done to develop the organ in size, compass or mechanism; in fact, no advances are known to have been made in the practice of music itself of a kind to call such improvements into existence. Yet a number of isolated records exist as to the materials used in the construction of the instrument; the great personages who exerted themselves about it; and its gradual introduction from Greece, where it is said to have taken its origin, into other countries, and into the church; and these have only to be brought together and placed in something approaching to chronological order, with a few connecting words here and there, to form an interesting and continuous narrative.

In the organ of Ctesibius, described by Hero,¹ it appears that the lower extremity of each pipe was enclosed in a small shallow box, something like a domino box inverted, the sliding lid being downwards. Each lid had an orifice which, on the lid being pushed home, placed the hole in correspondence with the orifice of the pipe, and the pipe then sounded. When the sliding lid was drawn forward, it closed the orifice, and so silenced the pipe. With certain improvements as to detail, this action is in principle substantially the same as that shown in Figs. 3 and 4 and it continued in use up to the 11th century. But the most interesting part of this description is the reference to the existence of a simple kind of key-action which pushed in the lid on the key being pressed down, the lid being pulled back by a spring of elastic horn and a cord on the key being released. Claudian the poet, who flourished about A.D. 400, has in his poem *De consulatu F. Manlii Theodori* (316-19) left a passage describing an organist's performance upon an instrument of this kind, and also its effect, of which the following is a literal version:

'Let there be also one who by his light touch forcing out deep murmurs, and managing the unnumbered tongues of the field of brazen tubes, can with nimble finger cause a mighty sound; and can rouse to song the waters stirred to their depths by the massive lever.'

(For a technical description of the instrument see HYDRAULUS, also PLATE XXXVI.)

A Greek² epigram, attributed to the Emperor Julian the Apostate (d. A.D. 363), conveys some particulars concerning another kind of 4th-century organ, of which the following is a literal translation:

'I see a strange species (lit. "nature") of reeds: surely they have rather sprung up from a foreign (lit. another) brazen field (lit. furrow): wild—nor are they swayed by our winds: but a blast, rushing forth from a cavern of bull's hide, forces its way from beneath, under the root of the well-bored reeds. And a skilful man having nimble fingers stands feeling the yielding rods of pipes, and they, gently dancing, press out song.'

This account describes a wind organ, and one which had no keyboard. Both accounts

particularise the material of which the pipes were made, and it is not improbable that pipes of metal were at that time a novelty.

Theodoret (b. about 393, d. 457) also refers to musical organs as being furnished with pipes of copper or of bronze.

On an obelisk at Constantinople, erected by Theodosius (d. 393), is a representation of an organ, which is here copied.

FIG. 5.

The pipes are eight in number, and appear to be formed of large reeds or canes. They are not sufficiently varied in length to indicate the production of a proper musical scale, which is possibly an error of the sculptor. They are supported like those shown in Fig. 2. This example is very interesting as affording the earliest illustration known of a method of compressing the organ wind which some centuries afterwards became common—namely, by the weight of human beings. From the drawing it seems as if the two youths were standing on the same bellows, whereas they were more probably mounted on separate ones placed side by side. St. Jerome (d. 420) is said³ to mention an organ at Jerusalem, with twelve brazen pipes, two elephants' skins and fifteen smiths' bellows, which could be heard at the Mount of Olives,—it is nearly a mile from the centre of the city to the top of the mount,—and therefore must have been an instrument of great power. Cassiodorus, who was consul of Rome under King Vitigas the Goth in 514, described the organ of his day as an instrument composed of divers pipes, formed into a kind of tower, which, by means of bellows, is made to produce a loud sound; and in order to express agreeable melodies, it is constructed with certain tongues⁴ of wood from the interior, which the finger of the master duly pressing or forcing back, elicits the most pleasing and brilliant tones.

The exact period at which the organ was first used for religious purposes is not positively known; but according to Julianus, a Spanish bishop who flourished A.D. 450, it was in common use in the churches of Spain at that time. One is mentioned as existing 'in the most ancient city of Grado,' in a church of the nuns before the year 580. It is described as

¹ *Klito, Ope. Bib. Lit.*, 3rd ed., II. 355b. *Klito's* reference (A.I. Dardanius), however, does not appear to be correct.

² The term 'tongues' (*linguae*) remained in use for the sliders up to the time when the slide-box was superseded by the spring-box about the end of the 11th century.

³ See W. Chappell's account, *History of Music*, I. 343, etc.
⁴ *Palatine Anthology*, Bk. IX. No. 365.

being about two feet long, six inches broad, and furnished with fifteen playing-slides and thirty pipes, two pipes to each note. Hawkins¹ has given a drawing of the slide-box of this organ, the 'tongues' of which are singularly ornate. The number of notes on the slide-box (fifteen in a length of two feet) would show that the pipes were of small diameter, and therefore that the notes were treble ones.

The advantage of using the organ in the services of the church was so obvious that it would soon be perceived; and accordingly in the 7th century Pope Vitalian, at Rome (about the year 666), introduced it to improve the singing of the congregations. Subsequently, however, he abolished the singing of the congregations, and substituted in its place that of canonical singers.

At the beginning of the 8th century the use of the organ was appreciated, and the art of making it was known in England. The native artificers had even introduced the custom of pipe decoration, for, according to Aldhelm (d. 709), the Anglo-Saxons ornamented the front pipes of their organs with gilding. Organ-making was introduced into France about the middle of the same century. Pepin (714-68), the father of Charlemagne, perceived that an organ would be an important aid to devotion; and as the instrument was at that time unknown either in France or Germany, he applied (about the year 757) to the Byzantine Emperor Constantine Copronymus the Sixth, requesting him to send one to France. Constantine not only complied with this solicitation by presenting him with a large organ, but forwarded it by a special deputation, headed by the Roman bishop Stephanus. The organ was deposited in the church of St. Cornélius at Compiègne. It was a wind organ, with pipes of lead: and is said to have been made and played by an Italian priest, who had learnt the method of doing both at Constantinople.

The first organ introduced into Germany was one which the Emperor Charles the Great, in 811 or 812, caused to be made at Aix-la-Chapelle after the model of that at Compiègne. The copy was successful, and several writers expressed themselves in terms of high praise at its powerful yet pleasing tone.

Shortly after the year 800 an organ was sent to Charlemagne by the Caliph Haroun Alraschid, constructed by an Arabian maker of the name of Giafar, which was placed in a church at Aix-la-Chapelle. It was a wind organ of extraordinarily soft tone.

Venice was favourably known for its organ-makers about this time; a monk of that city, of the name of Georgius, a native of Benevento, having in the year 822 constructed an instrument for Louis le Debonnaire, which was an hydraulic organ, and was erected in the palace

of the king at Aix-la-Chapelle. Its pipes were of lead.

The progress of Germany in making and using organs in the latter half of the 9th century, particularly in East Franconia, was so great, that Pope John VIII. (880), in a letter to Anno, Bishop of Friesingen, requests that a good organ may be sent to him, and a skilful player to instruct the Roman artists.

By this time organ-building had apparently made its way into Bavaria; and a large instrument, with boxwood pipes, is said to have been erected in the Cathedral of Munich at a very early date.

In the 9th century organs had become common in this country, the English artificers furnishing them with pipes of copper, which were fixed in gilt frames. In the 10th century the English prelate St. Dunstan (925-88), famous for his skill in metal work, erected or fabricated an organ in Malmesbury Abbey, the pipes of which were of brass. He also gave an organ to Abingdon Abbey, and is said to have furnished many other English churches and convents with similar instruments. In this same century Count Elwin presented an organ to the convent at Ramsey, on which he is said to have expended the then large sum of thirty pounds in copper pipes, which are described as emitting a sweet melody and a far-resounding peal.

A curious representation of an organ of about this date is given² in a MS. Psalter of Edwin preserved in the library of Trinity College, Cambridge.³ The pipes are placed within a frame, apparently after the manner referred to above. The surface of the organ is represented as being perforated to receive a second set of pipes, though the draughtsman appears to have sketched one hole too many. The two organists, whose duties seem for the moment to have been brought to an end by the inattention of the blowers, are intent on admonishing their assistants, who are striving to get up the wind-supply, which their neglect has apparently allowed to

FIG. 6.

run out. The four bellows are blown in a manner which we here meet with for the first time—namely, through the intervention of

² It is a bad copy of a picture in the Utrecht Psalter.

³ Part of the representation is here engraved from a photograph, by the kind permission of the authorities.

¹ *History of Music*, I. 401.

handles instead of directly by the hands ; and as in so small an organ there could not have been room for four persons to compress the wind by standing upon the bellows, it is possible that they were loaded with weights in the manner that has generally been supposed not to have been introduced until some centuries later.

At the end of the 10th century several organs existed in Germany (St. Paul's, Erfurt ; St. James's, Magdeburg ; and Halberstadt Cathedral), which, although small and unpretending instruments, were objects of much astonishment and attraction at the time.

In the 11th century we find a treatise¹ on the construction of organs, included in a larger work on *Divers Arts*, by a monk and priest of the name of Theophilus, which is of considerable interest as showing the exact state of the art of organ-making at that period. It is too long to quote *in extenso*, and is also rather obscure in parts ; but the following particulars may be gathered from it : that the slide-box was made two and a half feet in length, and rather more than one foot in breadth ; that the pipes were placed upon its surface ; that the compass consisted of seven or eight notes ; that the length of the slide-box was measured out equally for the different notes or slides, and not on a gradually decreasing scale as the pipes became smaller, since the playing-slides would not in that case have been of one width or at one distance apart ; that the organ was played by these movable slides ; that each slide worked in little side-slits, like the lid of a box of dominoes ; that there were two or perhaps even more pipes to each note ; that the projecting 'tongue' of each slide was marked with a letter to indicate to which note it belonged — a custom that continued in use for centuries afterwards (as, for instance, in the Halberstadt organ finished in 1361 ; and in the old organ in the church of St. Ægidius, in Brunswick, built in the latter part of the 15th century, and illustrated on p. 744) ; that a hole was cut through the slide under each pipe about an inch and a half across, for the passage of the wind ; that all the pipes of a note sounded together ; that a note was sounded by the slide being pushed in, and silenced by its being drawn forward ; and that in the front of each slide, immediately behind the handle or tongue, a narrow hole about two inches long was cut, in which was fixed a copper-headed nail, which regulated the motion of the slide and prevented its being drawn out too far.

The following illustration, deduced from Theophilus's description, shows the slide, and three passages for wind to as many pipes above. The slide intercepts the wind, but will allow it

to pass on being moved so that its openings, shown by the unshaded parts, correspond with those below and above.

FIG. 7.

Gori's *Thesaurus diptychorum*, 1759, vol. ii., contains a most interesting engraving, copied from an ancient MS., said to be as old as the time of Charlemagne, which shows a person playing upon an instrument of the Theophilus type. (See Fig. 8.)

But of all the information given by Theophilus, the most important, because previously unknown and unsuspected, is that which relates to the finishing of the pipes so as to produce different qualities of tone. They were

FIG. 8.

made of the finest copper ; and the formation of a pipe being completed, Theophilus thus proceeds :

'He (the maker) can bring it (the pipe) to his mouth and blow at first slightly, then more, and then strongly ; and, according to what he discerns by hearing, he can arrange the sound, so that if he wish it strong the opening is made wider ; but if slighter, it is made narrower. In this order all the pipes are made.'

Here we see that the means for producing a fuller tone by a wide or high mouth, and a more delicate sound by a narrower or lower one, were well known in the 11th century ; and that the manner of testing the 'speech' by blowing the pipe with the mouth in various ways is precisely that often employed by the 'voicer' of the present day when 'regulating' or 'finishing' a stop. It is worthy of observation that although Theophilus incidentally recognises an addition to the number of pipes to a note as one means of increasing the utility of the organ, he as distinctly indicates its range or compass as simply seven or eight notes.

We have intentionally introduced the account of Theophilus somewhat before its due chronological place, as it materially assists in

¹ Theophilus, qui et Rugerus, Presbyteri et Monachi libet III., de diversis artibus. Opera et studio Roberti Hendrie. Londini, Johanne Murray, MDCCCXVII. 8vo.

elucidating the description of the remarkable organ erected in Winchester Cathedral in the 10th century by order of Bishop Elphege (d. 961), and described in a poem by a monk of the name of Wulstan, who died in 963. It is of further use in this place, since Wulstan's description had formerly been a great puzzle to writers on the history of the organ.

The following is a translation of the portion of the Latin poem with which we are concerned, as given in Wackerbarth's *Music and the Anglo-Saxons*, pp. 12-15:

'Such organs as you have built are seen nowhere, fabricated on a double ground. Twice six bellows above are ranged in a row, and fourteen lie below. These, by alternate blasts, supply an immense quantity of wind, and are worked by seventy strong men, labouring with their arms, covered with perspiration, each inciting his companions to drive the wind up with all his strength, that the full-bosomed box may speak with its four hundred pipes which the hand of the organist governs. Some when closed he opens, others when open he closes, as the individual nature of the varied sound requires. Two brethren (religious) of concordant spirit sit at the instrument, and each manages his own alphabet. There are, moreover, hidden holes in the forty tongues, and each has ten (pipes) in their due order. Some are conducted hither, others thither, each preserving the proper point (or situation) for its own note. They strike the seven differences of joyous sounds, adding the music of the lyric semitone. Like thunder the iron tones batter the ear, so that it may receive no sound but that alone. To such an amount does it reverberate, echoing in every direction, that every one stops with his hand his gaping ears, being in no way able to draw near and bear the sound, which so many combinations produce. The music is heard throughout the town, and the flying fame thereof is gone out over the whole country.'

THE PRIMITIVE KEYBOARD.—We now arrive at a period when a vast improvement was made in the manner of constructing the organ. It has been shown that when the Winchester organ was made, and onwards to the date of the treatise by Theophilus, the method of admitting wind to, or of excluding it from, the pipes of a note was by a slide, which alternately covered and exposed the underside of the holes leading up to its pipes. The frictional resistance of the slides, at all times trying, would inevitably be increased by their swelling in damp weather and becoming tight; they would certainly have to be lengthened for every pipe added, which would make them heavier and harder to move with the hand; and they involved the twofold task, already mentioned, of simultaneously thrusting one slide back while another was being drawn out. These circumstances, added to the fact that a given resistance can be overcome with less difficulty by a blow than by a pull with the fingers and thumb, must have directed attention to the possibility of substituting pressure for traction in the manipulation of the organ. Thus it is recorded that towards the end of the 11th century huge keys, or rather levers, began to be used as the means for playing the instrument; and however unwieldy these may have been, they were nevertheless the first rude steps towards provid-

ing the organ with a keyboard. A spring-box too, of some kind was almost of necessity also an improvement of the same period; for without some restoring power, a key, on being knocked down, would have remained there until picked up; and that restoring power would be the most readily supplied by a spring or springs. In some of the early spring-boxes a separate valve seems to have been placed against the hole leading up to every pipe of each note, where it was held in position by an elastic appliance of the nature just named. The valves were brought under outward control by strings or cords, which passed through the bottom of the spring-box, and were attached to the key lying in a direct line beneath. As the keys must have been hung at their inner end, and have had their greatest fall in front, the smallest pipes of a note were no doubt from the first placed quite inside, and the largest in front, with those of graduating scale occupying an intermediate position in proportion to their size; and thus the small valves, opening a lesser distance, were strung where the key had the least fall, and the larger pallets where they had the greatest motion.

Edmund Schulze, of Paulinzelle, about the middle of the 19th century made for the present writer a rough sketch of the spring-box of an organ about 400 years old which he assisted in taking to pieces when he was quite a youth; from which sketch the drawing for the following illustration was prepared.

FIG. 9.

The early keys are described as being from three to five inches wide, or even more; an inch and a half thick; from a foot and a half to a yard or more in length, with a fall sometimes of as much as a foot in depth. They must at times, therefore, have been as large as the treadle of a knife-grinder's machine. Their size and amount of resistance would on first thought appear to have been most unnecessarily great and clumsy; but this is soon accounted for. We have seen that the gauge of the keys was influenced by the size of pipe necessary for the lowest note. Their width would be increased when the compass was extended downwards with larger pipes; and their length would be increased with the number

of valves that had to be strung to them ; while the combined resistance of the many strong springs of the larger specimens would render the touch insensible to anything short of a thump.

It was in the cathedral at Magdeburg, towards the end of the century of which we have been speaking (the 11th), that the earliest organ with a keyboard of which we have any authentic record was erected. It is said to have had a compass of sixteen notes, but no mention is made as to what the notes were.

In the 12th century the number of keys was sometimes increased ; and every key further received the addition of two or three pipes, sounding the fifth and octave to the unison. According to Seidel¹ a third and tenth were added. All sounded together, and there was no escaping from the strong incessant ' Full Organ ' effect.

There is a curious account written by Lootens²—an author but little known—of a Dutch organ said to have been erected in the church of St. Nicholas at Utrecht in the year 1120. The organ had two manuals and pedals. The compass of the former was from F, represented by a pipe of 6 feet standard length, up to b^b, namely two octaves and a half. The chief manual had twelve pipes to each key, including one set of which the largest pipe would be 12 feet in length,³ and which therefore was identical with the Double Open Diapason of subsequent times. The sound-board was without grooves or draw-stops, consequently there were probably nearly as many springs for the organ-beater to overcome as there were pipes to sound. The second manual was described as having a few movable draw-stops ; and the pedals one independent stop—oddly enough a Trumpet—details and peculiarities which strongly point to the last two departments having been additions made at a much later period ; for a ' double organ ' is not known to have existed for two centuries after the date at which this one is said to have been completed ; still less a triple one.

One of the greatest improvements effected in the organ in the 14th century was the gradual introduction of the four remaining chromatic semitones. F \sharp was added in the early part of the century ; then followed C \sharp and E \flat ; and next G \sharp . The B \flat already existed in the Winchester and other mediæval instruments. By Dom Bedos the introduction of these four notes is assigned to the 13th century ; while others place the first appearance of three of them as late as the 15th. Praetorius gives them an

intermediate date—the middle of the 14th century ; and he is undoubtedly correct, as they were certainly in the Halberstadt organ, finished in the year 1361.

Dom Bedos refers to a curious MS. of the 14th century in the Bibliothèque Nationale, as affording much further information respecting the organ of that period. This MS. records that the clavier of that epoch sometimes comprised as many as thirty-one keys, namely, from B up to f^{''}, two octaves and a fifth ; that wooden rollers, resembling those used in English organs as late as the 19th century, were employed to transmit the movement of the keys to the valves ; that the bass pipes were distributed, right and left, in the form of wings ; and that those of the top notes were placed in the centre of the instrument, as they now are.

To appreciate the importance of the improvements just mentioned, and others that are necessarily implied, it is necessary to remember that so long as it was a custom in organ making to have the pipes above and the keys below placed parallel one to the other, every little expansion of the organ involved an aggravation of the unwieldy size of the keys, at the same time that the convenient reach of the player set most rigid bounds to the legitimate expansion of the organ, and fixed the extent of its limits. The ingenious contrivance of the roller-board at once left the dimensions of the organ free to be extended laterally, irrespective of the measure of the keyboard.

This emancipation was necessary before the additional semitones could be conveniently accommodated ; for as they would materially increase the number of pipes in each rank, so they would require wider space to stand in, a larger spring-box, such as was then made, to stand upon, and rollers equal in length to the sum of the distance to which the pipes were removed from a parallel with each key.

With regard to the distribution of the pipes, they had generally been placed in a single row, as shown in mediæval drawings, but as the invention of the chromatic notes nearly doubled the number in the septave—increasing them from seven to twelve—half the series would now form nearly as long a row as the entire diatonic range previously did. The two smallest pipes were, therefore, placed in the centre of the organ, and the remainder alternately on each side ; and their general outline—spreading outwards and upwards—gave them the appearance of a pair of outstretched wings. The ' zigzag ' plantation of pipes was doubtless a subsequent arrangement.

In 1350 Poland appears in connexion with our subject. In that year an organ was made by a monk at Thorn in that kingdom, which had twenty-two keys. As this is the exact number possessed by the Halberstadt organ, completed eleven years later, it is possible that

¹ Johann Julius Seidel, *Die Orgel und ihr Bau* (Braunau, 1842).

² *Nouveau Manuel complet de l'organiste* (Paris).

³ No record is known to exist as to the pitch to which the very early organs were tuned, or whether they were tuned to any uniform pitch whatever, which is extremely doubtful. In referring to the lowest pipe as being 12 feet in speaking length, a system of pipe measurement is made use of which is not known to have been adopted until centuries after the date at which this organ is stated to have been made.

the Thorn organ may have been an anticipation of that at Halberstadt, as far as the chromatic keyboard is concerned.

The Halberstadt Cathedral organ, although, strictly speaking, a 'single organ,' only, with a compass of scarcely three octaves, had three claviers, and pipes nearly equal in size to any that have ever been subsequently made. It was built by Nicholas Faber, a priest, and was finished on Feb. 23, 1361. Our information regarding it is obtained from the description of Michael Praetorius in his *Synagma musicum*. It had twenty-two keys, fourteen diatonic and eight chromatic, extending from B \sharp up to a', and twenty bellows blown by ten men. Its largest pipe, B, stood in front, and was 31 Brunswick feet in length, and 3 $\frac{1}{2}$ ft. in circumference, or about 14 inches in diameter. This note would now be marked as the semitone below the C of 32 feet, and the pipe would naturally be expected to exceed the pipe of that note in length; but the pitch of the Halberstadt organ is known to have been more than a tone sharper than the highest pitch in use in England at the present day, which accounts for the want of length in its B \sharp pipe.¹

In the Halberstadt instrument a successful endeavour was made for the first time to obtain some relief from the constant 'full organ' effect, which was all that had previously been commonly produced. For this purpose a means was devised for enabling the pipes standing in front (afterwards the Principal, Praestant, or Open Diapason), and the larger pipes in the side towers (subsequently part of the Great Bass Principal, or 32-foot Diapason), to be used separately and independently of the other tiers of pipes, which were located behind, and hence called the *Hintersatz*, or 'hinderposition.' This result was obtained by introducing three claviers instead of one only; the upper one for the full organ, consisting of all the tiers of pipes combined; the middle one, of the same compass as the upper, and called 'Discant,' for the Open Diapason alone; and the lower one, with a compass of an octave, from \sharp (B \sharp) to H (b \sharp), for the lower portion of the Bass Diapason. Praetorius mentions incidentally that the large bass pipes, which sounded the *third* octave below the unison, would have been scarcely definable, but being accompanied by the numerous pipes of other pitches in the general mixture organ, they became effective.

The claviers of the Halberstadt organ presented several other interesting features; and being

the earliest examples of chromatic keyboards known, are here engraved from Praetorius.

The keys of the Halberstadt organ were made at a time when the five chromatic notes were placed in a separate row from the 'naturals,' almost as distinctly so as a second manual of the present day. The keys of the upper (*Hintersatz*) and middle (*Discant*) claviers (Fig. 10) measured four inches from centre to centre and the diatonic notes were ornamentally shaped and lettered, thus preserving the 'alphabetic' custom observed in the 16th-century organ at Winchester, and described by Theophilus in the 11th. The chromatic notes were square-shaped, and had their surface about two and a half

FIG. 10.

FIG. 11.

FIG. 12.

inches above that of the diatonic, were two inches in width, and one inch in thickness, and had a fall of about an inch and a quarter. The chromatic keys were no doubt pressed down by the three inner fingers, and the diatonic by the wrist end of the hand. The diatonic notes of the lower clavier (Fig. 11), eight in number, namely \sharp (B \sharp), C, D, E, F, G, A, H (B \sharp), were quite differently formed, being square-fronted, two inches in breadth, and with a space of about the same width on each side. These keys were evidently thrust down by the left hand, by pressure from the shoulder, like handles, the space on each side being left for the fingers and thumb to pass through. This clavier had four chromatic notes, C \sharp , E \flat , F \sharp , and G \sharp , but curiously enough, not B \flat , although that was the 'lyric semitone' of which so much is heard long before.

The contrast between the *forte* and *piano* effect on the Halberstadt organ—from the full organ to a single set of pipes—must have been very violent; but the experiment had the good effect of directing attention to the fact that a

¹ As the history of musical Pitch is treated of under its proper head, it is only necessary here to refer briefly to the remarkable fact that the pitch of old organs sometimes varied to no less an extent than half an octave, and that too at one and the same date, as shown by Arnold Schlick in 1511. One reason given for this great shifting of the pitch was, that the organ should be tuned to suit higher or lower voices, without the organist having to 'play the chromatic,' which was not convenient to every one; a difficulty that must have arisen as much from the construction of the keyboards, and the tuning in unequal temperament, as from lack of skill in the performer to use them.

change, if less marked, would be grateful and useful; for Seidel (p. 9) records that from this time instruments were frequently made comprising *two* manual organs, the upper one, interestingly enough, being named 'discont'; and he further gives it as his opinion that this kind of construction probably led to the invention of Couplers.

He likewise mentions that large churches were often provided with a second and smaller organ; and Praetorius speaks of primitive little organs which were hung up against a column in the church 'like swallows' nests,' and contained twelve or thirteen notes almost or entirely diatonic, thus,

B, C, D, E, F, G, A, B, C, D, E, F; or
C, D, E, F, G, A, B \flat , C, D, E, F, G, A.

Dom Bedos relates that in the 14th century an organ was erected in the church of St. Cyprian, at Dijon, which not only had two manuals, but had the choir organ in front. The front pipes were made of tin, those inside of lead; there were said to be sound-board grooves, covered underneath with white leather; three bellows 4 feet 7 inches long, and 2 feet 1 inch wide; and an arrangement by which a continuous wind could be provided from one bellows only. This, however, is manifestly the account of an organ which had received improvements long after its construction, such additions afterwards coming to be described as part of the original work.

MECHANICAL ADVANCE IN THE 15TH CENTURY.—We now come to the 15th century, which was prolific in its improvements of the spring-box, keys, pedals, wind-supply, etc. And first of the spring-box.

The first endeavour was to obtain more than one strength of tone from the same manual. It appears that to establish the power of preventing some of the sets of pipes (doubtless those that afterwards constituted the mixture and other bright-sounding ranks) from speaking when required to be silent, a sliding board was placed over the valves that opened and closed the entrance for the wind at the feet of those pipes. The remaining tiers of pipes, doubtless those sounding the unison (8), octave (4), and sub-octave (16), could thus be left in readiness to sound alone when desired. The effect of this contrivance must have greatly resembled that of the 'shifting movement' of subsequent times.

Two distinct effects were thus obtained from one organ and one set of keys; and the question would soon arise, 'If two, why not more?' A further division of the organ-sound soon followed; and according to Praetorius the credit of first dividing and converting the *Hintersatz* into an instrument of several single sets of pipes (afterwards called registers or stops) is due to a German artificer of the appropriate

name of Timotheus, who constructed a sound-board possessing this power for an organ which he rebuilt for the monastery of the Bishop's palace at Würzburg.

The 'Spring sound-board' was formed in the following manner. The valves of each note were closed in on each side by two diminutive walls (sound-board bars) extending from the back to the front of the wind-box, and, together with the top and bottom, forming and enclosing each valve within a separate canal (sound-board) groove of its own. The entire area of the former wind-box was partitioned off in this manner, and occupied by the 'bars' and 'grooves' of the newly devised sound-board. A playing-valve (sound-board pallet) was necessary below each groove to admit or exclude wind. These were collectively enclosed within a box (wind-chest) now added to fulfil the duty of the transformed wind-box. The valves immediately under the several pipes of a note were no longer drawn down from below by cords, but were pressed down from above, as shown in the following cut, which is a transverse section of a small spring sound-board for three stops.

FIG. 13.

A metal pin passed down through the surface of the sound-board and rested on the front end of the 'register-valve' as it was called. A movement or draw-stop was provided, on drawing which the longitudinal row of metal pins was pressed down, and the valves lowered. The combined resistance of the set of springs beneath the valves was very considerable, hence great force was necessary in drawing a stop, which had to be hitched on to an iron bar to keep it 'drawn.' When released it sprang back of its own accord. The set of pipes of which the register-valves were open would then be ready for use; and in the woodcut the front set is shown as being thus prepared. The wind would be admitted into the groove by drawing down the sound-board pallet, which is seen immediately below.

By this means the power was created of using each separate set of pipes, except the small ones, singly or in any desired combination, so that the organ could be played loudly or softly, or at any intermediate strength between the two extremes; and they now for the first time received distinctive names, as Principal (Open

Diapason, 8 feet); Octave (Principal, 4 feet); Quint (Twelfth, $2\frac{2}{3}$ feet); Super-octave (Fifteenth, 2 feet); etc.; and each separate series was then called a Register (Stop). The smaller sets of pipes were left to be used in a group, and were called 'Mixture'¹ (Sesquialtera, etc.). The stops sounding a note in accordance with the key struck, as C on the C key, were afterwards called Foundation-stops; those which produced a different sound, as G or E on the C key, were named Mutation-stops; while those that combined the two classes of sounds were distinguished as Compound or Mixture Stops.

The spring sound-board was much admired by some Hollanders; and some organ-builders from the Low Countries, as well as from Brabant, went to see it, and constructed sound-boards on the same system for some time afterwards.

The pipe-work, however, was all of one class,—open, metal, cylindrical, and of full proportionate scale—similar in general model to the second great class of pipe referred to at the beginning of this article as Open. Great therefore as was the gain resulting from the invention of the registers, the tone still remained of one general character or quality. It then occurred to some of the thinking men of the time that other qualities of tone would probably ensue if modifications were made either in the shape, proportion, outline, or material of the pipes, etc.; and the experiments justified the hypothesis.

Stopped pipes (our first great class) were made either of wood closed with a plug, or of metal covered with a sliding cap; and so a soft pleasing mild tone was obtained. Thus originated the Gedact (Stopped Diapason), Bordun (Bourdon), Klein-gedact (Flute), etc. Some Reed-stops (our third class) were also invented about this time, as the Posaune (Trombone), Trumpet, Vox humana, etc. Stops composed of cylindrical pipes of small diameter were likewise constructed, and made to produce the string-tone, which stops were hence called Violone (Double Bass), Viol di gamba, etc.; and further modifications of tone were secured by either making the pipes taper upwards, as in the Spitz-flöte, Gemshorn, etc., or spread out, as in the Dolcan. Thus was brought about as great a contrast in the organ 'tone-tints' as there is between the graduated but similar tones of a photograph and the varied tints of a coloured drawing.

In the course of the 15th century the keys were reduced in size several times, as fresh contrivances for manipulating the instrument

¹ Dr. Burney, Dr. Crotch, Kieselwetter and other writers, took considerable pains to ventilate and enforce their various theories as to the origin of the Mixture-stop in an organ; but they all omitted to remember that for centuries the whole organ was nothing but one huge stop of the kind; and that when the larger sets of pipes were separated off for use, the Mixture was self-formed out of the residue, consisting of rows of little pipes that were thought scarcely worth the trouble of 'drawing' separately.

were from time to time thought of, or new requirements arose.

An early improvement consisted in combining the 'long and short keys' on one manual, and so far reducing their size that they could be played by perhaps a couple of fingers and the thumb alternately. The manuals of the old organ in the church of St. Egidius, in Brunswick, presented this advance; and as they are early examples, perhaps the very first to foreshadow the modern keyboard, a representation of a few notes of one of them is here given from Praetorius.

FIG. 14.

The naturals of the Great manual were about an inch and three-quarters in width, two inches and three-eighths in length in front of the short keys, while the short keys, three inches long and an inch wide, stood an inch and a half above the naturals. The keys of the second manual (*Rück-positif*), curiously enough, appear to have been made to a somewhat smaller gauge, the naturals being an inch and a half in width. On this organ the intervals of a third, fourth and fifth lay within the span of the hand.

It will be observed that the plan of lettering the keys was still followed; but the formation of the clavier was quickly becoming so compact, well defined and susceptible of being learnt without such assistance, that the 'alphabet' probably fell into disuse as superfluous soon after this time.

The name given to the second manual,—*Rück-positif*, Back-choir organ, or, as it is called in England, 'Choir organ in front,'—is interesting as showing that at this time the double organ (to the eye) was certainly in existence.

Franchinus Gaffurius, in his *Theorica musica*, printed at Milan in 1492, gives a curious en-

graving of an organist playing upon an early clavier of this period, with broad keys, of which a copy is given (Fig. 15).

The keys of the organs in the Barefooted Friars' church at Nuremberg (Rosenberger, 1475), the cathedral at Erfurt (Castendorfer, 1483), and the collegiate church of St. Blasius at Brunswick (Kranz, 1499), were less again in size than the foregoing, so that an octave was brought within about a note of its present width. The next reduction must, therefore, have introduced the scale of key still in use. Seidel (p. 10) mentions that in 1493 Rosen-

Fig. 15.

berger built for the cathedral at Bamberg a still larger organ than his former work at Nuremberg, and with more keys. He further observes that the manual of the organ in the Barefooted Friars' church had the upper keys of ivory and the under keys of ebony. Here, then, we reach a period when the keys were certainly capped with light and dark-hued materials, in the manner which continued to be followed up to the end of the 18th century, when the naturals were usually black, and the sharps and flats white. Seidel states also that all the above-named organs were provided with pedals.

The invention of the pedals ranks among the most important improvements that were effected in the 15th century. For a long time they did not exceed an octave in compass, and consisted of the diatonic notes only— \sharp (B_1), C, D, E, F, G, A, H (B_2)—and their use was for some time confined, as might have been expected, to the holding of long sustained sounds only. The manual clavier was attached to them by cords. This kind of 'pedal action' could only be applied conveniently when the pedals were made to a similar gauge to the manual clavier as the clavier keys had previously been made to accord in position with the valves in the early spring-box. This correspondence of gauges was actually observed by Georgius Kleng in the pedals which he added to the organ at Halberstadt in 1495; and as those pedals were at the same time the earliest of which a representation is to be traced, an engraving has already been given of them below the Halberstadt claviers (Fig. 12). It will be observed that in addition to the diatonic keys already mentioned, they had the four chromatic notes corresponding with those on the lower manual with which they communicated. The naturals were made of the kind that were afterwards called 'toe pedals.'

In the early part of the 15th century—in the year 1418—the pedals received the important accession of a stop of independent pedal-pipes, and thus were initiated the 'Pedal Basses' which were destined to impart so much dignity and majesty to the general organ tone.

The manner in which the date of the construction of the first pedal stop was discovered is thus related in the *Leipzig Allgem. mus. Zeitung* for 1836 (p. 128):

'In the year 1818 a new organ was erected in the church of Beeskow, five miles from Frankfurt on the Oder, on which occasion the organ-builder, Marx, senior, took some pains to ascertain the age of the old organ which he had to remove. On a careful investigation it appeared that the old organ had been built just four hundred years, the date MCCCXVIII being engraved on the upper side of the partition (*kern*) of the two principal pedal-pipes, for that these two pipes did belong to the pedal was clear from their admeasurement.'

This may, however, have indicated some kind of arrangement similar to that of SHORT OCTAVE (see below).

In 1468–69 Traxdorff, of Mainz, made an organ for the church of St. Sebald at Nuremberg, with an octave of pedals, which adjuncts led to his being afterwards at times quoted as the originator of them. Their invention has more usually been attributed to Bernhard in 1470 or 1471, organist to the Doge of Venice; but there can be little doubt that they were known before his time.

Several improvements connected with the pedals seem not to have been traced to their originators; such as the introduction of the semitones, the formation of the frame pedal-

board as now made, the substitution of rollers for the rope-action when the breadth of the manual keys was made less than that of the pedals; the separation of the 32-foot stop from the manual, and its appropriation, together with that of other registers, exclusively to the use of the pedals, etc. Bernhard may perhaps have been the first to originate some of these alterations, and Traxdorff others.

Dom Bedos mentions that in the course of the 15th century, 16- and even 32-foot pipes began to be heard of, and that they necessitated a general enlargement of the several parts of the organ, particularly of the bellows. Pipes of 16 and *nearly* 32 feet were, as we have seen, in existence a century earlier than the period to which Dom Bedos assigns them. His observation, therefore, may be taken as applying more probably to the fact that means, which he specifies, had been taken to rectify the feebleness existing in the tones of large pipes, such, for instance, as those at Halberstadt. Hand-bellows were no longer adequate to the supply of wind, either in quantity or strength, and hence more capacious ones were substituted. Praetorius, in 1620, illustrates this improvement by giving a representation of the twenty bellows which he found existing in the old organ in the church of St. Egidius in Brunswick, and which we have copied (Fig. 16).¹

FIG. 16.

Upon each bellows was fixed a wooden shoe; the blowers held on to a transverse bar, and each man, placing his feet in the shoes of two bellows, raised one as he lowered the other. Great ingenuity and constructive labour were bestowed on such bellows; but a supply of wind of uni-

¹ The reader will remember that this method of compressing the organ-wind had been thought of upwards of a thousand years earlier at Constantinople.

form strength could never have been obtained from them, and consequently the organ could never have sounded strictly in tune.

About the beginning of the 16th century the very ingenious but complicated spring sound-board was discontinued as being subject to frequent and very difficult repairs, and for it was substituted the sound-board with sliding registers.

In this sound-board were ingeniously combined the chief features of the two kinds of wind-controlling apparatus that had been in use in previous centuries. Between the holes in the top of the grooves, and those now made parallel therewith in the pipe-stocks, into which the feet of the pipes fitted, were now introduced the *slides*, shown in section in the following cut;

FIG. 17.

which were now laid the length-way of the sound-board, instead of the cross-way as in the old spring-box; and as they were placed in the opposite direction they likewise operated in the reverse way; that is, each slide opened or closed one pipe or rank of the several notes, whereas before it acted on the several pipes of one note, as shown in Fig. 7. The pallets and springs in the wind-chest were of course retained; but the forest of valves, etc., which had been imbedded in the grooves was done away with, and the sound-board simplified and perfected in the form in which it still continues to be made. (Fig. 17.)

In the early part of the 16th century (1516-18) a large and handsome organ was erected in St. Mary's Church, Lübeck, which had two manuals from DD to *a'''* and a separate pedal down to C. The latter had a great Principal of 32 feet, and a second one of 16 feet, made of the finest English tin, and both 'in front.' This organ, however, was tuned to a very sharp pitch—a whole tone above the highest now in use. Its largest pipe, therefore, although named C, really sounded D, and was therefore scarcely so long as the biggest pipe at Halberstadt, made a century and a half earlier. This organ received the addition of a

'third Manual (then called 'Positiv im Stuhl') in 1560 and 1561, and subsequently underwent many other enlargements and improvements; so that by the beginning of the 18th century, when the celebrated Buxtehude was organist, its disposition stood nearly as follows; though the list may possibly include a few subsequent additions of minor importance.

HAUPTWERK. 13 stops.			
	Feet.		Feet.
Principal	16	Rausch-pfeife (12 & 15).	
Quintadon	16	Mixture, 7 ranks.

Nacht-horn	4	Trompete	4
Octav	2		

Having traced the history and growth of the organ in various kingdoms, attention may now be devoted to its special progress in England.

ELY CATHEDRAL ACCOUNTS.—The earliest record known to exist that gives any particulars as to the cost of making an organ in England is that preserved in the Precentor's accounts of Ely Cathedral, under the date 1407. The items, translated from the Latin, read as follows:

	s.	d.
20 stones of lead	16	9
4 white horses' hides for 4 pair of bellows	7	8
Ashen hoops for the bellows	0	4
10 pairs of hinges	1	10
The carpenter, 8 days, making the bellows	2	8
12 springs	0	3
1 pound of glue	0	1
1 pound of tin	0	3
6 calf skins	2	6
12 sheep skins	2	4
2 pounds of quicksilver	2	0
Wire, nails, cloth, hoops and staples	1	0
Fetching the organ-builder, and his board, 13 weeks	40	0
Total	3	17 8

These particulars, although scanty, contain entries that help us to trace a few of the features of this early instrument. The 'ashen hoops' indicate that the bellows were of the forge kind. The '12 springs' were presumably the 'playing springs,' and if so, denote that the organ had a compass of 12 notes, C to F, with the B_♭ added. The metal for the pipes, compounded of '1 pound of tin' only to '20 stones of lead,' must

have been rather poor in quality and texture. The circumstance of the organ-builder being fetched, and his board paid for, indicates that the useful class of artificers to which he belonged sometimes led rather an itinerant life, as we shall presently see they continued to do two centuries later.

About the year 1450, Whethamstede, Abbot of St. Albans, presented to his church an organ on which he expended, including its erection, fifty pounds—an enormous sum in those days. This instrument, we are told, was superior to everything of the kind then in England for size, tone and workmanship; but no record is left as to where or by whom it was made, nor as to what its contents or compass were.

A PAIR OF ORGANS.—The term 'pair of organs,' so much used in the 16th and the greater part of the 17th centuries, has been a source of as much difficulty to the commentators as the spelling of the words themselves became to the scribes of the period. (See note below.) It grew gradually into use; and the most interesting fact connected with it, namely that there were various *kinds* of 'pairs' in use, has passed without hitherto receiving sufficient notice. At York in 1419, 1457, 1469 and 1485, the instrument is spoken of in the singular number, as 'The organ,' or 'The great organ.' In 1475 it is referred to as 'An organ.' In 1463 we meet with 'ye players at ye orgenys,' and in 1482 a payment is made for 'mending of orgynys.' In 1501 the complete expression is met with, 'one peyre of orgynys'; and it continued in use up to the time of Pepys, who wrote his 'Diary' in the second half of the 17th century.

One commentator considered the term 'pair' to refer to the 'double bellows'; but besides the fact that a *single* bellows is sometimes itself called a 'pair,' a 'pair of virginals,' containing wires, required no wind whatever. Another annotator thought that a 'pair' signified two organs conjoined, with two sets of keys, one above the other—'one called the choir organ, and the other the great organ'; but this explanation is answered by an entry of the expense incurred for 'a pair of new organs' for the Church of St. Mary at Hill, in the year 1521, which, including the cost 'for bringing them home,' amounted altogether to 'xs. viij*d*. only. If this were not sufficient, there would be the fact that many churches contained 'two peyre of orgyns'¹; and if they were of the bulk supposed, there would be the question how much room, if any, could have remained in the church for the accommodation of the congregation. A third writer suggested that a 'pair' meant an organ with two pipes to each note; but 'a pair of regals' sometimes had but a

⁴ Item, ii peyre of organs.
⁵ Item, ii peyre of organs.
⁶ Item, ii peyre of organs.

single pipe to each key. The term in all probability meant simply an instrument with at least one complete set of pipes.¹ It might have more, as in Duddington's organ noticed farther on.

The most interesting question here, however, is not simply the fact that a church had frequently two pairs of organs, but, when so, why one was generally 'the grete orgones' and the other 'the small orgones.' It is quite possible that the custom mentioned by Praetorius, and already quoted, may have prevailed in England, of regulating the pitch of the organ according to the prevailing pitch of the voices (whether high or low), and that when there were two organs, one was made to suit each class of voice; and as an alteration of pitch, made for this purpose, of say half an octave, would have caused one organ to be nearly half as large again as the other, their difference of size may have led to the distinction of name as a natural sequence. This opinion seems to receive support from the fact that at Bethersden they had not a 'great' but 'a base peare of organes.'

AN EARLY SPECIFICATION.—Under the date 1519 we meet with the earliest specification of an English organ that is known to exist. It is found embodied in an 'endenture' or 'bargayn' entered into by 'Antony Duddington, citezen of London,' to make a 'payer of organs' for the 'P'ishe of Alhalowe, Barkyng, next ye Tower of London.' It was to have three stops, namely, a 'Diapason, containing length of x foot or more,' and 'dowble principalls throwout, to contain the length of v foote.' The compass was to be 'dowble *Ce-fa-ut*,' and comprise 'xxvij playne keyes,' which would doubtless be the old four-octave short octave range, in which the *apparent* EE key sounded CC, up to *c*.² It was further specified that 'the pyppes w^t in-forth shall be as fyne metall and stuff as the utter parts, that is to say of pure Tyn, w^t as fewe stoppes as may be convenient'; and the cost was to be 'fyfty poundes sterlinge.' It was also a condition 'that the aforesaid Antony shall convey the belowes in the loft abowf, w^h a pype to the sond boarde.' It is interesting to note that although made so few years after the invention of 'stops' and the 'sound-board' abroad, the English builder had made himself acquainted with these improvements, and here inserted them.

Many entries follow closely on the date given above; but none that supply any additional matter of sufficient interest to be quoted here, until nearly the end of the century, when the list of payments made to John Chappington for an organ he built in 1597 for Magdalen College, Oxford, shows that the practice of painting the

front pipes was sometimes observed at that period. It is short, and runs thus:

	£	s.	d.
Paid Mr. Chappington for the organ	35	13	8
For colour to decorate the same	2	2	0
For wainscot for the same	3	14	0
	41	9	8

SHORT OCTAVES.—By the end of the 15th century the manuals had in continental organs been extended to four octaves in compass, and those of this country had most likely also reached the same range, the lowest octave, however, being either a 'short octave' or a 'broken octave.' In the short octave two of the natural keys were omitted, and the succession stood thus: CC (on the EE key), FF, G, A, B, C.³ A short octave manual, CC to C in alt, therefore, had only twenty-seven natural keys instead of twenty-nine. The three short keys in the lower octave were not all chromatic notes, but sounded DD on the FF♯ key, EE on the G♯ key, and B♭. The object of this device no doubt was to obtain a deep sound for the tonic of as many of the scales and chords in use at the time as was practicable. When the lowest octave was made complete, the EE♭ note was present; DD occupied its correct position; and the CC♯ key sounded AA. Father Smith's organs at the University Church, Oxford, the Danish Chapel, Wellclose Square, and St. Nicholas, Deptford, were originally made to this compass. A key was sometimes added beyond CC, sounding GG, which converted the compass into 'GG short octaves.' There is a painting in the picture gallery at Holyrood, of about the date of the end of the 15th century, representing St. Cecilia playing upon a Positive Organ, which shows quite clearly the lower keys and pipes of a GG short octave manual. Both Smith and Harris sometimes constructed organs to this compass, and subsequent builders also did so throughout the 18th and early part of the 19th centuries. The FFF short octave manual, which would seem to have existed, although we have at present no record of it, might have had the note acting on the AA long key, or on a supplementary short key between the BB and CC keys.

RECORD OF INSTRUMENTS BY THE DALLAM FAMILY.—A great progressive step was made when Thomas DALLAM (*q.v.*), in 1605-06, built for King's College Chapel, Cambridge, the handsome 'double organ,' the case of which remains to this day. It was a complete two-manual organ, the earliest English specimen of which we have a clear trace; and to construct it Dallam and his assistants closed their workshop in London and took up their residence in Cambridge. As this instrument is the first of importance out of several that were made before the time of the Civil War, but of which the accounts are more or less vague or incom-

¹ It is possible that the word 'pair' was used in a sense equivalent to the German 'Paar,' of several things, not exclusively two. Traces of this use in England remain in the vulgar phrase 'a pair of stairs.' If this be so, the expression might refer to an instrument with a number of pipes.

² In the system of nomenclature now used apart from the special method employed by organists, these notes are C, F, G, A, B, c.

plete, it will be worth while to follow out some of their leading particulars.

No record is known to exist of the contents or compass of this instrument. The only stop mentioned is the 'shaking stoppe' or tremulant. The compass, however, can be deduced with some approach to certainty. Mr. Thomas Hill, who with his father rebuilt this organ in the 19th century, stated that the 'fayre groat pypes' mentioned by Dallam still occupied their original positions in the eastern front of the case, where they are utilised as part of the Double Diapason. As the largest pipe sounds the GG of the present lower pitch (nearly a whole tone below what is known to have been the high ecclesiastical pitch of the first half of the 17th century), there can be little doubt that the King's College Chapel organ was originally of FFF compass, as Father Smith's subsequent instruments were at the Temple, St. Paul's (choir organ) and Durham. Smith in that case must simply have followed an old tradition. More is said on this subject farther on. The east front pipes, as well as those in the 'Chayre Organ,' were handsomely embossed, gilded and coloured.

On Mar. 20, 1632, Robert Dallam, 'citizen and blacksmith of London,' entered into an agreement with 'the right worshipping John Scott, deane of the cathedrall and metropolitall church of St. Peter of Yorke, touchinge the makinge of a great organ for the said church.' Most of the particulars respecting this instrument have fortunately been preserved, from which we learn that 'the names and number of the stoppes or setts of pipes for the said great organ, to be new made; every stopp containeing fiftie-one pipes; the said great organ containeing eight stoppes,' were as follows:

GREAT ORGAN. 9 stopps.

- 1 and 2. Imprints two open diapasons of tynn, to stand in eight, many of them to be chased.
3. Item one diapason stopp of wood.
- 4 and 5. Item two principalls of tynn.
6. Item one twelft to the diapason.
7. Item one small principall of tynn. (15.)
8. Item one recorder, unison to the said principall. (15.)
9. Item one two and twentieth.

'The names and number of stoppes of pipes for the chaire organ, every stopp containeing fiftie-one pipes, the said chaire organ containeing five stoppes,' were as follows:

CHAIRE ORGAN. 5 stopps.

10. Imprints one diapason of wood.
11. Item one recorder of tynn, unison to the voice.
12. Item one principall of tynn, to stand in eight, many of them to be chased.
13. Item one flute of wood.
14. 'tem one small principall of tynn. (15.) Three bellows.

It will be noticed that this organ contained neither reeds nor mixtures, and but one mutation-stop, namely the 'twelfth.'

No mention is made as to what was the compass of the old York Minster organ. All that is stated is that each 'stoppe' had a series of 'fiftie-one pipes'—an unusual number. The old case of the organ remained until the in-

cendiary fire of 1829, and contained the two original Diapasons; and as the largest pipes of these stopps sounded the GG of the lowered pitch of the 18th century, it is quite possible that the compass was originally FFF, short octave (that note sounding on the AA key), up to C in alt (F, to c'''), which range would have required exactly the number of notes specified in the agreement. Robert Dallam built organs similar to that at York for St. Paul's and Durham Cathedrals, the latter costing £1000. If they were of FFF compass, that circumstance would perhaps account for the schemes for Smith's new organs for both those churches having been prepared for that exceptional range.

In Aug. and Sept. 1634 three musical enthusiasts, 'a Captaine, a Lieutenant, and an Ancient (Ensign), of the Military Company in Norwich,' went on 'a Seaven Weekes' Journey' through a great part of England, in the course of which they occasionally took particular notice of the organs. At York they 'saw and heard a faire, large, high organ, newly built'—the one just noticed; at Durham they 'were wrapt with the sweet sound and richness of a fayre organ'; at Lichfield 'the organs were deep and sweet'; at Hereford was 'heard a most sweet organ'; at Bristol they found a 'neat, rich, melodious organ'; while at Exeter the organ was 'rich, delicate, and lofty, with more additions than any other; and large pipes of an extraordinary length.' Some of these instruments were destined in a few years to fall a prey to 'axes and hammers.' The organ at Carlisle, however, was described as being 'like a shrill bagpipe.'

MAGDALEN COLLEGE, OXFORD.—Three years afterwards (in 1637) a maker of the name of HARRIS (q.v.)—the first of four generations of organ-builders of that name—built a 'double organ' (Great Organ, with Choir Organ in front) for Magdalen College, Oxford. Its Manuals ranged from 'Do Sol Re' (double C) without the CC# up to D in alt (C to d'') fifty notes; and the Great Organ had eight stops, while the Choir had five. The following was its specification:

GREAT ORGAN. 8 stopps.

	Feet.		Feet.
1 & 2. Two open Diapasons	8	5 & 6. Two Fifteenths	2
3 & 4. Two Principals	4	7 & 8. Two Two-and-twentieths	1

CHOIR ORGAN. 5 stopps.

	Feet tone.		Feet tone.
9. One Stopped Diapason	8	12. One Recorder	4
10 & 11. Two Principals	4	13. One Fifteenth	2

This was the organ which Cromwell had taken down and conveyed to Hampton Court, where it was placed in the great gallery. It was restored to the college in 1660, and remained there until 1737, when it was removed to Tewkesbury Abbey. The Diapasons and Principal of the Great Organ, and the Principal in the Choir still remain, and are made of tin

alloyed with about eight pounds of lead to the hundredweight.

This organ was tuned to a high pitch, as is shown by one of the items in Renatus Harris's agreement for improving it (1690), which specifies that he 'shall and will alter the pitch of the said organs half a note lower than they are now.'

This is the last organ of which we have any authentic particulars as being made previously to the outburst that checked the art of organ-building in this country for several years.

On Aug. 23, 1643, an ordinance was passed by the Lords and Commons assembled in Parliament for abolishing superstitious monuments. On May 9, 1644, a second ordinance was passed 'for the further demolishing of monuments of Idolatry and Superstition,' in which the destruction of organs was enjoined.¹

In consequence of this ordinance collegiate and parochial churches were stripped of their organs and ornaments; some of the instruments were sold to private persons, who preserved them; some were totally and others partially demolished; some were taken away by the clergy to prevent their being destroyed, and some few escaped injury altogether.

Among the organs that escaped destruction or removal were those of St. Paul's, York, Durham and Lincoln Cathedrals; St. John's College, Oxford; Christ's College, Cambridge, etc.

During the sixteen years that elapsed between the date of the ordinance already quoted and that of the Restoration, most of the English organ-builders had been dispersed, and compelled to work as ordinary joiners, carpenters, etc.; so that at the expiration of the period just mentioned, there was, according to Sir John Hawkins, 'scarce an organ-maker that could be called a workman in the kingdom,' excepting the Dallams (three brothers); Thamar of Peterborough, concerning whom, however, nothing is known; Preston of York, who repaired the organ in Magdalen College, Oxford, in 1680—and who, among other doings, according to Renatus Harris (1686), spoiled one stop and several pipes of another; and Henry Loosemore of Exeter, who built the organ in the cathedral of that city. Inducements were, therefore, held out to encourage artists from the Continent to settle in this country; and among those who responded to this invitation were a German, Bernhard Schmidt, known as 'Father Smith,'² with his two nephews, Bernard (Christian) and Gerard; and Thomas Harris, an Englishman, who had taken refuge in France during the troublous

times, together with his son Renatus, a young man of great ingenuity and spirit.

Smith and the Dallams had for some years the chief business of the kingdom, the Harrises not receiving an equal amount of encouragement; but on the death of Robert and Ralph Dallam, in 1665 and 1672 respectively, and of the elder Harris shortly after, Renatus Harris became a formidable rival to Smith.

Smith seems to have settled at once in London, was appointed 'organ-maker in ordinary' to King Charles II. and put into possession of apartments in Whitehall, called in an old plan of the palace 'The Organ-builder's Workhouse.' The Harrises appear to have taken up their abode at Old Sarum, but on the death of the father, Renatus removed to the metropolis.

To illustrate the gradual progress from this starting-ground, a description will now be given of a series of representative organs, the accounts of which are derived from sources not now generally accessible, including notices of many historical instruments which, since the time of their original construction, have either been much altered or removed altogether.

THE RESTORATION ORGANS

Soon after the Restoration, Ralph Dallam built an organ for St. George's Chapel, Windsor, containing the recently imported novelties of Compound and Trumpet Stops (Nos. 6 and 7, below). It was a single-manual organ only; and its specification, given below, is very interesting, as showing that means were taken even at that early time to compensate, as far as might be, for the lack of a second manual, by the adoption of mechanical arrangements for obtaining variety of effect from a limited number of registers governed by a single set of keys. Thus there were two 'shifting movements,' or pedals, one of which reduced the 'Full Organ' to the Diapasons and Principal, and the other to the Diapasons and Principal. Thus two reductions of tone, in imitation of choir organ strength, could quickly be obtained; which, in a place like St. George's Chapel, where choral service was celebrated, was very necessary. Besides this, the Compound and the

organ builders. Its specification is retained here for comparison with others.

GREAT ORGAN. 10 stops.

	Pipes.		Pipes.
1. Open Diapason . . .	53	7. Block Flute, metal to middle C†	24

Compass, Great and Choir, GG, without GG# to C in alt, 53 notes, Echo, Fiddle G to C in alt, 29 notes.

¹ For the proposal to abolish organ-playing in churches as early as 1650 see MEMBERSHIP.

² No particulars of Smith's first organ at Whitehall exist. That which Hopkins originally described here was the organ of the Banqueting Hall Chapel built in 1699, i.e. after his Temple and St. Paul's organs (see *Father Smith*, by the Rev. A. Freeman). This diminishes the historical importance of the instrument and disposes of Hopkins's suggestion that it was a model for the Restoration

Trumpet stops were both made to draw in halves at middle C, that is to say, the Treble portion could be used without the Bass, so that a solo could be played prominently with the right hand and a soft accompaniment with the left; and the solo stop could also be suddenly shut off by the foot at pleasure.¹

GREAT ORGAN. 9 draw-stops.		
	Pipes.	Pipes.
1. Open Diapason to CC, then Stopped and Octave pipes . . .	54	5. Fifteenth . . . 52
2. Stopped Diapason . . .	52	6. Cornet Treble, 3 ranks . . . 78
3. Principal . . .	52	7. Trumpet Treble . . . 26
4. Twelfth . . .	52	8. Trumpet Bass . . . 26
Compass, GG, short octaves, to D in alt, 52 notes.		

EXETER. DOUBLE DIAPASON, ETC.—The organ in Exeter Cathedral, constructed by John Loosemore, possessed a remarkable feature in its Double Open Diapason, which contained the largest pipes ever made in this country. The fourteen pipes of which this stop consisted were grouped in two separate sets of seven each, against the columns at the south entrance of the choir,¹ and therefore at some distance from the main body of the organ; and were acted upon by an additional set of pallets. The dimensions of the largest pipe (GGG) were as follows:

Speaking part, long . . .	20 ft. 6 in.	Contents of the speaking part, . . .
Noise . . .	4 " 0 "	3 hogs. 8 gal.
Circumference . . .	1 " 11 "	Weight, 360 lbs.
Diameter . . .	1 " 3 "	

The large Exeter pipes, like those at Halberstadt, did not produce much effect when tried by themselves, for an old writer, the Hon. Roger North, says of them, 'I could not be so happy to perceive that in the musick they signified anything at all'; but (like those at Halberstadt) they manifested their influence when used in combination; for another writer, at the beginning of the 19th century, observes respecting them, 'no effect alone, but very fine with the Diapasons and Principal.'

The following was the scheme of the Exeter Cathedral organ, in which we find the Open Diapasons duplicated:

GREAT ORGAN. 10 stops.		
	Pipes.	Pipes.

Compass, Great and Choir, GG, long octaves, no GG $\frac{1}{2}$, to D in alt, 55 notes.		

THE TEMPLE. TWO QUARTER NOTES.—In Sept. 1682 the treasurers of the two Hon. Societies of the Inner and Middle Temple had some conversation with Smith respecting the construction of an organ for their church. Renatus Harris, who was then residing in 'Wyne Office Court, Fleet Street,' and was therefore close upon the spot, made interest

with the Societies, who were induced to arrange that if each of these excellent artists would set up an organ, the Societies would retain that which, in the greatest number of excellences, deserved the preference. This proposal was agreed to, and by May 1684, the two organs were erected in the church. Smith's stood in the west-end gallery, and Harris's on the south (Inner Temple) side of the Communion Table. They were at first exhibited separately on appointed days, and then tried on the same day: and it was not until the end of 1687, or beginning of 1688, that the decision was given in favour of Smith's instrument; Harris's organ being rejected without reflecting any loss of reputation on its ingenious builder.²

Smith's organ reached in the bass to FFF; and from FF upwards it had two additional keys or 'quarter notes' in each octave, 'which rarities,' according to an old book preserved in the library of the Inner Temple, 'no other organ in England hath; and can play any tune, as for instance y^e tune of y^e 119th Psalm (in E minor), and severall other services set by excellent musicians; which no other organ will do.' The order of the keys ran thus: FFF, GG, AA, BB $\frac{1}{2}$, BB $\frac{1}{2}$, then semitones to gamut G, after which the two special quarter tones in each octave; the compass ending on C in alt, and the number of keys on each manual being sixty-one.³

The keys for the two extra notes (A $\frac{1}{2}$ and D $\frac{1}{2}$) were provided by those for G $\frac{1}{2}$ and E $\frac{1}{2}$ being cut across midway; the back halves, which acted on the additional pipes, rising as much above the front halves as the latter did above the long keys.⁴

Smith's organ had three complete manuals, which was also a novelty. Two complete stops were allotted to the upper set of keys, forming a kind of Solo organ, with which the 'Echoes' acted in combination.

¹ The interesting details of this musical contest are not given here, as they have been printed separately by one of the Benchers of the Middle Temple, the late Edmund Maury, under the title *A Few Notes on the Temple Organ*. (See also PURCELL, Henry.)

² Dr. Armes, the organist of Durham Cathedral, brought under the notice of the present writer a very curious discovery—namely, that the organ in that Church was originally prepared for, and afterwards received, quarter notes exactly similar to those at the Temple. The original order for the organ, dated Aug. 18, 1683, does not provide for them, the number of pipes to each single stop being specially given 'fifty-four,' which would indicate the same compass as the Temple organ, viz. FFF to C in alt without the quarter tones; but the sound-boards, roller-boards, etc., were unquestionably made from the first with two extra grooves, movements, etc. for each octave from FF upwards, and the large extra diapason pipes, as being required for the east and west fronts, were also inserted. The original contract was completed by May 1, 1685; and Dr. Armes is of opinion that the £50, paid in 1691 to Smith by 'the Ward, the Dean and Chapter of the Temple,' was work done at ye Organ' was for the insertion of the quarter-tone pipes.

Smith made use of several different pitches. His highest, arising from placing a pipe of one English foot in speaking length on the A key, he used at Durham Cathedral. His next, resulting from placing a similar pipe on the B $\frac{1}{2}$ key, he used for Hampton Court Chapel. The pitch a semitone lower than the last, produced by placing the 1-ft. pipe on B $\frac{1}{2}$, was used by Renatus Harris towards the latter part of the 17th century. It was Handel's pitch, and that of the organ-builders generally; the 18th and early part of the 19th centuries, as well as of the Philharmonic Society at the time of its establishment (1813). The lowest pitch of all, arising from placing the 1-ft. pipe on the C key, was used by Smith at Trinity College, Cambridge. These variations were first clearly pointed out by Mr. Alexander Ellis in his *History of Musical Pitch*, 1880. (See PITCH.)

⁴ The organ built by Parker for the founding chapel in 1769 had four quarter notes, D $\frac{1}{2}$, D, A $\frac{1}{2}$, and A $\frac{1}{2}$. These were not furnished with extra keys but were controlled by a substituting mechanism.

¹ The 'Cornet' quickly became a favourite 'solo' stop and continued to be so for nearly 150 years.

The following is a copy of the Schedule of Father Smith's organ as delivered to the two Societies, signed, and dated June 21, 1688.

With 3 full sets of Keys and quarter notes to C in Alt, 61 notes.

ST. PAUL'S CATHEDRAL. — Father Smith's success at the Temple doubtless had much to do with his being invited to erect an organ in St. Paul's Cathedral; the contract for which was dated and signed Dec. 19, 1694.¹ The instrument was to consist of Great and Chayre Organs, and Echoes, it was to be completed by Lady Day, 1696, and the price to be £2000. The compass was to be the same as that at the Temple, namely 'Double F fa ut to C sol fa in Alt inclusive,' 54 notes. Smith's contract was for the inside of the organ only; the case being provided by Sir Christopher Wren. The list of stops originally agreed upon was as follows

GREAT ORGAN 12 stops.			
1. Open Diapason.	7. Fifteenth.		
2. Open Diapason.	8. Small Twelfth.		
3. Stop Diapason.	9. Sesquialtera.

ECHOES or halfe stops; 6.

22. Diapason.	23. Fifteenth.
23. Principal.	24. Cornet.
24. Naon.	27. Trumpet.

After the contract was signed, Smith extended his design, and made the Great Manual to the compass of 16 ft., instead of 12 ft. only; and he added the six large extra notes—CCC, DDD, EEE_b, EEE_c, FFF_b, and GG_b—at his own expense. He had previously given Sir Christopher Wren the dimensions of the case he would require for his 12-ft. organ; and he now desired these to be increased, but this Sir Christopher refused, declaring that the building was already spoiled by the 'confounded box of whistles.' Smith took his revenge on Wren

¹ It is given in *Mus. T.*, 1880, p. 21; an illustration of the organ is in the same periodical, 1900, p. 794; see also 1901, p. 239.

by letting the larger open Diapason pipes in the two side towers project through the top of the case nearly a foot, which vexed Sir Christopher exceedingly, and compelled him to add ornaments several feet in height to hide the disfigurement. The Choir Organ case, too, was made so small that it had no room for the Quinta-dena, which therefore, though made, had to be left out.

EARLY 18TH CENTURY.—An organ at St. Saviour's, Southwark (now Southwark Cathedral), is said to have been built by 'one Jordan, a distiller, who,' as Sir John Hawkins tells us in his *History of Music*, 'had never been instructed in the business, but had a mechanical turn, and was an ingenious man, and who, about the year 1700, betook himself to the making of organs, and succeeded beyond expectation.' He certainly built several excellent and substantial instruments. The one under notice had a 16-ft. octave of metal pipes acting on the Great Organ keys from tenor C down to CC. These large pipes originally stood in the front of the case, where they made a very imposing appearance, as their full length was presented to view, without nearly a yard of the upper part being hidden behind the case, as at St. Paul's. This organ possibly had an Echo; but no account of it has been preserved.

Compass, GG, short octaves, up to E in alt, 54 notes.

In the year 1710 Renatus Harris erected in Salisbury Cathedral, in place of the instrument put up by his father, an organ possessing four manuals (for the first time in England) and fifty stops, including 'eleven stops of Echos,' and on which 'may be more variety express'd, than by all y^e organs in England, were their several excellencies united.' Such was the glowing account given of the capabilities of this new organ, on the engraving of its 'East Front.' The extra department consisted of a complete borrowed organ of thirteen stops derived from the Great Organ. The Choir organ had its own real stops; and the 'eleven Stops of Echos' were to a great extent made up of the single ranks of the ordinary Cornet. There was a 'Drum Pedal, CC,' the 'roll' of which was caused by the addition of a second pipe sounding a semitone below the first pipe, with which it caused a rapid beat. Smith had previously put 'a Trimelee' into his organ at St. Mary-at

Hill, and 'a Drum,' sounding D, into that at St. Nicholas, Deptford.

THE FIRST SWELL.—In 1712 the Jordans (Abraham, sen. and jun.) built an organ for the church at the opposite end of London Bridge to St. Saviour's, namely St. Magnus, which deserves special notice as being the first instrument that contained a Swell. This organ also had four sets of keys, the fourth no doubt being a counterpart of the third (Echo) but 'adapted to the act of emitting sounds by swelling the notes,' so that passages played with expression could be contrasted with those played without. A list of the stops in the Swell has not been preserved; but we know from those subsequently made, that its compass and capacity must have been very limited, though sufficient to illustrate the importance of the improvement.

FIRST OCTAVE COUPLER.—In 1726 John Harris and John Byfield, sen., erected a fine and imposing-looking organ for the church of St. Mary Redcliff, Bristol, which had a '16 ft. speaking front.' The compass of this instrument was in some respects unusually complete, the Great Organ descending to CCC, including CCC#, and the Choir Organ going down to GG with GG#; the Swell consisted of the unusual number of nine stops. Four of the Stops in the Great Organ descended to GG only; and one of the open Diapasons had stopped-pipes to the last four notes. There was 'a spring of communication' attached to the Great Organ, by which CC was made to act on the CCC key, and so on throughout the compass. The Redcliff organ, therefore, contained the first 'octave coupler' that was ever made in England; in fact, the first coupler of any kind with which any organ in this country was provided. Some old printed accounts of this organ state that

the Swell originally went to tenor C, with the lower notes of the reeds very fine; and that it was afterwards shortened to the fiddle G compass; but Vowles, organ-builder of Bristol, who reconstructed the organ, and had all its original mechanism under his eye, assured the present writer that the statement was erroneous, and probably took its rise from the circumstance that the key-maker, doubtless by mistake, made the Swell Manual down to tenor C, and that the seven extra keys were, therefore, allowed to remain as 'dummies.'

1790. INTRODUCTION OF PEDALS.—Although as we have seen, pedals were known in Germany upwards of four hundred years ago, yet they were not introduced into England until nearly the close of the 18th century. Who first made them, or which was the first organ to have them, are matters of some doubt. The organs in Westminster Abbey, the German Lutheran Church in the Savoy, and St. Matthew's, Friday Street, each claim the priority. The first organ that is known for certain to have had them, was that made in 1790 by G. P. England, and erected by him at St. James's, Clerkenwell, which instrument, according to the words of the original specification, was 'to have pedals to play by the feet.' These, like the early German specimens, were an octave only in compass, GG to Gamut G; and also, as at Halberstadt, etc., had no pipes of their own, but only drew down the manual keys. Before 1793 Avery put pedals to the Westminster Abbey organ, together with an octave of unison wood GG pedal-pipes; and from that date he frequently introduced both into his own instruments. In 1811 G. P. England built an organ for Lancaster with 1½ octave of Pedals, GG to tenor C; and two couplers, Great and Choir to Pedal. He also, like Avery, became a strong advocate for separate pipes for the pedals, introducing them in 1803 into his organ at Newark, which had the FFF (12 ft.) pipe.

After a time pipes of double size, speaking down to GGG (21½ feet length) were made, as by Elliott & Hill at Westminster Abbey, etc.

Besides the unison and double pedal-pipe ranges, a mongrel scale crept into use, which, though most defective, was for a few years the most frequently followed. This consisted of an octave of double pipes from CC down to CCC, and then five unison pipes from BB down to GG. The five pedal keys, B to G, at each extremity of the pedal-board, were thus without any difference in the pitch of their five sounds.

In 1809 J. C. Bishop effected the improvement on the old Shifting movement which afterwards became so generally known as the COMPOSITION PEDALS (*q.v.*).

The most complete GG Pedal Organ that was ever made, both as to compass and stops, was the one erected by J. C. Bishop in St. James's Church, Bermondsey, in 1829. It had three stops of a range of two octaves each.

There was a keyboard on the left-hand side of the manuals, acting on the Pedal Organ; and the writer remembers seeing in print a copy of Handel's chorus, 'But the waters overwhelmed their enemies,' arranged for *three* performers,—a duet for the manuals, with the rolling bass part for a third player at the side keyboard,—prepared expressly for and played at the opening of this organ.

1832. THE PNEUMATIC LEVER.—In a large organ with several pallets to a key, and perhaps some stops on a heavy pressure of wind, the touch becomes heavier than the most muscular finger (or foot) can control without experiencing great exhaustion.¹ The number of springs in the several sound-boards to some extent bring back the resistance existing in the old 16th-century spring-boxes, which resistance, however, can now no longer be overcome by brute force, but must be controlled by the elastic action from the knuckles or ankle. The power to do this is supplied by the pneumatic lever.

Joseph Booth, of Wakefield, was the first organ-builder to whom the idea seems to have occurred of establishing pneumatic agency, and of thus ingeniously turning the wind-power, one of the organist's antagonists, into his assistant. It was to some of the bass pipes of the organ he built for the church of Attercliffe, near Sheffield, in the year 1827, that Booth first applied his little invention. The lower notes of the wood open Diapason of the GG manual were placed on a small separate sound-board, and to the pull-down of each pallet he attached a small circular bellows below. From the great organ sound-board groove a conveyance conducts wind into this bellows, which, opening downwards, draws the pallet with it. These small bellows Booth used to call *puff-valves*.

It was in 1832 that Charles Spackman Barker first thought of the invention that has since been called the pneumatic lever. On the com-

¹ The organist at Haarlem was accustomed to strip like a blacksmith preparatory to giving his usual hour's performance, and at the end of it retired, covered with perspiration.

pletion of the organ in York Minster, the touch of which, in consequence of the great size of the instrument, was of course very heavy, he wrote to Dr. Camidge, then the organist of the Cathedral, begging to be allowed to attach one of his levers in a temporary way to one of the heaviest notes of his organ. Dr. Camidge admitted that the touch of his instrument was 'sufficient to paralyse the efforts of most men'; but financial difficulties stood in the way of the remedy being applied; and in 1837 Barker went to France to superintend its introduction into the organ then being built by the eminent builder Cavaillé-Coll for the royal Church of St. Denis, near Paris. Cavaillé had, among his other experiments, made Flue and Reed pipes to produce harmonic tones by means of wind of heavy pressure, but these discoveries he had looked upon as practically useless on account of their leading to the production of a touch which no human muscles could overcome. Barker's apparatus, which simply overpowered the resistance that could not be removed, was therefore an opportune presentation; and Cavaillé immediately introduced it, together with several Harmonic stops, into the large organ he was then (1841) building for the Abbey Church of St. Denis.

In 1835 David Hamilton, of Edinburgh, made a pneumatic movement, which he applied to the organ in St. John's Episcopal Church in that city; and in 1839 a paper was read at a meeting of the British Association at Birmingham explanatory of a pneumatic lever which he then exhibited.

The pneumatic lever consists of a bellows shaped very like a small concussion bellows, two or three inches in width, and about ten inches in length. The key of the clavier opens a small circular valve beneath this, and compressed air being thus admitted, the bellows rises, drawing with it a tracker that communicates the motion to the pallets and to such of the coupling movements, etc., as may be 'drawn'; all of which immediately answer to the putting down of the key. When the key is released the valve that admitted the air is closed and another opened, the bellows consequently closing. The key is thus relieved from the combined resistance of the main pallets, coupling movements, and the heavy wind-pressure; and the touch can consequently be adjusted to any degree of elastic resistance pleasant to the performer.

1834. IMPROVEMENTS AT YORK MINSTER. RADIATING PEDAL-BOARD.—The organ in York Minster, which had been twice enlarged—about 1754, and again in 1813—was a third time altered and considerably increased in size in 1823, by Ward of York; who among other things added a Pedal Organ of thirteen stops down to FFFF, 24 feet length, etc. The fire of

1829 cleared all this away; and Messrs. Elliott & Hill were then engaged to erect an entirely new organ, under the superintendence of Dr. Camidge.

It had been found from experience that the vast area of York Minster required an immense amount of organ tone to fill it adequately, and with the view of supplying this, Dr. Camidge seems to have selected as the foundation of his plan, the type of a large ordinary Great Organ of the period, of twelve stops, which he followed almost literally, and then had that disposition inserted twice over. The compass of the Great and Choir Manuals he extended downwards to CCC, 16 feet and upwards to *c* in *altissimo*; and the Pedal Organ he designed to include four 'Double' Stops of 32 feet, and four 'Unisons' of 16 feet. The great fault in the scheme lay in the entire omission from the Manuals of all sub-octave Foundation-stops—i.e. stops sounding the 16-foot tone on the 8-foot key—and consequently also of all the Mutation-stops due to that sound. In spite of the great aggregation of pipes, therefore, the numerous manual stops produced no massiveness of effect, while as the Pedal had no less than four ponderous sub-octave registers,¹ and, with the manuals coupled, a total of over forty stops, the only possible result from such an arrangement was a 'top-and-bottom' effect.

The original scheme of the organ—which underwent thorough revision and improvement in 1859—is given below. This organ had a radiating pedal-board. The organ erected in Mit-cham church in 1834, and originally made by Bruce of Edinburgh, also had a radiating pedal-board, of peculiar construction.

Manual and Pedal couplers. Radiating Pedal-board.

¹ It was stated at the time this organ was made that the largest pedal-pipe would hold a glass of ale for every man, woman and child then residing within the walls of the city of York.

Not long after the completion of the York organ H. J. GAUNTLETT (*q.v.*) made a praiseworthy effort to introduce some of the leading features of the continental principle of organ-building into England; and being heartily seconded by William Hill, his endeavours were attended with a considerable amount of success. The 8-foot compass was gradually accepted as the proper range for the Manuals, although at times greatly opposed; the sub-octave (16 feet) manual stops, which had been essayed successively by Parker, Snetzler and Lincoln, at last obtained favourable recognition, together with the Twelfth thereto, viz. the Quint of 5½ feet. Double manual² reeds were incorporated; and the importance of and necessity for the independent Pedal Organ was also demonstrated. The weak points were the number of half and incomplete stops, which retarded the process of quick registering; and the short range of the Pedal Organ, which, instead of being, like the pedals themselves, upwards of two octaves in compass, from CCC, consisted of a single octave only, which then repeated. This defect—a continuation of the old 'return pedal-pipe' system—had to be remedied before a clear and intelligible reading of Bach's Fugues, or any other essentially organ music, could be given.

1851. EXHIBITION ORGANS.—Of four organs shown at the great Industrial Exhibition of 1851, three were by foreign builders (Ducroquet, Schulze, Ducci³), the other by Henry Willis. This instrument had three manuals and pedal, seventy sounding stops and seven couplers. There were four different pressures of wind. The Swell had its own separate bellows placed within the swell-box, as in Green's organ at St. George's, Windsor. It also presented several novelties, the principal of which was the introduction of studs or pistons projecting through the key-slips, acting on the draw-stops, operated by the thumbs, and designed as a substitute for the ordinary Composition Pedals. This was effected by the aid of a pneumatic apparatus on the same principle as that applied to the keys. A stud, on being pressed, admitted compressed air into a bellows, which immediately ascended with sufficient power to act, by means of rods and levers, on the machinery of the stops, drawing those which the given combination required, and pushing in those that were superfluous. In most cases there was a duplicate stud for each combination, so that it could be obtained by using either the right or the left thumb.

² A double reed-stop (double bassoon, down to the DDD pipe) formed a portion of the Great Organ of the instrument erected by John Rydell, tun., in Christ Church Cathedral, Dublin, in 1751.

³ These were fully described and many specifications of contemporary organs were given in previous editions of this Dictionary. As organs in public buildings, and particularly in the English cathedrals, are continually being rebuilt according to modern requirements, no attempt has been made to reproduce this feature of Hopkins's article in the present edition.

2. DESCRIPTION OF MECHANISM

It has been shown in the preceding history traced to the middle of the 19th century how the organ became virtually the instrument of to-day, and sometimes consists really of as many as five separate and distinct organs—Great, Swell, Choir, Solo, and Pedal, with the occasional addition of an Echo, Celestial or Altar Organ. To describe such an organ completely and in detail would require a volume, which is impossible here, and is besides unnecessary, as the smallest specimen equally with the largest comprises a certain number of necessary parts; namely, (1) the apparatus for collecting and distributing the wind, viz. the bellows, wind-trunk, the wind-chest, and the sound-board-grooves; (2) the mechanism for playing the organ, viz. the clavier and the key movement; (3) the mechanism for controlling the use of the tiers of pipes, viz. the draw-stop action. To these have to be added (4) the couplers, composition pedals, pistons, etc.

(1) **THE BELLWS** that collect and compress the wind are shown in the accompanying woodcut occupying their usual position in the lower part of the organ; the reservoir being marked *r,r,r,r*, and the feeder *l,l,l*. From the reservoir of the bellows the wind is conducted through a large service-pipe or 'wind-trunk' to the wind-cisterns or wind-chests *z,z*, where it remains for further use in smaller quantities. The wind-trunk, which could not be conveniently shown in the woodcut, is made either of wood or metal, and traverses the distance between the reservoir and wind-chest by the shortest convenient route. The wind-chest is a substantial box of wood extending the whole length of the sound-board; about equal to it in depth; and about two-thirds its width. In this chest are located the sound-board pallets (*d* and *k*), which prevent the wind proceeding any farther, unless one or more of them are drawn down (or opened) by the means next to be noticed.

(2) **THE KEY ACTION** is the system of mechanism by which the performer is able to open the pallets, which are otherwise far beyond his reach. In an action of simple construction this consists of a key (*a*), sticker (*b*), roller and tracker (*c*), communicating with a pull-down (*d*) attached to the pallet. On pressing down the front end of the key (*a*)—which key works on a metal pin or centre—the further end rises, lifting with it the vertical sticker (*b*). This sticker, lifting the first arm of the horizontal roller, causes the roller partly to revolve. At the opposite end of this roller is a second arm projecting from the back, which consequently descends (*c*). To this is attached a tracker made to any length necessary to reach from the second roller-arm to the pull-down (*d*). The course of the motion transmitted by these parts is as follows: The key-tail carries the

motion inwards, the sticker carries it upwards; the roller conveys it to the necessary distance laterally, while the tracker again carries it upwards to the pallet. Small discs of crimson cloth, placed at each end of the sticker, prevent any rattling between the contiguous parts of the mechanism. A pin passes down from the sticker, through the key-tail, to prevent the former from slipping off the latter. A second one is placed on the top, and passes through an eye in the roller-arm to secure the certain action of the roller. The two studs into which the roller-pins pass to sustain the roller are lined with cloth, or 'bushed,' as it is termed, also to secure silence in action; and the rollers themselves are made of iron tubing, which is more firm and rigid than the old wooden rollers, and has the additional advantage of taking much less space.

It is a matter of much importance to lessen the strain on the key-movement just noticed by reducing the resistance at the pallet as much as possible, and thus also relieving the finger of the player from all unnecessary labour and fatigue. For this purpose builders make use of what are called *relief* pallets. When wind, in however small quantity, gains admission above a pallet, the wind-pressure ceases by becoming equal all round, and there remains only the elastic resistance of the spring to be overcome. To effect this relief numerous devices have been thought of, as the 'jointed pallet,' in which two or three inches of the fore part move first, and then the remainder, perhaps for nearly a foot in length. There is also the 'double pallet,' in which a small valve is placed on the back of the large one, and opens first, etc. etc. In large organs some builders use relief pallets to obviate the necessity for 'pneumatics,' though the two are sometimes used at the same time.

(3) **THE DRAW-STOP ACTION** is a second system of mechanism, by means of which the performer is enabled to draw out or push in any slider that lies beneath a separate set of pipes or 'stop.' In the accompanying drawing each separate pipe depicted represents a single member of a different stop, and the slider-ends are the little shaded portions that are shown immediately over the 'sound-board groove' (*e,e,e* and *o,o,o,o*). The unshaded intermediate parts are the 'bearers,' which sustain the weight of the 'upper-boards' on which the pipes are seen standing, as well as of the pipes themselves; the sliders being thus left unfettered to move freely to and fro. In the small movable (Portative) organs of the Middle Ages, when the surface of the sound-board, or 'table' on which the pipes stood, was scarcely any higher above the keys than the top of a modern square pianoforte above its clavier, and when the sound-board measured only about a couple of feet in length, the slider-ends could

be easily reached by the player, and be moved in or out with the fingers and thumb. When the sound-board became longer, and the sliders longer and heavier, a lever was added, to move them to and fro. This was the arrangement in the 16th-century organ at Radnor. At that period, and for a long time after, the stops were arranged before the playing commenced, and were not varied during the performance.

In a modern organ, even one of small dimensions, the slider-ends are always beyond the reach of the performer, being, in relation to the clavier, generally farther in, considerably to the right or left, as the case may be, and at a much higher level. The 'action' to a single stop therefore consists of a 'draw-stop rod,' which passes into the organ to the necessary extent; a movable 'trundle,' which turns the corner; a 'tracerod,' which spans the distance from the trundle to the end of the sound-board; and the lever that is in connexion at its upper end with the slider. These attached parts act in the following manner. The draw-stop rod is drawn forward; the trundle partly revolves and moves the tracerod; and the lower end of the lever is drawn inwards, causing the upper end to move outwards, and to take the slider-end with it. The stop is now ready for use. On pushing in the draw-stop, the action of the several parts is reversed, and the stop is silenced.

The end of the draw-stop rod projects through the jamb at the side of the keys, and is finished off with a knob ornamented with an ivory label bearing the name of the stop that it controls.

The Concussion-bellows is shown in position (see *g*) attached to the under-side of the wind-chest.

(4) **COUPLERS, ETC.**— Besides the two primary systems of mechanism just noticed, most organs, however small, have a greater or less number of members belonging to certain subsidiary systems, foremost among which rank the Couplers.

The action of a manual-coupler consists simply of a set of levers or 'backfalls,' one to each key. The front end of the backfall is lifted, the far end descending, and pressing down a sticker resting on the back end of the T-shaped backfall of the swell-action, which is then set in motion (*g, h, i, j, k*) as completely as though it had been drawn at *f* by the swell upper-manual key. An octave coupler consists of a set of diagonal or splayed backfalls, which extend sufficiently to the right to reach from any given key to the tracker of its octave. The upper backfall above *h* shows this. A sub-octave coupler has a set of diagonal backfalls acting on the octave below. When not required to be used, the draw-stop is 'put in,' which raises the frame and backfalls from the stickers at the front end.

The pedal-couplers are made in manner similar to those just described, one of which may here be traced. On pressing down the pedal *aa* the trackers and roller-arms, *bb, bb* descend, drawing down the front end *cc* of the backfall. The far end *dd* is thus made to rise, lifting with it the sticker, which, communicating with the under-side of the tail (*ee*) of the great-organ key, lifts it and thus plays the note as exactly as though it had been pressed down by a finger.

The 'Sforzando coupler' is a movement worked by a pedal, by the aid of which the Great Organ is suddenly attached to the Swell. It reinforces the strength of the Swell to a far greater extent, and more quickly than by the 'crescendo' pedal; and is therefore useful when a quick and remarkable accent is required. It is formed of a backfall, the far end of which presses down a sticker resting on the back part of the square backfall of the Great Organ, which it depresses, and so sets the Great Organ tracker in motion. The first coupler of the kind was made by Lincoln, and introduced by him into his organ at St. Olave's, Southwark, erected in 1844. This coupler is always worked by a pedal, on pressing which the backfalls descend into position. On releasing the pedal the backfalls are raised from their work by a spring. Other subsidiary pedals are now frequently introduced, such as 'Great to Pedal, on or off,' and 'Swell to Great, on or off.'

The Composition Pedals have already been noticed. Their use is so generally felt that in addition to those attached to the Great Organ stops, there are usually two or three provided for the Swell of organs of even average size. In instruments that have a Pedal Organ of fair dimensions, the Great Organ composition pedals usually do, or at any rate should, act also on those of the Pedal, 'in proportion'; particularly where the latter has any Mutation, Mixture, or 16-foot Reed stops. In such cases a 'Piano Pedal' for reducing the Pedal organ so that it may be available for use with the Swell or Choir, is very desirable.

Sometimes, instead of silencing some of the stops by composition pedals, they are rendered mute by means of a trap or *ventil* in the local wind-trunk, which, by closing, cuts off the supply of wind. This lessens the wear and tear of the mechanical parts of the organ. On the other hand the draw-stops, or registers, may all be duly prepared, and may announce that all is in readiness, yet if the ventil is forgotten there may be as distinctly a false start as if there were 'no wind in.'

In his large organs Henry Willis introduced combination pistons projecting through the key-slips in lieu of composition pedals; and devoted the width over the pedal-board to pedals acting on the various couplers, etc.

ELECTRIC AND TUBULAR PNEUMATIC ACTIONS.—Notice may now be taken of two substitutes which modern thought has devised for the first of the primary systems of organ mechanism already described under the title of 'Key-movement.'

1. Seeing what had been accomplished by telegraphy, by which the most delicate movements could be transmitted with rapidity and precision, and to indefinite distances, the thought occurred as to whether it might be possible to apply the principle of electricity to the organ, in which case the key-board would represent the manipulator and the pallets of the organ the receptors. To Dr. Gauntlett belongs the credit of having been the first to start this theoretical idea. His first proposal, made at the time of the Great Exhibition of 1851, was to play all the organs in the place at one and the same time; but the suggestion met with no response. When the intention of the Crystal Palace Company to build an immense organ was announced in 1852, he met the Provisional Committee and proposed the erection of facsimiles of the eight most celebrated continental organs in various parts of the Palace, and of playing them, either all together or separately, in the centre of the building; but this suggestion also remained unembodied. Dr. Gauntlett patented his invention in 1852, and in 1863 another plan was patented by Goundry; but no organs appear to have been built to illustrate the practicability of either of them.

In 1867 Barker erected an electric organ in the church of St. Augustin in Paris, which attracted the attention of Bryceson, who was then paying a visit to the Paris Exhibition, and who made arrangements with Barker for introducing the electric system into England. Barker's English patent was taken out in Jan. 1868. It protected his special applications for playing the manual and pedal organs; for coupling the various manuals as well as the pedals, either in the unison, or in the octave or sub-octave, and for commanding the large traps in the wind-trunks known in England as ventils, to which was afterwards added an arrangement for drawing the stops. Bryceson added in Apr. 1868 a perfectly new form of pallet which offered no resistance in opening; and he subsequently introduced several other improvements, including an arrangement for using attenuated air instead of pressure; and Henry Willis took out a patent almost simultaneously with Bryceson for using exhaust and power alternately for actuating a 'floating valve,' in connexion with a novel arrangement of draw-stop action; neither builder manifestly being aware of the conclusion arrived at by the other.

Among the electric organs erected or reconstructed by Bryceson were included St. Michael's, Cornhill; St. George's, Tufnell

Park; St. Augustine's, Highbury; Milney Manor.

2. A second substitute for the long tracker movements, etc., in large or separated organs, is the 'tubular pneumatic system.' The germ of this application existed of course in Booth's contrivance (already noticed), which consisted of a tube receiving compressed wind at one end, and having a motor at the other; but there is as much difference between the primitive device of 1827 and the more perfected 'system,' as between the early trials of Papin and the steam engines of Watt and Stephenson. It was not till 1867 that the principle was turned to practical account, when it was applied to an organ that was publicly shown at the Paris Exhibition of that year. Its importance was recognised by Henry Willis, who introduced it with improvements into his organ in St. Paul's Cathedral in 1874; and employed it extensively in that at the Alexandra Palace; and it was used by Bryceson in the organ removed from St. Paul's to the Victoria Rooms, Bristol; by T. Hill in his organ at Manchester Cathedral; by Bishop in the Yarmouth organ; by Foster & Andrews at the City Temple; and by Lewis & Co., for the Pedal Organ of their new instrument at Ripon.

The invention of some mechanical means for blowing the bellows, and for increasing or decreasing the speed of the supply, according as much or little might be required, became a matter of some concern and much importance.

The first piece of mechanism devised for this purpose was the Hydraulic Engine of Joy and Holt—afterwards David Joy, of Middlesborough. This consisted of a cylinder similar to that of an ordinary steam-engine, but deriving its motion from the pressure of a column of water, admitted alternately to the top and bottom of the piston. Engines of this kind were attached to the organs at the Town Hall, Leeds; the Parish Church, Leeds; Rochester Cathedral; the Temple Church, etc. etc.

The Liverpool Water Meter, as patented by Thomas Duncan, and made by Forrester & Co., of Liverpool, consisted of two cylinders, with pistons and slotted piston-rods working a short crank-shaft. Gas engines also came into use for blowing organs. E. J. H.; rev. T. E.

The following English works (from Rev. J. H. Burn's Bibliography) deal with the History of the organ.

NOTE.—Technical works of every description may be consulted at the Library of the Patent Office, Chancery Lane, London.

3. THE MODERN ORGAN

Since the preceding article was written enormous strides have been taken in the organ world. Not only in the actual construction of the instrument has this been the case, but in every department or branch of science or art connected with the organ there is progress to report.

Organ - building, organ - playing, balance, quality, and power of tone, marvellous actions and systems of control, development of flue, string and reed tone, acoustics, compass, pitch, tuning, wind pressures and blowing machinery stand prominently out from amongst the multitude of minor subjects and their attendant problems that have called for earnest study, and have received the unremitting attention of some of the foremost men of our time, whose combined labours and achievements in these directions have resulted in an almost perfect instrument, the fruits of which are so well displayed in the organ recital as we hear it to-day. (Cf. ORGAN-PLAYING and REGISTRATION.)

It is scarcely within the scope of this article to deal minutely with the innumerable factors or influences to which this happy state of affairs is due, but mention must be made of the continual improvement in organ action, stop control, tonal development and kindred matters accruing from the indefatigable investigations of a host of labourers in the field.

BELLOWS.—The wind-consumption of the large modern tubular - pneumatic organ is enormous.

It is not only a question of the quantity of wind required to sound the multitudinous pipes—many of which are very large and greedy of wind—but its quality also must be taken into consideration. It must fulfil several conditions. The supply must be ample for the Full Organ. Several different pressures must be provided, some of which are heavy. There must be no unsteadiness when a sudden demand (or cessation of demand) on the wind is created by the player.

Not only is wind required for filling the several reservoirs and sounding the pipes, but sufficient must be raised for operating the pneumatics and for satisfying the demands of numerous couplers and extensions of pipes, especially in the Pedal department.

It is indeed a far cry from the small and primitive diagonal (blacksmith's) bellows to the latest elaborate power-blowing installation, of which there are now several varieties.

In course of time the weighted reservoir (or upper portion of the bellows) was made to rise horizontally instead of diagonally. Later on the large *single* feeder (or lower portion of the bellows) was superseded by double (or triple) feeders, which, by being smaller and acting alternately, supply the wind much more steadily

and regularly than the full-sized single feeder acting intermittently. Upon the introduction of blowing by power, the feeders, as well as the reservoir, were made to rise horizontally instead of diagonally, thereby doubling the supply of wind per stroke. With power-blown bellows the wind is automatically fed off to the lower pressures. When all the reservoirs are full the blowing-power likewise is automatically cut off. Rotary fan-blowers are now largely used. The wind may be generated at the lowest pressure and raised step by step to the higher pressures.

The problem of securing steady wind has claimed the attention of all who have had the best interests of the organ at heart. A great step forward was made when (in 1825) the 'Concussion Bellows' was introduced by J. C. Bishop.

This consists of a feeder attached to the wind-trunk or to the wind-chest, and open to the wind inside. Normally—with the wind 'on'—springs connected with the feeder are so adjusted as to allow it to stand half-way open. Consequently, when fluctuation arises the feeder gives or takes pressure as occasion requires.

In the year 1894 the attention of John Turnell Austin was drawn to the unequal pressure arising from the conveyance of wind to the pipes through trunks and grooves of a comparatively small fixed capacity. This resulted in the construction of the 'Universal Air Chest,' in which a large portion of the lower part of the instrument is normally under wind. Springs, instead of weights, are used to give pressure, constituting practically a huge 'Concussion.'

The organ at Rushden Chapel, Northampton, is an early example, since when a very large number of instruments have been built on this system in the United States.

English organ-builders plant their wind-devouring manual bases over an independent supply, and provide each chief department or sound-board with its own separate reservoir.

ACTIONS.—Organ action may be divided into two classes—mechanical and supplementary.

Tracker or 'mechanical' action (as organ-builders term it) consists of stickers, backfalls, (or squares), rollers and trackers, by means of which the movement is conveyed from the key to the pallet; and is operated entirely by the energy of the performer.

The term 'mechanical' in organ-builders' phraseology may therefore be taken to imply that the whole of the energy required to open the pallet (or operate other mechanism) must be supplied by the performer.

Actions of this description have the advantage of cheapness, durability and promptness of response.

But when the instrument contains more than about twenty speaking stops or the couplers are

numerous, the touch becomes too heavy for the finger to overcome, and rapid playing (on anything like the full organ) becomes an impossibility.

To remedy this, class number two is employed, in which a secondary agent, such as pneumatic work, or a combination of electric and pneumatic work intervenes between the key and the pallet, and provides the power for overcoming the resistance. In this class of action the personal control of the pallet is almost entirely lost, constituting one of the most serious penalties which have to be paid for its use.

Supplementary actions are of several kinds. In the Barker pneumatic lever action depression of the key admits heavy pressure wind to a small external motor (something like a feeder), causing it to distend or inflate, and operate an ordinary tracker action leading to the pallet. Upon releasing the key a small valve is opened, emptying or exhausting the motor, which deflates and collapses, allowing the pallet spring to close the pallet.

Tubular-pneumatic action is of two kinds :

1. The supply, charge, or pressure system.
2. The exhaust system.

In supply pneumatics, depression of the key admits wind to a tube conveying it to further pneumatic work, which in turn exhausts an inflated motor subject to wind pressure within and without, causing it to collapse or deflate and pull down the pallet attached to it.

In the exhaust system depression of the key exhausts the tube and motors from the key end of the tube, opening the pallet as before.

Electro-pneumatic action is a combination of electric and pneumatic work. Depression of the key makes an electrical contact, which in turn causes the exhaustion of the inflated motor opening the pallet.

This action has the advantages of rapidity and of occupying very little room, allowing of a wide distribution of parts if desired. The wires necessary for the control of a large instrument may be formed into a cable and be led to a movable console.

No description of this action (which is largely used in America) would be complete without reference to the work of the late Robert Hope-Jones.

The latest development is an all-electric action, of which Compton, of Nottingham, is an exponent.

The following are useful works on actions :

THOMAS CARSON : *Modern Pneumatic Organ Mechanism*.
W. E. DICKSON : *Practical Organ Building*.
DR. J. W. HUNTON : *Story of the Electric Organ*.
F. E. ROBERTSON : *A Practical Treatise on Organ Building*.
MARK WICKS : *Organ Building for Amateurs*.

DOUBLE TOUCH.—Hope-Jones's electro-pneumatic organs were usually provided with double touch. In such case the depth of touch was divided into two dips or touches, the first touch resting upon the second, which resisted further

depression until extra pressure is brought to bear upon it. When only the first depth of touch was made use of, a combination of stops suitable for accompaniment was heard, but upon overcoming the resistance of the spring belonging to the second touch, and depressing the key to its full depth, an additional solo stop or more powerful combination came into operation, enabling the performer to pick out any part as a solo, or obtain contrasting powers on the same manual, by skilful manipulation of the two touches. The invention, however, did not win general approval.

STOP KEYS AND STOP CONTROL.—The introduction of supplementary action has led to its employment as an agent for the entire control. Pivoted stop keys or rocking tablets, adjustable pistons and composition pedals (sometimes having double touch), reversing movements, and every other imaginable device for controlling the resources of the instrument, combine to the production of the elaborate and efficient console as it is seen to-day, especially in America.¹

In England draw-stops with splayed draw-stop jamps still find favour.

COMPASS AND EXTENSION.—The compass of the manuals now extends from CC to c''', five octaves (61 notes), and that of the pedal board from CCC to g (32 notes), the concave and radiating modified Wesley-Willis pattern for the latter being generally adopted.

In connexion with the compass of both manual and pedal organs it has been the custom of late to make considerable use of what is known as the 'Extension' system of organ-building, in which the compass of the *pipes* is extended beyond that of the keyboard or clavier, thereby rendering them available for completing the compass of an octave (or sub-octave) coupler, or for use, by suitable means or mechanism, as a separate (borrowed) stop of octave or sub-octave pitch.

Also a stop may be 'borrowed' in its entirety from one manual to another, or from a manual organ to the pedal organ. Both extension and borrowing are open to abuse.

Extension,² if adopted and used indiscriminately, upsets the balance of tone.

Borrowing is open to objection when it depletes the proper tonal balance.

But it is now generally conceded that such methods have a perfectly legitimate value when properly applied and used.

By means of the judicious employment of the numerous couplers or stops suggested by the principle of manual and pedal extension (to say nothing of stops borrowed bodily from one manual to another), 'effects' can be

¹ See *The Evolution of the Modern Organ and its Control*, by J. M. B. (Boutsch).

² *Reform of the Church Organ* by Kenneth G. Burns, deals with the principle of extension as exemplified in the organ at the Church of St. Matthias, Richmond Hill (Extension, Transfer and Multiple Swell-box System).

obtained (with or without the use of the Unison Off) which are otherwise impossible.

SWELL PEDAL.—In all new instruments the Swell pedal is balanced.

American organ-builders frequently put several departments (including the Great organ) into separate swell-boxes. In England separate boxes for Choir and Solo organs are becoming general. The new organ at Liverpool Cathedral (1926) contains a large portion of the Pedal Organ in a swell-box of its own.

PIPES AND WIND PRESSURE.—Although the pipes of the chief foundation and chorus stops remain much about the same as formerly, great advances have been made in the 'voicing' of the pipes and in the power obtained by the use of wind varying in pressure from about three or four inches to fifty.

The power of the large modern organ ranges from the merest whisper of the Echo Dulciana to the Tuba, or the mighty Diaphone, of which it is said that it may be set over a variable pressure of wind without materially affecting its pitch.¹

PEDAL ORGAN.—The earlier development of the Pedal Organ was strongly championed by the late Dr. E. J. Hopkins and by Mr. Thomas Casson, whose organ at the London Music School exemplifies also his system of Octave Duplication, Stop Control and other inventions.

The Pedal Organ is now augmented by extension and borrowing to a condition of efficiency. Free use is made of the resultant Acoustic Bass produced by the sounding of two notes a fifth apart.²

PITCH AND TUNING.—The Diapason Normal, C=517.3 vibrations per second, is now generally adopted for new instruments.³

Shortening a pipe sharpens it; lengthening a pipe flattens it. Large open metal pipes are tuned by means of a tongue or tongues of metal near the top of the pipe. By pulling the tongue outward the pitch is sharpened, and by pressing closer it is flattened.

Large open wood pipes are tuned by shifting a wooden slide so as to cover partially or uncover a slot or aperture cut in the top end of the pipe, or, more clumsily, by nailing a piece of wood over a portion of the top of the pipe to flatten it, or by making the opening larger to sharpen it.

Small open metal pipes are tuned by pressing the pointed end of a tuning-horn or cone into the tops of the pipes to sharpen them, and by pressing the hollow end of the cone over the tops to flatten them. A better and more recent plan is to provide the pipes with lapped tuning-slides, which clasp the top of the pipe. These

can be raised to flatten, or lowered to sharpen, by tapping them with a thin square-edged tuning knife, thus avoiding injury to the tops of the pipes.

Small open wood pipes are provided with metal shades at the top, for partially shading or covering and uncovering the top of the pipe. Shading the top of the pipe flattens it, and uncovering sharpens it.

Stopped pipes are tuned by shifting the stoppers or stoppions upward to flatten, and downward to sharpen.

Reed pipes are provided with a hooked wire (near the boot of the pipe), which can be tapped upward to flatten and downward to sharpen, by which means the speaking portion of the tongue is lengthened or shortened.

The tuning of the organ should not be proceeded with until every other part of the instrument has been thoroughly overhauled, and all irregularities with regard to touch, actions, draw-stops or the speech of the pipes have received attention and been remedied. Tuning should always be done under normal conditions. This is especially necessary as regards the temperature of the building, which should be the same for tuning as when the instrument is in use.

The following are the chief particulars relating to the process of tuning.

In keyed instruments required to be playable in every key, but having only twelve notes to the septave, every interval except the octave must deviate slightly from just or true intonation, i.e. be slightly out of tune. (See **EQUAL TEMPERAMENT, TEMPERAMENT, and TUNING.**)

When two notes of a unison or of a consonant interval are perfectly in tune, they coalesce, but as soon as any departure from purity occurs waves or beats arise. The greater the departure or error the faster the beats, and the nearer the approach to purity the slower they become.

It is by means of these beating-rates that the instrument is tuned, the intervals employed being fifths, fourths and octaves.

All beats (following the law of vibrations) double their rate at the octave above.

It is important to bear this in mind, as the same degree of interval, say a fifth, beats quicker as the pitch rises.

Each fifth must be slightly *narrower* than a perfect fifth, and each fourth must be *wider* than a perfect fourth, the fourths being rather more imperfect (pitch for pitch) than the fifths. The major thirds accruing will be still more imperfectly *wide*.

Now hold middle C of the Principal 4 ft. on the Great organ with the G above, and tune the G slightly flat, or narrower than a perfect fifth.

Hold the same G with the D below, and tune

¹ See *Organ Voicing and Tuning*, Anon.; *Studies in Organ Tone* by the Rev. Noel A. Bonavia-Hunt, M.A.

² See Thomas Casson, *The Pedal Organ*.

³ As the pitch of an organ depends upon the length of its pipes, it cannot be materially altered except at considerable trouble and expense, especially when it requires to be flattened, which is generally the case with instruments of Victorian build.

the D slightly flat, or wider than a perfect fourth.

Hold the same D with the A above, and tune the A slightly flat.

Hold the same A with the E below, and tune the E slightly flat.

Hold the same E with the B above, and tune the B slightly flat.

Hold the same B with the F \sharp below, and tune the F \sharp slightly flat.

Hold the same F \sharp with the C \sharp below, and tune the C \sharp slightly flat.

Hold the same C \sharp with the G \sharp above, and tune the G \sharp slightly flat.

Now hold the middle C with the F above, and tune the F slightly sharp.

Hold the same F with the A \sharp (B \flat) above, and tune the A \sharp slightly sharp.

Hold the same A \sharp with the D \sharp below, and tune the D \sharp slightly sharp.

When this is done correctly, this D \sharp should prove to be a slightly wide fourth with the G \sharp above, which can be tested by holding the tuning-cone over the top of the G \sharp pipe and shading it slightly to flatten it, when such slight temporary flattening should cause it to sound a perfect fourth.

By this method each note within the compass of the septave is tuned, and it remains only to tune the octaves above and below to complete the compass.

As each octave note is tuned it should be tested for accuracy by holding it with its fifth and fourth already tuned. Ultimately the tuning is tested by the degree of smoothness or roughness of the resulting major thirds and tenths.

See THOMAS ELLISTON, *Organs and Tuning*; A. HENSTOCK, *On Tuning the Organ*; HERMANN SMITH, *Modern Organ Tuning*.

GENERAL REMARKS.—In reviewing the course of recent events attention may be drawn to (1) the great size, power, variety of tone, completeness and the general efficiency of the modern organ.

(2) The fuller appreciation of the complete Pedal organ and of the Foundation, String and Orchestral tone; also of softer mutation work.

(3) The increased refinement and variety of qualities in modern flue and reed work.

(4) The discrimination displayed in regard to the legitimacy of extension and borrowing, the free use of couplers, accessories, etc., and of the means taken to give control and expression.

(5) The great strides made in the United States of America, especially regarding the Unit System, in which widely extended ranks of pipes are made to serve as family stops, separately available.

(6) The use of the organ in cinematographic work.

(7) The great increase in the number of high-class organ recitals, and of text-books on the organ and organ-playing.

VOCABULARY OF STOPS¹

The following are the chief of the many names under which organ stops are classified. Brief definitions are given.

Acoustic Bass. 32 ft. Resultant tone yielded by pure fifths.
 Acute Mixture. See Sharp Mixture.
 Bass Flute. 8 ft. A pedal stop (frequently borrowed from the Bourdon—extended).
 Bassoon. 16 ft. The Bass of the Oboe or Clarinet. A light pedal reed.
 Bell Gamba. 8 ft. A Gamba surmounted by a bell or inverted cone.
 Bombarde. Similar to Bombardon but more powerful.
 Bombardon. 16 ft. A reed stop.
 Bourdon. 16 ft. *tone*. A Stopped Diapason.
 Carillons. Metal bars, gongs or bells.
 Cello. Contraction of Violoncello.
 Clarabella. } 8 ft. An open wood flue stop
 Claribel. } usually from mid C upward.
 Claribel Flute. }
 Clarinet (Clarionet). 8 ft. A reed stop resembling the tone of that instrument.
 Clarion. 4 ft. A manual reed stop.
 Clarionet Flute. 8 ft. *tone*. A reedy-toned Stopped Diapason having a hole through the stopper.
 Clarion Mixture. A flue-work Mixture of Clarion *tone*.
 Closed Horn. 8 ft. A reed stop.
 Contra. A prefix denoting the octave below.
 Cor Anglais. 8 ft. A reed stop of thin tone.
 Cor-de-Nuit. 8 ft. A closed flue stop of tin or metal.
 Cornet. A compound stop of the Mixture tribe.
 Corno-di-Bassetto. 8 ft. A Clarinet with its Bass.
 Corno Dolce. 8 ft. A metal stop of soft tone.
 Cornopean. 8 ft. A reed stop resembling the tone of that instrument.
 Cor-Oboe. 8 ft. A flue substitute for the reed of that name.
 Couplers. Explain themselves.—Ex. Swell (organ) to Great (organ).
 Cremona. See Clarinet.
 Cymbal. A Mixture.
 Diapason. See Open Diapason and Stopped Diapason.
 Diaphone. 32 ft., 16 ft. and 8 ft. A Tremulant stop of enormous power.
 Dolcan, Dolce. 8 ft. A metal stop of soft tone.
 Double. A prefix denoting the octave below.
 Dulciana. 16 ft., 8 ft. and 4 ft. An Open Diapason of small scale and delicate tone.
 Dulciana Mixture. A Mixture consisting of Dulciana pipes.
 Echo. A prefix signifying distant effect.
 Fagotto. 16 ft. A reed stop of moderate power.
 Fifteenth. 2 ft. A Diapason fifteen diatonic notes above pitch.
 Flageolet. 2 ft. A soft flue stop.
 Flautina. 2 ft. Virtually a soft Fifteenth. The octave of the Gemshorn.
 Flauto Traverso. 4 ft. Resembles the orchestral flute.
 Flute. 8 ft., 4 ft. An open or stopped pipe of flute-like tone.
 Flûte à Cheminée. 8 ft. *tone*. A stopped metal pipe having a tube or chimney in the stopper.
 Flute Bass. See Bass Flute.
 Flute d'Amour. 8 ft., 4 ft. A soft flue stop.
 Flute Harmonic. 8 ft., 4 ft. An open metal pipe of double speaking-length.
 Furniture (Fourniture). A Mixture.
 Gamba. 16 ft., 8 ft. and 4 ft. An open metal stop of small scale and stringy tone.
 Gedackt, Gedackt, Gedeckt. 8 ft. *tone*. A soft Stopped Diapason.
 Gelzen Principal. 8 ft. A small Open Diapason.
 Gemshorn. 4 ft. An open (conical) stop of soft tone.
 Grave Mixture. A Mixture consisting of pipes sounding the lower members of partial tones.
 Cf. Sharp Mixture.
 Great Quint. 5½ ft. A rank of pipes speaking the fifth above pitch.

¹ Many of the more representative stops also receive short notice under their own names throughout the Dictionary. The pitches indicated here in feet are the most usual, but others are built. No list can be exhaustive.

Harmonic. A prefix signifying that the pipes being of double, triple or quadruple speaking-length, the pitch yielded is harmonic.

Harmonic Bass. 32 ft. See Acoustic Bass.

Harmonic Flute. See Flute Harmonic.

Hautboy, Oboe. 8 ft. A reed stop resembling the instrument of that name.

Hohl Flute. 8 ft. Similar to the Clarabella but having the mouth on the wide side of the pipe.

Horn. 8 ft. A powerful reed stop.

Horn Diapason. 8 ft. A slotted Open Diapason of stringy tone.

Keraulophon. 8 ft. A slotted Gamba of small scale and delicate tone.

Liebllich. A prefix meaning sweet of tone.

Liebllich Flute. 4 ft. The octave of Liebllich Gedact.

Liebllich Gedact. 8 ft. See Gedact.

Major Bass. 32 ft. An open pedal stop.

Mixture. A compound stop consisting of ranks of pipes representative of partial tones.

Oboe. See Hautboy.

Octave. See Principal.

Open. A prefix signifying that the pipes are open at the top, i.e. of full speaking-length.

Open Diapason. 32 ft., 16 ft. and 8 ft. Open wood or metal pipes. The foundation of organ tone.

Ophicleide. 16 ft. A powerful pedal reed.

Orchestral. A prefix signifying that the stop resembles the orchestral instrument.

Piccolo. 2 ft. A stop of piccolo tone.

Posaune. 16 ft., 8 ft. A powerful reed stop.

Principal. 4 ft. An Open Diapason of octave pitch. Of 8 ft. pitch in the pedal organ and in German instruments.

Quint. See Great Quint.

Quintation. A stop in which the twelfth is a feature in the tone of the pipes.

Rohr Flute. 8 ft. *tone.* A metal Stopped Diapason.

Salicional, Salicet. 8 ft. An open metal stop of small scale and unobtrusive power.

Sesquialtera. Virtually a Mixture.

Sharp Mixture. A Mixture consisting of pipes sounding the higher partial tones.

Stopped. A prefix denoting that the top of the pipe is closed, i.e. a pipe of half true speaking length.

Stopped Diapason. 32 ft., 16 ft., 8 ft. and 4 ft. *tone.* Of wood or metal.

Suabe Flute. 4 ft. Similar to Clarabella, but of smaller scale and having the lip of the pipe inverted.

Sub. A prefix. See Contra or Double.

Sub Bass. 16 ft. *tone.* Another name for Bourdon.

Sub Bourdon. 32 ft. *tone.* A Contra Bourdon.

Super. A prefix signifying the octave above.

Super Octave. On a coupler means the octave above, but in pipe-work two octaves above, i.e. a fifteenth.

Tremulant. A draw-stop (or pedal) bringing on the action of the Tremulant.

Tromba. See Trumpet.

Trombone. 16 ft. A pedal reed of the Trumpet tribe.

Trumpet. 8 ft. A powerful reed stop.

Tuba. 8 ft. A very powerful reed stop.

Twelfth. 2½ ft. A stop sounding twelve diatonic notes above pitch.

Unda Maria. Similar in principle to the Voix Céleste.

Unison Off. A draw-stop silencing the unison note when the octaves only are required to sound in using the octave couplers.

Viol. 8 ft. Short for Viol d'Orchestre.

Viola. 8 ft. A Violin Diapason.

Viol d'Amour. 8 ft. Similar to Violin Diapason.

Viol di Gamba. 8 ft. A string-toned Gamba.

Viol d'Orchestre. 8 ft. A very keen string-toned Gamba of small scale.

Violin Diapason. 8 ft. A string-toned Open Diapason of small scale.

Violoncello. 8 ft. The octave of the Violone.

Violone. 16 ft. A string-toned stop of small scale.

Voix Céleste. 8 ft. A stop of two ranks of soft pipes which produce a waving effect in consequence of one of the ranks being tuned sharp.

Vox Angelica. 8 ft. A very delicate-toned open metal stop. Also applied to the Céleste when one rank is tuned flat.

Vox Humana. 8 ft. A reed stop intended to represent the voice.

Wald Flute. 8 ft., 4 ft. Similar to Clarabella with inverted mouth.

A bibliography of the organ appeared in *Notes and Queries* at various dates between Apr. 12 and Dec. 6, 1890.

Robertson's *Organ Building* contains a bibliography of 225 works on the organ, most of which are in the British Museum.

But the most complete is that of 756 works compiled by the Rev. John Henry Burn, B.D., for the second edition of the *Dictionary of Organs and Organists*, 1921, supplemented in Sept. 1923 by an article written by him, entitled *The Literature of the Organ*, which not only brings the bibliography up to that date, but contains much sound advice concerning the best course to pursue in following up the subject.

Barrel organs and instruments played by means of suitably perforated interchangeable paper tune-rolls are dealt with under the heading of **MECHANICAL APPLIANCES.** T. E.

ORGANISTRUM, see **HURDY GURDY.**

ORGANISTS, **ROYAL COLLEGE OF,** see **ROYAL COLLEGE OF ORGANISTS.**

ORGANO denotes the organ part in a score. **ORGANO PIENO** means Full organ—that is, the entire power of the instrument. E. J. H.

ORGANOPHONE, a variety of the Harmonium invented by A. Debain of Paris, wherein the reeds or vibrators are raised within instead of being beneath the channels. The result of this disposition is the production of a tone-quality assimilating to that of the American organ.

A. J. H.

ORGANO PLENO, see REGISTRATION.

ORGAN-PLAYING. In England, from the earliest until comparatively recent times, the organ has been the most important of all musical instruments. Our Cathedral choirs and choir-schools were for centuries the only training-grounds for composers and theoreticians, and until the foundation (in 1823) of the Royal Academy of Music there can have been few serious musicians whose early education had not centred round an organ-loft. Furthermore, it may be said, with scarcely any qualification, that in every town and village in the land the organist has been for centuries, for good or for bad, the focus and origin of all musical activities.

For various reasons this predominance of the organist is now gradually disappearing. But to its existence we undoubtedly owe the fact that for a long time no country has approached England (and no country approaches her now) either in the high standard of playing at which organists aim, or in the very large number of executants who reach that standard. Of late years we have been visited by many foreign organists of eminence whose press-agents have persuaded the public, even before their arrival, that England has lost her pride of place; but, welcome as our visitors are, and skilful as some of them have proved to be, those capable of judging agree that they are in no way superior, and in some ways definitely inferior, to many less-advertised Englishmen.

It is proposed to discuss briefly three aspects of organ-playing: (a) Technique and interpretation; (b) The special characteristics of organ-music; (c) The future of the organ itself; and the consideration of these must be preceded by an epitome of the idiosyncrasies of the instrument.

The organ is the chief of those wind-instruments on which chords can be played. It possesses several keyboards (called manuals), and also pedals. Each manual is provided with its own set of 'stops' (i.e. collections of pipes of varying strengths and qualities) which can be used either separately or together, and the different manuals can also be 'coupled.' The stops vary in pitch, and are said to be of 32-, 16-, 8-, 4-, or 2-ft. pitch according to the approximate length of the lowest (i.e. longest) pipe; and these various pitches are an octave apart—8 ft. stops being at 'piano-pitch.' Thus by depressing a single note such as middle C, when 5 stops of the above varieties have been drawn, we can obtain 5 different C's,

two above and two below the actual note held down. Consequently the compass of the organ, though apparently two octaves less than that of the piano, is in reality greater than that of any other keyed instrument.

(a) THE TECHNIQUE of organ-playing is *sui generis*. Leaving aside the use of the feet, which has a special technique of its own, and the peculiar mental and muscular difficulties in combining hand and foot movements, the actual finger-technique of the manuals differs from that of the only instrument with which it can be compared—the pianoforte. In the old days of the tracker-action there was scarcely any similarity between the two in the use of hands and fingers; and although the invention of pneumatic action (c. 1832) and electric action (c. 1851) has approximated methods by lightening the touch, there is still considerable divergence. In elementary respects—e.g. the fingering of scales and chords—the basis of technique is now identical; but there are other cardinal aspects of technique in which, owing to the fundamental differences of the instruments, divergence of method must always exist. On the pianoforte tone is, and always must be, dependent on touch, since it is governed by a hammer hitting a string; whereas on the organ the pipe alone provides the tone, and every note, be it *pianissimo* or *fortissimo*, is struck in the same way, since impact makes no difference to tone. Again, the existence of a sustaining pedal gives pianists facilities in legato passages which an organist must secure solely by ingenuity of fingering, and the existence of stops to be manipulated adds at all times tasks for his hands from which the pianist is exempt. In addition to the above considerations, the weight of touch still differs markedly in the two instruments. Messrs. Broadwood give their standard as '3 oz. in the bass, 2½ oz. in the centre, 2 oz. in the treble,' whereas Messrs. Walker & Sons, a leading firm of organ-builders, state that in their organs the touch-weight throughout is 'about 4½ oz. on end of key.'

INTERPRETATION, on the organ, is also governed to a considerable extent by the nature and limitations of the instrument. Apart from the 'Swell-pedal'—a device for opening the shutters of the box in which are contained the pipes of one manual—no accent is obtainable. The difficulty of playing rhythmically becomes, in consequence, so great that the crucial test of the musicianship of an organist is his ability to produce the illusion of rhythm. A further difficulty of interpretation lies in the curious fact that, whereas no inner part can be 'brought out' by means of touch, it is universally agreed that the music most germane to the organ is that in contrapuntal style, where the inner parts are of equal importance with the outer. To these

two difficulties is probably due the tendency of organists to shift the bearing of the word 'interpretation' on to the less musical aspects of organ-playing, such as registration. With all the resources of a modern organ at command it is so much easier to give a striking performance of, let us say, the 'Meistersinger' prelude than, confining oneself to single stops, to give an interpretation of a Bach sonata, wherein the necessity for phrasing and rhythm is supreme. It may be that the inability of audiences to appreciate the subtler qualities of good playing has bred a tendency in organists to discard music that will not prove 'popular,' but it is certain that nowadays the term 'Organ recital' has become suspect amongst musicians, and that few recital programmes—even of the best players—consist entirely of music which, to a non-organist, appears to be of a high calibre.

(b) To the composer the organ has always been a problem. Some, like Brahms, without any intimate understanding of the instrument, have introduced it into their orchestral scores, attracted by its obvious power of contributing volume and building up climax, or by the sonorous depth of its larger pipes. Others, like Mendelssohn, being themselves performers, have used it to the same ends with greater effect. There have also been experiments in the way of concertos for organ and orchestra in which, broadly speaking, contrast supercedes the attempt to blend. But organ and orchestra do not really 'mix,' and none of the numerous concertos that exist—even those of Handel and Mozart—have ever secured a firm foothold amongst musicians, in spite of many attractive movements.

Organ-music proper is something of a hybrid. Bach alone seems to have been able to work with ease at his highest level, but a complete programme, even of Bach, is apt to become wearisome to the ear, though never to the mind. The truth would seem to be that the organ, in spite of its variety of tone-colour, is a monotonous instrument, and composers for it, confronted *ab initio* with this fact, have never succeeded in solving the problem. The German school of the last generation, headed by Rheinberger and Merkel, accepted the fact, and in consequence their music, in the lump, is incontrovertibly dull. Their contemporaries in France, led by Guilmant and Widor, aimed at lightness and fancy, but the results, though often strikingly original, were too often fantastic or undignified. The best work, both in originality of treatment and in musical value, was probably that of César Franck; but even this, highly valued as it is by organists, is not completely successful. Nor was the solution of the problem much advanced by the immediate successors of those mentioned—men such as Max Reger and Vierne. But in more recent works there does seem to be a clear recognition

that the problem is worth attacking, and that by a combination of the contrapuntal style with the modern spirit the organ may prove to possess a dignity and charm which will once again bring it into the realm of serious music. It would be easy to name composers of standing who are contributing to this renaissance, and not least amongst them would be those who are gradually but firmly laying the foundations of a definite English School.

(c) But if the organ is to be rehabilitated, it is necessary, above all things, that it should be improved as a musical instrument. People who buy organs are in the hands—one might almost say at the mercy—of organ-builders; and English organ-builders—at their best still immeasurably the finest in the world—are in the main characterised by an adamant conservatism. Lovers of the organ seem blissfully unaware that by musicians at large their instrument is looked on as a noisy and in-artistic abomination. There is more than a little justification for this attitude in the way that the organ is frequently played; and also more than a little justification for the style of playing in the nature of the instruments with which organ-builders supply us. A few possible improvements may be mentioned which, it is safe to prophesy, will be part and parcel of every organ in a hundred years' time, and all of them could be embodied in any organ this year if the abandonment of stern conservatism were aided by talent for mechanical invention.

(1) The whole of an organ should obviously be enclosed in a swell-box. A dead equality of tone is the negation of all expression, and is not tolerated on any other instrument. Any one who has ever played (as the writer has) on Great Diapasons so enclosed, and realised the overwhelming gain in effect, must for ever be dissatisfied with a Great in which variation of intensity is only possible by the addition or subtraction of stops—i.e. by variation of quality.

(2) In very few organs is the number of 8-ft. stops, in comparison with the total number, anything approaching adequate.

(3) The shibboleth of an organ-builder is 'building up tone.' This means that stops are so voiced and graded that we get a series of volumes, from *pp.* to *ff.*, all satisfactorily balanced. The result is that, on practically all but the very largest organs, there is only one way of 'playing loud,' whereas there might quite easily be six or eight. To have to listen to a 'jubilant' piece of music on the organ is, to a non-organist, an almost intolerable experience.

(4) In most instruments the presence of overtones is recognised and definite steps are taken (e.g. in the pianoforte) to reduce them and keep them within bounds. The organ is

an instrument where, owing to its sustaining power, overtones are specially numerous and offensive; but so far from trying to suppress them we add mixture stops (tuned, too, to *unequal* whilst the rest of the organ is tuned to *equal* temperament) to emphasise and exaggerate them. It is a curious example of perverse ingenuity that man invents such an apparatus for the one instrument that needs it least, and the result, labelled 'cacophony' by Sir Walter Parratt in the first edition of this Dictionary, is distressing in the extreme to all but hardened organists. Berlioz and Helmholtz both expressed astonishment at their being tolerated, yet it is with great difficulty that any organ-builder can be persuaded to omit them.

(5) If an orchestral writer desired to brighten an effect, he would add to his score a few notes in the higher ranges: the last thing he would do would be to 'thicken' the lower parts. But when an organist desires brightness he cannot do the one without the other. If, for instance, the chord at (a) were played on an 8-ft.

flute, and then a 4-ft. flute were drawn, the result is the chord at (b)—an entirely haphazard chord in which three of the middle notes are being sounded at double strength. If, however, a 4-ft. flute were merely an extension of an 8 ft. by one octave, then the chord at (c) would result and the player would realise his desire in a completely musical way. Any 8-ft. stop, by having an octave added at each end of its compass, can provide three stops of 16-, 8-, and 4-foot tone of homogeneous quality, and there can be little doubt that this principle of 'extension' will one day be universal. It is economical both of money and space, it is what all musicians desire, and it helps enormously to eliminate that 'thickness' in the sound of the organ which now destroys the texture of the music. Yet organ-builders with one accord seem to have set their faces against it.

It was Spitta who spoke of 'the mechanical soulless material of the organ' (*Life of Bach*, i. 284), and there have been too many converts to his view for lovers of so noble an instrument to view the situation with complacent equanimity (cf. REGISTRATION).

ORGANUM. (1) A general term for measurable music as opposed to unmeasured plain-song. Johannes de Garlandia opens his treatise *De musica mensurabili* with these words:

'Habitudo de ipsa plana musica quae immensurabilis dicitur, nunc est praesens intentio de ipsa mensurabili, quae organum dicitur quantum ad nos prout organum generale dicitur ad omnem mensurabilem musicam' — 'Having dealt with plain music which is called unmeasurable, we now propose to treat of measurable music, which is called organum.'

(2) Organum *per se* or organum *communiter sumptum* is 'quilibet cantus ecclesiasticus tempore mensuratus' (Franco), or 'quidquid profertur secundum aliquem modum' (J. de Garlandia), i.e. any ecclesiastical melody composed in one of the six RHYTHMIC MODES (q.v.) of measurement, as opposed to the unmeasured plain-song chant (C. i. 114a, 118b).

(3) An early synonym for diaphony or descant in the sense of polyphony.

'Diaphonia vocum disjunctio sonat quam nos organum vocamus, cum dis unctae ab invicem voces et concorditer dissonant et dissonanter concordant' — 'Diaphony means the division of notes which we call organum, in which notes of different pitch are sounded together in concord or discord.'

'Multiplex armonica est plurium vocum dissimilium, ut gravis cum acuta, concussio, quam diaphoniam dico, quae communiter organum appellatur' — 'Multiple harmony is the sounding together of several different notes of varying pitch. This I term diaphony, which is commonly called organum.'

(4) The name given by Huebald and Guido to the added part in diaphony, taken by the vox organalis or subsecutor. (See DIAPHONIA.)

(5) Organum *purum* or *duplum* or *proprie sumptum*, an ancient form of descant, properly speaking in two parts only, consisting of a measured counterpoint above an unmeasured canto fermo. It is variously defined.

'Pure organum est, quando cuilibet notae de plano cantu ultra mensuram existentem correspondent de discantu duae notae, longa scilicet et brevis, vel his aliquid equipollens' — 'Organum proper is when each unmeasured note of the plain-song has answering to it in descant notes of two values, namely long and breve, or their equivalents.'

'Cantus non in omni parte sua mensuratur' — 'Vocal music which is not measured in all its parts.'

'Genus cantus organici in quo tantum attenditur coherentia vocum immensurabilium, et Organum Purum appellatur: et hoc genus antiquissimum est, et duorum tantum' — 'There is one species of part-singing in which the due adjustment of unmeasured notes is alone regarded. This is called Organum Purum. It is the most ancient species, and consists of two parts only.'

'Discantus igitur, cum magis proprie duos cantus respiciat quam plures, antiquitus de Organo Duplo dicebatur, in quo non sunt nisi duo cantus' — 'Descant, therefore, since it properly has reference to two melodies only, was originally derived from Organum Duplum, in which there are no more than two parts.'

1 Coussemaeker, *Scriptores*, i. 175a.

2 Guido ap. Gerbert, *Scriptores*, ii. 21a.

3 Walter of Odington ap. Coussemaeker, *Scriptores*, i. 212b, 225a.

4 *Discantus* species vulgaris ap. C. i. 96a.

5 Franco ap. C. i. 134b.

6 Walter of Odington, *ib.* i. 245b.

7 Johannes de Muris, *ib.* ii. 856a.

There is some ambiguity about the expression 'ultra mensuram' in the first of the above extracts. The author of the *Discantus positio vulgaris* seems to apply 'mensura' only to the subdivision of the perfect long of three beats, which he takes as his unit. The plain-song, therefore, consisting entirely of perfect longs, is 'ultra mensuram' in the sense of not having any notes of less value that require to be measured. Later writers, however, understood 'ultra mensuram' as meaning un-rhythmical. This is plain from the directions given by Franco and Odington for the conduct of the tenor, who has to watch closely the movement of the descant and wait for an opportunity of bringing in each note of his plain-song on a concord.¹

Odington gives an example of organum purum, in which the descant appears to be written in the third or dactylic mode of rhythm. The following transcription is given with some hesitation, because the example presents an arrangement of ligatures which does not exactly correspond to the rules laid down by Odington himself for the notation of this mode.

8ve.
lower.

The image shows three systems of musical notation. Each system consists of two staves: the upper staff is labeled '8ve.' and the lower staff is labeled 'lower.' The notation is in square neumes on a four-line red staff. The first system shows a descant in the third or dactylic mode of rhythm. The second and third systems show the continuation of the organum purum.

Wooldridge, following up the researches of Meyer of Göttingen, has been able to present us, in the first volume of the *Oxford History of Music*, with facsimiles and transcriptions of several specimens of this kind of composition, taken from a manuscript in the Laurentian Library at Florence. He observes that in none of these is the organum purum carried through from beginning to end; and it was in fact often introduced for a few bars only as a special feature, like *copula* or *ochetus*. Walter of Odington, for instance, says that one, two, or three notes of plain-song only should be taken for the canto fermo.² An episode of this sort was usually placed either at the beginning or end of a composition, and was called a 'punctus organicus' or 'floratura.'³ Good examples may be seen at pp. 195 and 206 of Wooldridge's book.

Of the mode of performance we are told :

¹ Coussemaker, i. 135 a, 246 b. ² *Ibid.* i. 246 b.
³ *Ibid.* i. 193 a, 261 a, ii. 385 b.

'Cantandum est leniter et subtiliter; descensus vero equaliter. Tenor autem tremule teneatur, et cum discordia offendit'—It must be sung smoothly and finely, and in descending passages evenly. The tenor should be sustained in a tremulous tone, even when a discord is sounded.⁴

MUSICA FICTA (*q.v.*) was doubtless employed in this, as in other forms of descant, and we are expressly told that the tenor might on occasion 'fingere in concordantiam,' i.e. sharpen or flatten the written note.⁵

The specimens of organum purum printed by Wooldridge confirm the impression given by Odington's example,⁶ that the descant in this form of composition was extremely free; but the difficulties of performance must have been considerable, and these led to its gradual abandonment in favour of methods less free in some respects, but simpler in execution. By the middle of the 14th century it had fallen into disuse, and Johannes de Muris⁷ writes regretfully of the 'organum purum de quo forsan pauci sciunt modernorum'—'Organum purum, of which probably few living musicians have any knowledge.' (See DESCANT.)

BIBL.—ERICH STEINHARD, *Zur Frühgeschichte der Mehrstimmigkeit*, i. 11, 1921, pp. 220–231. (Gives a list of the chief treatises on the question of diaphony and discusses Riemann's theory of the reversion of polyphonic music in the 11th and 12th century to the principles of the 9th century. Also quotes from two unpublished MSS.)

ORGENI, ANNA MARIA AGLAJA (real surname GÖRGER ST. JÖRGEN) (b. Rima Szombat, Hungary, Dec. 17, 1841; d. Vienna, Mar. 1926), was a pupil of Mme. Viardot-Garcia, and made her first appearance on the stage Sept. 28, 1865, as Amina, at the Royal Opera-House, Berlin, and was highly successful, both on account of her excellent singing and acting, and of the natural charm of her person and manner. She first appeared in England, Apr. 7, 1866, at the Royal Italian Opera, Covent Garden, as Violetta, and was very well received, subsequently playing Lucia and Marta. She also sang in concerts, and gained great praise for her singing of Agatha's scena from 'Der Freischütz' (of which a contemporary remarked, 'we have not heard anything better than the opening of the great scene . . . her measure and expression in delivery of the Largo bespoke a real artist'¹); and also of Bach's 'Mein gläubiges Herze' to the violoncello obbligato of Piatti, of which the same writer remarks that 'the elegance and distinction of her manner and her real musical acquirements have secured her a public.'² In spite of the large measure of favour given her, she never played on the stage again in England, but in 1870 sang in concerts for a short period, being well received at the Philharmonic in the above scena of Weber, and that from 'Lucia.' After her first season in London she went to Vienna in September of that year, and played

there with success, and afterwards was heard in opera, festivals and concerts, at Leipzig, Hanover and Dresden. She sang for a few nights at the Lyrique, Paris, in 1869, as Violetta. In 1881 she reappeared in England, and sang with success at the Crystal Palace, Philharmonic and other concerts. She subsequently became a teacher of singing at the Dresden Conservatorium, and was the first woman to receive there (1908) the title of Professor.

At about the beginning of the war (1914) she went to Vienna, where she had a great number of singing pupils.

ORLANDINI, GIUSEPPE MARIA (b. Bologna, Feb. 4, 1688; d. Florence, c. 1750), opera composer, for some time maestro di cappella to the Duke of Tuscany. He wrote 44 operas between 1708-45, which enjoyed great popularity; also oratorios, cantatas, etc.; on the subject of his comic opera 'Il giocatore,' see O. G. Sonneck, *Mus. Ant.*, Apr. 1913 (Q.-L.; Riemann).

ORNAMENTS (Fr. *agrèments*, properly *agrèments du chant* or *de musique*; Ger. *Manieren*; Ital. *abbellimenti*; Eng. *graces*), are commonly described by the French word *agrèments* (*agrèmens*), owing to the fact that they were standardised by the French. In the following articles the subject is treated under FRENCH, GERMAN and ENGLISH, and to these are added an explanation of the purely vocal ornamentation developed in the earlier Italian schools of music. Certain ornaments introduced into vocal or instrumental melody, indicated either by signs, or by small notes, are performed according to certain rules.

FRENCH.—The custom of ornamenting the melody is as ancient as music; perfect examples of *agrèments* are to be found in Gregorian chant and in the measured music (*Musica mensurata* or *Cantus mensuralis*) of the mediæval ages. At the time of the Renaissance the principal part was frequently enriched with vocalisations, of which many specimens have been retained by the theorists.

It is difficult to ascertain at what period the French style (*goût français*) took birth; it is inaccurate to impute the invention of *agrèments* to Chambonnières (1670), as already in 1636 the famous Père Mersenne mentions them in his *Harmonie universelle*.

Lully greatly contributed to codify their use. Between 1690 and 1800 the French *agrèments* perfectly defined have remained unchanged; their performance is absolutely necessary, for,

(says Blanchet in his *Art du chant*, 1756), 'they are greatly befitted to move powerfully the soul; to deprive music of such ornaments would be depriving it of the most beautiful part of its essence.' A similar doctrine is to be found in Ph. E. Bach, in his *Versuch über die wahre Art das Clavier zu spielen*, in 1753. (See below.) The principal *agrèments* of the French School are the following:

Coulé of the clavecinists.

Port de voix simple.

Port de voix avec Pincé.

Port de voix jeté.

Tremblement, simple.

Tremblement appuyé or Cadence pleine.

Cadence brisé.

Doublé.

Double Cadence.

Battement.

Pincé.

Harpigement.

To these must be added the Passages, Diminutions, Coulades, Fusées, Traits, which are arbitrary features left to the discretion of the performers.

BIBL.—E. BORREL, *Contribution à l'interprétation de la musique française au XVIII^e siècle*, Paris, 1916; J. ARGEN, *Les Agréments ou le rythme*, Paris, 1917; E. BAUNOLD, *Les Agréments chez les clavecinistes*.

GERMAN.—C. P. E. Bach, in his *Versuch über die wahre Art das Clavier zu spielen*, in 1753, speaks of the great value of the *agréments*:

They serve to connect the notes, they enliven them, and when necessary give them a special emphasis; they help to elucidate the character of the music; whether it be sad, cheerful, or otherwise, they always contribute their share to the effect. . . . an indifferent composition may be improved by their aid, while without them even the best melody may appear empty and meaningless.

At the same time he warns against their too frequent use, and says they should be as the ornament with which the finest building may be overlaid, or the spices with which the best dish may be spoiled.

The *agréments*, according to C. P. E. Bach, are the *Bebung*,¹ *Vorschlag*, *Triller*, *Doppelschlag*, *Mordent*, *Anschlag*, *Schleifer*, *Schneller*, *Brechung*.

The *PRALL-TRILLER* (*q.v.*) is included as a species of triller. In addition to these, Marpurg treats of the *Nachschlag* or 'Aspiration,' which Emanuel Bach does not recognise, or at least calls 'ugly, although extraordinarily in fashion,' but which is largely employed by modern composers.

ENGLISH.—The graces peculiar to English music differed considerably from the above. The 'Fitzwilliam Virginal Book,' which may be taken as typical of Elizabethan practice, that is, before the exertion of any French influence on English music, includes only two. These

¹ The *Bebung* (Fr. *balancement*, Ital. *trémolo*) cannot be executed on the modern pianoforte. It consisted in giving to the key of the cleveboard a certain trembling pressure, which produced a kind of pulsation of the sound, without any intervals of silence. On stringed instruments a similar effect is obtained by a rocking movement of the finger without raising it from the string.

are: (1) The slide of a third upwards or double

Written. *Played.*
appoggiatura, probably occasionally treated as a mordent.

(2) The shake, short or long.

A complete table, though of a later date and devised primarily for stringed instruments, is given by Christopher SIMPSON (*q.v.*) in *The Division Violist* (1659). In giving it, Simpson admits his indebtedness to COLEMAN (*q.v.*) in the words, 'for these I am obliged to the ever-famous Dr. Coleman.' The graces of this table are divided into two classes, the 'smooth and shaken graces.' The smooth graces are only adapted to stringed instruments, as they are to be executed by sliding the finger along the string; they include the Plain-beat or Rise, the Backfall, the Double Backfall, the Elevation, the Cadent, and the Springer which 'con-

cludes the Sound of a Note more acute, by clapping down another Finger just at the expiring of it.' The effect of this other finger upon the violin would be to raise the pitch of the last note but one (the upper of the two written notes) so that the Springer would resemble the French *accent*. The 'shaken graces' are the Shaked Backfall Close Shake, a slight undulation of pitch by oscillation of the finger (note Simpson's curiosity of notation), Shaked Beat, Elevation and Cadent, which are similar to the plain graces with the addition of a shake, and lastly the Double Relish, of which no explanation in words is attempted, but an example in notes given as below. It will be worth while to compare with the above the simpler list given in Henry Purcell's 'Choice

Shaked Backfall.

Close Shake.

Shaked Beat.

Shaked Elevation.

Shaked Cadent.

Double Relish.

Or thus—

Collection of Lessons for the Harpsichord or Spinnet,' published by his widow (1696), the more so since the comparison emphasises the influence exerted by the French school between the times of Coleman and of Purcell. The following is condensed from the instructions given in the 'Choice Collection' (edition 3, 1669).

Shake.

Beat.

Plain Note and Shake.

Forefall.

Backfall.

Turn.

Shake turned.

Slur.

Battery.

The Ornaments used in later music of the classical period, ACCIAOCATURA, APPOGGIATURA, ARPEGGIO, MORDENT, PRALL-TRILLER, SHAKE (TRILL) and TURN, are further described under their own names. (See also the masterly treatise on *Musical Ornamentation* by E. Dann-

reuther in two volumes of Novello's *Music Primers*.) F. T.

BIBL.—E. DANNREUTHER, *Musical Ornamentation* (2 vols.); R. LAOH, *Studien zur Entwicklungsgeschichte der ornamentalen Melodie* (Leipzig, 1913).

VOCAL ORNAMENTS OF THE ITALIAN SCHOOL

VOCAL.—The origins of the various ornaments employed in vocal music are lost in the mists of antiquity. Between the time of Charlemagne and the close of the 16th century the Latin writers, beginning with the Romanian letters, which were marks of expression, used a set of terms which clearly described ornaments. The most important were *crispatio*, a shake; *trepidatio*, also meaning a shake, *reverberatio* (mediaeval Latin) 'beats'—perhaps the beginning of our vibrato—*vinnulae* ('sweet'), probably, though not certainly, *mezza voce*, *voces tremulae*, tremulous voices, *copula*, a passage sung by a tenor over a hold in the bass, and *hocketi*, meaning staccati (see HOCKET). Appoggiaturas single and double, ascending and descending, were known in the 11th century. Grupetti were common from the earliest days, when they appeared in simple forms in the Kyrie. They were the roots of the 'passages' so much discussed toward the close of the 16th century.

These passages disclosed themselves first in the simple variation form called diminutions, from which ultimately developed the elaborate floridity of 16th- and 17th-century music. A clear illustration of the construction of a passage in diminution form on a plain chant is furnished by Giovanni Battista Bovicelli, a famous teacher, in his *Regole di musica* (1594).

Al - le - lu - ia

The trill existed at least as far back as the 3rd century, for it is defined by Pomponius Festus, the grammarian, who wrote at that time. The name was subsequently applied to other ornaments. At the time of Giulio Caccini, the end of the 16th century, the name *trillo* was applied to an ornament long since discarded. The example is from Herbst.

Ve - ni ve - ni

The trill of contemporaneous music was called *gruppò* by Caccini and his contemporaries, and written thus :

Johann Crüger, in his *Precepta musicae practicae figuralis* (1625), and Johann Andreas Herbst in *Musica practica sive Instructio pro symphoniaci* (1642), call this ornament *tremolo*. In the employment of florid passages much latitude was allowed to the singer, and Bovicelli lays stress on the importance of avoiding monotony by making rhythmic changes. A favourite device for this purpose was called the 'Lombard figure' and was merely a syncopation in this form.

The swell tone, later known as the *messa di voce*, was assiduously cultivated in the late years of the 16th century, if not earlier, and was then practised in several forms under the general title of *esclamazio*. The *esclamazio languida* consisted of a crescendo, a diminuendo and a crescendo. The *esclamazio viva* was a diminuendo followed by a crescendo. The latter was not usually employed in dramatic recitative, but was regarded as more suitable to canzone. The *rescendi* in these ornaments (which were also means of expression) did not go beyond a mezzo forte in Caccini's time. The 18th-century *messa di voce* was more vigorous and at one period was used on every long tone. An example from Caccini's 'Nuove musiche' will throw light on the *esclamazio*.

The development of ornamentation in vocal art began after the Council of Laodicea in 367 placed the music of the service entirely in the hands of trained choirs. The solo chanters quickly seized the opportunity for vocal display, and cultivated an ornate style. The Schola Cantorum, founded by Gregory the Great in 590, trained singers for the Papal Choir and the choirs of other churches of the Holy See. The most accomplished of its singers were made solo chanters. The vanity of these solo singers led to abuse of the ornaments of the

chant. In the 9th century we find the *apoggiatura*, *syncopation*, the *mordent*, *portamento* and other graces used indiscriminately. In the late years of the 16th century the church singers freely introduced passages in the polyphonic music. When Peri and Caccini, who complained vigorously of the inartistic employment of passages, introduced the new *stile parlante*, the ecclesiastical singers appeared to be more anxious than ever to preserve floridity in the church service. Pope John XXII., in the 14th century, had commanded the abolition of all ornaments from sacred chant, which shows us that abuses must have reached a lamentable state. But it is probable that Pope John's decree was not generally obeyed. It was after the public opera house came into existence and audiences encouraged opera singers and composers to the cultivation of a brilliantly florid style that the stage furnished what the Church gradually abandoned. Before the close of the 17th century all the ornaments had assumed the forms in which we now use them, and the extraordinary cadenzas of Handel's day had been already equalled. W. J. H.

ORNITHOPARCUS (ORNITOPARCHUS), ANDREAS, the author of a rare Latin treatise, entitled 'Musicae activae micrologus,' which was published at Leipzig in 1516. (See MICROLOGUS.) His real name was Vogelsang or Vogelgesang, and he seems to have adopted the Greek pseudonym of Ornithoparcus on account of the many countries which he had visited, and of which he gives a list at the end of the third book of his work. Little further is known about him, except that he was a native of Meiningen, that he was M.A. of Tübingen, and was connected in Oct. 1516 with the University of Wittenberg. (*Monatshefte*, 1878, p. 54.) His book was translated into English by JOHN DOWLAND (London, 1609). W. B. S.

ORNSTEIN, LEO (b. Kremenchug, Russia, Dec. 11, 1895), Russian-American pianist and composer. As a child he studied at the Conservatoire in St. Petersburg, where he was a pianistic prodigy; after 1906 he was a pianoforte pupil of Mrs. Thomas Tapper at the Institute of Musical Art in New York. His début as pianist was made in New York in 1911; since then he has played in concerts in numerous cities of Europe and America. A radical and anarchistic composer, he is reported to have declared himself 'not concerned with form or with standards of any nature.' His compositions include 2 piano concertos; 2 symphonic poems, 'The Life of Man' and 'The Fog,' and other orchestral pieces; chamber music and sonatas; choral pieces; piano pieces and songs. W. S. S.

OROLOGIO, ALESSANDRO. According to Eitner (*Monatshefte*, xxx. 36, and Q.-L.) there were two musicians of this name, living at the same time, and employed in very much the

same capacity at two different German courts, whose published works, too, it is almost impossible to separate. One is described as in 1580 violinist and in 1603 vice-Kapellmeister to the court chapel of the Emperor Rudolf at Prague. The other appears as in 1590 instrumentalist (Zinkenist) in the Electoral Chapel at Dresden, and also in 1603 promoted to the position of vice-Kapellmeister. DOWLAND (*q.v.*) made the acquaintance of this latter in 1584 at the court of the Landgrave of Hesse-Cassel. The works of both Orogios consist of Books of Madrigals and Canzonets a 3-6, but to the Dresden musician of this name is ascribed a Book of Instrumental Intradas a 5-6 dedicated to King Christian IV. of Denmark and published at Helmstädt, 1597. Morley has a Madrigal of Orogio with English words in his Book of 1598.

J. R. M.

ORPHÉE AUX ENFERS, opéra bouffe, in 2 acts and 4 tableaux; words by Hector Crémieux, music by Offenbach. Produced Bouffes-Parisiens, Oct. 21, 1858; in London in French (Hortense Schneider) St. James's Theatre, July 12, 1869. G.

ORPHÉON. This word was used about 1830 by Bocquillon-Wilhem to designate men's choral societies. In 1815 it had been one of Choron's aims to introduce the practice of music in the elementary instruction of French schools. In 1819 Wilhem opened special courses, taught at the Ecole Polytechnique, and at the City of Paris schools. Introduced into nineschoolsin 1830, singing became obligatory in 1835; in 1865 it was inaugurated at the schools of the Paris suburbs, and a wide popular movement of Orphéonistes resulted, for which many popular composers have written suitable music. The directors of the Orphéon societies (Paris) have been: Wilhem until 1842; Hubert, Gounod, Hubert, 1852; Bazin, Pasdeloup, 1863; Bazin, 1873-78; Dannhauser, 1879; Chapuis, 1894, who reorganised the municipal 'Orphéon.' An annual concert is given at the Trocadero with 1500 performers. The Orphéon-concourses date from 1849. In the provinces (Lyons), a military Orphéon was performed in 1843, and 700 provincial societies were existing in 1859; 3000 'Orphéonists' were heard in London in 1860.

From 1862, 300 societies have been steadily growing, attaining 2200 in about 1900. The movement is comparable with that of the British COMPETITION FESTIVALS (*q.v.*).

ORPHEOREON (ORPHEOREON, ORPHARION); an instrument of the cither kind, with flat back, but with the ribs shaped in more than

one incurvation. The varieties of the orpheoreon also differed from the usual cither in the bridge being oblique, rising towards the treble side. According to Praetorius (*Organo-graphia*, Wolfenbüttel, 1619, p. 54) the orpheoreon was tuned like a LUTE (*q.v.*) in 'Kammer-ton' (a). The strings were of brass or iron, in six or seven pairs, and were played with a plectrum. A larger orpheoreon was called Penorcon, and a still larger one Pandore—Praetorius spells this Pandorra or Bandore. According to his authority it was invented in England; to which another adds the name of John Rose, citizen of London, living in Bride-well, and the date of about 1560. It must, however, have been a rather different orpheoreon. Following Praetorius, the pandore, and we presume its congeners, had no chanterelle or melody string, and could therefore have been used only for accompaniment, like the common cither, *autoribus et sartoribus usitatum instrumentum*. He gives cither tunings for seven strings, including the common 'four-course' (b) and 'Italian' (c); old tunings (d), (e), often used an octave lower on the lute in France, and the old Italian six-course (f), but no other than the lute tuning above mentioned for the orpheoreon family. The player probably tuned as he chose. The forms 'Orpharion' and 'Pandora' occur in a book on the Lute and other instruments, entitled *The Schoole of Musicke*, by Thomas Robinson, London, 1603. A copy is in the British Museum. There is another instrument which Praetorius describes as being like a pandore in the back; this was the Quinterna, or Chiterna. It differed, however, in other respects, as the ribs, belly, etc., were of simple outline, and the bridge was straight. He says it was tuned like the very earliest lutes (g), and depicts it in his illustrations as not unlike a guitar.

An orpheoreon was sold at Christie's in 1898; another is in the possession of Lord Tolemache, at Helmingham. A. J. H.

ORPHEUS (1), a collection of partsongs or vocal quartets by German composers, with English words, published in parts and compressed score. It was started by Ewer in 1836, and continued by their successors, Novello.

A similar work—but for equal voices only—appeared in Germany, entitled 'Orpheus: Sammlung auserlesene mehrstimmige Gesänge für Männerstimmen,' in many volumes, published at Leipzig, by Friedlein, and by Zöllner G.

ORPHEUS (2). The story of Orpheus and Eurydice was the subject of the first actual operas in the history of music, (1) the 'Euridice' of Caccini and Peri to Rinuccini's words, 1600; this was shortly afterwards followed by (2) Monteverdi's 'Orfeo' in Mantua, 1607. Later in the 17th century there were many operas on the same subject, as, for example, by Sartorio (1672), Draghi (1683), the sons of Lully (1690), Reinhard Keiser (1699), Fux (1715), Pergolesi (1734), Wagenseil (1740), and Graun (1752). The most important is (3) the 'Orfeo ed Euridice,' words by Calzabigi, music by Gluck; produced Vienna, Oct. 5, 1762; Paris, 1764; in a slightly altered form as 'Orphée,' Opéra, Aug. 2, 1774; revived Théâtre Lyrique, Nov. 19, 1859; Covent Garden, June 27, 1860; New York, Metropolitan Opera House (in German), 1885. For later operas on the same story, see Riemann's *Opern Handbuch*.

M.

ORPHEUS BRITANNICUS, the first attempt towards a collection of Henry Purcell's vocal music. It was issued by Henry Playford, in folio, shortly after the composer's death, and the first volume, which is dedicated to Lady Elizabeth Howard, is dated 1698. The second bears the date 1702, and both have the portrait engraved by White after Closterman.

The second edition has the dates 1706 and 1711 (also in two volumes), and the third edition 1721. Of this last named few copies appear to have been printed, for Handel's music had begun to be more in favour than Purcell's.

About 1735 John Walsh published a volume of Purcell's songs under the title 'Orpheus Britannicus,' pp. 120, these being printed from engraved plates, which had been used for single songs.

The title-page of the original issue of 1698 runs:

* Orpheus Britannicus, a collection of all the choicest songs for One, Two, and Three voices, composed by Mr. Henry Purcell; together with such symphonies for violins or flutes as were by him designed for any of them, and a thorough-bass to each song figured for the Organ, Harpsichord, or Theorbo lute. London: printed by J. Heptinstall for Henry Playford in the Temple Change in Fleet St. mdcxcviii. fol.

F. K.

ORPHEUS CALEDONIUS, the first published collection of Scottish songs united to their melodies, for though a prior collection of Scottish airs had been issued, in 1700 (second edition 1701) by Henry Playford, yet these were merely noted for the violin, and did not include the most popular ones. The 'Orpheus Caledonius' was edited, with the bass added to the tunes, by William Thomson, who entered the work at Stationers' Hall on Jan. 5, 1725. The words are chiefly taken from the first volume of Allan Ramsay's *Tea-Table Miscellany*, 1724. It was dedicated to the Princess of Wales (afterwards Queen Caroline), who appears to have patronised Thomson. There is, no doubt in consequence of this patronage,

a very lengthy list of distinguished subscribers names. There are fifty songs and airs printed, and to several of them is affixed a mark attributing them to David Rizzio, the first appearance of this oft-repeated myth.

In 1733 Thomson again issued the 'Orpheus Caledonius,' but in two volumes octavo. The first contained the same fifty songs and airs as in the 1725 edition, with some slight changes in the melodies. The second volume had fifty more Scottish songs.

As the first edition is rare and of great interest, the following copy of the title-page and index may be of service.

Except the dedication and the list of subscribers, etc., the whole work is engraved.

* Orpheus Caledonius, or a Collection of the best Scotch Songs set to Musick by W. Thomson. London: Engraved and Printed for the Author at his house in Leicester Fields Enter'd at Stationers' Hall according to Act of Parliament. 1725, Jan. 5. ORPHEUS CHORAL SOCIETY, see under DUBLIN.

ORTIGUE, JOSEPH LOUIS D' (b. Cavaillon, May 22, 1802; d. Paris, Nov. 20, 1866), musical *littérateur*.

He studied at first merely as an amateur, under the Castil Blazes, father and son. He went to Aix in Provence to study law, but music proved more powerful, and he finally resolved to abandon the law for musical literature. With this view he came to Paris in 1829, and began by writing musical critiques in the *Mémoires Catholique*; then, becoming intimate with Lamennais, he wrote for *L'Avenir*, and, after its failure, for *La Quotidienne*, besides the *Gazette musicale* and *La France musicale*. After his marriage in 1835 he redoubled his exertions and contributed to half a score of periodicals, including the *Temps*, *Revue des deux Mondes*, *National*, *L'Univers*, *L'Université Catholique*, *L'Opinion Catholique*, and above all the *Journal des Débats*, on which paper he succeeded Berlioz as musical critic. To this last paper he mainly owed his reputation, and his place in several commissions, historical and scientific, to which he was appointed by government. In 1863 he became chief editor of *Le Ménestrel*.

His important works are *De la guerre des dilettanti* (1829); his large *Dictionnaire liturgique, historique, et théorique de plain-chant et de musique religieuse* (Paris, 1854 and 1860, small 4to), and *La Musique à l'Église* (*ibid.*, 1861, 12mo). To the former of these the Abbé Normand contributed a number of articles under the nom de guerre of Théodore Nisard. D'Ortigue was associated with Niedermeyer in founding *La Maîtrise* (1857), a periodical for sacred music, and in the *Traité théorique et pratique de l'accompagnement du plain-chant* (Paris, 1856, large 8vo). In 1862 he started, with Félix Clément, the *Journal des Maîtrises*, a periodical of reactionary principles in sacred music, which soon collapsed. He was an honest and laborious writer; his name will live through his *Dictionnaire*, which contains some excellent articles on church music, but his other books are mere musical miscellanies, thoughtfully written, but not endowed with any of those qualities of style or matter which ensure any lasting influence. He died suddenly.

BIBL.—M. BARBER, *Joseph d'Ortigue* (with list of works), 1919.

ORTIZ, DIEGO (b. Toledo; fl. 1547-65), Spanish composer, famous as being one of the first to employ the principle of variation. He is first heard of in 1547 as a composer of motets, printed in lute tablature in the 'Silva de Sirenas' of Enriquez de Valderrabano. In 1553 and 1558 he was maestro de capilla to the Duke of Alba, Viceroy of Naples. His singers and players were almost all Spaniards and included the blind organist Francisco de SALINAS (q.v.).

His famous book of variations for bass-viol and cymbalo appeared in Rome in 1553, in Spanish and Italian versions. If not the first to use variation-form, he certainly realised something of its artistic possibilities. Priority in this seems to belong to Hugh Aston and the composer of 'My Lady Carey's Dompe' (B.M. Royal MSS. App. 58), whose work dates from the beginning of the 16th century. In Italy the beginnings of variation are seen in the works of Silvestro Ganassi for flute (1535) and bass-viol (1542-43); while in Spain definite variations are found in the lute book of Luis de NAVARREZ (1538).

The published works of Diego Ortiz are as follows:

Tratado de glosas sobre clauusulas . . . en la musica de violones. Rome, 1553. (Berlin.) Reprinted by Max Schneider, Berlin, 1913.
 Il primo libro di Diego Ortiz Tolletano, nel qual si tratta delle glose sopra le cadenze. . . . Rome, 1553. (Bibl. Nac., Madrid.) An Italian version of the above.
Musicon Liber I. Hymnos, Magnificat, Salves, Motets, Psalmos. . . . Venice, 1565. Gardano. (Augsburg: Berlin; Bologna; Rome, St. Cecilia; Vienna.) Of these, 8 were reprinted by Froese, one by Salava and others by Pedrell.
 J. B. T.

ORTO, MARRIBIANO DE, a Flemish musician of the end of the 15th and beginning of the 16th centuries, to whom Fétis wrongly gives the Christian name Jean, and conjectures the surname to have been originally Dujardin, was a singer in the Papal chapel at Rome from 1484-

1494, contemporary therefore with Josquin des Prés.

From 1505 he was first chaplain and singer at the court of Philip the Fair of Burgundy, and his name appears in the chapel lists up to 1516. In 1505 Petrucci printed a book of five Masses a 4 by De Orto, bearing the titles *Dominicalis, l'ay pris amours* (containing two settings of the Creed), *L'omme armé, La belle se sied, Petite camusette*. The miscellaneous collections of Petrucci also contain a few motets, chansons and a lamentation lesson by De Orto. Two masses and parts of masses, including another 'L'omme armé' a 5, are contained in the choir-books of the Sistine chapel at Rome. The Imperial Library at Vienna has also two important unprinted masses of De Orto, one entitled 'Mi-mi,' indicating the main theme, in accordance with the hexachord solmisation system, as consisting of the constant succession of the two notes E-A, the other entitled 'Le Serviteur,' both a 4. The very remarkable Agnus of the Mass 'Mi-mi,' with the tenor based on the canon 'descende gradatim' is reproduced in modern score in the Beilagen to Ambros's *Geschichte der Musik*, also the motet Ave Maria, from Petrucci, 1501. J. R. M.

BIBL.—E. DROZ and G. THIBAUT, *Bibliographie des recueils de chansons du XVe siècle* (1926).

O SALUTARIS HOSTIA, probably part of the hymn of Aquinas, beginning *Verbum supernum prodiens*, for the office of Corpus Christi, but better known through its being sung at the service of Benediction, or more rarely from its being sung after the Benedictus at Mass.

Its plain-song melody is borrowed from the Ascensiontide hymn, 'Eterne Rex altissime.'¹

It is one of the more elaborate hymn melodies, and in the eighth mode; the melody has become current in a debased and simplified form, thus:

(See RUE, Pierre de la.)

W. S. R.

OSBORNE, GEORGE ALEXANDER (b. Limerick, Sept. 24, 1806; d. London, Nov. 16, 1893). His father was organist and lay-vicar at Limerick.

Osborne was a self-instructed pianist until

¹ *Hymns Ancient and Modern*, No. 167.

he reached the age of 18, when he determined on making music his profession and seeking instruction on the Continent. In 1825 he repaired to Belgium, and found a home in the house of the Prince de Chimay, Cherubini's friend, the well-known musical amateur, who made him acquainted with the works of the best German composers. During his residence in Brussels he taught the eldest son of the Prince of Orange, afterwards King of the Netherlands, by whom he was subsequently decorated. In 1826 he went to Paris, and studied the pianoforte under Pixis, and harmony under Fétis. He afterwards placed himself under Kalkbrenner, and soon obtained a good position among the pianists of the day, took his full share in the musical life at that time so abundant in Paris, and amongst other advantages enjoyed the privilege of an intimate acquaintance with Chopin and Berlioz.¹ In 1843 Osborne settled in London, where he was for many years one of the most esteemed and genial teachers. He died there, and was buried in Highgate Cemetery. He wrote three trios for piano and strings, and a sextet for piano, flute, oboe, horn, violoncello and double-bass. Of the many duets for piano and violin, thirty-three were written with De Bériot, the greater part of which are original, one was written in conjunction with Lafont, one with Artôt, and two with Ernst. His pianoforte solo, 'La Pluie des perles,' enjoyed extraordinary popularity in its day. W. H. H.

OSIANDER, Lucas (b. Nuremberg, Dec. 16, 1534; d. Stuttgart, Sept. 7, 1604), son of the Protestant controversialist, Andreas Osiander. Besides being himself a theologian of some eminence, pastor at Esslingen and elsewhere in Württemberg, he had received a thorough musical training, both theoretical and practical, which qualified him to bring out what is sometimes described as the first real German Chorale-Book, the first, that is, in which the melody is definitely placed in the descant or soprano part, and provided with a simple note-for-note counterpoint *a 4*. Though not absolutely the first to put the chorale melody in the descant (it had been occasionally done by Le Maistre and others), he was the first to do it systematically, and for the express purpose of enabling the whole congregation to join in the singing of it. The full title of his work is 'Fünzig geistliche Lieder und Psalmen mit 4 Stimmen auf contrapunctsweise also gesetzt, dass eine ganze christliche Gemein durchaus mitsingen kann,' Stuttgart, 1586. In the preface he says:

'I know, indeed, that composers otherwise usually put the Choral in the Tenor, but when that is done, the Choral is not sufficiently recognisable among the other voices, and the congregation (*der gemeine Mann*) cannot follow or join in the singing. I have, therefore, put the Choral always in the Descant.'

¹ See *Proc. Mus. Assn.* Apr. 1883.

This preface also shows the original meaning of the word '*choral*' as applied to the melody only, in contradistinction to the word '*figural*' as applied to every polyphonic setting, however simple. 'Pastors and schoolmasters,' he says, 'should see that the *Choral* and the Figured Music go well together, so as to form an agreeable concord.' A few of his settings were received into Schöberlein's *Schatz*, and Friedrich Zelle of Berlin republished the whole book ('*Das erste evangelische Choralbuch*') as his Easter programme, by way of appendix to his school report of 1903.

J. R. M.

OSSIA (OPPURE, OVVERO) (Ital. 'or else'); these words are used indifferently to mark a passage, generally printed above the treble or below the bass, which may be substituted for that written in the body or text of the work, being in most cases an easier version of the same kind of effect. These words were also used when the compass of the piano was in process of alteration; thus Moscheles sometimes adapts passages, originally written for a full-sized piano, to the smaller compass, writing the passage for the smaller piano above that of the full-sized one.

The same object is attained by the words *plus facile* or *leichter*. M.

OSTINATO, i.e. obstinate. 'Basso ostinato' is the Italian term for a GROUND BASS (*q.v.*), which recurs obstinately throughout the composition. 'I shall seem to you,' says Mendelssohn,² 'like a Basso ostinato, always grumbling over again, and at last becoming quite tiresome.' G.

OSTRČIL, OTAKAR (b. Smichov, Prague, Feb. 25, 1879), Czechoslovak, composer and conductor. His father was a medical man. Both parents feared the uncertain career of a musician for their son, and he therefore entered the philosophical faculty of the Prague University, and, in 1901, became professor of modern languages at the Commercial Academy, Prague. While pursuing his philological studies, he worked hard at music, taking private piano lessons from Prof. Ad. Mikeš of the Conservatoire, and from 1895 studying piano and composition with Zdenko FIBICH (*q.v.*). He remained with this master until his death in 1900, and in his last years became his assistant, correcting his proofs, helping him in the scoring of his works and with their pianoforte editions. From 1909-22 Ostrčil was conductor of the amateur orchestra, Orchestralní Idrůžení (The Orchestral Association), and brought it into prominence. From 1914-19 he was operatic conductor at the Vinohrady theatre, in Prague, and in the same year was appointed dramaturge at the National Theatre. On the death of Karel Kovařovic, in 1920, Ostrčil was chosen as his successor after he had resigned his professorship. In this new post

² Letter, Jan. 8, 1838.

he has shown himself a zealous and convinced propagandist of modern tendencies in dramatic music.

As a composer Ostrčil attracted attention early by the maturity of his technique. The symphonic poem, 'The Legend of Šemik,' is linked to the patriotic-mythical material of Smetana's and Fibich's works, and resembles the latter in the working of the motives and the formal structure. The same may be said of the music drama, 'The Death of Vlasta,' the libretto of which by K. Píppich was originally written for Fibich and, at his recommendation, set to music by his pupil. The suite in G major and the string quartet in B major are also allied to Fibich's style.

It was natural that at this period Ostrčil should pay some attention to melodrama, also his teacher's favourite form. He only composed, however, two concert-melodramas for orchestra, opp. 6 and 8 (see List below). The symphony in A major is still in an old-fashioned style and of minor importance. On the other hand, opus 9, 'Osířelo Ditě' (The orphaned child) introduces a fresh point of view. Here Ostrčil moves in modern paths with the spirit of the time; he sets folk poetry in the manner of V. NOVÁK (*q.v.*). Henceforth there came a gradual inward change in his development.

There is something novel in the opera 'Kunálový Oči' (Kunala's Eyes). This Indian legend, steeped in the mysticism of the Buddhist spirit, written by the Czech poet Julius Zeyer—who possessed a richly-coloured imagination and specially chose exotic material for his poems—gave Ostrčil a good opportunity to display his musical art in its fulness. He accentuates to the utmost the dramatic treatment and also the mystical and passionate elements, while avoiding the musical exoticism to which the Indian atmosphere might lead him. In harmony the work reflects much that is bold and rugged. The same applies in a still greater degree to his next opera, 'Poupě' (The Bud), which is therefore the more interesting, because here the composer is dealing with a comedy from modern life, in one act, in which he hits off brilliantly the colloquial style; and the scoring for small orchestra (without trombones) is quite lightly and transparently treated. In his succeeding works Ostrčil makes considerable advances, more particularly in polyphony, whereby the independent melodic movement of all the parts results in greater harmonic boldness. The work, however, which stands as a landmark in this respect is his impromptu for full orchestra, op. 13. It is an important step in his technical progress, but, artistically speaking, the suite in C minor (op. 14) stands higher. It is an intimately poetic and almost grotesquely humorous work. Entirely modern in polyphony are the compositions which follow the above: 'Cizí Host' (The Strange Guest),

'Legende o Svaté Zitě' (The Legend of St. Zita) and the 'Sinfonietta'; the last named employs a male voice a *cappella* chorus in the same style. For his latest opera, 'Legenda z Erinu' (A Legend of Erin) Ostrčil has again had recourse to one of Zeyer's dramas. The exceedingly tragic work contains many stirring dramatic situations.

LIST OF WORKS

Operas.—'Vlasty Skon.' op. 6 (The Death of Vlasta), music drama in 3 acts; libretto by K. Píppich, produced at National Theatre, Prague, Dec. 14, 1904, under Koválovic, MS.; 'Kunálový Oči,' op. 12 (Kunala's Eyes), opera in 3 acts, based on Zeyer's novel, National Theatre, Prague, Nov. 25, 1908, conducted by Koválovic (piano score, Hudební Matice, Prague); 'Poupě' (The Bud), comic opera in 1 act, op. 13, National Theatre, Prague, Jan. 25, 1911, under the composer (piano score, Hudební Matice); 'Legenda z Erinu' (Legend of Erin), op. 19, opera in 4 acts, on Zeyer's drama, National Theatre, Prague, 1923 (piano score, Forerster Society, Prague).

Orchestral.—'Selská Slavnost' (Rustic Festival), orchestral sketch, op. 1, MS.; suite in G, for full orch., op. 2, MS.; 'Pohádka o Šemiku' (The tale of Šemik), symphonic poem, op. 3, MS.; two melodramas for orch.: 'Ballada o mrtvém ševci, a mládě tanečnicku' (Ballad of the Dead Cobbler and the young Dancing-girl), op. 6, and 'Ballada Česká' (Czech ballad), op. 8; symphony in A maj., op. 7, MS.; impromptu for orch., op. 13, MS.; suite in C min., op. 14, MS.; 'Sirotek' (The Orphan), music to a drama by Kvačil, op. 14, MS.; 'Sinfonietta,' for orch., op. 20 (score pub. by the Forerster Soc.).

Choral and Vocal.—'Osířelo Ditě' (A child became an orphan), ballad for mezzo-soprano and orch., op. 9 (piano score, Mollir Ujeaneck, Prague); 'Česká Legenda Vánoční' (Czech Christmas legend) for male voice choir a *cappella*, op. 16 (Hudební Matice); 'Cizí Host' (The stranger guest), ballad for tenor and orch., op. 16 (piano score with Czech and German texts, Hudební Matice); 'Legenda o Svaté Zitě' (Legend of St. Zita), for mixed choir, tenor solo, orch. and organ, op. 17 (piano score and parts, Hudební Matice); 'Homely Motives,' four male voice part-songs, op. 21 (score and parts, Hudební Matice). Also three songs, op. 18, with piano accompaniment (Hudební Matice).
Chamber Music.—String quartet in B maj., op. 4, MS.; sonatina for violin, viola and piano, op. 22, MS.

R. V.

O'SULLIVAN, DENIS (b. San Francisco, Apr. 25, 1868; d. Columbus, Ohio, Feb. 1, 1908), son of Cornelius O'Sullivan of Skibbereen, Co. Cork, Ireland, first studied singing at San Francisco, as an amateur, under Ugo Talbo (Hugh Talbot Brennan) and Karl Formes. He was afterwards taught, for some time by Vannuccini at Florence, by Santley and Shakespeare in London, and later by Sbriglia in Paris. On Mar. 6, 1895, he made his début at Miss Ethel Bauer's concert, Prince's Hall, and sang six of Schumann's 'Dichterliebe' with the greatest success, on account of his excellent phrasing and enunciation. On Aug. 25 of the same year he made his début with the Carl Rosa Company at Dublin as Ferrando in 'Trovatore,' and also sang on tour as Prince John in 'Ivanhoe,' the Mayor in 'Son and Stranger,' Lothario in 'Mignon,' Vanderdecken in 'Flying Dutchman,' a part he sang at five hours' notice without rehearsal, etc. On Jan. 20, 1896, he sang at Daly's Theatre with the above company as Biterolf in 'Tannhäuser,' and in Feb. as Alfio in 'Cavalleria.' On Mar. 2 he made a great success as the hero on the production of Stanford's 'Shamus O'Brien' at the Opéra-Comique Theatre (London), and sang throughout the run of that opera. Between 1897 and 1899 he divided his time between England and America, singing in the latter country on tours with 'Shamus O'Brien,' and for two seasons in his native San Francisco; also Sept. 19, 1898, at New York as the Marquis de Saint André in

Englander's 'Little Corporal.' On Jan. 27, 1902, he sang as Shaun the Smith on production of Esposito's operetta 'The Post Bag,' at a performance given by the Irish Literary Society at St. George's Hall, and in the same year sang at the Westmorland and Northampton Festivals. On Oct. 17, 1903, he sang as Lefebvre in Caryll's 'Duchess of Dantzic' at the Lyric Theatre. On Nov. 7, 1904, he sang as Barry Trevor in the musical play 'Peggy Machree,' written by Patrick Bidwell (i.e. Mrs. O'Sullivan), with music by Esposito, produced at the Grimsby Theatre. He also acted in Boucicault's plays in America. A book of poems (dedicated to his memory) was published in 1911 by his widow. It contains a fine drawing of O'Sullivan by John Sargent.

A. C.

OSWALD, JAMES (d. Jan. 1769), a popular composer of the middle of the 18th century. He was originally a dancing-master at Dunfermline, and is first heard of in Aug. 1734, when he advertises in the *Caledonian Mercury* that he is publishing a collection of minuets. In 1736 he had taken up his residence in Edinburgh, and appears to have made a position quickly as a performer on the violin, as organist, composer and as teacher of dancing. From here he issued several collections of 'Scots Tunes' and chamber music. He advertised in 1740 that he was leaving for Italy, but it is doubtful whether he ever made the journey, though it is certain that in 1741 he left Edinburgh for London. His departure from Scotland is made the subject of a poetical 'Epistle' in the *Scots Magazine* for October 1741, which gives many interesting details of his compositions, his arrangements and his playing. Especially significant are the lines—

'Or when some tender tune compose again
And cheat the town wif David Rizo's name.'

Arrived in London, probably with influence from the Earl of Bute, he seems to have obtained patronage from the Prince and Princess of Wales, to whom he dedicated some of his works, and it is not unlikely he had some share in the early musical education of their son, afterwards George III., to whom he was appointed chamber composer in 1761. As court patronage would certainly not supply all necessities, there are indications that he obtained employment with JOHN SIMPSON (q.v.), who published all Oswald's early London work. It must be confessed that Oswald's life in London is much of a mystery, but it is pretty well ascertained that though his name had some degree of value, he worked both anonymously and under assumed names. It is likely that Oswald was a sort of musical editor to the several miscellaneous collections which Simpson published. Simpson having died in 1747, Oswald about this date set up a music-shop on the north side of St. Martin's Church, at the

corner of St. Martin's Lane. From this address were published many works of antiquarian musical interest, including the well-known collection of Scots tunes, twelve parts, entitled 'The Caledonian Pocket Companion,' the two first having been issued by John Simpson; 'Airs for the Spring,' 'Summer,' 'Autumn' and 'Winter'; his several collections of 'Scots Tunes,' etc. etc. 'The Comic Tunes in Queen Mab . . . by the Society of the Temple of Apollo' and 'Six Solos . . . by I. R. Esq.' (General Reid) were afterwards republished with a mysterious note that they were really by the 'late Mr. Oswald, who for certain reasons could not openly claim them during his life.' 'The Music in the Masque of Alfred . . . by the Society of the Temple of Apollo' (not Dr. Arne's) was doubtless one of these anonymous compositions.

The mysterious 'Society of the Temple of Apollo' was apparently a small society of musicians gathered round Oswald¹ which included Charles Burney, and probably John REID (then Captain, afterwards General, q.v.) and the Earl of Kelly. The several works which bear this society's name were all published by Oswald.

Meanwhile Oswald's name as composer of music for the popular fashionable song is very frequent in collections of the period, and one set of songs, 'Colin's Kisses,' attained some degree of fame. He died, so far as can be ascertained, in Jan. 1769, and was buried on the 9th of that month at Knebworth.

The writer broached the theory in *The Minstrelsy of England*, first series (Bayley Ferguson), that to Oswald we are indebted for either the composition of GOD SAVE THE KING (q.v.), or for its modern revival.

F. K.

OTELLO. (1) Opera; libretto based on Shakespeare's play, music by Rossini. Produced Fondo, Naples, Dec. 4, 1816; in French, Académie, as 'Othello,' Sept. 2, 1844; King's Theatre, May 16, 1822.

(2) Opera in 4 acts; libretto, founded on Shakespeare, by Arrigo Boito, music by Verdi. Produced La Scala, Milan, Feb. 5, 1887; New York, Academy of Music, Apr. 16, 1888; Lyceum Theatre, July 5, 1889; in English, Carl Rosa Co., Royal Court Theatre, Liverpool, 1895.

G.

OTGER, an early writer on musical theory, whose life is obscure, and whose very existence has been hitherto almost ignored. To him, probably, are due the treatises called *Musica enchiridiadis* and *Scolica enchiridiadis*, which on the authority of a few MSS. or notes in MSS. have been ascribed to Hucbald. The best of the MSS., however, give Abbot Otger (also called Hoger or Noger) as their author, and among them is a MS. (now at Valenciennes)

¹ See *Mus. Ant.* ii. 84, *James Oswald and the Temple of Apollo* by F. Kildesay

from the Monastery of St. Amand, which was the home of Hucbald; it is therefore good evidence against the ascription of these treatises to him. They, with the *Commemoratio brevis*, form a little group of treatises distinguished by a special method of notation (see HUCBALD) which, as well as the general tenor of the teaching, distinguishes the group sharply from the one unquestioned work of Hucbald (*De harmonica institutione*), or the writings of Odo of Cluny, to whom also the group is sometimes ascribed. No particulars of the life of Otger are known, but his treatises are among the most valuable of the sort. They are printed in Gerbert, *Scriptores*, vol. i. See further on the matter H. Müller, *Hucbalds echte und unechte Schriften* (Leipzig, 1884).

W. H. F.
OTHMAYR, KASPAR (b. Amberg, Upper Palatinate, Mar. 12, 1515; d. Nuremberg, Feb. 7, 1553), was a fellow-student with Georg Forster, the song-book editor, at the University of Heidelberg, and fellow-pupil with him in music under Lorenz Lem'in, the Heidelberg Kapellmeister. In 1545 he was rector of the Convent School at Heilsbronn. In 1547 he obtained a canonry at the church of St. Gumbert in Ansbach which had become Lutheran, and in 1548 was chosen to be provost; but the elections being contested, probably in consequence of the religious disputes of the time, he retired to Nuremberg. Forster speaks of him as a widely celebrated musician, and received twenty-six of his settings of secular songs¹ into his great collection. Othmayr's own publications are sacred works chiefly, and the titles of some of them bear witness to the religious confusion of the time, as, for instance, 'Cantilenæ aliquot . . . quibus his turbulentis temporibus ecclesia Christi utitur' (Nuremberg, 1546). *Epitaphium D. Martin Lutheri a 4*. Other works are 'Bicinia sacra' (1547), German hymns *a 2* and 'Tricinia' (1549), Latin motets *a 3*. J. R. M.

OTT, JEAN, a Nuremberg lute-maker who worked during the first half of the 15th century, and, according to Fétis, was alive in 1463. Together with Hans Frey, the father-in-law of Albert Dürer the painter, he was the earliest maker of viols in Germany, and they are generally named together with Joan Kerlino (1449), who was the first to manufacture viols in Italy. E. H.-A.

OTT (OTTO), JOHANNES, a bookseller and music-publisher at Nuremberg in the first half of the 16th century, who edited, in union with the typographer Hieronymus Formschneider or Graphæus, several very valuable collections of the older music. In his prefaces to these collections Ott shows himself to have been an excellent connoisseur of the older music, possessing good knowledge and refined taste. The

composers whom he chiefly loves to exalt are, first, Josquin, whom he describes as the hero of his art, having in him something truly divine and inimitable, and next to Josquin, Heinrich Isaac and Ludwig Senfl. His collections are as follows: 1533, 'Der erst Theil: 121 neue Lieder, von berühmten diser Kunst gesetzt, lustig zu singen und auf allerley Instrument dienstlich, vormals dergleichen im Truck nie ausgegangen.' This work is dedicated to the composer Arnold von Bruck, and contains twenty German songs by him, eighty-two by Senfl, the rest by other composers, all *a 4* to 6. 1537, 'Novum et insigne opus musicum,' etc. This work is dedicated to the Emperor Ferdinand, and contains fifty-seven motets, *a 4* to 6, chiefly by German composers, but fourteen of them by Josquin, among them the celebrated Miserere, *a 5*, to the beauties of which Ott himself calls special attention. 1538, 'Secundus tomus novi operis musici,' etc., contains forty-three motets, *a 4* to 6, among them eleven by Josquin including his famous Stabat Mater. 1539, 'Missæ tredecim 4 voc.,' dedicated to the Senate of Nuremberg, contains masses by Josquin, Isaac and others. 1544, '115 guter neuer Liedlein.' This last work has been completely reprinted in modern score by the Gesellschaft für Musikforschung. In one of his prefaces Ott had expressed his intention of bringing out a complete edition of the 'Coralis Constantinus' of Heinrich Isaac, but death would appear to have overtaken him before its publication by his associate Formschneider in 1560. Although his name is not mentioned in connexion with them, he is also supposed to have had some share in the publication by Formschneider of Senfl's Magnificats in 1532, and Heinrich Fink's Lieder in 1536. J. R. M.

OTTANI, ABBATE BERNARDINO (b. Bologna, Sept. 8, 1736; d. Turin, Oct. 26, 1827), pupil of Padre Martini; maestro di cappella at Bologna, 1758, and at Turin Cathedral, 1779. He composed 12 operas and a large amount of church music (46 masses), also instrumental music (*Q.-L.*; *Riemann*).

OTTAVINO, an octave flute. (See FLUTE.)

OTTER, FRANZ JOSEPH (b. Nandlstadt, Bavaria, 1760² or 1764³; d. Sept. 1, 1836), violinist.

Bishop von Freising sent him to Florence, where he became a pupil of Pietro Nardini. After the death of his patron Franz Otter was forced to return to Germany and seek employment. Together with his brother Ludwig, he received an appointment as violinist at the Salzburg Cathedral, with an annual stipend of 200 gulden. He occupied this position from 1803-07, and, upon retiring with a pension, settled in Vienna as a teacher and violinist at the Hofkapelle. Reichard's *Gothaer Kalender* for 1798 states that Otter, in that year, was

¹ For a description of these see Eitner, *Monatshefte*, xxvi. pp. 115-17.

² According to *Q.-L.*

³ According to *Fétis*.

Konzertmeister at the Vienna Hoftheater, and Musikdirector in 1800. Michael Haydn taught him composition. He wrote several concertos and sonatas for violin, but has left (so far as is known) only one published work, viz. Nineteen variations on the German air 'Ich bin licherlich,' with accompaniment for a second violin (Haslinger, Vienna). Amongst Michael Haydn's unpublished songs in the Berlin Museum there is a canon for nine voices by Otter, and in Prince Esterhazy's Library at Eisenstadt there is a canon for seven voices, composed by Otter, to celebrate Joseph Haydn's birthday. This is in manuscript. (*Féris*; *Q.-L.*) E. H.-A.

OTTEY, MRS. SARAH, (b. circa 1695), one of the earliest female professional performers on the violin in London. Dr. Burney, mentioning her in his *History*, says: 'This and the preceding year (1721-22) Mrs. Sarah Ottey frequently performed solos at concerts on three several instruments—Harpichord, bass-viol and violin.'

E. H.-A.

OTTO, (1) ERNST JULIUS (b. Königstein, Sept. 1, 1804; d. Dresden, Mar. 5, 1877), composer, more especially of works for men's voices, passed his 'maturity examination' at Dresden in 1822 with honour, and studied theology for three years at Leipzig. While doing this he worked at music with Schicht and Weinlig. His compositions are of a solid character—oratorios; masses; an opera ('Schloss am Rhein') performed at Dresden, 1838, and another at Augsburg; sonatas; cycles of songs for men's voices, etc. In 1830 he was appointed cantor at Dresden, a post which he held with honour to himself up till his death.

His brother, (2) FRANZ (b. June 3, 1809; d. Apr. 30, 1842), a bass singer, and also composer of popular works for men's choir, came with another brother, a tenor, to England in 1833 as directors of a part-singing society.

G.

OTTO, GEORG (b. Torgau, Electoral Saxony, c. 1544), spent the best part of his life from before 1588 to 1619 at Cassel as Kapellmeister to the Landgrave of Hesse-Cassel. He was the instructor in composition of the Landgraf Moritz. Otto's published works are: 'Geistliche deutsche Gesenge,' a 5 and 6 (Erfurt, 1588); 'Opus musicum divinum' (Cassel, 1604), in three books, containing motets a 5 to 8 on Latin texts from the Gospel for every Sunday and Festival and other occasions in the Church's year. Among unpublished works in the Library at Cassel are a series of introtos for the Church's year a 5, and various Latin psalms and Magnificats a 5 to 12. J. R. M.

OTTO, JACOB AUGUSTUS (b. Gotha, 1762; d. Jena, 1830), the author of a valuable treatise upon the construction of the violin, in which

the mathematical 'rules' of Bagatella are simplified and explained. An excellent maker and repairer of stringed instruments, he was at one time attached to the court of the Grand Duke of Weimar in that capacity. From time to time his profession required him to visit Halle, Leipzig, Magdeburg and Berlin, journeys which assisted him in enlarging his remarkable knowledge and judgment of ancient instruments of the violin class. In 1817 his *Über den Bau und die Erhaltung der Geige und aller Bogeninstrumente* is said to have been published by Reinecke in Halle, and an enlarged edition of the same, with the title *Über den Bau der Bogeninstrumente und über die Arbeiten der vorzüglichsten Instrumentenmacher*—published by Bran in Jena—appeared in 1828. Of this the second edition appeared in 1873 and the third in 1886. In 1833 Longmans brought out T. Fardeley's English translation, and John Bishop's English version entitled *Treatise on the Structure and Preservation of the Violin*, etc., was published by Robert Cocks in London in 1848 (second edition, 1850; third edition, 1876). The first edition, though often quoted, does not exist, as far as can be ascertained, in any public or private library, but an article by Otto bearing the original title is to be found at p. 3 of vol. i. (1809) of the *Neues Magazin aller neuer Erfindungen, Entdeckungen und Verbesserungen* (Leipzig). It is mainly an eulogy of Jacobus Stainer. Otto left five sons, all of whom became violin-makers.

E. H.-A.

OTTO, MELITTA, née ALVSLEBEN (b. Dresden, Dec. 16, 1842; d. there, Jan. 13, 1893), was taught singing there by Thiele at the Conservatorium, and sang in opera as a light soprano from 1860-73; in 1866 she married Max Otto, commissioner of customs. Her parts comprised Anna in 'Hans Heiling,' Rowena in 'Templer und Jüdin,' Queen of Night, Alice, Martha, Eva, etc. She acquired a great reputation as a concert singer, and was the solo soprano at the Beethoven Centenary at Bonn in 1871. She first appeared in England at Mme. Schumann's concert, St. James's Hall, Mar. 20, 1873; at the Crystal Palace, Mar. 22; at Manchester, in Bach's Passion music; at the Albert Hall, Apr. 2 and 7. She made a great success, and remained in England until 1875, appearing most frequently at the Crystal Palace and Albert Hall, notably in the revivals of 'Theodora,' Oct. 30, 1873, and the 'Christmas Oratorio,' Dec. 15, 1873. She sang at the Philharmonic, Mar. 25, 1874; at the Leeds Festival in 'St. John the Baptist' and Schumann's 'Paradise and the Peri,' etc., in 1874; at the Sacred Harmonic, the Wagner, Bache's, the Ballad and principal provincial concerts. She returned to Germany in 1875,

and sang in opera at Hamburg, and from 1877-1883 at Dresden. In 1879 she sang at the Cincinnati Festival.

A. C.

OTTO, STEPHAN (b. Freiberg, Saxony, c. 1594), received his musical instruction from the Freiberg cantor, Christoph Demantius. After holding some subordinate appointment at Augsburg, he became succentor or assistant cantor at Freiberg from 1632-33, during which time he also had Andreas Hammerschmidt for his pupil. Becoming cantor at Schandau, he afterwards, in 1643, made an unsuccessful application for the post of cantor at Freiberg in succession to Demantius. He was still living at Schandau in 1648. His chief published work bears the peculiar title:

'Kronen-Krönlein oder Musicalischer Vorläuffer auff geistliche Concert-Madrigal-Dialog-Melod-Symphon. Motetische Manier mit 3, 4, 5, 6, 7, 8 Stim. . . .' (Freiberg, 1648).

The title would indicate the compositions as being in the sacred concerto and dialogue style of Schütz and Hammerschmidt. It may be a question whether Otto did not precede Hammerschmidt in the adoption of the dialogue style of composition for church music, although this work is published later than similar works of Hammerschmidt. Another work of Otto, existing only in MS., consists of a setting of the hymn 'Ein feste Burg,' for nineteen voices divided into four choirs, intended for a special occasion. The full title of this work¹ would lend some degree of sanction to the tradition that Luther wrote the hymn on the occasion of his citation before the Diet of Worms, 1521.

J. R. M.

OTTO, VALERIUS (b. Leipzig), organist in 1607 of the Lutheran church, Prague; musician in 1611 at the court of Prince Lichtenberg. He composed psalms, a Magnificat and a book of 5-part pavans, galliards, etc. (*Q.-L.; Riemann*).

LOUDIN, EUGÈNE ESPÉRANCE (b. New York, Feb. 24, 1858; d. Nov. 4, 1894), singer, of French parentage, was a graduate of Yale University, and for a time practised at the American bar.

In 1886, while on a holiday in London, he adopted a musical career on the advice of friends, and received instruction from Moderati in America. On Aug. 30 of the same year he made his début on the stage at Wallack's Theatre, New York, with the M'Caul Opéra-Comique Company, as Montosol in an English version of Victor Roger's 'Joséphine vendue par ses sœurs,' his future wife, Miss Louise Parker, also making her début as Joséphine. Both artists were successful during the two months' run of the opera at New York and on tour. On Dec. 4, 1886, they were married at Detroit. In 1889 Oudin sang again in private concerts in London. On Jan. 31, 1891, he first appeared on the English stage, with the greatest success, both as a singer and actor, as the

Templar, on the production of Sullivan's 'Ivanhoe' at the Royal English Opera House (Palace Theatre), having been engaged at the instance of the composer, and sang throughout the run of the opera. On Oct. 17, 1892, he made a distinct success as the hero on the production of Tchaikovsky's 'Eugen Onegin' at the Olympic, and on Nov. 17 he sang as Henri Quatre on the production of Lacombe's 'Mamie Rosette' at the Globe, and later at the Prince of Wales's Theatre. Oudin then devoted himself in England exclusively to concerts, gaining great applause for his delivery of songs, ancient and modern, at the Popular and other concerts. He was the translator of many modern songs, also of the lyrics of Messager's 'Basoche,' for which he was greatly commended by the composer, and also of Saint-Saëns's 'Samson et Dalila,' wherein on Sept. 25, 1893, he sang on its production in a concert version under Cowen at the Promenade Concerts, Covent Garden. He composed a set of four songs, words and music; but his best composition is an 'O Salutaris' for two voices. In 1893 and 1894 he sang again in opera with great success at St. Petersburg as Wolfram, Telramund, the High Priest in 'Samson et Dalila,' Albert in 'Werther'; also in concerts throughout Russia. In 1894 he sang at the Birmingham Festival, where his rendering of Doctor Marianus's music in the third part of Schumann's 'Faust' made the greatest impression on all who heard him. On Oct. 20, after a Richter concert, he was struck down with apoplexy in the artists' room at the Queen's Hall. He never recovered from the stroke. Mrs. Oudin left the stage soon after her marriage, occasionally sang in concerts with her husband, and became a successful teacher of singing.

A. C.

OULIBICHEFF, ALEXANDER VON (b. Dresden, 1795; d. near Nijni-Novgorod, Jan. 24, 1858), Russian nobleman and enthusiastic amateur, whose father was Russian ambassador in Dresden. From his earliest years he was devoted to music, and studied the violin sufficiently to become a good quartet-player. He served first in the army, and then as a diplomatist, but retired on the accession of the Emperor Nicholas, and lived on his estates near Nijni-Novgorod till his death. Mozart was his idol, and he reawakened attention to his works at a time when Germany at least was entirely preoccupied with Meyerbeer and Spontini. Oulibicheff's great work, *Nouvelle Biographie de Mozart*, 3 vols. (Moscow, 1844), contains much valuable matter, biographical and æsthetical, and has been largely used by Otto Jahn. His admiration for Mozart, however, led him to depreciate Beethoven, and for this he was attacked by Lenz. In his reply, *Beethoven, ses critiques et ses glossateurs* (Leipzig and Paris, 1857), he expressed with even greater

¹ See *Monatshefte*, xx., *Die älteren Musikalien der Stadt Freiberg*, pp. 22, 23.

vehemence his opinion on the extravagance of Beethoven's later works, and drew down a storm of abuse and controversy with which he was little fitted to cope, and which is said to have hastened his end. It is but just to admit that his views, less caustically expressed, were held by many eminent musicians, including Ries and Spohr. F. G.

OURAGAN, L', lyric drama in 4 acts; text by Émile Zola, music by Alfred Bruneau. Produced Opéra-Comique, Paris, Apr. 29, 1901.

OURY, (1) ANTONIO JAMES (b. probably London, 1800; d. Norwich, July 25, 1883¹), violinist.

His father was an Italian of noble descent, who served as an officer in Napoleon's army. Taken prisoner by the English, he settled in this country, married a Miss Hughes, and became a professor of dancing and music. Antonio began playing the violin at the age of 3, and showed considerable promise. His first master was Christopher Gottfried Kiesewetter, a German violinist, who travelled about the continent, was appointed the leader of the Hanoverian court band, and finally settled in London. In 1820 Oury went to Paris, and studied under Kreutzer, Baillot and Lafont, and in 1828 returned to London and made his début (on Feb. 20), at a concert given for the benefit of Kiesewetter's widow and children. His performance provoked enthusiastic applause, and was considered to be 'as fine a specimen of finished violin-playing as was ever heard in this country.'² On the 25th of the same month he played with equal success at the first Philharmonic Concert of the season, held at the Argyll Rooms. On Mar. 28 he again played at the Philharmonic, and on May 21 led a quartet by Meyseider—with Lindley for violoncello—at another Philharmonic Concert. He held the post of 'leader of the ballet' at the King's Theatre, a position which admitted of many opportunities for displaying his graceful solo-playing. In 1831 he married Mlle. Belleville, and shortly after accompanied his wife on a nine years' concert tour, visiting Russia, Germany, Austria and France. (See below.)

BIBL.—DUBOIS, *The Violin*; PARKS, *Musical Memory*, p. 237; *Athenæum*, Feb. 1828; *Times*, 1828; LAURE, *Famous Violinists*; *The Violinist's Calendar for 1902*; published by W. E. Hill & Sons. E. H.-A.

(2) ANNA CAROLINE DE BELLEVILLE (b. Landshut, Bavaria, Jan. 24, 1808; d. Munich, July 22, 1880), his wife, a pianist of note, was the daughter of a French nobleman, director of the opera in Munich. She spent the first ten years of her life at Augsburg with her parents, studying with the cathedral organist, on whose recommendation she was taken to Vienna in 1816, and placed under the direction of Czerny for four years, during which time she was introduced to Beethoven, and heard him

improvise on the piano. She appeared on two occasions in Vienna, on one of which (Madame Catalini's farewell concert) she played a Hummel concerto with orchestra. In 1820 she returned to her parents at Munich, and played there with great success. The next year was spent in Paris, where she was well received. She resumed her studies with Andreas Streicher in Vienna in 1829, after which she made a professional tour to Warsaw, Berlin, etc. In 1831 she came to London, and made her début at Her Majesty's Theatre at Paganini's concert in July. Her own concert took place in August, and in October she married Oury, with whom she then proceeded to make a long tour to Russia, where they remained two years, to the principal cities of Germany, Austria and Holland, settling at length in Paris for two years and a half. In Apr. 1839 they returned to England, which from that time became their home. Until 1846 Madame Oury divided her time between London and Brighton, being particularly successful at the latter place. From that time she devoted herself entirely to composition, and during the 20 years that followed published no less than 180 pieces, principally of the class known as 'drawing-room' music. In 1866 she retired from all artistic pursuits, and continued to live near London. Schumann made an elaborate comparison between her playing and that of Clara Wieck (*Music and Musicians*, p. 68). M.

OUSELEY, the REV. SIR FREDERICK ARTHUR GORE, Bart. (b. London, Aug. 12, 1825; d. Hereford, Apr. 6, 1889), son of the Rt. Hon. Sir Gore Ouseley, Bart., Ambassador at the courts of Persia and St. Petersburg, from early childhood evinced great talent for music, and an extraordinarily accurate ear.³ His skill in playing and extemporising was very unusual, and at the age of 8 he composed an opera, 'L'isola disabitata.' In 1844 Sir Frederick succeeded his father, having entered, the year before, as a gentleman commoner at Christ Church, Oxford, at which University he graduated B.A. in 1846, and M.A. in 1849. In that year he was ordained, and until the close of 1850 held a curacy at St. Paul's, Knightsbridge. In 1850 he took the degree of Mus.B. at Oxford, his 'exercise' being a cantata, 'The Lord is the true God,' and in 1854 took the higher grade of Mus.D. for which his oratorio 'The Martyrdom of St. Polycarp' was composed and performed. In that year the foundation-stone was laid of St. Michael's College, Tenbury, with which he was so intimately connected for the rest of his life. Upon the death of Sir Henry R. Bishop in 1855, Sir Frederick was elected to the professorship of music at Oxford, an office which he held till his death. The same year he was ordained priest and appointed precentor of Hereford Cathedral. In 1856 he was ad-

¹ Date of death furnished by Arthur Hill.

² *The Times*.

³ See the *Harmonicon*, 1833, pp. 102, 103.

mitted to the *ad eundem* degrees of Mus.B. and Mus.D. at Durham, and became vicar of St. Michael's, Tenbury, as well as warden of St. Michael's College¹ there for the education of boys in music and general knowledge, of which establishment he was the principal munificent founder and maintainer (see LIBRARIES). The daily choral service in the beautiful church of St. Michael's, which Sir Frederick erected adjoining his college, is served by the masters and boys. He received the honorary degrees of Mus.D. Cantab. in 1862, LL.D. Cantab. 1883, and LL.D. Edinburgh, 1885. He died suddenly of heart disease, and was buried on Apr. 11 at Tenbury.

Ouseley was skilled both as pianist and organist. He excelled in extemporaneous performance on the organ, especially in fugue-playing and in contrapuntal treatment of a given theme. He published treatises on *Harmony, Counterpoint and Fugue, Form and General Composition*.

As composer Sir Frederick is known chiefly by his works for the church. In these he adhered closely to the traditions of the Anglican school. He composed 11 services, one in 8 parts, another with orchestral accompaniment. He also published upwards of 70 anthems, and edited the sacred works of Orlando Gibbons. His compositions for organ include a set of 6, one of 7, and one of 18 preludes and fugues, also 6 preludes, 3 andantes, and 2 sonatas. He also wrote some dozen glees and partsongs, several solo songs with PF. accompaniment, and 2 string-quartets. His oratorio, 'Hagar,' was produced at the Hereford Festival of 1873, and performed in the following year at the Crystal Palace.

As Oxford professor he effected considerable improvements and reforms. The office of Choragus, which had fallen into disuse, was re-established, and was held at first by Corfe, who was succeeded in 1884 by C. H. H. Parry, Sir F. A. Gore Ouseley's successor in the professorship; the standard of qualifications for degrees was raised, and the professor also induced his University to grant honorary degrees in music, which had never been given by Oxford previous to 1879.²

In addition to the works already named, Ouseley edited a collection of Cathedral Services (1853), and with Dr. E. G. Monk, 'Anglican Psalter Chants' (1872). (See *Memorials of Sir F. A. Gore Ouseley, Bart.*, by F. T. Havergal, 1889; a more extensive memoir by the Rev. F. W. Joyce was published in 1896.)

H. S. O.

OVER-BLOWING is the production of a higher note than the natural note of a pipe, by forcing the wind. In the flute the upper

octaves are legitimately so produced. In the organ it is apt to arise when the feeders of a bellows pump wind into the reservoir in greater quantities or at greater speed than its consumption, and when the reservoir is full this is liable to cause undue strain. If more wind were then to be supplied it might become more compressed,—stronger,—causing the pipes to produce a momentary scream rather than a musical sound. To prevent this natural consequence of 'over-blowing,' a safety-valve or *waste-pallet* is provided, which allows the super-added wind to pass from the reservoir.

E. J. H.

OVEREND, MARMADUKE (d. June 1790), organist of Isleworth in 1760 and scholar of Dr. Boyce, whose MSS. on the theory of music he acquired, enjoyed much reputation as a theorist. He composed an 'Epithalamium' for the marriage of George III. in 1761, 'Twelve Sonatas for two Violins and a Violoncello,' published in 1763.³ In 1783 he published *A Brief Account of, and Introduction to Eight Lectures on the Science of Music*. (It does not appear that the lectures were ever delivered.) A canon for eight voices by him, 'Glory be to the Father,' is printed in Warren's collection. In his will, dated 1781, he described himself as 'Student in Music.' He was buried on June 25, 1790. His library was sold in 1791, when his MSS. (including those of Dr. Boyce), passed into the hands of Calcott.

W. H. H.

OVERSPUN, equivalent to the German *überspannen*, applied to the large strings in a pianoforte, or the G string in a violin, etc., which are wound or spun round with fine wire to increase their weight and also the depth and richness of their tone.

A. J. H.

OVERSTRINGING, a method adopted by some pianoforte-makers of raising the lower bass strings and leading them diagonally over the others, to obtain length and a different arrangement of the scale. (See *PIANOFORTE*.)

A. J. H.

OVERTONES. A word formed in imitation of the German *Obertöne* which Helmholtz uses as a contraction for *Oberpartialtöne*, meaning Upper PARTIAL TONES (q.v.). (See *ACOUSTICS*, subsection *HARMONIC SERIES*.)

J. L.

OVERTURE (Fr. *ouverture*; Ger. *Ouvertüre, Vorspiel, Einleitung*; Ital. *overtura*), i.e. opening. This term was originally applied to the instrumental prelude to an opera and later to orchestral works of an independent, self-existing type. The first important development is due to Lully, as exemplified in his series of French operas and ballets, dating from 1672-1686. The earlier Italian operas were generally preceded by a brief introduction for instruments, usually called 'Sinfonia,' sometimes 'Toccata.' Monteverdi's opera 'Orfeo' (1607) begins with a short prelude of nine bars, termed

¹ See *Mus. T.*, 1900, p. 713.

² The degree offered to Handel was refused because it was not honorary. Baydn presented an 'exercise' for him, and presumably said his 'oss.

³ Advertisement in *Lloyd's Evening News*.

'Toccata,' to be played three times through—being, in fact, little more than a mere preliminary flourish of instruments. Such small beginnings became afterwards somewhat amplified, both by Italian and French composers; but only very slight indications of the overture, as a composition properly so called, are apparent before the time of Lully, who justly ranks as an inventor in this respect. He fixed the form of the dramatic prelude; the overtures to his operas having not only served as models to composers for nearly a century, but having also been themselves extensively used in Italy and Germany as preludes to operas by other composers.

The form of the overture of Lully's time consisted of a slow Introduction, generally repeated, and followed by an allegro in the fugued style; and occasionally included a movement in one of the many dance-forms of the period, sometimes two pieces of this description. The distinction between the French and Italian styles, on which so much trouble was expended by the musical writers of the 18th century, seems to amount to little more than this; that the French type of overture began with a slow introductory movement, the Italian type with a quick movement.¹ The development of the ballet and of the opera having been concurrent, and dance-pieces having formed important constituents of the opera itself, it was natural that the dramatic prelude should include similar features, and no incongruity was thereby involved, either in the overture or the serious opera which it heralded, since the dance music of the period was generally of a stately, even solemn, kind.

Up to the time of Gluck the dramatic overture had no special relevance to the character and sentiment of the work which it preceded. In the dedication of his 'Alceste' Gluck refers to this among his other reforms in stage composition. (See GLUCK: OPERA, *ante*, p. 699.) He did not, however, always identify the overture with the opera to which it belonged so thoroughly as was afterwards done by including a theme or themes in anticipation of the music which followed, but he certainly made the orchestral prelude what, as a writer has well said, a literary preface should be—'something analogous to the work itself, so that we may feel its want as a desire not elsewhere to be gratified.' His overtures to 'Alceste' and 'Iphigénie en Tauride' run continuously into the first scene of the opera—and the latter is perhaps the most remarkable instance up to that time of special identification with the stage music which it heralds; inasmuch as it is a distinct foreshadowing of the opening storm scene of the opera into which the prelude is merged. Perhaps the finest specimen of the dramatic overture of the

period, viewed as a distinct orchestral composition, is that of Gluck to his opera 'Iphigénie en Aulide.'

The influence of Gluck on Mozart is clearly to be traced in Mozart's first important opera, 'Idomeneo' (1781), the overture to which, both in beauty and power, is far in advance of any previous work of the kind; but, beyond a general nobility of style, it has no special dramatic character that inevitably associates it with the opera itself, though it is incorporated therewith by its continuance into the opening scene. However, in the overture to his 'Don Giovanni' (1787) we have a distinct identification with the opera by the use, in the introductory 'Andante,' of some of the music introducing the entry of the statue in the last scene, while the solemn initial chords for trombones of the overture to 'Die Zauberflöte' may be supposed to be suggestive of the religious element of the libretto. Since Mozart's time the overture adopted the same general principles of form which govern the first movement of a symphony or sonata, without the repetition of the first section.

Reverting to the French school, we find a characteristic overture of Méhul's to his opera 'La Chasse du Jeune Henri' (1797), the prelude to which alone has survived. Cherubini, all of whose great works were produced at Paris, must be specially mentioned as having been one of the first to depart from the pattern of the overture as fixed by Mozart. Cherubini indeed marks the transition point between the regular symmetry of the style of Mozart, and the developments effected by Beethoven. In the dramatic effect gained by the gradual and prolonged *crescendo*, both he and Méhul seem to have anticipated one of Rossini's favourite resources, as is observable in the overture to his opera 'Anacréon' (1803).

The next step in the development of the overture was taken by Beethoven. In the 'Leonore' overtures, Nos. 1, 2 and 3, we find references to music in the opera itself.² Other overtures of Beethoven, such as 'Coriolan' and 'Egmont,' written as preludes to the plays, really belong to the class of independent overtures referred to later.

The overtures of Weber are impressed with the character and tone of the opera to which they belong, anticipating themes from the following stage music, while the Mozart model is adhered to in the regular recurrence of the principal subject and the episode.

Berlioz left two overtures to his opera of 'Benvenuto Cellini,' one bearing the name of the drama, the other called the 'Carnaval romain,' and usually played as an entr'acte. The themes of both are derived more or less from the opera itself.

² There is a curious anticipation of the famous trumpet-call of the overture to Méhul's 'Hélène.'

¹ See *Oxf. Hist. Mus.* vol. iv. p. 236 ff.

Since Weber there have been no such fine examples of the operatic overture—suggestive of and identified with the subsequent dramatic action—as those of Wagner. That to 'Tannhäuser' is of especial importance in the history of the overture, as Wagner remodelled it so as to make it a prelude to the drama, rather than an overture in the usual sense. In the later works his practice varies, for sometimes he is content with a mere prelude suggestive of what is to follow; compare the 'Ring' introductions with 'Die Meistersinger' or 'Tristan und Isolde.'

The later tendency seems to be to dispense with overtures of an elaborate nature, sometimes indeed a few bars of introductory matter are considered sufficient, just enough to put the hearer into the right frame of mind before the curtain rises.

Reference has already been made to the title 'Overture' as applied to orchestral pieces intended merely for concert use, sometimes with no special purpose, in other instances bearing a specific title indicating the composer's intention to illustrate some poetical or legendary subject. Formerly a symphony, or one movement therefrom, was entitled 'Grand Overture,' or 'Overture,' in the concert programmes, according to whether the whole work or only a portion thereof was used. Thus in the announcements of Salomon's London concerts (1791-94), Haydn's symphonies, composed expressly for them, are generally so described. Like the opera overture such self-existing works have generally been written in the 'first movement' form; they are often called 'Concert-overtures' and form a valued part of the orchestral repertory. (See ENTRÉE; INTRADA; INTRODUCTION; PRELUDE; SYMPHONY.)

H. F. L.; rev. N. C. G.

OXFORD. The ancestry of all Oxford Musical Societies may be traced to the 'weekly music meetings' which are described in detail by Anthony Wood. In 1656 they were taking place at the house of 'William Ellis, late organist of St. John's College,' and were attended by an enthusiastic company of amateurs. Wood says that if he missed a meeting 'he could not well enjoy himself the week after.' During the early part of the 18th century the practice seems to have fallen into abeyance; but in 1733 it received new impetus from the visit of Handel, who gave five concerts in the theatre; and by 1750 the author of the *Academic* could write that 'a Taste for Musick, modern Languages, and other polite Entertainments of the Gentlemen have succeeded to Clubs and Bacchanalian Routs.'¹ When Haydn received his degree in 1791 the concerts given at Oxford were probably better than those of any provincial town in England, and they maintained for some years a high

standard of excellence. But about the middle of the 19th century there succeeded another period of apathy and indifference. Crotch, who held the professorship for fifty years, and in 1819 founded the Oxford Choral Society, was non-resident during the latter part of his life; Bishop who succeeded him in 1848 was not a man of much strength or energy; and matters were going from bad to worse when in 1855 a new chapter of Oxford history was opened by Ouseley's appointment to the chair. The difficulties which he encountered and overcame were those which commonly beset the path of the reformer. To his ability, his patience and his power of organisation the subsequent activity of Oxford music is largely due.

In 1865 Sir John Stainer founded the Philharmonic Society, and after its first concert handed over the conductorship to Dr. James Taylor, organist of New College. In 1869 the Choral Society was remodelled by Allchin, organist of St. John's, and for some quarter of a century these two societies divided the larger choral music of Oxford between them. Allchin was succeeded by Sir Walter Parratt (1881), C. H. Lloyd (1882) and J. V. Roberts (1886); soon after this Taylor resigned the conductorship of the Philharmonic and was succeeded by Lloyd. Meanwhile a third society, for the performance of madrigals, had been founded in 1885, under the conductorship of J. V. Roberts. Among the works performed during this period by the Choral Society may be mentioned Handel's 'Israel in Egypt,' Schumann's 'Pilgrimage of the Rose,' Macfarren's 'Joseph' and 'John the Baptist,' Stainer's 'Daughter of Jairus,' Barnett's 'Ancient Mariner,' Sullivan's 'Martyr of Antioch,' and Parry's 'Prometheus Unbound': by the Philharmonic, Beethoven's 'Choral Fantasia,' Cherubini's 'Requiem in C minor,' Schubert's 'Song of Miriam,' Spohr's 'Fall of Babylon,' Bennett's 'Woman of Samaria' and Schumann's 'Paradise and the Peri.'

In 1890, shortly after Sir John Stainer's appointment as professor, the societies were all amalgamated under the title of 'Choral and Philharmonic,' conducted successively by J. V. Roberts (1890), F. Cunningham Woods (1893), and G. H. Betjemann (1895). The enlarged resources enabled a wider range of work to be chosen, and during the first few years of its existence the combined Society gave Mozart's Requiem, Sullivan's 'Golden Legend,' Dvořák's 'Stabat Mater' and 'Spectre's Bride,' and Parry's 'Judith' and 'Blest Pair of Sirens.'

In 1896 the OXFORD BACH CHOIR was founded under the conductorship of Harwood, and soon indicated its distinctive character by performances of the Christmas Oratorio, the St. John Passion, and the cantata 'My Spirit was in heaviness.' In 1901 H. P. Allen came to

¹ Godley, *Opus 1 in the Eighteenth Century*, p. 136.

Oxford as organist of New College, and was at once appointed conductor both of the Bach Choir and of the Choral and Philharmonic Society. For a time the two institutions worked together in entire accord, retaining their separate committees and their separate organisation, but uniting their forces in the concert-room. Among the works given in these conditions may be mentioned Bach's St. Matthew Passion and B minor Mass, Beethoven's Choral Fantasia, Choral Symphony and Mass in D, Brahms's 'Song of Destiny,' 'Nänie,' 'Begräbnissgesang,' and Requiem, Verdi's Stabat Mater, Parry's 'Blest Pair of Sirens,' 'The Glories of our Blood and State,' and 'Job,' Walker's 'Hymn to Dionysus,' and Harwood's 'As by the streams of Babylon.' Later the two societies were completely amalgamated with the title of the Oxford Bach Choir, which under the inspiring energy of Allen has given a wide range of choral music annually to the present time (1926). Outstanding events under Allen's direction have been a Festival of Bach (May 13-15, 1914), a whole week's festival of miscellaneous music (May 8-13, 1922) and a week's festival to commemorate the 300th anniversary of the Heyther foundation (see HEYTER and PROFESSOR) May 3-8, 1926.

The membership of all these societies has been open alike to the University and the town, and the same is true of the Oxford Orchestral Society, which was brought to a high pitch of efficiency by Lloyd, and, after his departure from Oxford, maintained by Harwood. Allen reconstituted the orchestra, which was first called by his name and then became the Oxford Orchestra. Besides taking part with the choral societies in all their activities, the orchestra, an admirable amateur organisation, has given periodic concerts of the larger kinds of orchestral music. Since 1919 it has been conducted by Maurice BESLY (q.v.).

Among several operatic productions by members of the University and town the first performance on the modern stage of Monteverdi's 'Orfeo' (Dec. 7, 1925), under the musical direction of W. H. Harris, was an event of more than local importance.

Two chamber-music societies are, except under special conditions, restricted to members of the University. The first inception of the OXFORD MUSICAL CLUB may be traced to the informal music meetings held in the rooms of Hubert Parry when he was an undergraduate at Exeter College; its actual foundation is due to C. H. Lloyd (then scholar of Hertford College) who became its first president in 1872. For some time the concerts were given mainly by members of the Club—often with a professional violinist to lead the quartet; then the professional element was gradually increased until it took a preponderating share in the performance.

OXFORD HOUSE CHORAL SOCIETY

As an offset to this the OXFORD MUSICAL UNION was founded in 1884 by J. H. Mee, with the object of providing for its members a larger opportunity of ensemble-playing in practice and performance: and the continued prosperity for many years of the two societies provided clear indication that the University had ample room for both. In 1916, however, the two were brought together, provision being made for both the professional and amateur performances under one organisation.

The LADIES' MUSICAL SOCIETY, founded on the lines of the Musical Club, also provides chamber-music performances for its members fortnightly during term. In addition to its own weekly meetings the Musical Club established in 1891 a series of public classical concerts, partly of chamber-music, partly of orchestral, which were continued until 1913.

A special place in the history of Oxford Music must be assigned to the Sunday evening concerts which have been given since 1885 in the Hall of Balliol College. They were founded by John Farmer, on his appointment as organist of Balliol, and soon attained a popularity which they well merited by their excellent programmes and their high standard of performance. In 1892 the direction of these concerts was shared by Ernest Walker, who from 1900 till 1925 took the entire control of them. On his retirement these concerts were successfully maintained on generally similar lines under W. H. Harris, organist of New College.

During the latter half of the 19th century many Oxford colleges formed separate musical societies, meeting for weekly practice, and giving at least one concert a year, usually in the summer term. Some of these societies have been intermittent, others have preserved an unbroken continuity, all alike have contributed in their measure to the progress of University Music. (See also DEGREES IN MUSIC, LIBRARIES.)

W. H. H^W.; rev. C. (with information from E. W.).

OXFORD HOUSE CHORAL SOCIETY, THE. This Society was first formed in 1898 by two residents of the Oxford House (the University Settlement in Bethnal Green), Hugh A. Burry, who became conductor, and A. P. Charles, hon. secretary. Burry was succeeded at the beginning of 1901 by Cuthbert Kelly, who has been conductor of the Society ever since that date.

The object of the Society was to provide the people of Bethnal Green and its neighbourhood with an opportunity for practising and performing the best choral music. The members have always been recruited entirely in East London, and concerts have been given during every winter since the Society's formation, at Excelsior Hall, Bethnal Green.

In 1903 the Society made its first appearance

in West London at the old St. James's Hall in Piccadilly. From 1904-21 a concert was given annually at Queen's Hall. Since 1921 the annual West End appearances have been made at the church of St. Martin-in-the-Fields, Trafalgar Square.'

Among the works which have been performed both in Bethnal Green and in West

London are Elgar's 'The Dream of Gerontius' (in 1912, 1914 and 1922); 'The Music Makers' (in 1913—the work's second performance); 'For the Fallen'; Brahms' 'Requiem' (in 1915 and 1923) and 'A Song of Destiny'; Parry's 'Blest Pair of Sirens' and 'The Pied Piper'; Vaughan Williams's 'Toward the Unknown Region.'
